# Preface

In 1970, I was in the Sea Islands of South Carolina doing anthropological fieldwork for my Ph.D. dissertation in a rural black community. I was surprised to learn that sometimes when people were ill, they gathered various wild plants as medicines. Although I had not intended to do so, I began to inquire into the matter. In time, I had identified about 35 species of plants, from *Allium* to *Zanthoxylum*, which were so used. I then asked what seemed at the time to be a few simple questions: How had these people learned of these plants? Did it do any good to take them? Had anyone else ever used them, and if so, for what? *Native American Ethnobotany* is the most complete of my several efforts that have resulted from asking those naive questions. The book is intended to help anyone interested in the use of plants understand which ones have been used by native North American peoples to treat disease, for food, fiber, and dye, and for many other purposes as well.

As I began this work, I found I was in the company of some of the great American students of ethnobotany of the past—Huron H. Smith, Francis Densmore, Melvin Randolph Gilmore, Matilda Coxe Stevenson, Gladys Tantaquidgeon, and many others. Their fascinating works, too often overlooked, were found with the help of reference librarians in the recesses of one library or another across the continent. Most of the works have long been out of print or were published in specialist journals and were very hard to find.

Once found, many of the works were difficult to use. Most were not indexed, or at least not very well indexed. To answer a seemingly simple question such as, Who used *Allium* and for what?, took hours of digging. I decided to try to coordinate the information. I bought a few hundred index cards, the kind with sorting holes around the edges, and started filling them in. Soon I had more cards than would fit on the sorting pin. I had to start new boxes of subcategories to store the cards. Once I dropped a stack of cards on the floor. It was very discouraging.

One day in 1974 I had a chance conversation with Ralph Nichols, then the registrar at the University of Michigan—

Dearborn. Among other things he was responsible for putting out the schedule of classes each term—course number, name, department, room, time, professor, and so on. He was experimenting with some new system that worked on a computer; it was used for manipulating what he called data banks. I told him what I was doing and he said I might want to give his system a try. I had played around with a computer a few years earlier and had thought it kind of fun, so I decided I would look into it. Soon I was working with a new kind of card, rectangular ones with a notch on one corner! I transferred the material from one kind of card to the other and started feeding them into the hopper at the computing center. The material was then read into a database using the TAXIR (Taxonomic Information Retrieval) system available on the university computer.

In 1975, with a summer stipend from the National Endowment for the Humanities, I filled out thousands of code sheets with material from the works by Smith, Tantaquidgeon, and others. With funds provided by the university, I hired key-punch operators to produce the thousands of cards needed for computing. The first version of the database was published in 1977 as *American Medical Ethnobotany: A Reference Dictionary* (New York: Garland Publishing). That book included 1288 plant species from 531 genera from 118 families used in 4869 different ways in 48 different societies. The book was produced from line printer copy, all in upper case. I typed the page numbers on little labels and stuck them onto the bottoms of the pages by hand, one at a time. It was crude, but it had advantages. There was no index, but each of the 4869 items appeared in the book four times—one list organized by genus, one by family, one by use, and one by tribe.

Even though that book had more than 500 pages, it was far from a comprehensive list of Native American medicinal plant use. I had not had time nor resources to code several other available sources (for example, Francis Elmore on the Navaho, Erna Gunther on the Northwest Coast peoples). And at the time there were no sources available on two major

groups, the Cherokee and Iroquois. With the help of several reference librarians, I continued to add to my collection of ethnobotanical works, published and unpublished. Paul Hamel and Mary Chiltoskey's *Cherokee Plants and Their Uses* and James Herrick's monumental *Iroquois Medical Botany* appeared later in the 1970s (those two sources alone had more items in them, 4875, than all the rest of my original database).

And the database technology was changing. Personal computers began to show up on desks, supplementing mainframes, and the weakest link in mainframe computer technology—printing—was revolutionized by the introduction of laser printers. In 1984 the National Endowment for the Humanities again agreed to support my project with a grant. I established a laboratory at the University of Michigan—Dearborn, and students were hired to do the coding. Within 2 years a new database was constructed on the foundation of the original one. It was published in 1986 as *Medicinal Plants of Native America* (University of Michigan Museum of Anthropology, Technical Reports, Number 19), in two volumes with 910 pages, and included 2147 plant species from 760 genera from 142 families used in 17,634 different ways in 123 different societies. The listings were much more readable than in the earlier version because laser printing allowed the use of a variety of fonts.

As I continued to work, however, I realized that my database was incomplete in another way. Native American peoples used many species of plants as medicines but they used many plants for other purposes as well, in particular, for food. Other scholars had begun to recognize that medicinal plants were not completely distinct from food plants—indeed, there was often a substantial overlap in species that were used for both food and medicine. So I decided to broaden my net.

I applied to the National Science Foundation for funds to cover the costs of building a database of American Indian food plants to supplement the existing medicinal plant collection. As I started accumulating new food plant material, I checked again all the original material coded in *Medicinal Plants of Native America*. In many of them I found detailed discussions of food plants that we had passed by in earlier projects. But in addition to the food plants there was ethnobotanical information on dyes, fibers, and many other uses. The notion of going back over the same material for a third or fourth time seemed silly so I decided to code everything this time. The result is this book, which includes 4029 kinds of plants (species, subspecies, varieties, and so on) from 1200 genera from 242 families used in 44,691 different ways in 291 different societies. Of the 44,691 usages, 24,945 are medicinal, 11,078 are as food, 2567 as fibers, 607 as dyes, and 5494 as other kinds.

On a more personal level, my wife Claudine Farrand is a true partner in life. She provided context for this work by making life fun. My daughter Jennifer Moerman did the illustrations seen throughout the book. She is a wonderful artist and a great friend.

But our deepest debt is to those predecessors of ours on the North American continent who, through glacial cold in a world populated by mammoths and saber-toothed tigers, seriously, deliberately, and thoughtfully studied the flora of a new world, learned its secrets, and encouraged the next generations to study closer and to learn more. Their diligence and energy, their insight and creativity, these are the marks of true scientists, dedicated to gaining meaningful and useful knowledge from a complex and confusing world. That I cannot list them individually by name in no way diminishes my sense of obligation to them.

# Acknowledgments

Any long and complicated project such as the work that has gone into *Native American Ethnobotany* is due to the contributions of many scholars, specialists, organizations, and friends. The National Endowment for the Humanities twice provided support. An NEH summer stipend in 1977 was a small investment that had a great importance in encouraging me to continue; it was instrumental in the production of the first published version of my database. A much more substantial Research Tools Award (NEH-RT-20408-04) in 1984 from the Endowment led to the second, larger version of the work. Subsequently, two grants from the National Science Foundation materially advanced the work. In 1987, the NSF supported (BNS-8704103) a substantial analysis of the previous database. In 1993, the Foundation provided major funding (SBR-9200674) to add all of the food plants to the database and to support a complete analysis of the flora utilized by Native American peoples. Regardless of will or wish, this project could never have been even imagined without that support.

The University of Michigan—Dearborn, my professional home for more than two decades, has supported the work in untold ways, large and small, material and personal. Various chairs and deans have been especially helpful at one time or another, among them Jim Foster, Don Levin, John Presley, Robert Simpson, Rick Straub, and Victor Wong. Several sponsored-research administrators at the university's Dearborn and Ann Arbor campuses have helped with the arcana of grant management, including Drew Buchanan, Paul Cunningham, Jim Gruber, Lee Katz, and Marty Tobin. Many of my University of Michigan colleagues have provided support, among them Katie Anderson-Levitt, Barry Bogin, Dick Ford, and Larry Radine.

Professional colleagues from around the country provided a broad range of help. John Kartesz of the University of North Carolina Herbarium provided a computerized version of his authoritative listing of North American plant synonyms; it is unclear how the project could have been completed without

it. John also identified a number of odd plant names outside the range even of his comprehensive listing. Stanwyn Shetler, formerly of the Smithsonian Institution, provided a computerized version of the preliminary checklist for *Flora North America* that was invaluable in my understanding the dimensions of the North American flora. Tony Resnicek of the University of Michigan Herbarium enlisted the aid of several of his colleagues (Howard Crum, Bob Fogel, and Mike Wynne) to help with the identification of a number of nonvascular plants. Other botanists or ethnobotanists who have helped in one way or another over the years include Jim Duke and Steve Beckstrom-Sternberg of the U.S. Department of Agriculture Agricultural Research Service, Scott Peterson of the U.S. Department of Agriculture National Plant Data Collection Center, Nina Etkin and Paul Ross of the University of Hawaii, Jim Menhart of Texas A&M University, Sara Gage of the University of Washington, Brian Compton of the University of British Columbia, Jim McCormick of Mt. Royal College, Calgary, and Jim Herrick of Chittenango, New York.

This project could not have been carried out without the use of computers. A number of individuals have been particularly helpful. Bob Brill, inventor of TAXITR, one of the first database management systems, taught me the rudiments of programming. Bob Parnes provided persistent support for the notion that computers are devices to enhance communication. Betsy Alexander at Page Ahead Software and Joseph Lovett at Step2 Software provided much needed support with InfoPublisher. A dozen people at Fox Software and then at Microsoft helped with FoxPro and later with Windows.

Librarians, too, were essential. Shirley Smith and then Margaret Kruszewski, of the Mardigian Library at the University of Michigan—Dearborn, helped organize hundreds of inter-library loan requests with patience and good humor.

A number of students helped with the coding over the years. This intensely tedious work requires a subtle blend of decisiveness and caution and is not easy. I deeply appreciate the con-

tributions of all the people who have helped in the nitty-gritty of scientific work, among them Mary Johnson, Essam Khraizat, Sarita Kini, Grace Kazaleh, Karen Duhart, Maria Madias, and Shannon Becker. Essam and Sarita also helped with the analysis of the fiber and dye plants; we gratefully acknowledge the support of an NSF Research Experience for Undergraduates grant to support that work.

Special mention must be made of Ann Bruder. Ann worked on the coding for the work published in 1986 and was the research manager for this more recent project. She coded thousands of items and managed the work of all the other coders. Her clear sense of organization, her no-nonsense willingness to get some work done, and not least, her willingness to put up with my ambiguities and foibles, all with a genial good humor, allowed this project to be completed. I cannot imagine how it would have happened without her.

Anthropologists are often and rightly criticized for taking from the lives of other people and not giving very much back. In a

small effort to address that criticism, I decided some time ago to attempt to find funds sufficient to purchase a copy of this book to give to each of the 1100 or so registered American and Canadian Indian tribes. With the help of the Development Office at the University of Michigan—Dearborn, and, in particular, the imaginative work of Susan Skramstad and Annette Ketner, we managed to raise a portion of the money for that purpose. Contributions came from both individuals and companies. We will give as many copies as we can, starting with those groups represented in these pages. We will happily accept further contributions from others and will continue to distribute books as long as we receive funds. I am deeply grateful to these contributors for their generous support of this effort: Cal M. Bewicke; Lou Johnson of the Trout Lake Farm Company; Katy Moran; William Thomson, Professor of Psychology at the University of Michigan—Dearborn; Ginger Webb; Capsugel Division of the Warner-Lambert Company; Flora, Inc.; Indena USA, Inc.; McZand Herbal, Inc.; MW International, Inc.; Nature's Herbs; and Shaman Pharmaceuticals, Inc.

# Plant Use by Native Americans

Native American peoples had a remarkable amount of knowledge of the world in which they lived. In particular, they knew a great deal about plants. There are in North America 31,566 kinds (species, subspecies, varieties, and so on) of vascular plants: seed plants, including the flowering plants (angiosperms) and conifers (gymnosperms), and spore-bearing plants, including the ferns, club mosses, spike mosses, and horsetails (pteridophytes). North America is defined here as North America north of Mexico, and Hawaii and Greenland. American Indians used 2874 of these species as medicines, 1886 as foods, 230 as dyes, and 492 as fibers (for weaving, baskets, building materials, and so on). They used 1190 species for a broad range of other purposes as well, classified in this book as Other. All told, they found useful purpose for 3923 kinds of vascular plants. Native American Ethnobotany also contains information on 106 kinds of nonvascular plants (algae, fungi, lichens, liverworts, and mosses). The data for nonvascular plants are much less complete than those for vascular plants, however.

*Native American Ethnobotany* includes information on plant use by Native American people. Most of the plants used are native to North America, but some are not. Some are plants that were introduced into North America—some perhaps in pre-Columbian times and some certainly thereafter—and that became naturalized, growing spontaneously. Other plants are introductions that were kept in cultivation. The information in *Native American Ethnobotany* documents plant usage no doubt dating back to very early times and passed down through generations as traditional knowledge, as well as innovations in response to much more recent plant introductions.

Many species had multiple uses. Native American people used 55 different species for at least one purpose in each of the five categories: Drug, Food, Fiber, Dye, and Other. Table 1 lists the 10 champion plants with many uses in all categories, and Table 2 lists the 10 with the greatest total number of uses, regardless of category.

**Table 1.** The 10 plants with the greatest number of uses, and with uses in all five categories, by Native Americans

PLANT	DRUG	FOOD	FIBER	DYE	OTHER	TOTAL
<i>Thuja plicata</i> , western red cedar	52	6	188	1	121	368

## Plants Used as Drugs

There are 2582 species included in *Native American Ethnobotany* that were used medicinally by Native Americans. The listing of Plant Usage Categories toward the end of this chapter defines the many sorts of drug use that appear in the Catalog of Plants. The 10 plants with the greatest number of uses as drugs by Native Americans are

<i>Achillea millefolium</i> , common yarrow	355
<i>Acorus calamus</i> , calamus	219
<i>Artemisia tridentata</i> , big sagebrush	166
<i>Lomatium dissectum</i> , fernleaf biscuitroot	139
<i>Prunus virginiana</i> , common chokecherry	132
<i>Artemisia ludoviciana</i> , Louisiana sagewort	128
<i>Oplopanax horridus</i> , devil's club	128
<i>Juniperus communis</i> , common juniper	117
<i>Mentha canadensis</i> , Canadian mint	115
<i>Urtica dioica</i> , stinging nettle	114

The first thing people usually ask about American Indian medicinal plants is, Do they work? This it turns out is a tricky question. The short answer is, Yes. The longer answer is more interesting. What does it mean to say that a medicine "works"? Essentially it means that the medicine has the effect that we want it to have, that it meets our expectations. This means that a drug that meets one person's expectations may not meet another's, and people may therefore disagree over whether the drug works. Such disagreements usually hinge on different conceptions of health or healing. This is to say that definitions of health and well-being are often cultural matters; they are rarely simple matters of "fact."

Consider a case not from American Indian medicine but from the history of European medicine. In European tradition as recently as the early twentieth century (and very often in

many other medical traditions as well) people understood that illness was in part the result of certain kinds of imbalance in the body's "humors." Certain humors (blood, bile, or phlegm, for example) accumulated at the expense of others and the healer's goal was to attempt to reestablish the proper balance. One way to achieve this was often to purge the sick individual, to cause him to vomit.

Consider also these similar cases. The Iroquois used *Lobelia inflata* to induce vomiting; they soaked the whole plant in cold water, then drank it. *Lobelia* has several English common names, among them emetic herb, vomit wort, and pukeweed. It contains a series of alkaloids but the one probably responsible for its major actions on the human body is lobeline. Besides causing emesis, some species of *Lobelia* have been used as an expectorant in cough syrups. So, does it work? Well, a physician in the European tradition and an Iroquois healer could probably agree that *Lobelia* is an effective emetic—the drug works. But why do the Iroquois want to induce vomiting? They use this emetic to cure a sufferer of "tobacco or whiskey addiction." It is at this point that the Euro-American and the Iroquois may find themselves at odds, the latter saying it does work, the former saying it does not work. Euro-American medical theory does not to my knowledge contain any theory allowing that vomiting will cure people of addiction to whiskey or cigarettes. Similarly, the Cherokee, another Native American group, are reported to use *L. inflata* as an emetic (now we have triple agreement) to cure asthma (and now a triple disagreement). Whereas the Euro-American, the Iroquois, and the Cherokee are likely to agree on one dimension of these treatments (emesis), they may disagree about others. Asking about the effectiveness of a drug, then, is not a simple biological or medical issue but also a complex problem of culture and meaning.

Issues of culture and meaning come in many different

forms. For example, in all the thousands of listings in this book one will only find 55 items categorized as Cancer Treatment, under Drug, in the Catalog of Plants. Yet cancer is the disease against which U.S. president Richard Nixon “declared war.” Cancer is evidently a much more important disease in modern America than it was in native America. Why? The primary reason seems to be that Native American peoples did not suffer from cancer nearly as often as modern Americans. This may still be true although that is controversial. (For a fascinating review of the situation, see Thomas J. Csordas: *The Sore That Does Not Heal: Cause and Concept in the Navajo Experience of Cancer*. *Journal of Anthropological Research* 45:457–486. 1989.) It is less controversial for the historical and prehistoric past. Cancer is a relatively recent disease that is to some degree dependent on carcinogens, substances that “cause” or accelerate cancer. Most carcinogens are industrially manufactured artifacts like food colors, radioactive materials, and x-ray machines. An interesting exception is tobacco. Native Americans regularly used tobacco as a ceremonial smoke. A dozen or so people would occasionally share a bowl of tobacco in a pattern very different from the addicted smoking of Europeans and Euro-Americans (modern cigarettes are, of course, industrially manufactured products). The other significant carcinogen that is not an industrial product is sunlight. The differences in susceptibility to cancer in Native America and among modern Americans are generally matters of culture, and they seem to me to account for the general lack of cancer among Native American people, at least in the past, and therefore, the rarity of cancer treatments documented here.

In contrast to cancer treatments, one will find 582 treatments classified as Eye Medicine, under Drug, in the Catalog of Plants. I believe that the explanation for this is probably to be found in a similar cultural comparison: American Indians often lived in smoky houses. As the conditions that required treatment varied, so did the treatments available.

This cultural analysis does not mean that American Indian medicines are not valuable for modern conditions. Indians used *Podophyllum peltatum*, mayapple, for a broad range of things: as a cathartic, an insecticide, for rheumatism, and so on. Even though it has been so reported, it seems very unlikely that they used it as a cancer remedy. The plant has for a long time had an interesting role in Western medicine. A resin from the roots known as podophyllin is a common and moderately effective treatment for condylomata acuminata or venereal warts. Since some forms of venereal warts (caused by a virus) can be a precursor to cancer, this botanical remedy can be said to be a cancer cure. It is also the basis for the production of etoposide, a semisynthetic derivative of podophyllo-

toxin, a chemical found in mayapple. Etoposide is widely used in the treatment of several forms of cancer.

Another interesting example of cross-cultural drugs is taxol. Taxol is found in the leaves and bark of several species of yew, of the genus *Taxus*. Native Americans used three species of *Taxus* for a broad range of things: antirheumatic, cold remedy, lung medicine, and so on. The Tsimshian Indians of British Columbia have been reported to use the plant “for internal ailments and cancer.” *Taxus* has not traditionally been an important Western medicine but, as a result of screening of plant material at the National Cancer Institute in Washington, D.C., researchers have shown that taxol is an interesting and potentially very useful cancer drug. It seems likely that this Native American drug, which was used by one tribe to treat cancer, may become an important modern cancer drug.

Of course, just because taxol “works” for ovarian cancer does not mean it “works” for rheumatism, colds, or for lungs, at least not in any very absolute sense. We must always consider the expectations and wishes of the people taking medicines. Why do we take medicines at all? Usually, we take medicines when we “do not feel well.” The goal is to “feel better.” For example, say I am tired, sore, have a low fever, a sore throat, and a runny nose. Occasionally, a chill runs down my spine. I have not slept well for 2 days. My wife goes into the kitchen and makes a big pot of fresh chicken soup. It is rich and flavorful; the whole house smells warm and sweet. I eat a small bowl of the soup and eat a few chunks of chicken. Along with it I eat a crusty piece of bread. I feel much better. An hour later I go to sleep and get some real rest. Are we to class chicken soup as an effective drug? Perhaps, but clearly this is different from, say, the matter of taxol and ovarian cancer. In the matter of chicken soup, much of the “effectiveness” of the treatment probably comes from the context within which the “cure” takes place. But the soup is an important part of that context and probably essential to it.

An interesting question is *why* plants have medicinal value. What does *Taxus brevifolia* care about cancer? In short the answer is, Nothing. But plants do produce a broad range of chemicals that serve a variety of purposes for the plants, some of which can be used by people to serve their own often different purposes. Phytochemists have classified plant chemicals (or phytochemicals) as either primary or secondary: primary chemicals are those involved in the basic biochemistry of plant life, particularly photosynthesis; secondary chemicals are all the rest. Drugs are generally found to belong to the class of secondary chemicals. Typically, in the past these secondary chemicals were thought not to be essential; they were considered to be the byproducts of primary processes, or to be just random. More recently, as scientists have taken a more

ecological approach to plant chemistry, the view of the function of secondary chemicals has changed. Plants seem to produce many chemicals that are biologically active, in other organisms as well as in themselves, to enhance their own survival. They may produce herbicides to inhibit the growth of competing plants. For example, salicylic acid (a naturally occurring chemical from which aspirin is made) is a water-soluble phytotoxin (plant poison) that washes off the leaves of willows (*Salix*) and other plants to the ground below, inhibiting the growth of competing plants. Juglone, produced by black walnut trees (*Juglans nigra*), does the same thing.

Plants also produce substances that deter browsing by insects and other herbivores. A classic case involves the relationship between grasses and grazing mammals. Grasses rely on physical defenses (sharp leaves, high silica content) and vegetative reproduction rather than chemicals for defense: essentially, grasses grow back once they are browsed or mowed. More interesting for our present purpose, however, are plants that produce toxic or repellent chemicals. Some familiar botanical insecticides are nicotine from tobacco (*Nicotiana*) and the pyrethrin found in chrysanthemums (*Dendranthema*, *Leucanthemum*, and other genera formerly included in a more inclusive genus *Chrysanthemum*). Pyrethrin is the active ingredient in Raid and other common commercial insecticides. In certain cases, herbivores have adapted to these defenses. A well-known case is that of the monarch butterfly (*Danaus plexippus*). The monarch larvae feed on milkweeds (*Asclepias*), which are very toxic to other animals and insects. The larvae ingest and sequester various cardiac glycosides throughout their bodies, thereby deterring birds from feeding on them. Humans, too, can use the cardiac glycosides of milkweed when they want to cause vomiting for whatever reason (recall the discussion above about pukeweed).

Similarly, pines (*Pinus*) are generally protected against a variety of both insects and fungi by the pitch they exude from bark and leaves. Protection against insects is both physical (the sticky pitch drowns them) and chemical (the monoterpenes in pitch are toxic to many insects). Several kinds of bark beetles (*Dendroctonus* species, for example), however, can detoxify these substances and even use them as pheromones that serve to attract a sufficiently large number of beetles to overcome the physical resistance of the tree—the tree's chemical defense is turned against itself. Similarly, people have used pine pitch as a disinfectant and for a broad range of other purposes as well. Both people and other creatures can occasionally find their own uses for the secondary chemicals that plants produce.

Some cases of animal use of plant secondary chemicals are straightforward. For example, it is reasonable enough to use

pyrethrin to kill insects; that is probably what the chrysanthemums make them for in the first place. Similarly, it seems reasonable to expect that substances produced by plants to protect themselves against worms that eat their roots might turn out to be useful for treating intestinal parasites. Other cases are less obvious. For example, several different plants—birches (*Betula*), willows (*Salix*), wintergreen (*Gaultheria*), *Spiraea*—produce various salicylates, among them salicin and methyl salicylate, which are precursors for aspirin. Aspirin, or acetylsalicylic acid, is a semisynthetic drug, a modification of the natural precursors. The natural products do more or less what aspirin does but aspirin has the great benefit of being much less toxic than salicin. The natural salicylates have the advantage of being readily absorbed through the skin and for that reason they are often used as the active ingredients in “sports creams” for stopping muscle pain. As noted above, the natural salicylates are probably herbicides that serve to reduce competition for growing space for the plants that produce them. But why should a herbicide stop headaches? This is a question without an obvious answer. In part it is because no one is quite sure how aspirin or the other salicylates work in the first place. They apparently inhibit the production of prostaglandins. Prostaglandins are important chemicals involved in the processes of temperature regulation, inflammation, and pain; they also help maintain the mucous layer in the gut, preventing the stomach from digesting itself. This is apparently why aspirin can upset the stomach when one takes it to relieve a headache. But it is not at all clear to me why an herbicide should be an effective inhibitor of prostaglandin production. There are many other similar cases, all of which indicate how much we have yet to learn about human and plant physiology.

### Problems and Paradoxes

It is usually not too difficult to “make sense” of American Indian medicinal plant use with analyses such as those described above. Usually one can find parallels with other medicinal plant use elsewhere; often the drugs involve a secondary chemical that performs understandable functions for the plant. Sometimes it is not clear why such substances might do the things they do (as in the case of the herbicide that stops headaches) although often it is clear. There are, however, limits to such rational interpretations. It is not difficult to find cases in which different peoples—sometimes even the same peoples—are reported to use the same plant, often prepared in the same or very similar ways, for quite opposite purposes. Consider these paradoxical cases:

The Woodlands Cree are reported to mix the fruit of *Arctostaphylos uva-ursi*, kinnikinnick, with grease and give it to

children as a treatment for diarrhea, whereas the Upper Tanana are said to eat raw kinnikinnick berries as a laxative. The Hualapai are said to use a decoction of the leaves of *Eriodictyon angustifolium*, yerba santa, as a laxative, whereas the Paiute are said to use the same formulation as a treatment for diarrhea.

The Iroquois reportedly use a decoction of the roots of *Silphium perfoliatum*, cup plant, as an emetic (to cause vomiting), whereas the Meskwaki use the root of the same plant to alleviate the vomiting and nausea that often accompany pregnancy.

The Cherokee are said to use an infusion of the bark of *Hydrangea arborescens*, wild hydrangea, as an antiemetic for children but are also said to use the same thing to induce vomiting to “throw off disordered bile.”

Similar cases can be found in which the same plant is used as both a stimulant and a sedative. There are even a few cases in which a plant is considered poisonous by one group whereas for another it is used as an antidote for poisoning.

How are we to account for such apparent contradictions? I believe there is much in medicine, any form of medicine, that resists logic, rationality, and explanation. For example, modern Western biomedicine has a long history of treatments once deemed essential that are now considered nonsense. Historians seem generally to agree, for example, that George Washington was bled to death by his physicians. It is likely that some of the treatments we use today will be ridiculed in a decade (as will some of their replacements in another decade). In addition, some physicians are better than others. The most highly trained physicians can make mistakes, as seen in many malpractice suits in our courts. There is no reason to believe that Native American physicians had a monopoly on accuracy. They doubtless made mistakes, too, and some of these mistakes are probably reported in the material in this book.

Some treatments that seem paradoxical may be homeopathic in some sense. The bulk of Western medicine is said to be allopathic. In allopathy, disease is fought by using its opposite, or something that acts against the disease, such as an antibiotic. Homeopathy treats disease by prescribing drugs, usually in very small doses, that produce symptoms resembling the disease being treated. The logic of homeopathy suggests that you should take some of the hair of the dog that bit you. It also underlies the practice of vaccination for smallpox or measles in which a controlled and attenuated case of an illness is induced to develop an immunity to a real infection. Such logic may make sense of the notion that what one group recognized as a poison, another group may have recognized as a homeopathic treatment for poisoning.

Some of the seemingly paradoxical cases may be the result of confusion on the part of the Native Americans consulted, errors in understanding by the investigator, or both. Some errors in understanding may be due to mistranslation. It is unlikely that such errors are restricted to paradoxical cases—the potential of such errors in any case urges us to be careful with *all* the information gathered here.

These reservations do not undercut the real value of the information gathered in *Native American Ethnobotany*. There is no doubt that Native Americans had a huge reservoir of real knowledge about the medicinal values of plants. But they were human beings who also made mistakes, who sometimes understood things wrongly, or differently. That there may be some errors in the information gathered here does not make everything wrong; it does mean that just because something has been reported does not make it true.

## Plants Used as Foods

There are 1649 species included in *Native American Ethnobotany* that were used for food by Native Americans. They are an extremely diverse assortment of species. The listing of Plant Usage Categories toward the end of this chapter defines the many sorts of food use that appear in the Catalog of Plants. The 10 plants with the greatest number of uses as foods by Native Americans are

<i>Prunus virginiana</i> , common chokecherry	163
<i>Yucca baccata</i> , banana yucca	126
<i>Zea mays</i> , corn	121
<i>Amelanchier alnifolia</i> , Saskatoon serviceberry	117
<i>Prosopis glandulosa</i> , honey mesquite	79
<i>Rubus idaeus</i> , American red raspberry	74
<i>Carnegia gigantea</i> , saguaro	72
<i>Rubus spectabilis</i> , salmonberry	72
<i>Rubus parviflorus</i> , thimbleberry	71
<i>Typha latifolia</i> , broadleaf cattail	71

Is there a relationship between the food plants and the medicinal plants? We have noted that many medicines are plant substances that are toxic; they are often herbicides or insecticides or the like. It is not at all uncommon for medicines to be poisonous. In most societies, medicines are considered dangerous, or powerful, or are associated with strong powers in nature. They are often under the control of people with elaborate and esoteric training, for example, shamans and physicians. In Western culture, medicines are often only available by prescription, presumably because they are dangerous, or poisonous, or addicting. In any event, it seems a reasonable prediction that foods and drugs would be quite different, that these would be discrete categories.

Quite surprisingly, food and drug plants are not so discrete. There is a remarkable overlap of the two categories. [Much of the interpretation of such overlap that follows is based on a mathematical and statistical argument, details of which are complex and do not require full explanation here. Aficionados can read more about the background of this argument by consulting a paper of mine: An Analysis of the Food Plants and Drug Plants of Native North America. *Journal of Ethnopharmacology* 52: 1–22. 1996.]

One way to see overlap between food and drug plants is to notice that there are a number of plant families that have disproportionate shares of both kinds of plants, among which are the parsley family (Apiaceae), honeysuckle family (Caprifoliaceae), heath family (Ericaceae), oak family (Fagaceae), pine family (Pinaceae), and rose family (Rosaceae). These plants may produce nutritious and edible parts (often fruits or seeds) that attract animals, probably to facilitate plant dispersal. At the same time, however, they may produce noxious and poisonous substances to protect other aspects of their integrity.

The Rosaceae, an excellent example of this proposition, includes apples (*Pyrus*) and almonds, cherries, peaches, and pears (all *Prunus*) yet is also characterized by what we may think of as the “poisoned apple syndrome.” Many members of the rose family produce nutritious and attractive fruits; they also produce quite toxic substances that occur in the leaves, bark, and pits of the fruits of many species. Among these chemicals are a class of cyanogenic glucosides (about 24 have been identified). Their toxicity occurs because they release cyanide gas when combined with certain enzymes; usually this occurs if the appropriate plant parts are crushed or chewed. Amygdalin is one of several cyanogenic glucosides produced by various species of Rosaceae that “can give rise to cyanide poisoning. Usually this is only moderate, with distress, but occasionally more serious poisoning gives rise to loss of consciousness, and serious respiratory trouble. Apnoea and fatal collapse are exceptional, but have occurred” (F. Bodin and C. F. Cheinisse, page 162 in *Poisons*. New York: McGraw-Hill. 1970).

People have died eating apple pits; “poisoned apple” is redundant. In this manner the plants can attract various browsers to them to aid in dispersion of the seeds but simultaneously protect the seeds from being destroyed. At the same time, in moderation, people have made medicinal use of these chemicals, as the rose family is an important source of plant medicines. Of 836 North American species of Rosaceae, 56 (7%) have been used medicinally by Native Americans, typically for treatment of dermatological, gastrointestinal, and gynecological problems of many sorts, 23 (3%) have been used as food, and a significantly larger number, 77 (9%), as both food and medicine.

Other good examples of food–drug overlap are found in the honeysuckle family, Caprifoliaceae. Of the North American plants in the family, 7 of the 11 genera and 30 of the 88 species were used medicinally by Native Americans, 5 of the genera and 17 of the species were used as foods, and 16 of the species used as foods were also used as medicines.

Members of the Caprifoliaceae, like those of Rosaceae, produce significant quantities of cyanogenic glycosides. One genus, *Sambucus* (elderberry), has been shown to produce a whole series of them, including holocalin, prunasin, sambunigrin, and zierin. *Sambucus* also produces a series of alkaloids, most of which probably act to inhibit excessive browsing by birds. It is the most heavily used of the seven medicinal genera in the family and is particularly interesting. Some species of *Sambucus* provide edible fruits. The earliest recipe of which I am aware that calls for elder is from Apicius’s cookbook, written during the reign of Tiberius, A.D. 14–37. He recommended a sort of omelet of eggs, elderberries, pepper, wine, and *liquamen* (a sauce made of fish and salt, of the order of Worcestershire). Elderberries are generally cooked, dried, or fermented before they are eaten to moderate the effects of several emetic alkaloids. These substances are probably responsible for the common use of the plants as emetics, cathartics, or laxatives (comprising 55 of the 241 drug uses). Although most of the food uses of elder reported in *Native American Ethnobotany* involve such cooking or drying, in a number of cases it is reported that the berries were eaten raw!

So, on the one hand, there is a substantial overlap of food plants and medicinal plants. There are a number of other families with overlaps like the ones described. Overall, in the data collected here, there are 3244 species used for *either* food or drug, 987 of which are used for *both* food and drug. But on the other hand there are 662 species used for food and not medicine, and 1595 used for medicine and not food. Moreover, it is often the case that for species used for both food and medicine, different plant parts are used. For those cases in which the plant part used can be identified, it is far more likely for a root to be used for a medicine (35%) than for a food (9%). Likewise, it is far more likely for a fruit to be used for a food (47%) than for a medicine (12%). So the food–drug situation is complex, and simple assertions (“foods and medicines are different” or “foods and medicines are the same”) just will not do.

## Plants Used as Fibers and Dyes

There are far fewer fiber and dye plants than medicinal or food plants—442 fiber plants and 217 dye plants are documented in *Native American Ethnobotany*. In part that is because I did not seek out all possible sources of information on fiber plant

usage as intensively as I did those for drugs and foods. Most of the items included here (see Plant Usage Categories toward the end of this chapter for listings of the uses that appear in the Catalog of Plants) are from comprehensive ethnobotanical works that included fiber or dye plants along with drugs, foods, and the rest. There are, however, several sources explicitly devoted to fibers that have been checked, including Barrett's *Pomo Indian Basketry*, Kelly's *Yuki Basketry*, and Kirk's *Panamint Basketry*.

The plants most widely used for fibers are a diverse lot. The 10 plants with the greatest number of uses as fibers by Native Americans are

<i>Thuja plicata</i> , western red cedar	188
<i>Typha latifolia</i> , broadleaf cattail	105
<i>Betula papyrifera</i> , paper birch	59
<i>Yucca baccata</i> , banana yucca	47
<i>Urtica dioica</i> , stinging nettle	36
<i>Picea glauca</i> , white spruce	35
<i>Tilia americana</i> , American basswood	35
<i>Yucca glauca</i> , small soapweed	35
<i>Chamaecyparis nootkatensis</i> , Alaska cedar	34
<i>Apocynum cannabinum</i> , Indian hemp	33

Most widely utilized is *Thuja plicata*. It has been used to make baskets, to make thread for sewing boxes together, and its bark has been used to make everything from mats to cords to canoes to cradles to sanitary napkins. *Typha latifolia* comes in second with similarly diverse uses as a fiber. Its leaves have been used for weaving baskets and mats, and the fuzzy down has been used to stuff mattresses and for making quilts and baby diapers. Cattail is also an important food plant—the fleshy stems and roots are eaten by many Native American groups.

The 10 plants with the greatest number of uses as dyes by Native Americans are

<i>Alnus incana</i> , mountain alder	53
<i>Alnus rubra</i> , red alder	21
<i>Sanguinaria canadensis</i> , bloodroot	20
<i>Chrysothamnus nauseosus</i> , rubber rabbitbrush	16
<i>Rhus glabra</i> , smooth sumac	16
<i>Rumex hymenosepalus</i> , canaigre dock	14
<i>Populus deltoides</i> , eastern cottonwood	13
<i>Juglans nigra</i> , black walnut	12
<i>Rhus trilobata</i> , skunkbush sumac	11
<i>Juglans cinerea</i> , butternut	9

The taxonomic distribution of dye plants is quite interesting. The following analysis is based in part on the work of my student, Essam Khraizat, who spent several months studying the dye plants in the database, and we express our appreciation to the National Science Foundation for a Research Experience

for Undergraduates Award, which allowed that work to occur. Many are members of the sunflower family (Asteraceae), oak family (Fagaceae), pine family (Pinaceae), buttercup family (Ranunculaceae), or rose family (Rosaceae). The interpretation of why some plants produce important dyestuffs and others do not is similar to the analysis of medicinal plants. Oaks are a good example. The substances in the various oaks that are responsible for their ability to dye fibers are flavonoids. Depending on the plant, flavonoids may function in attracting or repelling pollinating birds and insects, regulating growth and photosynthesis, conferring antimicrobial activity, or responding to infection and injury. Although flavonoids occur in most plants, the amount varies greatly from species to species; oaks are very rich in flavonoids. There are several kinds of flavonoids, one of which is flavones. Quercetin, a flavone that occurs in high concentrations in the bark of oaks (genus *Quercus*), is a particularly strong dyestuff. One problem with modern synthetic dyes is that many are often quite toxic; some synthetic organic dyes are highly carcinogenic. Quercetin, too, is carcinogenic.

## Plants with Other Uses

Many American Indian plant uses do not fit comfortably into the categories of drugs, foods, fibers, or dyes. Classified here as Other, 1074 species are documented as having such uses in *Native American Ethnobotany*. This very broad category includes all sorts of things, including hunting and fishing supplies (rods, lines, lures, traps, bows, arrows, spears, etc.), incense and fragrances, fuels, tools, and many more uses. The kinds of uses, which appear in the Catalog of Plants, are listed under Plant Usage Categories toward the end of this chapter. Among such uses are more than 750 we have classified under Ceremonial Items. Ceremonial items include a very wide range of plants or plant parts used for making talismans for various chants and religious ceremonies, for making shamans' rattles, for use in various activities at funerals, and the like. The 10 plants with the greatest number of Other uses by Native Americans are

<i>Thuja plicata</i> , western red cedar	121
<i>Taxus brevifolia</i> , Pacific yew	84
<i>Betula papyrifera</i> , paper birch	76
<i>Pseudotsuga menziesii</i> , Douglas fir	72
<i>Pinus edulis</i> , twoneedle pinyon	61
<i>Cornus sericea</i> , red osier dogwood	58
<i>Tsuga heterophylla</i> , western hemlock	56
<i>Arctostaphylos uva-ursi</i> , kinnikinnick	51
<i>Urtica dioica</i> , stinging nettle	51
<i>Holodiscus discolor</i> , ocean spray	49

Perhaps the most interesting thing about this list of 10 is that the first 7 are trees. This is somewhat surprising since only about 9% of the plants in North America are trees, yet they are disproportionately represented in this Other category. A few particular items also stand out. *Taxus brevifolia* is a relatively inconspicuous understory tree in Pacific forests made up primarily of *Pseudotsuga menziesii*, *Sequoia sempervirens* (redwood), or other trees. Yet 30 different western tribes are reported to have used it to make bows, several saying it made the very best bows. As discussed above under Plants Used as Drugs, the tree is also interesting as it is the source of a chemical known as taxol, which has been approved by the U.S. Food and Drug Administration as a treatment for ovarian cancer. There is much to learn by browsing through the many items listed under what otherwise appears to be a less than interesting category, Other!

Among the uses classified as Other are a few dozen cleaning agents. In particular, there are a number of plants regularly used on the Pacific Northwest coast to clean up after handling fish. Also, plant materials are used as containers, cooking tools, decorations, designs, fasteners, fuels, and weapons.

One particularly interesting category is that of Smoke Plant. There are 100 different species used in various smoking mixtures although a half dozen account for most of the 308 uses reported here. In first place is *Arctostaphylos uva-ursi*, kinnikinnick. The word kinnikinnick may be spelled five or six different ways; it comes from a Delaware Indian language and means something like “item for mixing in.” It was not uncommon for American Indian people to mix together several different things to make their smoking materials. Often, in addition to kinnikinnick, they would use one of several kinds of tobacco, *Nicotiana*, as well as the leaves or bark of silky cornel, *Cornus sericea*, a plant closely related to the flowering dogwood. Other plants widely used for smoking were the dwarf sumac, *Rhus glabra*, and the prairie rose, *Rosa arkansana*.

Smoke plants often had medicinal uses as well. Often one smoked a pipe of various plant leaves and barks as a sort of prayer for better health. The medical, ceremonial, and religious elements of life were twined together, and I sort them out here at my peril.

## Conclusions on Usages

There is an enormous amount of real human knowledge contained in *Native American Ethnobotany*. The earliest evidence we have of human beings using plants for medicine comes from the Middle Paleolithic site of Shanidar in northern Iraq, dated about 60,000 years ago. People have been experimenting with nature since then (and perhaps before), learning

what could be eaten, what would stop bleeding or relieve pain, what would make good baskets or colors. People first came to the Americas about 15,000 years ago and have been studying the plants of the two continents ever since. Given that the floras of North America and China are remarkably alike, it is possible that the earliest Asian immigrants to North America saw recognizable plants when they got here.

Much of this accumulated knowledge of useful plants, slowly wrung from nature over millennia, has in a few centuries been lost, at least lost as a part of normal human life. There are specialists—anthropologists, ethnobotanists, phytochemists, pharmacognosists—who are aware of some portions of what this book contains. But in past times this was to a large degree the knowledge of ordinary people. Surely there were specialists, people who were more interested than others in these matters, and they may even have developed esoteric knowledge that they kept to themselves for personal profit. But generally this was normal human knowledge, part and parcel of everyday life. People walked in the world and saw plants they knew to be useful for various purposes. Their children learned of these matters as naturally as our children learn the names of baseball teams or athletic shoes or rock bands. In a world where one may buy a bottle of aspirin tablets at a grocery store for little more than the price of the bottle there is not much need for people to be able to recognize willow, black birch, spiraea, or wintergreen as naturally occurring painkillers.

And I do not believe there is a need for anyone to give up on aspirin tablets and rely on willow twigs. One need not eat medicinal plants in order to appreciate them, any more than a bird-watcher needs to eat a curlew to enjoy it. But when one knows something of the uses people have made of thousands of the wild plants around us, the plants take on a new meaning, a new value greater than their beauty or their cooling shade or their pleasant scent.

## Sources of Information on Plant Usages

*Native American Ethnobotany* is based on the research of hundreds of scholars. I have accumulated the material included here over a period of more than 25 years. In that period, any time I saw an item containing useful information, I made a note of it. In addition, in 1993 I did an intensive search of the literature using traditional techniques such as reading bibliographies as well as using computerized search techniques. I examined approximately 500 possible sources. The information gathered here is based on material from 206 of those sources, enumerated in the Bibliography.

The criteria for selecting a source to be included were fairly simple. First, the material had to be primary, that is, based on

original work with Native Americans who used the plants. I excluded all secondary material, that is, material based on prior published work. If I found an interesting secondary source I examined its bibliography to identify original sources that had yet to be consulted. In a few cases the primary source was not written by the individual who actually did the fieldwork. For example, source 59, by Catherine Fowler, is based on primary research done many years earlier by Willard Z. Park with the Northern Paiute, work that was not published at the time. As a second criterion, the source had to have reasonably clear scientific plant names, the plant identifications preferably having been made by professional botanists. Third, at least some of the information had to come from Native Americans living north of the Rio Grande. Fourth, information was coded only once even if it was published several times. In such cases I tried to use the earliest publication, but sometimes I used a later one if it had better plant identifications. Whereas the average number of plant usages coming from each source is 217.5, the range is from 1 to 2947. The oldest source was published in 1840, the most recent in 1993.

Concerning the second criterion, on the accuracy of plant identification, although sources were used in which care had been taken in this matter, no doubt some plants were misidentified and thus misnamed. Or, in some cases, if the plant were reidentified now, another identification might be made because, for example, what may have been recognized as one species at the time the plant was originally identified may now be recognized as two similar species. Which of those two (or both) species was used cannot be determined without a reidentification. Such reidentification is possible when a sample of the plant was dried, pressed, and preserved in an herbarium for reexamination. Such specimens are called vouchers. Although vouchers exist in various herbaria for some of the sources, unfortunately some sources' identifications do not rest on vouchered collections. "Suspect" identifications must be reverified by recourse to vouchers, when they exist.

And there is further work to do on the plants themselves, as documented in *Native American Ethnobotany*. For example, sometimes plants were originally identified in the sources only to the level of genus; these include the "sp." entries under various genera in the Catalog of Plants. The particular species (one or more than one species) may yet be identified, if vouchers exist. Apart from the matter of the accuracy of identification, the precision of identification in *Native American Ethnobotany* depends on that in the original sources. For example, in some species different subspecies or varieties may be recognized. If one source reported a plant named only to the level of species, and another source reported a plant to the level of subspecies or variety (or used a name that can be

attributed to a particular subspecies or variety), then the usages will be listed in the Catalog of Plants under the species, or under the subspecies or variety, respectively. Thus the usages of *Rhus trilobata* by the Kiowa were reported in two sources, and because the sources used plant names that can be determined to different levels of precision, some uses are reported under the entry for *R. trilobata*, and others under that for *R. trilobata* var. *trilobata*.

## Plant Usage Categories

There are 186 different plant usage categories in *Native American Ethnobotany*. They are all defined in the following list under the five major categories used in the Catalog of Plants: Drug, Food, Fiber, Dye, Other. Some care needs to be exercised in the interpretation of certain categories. Under Drug, for example, there are a number of uses described for particular diseases: Cancer Treatment, Tuberculosis Remedy, etc. Most of these disease categories have a minimum of 50 to 60 items (particular bits of information about plants used in those ways) listed under them, and some are very large with hundreds or more. Some treatments for specific diseases without a category of their own are classified under Miscellaneous Disease Remedy. A few examples of such are treatments for diabetes, flu, and measles. But listed under one of the other major usage categories, Other, are usages not for a particular disease (such as flu) but for plants said to be used for treatments such as antibiotics, or for sunstroke, or for "strengthening veins."

A subcategory that may appear under any of the major categories (Drug, Food, Fiber, Dye, Other) is Unspecified. For example, a source may state that a plant is used as a medicine but reports nothing about the particular use. "The plant is used medicinally" would be a typical report classified under Drug, Unspecified. Or under Food, for example, it is common for a source to report that a particular plant is eaten but not specify in any more detail how, what part, in what form, or when. Such usages are classified under Food, Unspecified. "Unspecified" is a very large category, including 567 reports under Drug, 2756 under Food, 8 under Fiber ("plant used for its fibers"), and 95 under Dye ("plant used as a dye"). Finally, there are 30 usages classified under Other, Unspecified. In all such cases the source reported the name of the plant but no uses for it were specified.

## Drug

*Abortifacient*. Drug designed to eliminate a pregnancy, to induce an abortion, or to "bring on a delayed period" (an emmenagogue). See also Contraceptive.

- [Drug]
- Adjuvant.* An item that is a subordinate element in medicines that helps them work or taste better.
- Alterative.* An alterative is something that changes the character of one's system. This category is used only if the term alterative actually appears in the source.
- Analgesic.* Drug that relieves pain.
- Anesthetic.* Drug that reduces the sense of touch or pain.
- Anthelmintic.* Drug used for the treatment of intestinal parasites.
- Anticonvulsive.* Drug that stops or prevents convulsions or fits.
- Antidiarrheal.* Drug used to stop diarrhea.
- Antidote.* Drug that negates the effects of a poison. See also Poison.
- Antiemetic.* Drug that inhibits vomiting.
- Antihemorrhagic.* Drug that stops hemorrhage, especially internal bleeding. See also Hemostat.
- Antirheumatic (External).* Drug used for rheumatism or arthritis and that is applied externally, for example, a liniment.
- Antirheumatic (Internal).* Drug used for rheumatism or arthritis and that is taken internally, for example, aspirin.
- Basket Medicine.* Drug that makes people buy baskets. If a prospective buyer picks up a basket, he will not be able to let go and will pay the price asked.
- Blood Medicine.* Medicine designed to purify or influence the blood.
- Breast Treatment.* Drug used to treat breasts.
- Burn Dressing.* All types of dressings applied externally to burns.
- Cancer Treatment.* Drug used to treat cancer or tumors. This category is used only if the word cancer explicitly appears in the source.
- Carminative.* Drug that relieves flatulence or "gas." Simethicone is a carminative.
- Cathartic.* Drug that causes evacuation of the bowels, a strong laxative; physic and purgative are synonyms of cathartic. See also Laxative.
- Ceremonial Medicine.* Medicine used as a part of ceremonies.
- Cold Remedy.* Medicine used for the relief or cure of colds.
- Contraceptive.* Drug used to prevent pregnancy. See also Abortifacient.
- Cough Medicine.* Medicine used for the relief or cure of coughs.
- Dermatological Aid.* Drug used to treat any conditions of the skin or hair: acne, dandruff, itching, etc.
- Diaphoretic.* Drug that causes sweating.
- Dietary Aid.* Drug that affects the diet or hunger in a situation involving illness, usually used to increase the appetite of a sick person with no appetite or to decrease it (as with "diet pills"). See also Dietary Aid, under Food, below.
- Disinfectant.* Drug used to eliminate "infection," literal or otherwise.
- Diuretic.* Drug that causes urination. See also Urinary Aid.
- Ear Medicine.* Drug used for earaches, deafness, or any other afflictions of the ear.
- Emetic.* Drug that causes vomiting.
- Expectorant.* Drug that promotes the ejection of mucus from the lungs, usually by spitting. See also Pulmonary Aid, and Respiratory Aid.
- Eye Medicine.* Drug used for any afflictions of the eye.
- Febrifuge.* Drug used to reduce fevers.
- Gastrointestinal Aid.* Drug used to treat distress of the digestive tract.
- Gland Medicine.* Drug used for the treatment of irregular glands: swollen, suppurating, etc.
- Gynecological Aid.* Drug used to treat problems surrounding pregnancy and childbirth and other problems specific to women.
- Hallucinogen.* Substance that induces hallucinations.
- Heart Medicine.* Drug used for the treatment of heart problems.
- Hemorrhoid Remedy.* Drug used for hemorrhoids or "piles."
- Hemostat.* Drug used to stop external bleeding. This category is also used for topical treatments for nosebleed (as in "leaves applied to nose for nosebleed"). See also Antihemorrhagic.
- Herbal Steam.* Herbs used medicinally in a steam bath for various ailments. Plants for smoking are classified as Smoke Plant, under Other, below.
- Hunting Medicine.* Medicine used to help a hunter find or capture prey.
- Hypotensive.* Drug used to reduce blood pressure.
- Internal Medicine.* Medicine used for various internal ailments. These are frequently very vaguely described, for example, "decoction of flowers taken for internal disorders."
- Kidney Aid.* Drug used for kidney troubles and the treatment of "dropsy," an anachronistic term for edema that appears often in older ethnobotanical literature.
- Laxative.* A mild treatment for constipation. See also Cathartic.
- Liver Aid.* Drug used for the treatment of various liver disorders.
- Love Medicine.* Drug used to procure love from another.
- Miscellaneous Disease Remedy.* Drug used for a particular disease, one not categorized elsewhere, such as ague, grippe, or rabies.
- Narcotic.* Drug that produces sleep or stupor, a strong sedative. See also Sedative.
- Nose Medicine.* Drug used for the treatment of various nose ailments. See also Hemostat.
- Oral Aid.* Drug used for the treatment of various mouth disorders.
- Orthopedic Aid.* Drug used for afflictions of the muscles or bones.
- Other.* Drug used for various conditions and ailments that are not diseases and not categorized elsewhere, such as heat prostration, meanness, and sunstroke.
- Panacea.* Drug used as a cure-all, a drug that will help any condition.
- Pediatric Aid.* Drug specifically mentioned as a treatment for children.
- Poison.* Substance that usually kills, injures, or impairs an organism. See also Antidote.
- Poultice.* Drug held against the skin.
- Preventive Medicine.* Drug that prevents various ailments.
- Psychological Aid.* Drug directed toward the mind and specifically toward issues of will or desire.

*Pulmonary Aid.* Drug used for lung conditions. See also Expecto- rant, Respiratory Aid, and Tuberculosis Remedy.

*Reproductive Aid.* Drug used by males or females to facilitate suc- cessful reproduction.

*Respiratory Aid.* Drug used to help breathing. See also Expecto- rant, and Pulmonary Aid.

*Sedative.* Drug that reduces excitement or upset, a “downer.” See also Narcotic.

*Snakebite Remedy.* Drug used for the treatment of snakebites.

*Sports Medicine.* Drug used by athletes for various complaints or to enhance performance.

*Stimulant.* Drug that stimulates or wakes a person up, an “upper.”

*Strengtheners.* Drug used to increase strength.

*Throat Aid.* Drug used for afflictions of the throat.

*Tonic.* Drug used as a tonic for various ailments. This generic cat- egory is only used when the term tonic is specifically men- tioned in the source.

*Toothache Remedy.* Drug used for toothaches as well as any other dental medicines.

*Tuberculosis Remedy.* Drug used for the treatment of tuberculo- sis. This category is used only when the source specifically mentions consumption, scrofula, or tuberculosis. Scrofula is a form of tuberculosis that affects the lymph nodes, especially of the neck. See also Pulmonary Aid.

*Unspecified.* Drug used as an unspecified medicine or to treat unspecified illnesses. This category is used if the source states something such as “plant used as a medicine” but with no more specific information.

*Urinary Aid.* Drug used for problems of the urinary tract and by men for sexual organ problems. See also Diuretic.

*Venereal Aid.* Drug used for any venereal disease: gonorrhea, syphilis, etc.

*Vertigo Medicine.* Drug for treating dizziness.

*Veterinary Aid.* Drug used to treat diseases and injuries of animals.

*Witchcraft Medicine.* Drug used for sorcery or magic.

## Food

*Appetizer.* Food or drink that stimulates the appetite and is usual- ly served before a meal.

*Baby Food.* Food prepared especially for babies or children.

*Beverage.* Beverages include beer, cider, coffee, intoxicants, tea, wine, and other drinks.

*Bread & Cake.* All biscuits, breads, cakes, cookies, doughnuts, dumplings, muffins, pancakes, stuffings, pones, rolls, and tor- tillas.

*Breakfast Food.* This category is used when the source specifical- ly mentions the term breakfast.

*Candy.* Candies, chewing gums, confections, and taffy.

*Cooking Agent.* Cooking oils, curdling agents, flavorings, food colorings, food thickeners, pectin, vinegars, and yeast.

*Dessert.* This category is used when the source specifically men- tions the term dessert.

*Dietary Aid.* Plant parts added to food to make it more digestible, to benefit the diet, to improve the (normal) appetite, or as a good source of vitamins. Items to help the appetite of a sick person are classed as Dietary Aid, under Drug, above.

*Dried Food.* Food sun or fire dried and usually stored for future use.

*Fodder.* Food fed to animals by people.

*Forage.* Food sought out by animals, usually by grazing or brows- ing.

*Frozen Food.* Food frozen and stored for future use.

*Fruit.* Fruit used fresh with no significant preparation.

*Ice Cream.* This category is used only when the source specifical- ly mentions ice cream.

*Pie & Pudding.* Savory or sweet pies and puddings. Basically, a pie is a pudding with a crust.

*Porridge.* A soft food made by boiling grain or legume meal in a liquid until thick, including atole, boiled hot cereal, gruel, hominy, mucilaginous mass, mush, and paste.

*Preservative.* Food additive used to protect against decay, discol- oration, or spoilage.

*Preserves.* Conserves, fruit butters, jams, jellies, marmalades, nut butters, pastes, preserves.

*Sauce & Relish.* Condiments, dips, gravies, ice cream toppings, relishes, sauces, sweet pickles, and syrups.

*Snack Food.* This category is used when the source specifically states the food was used for nibbles, refreshments, snacks, or tidbits. It is also used for popcorn.

*Soup.* Broths, chowders, pottages, soups, and stews.

*Sour.* Foods said to have acidic, bitter, sour, or tart tastes.

*Special Food.* Ceremonial foods, delicacies, rations, and food used for ritual meals and feasts.

*Spice.* Used to flavor, marinate, or season foods.

*Staple.* Foods used regularly, including cereals, flours, meals, pinoles, sugars, hominies, and rice. This category is also used when the source states that the item was used as a depend- able, important, main, principal, or staple food.

*Starvation Food.* Food said to be used in times of emergency, famine, food shortage, or need but generally avoided in ordi- nary times.

*Substitution Food.* Food used to take the place of another food when the latter was unavailable.

*Sweetener.* Nectars, sugars, sweetening flavors, and syrups.

*Unspecified.* A very large category with 2756 items. In many sources it is common to see something such as “the root of this plant was eaten” or “the inner bark was used for food.” When the food use was not specified any more clearly it has been classified as Unspecified.

*Vegetable.* Used for all foods described in the source as being greens, vegetables, or the like, for example, “the flower stalks were eaten as greens.”

*Winter Use Food.* Stored foods used during the winter months.

## Fiber

*Basketry.* Used to make all types of baskets.

*Brushes & Brooms.* Used to make any type of brush or broom.

*Building Material.* Used to make bath tubs, caches, corrals, doors, fences, floors, granaries, hearths, lodges, lumber, ramadas, roofs, sand breaks, shelters, sweat houses, thatch, wind breaks, etc.

*Canoe Material.* Used to make boats, canoes, dugouts, kayaks, rafts, and paddles.

*Caulking Material.* Used to stop up and make watertight the seams of various articles: boats, water bottles, etc.

*Clothing.* Used to make cloth and all types of clothing, including aprons, baby clothes, belts, capes, dresses, costumes, diapers, hats, overcoats, robes, sandals, shoes, skirts, and socks.

*Cordage.* Fiber made into string and ropes and used for many different applications.

*Furniture.* Used to make beds, chairs, cradles, etc.

*Mats, Rugs & Bedding.* Used to make mats for bedding, beds, blankets, cradle mats, curtains, cushions, head pads, flooring, kneeling pads, mattresses, pillows, place mats, quilts, rugs, sleeping bags, tarpaulins, towels, etc.

*Other.* Fiber used for various applications: as an absorbent, sanitary napkins, structures in weaving, for carving, etc.

*Scouring Material.* Plant parts used to polish, scour, sharpen, or smooth items.

*Sewing Material.* Plant parts used as embroidery stretchers, needles, thread, or for sewing things together.

*Snow Gear.* Used to make snow gear: skis, sleds, snowshoes, toboggans, etc.

*Sporting Equipment.* Used to make sporting equipment: balls, bats, hitting sticks, pucks, etc.

*Unspecified.* This category is used when plants were used as a source of fibrous material and fiber but a specific use is not given in the original source.

## Dye

Dyes are used to impart new and often permanent colors to various articles. The colors listed are from the sources and are sorted into the following categories: Black, Blue, Blue-Black, Brown, Gray, Green, Orange, Orange-Red, Orange-Yellow, Pink, Purple, Red, Red-Brown, Red-Yellow, White, Yellow, and Yellow-Brown. When the source does not state a color, the usage is classified as Unspecified. A material used to set the dye, to attempt to make it more permanent, is classified as a Mordant.

## Other

*Cash Crop.* Plant parts grown or gathered for sale or trade.

*Ceremonial Items.* Any item made from plant parts used for ceremonial purposes.

*Cleaning Agent.* Plant parts used to wipe or clean another object.

*Containers.* This category includes all types of containers: bags, boxes, buckets, carrying nets, coffins, hearths, pottery, reels,

trays, and quiver cases as well as the covers, liners, and stoppers for containers.

*Cooking Tools.* Any item used in the preparation and eating of food.

*Decorations.* Used to make bouquets, carvings, decorations, hair ornaments, makeup, masks, tattoos, and wreaths. This category is also used for house plants.

*Designs.* Used to make designs for baskets, beadwork, carvings, and in other decorative arts.

*Fasteners.* Many different types of fasteners, including buttons, closure pins, glues, lashings, and tepee pegs.

*Fertilizer.* Plants used to increase plant production.

*Fuel.* Plant material used for any sort of fuel, including charcoal, firewood, matches, and tinder.

*Good Luck Charm.* Plant parts used in various ways to bring good luck.

*Hide Preparation.* Plant parts used to cure, smoke, or tan animal hides.

*Hunting & Fishing Item.* Used to make hunting and fishing equipment: animal calls, arrows, bows, darts, fish nets and traps, fish poison, harpoons, hooks, snares, spears, etc.

*Incense & Fragrance.* All types of scents, including air fresheners, deodorants, perfumes, and sachets.

*Insecticide.* Used to kill, remove, or repel insects.

*Jewelry.* Used to make anklets, beads, bracelets, earrings, finger rings, labrets, necklaces, and wristlets.

*Lighting.* Used to make candles, oil lamp wicks, and torches.

*Lubricant.* Used to lubricate working parts.

*Malicious Charm.* Plant parts used to curse opponents in games or horse races, to do away with evil spirits after a death, or to cause other people bad luck.

*Malicious Magic.* This category is used for plants that brought unwanted weather or when the source specifically mentions "malicious magic."

*Musical Instrument.* Plant parts used to make any types of instruments: drums, drumsticks, flutes, musical rasps, rattles, trumpets, and whistles.

*Paint.* Used to make and inks, paints, stains, varnishes, and face paints. Paints are different from dyes in that they are applied on the surface whereas dyes change the color of the material itself.

*Paper.* Used to make cards, paper, pulpwood, and toilet paper.

*Plant Indicator.* The presence of this plant indicated the presence of another plant.

*Planting Seeds.* Seeds gathered from the plant and stored for future planting.

*Preservative.* Plant parts used for fishhooks, cedar bark bailers, tanning paddles, and to protect articles from decay.

*Protection.* Plant parts used in various ways as protection from animals, athletic opponents, evil spirits, ghosts, supernatural powers, warfare, weather, and witches.

**Sacred Items.** Plants or plant parts dedicated or set apart for the service or worship of deity.

**Season Indicator.** The appearance of some plant parts indicated fishing, hunting, planting, or harvesting times, the new year, seasons, or the types of weather to come, for example, “flowers indicate it is time to plant beans.”

**Smoke Plant.** Plant parts used for smoking materials. See also Smoking Tools, and Snuff.

**Smoking Tools.** Plant parts used to make pipes, pipe bowls, pipe stems, tamps, and cigarette papers. See also Smoke Plant, and Snuff.

**Snuff.** Used for snuff and chewing tobacco. See also Smoke Plant, and Smoking Tools.

**Soap.** Plant parts used as soap to clean various items, including the body.

**Stable Gear.** Plant parts used to make stable gear: bridle ropes, dog sled harnesses, ox yokes, saddle blankets, saddles, and stirrups.

**Tools.** Plant parts used to make various types of tools: awls, digging sticks, fire drills, planting sticks, seed beaters, tool handles, wedges, etc.

**Toys & Games.** Used to make several different kinds of toys and games: balls, children's rattles and whistles, gambling dice and sticks, popguns, slingshots, targets, etc.

**Unspecified.** This category is used for a few items when a source reported that a particular plant was named but apparently not used for anything.

**Walking Sticks.** Used to make canes, staffs, and walking sticks.

**Water Indicator.** Used as an indication of water location, quality of the water, or as a charm to make it rain.

**Waterproofing Agent.** Plant parts used to waterproof various items: baskets, bottles, boxes, hides, mittens, moccasins, water bottles, etc.

**Weapon.** Plant parts used to make weapons: armor, clubs, lances, spears, and war bows and arrows.

## Native Americans

The names of Native American or American Indian groups is a complicated matter. Even the phrase American Indian is problematic. Christopher Columbus and his followers were naive about the location of “India.” And so, many people now seem to prefer the term Native American. But it is also the case that indigenous peoples were here long before the continents of the New World were named after the Italian navigator, Amerigo Vespucci. In Canada, the generic term usually used is Native People. Yet the fact remains that many people have been quite happy with the term Indian. One of the radical movements of the 1960s, for example, was known as AIM, the American Indian Movement. Since these names often have political significance it is for all practical purposes impossible to refer generically to the indigenous population of

the Americas without offending someone, but such is not the intention here.

There are similar problems with tribal names. A classic case is the name Eskimo. The word is, apparently, an English mispronunciation of a French mispronunciation of a Montagnais or Micmac word *ayashkimew*, which seems to have meant something like “eaters of raw meat,” intended as a nasty insult. The Eskimo people generally call themselves Inuit or Inuit, meaning “people.” I am unaware of the Inuit name for the Micmac but my guess is that it was equally insulting. Such derived names are not always insults, however. The name Navaho or Navajo is a Spanish variation on a Tewa word meaning “large arroyo with cultivated fields,” a place name. The Navajo name for themselves is Dene, meaning “people,” but many Navajo also call themselves Navajo. Again, the names used to refer to particular Native American tribes can occasion political debate. Referring to one group by a term that means “people” implicitly asserts that other groups are something other than people, for example. Names used in *Native American Ethnobotany* are not intended in any way to offend anyone. I have elected to use the names for peoples reported in the original sources. This means that material for “the same people” is sometimes listed under different designations, but rarely is it for the same people at the same time. There are 291 groups mentioned in *Native American Ethnobotany*, as listed below. The reference numbers below correspond to the sources enumerated in the Bibliography, from which information on each of the peoples was obtained:

**Abnaki.** Saint François du Lac, about 100 miles (160 km) northwest of Montréal, Quebec (144).

**Acoma.** A pueblo in western central New Mexico (32, 200). See also Keresan, and Keres, Western.

**Alabama.** Located on a state reservation on the Trinity River in Polk County, Texas (172, 177).

**Alaska Native.** Alaska (85).

**Aleut.** Seventeen Aleutian Islands lie between the Alaska Peninsula and Attu, Alaska (7, 8, 149, 189).

**Algonquin.** New England (22).

**Algonquin, Quebec.** Western Quebec (18).

**Algonquin, Tête-de-Boule.** Manouan, about 260 miles (420 km) north of Montréal, Quebec (132).

**Anticosti.** On the Ile d'Anticosti in the Saint Lawrence River, north of the Gaspé Peninsula, Quebec (143).

**Apache.** Various Apache groups live in Arizona and New Mexico (17, 32, 47, 121, 138).

**Apache, Chiricahua & Mescalero.** Chiricahua Apache ranged through western New Mexico, southeastern Arizona, and southward into Mexico; their eastern boundary began at the Rio Grande. The Mescalero Apache were principally located in

- New Mexico; the Rio Grande was their western boundary (33).
- Apache, Mescalero.** Southern New Mexico, western Texas, and northern Chihuahua, Mexico (14, 17).
- Apache, San Carlos.** The San Carlos Reservation is in eastern Arizona (95).
- Apache, Western.** Fort Apache Reservation, Arizona (26).
- Apache, White Mountain.** White Mountain, Arizona (136).
- Apalachee.** In the sixteenth and seventeenth centuries the Apalachee lived in Spanish Florida, what is now northern Florida and southern Georgia (81).
- Arapaho.** Between the Platte and Arkansas Rivers in eastern Colorado and southeastern Wyoming (19, 118, 121).
- Arikara.** Missouri River region, especially in South Dakota (70).
- Atsugewi.** North of the Sierra Nevada and south of the Pit River in northeastern California (61).
- Bannock.** Idaho (118).
- Bellabella.** The village of Bella Bella, British Columbia, is about 250 miles (400 km) northwest of Vancouver (184).
- Bella Coola.** The village of Bella Coola, British Columbia, is near the mouth of the Bella Coola River, about 250 miles (400 km) north northwest of Vancouver (74, 150, 184). See also Kimsquit.
- Blackfoot.** The Blackfoot hunted over the region of Montana, Alberta, and Saskatchewan. Blackfoot is a common spelling in Canada whereas Blackfeet is more common in the United States (82, 86, 97, 114, 118, 121).
- Cahuilla.** Southern California (15).
- California Indian.** California (19, 118).
- Canadian Indian.** British Columbia, Alberta, and Saskatchewan (97).
- Carrier.** Near Fort St. James and Anahim Lake in central and northern British Columbia (31, 89, 184).
- Carrier, Northern.** Near Hagwelget, in northwestern British Columbia (150).
- Carrier, Southern.** Near Ulkatcho, in northwestern British Columbia (43, 150).
- Catawba.** Along the Catawba River in the Carolinas (157, 177).
- Chehalis.** Western central coast of Washington state (79).
- Cherokee.** The Cherokees are found throughout much of western North Carolina (particularly in Graham and Cherokee Counties) and in northwestern Georgia. There are also many Cherokees in Oklahoma (80, 126, 169, 177, 203, 204).
- Cheyenne.** Montana and Oklahoma (19, 75, 76, 82, 83, 97).
- Cheyenne, Northern.** Montana (82).
- Chickasaw.** Information in source 28 was collected by Gideon Lincecum during the years 1800–1835 in Mississippi. Most Chickasaws are now in Oklahoma (28, 177).
- Chinook.** Southwestern coast of Washington state (79).
- Chinook, Lower.** Southwestern coast of Washington state (79).
- Chippewa.** Also known as the Ojibwa, Chippewas are located in the upper Midwest and southern Ontario. Source 51 describes the Ojibwa of northern Minnesota, primarily the Leech Lake, Red Lake, and White Earth reservations but also including a consultant from the Bois Fort reservation. Source 53 describes the Ojibwa of northern central Minnesota and the Manitou Rapids Reserve in Ontario. Source 71 describes people from Pinconning and Lapeer, Michigan, and Sarnia, Ontario. See also Ojibwa.
- Choctaw.** Saint Tammany Parish, Louisiana, on the northern shore of Lake Pontchartrain, is a center of the Choctaw region. Information in source 28 was collected by Gideon Lincecum during the years 1800–1835 in Mississippi (25, 28, 158, 177).
- Chumash.** Southern California (15).
- Clallam.** Olympic Peninsula, Washington (57).
- Coahuilla.** Southern California coast (13).
- Cochiti.** Pueblo Indians of New Mexico (32). See also Keresan.
- Cocopa.** Southwestern Arizona, and Baja California and Sonora, Mexico, generally along the lower Colorado River (37, 64).
- Cocopa & Yuma.** Lower Colorado River in Arizona (37).
- Cocopa, Maricopa, Mohave & Yuma.** The Cocopa, Mohave, and Yuma are located on the lower Colorado River in Arizona, and the Maricopa are located on the Gila River in Arizona (37).
- Coeur d'Alene.** The Coeur d'Alene Reservation is in northern Idaho (89, 178).
- Comanche.** The Comanche Indian Reservation is near Indianola, Comanche County, Oklahoma (29, 32, 99).
- Concow.** The Round Valley Indian Reservation is in Mendocino County, California, and stretches as a band about 60 miles (100 km) broad for 84 miles (135 km) along the coast, about midway between San Francisco and the Oregon border to the north (41). See also Numlaki.
- Costanoan.** The territory once occupied by the Costanoan Indians is in the Coast Ranges of central California. Their territory extended from San Francisco south to Big Sur and from the Pacific coast inland to the Diablo Range foothills (21).
- Costanoan (Olhonean).** Central California (117).
- Cowichan.** Southeastern coast of Vancouver Island, British Columbia (182, 186).
- Cowlitz.** Southern central Washington state (79).
- Cree.** The Cree range from the Northwest Territories (16) through central Alberta and southwestern Saskatchewan (97) to Montana (82).
- Cree, Alberta.** Northern Alberta (149).
- Cree, Hudson Bay.** Hudson Bay region, Canada (92).
- Cree, Plains.** Montana and North Dakota (113).
- Cree, Woodlands.** Saskatchewan (109).
- Creek.** Information from source 28 was collected by Gideon Lincecum during the years 1800–1835 in the original Creek homeland in Georgia. Most Creeks are today in Oklahoma (28, 169, 172, 177, 203).
- Crow.** A Siouan tribe living in southwestern Montana and northern Wyoming (19, 82).
- Dakota.** The Dakota, also known as the Lakota or Sioux, live on a

number of reservations in Montana, the Dakotas, Nebraska, and Minnesota (69, 70, 97, 121). See also Lakota, and Sioux.

**Delaware.** The Delaware originally lived on the East Coast. Today, some live in Ontario but most are in Oklahoma (176).

**Delaware, Oklahoma.** Oklahoma (175).

**Delaware, Ontario.** Ontario (175).

**Diegueño.** The Diegueño live throughout southernmost California, notably on the Santa Ysabel Indian Reservation in San Diego County (15, 37, 84, 88).

**Eskimo.** There are many communities of Inuit or Eskimo people across the Arctic regions of Alaska, Canada, and Greenland. Some sources describe individual villages whereas others are more general in their coverage. Source 149 describes some Alaskan Inuit and source 181 describes people living at Hudson Bay.

**Eskimo, Alaska.** Nelson Island, on the Bering Sea coast of the Yukon-Kuskokwim Delta, western Alaska (1), villages along the northern Bering Sea and Arctic Alaska (4), western and southwestern Alaska (128), and Kodiak, Alaska (149).

**Eskimo, Arctic.** Central Canadian Arctic and sub-Arctic (127, 128).

**Eskimo, Chugach.** These southern Alaskan Inuit are located east of the Kenai Peninsula along the coast to Controller Bay, Alaska (149).

**Eskimo, Greenland.** Greenland (128).

**Eskimo, Inuktitut.** Alaska, Canada, and Greenland (202).

**Eskimo, Inupiat.** Kotzebue in northwestern Alaska (98).

**Eskimo, Kuskokwagmiut.** Napaskiak, western Alaska (122).

**Eskimo, Nunivak.** Nunivak Island, Alaska (149).

**Eskimo, Western.** Lower Kuskokwim, Nunivak, and Nelson Islands on the western coast of Alaska (108).

**Flathead.** An Interior Salish tribe located in western Montana and Idaho, north of the Gallatin River, between the Rocky Mountains in the west and the Little Belt Range in the east (19, 82, 89, 97).

**Gabrielino.** Southern California (15).

**Gitksan.** The Gitksan live along the northern coast of British Columbia and along the Skeena River (43, 73, 74, 150).

**Gosiute.** In desert territory bordering the Great Salt Lake in Utah on the south and extending westward into eastern Nevada (39).

**Great Basin Indian.** Uintah-Ouray Reservation, Fort Duchesne, Utah (121).

**Green River Group.** South of Seattle, Washington (79).

**Gros Ventre.** An Algonquian tribe living in the Milk River area of northern Montana (19, 82, 118).

**Hahwunkwut.** Northern California (117).

**Haida.** The Haida live along the northern coast of British Columbia into southern Alaska as well as on the Queen Charlotte Islands off the coast of British Columbia (43, 79).

**Haihais.** Central coast of British Columbia (43).

**Haisla.** Central coast of British Columbia (43, 73, 74).

**Haisla & Hanaksiala.** Central coast of British Columbia (43).

**Hanaksiala.** Central coast of British Columbia (43).

**Havasupai.** Cataract Canyon, a side branch of the Grand Canyon

in northwestern Arizona (17, 162, 197, 200).

**Hawaiian.** Hawaii (2, 112).

**Heiltsuk.** Central coast of British Columbia (43).

**Hesquiat.** Coast of British Columbia and Hesquiat Harbor, Vancouver Island, British Columbia (43, 185, 186).

**Hidatsa.** Missouri River region, South Dakota (70).

**Hoh.** Hoh Village is near the mouth of the Hoh River on the western side of the Olympic Peninsula, Washington (137).

**Hopi.** The Hopi live in several villages on the Hopi Reservation in northeastern Arizona. The Hopi Reservation is surrounded by the Navajo Reservation (17, 32, 34, 36, 42, 56, 101, 120, 138, 190, 200, 205).

**Houma.** Louisiana (158).

**Hualapai.** Northwestern Arizona (195).

**Hupa.** Northern California (117, 118, 148).

**Huron.** The Hurons lived in southern Ontario and Michigan until the early nineteenth century. Now they live in Wisconsin (3).

**Iroquois.** The Iroquois live throughout upstate New York and in southern Quebec (87, 124, 141, 142, 196).

**Isleta.** The Isleta pueblo is located on the western bank of the Rio Grande, 12 miles (19 km) south of Albuquerque, New Mexico (32, 100).

**Jemez.** The Jemez pueblo is located on the Jemez river about 45 miles (72 km) northwest of Albuquerque, New Mexico (17, 32, 44, 100, 200).

**Kamia.** Imperial Valley in southeastern California (62).

**Kansa.** The Kansa, who give their name to Kansas, are now located in Oklahoma (68).

**Karok.** The Karok are located along the Klamath River in an area paralleling the California coast from above Bluff Creek in Humboldt County to Happy Camp in Siskiyou County (6, 117, 148).

**Kawaiisu.** East of Bakersfield in southeastern California (206).

**Keresan.** There are seven pueblos near Albuquerque, New Mexico, where the languages are classified as Keresan. The Eastern Keresan pueblos are Cochiti, San Felipe, Santa Ana, Santo Domingo, and Sia. The Western Keresan pueblos are Acoma and Laguna. All of these but Santa Ana and Santo Domingo are treated separately in this book (198). See also Acoma; Cochiti; Keres, Western; Laguna; San Felipe; Sia.

**Keres, Western.** The Acoma and Laguna pueblos (171). See also Keresan.

**Kiliwa.** Lower Colorado River valley (37).

**Kimsquit.** Bella Coola, British Columbia (184). See also Bella Coola.

**Kiowa.** Southern plains near the Arkansas and Red Rivers (19, 192).

**Kitasoo.** Central coast of British Columbia (43).

**Kitkatla.** Northern coast of British Columbia (43).

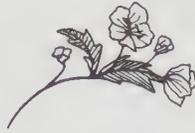

**Klallam.** Southern shore of Vancouver Island, British Columbia, and the northern central Olympic Peninsula, Washington (78, 79).

- Klamath.** Southern central Oregon (45, 46, 117, 118, 163).
- Koasati.** Southeastern United States (177).
- Konomeho.** Northern California (117).
- Koyukon.** Huslia and Hughes, Alaska (119).
- Kuper Island Indian.** Kuper Island, southwest of Nanaimo, Vancouver Island, British Columbia (182).
- Kutenai.** Montana (82).
- Kwakiutl.** Northern Vancouver Island and north of Vancouver Island on the mainland coast of British Columbia (20, 182, 183).
- Kwakiutl, Southern.** Central western coast of British Columbia and northeastern coast of Vancouver Island, British Columbia (183, 184).
- Kwakwaka'wakw.** Central coast of British Columbia (43).
- Laguna.** The Laguna pueblo is in New Mexico (32). See also Keresan, and Keres, Western.
- Lakota.** Standing Rock Reservation is located on the central border of North Dakota and South Dakota (106); Rosebud Reservation is in Todd County, South Dakota (106, 139). The Lakota are also known as Dakota and Sioux. See also Dakota, and Sioux.
- Lillooet.** British Columbia (89).
- Lolahnkok.** Northern California (117).
- Luiseno.** Southern California near San Juan Capistrano (15, 155).
- Lummi.** Northwestern border of Washington, near British Columbia (79).
- Lummi, Washington.** Northwestern Washington state (182).
- Mahuna.** Southwestern California (140).
- Maidu.** Sacramento, California (173).
- Makah.** Northwestern tip of the Olympic Peninsula, Washington (43, 67, 79, 186).
- Malecite.** New Brunswick, Canada (116, 160).
- Mandan.** North Dakota along the Missouri River near the mouth of the Heart River (19, 70).
- Maricopa.** Southern central Arizona (32, 37, 47, 95).
- Maricopa & Mohave.** The Maricopa are located on the Gila River in Arizona; the Mohave are located on the lower Colorado River in Arizona (37).
- Mendocino Indian.** Mendocino County, California, halfway between San Francisco and the Oregon border (41).
- Menominee.** Wisconsin (54, 151).
- Meskwaki.** Tama, Iowa (152).
- Mewuk.** Central California (117).
- Micmac.** Nova Scotia, Prince Edward Island, New Brunswick east of the St. John River, and part of the Gaspé Peninsula, Quebec (40, 116, 145, 156, 159, 194).
- Midoo.** Central California (117).
- Missouri River Indian.** Montana (82).
- Miwok.** The Sierra Nevada together with the western foothills and a relatively small portion of the adjacent Sacramento-San Joaquin Valley, California (12).
- Modesse.** Northern California (117).
- Modoc.** Northern California and southern Oregon along the Lost River, as well as Tule, Klamath, and Clear Lakes (45).
- Mohave.** Lower Colorado River valley (32, 37, 168).
- Mohegan.** Connecticut (30, 174, 176).
- Montagnais.** Montagnais live throughout eastern Quebec, Lac-St.-Jean (24) and the northern coast of the Gulf of St. Lawrence and the lower St. Lawrence River (156), and Labrador (174).
- Montana Indian.** Montana (19, 82).
- Montauk.** Eastern end of Long Island, New York (30).
- Nanaimo.** Vancouver Island, British Columbia (182).
- Nanticoke.** Delaware (174, 175).
- Narraganset.** Rhode Island (30).
- Natchez.** Lower Mississippi River (172, 177).
- Navajo.** Arizona, New Mexico, and Utah (17, 23, 32, 47, 55, 56, 90, 97, 100, 110, 136, 138, 165, 200).
- Navajo, Kayenta.** Northeastern Arizona, near Monument Valley (205).
- Navajo, Ramah.** Western New Mexico (191).
- Neeshenam.** Bear River, Placer County, California (129).
- Nevada Indian.** Nevada (118, 121).
- Nez Perce.** Along the lower Snake River and its tributaries in western Idaho, northeastern Oregon, and southwestern Washington (19, 82, 97).
- Nimkish.** North of Vancouver Island on the mainland of British Columbia (183).
- Nisga.** Northern coast of British Columbia (43).
- Nisqually.** South of Puget Sound, Washington (79).
- Nitinaht.** Southwestern coast of Vancouver Island, British Columbia, from near Jordan River to Pachena Point, extending inland along Nitinat Lake (67, 185, 186).
- Nootka.** Southwestern coast of Vancouver Island, British Columbia (170, 185, 186).
- Nootka, Manhousat.** Vancouver Island, British Columbia (186).
- Northwest Indian.** Oregon and Washington (19, 118).
- Numlaki.** Round Valley Indian Reservation is in Mendocino County, California, midway between San Francisco and the Oregon border (41). See also Concow.
- Nuxalkmc.** Valley of the Bella Coola River, South Bentinck Arm, Tallio Inlet, and Kimsquit in western central British Columbia (43).
- Oglala.** South Dakota (70).
- Ojibwa.** Also known as the Chippewa, Ojibwas are located in the upper Midwest and southern Ontario. Source 5 describes the Ojibwa north of lakes Superior and Huron in Ontario. Source 96 describes people on Parry Island, located on the eastern central side of Georgian Bay, Ontario. The Fort Bois Ojibwa described in source 135 live on a reservation 140 miles (225 km) northwest of Duluth, Minnesota. People described in source 153 live in northern Wisconsin. See also Chippewa.
- Ojibwa, South.** Red Lake and Leech Lake, Minnesota (91).
- Okanagan-Colville.** Okanagan is the Canadian spelling. The Okanagan occupied the Okanagan and Similkameen River val-

- leys and the shores of Lake Okanagon on both sides of the U.S.-Canadian border. The Colville are located on the Colville Reservation in northeastern Washington state (74, 188). See also Okanagon.
- Okanagon.** Okanagon is the American rather than the Canadian spelling. The Okanagon are found on the Colville Reservation in Washington state and on various reserves in British Columbia (125, 164, 178). See also Okanagon-Colville.
- Omaha.** Nebraska (58, 68, 70).
- Oregon Indian.** Oregon (118).
- Oregon Indian, Warm Springs.** Warm Springs, Oregon (104, 118).
- Oto.** Eastern Nebraska along the Platte River (70).
- Oweekeno.** Western central coast of British Columbia (43).
- Paipai.** Southwestern United States (37).
- Paiute.** Paiutes generally live in the Great Basin region although some live in California and Oregon. People described in sources 15 and 104 are from Surprise Valley, California. Source 111 describes the Warm Springs Reservation, Oregon. The remaining sources (32, 118, 121, 167, 180) generally describe people living in Nevada.
- Paiute, Nevada.** Nevada (121).
- Paiute, Northern.** Western Nevada (59, 60).
- Paiute, Southern.** Northern Arizona, southern Utah, and southern Nevada and adjacent areas of California (15).
- Panamint.** Death Valley, California (105).
- Papago.** In desert regions south of the Gila River of Arizona and extending into Sonora, Mexico (17, 32, 34, 36, 47, 95, 118, 146).
- Papago & Pima.** Arizona (35).
- Pawnee.** Missouri River region (70).
- Pend d'Oreille, Upper.** Montana (82).
- Penobscot.** Northern New England and the maritime provinces of Canada. There is a Penobscot Reservation in Maine (156, 174).
- Pima.** Gila and Salt River valleys of southern Arizona (17, 32, 36, 47, 95, 146).
- Pima, Desert.** Southwestern Arizona (133).
- Pima, Gila River.** North of Jalisco, Mexico, to Phoenix, Arizona (133).
- Pima, Lehi.** Lehi, Arizona (47).
- Pit River.** Northern California (41, 117).
- Plains Indian.** Montana (82, 97).
- Poliklah.** Northern California (117).
- Pomo.** Sonoma, Mendocino, and Lake Counties, California (9, 11, 41, 66, 117, 118).
- Pomo, Calpella.** Northern California (41).
- Pomo, Kashaya.** Western coast of Sonoma County, California (72).
- Pomo, Little Lakes.** Northern California (41).
- Pomo, Potter Valley.** Northern California (41).
- Ponca.** The Northern Ponca are located in Nebraska and South Dakota whereas the Southern band is located in Oklahoma (70, 94).
- Potawatomi.** Wisconsin (154).
- Pueblo.** New Mexico and Arizona (32, 34).
- Puyallup.** Southeastern side of Puget Sound, Washington (79).
- Quileute.** Western coast of the Olympic Peninsula, Washington (67, 79, 137).
- Quinault.** Southwestern coast of the Olympic Peninsula, Washington (79, 201).
- Rappahannock.** Virginia (30, 161).
- Ree.** Montana (19).
- Rocky Boy.** Rocky Boy Reservation, Montana (118).
- Round Valley Indian.** Round Valley, 200 miles (320 km) north of San Francisco in northern California (41).
- Saanich.** Southeastern side of Vancouver Island, British Columbia (182).
- Salish.** North of Vancouver Island on the mainland coast of British Columbia (178, 182, 183, 185).
- Salish, Coast.** Northern central side of Vancouver Island and north of Vancouver Island on the mainland of British Columbia (182, 183).
- Salish, Cowichan.** Southeastern side of Vancouver Island, British Columbia (182, 186).
- Salish, Halkomelem.** Vancouver Island, British Columbia (186).
- Salish, Straits.** Vancouver Island, British Columbia (186).
- Samish.** Northwestern coast of Washington, near the British Columbia border (79).
- Sanel.** Mendocino County, California (41).
- San Felipe.** The San Felipe pueblo is in New Mexico (32). See also Keresan.
- San Ildefonso.** The San Ildefonso pueblo is located about 20 miles (32 km) north of Santa Fe, New Mexico, on the eastern bank of the Rio Grande (138).
- Sanpoil.** South of the Columbia River in northeastern Washington (89, 131, 188).
- Sanpoil & Nespelem.** South of the Columbia River in northeastern Washington (131, 188).
- Santa Clara.** The Santa Clara pueblo is about 25 miles (40 km) north of Santa Fe, New Mexico, on the western bank of the Rio Grande (138).
- Seminole.** Southern Florida (169).
- Seri.** Isla Tiburon in the Gulf of California, Mexico (50).
- Shasta.** Along the Klamath River in northern California near the Oregon border (93, 117).
- Shinnecock.** Long Island, New York (30).
- Shoshoni.** Most Shoshoni are in Nevada but they extend into Montana and central California (82, 97, 117, 118, 121, 180).
- Shuswap.** Southern interior plateau of British Columbia (89, 123, 178).
- Sia.** Sia (sometimes Zia) is a Keresan pueblo near Albuquerque, New Mexico (199). See also Keresan.
- Sierra.** California (41).
- Sikani.** Headwaters of Peace River in British Columbia (150).

- Similkameen.** Various reserves in British Columbia (164).
- Sioux.** The Sioux, also known as the Dakota or Lakota, hunted buffalo across the Great Plains from Minnesota to Wyoming and Montana (19, 82, 118, 153). See also Dakota, and Lakota.
- Sioux, Fort Peck.** The Fort Peck Reservation is in northern Montana (19).
- Sioux, Teton.** Wyoming and Montana (52).
- Skagit.** Northwestern Washington state (79).
- Skagit, Upper.** Northern Cascade Range, Washington (179).
- Skokomish.** Western central side of Puget Sound, Washington (79).
- Snake.** Montana (19).
- Snohomish.** Northeastern side of Puget Sound, Washington (79).
- Snuqualmie.** Central Washington (79).
- Songish.** Southeastern side of Vancouver Island, British Columbia (182).
- Southwest Indians.** Southwestern United States (17).
- Spanish American.** Southwestern United States (32).
- Spokan.** The Spokane Reservation is in eastern Washington, the Colville Reservation in Washington, and the Coeur d'Alene Reservation in Idaho (178).
- Squaxin.** South of Puget Sound, Washington (79).
- Stony Indian.** Montana (82).
- Swinomish.** Northwestern coast of Washington state (79).
- Tanaina.** Near Anchorage, Alaska (149).
- Tanana, Upper.** Alaska between Anchorage and Fairbanks (77, 102, 115).
- Tarahumara.** Arizona and northern Mexico (17).
- Tewa.** Near Santa Fe, New Mexico (17, 32, 42, 138).
- Tewa of Hano.** Near Santa Fe, New Mexico (138).
- Thompson.** Southwestern British Columbia (89, 125, 164, 178, 187).
- Thompson, Lower.** On the lower Fraser River in British Columbia (89).
- Thompson, Upper (Fraser Band).** Along the Fraser River above Lytton, British Columbia (164).
- Thompson, Upper (Lytton Band).** Lytton, British Columbia (164).
- Thompson, Upper (Nicola Band).** Along the Nicola River from a few miles above Spences Bridge to above Nicola Lake in British Columbia (164).
- Thompson, Upper (Spences Bridge).** Along the Thompson River from Lytton to Ashcroft, British Columbia (164).
- Tlingit.** Southeastern coastline of the Alaska panhandle from Yakutat Bay to Cape Fox (79, 107, 149).
- Tolowa.** Northwestern California (6).
- Tsimshian.** Northwestern coast of British Columbia into the southeastern portion of the Alaska panhandle (43, 73, 74, 79).
- Tsimshian, Coast.** Western central coast of British Columbia (43).
- Tubatulabal.** California (193).
- Ukiah.** Ukiah, Mendocino County, northern California (41).
- Umatilla.** Along the Umatilla and Columbia Rivers in Oregon (45, 89).
- Ute.** Western Colorado and eastern Utah (32, 34, 38, 45, 118).
- Wailaki.** Round Valley Reservation in Mendocino County, northern California (41, 118).
- Walapai.** Cataract Canyon, northwestern Arizona (17, 162, 197).
- Warihio.** Lower Colorado River valley (37).
- Washo.** Near Lake Tahoe on the California-Nevada border (10, 118, 121, 180).
- West Coast Indian.** West Coast of the United States (134).
- Wet'suwet'en.** East of the western central coast of British Columbia (73).
- Weyot.** Northern California (117).
- Winnebago.** Originally living near Green Bay, Wisconsin, the Winnebago now occupy reservations in Wisconsin and Nebraska (70, 130).
- Wintoon.** Central California (117).
- Yana.** Northern California (147).
- Yaqui.** Guadalupe, Arizona (47)
- Yavapai.** Western Arizona (17, 63, 65).
- Yokia.** Ukiah, Mendocino County, northern California (41).
- Yokut.** Central California (117).
- Yuki.** Round Valley, Mendocino County, northern California (9, 41, 48, 49, 103, 118).
- Yuma.** Lower Colorado River valley in Arizona (32, 34, 37).
- Yurok.** Northwestern California (6).
- Yurok, South Coast (Nererner).** Northwestern California (117).
- Zuni.** The Zuni pueblo is about 40 miles (64 km) southwest of Gallup, New Mexico (17, 27, 32, 34, 136, 166).

# Organization of the Information in *Native American Ethnobotany*

## Scientific Plant Names

The first principle underlying the organization of *Native American Ethnobotany* is that the book is to be used for finding all the known uses of a given plant by Native Americans. The information is, therefore, organized in the Catalog of Plants alphabetically by the scientific names of the plants.

## Genera and Species

Scientific plant names have a very particular form, for example, for balsam fir, a member of the plant family Pinaceae, *Abies balsamea* (L.) P. Mill. The first two words in the name, *Abies balsamea*, are, respectively, the genus (plural, genera) and the species (plural, species), in combination called a binomial. One may think of them rather like the surname and first name of a person, "Doe, John," in the order he would be listed in a telephone directory, last name first. The names are in a special form of Latin agreed on by botanists and are usually printed in italics or underlined. In this book, seven different species of the genus *Abies* are listed together in the first pages of the Catalog of Plants. Following the species name is another term, one of importance in distinguishing instances in which the same name may have been used more than once, sometimes to apply to different plants. In our example the term is "(L.) P. Mill.," known as the author or authority for the binomial, and it represents the names of the botanists who named the species. The "L." refers to Carl Linnaeus, the inventor of binomial nomenclature for organisms, who first described the species scientifically in his book, *Species Plantarum*, published in Stockholm in 1753. But Linnaeus originally placed it in a different genus, as *Pinus balsamea* L. At the time most conifers were lumped together in the genus *Pinus*, now restricted to the true pines. The "P. Mill." refers to Philip Miller, who reassigned the species to a separate genus for firs, *Abies*, in the eighth edition of his book, *The Gardener's Dictionary*, published in London in 1768.

Some plant names are more complex than the example just given. In some species, botanists recognize a number of subspecies or naturally occurring varieties. Usually the rank of subspecies or variety is recognized in a particular species, but sometimes both ranks are used and then a subspecies may comprise more than one variety. For the purpose of completeness the subspecies (abbreviated here as ssp.) and variety (var.) names are both given in this book, for example, for the full name of Pacific red elder, a member of the Caprifoliaceae and a plant used in a dozen or so ways by a number of West Coast tribes, *Sambucus racemosa* ssp. *pubens* var. *arborescens* (Torr. & Gray) Gray.

When reference is made to an unknown species of a particular genus, the abbreviation "sp.," for species, is used. A source may have referred to one unknown species of a genus, or more than one unknown species; "sp." is used here for both kinds of references. For example, uses of firs that cannot be identified to species level are collected together under *Abies* sp.

Species that are known to result from hybridization have a multiplication sign added to their names, for example, *Apocynum* × *floribundum* Greene, formed by the hybridization *Apocynum androsaemifolium* L. × *A. cannabinum* L.

## Families

In a formal designation the names of the authorities are followed by the family names: Pinaceae, the scientific name for the pine family, which includes *Abies*, *Pinus*, and other genera, and Caprifoliaceae, the name for the elder family, which includes *Sambucus* and *Viburnum* among other genera. There are between 375 and 400 families of vascular plants worldwide, of which 286 occur in North America north of the Rio Grande. To see which genera of which families are included in *Native American Ethnobotany*, please look up the family name in the alphabetically organized Catalog of Plants. The family names of all plants, vascular and nonvascular, that are included in *Native American Ethnobotany* are listed below.

Family names for nonflowering plants are perhaps less familiar. Here are cross-references to the family names for the nonflowering plants, including nonvascular plants (algae, fungi, lichens, liverworts, and mosses), the vascular cryptogams (club mosses, spike mosses, ferns, and horsetails), and among seed plants, the gymnosperms (conifers):

<b>Algae</b>	Hydnaceae	<b>Mosses</b>	Dennstaedtiaceae
Alariaceae	Lycoperdaceae	Aulacomniaceae	Dryopteridaceae
Bangiaceae	Pezizaceae	Bryaceae	Marattiaceae
Fucaceae	Polyporaceae	Dicranaceae	Ophioglossaceae
Laminariaceae	Tricholomataceae	Hylocomiaceae	Osmundaceae
Leathesiaceae	Ustilaginaceae	Leucobryaceae	Polypodiaceae
Lessoniaceae	<b>Lichens</b>	Leucodontaceae	Pteridaceae
Palmariaceae	Alectoriaceae	Mniaceae	Thelypteridaceae
Rhodymeniaceae	Cladoniaceae	Polytrichaceae	Vittariaceae
Trentepohliaceae	Lecanoraceae	Pottiaceae	<b>Horsetails</b>
Ulvaceae	Parmeliaceae	Rhytidiaceae	Equisetaceae
Zygnemataceae	Peltigeraceae	Sphagnaceae	<b>Conifers</b>
<b>Fungi</b>	Stereocaulaceae	<b>Club Mosses</b>	Cupressaceae
Agaricaceae	Stictaceae	Lycopodiaceae	Ephedraceae
Amanitaceae	Teloschistaceae	<b>Spike Mosses</b>	Pinaceae
Boletaceae	Usneaceae	Selaginellaceae	Taxaceae
Cantharellaceae	<b>Liverworts</b>	<b>Ferns</b>	Taxodiaceae
Exobasidiaceae	Conocephalaceae	Blechnaceae	Zamiaceae
Helvellaceae	Jungermanniaceae	Cyatheaceae	

Some families of angiosperms or flowering plants have alternative names (Asteraceae or Compositae for the sunflower family, for example) and the alternative name is given in parentheses below:

<b>Flowering Plants</b>	Butomaceae	Droseraceae	Krameriaceae
Acanthaceae	Cactaceae	Ebenaceae	Lamiaceae (Labiatae)
Aceraceae	Calycanthaceae	Elaeagnaceae	Lauraceae
Acoraceae	Campanulaceae	Empetraceae	Lemnaceae
Agavaceae	Cannabaceae	Epacridaceae	Lennoaceae
Aizoaceae	Cannaceae	Ericaceae	Lentibulariaceae
Alismataceae	Capparaceae	Euphorbiaceae	Liliaceae
Amaranthaceae	Caprifoliaceae	Fabaceae (Leguminosae)	Linaceae
Anacardiaceae	Caricaceae	Fagaceae	Loasaceae
Annonaceae	Caryophyllaceae	Fouquieriaceae	Loganiaceae
Apiaceae (Umbelliferae)	Celastraceae	Garryaceae	Lythraceae
Apocynaceae	Chenopodiaceae	Gentianaceae	Magnoliaceae
Aquifoliaceae	Chrysobalanaceae	Geraniaceae	Malvaceae
Araceae	Cistaceae	Gesneriaceae	Marantaceae
Araliaceae	Clethraceae	Goodeniaceae	Melastomataceae
Arecaceae (Palmae)	Clusiaceae (Guttiferae)	Grossulariaceae	Meliaceae
Aristolochiaceae	Combretaceae	Haemodoraceae	Menispermaceae
Asclepiadaceae	Commelinaceae	Haloragaceae	Menyanthaceae
Asteraceae (Compositae)	Convolvulaceae	Hamamelidaceae	Moraceae
Balsaminaceae	Cornaceae	Hippocastanaceae	Musaceae
Berberidaceae	Crassulaceae	Hippuridaceae	Myricaceae
Betulaceae	Cucurbitaceae	Hydrangeaceae	Myrsinaceae
Bignoniaceae	Cuscutaceae	Hydrocharitaceae	Myrtaceae
Bixaceae	Cyperaceae	Hydrophyllaceae	Nelumbonaceae
Boraginaceae	Datisaceae	Iridaceae	Nyctaginaceae
Brassicaceae (Cruciferae)	Diapensiaceae	Juglandaceae	Nymphaeaceae
Bromeliaceae	Dioscoreaceae	Juncaceae	Olaceae
Burseraceae	Dipsacaceae	Juncaginaceae	Oleaceae

Onagraceae	Polygalaceae	Sarraceniaceae	Thymelaeaceae
Orchidaceae	Polygonaceae	Saururaceae	Tiliaceae
Orobanchaceae	Pontederiaceae	Saxifragaceae	Typhaceae
Oxalidaceae	Portulacaceae	Scrophulariaceae	Ulmaceae
Paeoniaceae	Potamogetonaceae	Simaroubaceae	Urticaceae
Pandanaceae	Primulaceae	Simmondsiaceae	Valerianaceae
Papaveraceae	Punicaceae	Smilacaceae	Verbenaceae
Passifloraceae	Ranunculaceae	Solanaceae	Violaceae
Pedaliaceae	Rhamnaceae	Sparganiaceae	Viscaceae
Phytolaccaceae	Rhizophoraceae	Staphyleaceae	Vitaceae
Piperaceae	Rosaceae	Sterculiaceae	Xyridaceae
Pittosporaceae	Rubiaceae	Styracaceae	Zingiberaceae
Plantaginaceae	Rutaceae	Symplocaceae	Zosteraceae
Platanaceae	Salicaceae	Taccaceae	Zygophyllaceae
Plumbaginaceae	Santalaceae	Tamaricaceae	
Poaceae (Gramineae)	Sapindaceae	Theaceae	
Polemoniaceae	Sapotaceae	Theophrastaceae	

## Synonyms

Some plants have in the course of time been named more than once scientifically. What was originally thought to have been two separate species, for example, may now be considered to be one variable species. The goal in this book is to provide a useful reference by which anyone can easily find all the known uses of particular plants by Native American peoples. But that would be very difficult if the "same plant" were to show up here under as many as five or ten different scientific names. And there are such cases! In the material gathered for *Native American Ethnobotany*, the champion is *Arctostaphylos uva-ursi*, kinnikinnick or bearberry, with 19; *Gutierrezia sarothrae*, broom snakeweed, had 17. *Oplopanax horridus*, devil's club, had only 15 but they are particularly interesting because four different generic names, three different species names, plus a batch of different plant name authors were found in the ethnobotanical literature:

*Echinopanax horridum*  
*Echinopanax horridum* (J. E. Sm.) Dene. & Pl.  
*Echinopanax horridum* (Smith)  
*Fatsia horrida* B. & H.  
*Fatsia horrida* (Sm) B. and H.  
*Fatsia horrida* Sm. (B. and H.)  
*Oplopanax horridum*  
*Oplopanax horridum* (J. E. Smith) Miq.  
*Oplopanax horridum* (Smith) Miq.  
*Oplopanax horridum* (Sm.) Miquel.  
*Oplopanax horridus*  
*Oplopanax horridus* (J. E. Smith) Miq.  
*Oplopanax horridus* (J.E. Smith) Miq.  
*Oplopanax horridus* (Smith) Miq.  
*Panax horridum*

One must look closely to see the differences sometimes, but they are there. Variant names for plants are known to botanists as synonyms. Some of the differences reflect differences in how the plant was classified at different times or by different people; some are the result of different conventions (in giving authors' names, for example), and some are errors of omission or other mistakes. The most "correct," current name, using the conventions adopted here, is different yet: *Oplopanax horridus* (Sm.) Torr. & Gray ex Miq. (The "ex" means that although John Torrey and Asa Gray made the taxonomic decision to place a previously described species in the genus *Oplopanax*, F. A. W. Miquel was the person who first published the binomial *Oplopanax horridus* scientifically, adopting the name that Torrey and Gray had proposed.) If a uniform plant nomenclature were not adopted for use in this book, the 157 uses of devil's club would be spread throughout the Catalog of Plants under the different names used in the various sources from which the information was drawn.

The primary source I have used for choosing the most correct, currently used plant name is John Kartesz's *A Synonymized Checklist of the Vascular Flora of the United States, Canada, and Greenland, Second Edition* (Timber Press, 1994). The author kindly sent me a computerized version of the work prior to publication that allowed me to resolve synonyms electronically. Cross-references from synonyms to the accepted scientific name are listed in the Index of Synonyms. It should be clear that I am not taking exception to the botanical classifications of the various ethnobotanists but am relying on a single modern authority to maximize the value of *Native American Ethnobotany*.

## Common Plant Names

Although a correctly identified plant can be assigned one, unique scientific name, common names for the plant may be several to many. Unlike scientific names, there are no rules of nomenclature governing common names, and different people in the same place, or people in different places, have bestowed their own names on plants. Not all names so applied have been adopted by others and have been forgotten, and some plants do not have truly commonly used names at all. The common name included in the Catalog of Plants is not necessarily the one used by ethnobotanists reporting on usage. And because various ethnobotanists may have used different common names for the various usages of the plant, usually more than one common name appears in the original sources. When one is available, what has generally been chosen is, instead, a relatively standard common name established by the U.S. Department of Agriculture Natural Resources Conservation Service. The common names used by the various ethnobotanists are cross-referenced in the Index of Common Names, however. Unfortunately, with few exceptions the names applied to plants by Native Americans, their common names for the plants, have not been recorded in the sources and are not indexed. With so many Native American languages, it would require a separate, large book to treat the American Indian names of plants as comprehensively as their uses are cataloged here.

## Ethnobotanical Information

Under each plant name, usages are categorized first by the five main categories—Drug, Food, Fiber, Dye, Other—in that order. Each of the five main categories is next divided alphabetically by tribe, all the names of which are listed in the previous chapter under Native Americans. Following the tribe name are all the uses of the plant, listed alphabetically according to the categories defined in the previous chapter under Plant Usage Categories.

In a few hundred instances, usages cited in the Catalog of Plants have numbered superscripts, for example, Pitch taken for any type of bad disease.<sup>1</sup> These numbers refer to more detailed information that would not fit in a short note, and this information is enumerated in the Notes, which precede the Bibliography. The same note may be referred to more than once in the Catalog of Plants.

The statement or statements on usage are followed by an abbreviated reference, for example, (184:197). The reference applies to all preceding statements, even if the reference is separated from the particular statement, for example, by the italicized name of a different usage category or the boldfaced name of a different tribe. The number preceding the colon

refers to the source from which the information came, and sources are enumerated in the Bibliography. The number following the colon is the page number in that original source. When the original source used a plant name differs from that adopted in the Catalog of Plants, that is, the source cited a synonymous name, the plant name used in the source is also given within the parentheses, for example, within the entry for *Acer negundo* var. *interius*, (as *Negundo interius* 138:38). When differences are minor, however, such as insignificant differences in author citation, these other names are not given. Cross-references from the synonyms to the names used as the main entries in the Catalog of Plants are listed alphabetically in the Index of Synonyms.

For the reasons described above, under Common Plant Names, only one common name has been included for each plant in the Catalog of Plants. However, an extensive Index of Common Names is provided so that information on Native American plant use may be found even if one does not initially know the scientific name of the plant.

Two comprehensive Plant Usage Indexes are provided so that the information collected in the Catalog of Plants can be found in ways other than by plant name:

**Index of Tribes.** Categories of plant usage are arranged by names of Native American groups, as listed in the previous chapter under Native Americans. Categories of plant usage are listed first under one of the five main categories—Drug, Food, Fiber, Dye, Other—and then alphabetically under the particular usage. Plants are identified to the level of species in the Index of Tribes. If subspecies or varieties appear in the Catalog of Plants, check under those names, too, for all usages indexed. For example, one may look up Comanche and under Drug, Cold Remedy, see that *Rhus trilobata* was used. The specific ethnobotanical information and the source from which the information was obtained may be found by turning to *Rhus trilobata*, *R. trilobata* var. *pilosissima*, and *R. trilobata* var. *trilobata* in the Catalog of Plants.

**Index of Usages.** Plant genera are arranged alphabetically under the categories of plant usage, first under one of the five main categories—Drug, Food, Fiber, Dye, Other—and then alphabetically under the particular usage, as defined in the previous chapter under Plant Usage Categories. For example, one may look up Drug, Cold Remedy, and see that *Rhus* was used by the Cahuilla, Cheyenne, Chippewa, Comanche, and Iroquois. The specific ethnobotanical information and the sources from which the information was obtained may be found by turning to *Rhus* in the Catalog of Plants and examining the Drug, Cold Remedy, entries listed for *Rhus*.

# Catalog of Plants

## **Abies**, Pinaceae, conifer

**Abies amabilis** (Dougl. ex Loud.) Dougl. ex Forbes, Pacific Silver Fir

- **Drug**—**Bella Coola Eye Medicine** Liquid pitch mixed with mountain goat tallow and used for infected eyes. **Gastrointestinal Aid** Infusion of bark taken for stomach ailments. **Throat Aid**

Liquid pitch mixed with mountain goat tallow and taken for sore throat. **Tuberculosis Remedy** Infusion of bark taken for tuberculosis. (184:197) **Haisla Tonic** Bark and other plants used as a tonic. **Unspecified Bark** and other plants used for “sickness.” (73:152) **Hanaksiala Gastrointestinal Aid** Infusion of bark taken for stomach ulcers. **Hemorrhoid Remedy** Infusion of bark taken for hemorrhoids. (43:173) **Kitsoo Unspecified** Decoction of bark used medicinally. (43:316) **Nitinaht Internal Medicine** Infusion of crushed bark, red alder and hemlock barks taken for internal injuries. **Preventive Medicine** Boughs placed in fire and smoke inhaled to prevent sickness. (186:71) **Oweekeno Cold Remedy** Pitch boiled with grease or pitch and sugar and taken for colds. (43:68) **Thompson Cold Remedy** Pitch taken for colds.<sup>1</sup> **Panacea** Pitch taken for any type of bad disease.<sup>1</sup> **Tuberculosis Remedy** Poultice of pitch and buttercup roots used for tuberculosis. Pitch taken for tuberculosis.<sup>1</sup> Decoction of boughs and/or bark taken for tuberculosis. **Unspecified** Decoction of branches taken as medicine. (187:97)

- **Food**—**Haisla Unspecified** Cambium used for food. (73:151) **Kitsoo Unspecified** Inner bark used for food. (43:316) **Nitinaht Candy** Hardened pitch chewed for pleasure. (186:71)
- **Fiber**—**Haisla & Hanaksiala Snow Gear** Boughs used as a “bush sleigh” to pull cargo across deep snow. (43:173)
- **Other**—**Haisla Ceremonial Items** Pitch applied to the face of mourners. **Hanaksiala Containers** Boughs used to line oolichan (candlefish) ripening pits. (43:173) **Nitinaht Hunting & Fishing Item** Long, hard knots used to make halibut hooks. **Incense & Fragrance** Boughs bundled up and used as home air fresheners. (186:71) **Thompson Incense & Fragrance** Boiled boughs mixed with decoctions of other plants and deer grease and used to perfume the hair.<sup>2</sup> (187:97)

**Abies balsamea** (L.) P. Mill., Balsam Fir

- **Drug**—**Abnaki Dermatological Aid** Gum used to make various ointments. Gum used for “slight” itches. (144:164) **Disinfectant** Used as

an antiseptic. **Panacea** Leaves made into pillows and used as a panacea. (144:155) **Unspecified** Needles and wood stuffed into pillows and used for good health. (144:163, 164) **Algonquin, Quebec Dermatological Aid** Poultice of gum applied to open sores, insect bites, boils, and infections. **Gynecological Aid** Needles used in a sudatory for women after childbirth and for other purposes. **Heart Medicine** Roots used for heart disease. **Laxative** Needles used to make a laxative tea. **Poultice** Needles used for making poultices. **Unspecified** Needles used in a sudatory for women after childbirth and for other purposes. Gum or mashed cones taken for gonorrhea and applied to gonorrheal sores. **Sikani Dermatological Aid**

Gum applied to wounds. (150:51) **Thompson** *Gastrointestinal Aid* Decoction of shoots and bark taken for stomach trouble. *Tonic* Decoction of shoots and bark taken as a tonic. (164:462)

- **Food**—**Thompson** *Unspecified* Gum chewed and swallowed. (164:484)
- **Fiber**—**Carrier** *Building Material* Wood used to make shingles for roofs. (31:70)
- **Other**—**Carrier** *Hide Preparation* Rotten wood used to smoke and tan skins. (31:70)

## **Abronia**, Nyctaginaceae

**Abronia elliptica** A. Nels., Fragrant White Sand Verbena

- **Drug**—**Hopi** *Pediatric Aid* Plant placed on child's head to induce sleep. (200:75) *Sedative* Plant placed on child's head to induce sleep. (200:36, 75)

**Abronia fragrans** Nutt. ex Hook., Snowball Sand Verbena

- **Drug**—**Keres, Western** *Dietary Aid* Roots ground, mixed with corn flour and eaten to give one a good appetite and to make one fat. *Psychological Aid* Roots ground, mixed with corn flour, and eaten to keep one from becoming greedy. (171:24) **Navajo** *Dermatological Aid* Plant used for boils. (90:158) *Gastrointestinal Aid* Plant taken to "remove the effects of swallowing a spider." (55:46) **Navajo, Kayenta** *Cathartic* Plant used as a cathartic. *Dermatological Aid* Plant used for insect bites. *Diaphoretic* Plant used as a sudorific. *Emetic* Plant used as an emetic. *Gastrointestinal Aid* Plant used for stomach cramps. *Panacea* Plant used as a life medicine. (205:21) **Navajo, Ramah** *Dermatological Aid* Cold infusion used as lotion for sores or sore mouth and to bathe perspiring feet. *Oral Aid* Cold infusion used as lotion for sores or sore mouth. (191:26) **Ute** *Gastrointestinal Aid* Roots and flowers used for stomach and bowel troubles. (38:32) **Zuni** *Gastrointestinal Aid* Fresh flowers eaten for stomachaches. (27:377)
- **Food**—**Acoma** *Unspecified* Roots ground, mixed with cornmeal, and eaten. **Laguna** *Unspecified* Roots ground, mixed with cornmeal, and eaten. (32:39)
- **Other**—**Keres, Western** *Ceremonial Items* Flowers made into ceremonial necklaces. (171:24)

**Abronia latifolia** Eschsch., Coastal Sand Verbena

- **Food**—**Clallam** *Unspecified* Roots used for food. (57:201) **Klallam** *Unspecified* Roots used for food. **Makah** *Unspecified* Roots eaten in the fall. (79:29)

**Abronia turbinata** Torr. ex S. Wats., Transmontane Sand Verbena

- **Drug**—**Shoshoni** *Dermatological Aid* Poultice of mashed leaves applied to swellings. (180:30)

**Abronia villosa** S. Wats., Desert Sand Verbena

- **Drug**—**Paiute** *Diuretic* Used as an urinary inducer. (118:41) **Shoshoni** *Burn Dressing* Poultice of mashed roots applied to burns. (180:30)

## **Abutilon**, Malvaceae

**Abutilon incanum** (Link) Sweet, Pelotazo

- **Drug**—**Hawaiian** *Gastrointestinal Aid* Dried flowers eaten for griping stomachaches. Flowers, root bark, and other plants pounded, resulting liquid heated and taken for stomachaches. (2:69)

## **Acacia**, Fabaceae

**Acacia greggii** Gray, Catclaw Acacia

- **Food**—**Cahuilla** *Porridge* Dried pods ground into flour and used to make mush or cakes. *Vegetable* Pods eaten fresh. (15:29) **Diegueño** *Fodder* Used to feed domesticated animals. (88:218) **Havasupai** *Bread & Cake* Seeds stored, roasted, ground, and made into bread. (197:225) **Pima** *Unspecified* Beans formerly used for food. (146:76) **Pima, Gila River** *Starvation Food* Seeds used as "starvation food." (133:7) **Seri** *Porridge* Beans ground into a meal, mixed with water or sea lion oil, and eaten. (50:136)
- **Fiber**—**Cahuilla** *Building Material* Considered an outstanding construction material and a fine firewood. (15:29) **Havasupai** *Basketry* Split twigs used as basket material. *Brushes & Brooms* Twigs made into a brush and used to brush off metates. (197:225) **Papago** *Basketry* Thorns removed, twigs split in half lengthwise, and used to make serviceable baskets. (34:57) *Other* Twigs used for curved structures in wrapped weaving. (34:53) **Pima** *Building Material* Bushes dried, piled high, and used as brush fences. *Furniture* Branches used to make cradle frames. (47:90)
- **Other**—**Cahuilla** *Fuel* Considered an outstanding construction material and a fine firewood. (15:29) **Papago** *Hunting & Fishing Item* Fitted around deer hunters' heads and used in sizing deer head disguises. (34:40) *Incense & Fragrance* Buds and blossoms dried and used by women as perfume sachets. (34:52) *Tools* Short transverse sticks affixed to poles and used to dislodge saguaro fruits from the shafts. (34:20) Curved rods used for fleshing and dehairing animal skins. Stems peeled of bark and thorns and used to beat sheep hides to make them more pliable. (34:69) **Pima** *Fuel* Bushes dried and used for firewood. *Hunting & Fishing Item* Wood used to make bows. Used to make bows. (47:90)

**Acacia koa** Gray, Koa

- **Drug**—**Hawaiian** *Diaphoretic* Leaves spread out on the bed to cause the patient lying on them to sweat. *Pediatric Aid* Ashes of this and other plants applied to the mouth interior of infants for physical weakness. *Strengtheners* Ashes of this and other plants applied to the mouth interior of infants for physical weakness. (2:46)
- **Fiber**—**Hawaiian** *Canoe Material* Wood used to make canoes. (2:46)

**Acacia** sp., Cat's Claw

- **Fiber**—**Hualapai** *Basketry* Limbs split and used to coil around the edges of baskets. *Furniture* Limbs used for cradleboard "spudi." Roots used to make the cradleboard frame. (195:14) **Walapai** *Furniture* Used for cradle frames. (17:49)

**Acacia willardiana**, Palo Blanco

- **Fiber**—**Seri** *Basketry* Splints used to make the woof for basketry. (50:138)
- **Other**—**Seri** *Hunting & Fishing Item* Used to make bows. (50:138)

## **Acalypha**, Euphorbiaceae

**Acalypha virginica** L., Virginia Threeseed Mercury

- **Drug**—**Cherokee** *Kidney Aid* Root used for "dropsy." *Misc. Disease Remedy* Root used for pox. *Urinary Aid* Root used for "gravel." (80:61)

## **Acamptopappus**, Asteraceae

**Acamptopappus sphaerocephalus** var. *hirtellus* Blake, Rayless Goldenhead

- **Drug**—Kawaiisu *Analgesic* Mashed plant used as a salve for pain. (206:9)

**Acanthaceae**, see *Justicia*, *Stenandrium*

**Aceraceae**, see *Acer*

### **Acer**, Aceraceae

**Acer alba**, White Maple

- **Drug**—Micmac *Cough Medicine* Bark used as a cough remedy. (40:53)

**Acer circinatum** Pursh, Vine Maple

- **Drug**—Karok *Love Medicine* Branches used by women as a love medicine. (148:385) **Thompson** *Antidiarrheal* Wood burned to charcoal, mixed with water and brown sugar, and taken for dysentery.<sup>3</sup> *Misc. Disease Remedy* Wood burned to charcoal, mixed with water and brown sugar, and taken for polio.<sup>3</sup> (187:145)
- **Food**—Clallam *Dried Food* Sap eaten dried. *Unspecified* Sap eaten fresh. (57:197)
- **Fiber**—Makah *Basketry* Used to make baskets. (67:285) **Modesse** *Snow Gear* Branches used for the frames of snowshoes. (117:223) **Quinault** *Basketry* Straight shoots used to make openwork baskets for general household utilities. *Building Material* Poles used to hold down roof planks on houses. (79:40) **Shuswap** *Snow Gear* Used to make snowshoes. (123:56) **Skagit** *Furniture* Saplings used as swings for baby cradles. (79:40) **Thompson** *Furniture* Wood used in making baby basket frames. (187:145) *Snow Gear* Wood used to make snowshoes. (164:498) Wood used in making snowshoe frames. (187:145)
- **Other**—Chehalis *Hunting & Fishing Item* Used to make the wattleworks of fish traps. (79:40) **Karok** *Cooking Tools* Wood used to make acorn paddles. (6:15) **Lummi** *Hunting & Fishing Item* Used to make the wattleworks of fish traps. (79:40) **Nitinaht** *Containers* Wood used to make small boxes and oil containers. *Cooking Tools* Wood used to make bowls and drinking containers. (186:90) *Hunting & Fishing Item* Used to make bows. (186:76) Wood used to make bows. (186:90) **Quileute** *Hunting & Fishing Item* Used to make the wattleworks of fish traps. **Quinault** *Paint* Charcoal mixed with oil and used as black paint. **Skagit** *Tools* Saplings used to make salmon tongs. (79:40) **Thompson** *Hunting & Fishing Item* Wood gathered while green, the heart removed and used in making bows, arrows, and dip net frames. *Tools* Wood used in making implement handles. (187:145)

**Acer glabrum** Torr., Rocky Mountain Maple

- **Drug**—Blackfoot *Cathartic* Infusion of bark taken in the morning as a cathartic. (86:65) **Navajo**, **Ramah** *Panacea* Infusion of branches used for swellings, a “life medicine.” (191:36) **Okanagan-Colville** *Hunting Medicine* Branch tied in a knot and placed over the bear’s tracks while hunting to stop the wounded bear. (188:59) **Thompson** *Antiemetic* Decoction of wood and bark taken for nausea caused by smelling a corpse. (164:475) *Gynecological Aid* Decoction of sticks and saskatoon sticks taken to heal women’s insides and stimulate lactation. The decoction was made either with two sticks each of saskatoon and rocky mountain maple, or, for a stronger medicine, four sticks each and used after childbirth to heal women’s insides and to stimulate the flow of milk for nursing. *Snakebite Remedy* Decoction of four straight, young sticks used as a wash or taken for snakebites. The informant could not recall whether the decoction

was taken internally or used as a wash. (187:146)

- **Food**—Blackfoot *Spice* Dried, crushed leaves used to spice stored meat. (86:100)
- **Fiber**—Okanagan-Colville *Building Material* Wood used to make the frame of a woman’s sweat house. *Snow Gear* Wood used to make snowshoes. (188:59) **Thompson** *Cordage* Fibrous inner bark used to make twine. *Furniture* Wood used for cradle frames. (187:146) *Snow Gear* Wood used for making snowshoes. (164:499) Twigs used to make snowshoe frames. (164:500) Branches used whenever obtainable to make snowshoe frames. (187:146)
- **Other**—Bella Coola *Cooking Tools* Bark used to make spoons. *Tools* Straight sticks tied around a tree base, ignited, and burned until the tree fell. (184:200) **Blackfoot** *Containers* Bark used to make paint containers. (86:107) **Isleta** *Hunting & Fishing Item* Straight, young tree trunks used to make bows. (100:20) **Montana Indian** *Hunting & Fishing Item* Young twigs used for making fish net hoops. (19:5) **Okanagan-Colville** *Cooking Tools* Wood used to make screens for smoke drying racks. Wood used to make tongs for removing food from boiling water. *Fasteners* Wood used to make tepee pegs. *Fuel* Wood used for fuel. *Musical Instrument* Wood used to make drum hoops. *Tools* Wood used to make spear handles. *Toys & Games* Wood used to make a child’s first bow. (188:59) **Thompson** *Hunting & Fishing Item* Wood used for making bows. (164:499) **Yurok** *Toys & Games* Fruit used to play with. (6:15)

**Acer glabrum** var. *douglasii* (Hook.) Dippel, Douglas Maple

- **Fiber**—Gitksan *Basketry* Inner bark used to make baskets. *Mats, Rugs & Bedding* Inner bark used to make mats. (73:153) **Haisla & Hanaksiala** *Snow Gear* Wood used to make snowshoes. (43:209)
- **Other**—Haisla *Ceremonial Items* Wood made into rattles and used by shamans. **Haisla & Hanaksiala** *Ceremonial Items* Wood used to make frontispieces for chief’s masks. *Cooking Tools* Wood used to make spoons. *Tools* Wood used to make ax handles. **Hanaksiala** *Ceremonial Items* Wood used to make the skulls for the shamanistic costumes. (43:209) **Oweekeno** *Cooking Tools* Wood used to make spoons. (43:82)

**Acer glabrum** var. *neomexicanum* (Greene) Kearney & Peebles, New Mexico Maple

- **Food**—Apache, Chiricahua & Mescalero *Sweetener* Sap collected and boiled to obtain syrup and sugar. (as *A. neomexicana* 33:44)

**Acer macrophyllum** Pursh, Bigleaf Maple

- **Drug**—Klallam *Tuberculosis Remedy* Infusion of bark taken for tuberculosis. (79:39) **Kwakiutl** *Dermatological Aid* Sticky gum from the spring buds mixed with oil and used as a hair tonic. (183:275) **Thompson** *Tonic* Raw sap used as a tonic in the olden days. (187:147)
- **Food**—Clallam *Dried Food* Sap eaten dried. *Unspecified* Sap eaten fresh. (57:197) **Costanoan** *Unspecified* Seeds used for food. (21:248) **Cowichan** *Spice* Leaves used in steaming pits to flavor deer, seal, or porpoise meat. **Saanich** *Spice* Leaves used in steaming pits to flavor deer, seal, or porpoise meat. **Salish, Coast** *Unspecified* Cambium eaten in small quantities with oil. (182:77) **Thompson** *Sauce & Relish* Sap boiled to make a type of maple syrup. *Unspecified* Raw shoots used for food. *Vegetable* Sprouted seeds boiled and eaten as green vegetables. The sprouted seeds were generally bitter, but the young

shoots were considered to be quite sweet and juicy. (187:147)

- **Fiber**—**Cahuilla Building Material** Limbs used for house construction and considered good firewood. (15:29) **Clallam Canoe Material** Wood used to make canoe paddles. (57:197) **Concow Basketry** Inner bark used in spring to make baskets. **Clothing** Bark used to make crude dresses. (41:365) **Cowlitz Cordage** Bark used to make rope and tumplines. (79:39) **Karok Mats, Rugs & Bedding** Leaves made into mats and used to cover the layers of dried salmon stored for the winter in baskets. (148:385) **Klallam Canoe Material** Wood used to make canoe paddles. **Lummi Furniture** Wood used to make cradleboards. (79:39) **Maidu Basketry** Withes used as coarse twine warp and weft in the manufacture of baskets. **Sewing Material** Withes used as coiling thread. (173:71) **Makah Basketry** Used to make baskets. (67:285) **Nisqually Building Material** Boughs used to cover temporary housing. (79:39) **Nitinaht Canoe Material** Hard, lightweight wood used to make paddles. (186:91) **Skagit Canoe Material** Wood used to make canoe paddles. **Snohomish Canoe Material** Wood used to make canoe paddles. **Swinomish Furniture** Wood used to make cradleboards. (79:39) **Thompson Basketry** Inner bark used to make scouring pads, temporary baskets, and sometimes for weaving bags. **Scouring Material** Inner bark used to make scouring pads and sometimes for weaving bags and for temporary baskets. (187:147) **Tolowa Clothing** Bark fibers used to make women's skirts. (6:15)
- **Other**—**Cahuilla Fuel** Limbs used for house construction and considered good firewood. (15:29) **Chehalis Cooking Tools** Dead wood used for smoking salmon. (79:39) **Cowichan Cooking Tools** Large leaves used for lining baskets, wrapping fish, and placing on berry drying racks. (182:77) **Haida Decorations** Wood used to make wood carvings. (79:39) **Hesquiat Toys & Games** White wood used to make rattles. (185:60) **Karok Containers** Leaves placed under and between layers of the bulbs while cooking in the earth oven. (148:385) **Cooking Tools** Wood used to make acorn paddles. (6:15) Wood made into the paddle used for stirring the food in the cooking baskets. (148:385) **Kwakiutl, Southern Ceremonial Items** Wood used to carve masks. **Cooking Tools** Wood used to carve dishes and spoons. **Musical Instrument** Wood used to carve rattles. (183:296) **Lummi Cooking Tools** Leaves used to cover food cooking in pits. Wood used to make dishes and spoons. (79:39) **Nitinaht Ceremonial Items** Hard, lightweight wood used to make masks and ceremonial rattles. **Cooking Tools** Hard, lightweight wood used to make bowls. (186:91) **Pomo Toys & Games** Wood used to make dice for a gambling game. (66:14) **Pomo, Kashaya Toys & Games** Branches used to make staves for a dice-type gambling game. (72:70) **Quinault Fuel** Dead wood used for smoking salmon. (79:39) **Salish, Coast Fuel** Wood used as an excellent fuel. (182:77) **Skagit Cooking Tools** Leaves used to cover food cooking in pits. (79:39) **Skagit, Upper Containers** Leaves used to cover food cooking in pits. (179:42) **Snohomish Cooking Tools** Leaves used to cover food cooking in pits. **Squaxin Containers** Leaves used to lay fish on while cleaning. **Swinomish Cooking Tools** Dead wood used for smoking salmon. Wood used to make dishes and spoons. (79:39) **Thompson Containers** Inner bark used to make scouring pads, temporary baskets, and sometimes for weaving bags. **Cooking Tools** Inner bark used to make soapberry whippers. Children sometimes made miniature whisks which they used to whip the juice that was left after the dried soapberries were soaked. They made the juice

with their whisks and then drank it. Leaves used to line the containers used in making ripened salmon eggs. The maple leaves were used to line the basket and were placed in layers between the eggs. The eggs were generally prepared in a birch bark basket, placed in a hole in the ground lined with birch bark, and left there until spring-time when they were considered cooked. Leaves used in pit cooking, to line the pit and interspersed between the layers of food. The leaves were also used between layers of fish in fish caches. Wood used to make soapberry eating paddles. (187:147) **Tlingit Decorations** Wood used to make wood carvings. **Tsimshian Decorations** Wood used to make wood carvings. (79:39) **Wailaki Hunting & Fishing Item** Bark cut into 1-inch bands, fastened together into a roll, and used to catch deer. (41:365)

### *Acer negundo* L., Box Elder

- **Drug**—**Cheyenne Ceremonial Medicine** Wood burned as incense for making spiritual medicines. (82:4) **Meskwaki Emetic** Decoction of inner bark taken as an emetic. (152:200) **Ojibwa Emetic** Infusion of inner bark taken as an emetic. (153:353)
- **Food**—**Apache, Chiricahua & Mescalero Dried Food** Inner bark scrapings dried and kept for winter use. **Sweetener** Inner bark boiled until sugar crystallizes out of it. (33:44) **Cheyenne Candy** Sap mixed with shavings from inner sides of animal hides and eaten as candy. (82:4) Sap boiled, added to animal hide shavings, and eaten as a relished candy. (83:13) **Dakota Sweetener** Sap used to make sugar. (69:366) **Montana Indian Sauce & Relish** Sap boiled or frozen and used as a sweet syrup. (82:4) **Ojibwa Beverage** Sap mixed with the sap of the sugar maple and used as a beverage. (153:394) **Omaha Sweetener** Sap boiled to make sugar and syrup. (68:329) Sap used to make sugar. **Pawnee Sweetener** Sap used to make sugar. **Ponca Sweetener** Sap used to make sugar. **Winnebago Sweetener** Sap used to make sugar. (70:101)
- **Other**—**Cheyenne Ceremonial Items** Wood burned during Sundance ceremonies. (82:4) **Cooking Tools** Wood used to make bowls. (83:46) **Fuel** Wood burned and used for cooking meat. (82:4) Wood used as firewood for cooking meat. (83:13) **Dakota Ceremonial Items** Wood made into charcoal and used for ceremonial painting and tattooing. (70:101) **Decorations** Wood used to obtain charcoal for tattooing. (69:366) **Keres, Western Ceremonial Items** Twigs made into prayer sticks. (171:24) **Kiowa Ceremonial Items** Wood burned in the altar fire of the peyote ceremony. (192:40) **Montana Indian Cooking Tools** Large trunk burls or knots used to make bowls and dishes. **Musical Instrument** Large trunk burls or knots used to make drums. **Smoking Tools** Large trunk burls or knots used to make pipestems. (82:4) **Navajo Tools** Wood used to make tubes for bellows. (55:62) **Omaha Ceremonial Items** Wood made into charcoal and used for ceremonial painting and tattooing. (70:101) **Decorations** Plant made into charcoal and used for tribal tattooing of girls. (68:336) **Sioux Ceremonial Items** Wood made into charcoal and used for ceremonial painting and tattooing. (82:4)

### *Acer negundo* var. *interius* (Britt.) Sarg., Box Elder

- **Food**—**Cree Sweetener** Sap used to make sugar. (97:44)
- **Other**—**Tewa Smoking Tools** Twigs used for making pipestems. (as *Negundo interius* 138:38)

***Acer negundo* L. var. *negundo***, Box Elder

- **Food**—*Sioux Staple* Sap boiled down in the spring and made into sugar. (as *Negundo aceroides* 19:16)
- **Other**—*Kiowa Ceremonial Items* Wood burned in the altar fire of the peyote ceremony. Wood burned in the altar fire of the peyote ceremony. (as *Negundo aceroides* 192:40)

***Acer nigrum* Michx. f.**, Black Maple

- **Drug**—*Ojibwa, South Antidiarrheal* Decoction of inner bark used for diarrhea. "Arbor liquore abundans, ex quo liquor tanquam urina vehementer projicitur [A tree full of sap, which shoots out forcefully, just like urine]." (91:199)
- **Food**—*Ojibwa Sweetener* Sap used to make sugar. (as *A. saccharinum* var. *nigrum* 135:234)
- **Other**—*Ojibwa Hunting & Fishing Item* Wood used to make arrows. *Toys & Games* Root used to make the bowl for the dice bowl game. (as *A. saccharinum* var. *nigrum* 135:234)

***Acer pensylvanicum* L.**, Striped Maple

- **Drug**—*Abnaki Respiratory Aid* Used for bronchial troubles. (144:154) *Algonquin, Quebec Unspecified* Infusion of plant used as a medicinal tea. *Veterinary Aid* Plant eaten by a moose with a broken bone to aid its healing. (18:196) *Iroquois Emetic* Decoction of bark taken as an emetic. *Laxative* Compound decoction of bark taken as a laxative. *Orthopedic Aid* Decoction of bark applied as poultice for paralysis. (87:378) *Micmac Antihemorrhagic* Wood used for spitting blood. *Cold Remedy* Bark used for colds. *Cough Medicine* Bark used for coughs. *Kidney Aid* Wood used for kidney trouble. *Misc. Disease Remedy* Bark used for "grippe." *Orthopedic Aid* Unspecified plant parts used for "trouble with the limbs." *Venereal Aid* Wood used for gonorrhea. (40:53) *Ojibwa, South Emetic* Decoction of inner bark taken as an emetic. (91:200) *Penobscot Antihemorrhagic* Compound infusion of plant taken for "spitting up blood." (156:311) *Dermatological Aid* Poultice of steeped bark applied to swollen limbs. (156:310) *Kidney Aid* Compound infusion of plant taken for kidney trouble. *Tonic* Compound infusion of plant taken as a tonic. *Venereal Aid* Compound infusion of plant taken for gonorrhea. (156:311)
- **Food**—*Micmac Beverage* Bark used to make a beverage. (159:258)
- **Other**—*Cherokee Fuel* Wood used for firewood. (80:44) *Ojibwa Hunting & Fishing Item* Wood used to make arrows. *Toys & Games* Root used to make the bowl for the dice bowl game. (135:234)

***Acer rubrum* L.**, Red Maple

- **Drug**—*Cherokee Analgesic* Infusion of bark taken for cramps. *Antidiarrheal* Infusion taken for dysentery. *Dermatological Aid* Infusion taken for hives. *Eye Medicine* Inner bark boiled and used with water as wash for sore eyes. (80:44) Decoction of inner bark boiled to a syrup and used as a wash for sore eyes. (203:73) *Gynecological Aid* Compound infusion of bark taken for "female trouble" and cramps. *Misc. Disease Remedy* Hot infusion of bark given for measles. (80:44) *Iroquois Blood Medicine* Complex compound taken as a blood purifier. *Eye Medicine* Infusion of bark used as drops for sore eyes and cataracts. *Hunting Medicine* Decoction of plants used as a wash for traps, a "trapping medicine." (87:378) *Ojibwa Eye Medicine* Decoction of bark used as a wash for sore eyes. (153:353) *Potawatomi Eye Medicine* Decoction of inner bark used as an eyewash. (154:37) *Seminole Dermatological Aid, Hemorrhoid Remedy, and Orthopedic Aid*

Decoction of bark used for ballgame sickness: sores, back or limb pains, and hemorrhoids. (169:269)

- **Food**—*Abnaki Sweetener* Used as a sweetener. (144:152) Sap used to make sugar. (144:170) *Algonquin, Quebec Sauce & Relish* Sap used to make syrup. *Sweetener* Sap used to make sugar. (18:99) *Iroquois Bread & Cake* Bark dried, pounded, sifted, and made into bread. (as *A. rubra* 196:119)
- **Fiber**—*Cherokee Basketry* Used to make baskets. *Building Material* Wood used for lumber. *Furniture* Wood used to make furniture. (80:44) *Malecite Basketry* Used to make basket splints. (160:6) *Micmac Basketry* Used to make basket ware. (159:258)
- **Other**—*Cherokee Decorations* Wood used to carve. (80:44) *Iroquois Cooking Tools* Wood used to make bowls. (141:53) *Ojibwa Designs* Leaf frequently used in the Ojibwe beadwork designs. Many leaves, flowers, and fruits furnish designs. Since the plants are sacred to their midewiwin or medicine lodge, it is common for them to use especially valuable remedies in their designs. (153:412) *Potawatomi Hunting & Fishing Item* Traps boiled in water with bark to deodorize the scent of the previous animal trapped. (154:116) *Seminole Cooking Tools* Plant used to make spoons. *Hunting & Fishing Item* Plant used to make arrowheads. *Stable Gear* Plant used to make ox yokes. (169:472)

***Acer rubrum* var. *drummondii*** (Hook. & Arn. ex Nutt.) Sarg., Drummond's Maple

- **Drug**—*Koasati Dermatological Aid* Infusion of bark taken and used as a wash for gun wounds. (177:39)

***Acer saccharinum* L.**, Silver Maple

- **Drug**—*Cherokee Analgesic* Infusion of bark taken for cramps. *Antidiarrheal* Infusion taken for dysentery. *Dermatological Aid* Infusion taken for hives. *Eye Medicine* Inner bark boiled and used with water as wash for sore eyes. *Gynecological Aid* Compound infusion of bark taken for "female trouble" and cramps. *Misc. Disease Remedy* Hot infusion of bark given for measles. (80:44) *Chippewa Dermatological Aid* Bark boiled and used as a wash for old, stubborn, running sores. (71:136) *Iroquois Unspecified* Sap, thimbleberries, and water used to make a medicine. (196:142) *Mohegan Cough Medicine* Infusion of bark, removed from south side of tree, taken for cough. (174:269) *Ojibwa Venereal Aid* Infusion of root bark taken for gonorrhea. (135:232) *Ojibwa, South Antidiarrheal* Decoction of inner bark used for diarrhea. (91:198) *Diuretic* Compound decoction of inner bark taken as a diuretic. (91:199)
- **Food**—*Chippewa Sweetener* Sap used to make sugar. (71:136) *Dakota Sweetener* Sap used to make sugar. (70:100) *Iroquois Beverage* Sap, thimbleberries, and water used to make a drink for home consumption and longhouse ceremonies. (196:142) Sap fermented and used as an intoxicant. (196:146) *Bread & Cake* Bark dried, pounded, sifted, and made into bread. (196:119) *Sweetener* Sap used to make sugar. (196:142) *Ojibwa Sweetener* Sap used to make sugar. (135:234) *Omaha Sweetener* Sap boiled to make sugar and syrup. (68:328) Sap used to make sugar. *Ponca Sweetener* Sap used to make sugar. *Winnebago Sweetener* Sap used to make sugar. (70:100)
- **Fiber**—*Cherokee Basketry* Used to make baskets. *Building Material* Wood used for lumber. *Furniture* Wood used to make furniture. (80:44)

- **Dye—Omaha** *Black* Twigs and bark made into a black dye and used in tanning leather. Twigs, bark, and an iron stained clay mixed with tallow, roasted in a pot, and made into a black dye used in tanning leather. (68:324) Twigs and bark made into a black dye and used to color tanned hides.<sup>4</sup> **Winnebago** *Black* Twigs and bark made into a black dye and used to color tanned hides.<sup>4</sup> (70:100)
- **Other—Cherokee** *Decorations* Wood used to carve. (80:44) **Chippewa** *Cleaning Agent* Bark, hemlock, and swamp oak bark boiled together to make a wash to remove rust from steel or iron. The barks were boiled together and used to remove rust from steel or iron and to prevent further rusting. (71:136) **Ojibwa** *Hunting & Fishing Item* Wood used to make arrows. *Toys & Games* Root used to make the bowl for the dice bowl game. (135:234)

### *Acer saccharum* Marsh., Sugar Maple

- **Drug—Iroquois** *Blood Medicine* Complex compound used as a blood purifier. *Dermatological Aid* Compound decoction of leaves used as a wash on parts affected by "Italian itch." *Eye Medicine* Compound infusion of bark used as drops for blindness. (87:378) Sap used for sore eyes. (196:142) *Pulmonary Aid* Infusion of bark with another whole plant taken by forest runners for shortness of breath. (as *A. saccharophorum* 141:52) *Unspecified* Sap, thimbleberries, and water used to make a medicine. (196:142) **Mohegan** *Cough Medicine* Inner bark used as a cough remedy. (176:69, 128) **Potawatomi** *Expectorant* Inner bark used as an expectorant. (154:37)
- **Food—Algonquin, Quebec** *Sauce & Relish* Sap used to make syrup. *Sweetener* Sap used to make sugar. (18:98) **Cherokee** *Sweetener* Juice used to make sugar. (80:44) Sap used to make sugar. (126:32) **Dakota** *Sweetener* Sap formerly used to make sugar. (70:100) **Iroquois** *Beverage* Sap made into sugar and used to make beer. (as *A. saccharophorum* 141:52) Sap, thimbleberries, and water used to make a drink for home consumption and longhouse ceremonies. (196:142) Sap fermented and used as an intoxicant. (196:146) *Bread & Cake* Bark dried, pounded, sifted, and made into bread. (196:119) *Sweetener* Sap used to make sugar. (as *A. saccharophorum* 141:52) Sap used to make sugar. (196:142) **Malecite** *Sauce & Relish* Used to make maple syrup. *Sweetener* Used to make maple syrup and sugar. (160:6) **Menominee** *Sweetener* Boiled sap made into maple sugar and used in almost every combination of cookery. (151:61) **Meskwaki** *Sweetener* Maple sugar used instead of salt as seasoning in cooking. (152:255) **Micmac** *Beverage* Bark used to make a beverage. *Sauce & Relish* Sap used to make maple syrup and maple sugar. (159:258) **Mohegan** *Sweetener* Sap used as a sweetening agent and to make maple syrup. (176:69) **Ojibwa** *Beverage* Sap saved to drink as it comes from the tree, alone or mixed with box elder or birch sap. *Sour* Sap allowed to sour to make vinegar and mixed with maple sugar to cook sweet and sour meat. *Sweetener* Maple sugar used to season all kinds of meats, replaced now with salt. Smith describes in detail the process by which the Ojibwe make maple syrup. Although now (1932) they use iron kettles, originally the sap and storage vessels were "made of birch bark, sewed with boiled basswood fiber or the core of the jack pine root." The vessels are rendered waterproof by the application of pitch secured by boiling jack pine cones. (153:394) **Potawatomi** *Beverage* Maple sap, as it came from the tree, drunk by children. *Candy* Children made taffy by cooling the maple sap in the snow. *Sour*

Maple sap not only furnished the sugar for seasoning material but also furnished the vinegar. Sap that was allowed to become sour made a vinegar to be used in cooking venison which was afterwards sweetened with maple sugar. This corresponds somewhat to the German "sweet and sour" style of cooking. *Sweetener* Maple sugar used, instead of salt, to season all cooking. The sugar maple and the black sugar maple are found all over Wisconsin and were considered to be the most valuable trees in the forest because they furnished them their seasoning material. While they do use salt today, it is an acquired ingredient and most of the old people would prefer to have sugar for their seasoning. (154:92)

- **Fiber—Cherokee** *Building Material* Wood used for lumber. *Furniture* Wood used to make furniture. (80:44) **Malecite** *Canoe Material* Wood used to make paddles and oars. (160:6)
- **Other—Cherokee** *Decorations* Wood used to carve. (80:44) **Chippewa** *Cash Crop* Sap made into sugar and used as a commodity of intertribal commerce. Maple sugar was among the great staples in the domestic economy and was a commodity of intertribal commerce being traded to people of tribes in areas not possessing this tree. (71:135) *Cooking Tools* Used to make paddles for stirring maple sap. (53:377) **Malecite** *Lighting* Wood used to make torch handles. (160:6) **Meskwaki** *Designs* Leaf used in beadwork designs. (152:266) **Micmac** *Hunting & Fishing Item* Used to make bows and arrows. (159:258) **Ojibwa** *Cooking Tools* Wood used to make paddles for stirring maple sugar or wild rice while scorching or parching it. Wood used to make bowls and many other objects of utility. (153:413)

### *Acer* sp., Maple

- **Other—Paiute** *Hunting & Fishing Item* Wood used to make bows. (111:88)

### *Acer spicatum* Lam., Mountain Maple

- **Drug—Algonquin, Tête-de-Boule** *Dermatological Aid* Poultice of boiled root chips applied to wounds and abscesses. (132:118) **Iroquois** *Antihemorrhagic* Compound decoction of roots and bark taken for internal hemorrhage. (87:377) *Gastrointestinal Aid* Plant used for intestinal diseases. (142:94) **Malecite** *Eye Medicine* Infusion of outside bark used for sore eyes. Poultice of outside bark used for sore eyes. (116:248) **Micmac** *Eye Medicine* Bark used for sore eyes. (40:53) **Ojibwa** *Eye Medicine* Infusion of pith used as a wash for sore eyes and pith used to remove foreign matter. (153:353) **Potawatomi** *Cough Medicine* Compound containing inner bark used as cough syrup. (154:37)
- **Other—Menominee** *Designs* Leaves used as design for bead work and appliqué work. (151:73) **Ojibwa** *Designs* Three-lobed leaf was a great favorite with Ojibwe women for design work for beading. (153:413) *Hunting & Fishing Item* Wood used to make arrows. *Toys & Games* Root used to make the bowl for the dice bowl game. (135:234) **Potawatomi** *Designs* Leaves used as a pattern for bead and appliqué work. In making up a design for art work or bead work, a woman would burn deer antlers until they turned to charcoal and use this to rub on the backs of leaves. This surface was placed down upon a piece of white birch bark and rubbed until the shape and venation of the leaves were transferred to the birch bark. Then arranging with other leaves, a design would be formed which would be the pattern for the bead work. Oftentimes, this would be placed directly under

the loom so that the form and outline of the finished bead work would be a true representation of the natural object. (154:110)

## *Achillea*, Asteraceae

*Achillea millefolium* L., Common Yarrow

• **Drug**—**Abnaki** *Cold Remedy* Infusion of whole plant given to children for colds. (144:174) *Febrifuge* Used for fevers. *Misc. Disease Remedy* Used for gripe. (144:154) *Pediatric Aid* Infusion of whole plant given to children for colds. (144:174) **Algonquin, Quebec** *Analgesic* Crushed leaves used as a snuff for headaches. *Cold Remedy* Used for colds. *Poultice* Leaves used for poultices. *Respiratory Aid* Used for respiratory disorders. (18:240) **Algonquin, Tête-de-Boule** *Analgesic* Decoction of leaves and flowers used for headaches. (132:118) **Bella Coola** *Breast Treatment* Leaves pounded, heated, and used for breast abscesses. (184:201) *Burn Dressing* Poultice of chewed leaves applied to burns. (150:65) Leaves pounded, heated, and used for burns. *Dermatological Aid* Leaves pounded, heated, and used for boils. *Pediatric Aid* and *Respiratory Aid* Poultice of leaves and eulachon (candlefish) grease applied to the chest and back of children for bronchitis. (184:201) **Blackfoot** *Analgesic* Infusion of plant taken or rubbed on the body to soothe the pain of gastroenteritis. (86:65) *Antirheumatic (External)* Poultice of chewed flowers applied to swollen parts. Infusion of plant applied to swellings. *Dermatological Aid* Infusion of plant applied to sores. (86:74) *Diuretic* Infusion of plant taken as a diuretic to pass the sickness with the urine. (86:69) *Gynecological Aid* Infusion of leaves taken when labor pains started and to ease the delivery. Infusion of leaves taken to expel the afterbirth. (86:60) *Liver Aid* Infusion of plant taken or rubbed on the body for liver troubles. (86:65) *Panacea* Infusion of plant rubbed on the body part affected by sickness. (86:69) *Throat Aid* Infusion of plant taken for sore throats. (86:70) *Veterinary Aid* Infusion of plant used as an eyewash for horses. (86:87) **Carrier, Southern** *Cold Remedy* Decoction of entire plant, except roots, taken for colds. *Dermatological Aid* Poultice of chewed leaves applied to swellings. *Orthopedic Aid* Poultice of chewed leaves applied to sprains. (150:65) **Chehalis** *Antidiarrheal* Decoction of leaves taken for the passage of blood with diarrhea. (79:49) **Cherokee** *Antihemorrhagic* Used for hemorrhages and spitting blood. *Dermatological Aid* Astringent leaves used for hemorrhages and bowel complaints. *Febrifuge* Infusion taken for fever. *Gastrointestinal Aid* Used for bowel complaints. *Gynecological Aid* Used for flooding. *Hemorrhoid Remedy* Used for bloody piles. *Respiratory Aid* Dried leaves smoked for catarrh. *Sedative* Infusion taken for restful sleep. *Urinary Aid* Used for bloody urine. (80:62) **Cheyenne** *Analgesic* Infusion of leaves and flowers taken for chest pains. *Antiemetic* Infusion of fresh or dried plant taken for nausea. (83:17) *Cold Remedy* Infusion of leaves used for colds. (82:6) Infusion of fresh or dried plant taken for colds. *Cough Medicine* Infusion of fresh or dried plant taken for coughs. *Diaphoretic* Infusion of fresh or dried plant taken to cause perspiring. (83:17) *Febrifuge* Infusion of leaves used for fevers. (82:6) *Heart Medicine* Infusion of leaves and flowers taken for heart troubles and chest pains. *Hemostat* Crushed leaves placed in the nose for nosebleeds. *Respiratory Aid* Infusion of plant taken or leaves rubbed on body for respiratory diseases. *Throat Aid* Infusion of fresh or dried plant taken for tickling of the throat. *Tuberculosis Remedy* Infusion of plant taken or leaves rubbed on

body for tuberculosis. (83:17) **Chippewa** *Analgesic* Decoction of leaves steamed and inhaled for headache. (53:336) *Dermatological Aid* Decoction of root applied to skin “eruptions.” (53:350) *Herbal Steam* Decoction of leaves sprinkled on hot stones as herbal steam for headache. (53:336) *Stimulant* Dried chewed root spit onto limbs as a stimulant. (53:364) *Veterinary Aid* Decoction of leaves and stalk applied to horses as a stimulant. (53:366) **Clallam** *Cold Remedy* Infusion of leaves used for colds. *Gynecological Aid* Infusion of leaves used during childbirth. (57:199) **Cowlitz** *Dermatological Aid* Infusion of leaves used as a hair wash. *Gastrointestinal Aid* Decoction of roots taken for stomach troubles. (79:49) **Cree, Woodlands** *Analgesic* Infusion of plant heads used to make a compress for headaches. *Antihemorrhagic* Leaves chewed for bleeding. *Febrifuge* Infusion of plant heads used to make a compress for fevers. Decoction of roots taken for fevers. *Toothache Remedy* Decoction of roots taken or roots chewed for toothaches. (109:23) **Creek** *Toothache Remedy* Plant used as toothache medicine. (172:663) **Crow** *Burn Dressing* Poultice of plant used for burns. *Dermatological Aid* Poultice of plant used for boils and open sores. (82:6) **Delaware** *Kidney Aid* Infusion of plant used for kidney disorders. *Liver Aid* Infusion of plant used for liver disorders. (176:35) **Delaware, Oklahoma** *Kidney Aid* Infusion of whole plant taken for kidney disorders. *Liver Aid* Infusion of whole plant taken for liver disorders. (175:29, 74) **Flathead** *Antirheumatic (External)* Leaves boiled and used for aching backs and legs. *Cold Remedy* Infusion of leaves used for colds. *Dermatological Aid* Leaves crushed and used for wounds. *Disinfectant* Herb used as a disinfectant. *Febrifuge* Infusion of leaves used for fevers. (82:6) **Gitksan** *Throat Aid* Decoction of young plant or root gargled for sore throat. (150:65) **Gosiute** *Analgesic* Infusion of plant used for headaches. (39:360) *Antirheumatic (External)* Poultice of plant applied to joints affected by rheumatism. (39:350) Poultice of plant applied for rheumatism. *Dermatological Aid* Poultice of plant applied to bruises. *Gastrointestinal Aid* Infusion of plant used for biliousness. (39:360) **Haisla & Hanaksiala** *Unspecified* Plants placed on heated rocks and rising vapors used for unspecified illness. (43:220) **Hesquiat** *Analgesic* Leaves chewed and the juice swallowed for any kind of internal pain. *Cough Medicine* Leaves chewed and the juice swallowed for prolonged cough. *Gastrointestinal Aid* Leaves chewed and the juice swallowed for the stomach. *Internal Medicine* Leaves chewed and the juice swallowed for internal organs. (185:61) **Iroquois** *Analgesic* Infusion of roots or leaves used internally or externally for headaches. (87:469) Plant chewed and poultice of leaves applied for neuralgia. *Anthelmintic* Infusion of leaves given to children with worms. *Anticonvulsive* Decoction of plants given and used as wash for babies with convulsions. *Antidiarrheal* Compound decoction of plants, bark, and roots taken for diarrhea. (87:470) Infusion of smashed plants taken for diarrhea. (87:471) Infusion of plant and seeds from another plant used for diarrhea. (141:64) *Antiemetic* Decoction or infusion of plants, bark, and roots taken for vomiting. (87:470) Decoction of leaves, branches, and another plant taken for vomiting and nausea. (141:64) *Antirheumatic (Internal)* Infusion of plants taken when “sore through the joints.” *Blood Medicine* Compound decoction of plants, roots, and bark taken as a blood purifier. (87:470) *Emetic* Infusion of smashed plants taken as an emetic for sunstroke. (87:471) *Febrifuge* Infusion of leaves given to babies with any kind of

fever. (87:469) Infusion of smashed plants taken for fever caused by sunstroke. (87:471) Poultice of plant applied and infusion of plant used for fevers. (142:103) *Gastrointestinal Aid* Plant used for “summer complaint” and decoction of plants taken for cramps. (87:470) Decoction of plant fragments taken for digestive cramps. (141:64) *Misc. Disease Remedy* Plant used as a miscellaneous disease remedy. (87:470) *Panacea* Infusion of leaves given to babies with any kind of sickness. *Pediatric Aid* Infusion of leaves given to babies with any kind of sickness or fever. (87:469) Compound decoction of stems given to children with diarrhea. Decoction of plants given and used as wash for babies with convulsions. *Stimulant* Cold infusion given and used as wash on unconscious person who had fallen. *Venereal Aid* Compound decoction of plants, roots, and bark taken for venereal disease. (87:470) Decoction of plant tops used as a wash on parts affected by gonorrhea. (87:471) **Karok** *Dermatological Aid* Poultice of soaked stalks and leaves applied to wounds. (148:390) **Klallam** *Cold Remedy* Decoction of leaves taken for colds. *Dermatological Aid* Poultice of chewed leaves applied to sores. *Gynecological Aid* Decoction of leaves taken during childbirth. (79:49) **Kutenai** *Dermatological Aid* Leaves crushed and used for wounds. Decoction used for washing sores and other skin problems. *Disinfectant* Herb used as a disinfectant. (82:6) **Kwakiutl** *Antirheumatic (External)* Leaves used in a steam bath for rheumatism. *Cold Remedy* Poultice of leaves applied to the chest for colds. (183:278) *Dermatological Aid* Poultice of chewed leaves applied or compound rubbed on sores and swellings. (183:266) *Gynecological Aid* Poultice of leaves applied to chest for hardened breasts after childbirth. *Herbal Steam* Leaves used in a steam bath for rheumatism or general sickness. *Panacea* Leaves used in a steam bath for general sickness. (183:278) **Lakota** *Dermatological Aid* Poultice of dried and chewed plants applied to wounds and sores. (106:46) **Lummi** *Analgesic* Decoction of flowers taken for body aches. *Diaphoretic* Decoction of flowers taken to produce sweating. *Misc. Disease Remedy* Decoction of flowers taken to prevent mumps. (79:49) **Mahuna** *Toothache Remedy* Rolled leaves inserted into cavity of painful tooth. (140:24) **Makah** *Blood Medicine* Leaves chewed as a blood purifier. (67:322) Decoction of leaves taken to purify the blood. (79:49) *Cathartic* Leaves chewed “to clean one out.” (67:322) *Diaphoretic* Raw leaves chewed by women to produce sweating at childbirth. (79:49) *Gynecological Aid* Plant taken by an expectant mother close to the time of birth for an easy delivery. Plant taken at the start of labor “to hurry the baby.” (67:322) Decoction of leaves taken to heal the uterus after birth. Raw leaves chewed by women to produce sweating at childbirth. (79:49) *Other* Plant used like an antibiotic. *Throat Aid* Leaves chewed and the juice swallowed for sore throats. (67:322) **Malecite** *Dermatological Aid* Used as a liniment for bruises. *Orthopedic Aid* Used as a liniment for sprains. (116:244) **Mendocino Indian** *Analgesic* Infusion of leaves and flowers taken for headaches. *Dermatological Aid* Infusion of leaves and flowers used as a wash for bruises. *Eye Medicine* Infusion of leaves and flowers used as a wash for sore eyes. *Gastrointestinal Aid* Infusion of leaves and flowers taken for stomachaches. *Orthopedic Aid* Infusion of leaves and flowers used as a wash for sprains. *Tuberculosis Remedy* Infusion of leaves and flowers taken for consumption. (41:391) **Menominee** *Dermatological Aid* Poultice of dried, powdered leaves applied to swellings and sores. (54:132) Poultice of leaves used on children’s rash and

fresh tops used to rub on eczema. *Febrifuge* Infusion of leaves used for fevers. *Pediatric Aid* Poultice of leaves used for “the rash of children.” (151:28, 29) **Micmac** *Antirheumatic (External)* Dried, powdered bark or green leaves rubbed over swellings. (194:25) *Cold Remedy* Herb used for colds. (40:53) *Dermatological Aid* Dried, powdered bark or green leaves rubbed over bruises. *Diaphoretic* Decoction of plant taken with milk to cause a sweat for colds. (194:25) *Orthopedic Aid* Herb used for swelling, bruises, and sprains. (40:53) Dried, powdered bark or green leaves rubbed over sprains. (194:25) **Miwok** *Analgesic* Dried or green mashed leaves used for pain and used during influenza epidemic. Dried or green mashed leaves used for pain. *Cold Remedy* Infusion of leaves and flowers taken for bad colds. *Misc. Disease Remedy* Infusion of leaves and flowers used externally for influenza. (12:166) **Mohegan** *Dietary Aid* Cold, compound infusion taken as an appetizer. *Gastrointestinal Aid* Cold, compound infusion taken for the stomach. (174:266) Compound infusion of leaves taken as a stomach aid and to improve the appetite. (176:75, 128) *Kidney Aid* Infusion of plant taken for the kidneys. (174:269) Simple or compound infusion of leaves taken for kidney disorders. (176:69, 128) *Liver Aid* Infusion of plant taken for the liver. (174:269) Simple or compound infusion of leaves taken for liver disorders. (176:69, 128) **Montagnais** *Febrifuge* Infusion of plant used for fever. (156:315) **Nitinaht** *Cold Remedy* Decoction of plants taken for colds. *Panacea* Plants chewed and swallowed as “medicine for everything.” (186:96) *Throat Aid* Leaves chewed and the juice swallowed for sore throats. (67:322) **Ojibwa** *Ceremonial Medicine* Florets smoked for ceremonial purposes. *Febrifuge* Florets placed on coals and smoke inhaled to break a fever. (153:362) **Okanagan-Colville** *Analgesic* Infusion of roots taken for headaches. *Antidiarrheal* Infusion of roots taken for diarrhea. *Antirheumatic (External)* Decoction of whole plant used as a bath for arthritic or rheumatic pains. *Cathartic* Decoction of roots and scarlet gilia leaves taken as a physic. *Cold Remedy* Infusion of roots taken for colds. *Dermatological Aid* Leaves and stems mixed with white clematis and witches’-broom branches to make a sham-poo. *Gastrointestinal Aid* Infusion of roots taken for stomachaches. *Laxative* Decoction of roots and scarlet gilia leaves taken as a laxative. *Toothache Remedy* Roots mashed and applied to the tooth for toothaches. (188:74) **Okanagon** *Dermatological Aid* Decoction used as wash for chapped hands, pimples, rashes, and insect bites. *Eye Medicine* Decoction of whole plant used as a wash for sore eyes. *Snakebite Remedy* Decoction of plant used as a wash for insect or snake bites. *Tonic* Decoction of whole plant taken as a tonic. (as *Achilles millefolium* 125:40) **Paiute** *Analgesic* Green plants smelled by old men for headaches. *Cold Remedy* Infusion of plant taken or green plants smelled for colds. (167:317) *Dermatological Aid* Poultice of crushed leaves applied to swellings. (104:196) Decoction of leaves and stems used as a liniment for skin sores. (167:317) *Eye Medicine* Cold infusion of leaves used as a wash for sore eyes. (104:197) *Orthopedic Aid* Poultice of crushed leaves applied to sprains. (104:196) *Toothache Remedy* Leaves chewed for toothache. (104:197) **Paiute, Northern** *Cold Remedy* Decoction of roots taken for chest cold. Roots dried and chewed raw for colds. *Cough Medicine* Leaves soaked and used for coughs. *Dermatological Aid* Poultice of pulverized roots applied to cuts and sores. *Diaphoretic* Leaves soaked and sprinkled on the hot rocks in the sweat bath. *Kidney Aid* Decoction of roots taken

for kidney troubles. *Misc. Disease Remedy* Decoction of roots taken for flu. *Throat Aid* Root chewed and the saliva allowed to flow down the throat for sore throats. (59:128) **Potawatomi Stimulant** Flowers smudged on live coals to revive comatose patient. *Witchcraft Medicine* Flowers smudged on live coals to repel evil spirits. (154:47, 48) **Quileute Antirheumatic (External)** Poultice of boiled leaves applied to rheumatic limbs. *Febrifuge* Poultice of boiled leaves applied to rheumatic limbs for the fever. *Panacea* Decoction of leaves used as an aromatic bath for sick infants. *Pediatric Aid* Decoction of leaves used as an aromatic bath for sick infants. **Quinault Eye Medicine** Decoction of roots used as an eyewash. *Tonic* Decoction of roots taken as a general tonic. *Tuberculosis Remedy* Decoction of roots taken for tuberculosis. (79:49) **Saanich Cold Remedy** Young leaves chewed and juice swallowed for colds. *Throat Aid* Young leaves chewed and juice swallowed for sore throats. *Toothache Remedy* Poultice of leaves held in the mouth for toothaches. (182:80) **Salish Eye Medicine** Decoction of plants used for sore eyes. (178:293) **Shuswap Blood Medicine** Decoction of flowers and roots taken as a blood purifier. (123:58) *Dermatological Aid* Infusion of leaves taken for poison ivy. (123:56) **Skagit Antidiarrheal** Decoction of leaves taken for diarrhea. **Snohomish Antidiarrheal** Decoction of leaves taken for diarrhea. **Squaxin Dermatological Aid** Poultice of chewed leaves applied to sores. *Gastrointestinal Aid* Decoction of roots taken for stomach troubles. **Swinomish Other** Plant used as a bath for invalids. (79:49) **Thompson Antidiarrheal** Infusion of leaves given to children for diarrhea. Leaves chewed or infusion of leaves taken for dysentery. Infusion of roots or whole plant taken for diarrhea. *Antirheumatic (External)* Decoction of leaves and roots used for bathing arthritic limbs. Poultice of pounded roots used on the skin for sciatica. *Cold Remedy* Infusion of flowers taken in small quantities for colds. Infusion of roots or whole plant taken for colds. Leaves chewed or decoction of leaves taken for colds. Roots chewed or decoction of roots taken for colds. (187:166) *Dermatological Aid* Decoction of plant used as a wash for chapped hands, pimples, rashes, and insect bites. (as *Achilles millefolium* 125:40) Infusion of plant used as wash or powdered stem and leaf applied for skin problems. (164:460) Leaves and roots rubbed on sores. Poultice of mashed basal leaves used for cuts. (187:166) *Eye Medicine* Decoction of whole plant used as a wash for sore eyes. (164:460) *Gastrointestinal Aid* Infusion of roots or whole plant taken for bad stomach cramps. *Misc. Disease Remedy* Infusion of flowers taken in small quantities for influenza. *Orthopedic Aid* Leaves and roots rubbed on broken bones. *Panacea* Decoction of whole plant taken for any sickness. Decoction of plant used as a wash for any kind of sickness. *Pediatric Aid* Infusion of leaves given to children for diarrhea. (187:166) *Snakebite Remedy* Decoction of plant used as a wash for insect or snake bites. (as *Achilles millefolium* 125:40) Decoction of whole plant used as a wash for snakebites. (164:460) *Tonic* Decoction of whole plant taken as a tonic. (as *Achilles millefolium* 125:40) Decoction of whole plant taken as a tonic “for slight indisposition.” (164:460) *Toothache Remedy* Mashed root placed over a tooth for toothache. *Unspecified* Roots and stems considered “a good medicine.” *Urinary Aid* Infusion of flowers taken in small quantities for bladder trouble. *Venereal Aid* Root used for venereal disease. (187:166) **Ute Dermatological Aid** Poultice of plant applied externally to bruises. *Panacea* Infusion of plant taken for cases of sickness. (38:32)

**Winnebago Dermatological Aid** Infusion of herb used as a wash for swellings. *Ear Medicine* Wad of leaves or infusion put into ear for earache. (70:134) **Yuki Cold Remedy** Infusion of leaves and flowers taken for cold in the chest. *Respiratory Aid* Infusion of leaves and flowers taken for cold in the chest. (49:47)

- **Food—Blackfoot Beverage** Leaves and flowers used to make a pleasant tea. (86:100) **Haisla & Hanaksiala Forage** Plant eaten by bears. (43:220) **Klamath Preservative** Stem, leaf, and flower placed inside fish cavity as a preservative. (45:105)
- **Other—Clallam Incense & Fragrance** Seeds used as house fragrances. (57:199) **Cree, Woodlands Hunting & Fishing Item** Dried flowers used for lynx bait. (109:23) **Kutenai Incense & Fragrance** Leaves formerly used for cologne, perfume, and bath powder. (82:6) **Okanagan-Colville Insecticide** Leaves and stems used in a smudge to keep mosquitoes away. (188:74) **Potawatomi Protection** Seed heads placed on a pan of live coals to produce smoke to keep the witches away. (154:117)

***Achillea millefolium* var. *arenicola*** (Heller) Nobs, Common Yarrow

- **Drug—Pomo, Kashaya Dermatological Aid** Mashed leaf juice used as a salve on sores. (as *A. borealis* ssp. *arenicola* 72:120)

***Achillea millefolium* var. *borealis*** (Bong.) Farw., Boreal Yarrow

- **Drug—Aleut Analgesic** Infusion of leaves taken for pains in stomach, throat, chest, and muscles. *Cold Remedy* Infusion of leaves taken for colds, stomach pains, and throat pains. *Gastrointestinal Aid* Infusion of leaves taken for stomach pains and throat pains. *Hemostat* Leaves used as a coagulant for cuts and stuffed into nostrils for nosebleeds. *Throat Aid* Infusion of leaves taken for stomach pains, throat pains, and colds. *Tuberculosis Remedy* Infusion of leaves taken for consumption in post-Russian era. (as *A. borealis* 8:426) **Costanoan Dermatological Aid** Decoction of plant used as a wash for sores. Poultice of heated leaves applied to wounds to prevent swelling. *Gastrointestinal Aid* Decoction of plant taken for stomachaches. *Toothache Remedy* Heated leaves held in the mouth for toothaches. (as *A. borealis* 21:25) **Eskimo, Alaska Unspecified** Infusion of dried plants used for medicinal purposes. (as *A. borealis* 4:716) **Eskimo, Nunivak Unspecified** Infusion of dried plants used for its medicinal qualities. (as *A. borealis* 149:325) **Kwakiutl Dermatological Aid** Poultice of chewed or soaked and heated plant applied to swellings and sores. (as *A. borealis* 20:381)

***Achillea millefolium* var. *californica*** (Pollard) Jepson, California Yarrow

- **Drug—Yurok Eye Medicine** Used to wash or steam aching, sore eyes. (6:15)

***Achillea millefolium* var. *occidentalis*** DC., Western Yarrow

- **Drug—Carrier Antirheumatic (External)** Decoction of leaves and stems used as a bath for rheumatism. *Toothache Remedy* Crushed roots placed in the tooth for toothaches. (as *A. lanulosa* 31:85) **Cheyenne Antiemetic** Infusion of green or dried leaves taken for slight nausea. *Cold Remedy* Infusion of green or dried leaves taken for colds. *Cough Medicine* Infusion of dried, pounded plant taken for coughs. *Throat Aid* Infusion of dried, pounded plant taken for tickling in the throat. (as *A. arguta* 125:41) **Quileute** *Dermatological Aid* Poultice of chewed leaves applied to boils. **Quinault** *Dermatological Aid* Poultice of chewed leaves applied to wounds. (as *A. arguta* 79:30) **Thompson** *Antirheumatic (Internal)* Decoction of roots taken for rheumatism. (as *A. arguta* 125:41) Decoction of root taken for rheumatism. (as *A. arguta* 164:463) *Dietary Aid* Decoction of roots taken for emaciation. (as *A. arguta* 125:41) Decoction of roots taken for emaciation. (as *A. arguta* & *A. eburnea* 164:463) *Poison* Decoction of roots considered poisonous if taken in large quantities. (as *A. arguta* & *A. eburnea* 164:512) *Venereal Aid* Decoction of root taken for syphilis. (as *A. arguta* & *A. eburnea* 164:463)

### **Actaea rubra** (Ait.) Willd. **ssp. rubra**, Red Baneberry

- **Drug—Iroquois** *Antihemorrhagic* Compound decoction with roots taken for internal hemorrhage. *Antirheumatic (External)* Infusion of roots used as a wash for rheumatism. *Psychological Aid* Taken and sprinkled on head to give “young men the right sense.” *Veterinary Aid* Infusion of roots given to dogs “when the dog won’t hunt anymore.” (as *A. spicata* ssp. *rubra* 87:321)

### **Actaea** sp.

- **Drug—Micmac** *Poison* Plant considered poisonous. (145:56)

### **Adenocaulon**, Asteraceae

#### **Adenocaulon bicolor** Hook., American Trailplant

- **Drug—Cowlitz** *Dermatological Aid* Poultice of leaves applied to boils. **Squaxin** *Dermatological Aid* Poultice of leaves applied to scrofula sores. *Tuberculosis Remedy* Poultice of leaves applied to scrofula sores. (79:48)

### **Adenostoma**, Rosaceae

#### **Adenostoma fasciculatum** Hook. & Arn., Common Chamise

- **Drug—Cahuilla** *Antirheumatic (External)* and *Disinfectant* Decoction of leaves and branches used to bathe infected, sore, or swollen areas of the body. (15:29) **Coahuilla** *Veterinary Aid* Plant used to make a drink given to sick cows. (13:79)
- **Fiber—Cahuilla** *Building Material* Branches used to build ramadas

and fences. (15:29) **Costanoan** *Basketry* Wood used for basketry. (21:249)

- **Other—Cahuilla** *Fuel* Large roots used for firewood. Wood coals used as a favorite source for roasting. *Hunting & Fishing Item* Branches used to make arrows. Branches used to make bows. *Lighting* Branches bound together and used for torches. (15:29) **Costanoan** *Hunting & Fishing Item* Wood used for arrow foreshafts. (21:249) **Diegueño** *Fuel* Used for firewood. (88:217) **Luiseño** *Fasteners* Gum used to secure stone points to arrows. *Hunting & Fishing Item* Plant used to make arrow foreshafts. (155:205)

### **Adenostoma sparsifolium** Torr., Redshank

- **Drug—Cahuilla** *Antirheumatic (External)* Plant used for arthritis. *Cold Remedy* Leaves used to make a beverage for colds. *Emetic* Infusion of dried leaves taken for stomach ailments by inducing bowel movements or vomiting. *Gastrointestinal Aid* Leaves used to make a beverage for ulcers. Infusion of dried leaves taken for stomach ailments by inducing bowel movements or vomiting. *Laxative* Infusion of dried leaves taken for stomach ailments by inducing bowel movements or vomiting. *Pulmonary Aid* Leaves used to make a beverage for chest ailments. *Veterinary Aid* Poultice of plant and bacon fat applied to saddle sores on horses. (15:30) **Coahuilla** *Analgesic* Infusion of twigs taken for stomach and intestinal pain. *Cathartic* Infusion of twigs used “to produce vomit and bowel relief.” *Dermatological Aid* Pulverized twigs mixed with grease and used as a salve. *Emetic* Infusion of twigs used “to produce vomit and bowel relief.” *Gastrointestinal Aid* Infusion of twigs taken for stomach and intestinal pain. (13:77, 78) **Diegueño** *Gastrointestinal Aid* Infusion of plant taken for colic. *Toothache Remedy* Infusion of plant used as a mouthwash for toothaches. (88:217)
- **Food—Cahuilla** *Unspecified* Seeds used for food. (15:30) **Coahuilla** *Unspecified* Seeds used for food. (13:77)
- **Fiber—Cahuilla** *Building Material* Wood used for building material and fence posts. *Clothing* Stripped bark used as a fibrous material for women’s skirts. (15:30) **Coahuilla** *Building Material* Used as building material. (13:77)
- **Other—Cahuilla** *Fuel* Used for firewood. Limbs used as a favorite firewood for roasting, giving a high-intensity heat. *Hunting & Fishing Item* Wood used to make arrowheads. (15:30) **Coahuilla** *Fuel* Used for fuel. (13:77) **Diegueño** *Fuel* Wood and roots used for firewood. (88:217)

### **Adiantum**, Pteridaceae, fern

#### **Adiantum aleuticum** (Rupr.) Paris, Aleutian Maidenhair

- **Drug—Lummi** *Dermatological Aid* Infusion of leaves used as a hair wash. **Makah** *Antihemorrhagic* Leaves chewed for internal hemorrhages from wounds. *Dermatological Aid* Infusion of leaves used as a hair wash. *Gastrointestinal Aid* Leaves chewed for sore chest and stomach troubles. **Skokomish** *Dermatological Aid* Infusion of leaves used as a hair wash. (as *A. pedatum* var. *aleuticum* 79:14)
- **Fiber—Karak** *Basketry* Stems used for the designs in baskets. (as *A. pedatum* var. *aleuticum* 6:15) **Makah** *Basketry* Midribs used for the designs in basketry. **Quinault** *Basketry* Midribs used for the designs in basketry. (as *A. pedatum* var. *aleuticum* 79:14) **Tolowa** *Basketry* Dried, stored stems soaked in water and used for the designs in bas-

kets. **Yurok Basketry** Stems used for the designs in baskets. (as *A. pedatum* var. *aleuticum* 6:15)

- **Other**—Pomo, **Kashaya Jewelry** Stem inserted into ear lobe to keep hole from closing, either alone or with feathers; an earring. (as *A. pedatum* var. *aleuticum* 72:45)

***Adiantum capillus-veneris*** L., Common Maidenhair

- **Drug**—Mahuna **Antirheumatic (Internal)** Plant used for rheumatism. (140:60) Navajo, **Kayenta Dermatological Aid** Infusion of plant used as a lotion for bumblebee or centipede stings. **Psychological Aid** Plant smoked or infusion of plant used for insanity. (205:14)

***Adiantum jordanii*** C. Muell., California Maidenhair

- **Drug**—Costanoan **Analgesic** Decoction of plant used for “pain below the shoulders.” **Blood Medicine** Decoction of plant used to purify the blood. **Gastrointestinal Aid** Decoction of plant used for stomach troubles. **Gynecological Aid** Decoction of plant used to expel the afterbirth and for postparturition. (21:4)
- **Fiber**—Pomo, **Kashaya Basketry** Dried, split stems used as a material for basket design. (72:46)
- **Other**—Pomo, **Kashaya Jewelry** Stem inserted into ear lobe to keep hole from closing, either alone or with feathers; an earring. (72:46)

***Adiantum pedatum*** L., Northern Maidenhair

- **Drug**—Cherokee **Antirheumatic (External)** Compound decoction of root applied with warm hands for rheumatism. (80:8) Decoction of roots rubbed on area affected by rheumatism. (177:3) **Antirheumatic (Internal)** Infusion taken for rheumatism. **Emetic** Infusion of whole plant given as an emetic “in case of ague and fever.” (80:34) Decoction of whole plant used as an emetic in cases of ague and fever. (203:74) **Febrifuge** Infusion of whole plant blown over head and chest of patient for fever. (80:34) Decoction of whole plant used as an emetic in cases of fever. (203:74) **Heart Medicine** Powdered leaves smoked for heart trouble. **Misc. Disease Remedy** Infusion of whole plant given as an emetic “in case of ague and fever.” (80:34) Decoction of whole plant used as an emetic in cases of ague. (203:74) **Other** Given for “sudden paralytic attacks as in bad pneumonia of children.” **Respiratory Aid** Powdered plant “snuffed” and smoked for asthma. (80:34) **Costanoan Blood Medicine** Decoction of plant used to purify the blood. **Gastrointestinal Aid** Decoction of plant used for stomach troubles. (21:5) **Hesquiát Respiratory Aid** Infusion of dried fronds burned to ashes, mixed with unknown, and taken for shortness of breath. Green fronds chewed for shortness of breath. **Strengtheners** Infusion of dried fronds burned to ashes, mixed with unknown, and taken for strength and endurance. This infusion used especially by dancers in winter. Hesquiát dancers would take nothing but this medicine on day when they were dancing; it made them “light on their feet” and helped them continue dancing for a long time without tiring. Green fronds chewed by dancers in winter for strength and endurance. (185:29) **Makah Gastrointestinal Aid** Fronds chewed or eaten for “weak stomach.” (67:217) **Menominee Antidiarrheal** Compound decoction of root used for dysentery. (54:131) **Gynecological Aid** Blades, stem, and root used for “female maladies.” (151:47) **Meskwaki Pediatric Aid** Compound containing root and stems used for children who “turn black.” (152:237) **Micmac Other** Herb used for fits and taken as an “agreeable decoction.” (40:54) **Nitinaht Ceremo-**

**nial Medicine** Used by dancers to make them light-footed. (186:61) **Potawatomi Gynecological Aid** Infusion of root taken by nursing mothers for caked breast. (154:73)

- **Fiber**—Karak **Basketry** Softened stems dried and used for the black designs in basket caps and other baskets. (148:377) **Makah Basketry** Dark petioles split in two, worked until soft, and used for black in basketry. (67:217)
- **Other**—Karak **Decorations** Stems used as decoration on clothing, especially on the Jump Dance dress. (148:377) **Kwakiutl, Southern Containers** Used to line baskets. **Cooking Tools** Used to cover berry drying racks. (183:264) **Maidu Decorations** Stalks used as decorative overlay twine in the manufacture of baskets. (173:71) **Pomo Tools** Stem inserted in a pierced ear lobe to keep the wound from closing. (66:11) **Potawatomi Good Luck Charm** Black stems used as hunting charms to bring good luck. (154:122)

***Adiantum pedatum*** L. **ssp. pedatum**, Northern Maidenhair

- **Drug**—Iroquois **Analgesic** Decoction of plant used by children for cramps. **Antirheumatic (External)** Compound decoction of green roots used as foot soak for rheumatism. **Antirheumatic (Internal)** Compound decoction of green roots taken for rheumatism. **Diuretic** Decoction of roots taken for the cessation of urine due to gall. **Emetic** Infusion of plant induced vomiting as a remedy for love medicine. **Gynecological Aid** Compound decoction or infusion of roots taken for excessive menstruation. Decoction of roots used by “ladies to get period, cleans out” or for abortions. Plant used for abortion pains and pain when about to deliver. **Liver Aid** Decoction of roots taken for the cessation of urine due to gall. (87:258) **Orthopedic Aid** and **Pediatric Aid** Poultice of smashed plant applied to sore back of babies. (87:257) Decoction of plant used by children for cramps. **Snakebite Remedy** Poultice of wet, smashed fronds bound to snakebites. **Venereal Aid** Decoction of plant used as a wash for gonorrhea. Decoction of root taken for venereal disease and used as a wash for sores. (87:258)

***Adiantum* sp.**, Maidenhair Fern

- **Drug**—Apalachee **Unspecified** Plant water used for medicinal purposes. (81:98)
- **Fiber**—Hahwunkwut **Basketry** Plant used to make cooking bowls, mush baskets, and other small baskets. (117:183) **Poliklah Basketry** Stems used to make the designs on baskets. (117:170) **Winton Basketry** Used to make designs on baskets. (117:264)
- **Other**—Hahwunkwut **Cooking Tools** Plant used to make cooking bowls, mush baskets, and other small baskets. (117:183)

***Aesculus***, Hippocastanaceae

***Aesculus californica*** (Spach) Nutt., California Buckeye

- **Drug**—Costanoan **Hemorrhoid Remedy** Smashed fruit applied as a salve for hemorrhoids. **Poison** Fruit used as a fish poison. **Toothache Remedy** Decoction of bark used for toothaches and loose teeth. (21:23) **Kawaiisu Hemorrhoid Remedy** Broken seeds used as suppositories for piles. **Poison** Raw seeds considered poisonous if eaten. (206:10) **Mendocino Indian Poison** Fresh fruit considered poisonous. **Toothache Remedy** Bark placed in cavity of tooth for toothaches. **Veterinary Aid** Fruit given to horses for bot worms and apt to cause an abortion in cows. (41:366) **Pomo Poison** Nuts used as poison. (66:14)

- **Food**—**Costanoan Fruit** Fruit used for food. (21:252) **Kawaiisu Bread & Cake** Seeds pounded, leached, boiled into a mush, made into a cake, and eaten with meat. (206:10) **Mendocino Indian Forage** Fruits eaten by squirrels as forage. **Fruit** Fruits roasted and eaten cold without salt. (41:366) **Miwok Soup** Roasted, peeled nuts ground into a meal and used to make soup. **Winter Use Food** Nuts stored for long periods and resorted to only when the acorn crop failed. (12:148) **Modesse Starvation Food** Nuts eaten in times of need. (117:223) **Pomo, Kashaya Unspecified** Boiled nuts eaten with baked kelp, meat, and seafood. Nuts were put into boiling water to loosen the husk. After the husk was removed, the nutmeat was returned to boiling water and cooked until it was soft like cooked potatoes. The nutmeat was then mashed with a mortar stone. The grounds could be strained at this stage or strained after soaking. The grounds would be soaked and leached a long time to remove the poisonous tannin. An older method was to peel the nuts and roast them in ashes until they were soft. They were then crushed and the meal was put in a sandy leaching basin beside a stream. For about 5 hours, the meal was leached with water from the stream. When the bitterness disappeared it was ready to eat without further cooking. (72:27) **Tubatulabal Unspecified** Nuts used for food. (193:15) **Yana Staple** Nuts ground into a fine meal and eaten. (147:251) **Yuki Unspecified** Nutmeats mashed and used for food. (49:85)
- **Other**—**Kawaiisu Cooking Tools** Wood sections hollowed out by burning and carved into bowls. (206:10) **Mendocino Indian Tools** Wood used as twirling sticks for making fire by friction. (41:366) **Pomo, Kashaya Hunting & Fishing Item** Wood used to make bows. Ground nuts sprinkled into pools to kill fish, a fishing method. **Tools** Wood used to make a drill stick and block for making fires. (72:27)

### ***Aesculus flava*** Ait., Yellow Buckeye

- **Fiber**—**Cherokee Building Material** Wood used for lumber. **Furniture** Wood used to make baby cradles. (as *A. octandra* 80:27)
- **Other**—**Cherokee Ceremonial Items** Wood used to make masks. **Containers** Wood used to make dough trays. **Decorations** Wood used to carve. **Paper** Wood used for pulpwood. (as *A. octandra* 80:27)

### ***Aesculus glabra*** Willd., Ohio Buckeye

- **Drug**—**Delaware Antirheumatic (External)** Nuts carried in the pocket for rheumatism. **Ear Medicine** Infusion of ground nuts mixed with sweet oil or mutton tallow and applied for earache. **Poison** Nuts ground and used as fish poison in streams. (176:30) **Delaware, Oklahoma Ear Medicine** Poultice of pulverized nuts with sweet oil applied for earache. **Poison** Pulverized nuts used as fish poison called “fish peyote,” made the fish dizzy. (175:25, 74) **Mohegan Antirheumatic (External)** Carried in the pocket for rheumatism pain. (176:78)

### ***Aesculus glabra* var. *arguta*** (Buckl.) B. L. Robins., Ohio Buckeye

- **Drug**—**Kiowa Emetic** Infusion of the inside of fruit taken as an emetic. (as *A. arguta* 192:41)

### ***Aesculus hippocastanum*** L., Horse Chestnut

- **Drug**—**Iroquois Analgesic** Compound of powdered roots used for chest pains. **Pulmonary Aid** Compound of powdered roots used for chest pains. (87:379) **Mohegan Antirheumatic (External)** Horse chestnut carried in the pocket for rheumatism. **Shinnecock Antirheumatic (External)** Horse chestnut carried in the pocket for rheumatism. (30:121)

### ***Aesculus pavia*** L., Red Buckeye

- **Drug**—**Cherokee Antirheumatic (External)** Nut carried in pocket for rheumatism and good luck. **Cancer Treatment** Poultice of pounded nuts used for tumors and infections. **Dermatological Aid** Poultice of pounded nuts used for tumors and infections and as a salve for sores. **Gastrointestinal Aid** Nuts used in various ways for dyspepsia and colic. (80:27) Infusion of roots taken and used as a bath for dyspepsia. (177:39) **Gynecological Aid** Cold, compound infusion given to stop bleeding after delivery. Infusion of bark and cold compound infusion of bark used in delivery. **Hemorrhoid Remedy** Nut carried in pocket for piles. **Orthopedic Aid** Poultice of pounded nuts used for “white swelling” and sprains. **Stimulant** Infusion of ground nutmeat taken to prevent fainting. (80:27)
- **Other**—**Cherokee Good Luck Charm** Nut carried in the pocket for good luck. (80:27)

### ***Aesculus* sp.**, Buckeye

- **Drug**—**Cherokee Poultice** Pounded nuts used in poultices. (203:74) **Creek Tuberculosis Remedy** Roots, a very strong medicine, used in cases of “pulmonary consumption.” (172:658) Roots used for pulmonary consumption. **Koasati Throat Aid** Poultice of heated beans applied to the throat for tonsil troubles. (177:39)
- **Other**—**Cherokee Hunting & Fishing Item** Pounded roots strewed on water to “intoxicate fishes.” (203:75) **Mewuk Tools** Wood used to make the fire drill. (117:325)

## ***Agalinis***, Scrophulariaceae

### ***Agalinis tenuifolia*** (Vahl) Raf. **var. *tenuifolia***, Slenderleaf False Foxglove

- **Drug**—**Meskwaki Antidiarrheal** Infusion used for diarrhea. (as *Gerardia tenuifolia* 152:246, 247)

## **Agaricaceae**, see *Agaricus*

## ***Agaricus***, Agaricaceae, fungus

### ***Agaricus campestris***

- **Food**—**Delaware Unspecified** Salted, boiled, or fried in fat and used for food. (176:60) **Pomo, Kashaya Vegetable** Baked on hot rocks or in the oven or fried. (72:130)

### ***Agaricus silvicola***, Deer Mushroom

- **Food**—**Pomo, Kashaya** Plant top cooked on a flat hot rock and eaten. (72:129)

### ***Agaricus* sp.**

- **Food**—**Thompson Dried Food** Plant strung, dried, cut, peeled, and eaten raw or roasted. (164:483)

## ***Agastache***, Lamiaceae

### ***Agastache foeniculum*** (Pursh) Kuntze, Blue Giant Hyssop

- **Drug**—**Cheyenne Analgesic** Cold infusion of leaves taken for chest pains caused by coughing. (as *A. anethiodora* 76:186) **Cold Remedy** Infusion of leaves taken as a cold medicine. **Diaphoretic** Leaves used in a steam bath to induce sweating. **Febrifuge** Powdered leaves rubbed on the body for high fevers. (83:27) **Heart Medicine** Infusion of leaves used for a weak heart. (as *A. anethiodora* 76:186) Infusion of leaves taken to correct dispirited heart. **Herbal Steam** Leaves used in

a steam bath to induce sweating. (83:27) *Pulmonary Aid* Cold infusion of leaves taken for chest pains caused by coughing. (as *A. anethiodora* 76:186) Cold infusion of leaves taken for chest pain. (as *A. anethiodora* 75:42) *Unspecified* Infusion of leaves taken for its medicinal qualities. (83:27) **Chippewa Analgesic** Infusion of root taken for cold and chest pain. (as *A. anethiodora* 53:340) *Burn Dressing* Simple or compound poultice of leaves or stalk applied to burns. (as *A. anethiodora* 53:352) *Cough Medicine* Infusion of root taken for cough of "an internal cold." (as *A. anethiodora* 53:340) **Cree Ceremonial Medicine** Flowers frequently included in medicine bundles. (97:51) **Cree, Woodlands Antihemorrhagic** Infusion of stem, leaves, and other plants taken for coughing up blood. (109:26)

- **Food—Cheyenne Beverage** Leaves used to make tea. (as *A. anethiodora* 76:186) **Cree, Woodlands Beverage** Leaves added to store bought tea to improve the flavor. (109:26) **Dakota Beverage** Leaves used to make a hot, tea-like beverage taken with meals. *Sweetener* Plant used as a sweetening flavor in cooking. (as *A. anethiodora* 70:113) **Lakota Beverage** Used to make tea. (139:49) **Omaha Beverage** Leaves used to make a hot, tea-like beverage taken with meals. *Sweetener* Plant used as a sweetening flavor in cooking. **Pawnee Beverage** Leaves used to make a hot, tea-like beverage taken with meals. *Sweetener* Plant used as a sweetening flavor in cooking. **Ponca Beverage** Leaves used to make a hot, tea-like beverage taken with meals. *Sweetener* Plant used as a sweetening flavor in cooking. **Winnebago Beverage** Leaves used to make a hot, tea-like beverage taken with meals. *Sweetener* Plant used as a sweetening flavor in cooking. (as *A. anethiodora* 70:113)
- **Other—Chippewa Protection** Plant used as a charm for protection. (as *A. anethiodora* 53:376)

***Agastache nepetoides*** (L.) Kuntze, Yellow Giant Hyssop

- **Drug—Iroquois Dermatological Aid** Compound infusion of plants used as wash for poison ivy and itch. (87:422)

***Agastache pallidiflora* ssp. *neomexicana* var. *neomexicana*** (Briq.) R. W. Sanders, New Mexico Giant Hyssop

- **Drug—Navajo, Ramah Ceremonial Medicine** Plant used in ceremonial chant lotion. *Cough Medicine* Plant used for bad coughs. *Dermatological Aid* Dried, pulverized root used as dusting powder for sores or cankers. *Disinfectant* Plant used as fumigant for "deer infection." *Febrifuge* Plant used as a fever medicine. *Witchcraft Medicine* Plant used to protect from witches. (as *A. neomexicana* 191:41)
- **Food—Acoma Spice** Leaves used for flavoring. (as *A. neo-mexicana* 32:34) **Apache Staple** Used as one of the most important foods. **Comanche Staple** Used as one of the most important foods. (as *A. neo-mexicana* 32:10) **Keres, Western Spice** Leaves mixed with meat for seasoning. (as *Agastache neo-mexicana* 171:24) **Laguna Spice** Leaves used for flavoring. (as *Agastache neo-mexicana* 32:34) **Mohave Staple** Used as one of the most important foods. **Paiute Staple** Used as one of the most important foods. **Papago Staple** Used as one of the most important foods. **Ute Staple** Used as one of the most important foods. **Yuma Staple** Used as one of the most important foods. (as *A. neo-mexicana* 32:10)
- **Other—Pima Cash Crop** Obtained by barter from the Papago Indians. (as *A. neo-mexicana* 32:10)

***Agastache scrophulariifolia*** (Willd.) Kuntze, Purple Giant Hyssop

- **Drug—Meskwaki Diuretic** Infusion of root used as a diuretic. *Unspecified* Compound of plant heads used medicinally. (152:225)

***Agastache urticifolia*** (Benth.) Kuntze, Nettleleaf Giant Hyssop

- **Drug—Miwok Antirheumatic (Internal)** Decoction of leaves taken for rheumatism. *Misc. Disease Remedy* Decoction taken for measles. (12:166) **Okanagan-Colville Cold Remedy** Infusion of leaves taken as a cold medicine. *Febrifuge* and *Pediatric Aid* Leaves placed in babies' blankets for fevers. (188:109) **Paiute Analgesic** Cold infusion of leaves used for stomach pains. *Cold Remedy* Decoction of plant taken for colds. *Dermatological Aid* Poultice of mashed leaves applied to swellings. *Gastrointestinal Aid* Cold infusion of leaves used for indigestion and stomach pains. **Shoshoni Cathartic** Decoction of plant taken as a physic. (180:33)
- **Food—Gosiute Unspecified** Seeds formerly used for food. (as *Lophanthus urticifolius* 39:374)

**Agavaceae**, see *Agave*, *Cordyline*, *Dasyliiron*, *Manfreda*, *Nolina*, *Pleomele*, *Yucca*

**Agave**, Agavaceae

***Agave americana*** L., American Century Plant

- **Food—Apache Dried Food** Heads and young leaves roasted, sun dried, and used immediately or stored. *Staple* Used as one of the most important foods. (32:10) **Apache, White Mountain Beverage** "Hearts" and roots pit baked, crushed, and fermented into an intoxicating beverage. (136:145) *Unspecified* Tubers pit baked and eaten. (136:155) *Winter Use Food* Tubers pit baked and stored for future use. (136:145) **Comanche Staple** Used as one of the most important foods. **Mohave Staple** Used as one of the most important foods. **Paiute Staple** Used as one of the most important foods. **Papago Staple** Used as one of the most important foods. (32:10) *Unspecified* Pit baked and extensively used for food. (34:16) Pit baked and used for food. (36:61) *Vegetable* Crowns with leaves removed eaten as greens in winter. Central flowering stalks eaten as greens in spring before they emerged. (34:14) Flower stalks eaten as greens. (34:16) Pit baked and used as greens. Flower stalks roasted in ashes and eaten as greens. (34:46) **Pima Dried Food** Fruit heads roasted, centers sun dried and used for food. *Sauce & Relish* Juice boiled and used as a syrup. *Starvation Food* Used for food in times of famine. (146:70) **Ute Staple** Used as one of the most important foods. **Yuma Staple** Used as one of the most important foods. (32:10)
- **Fiber—Papago Brushes & Brooms** Bundles of fibers used as combination brushes and combs for hair. (34:51) *Building Material* Leaves split and used for the weft of wrapped weaving in house frames. (34:53)
- **Other—Papago Cash Crop** Pit baked, kept in jars, and traded as a delicacy. (34:16) *Containers* Two-ply fiber formerly used to make carrying nets. (34:54) **Pima Cash Crop** Obtained by barter from the Papago Indians. (32:10)

***Agave decipiens*** Baker, False Sisal

- **Food—Apache, White Mountain Beverage** Heart and tubers used to make a fermented drink. *Unspecified* Tubers pit baked and eaten. (136:155)

***Agave deserti*** Engelm., Desert Agave

- **Food—Cahuilla Dried Food** Flowers parboiled to release the bitter-

- ness and dried for future use. Baked leaves dried and stored for future use. Roasted, pounded stalks and leaves made into cakes and sun dried. *Unspecified* Flowers parboiled to release the bitterness and eaten. Baked leaves eaten. Roasted stalks used for food. (15:31) **Cocopa** *Unspecified* Crowns gathered and pit baked. (37:202) **Diegueño** *Unspecified* Roots and stalks baked overnight in a pit oven and used for food. (84:13) **Papago** *Unspecified* Pit baked and used for food. (36:61) **Pima** *Candy* Heads baked, sliced, dried, and eaten like candy. *Unspecified* Heads pit baked and eaten with pinole. (47:48) **Pima, Gila River** *Candy* Plant dried and used as sweets. (133:6) *Dried Food* Hearts dried and stored indefinitely. (133:4) *Staple* Hearts pit roasted and used as a staple food. (133:7)
- **Fiber—Cahuilla** *Basketry* Pounded leaves dried and made into cactus bags. *Clothing* Pounded leaves dried and made into shoes, sandals, and women's skirts. *Cordage* Pounded leaves dried and made into nets, slings, and cordage. Pounded leaves dried and made into nets used for baby cradles. *Scouring Material* Pounded leaves dried and made into cleaning brushes for cooking water. (15:31) **Pima** *Cordage* Dead leaves cut, beaten, and fibers twined into cords or rope. (47:48)
  - **Dye—Cahuilla** *Unspecified* Burned stalk ash used as a dye for tattoos. (15:31)
  - **Other—Cahuilla** *Ceremonial Items* Pounded leaves dried and made into netting used for ceremonial costumes. *Fuel* Dried stalks used for firewood. *Hunting & Fishing Item* Pounded leaves dried and made into bowstrings and snares. *Stable Gear* Pounded leaves dried and made into saddle blankets. *Tools* Thorns used as awls in basket making. Thorns used as tool for tattooing. (15:31) **Cocopa** *Cash Crop* Baked crowns obtained from Paipai and Diegueño in trade for agricultural products. (37:202)

### **Agave lechuguilla** Torr., Lechuguilla

- **Fiber—Papago** *Cordage* Leaves used to make rough cordage. (34:61) **Pima** *Brushes & Brooms* Fiber used to make hairbrushes. (17:50)
- **Other—Papago** *Cash Crop* Fibers and the cordage made from them bartered with the Pimas for blankets and cotton. (34:61)

### **Agave palmeri** Engelm., Palmer's Century Plant

- **Food—Apache, Western** *Beverage* Juice fermented into a drink. Crowns cooked, fermented in a vessel, ground, boiled, and the liquor again fermented. Juice strained and mixed with "tiswin water," a liquor of fermented maize. Flower stalk baked and chewed for juice. *Candy* Heart of the crown eaten by children as candy. *Dried Food* Plant eaten dried. *Substitution Food* Used in absence of other foods. *Unspecified* Crowns used for food. (26:169) **Papago** *Unspecified* Pit baked and used for food. (36:61)
- **Fiber—Apache, Western** *Sewing Material* Thorn used as needle and thread. (26:169)
- **Other—Apache, Western** *Decorations* Juice used by young girls to daub on their cheeks. *Paint* Juice covering pit stones after baking used to paint stripes on buckskin. *Tools* Stalk fashioned into hoe handles. *Weapon* Stalk used for a lance shaft. (26:169)

### **Agave parryi** Engelm., Parry's Agave

- **Food—Apache** *Dried Food* Heads and young leaves roasted, sun dried, and used immediately or stored. Heads and young leaves

- roasted, sun dried, and used immediately or stored. *Staple* Used as one of the most important foods. (32:10) *Unspecified* Roots baked and eaten. (32:13) **Apache, Chiricahua & Mescalero** *Unspecified* Bulbous crowns baked in pits, pulpy centers released, pounded into thin sheets, and eaten. The Mescalero Apache were named for the food they made from mescal. In the pits where the crowns were baked, the largest rock was placed in the center and a cross made on it from black ashes. While the mescal baked, the women were supposed to stay away from their husbands, and if the crown was not completely roasted when removed from the pit, they were believed to have disobeyed. (33:35) Stalks roasted, boiled, or eaten raw. *Vegetable* Stalks boiled, dried, and stored to be used as vegetables. (33:38) **Apache, Mescalero** *Bread & Cake* Leaf bases pit cooked, made into cakes, dried, and used for food. (14:30) **Apache, Western** *Beverage* Juice fermented into a drink. Crowns cooked, fermented in a vessel, ground, boiled, and the liquor again fermented. Juice strained and mixed with "tiswin water," a liquor of fermented maize. Flower stalk baked and chewed for juice. *Candy* Heart of the crown eaten by children as candy. *Dried Food* Plant eaten dried. Plant eaten dried. *Substitution Food* Used in absence of other foods. Used in absence of other foods. *Unspecified* Crowns used for food. (26:169) **Comanche** *Staple* Used as one of the most important foods. **Mohave** *Staple* Used as one of the most important foods. **Paiute** *Staple* Used as one of the most important foods. **Papago** *Staple* Used as one of the most important foods. **Ute** *Staple* Used as one of the most important foods. **Yuma** *Staple* Used as one of the most important foods. (32:10)
- **Fiber—Apache, Western** *Sewing Material* Thorn used as needle and thread. (26:169)
  - **Other—Apache, Western** *Decorations* Juice used by young girls to daub on their cheeks. Juice used by young girls to daub on their cheeks. *Paint* Juice covering pit stones after baking used to paint stripes on buckskin. *Tools* Stalk fashioned into hoe handles. *Weapon* Stalk used for a lance shaft. (26:169) **Pima** *Cash Crop* Obtained by barter from the Papago Indians. (32:10)

### **Agave schottii** Engelm., Schott's Century Plant

- **Food—Papago** *Unspecified* Pit baked and used for food. (36:61)

### **Agave sp.**, Mescal Agave

- **Drug—Hualapai** *Dermatological Aid* Used as a facial cream. (195:55)
- **Food—Apache, San Carlos** *Unspecified* Pit baked and used for food. (95:257) **Havasupai** *Beverage* Leaves and young buds baked, soaked in water, and used as a drink. (200:71) **Hualapai** *Staple* Plant considered a main staple. *Sweetener* Stems, before blooming, eaten like sugar cane. *Winter Use Food* Plant stored for winter use. (195:55) **Navajo** *Beverage* Juice squeezed from baked fibers and drunk. *Dried Food* Heads baked or boiled, pounded into flat sheets, sun dried, and stored for future use. *Porridge* Dried, baked heads boiled and made into a "paste." *Soup* Dried, baked heads boiled and made into soup. *Unspecified* Heads baked and eaten. Leaves boiled and eaten. Young and tender flowering stalks and shoots roasted and eaten. (23:94) **Yavapai** *Beverage* Leaf stubs and heads pounded to express juice and used as a drink. (65:259) *Dried Food* Pounded, cooked, dried meaty centers of leaves stored in houses for later use. (65:260) *Unspecified* Flower stalk baked and soft, inner part used for food. (65:259)
- **Fiber—Hualapai** *Clothing* Cut, split leaves used to make sandals.

*Cordage* Cut, split leaves used to make rope. *Mats, Rugs & Bedding* Cut, split leaves used to make cradle mats. (195:55) **Navajo** *Cordage* Plant fibers used to make rope. (23:94) **Yavapai** *Brushes & Brooms* Grass stem brush used to transfer excess mescal juice from dish to slab. (65:259)

- **Other**—**Havasupai** *Cash Crop* Leaves and young buds baked and traded with the Hopi. *Ceremonial Items* Stalk and fiber used to make ceremonial equipment. (200:71) **Hualapai** *Containers* Crushed fibers used as an ingredient in pottery making. (195:55) **Navajo** *Cooking Tools* Leaves used to line the baking pits. (23:91) *Tools* Sharp pointed leaf tips used to make basketry awls. (23:94)

***Agave utahensis*** Engelm., Utah Agave

- **Food**—**Havasupai** *Beverage* Plant used to make a drink. (197:66)
- **Fiber**—**Havasupai** *Brushes & Brooms* Used to make brushes for the hair and for cleaning grinding stones. To make the brushes, the dried matter of a dead and rotten leaf was knocked free from the fibers, which were then bent in two. The upper end of this brush was wrapped with a cord and the bent portion was covered with buckskin or cloth. The loose fibers were cut to the right length and hardened by burning the ends. (197:212) **Navajo** *Mats, Rugs & Bedding* Fibers used to make blankets. (55:37)
- **Other**—**Havasupai** *Cooking Tools* Used to make spoons for thin drinks. (197:212)

***Ageratina***, Asteraceae

***Ageratina altissima*** (L.) King & H. E. Robins. **var. *altissima***, White Snakeroot

- **Drug**—**Cherokee** *Antidiarrheal* Taken for diarrhea, gravel, and urinary diseases. *Diuretic* Root used as a diuretic. *Febrifuge* Taken for fever. *Misc. Disease Remedy* Taken for ague. *Stimulant* Root used as a stimulant. *Tonic* Root used as a tonic. *Urinary Aid* Taken for gravel and urinary diseases. (as *Eupatorium rugosum* 80:56) **Iroquois** *Blood Medicine* Decoction of roots taken to separate venereal disease from the blood. (as *Eupatorium rugosum* 87:459) *Cathartic* Decoction of whole plant and roots taken as a physic. (as *Eupatorium rugosum* 87:458) *Diaphoretic* Decoction of roots taken and used as a sweat bath to keep patient cooled. *Gynecological Aid* Decoction or infusion of roots taken for a fallen or inflamed womb. *Panacea* Plant used for anything. *Venereal Aid* Decoction of roots taken to separate venereal disease from the blood. *Veterinary Aid* Infusion of plants given to horses to stop sweating. (as *Eupatorium rugosum* 87:459) *Witchcraft Medicine* Decoction of stems used as a witchcraft medicine. (as *Eupatorium rugosum* 87:458)

***Ageratina altissima* var. *roanensis*** (Small) Clewell & Woot., White Snakeroot

- **Drug**—**Chickasaw** *Toothache Remedy* Roots chewed and held in mouth for toothache. **Choctaw** *Stimulant* and *Tonic* Used as a “warming stimulant and tonic.” *Toothache Remedy* Roots chewed and held in mouth for toothache. (as *Eupatorium ageratoides* 28:288) **Meskwaki** *Diaphoretic* Used as a steaming agent in sweat bath. *Stimulant* Smudged and used to revive an unconscious patient. (as *Eupatorium urticaefolium* 152:214)

***Ageratina herbacea*** (Gray) King & H. E. Robins., Fragrant Snake-root

- **Drug**—**Navajo, Ramah** *Analgesic* Cold infusion taken and used as lotion for headache. *Febrifuge* Cold infusion taken and used as lotion for fever. (as *Eupatorium herbaceum* 191:51)

***Ageratina occidentalis*** (Hook.) King & H.E. Robins., Western Snakeroot

- **Drug**—**Zuni** *Antirheumatic (External)* Ingredient of “schumaakwe cakes” and used externally for rheumatism. *Dermatological Aid* Ingredient of “schumaakwe cakes” and used externally for swelling. (as *Eupatorium occidentale* 166:50)

***Agoseris***, Asteraceae

***Agoseris aurantiaca*** (Hook.) Greene, Orange Agoseris

- **Drug**—**Navajo, Ramah** *Ceremonial Medicine* Plant used as a ceremonial emetic. *Dermatological Aid* Cold infusion taken and used as lotion for arrow or bullet wounds. *Disinfectant* Cold infusion taken and used as lotion for “deer infection.” *Emetic* Plant used as a ceremonial emetic. *Orthopedic Aid* Wet leaves rubbed on swollen arms, wrists, or ankles. *Panacea* Root used as a “life medicine.” *Witchcraft Medicine* Cold infusion taken and used as lotion for protection from witches. (191:47)
- **Food**—**Karok** *Candy* Root juice used for chewing gum. (as *A. gracilens* 148:389)

***Agoseris aurantiaca*** (Hook.) Greene **var. *aurantiaca***, Orange Agoseris

- **Food**—**Gosiute** *Unspecified* Leaves used for food. (as *Troximon aurantiacum* 39:383)

***Agoseris aurantiaca* var. *purpurea*** (Gray) Cronq., Orange Agoseris

- **Other**—**Keres, Western** *Unspecified* Plant known and named but no use was specified. (as *A. purpurea* 171:25)

***Agoseris glauca*** (Pursh) Raf., Pale Agoseris

- **Food**—**Thompson** *Candy* Milky juice chewed as gum. (as *A. villosa* 164:493)

***Agoseris glauca* var. *dasycephala*** (Torr. & Gray) Jepson, Pale Agoseris

- **Drug**—**Okanagan-Colville** *Dermatological Aid* Infusion of entire plant used to wash sores and rashes. Poultice of latex applied to sores. *Laxative* Infusion of roots taken as a laxative. (188:74) **Thompson** *Dermatological Aid* Milky latex used to remove warts. (187:167)
- **Food**—**Okanagan-Colville** *Candy* Latex dried and used as chewing gum. (188:74) **Thompson** *Candy* Milky latex used as chewing gum. (187:167)

***Agoseris retrorsa*** (Benth.) Greene, Spearleaf Agoseris

- **Food**—**Kawaiisu** *Vegetable* Green leaves boiled and eaten. Whole plant above the ground boiled, washed in cold water to remove bitterness, and fried in grease. (206:10)

***Agoseris* sp.**

- **Food**—**Ute** *Unspecified* Leaves formerly used as food. (as *Troximon* 38:36)

***Agrimonia***, Rosaceae

***Agrimonia gryposepala*** Wallr., Tall Hairy Agrimony

- **Drug—Cherokee Antidiarrheal** Infusion of burs taken to “check bowels.” *Blood Medicine* Infusion of root taken to build up blood. *Dermatological Aid* Powdered root compound used for pox. *Dietary Aid* Infusion of root given to satisfy children’s hunger. *Febrifuge* Infusion of burs taken for fever. *Gastrointestinal Aid* Cold infusion of pulverized root taken for bowels. *Gynecological Aid* Infusion of burs taken to “check discharge.” *Pediatric Aid* Infusion of root given to satisfy children’s hunger. (80:22) **Iroquois Antidiarrheal** Infusion or decoction used by children for diarrhea, “summer complaint,” or vomiting. *Antiemetic* Infusion given to children for diarrhea, “summer complaint,” and vomiting. (87:357) *Basket Medicine* Infusion of roots and flowers used on anything to sell, a “basket medicine.” *Emetic* Decoction of plants taken for diarrhea and as emetic for “summer complaint.” (87:358) *Other* and *Pediatric Aid* Infusion given to children for diarrhea, “summer complaint,” and vomiting. (87:357) **Meskwaki Hemostat** Root used as a styptic for nosebleeds. (152:241) **Ojibwa Urinary Aid** Compound containing root used as a medicine for urinary troubles. (153:383, 384) **Potawatomi Hemostat** Plant used as styptic and infusion snuffed for nosebleed by Prairie Potawatomi. (154:76)

### *Agrimonia parviflora* Ait., Harvestlice

- **Drug—Cherokee Antidiarrheal** Infusion of burs taken to “check bowels.” *Blood Medicine* Infusion of root taken to build up blood. *Dermatological Aid* Powdered root compound used for pox. *Dietary Aid* Infusion of root given to satisfy children’s hunger. *Febrifuge* Infusion of burs taken for fever. *Gastrointestinal Aid* Cold infusion of pulverized root taken for bowels. *Gynecological Aid* Infusion of burs taken to “check discharge.” *Pediatric Aid* Infusion of root given to satisfy children’s hunger. (80:22)

### *Agrimonia* sp.

- **Drug—Iroquois Liver Aid** Compound decoction of roots taken for too much gall. (87:357)

### *Agropyron*, Poaceae

#### *Agropyron* sp., Wheat Grass

- **Food—Paiute Unspecified** Species used for food. (167:243)

### *Agrostis*, Poaceae

#### *Agrostis perennans* (Walt.) Tuckerman, Upland Bentgrass

- **Food—Klamath Unspecified** Seeds used for food. (45:91)

### *Aizoaceae*, see *Carpobrotus*, *Trianthema*

### *Alariaceae*, see *Alaria*, *Egregia*

### *Alaria*, Alariaceae, alga

#### *Alaria marginata* Postels & Ruprecht, Short Kelp

- **Food—Hesquiat Dried Food** Stipes and fronds with attached herring eggs dried for later use.<sup>6</sup> (185:24)
- **Fiber—Hesquiat Sporting Equipment** Dried stipes use as “pucks” and hitting sticks.<sup>5</sup> (185:24)

### *Alcea*, Malvaceae

#### *Alcea rosea* L., Hollyhock

- **Drug—Shinnecock Dermatological Aid** Leaves used to apply infusion of flowers to inflamed areas. (as *Althaea rosea* 30:120)

### *Alectoriaceae*, see *Alectoria*, *Bryoria*, *Cornicularia*, *Pseudephebe*

### *Alectoria*, Alectoriaceae, lichen

#### *Alectoria fremontii* Tuckerm., Black Moss

- **Food—Montana Indian Starvation Food** Long, black, hair-like lichen used as a famine food. (19:5)

#### *Alectoria jubata*

- **Food—Coeur d’Alene Unspecified** Formerly used for food. (black tree moss 178:91) **Spokane Unspecified** Species used for food. (black tree moss 178:344) **Thompson Unspecified** Plant cooked and eaten. (black moss 164:482)

#### *Alectoria nigricans* (Ach.) Nyl., Caribou Moss

- **Food—Eskimo, Inuktitut Fodder** Plant given to fawns to try to get them to eat from their hands. (202:191)
- **Other—Eskimo, Inuktitut Fuel** Dried plant used for tinder. (202:191)

#### *Alectoria nitidula* (Th. Fr.) Vain, Caribou Moss

- **Food—Eskimo, Inuktitut Fodder** Plant given to fawns to try to get them to eat from their hands. (202:191)
- **Other—Eskimo, Inuktitut Fuel** Dried plant used for tinder. (202:191)

#### *Alectoria ochroleuca* (Hoffm.) Massal., Caribou Moss

- **Food—Eskimo, Inuktitut Fodder** Plant given to fawns to try to get them to eat from their hands. (202:191)
- **Other—Eskimo, Inuktitut Fuel** Dried plant used for tinder. (202:191)

#### *Alectoria sarmentosa*

- **Drug—Nitinaht Dermatological Aid** Used for wound dressing material and as bandages. (maidenhair moss 186:55)
- **Fiber—Hanaksiala Mats, Rugs & Bedding** Plant used as mattresses at seasonal camps. (common witch’s hair 43:144) **Nitinaht Clothing** Used for baby diapers and female sanitary napkins. (maidenhair moss 186:55)
- **Other—Bella Coola Decorations** Formerly used to decorate dance masks. (184:195) **Nitinaht Cooking Tools** Used for wiping salmon. (maidenhair moss 186:55)

#### *Alectoria* sp., Tree Lichen

- **Food—Hesquiat Forage** Plant browsed by deer. (185:17)

### *Aletes*, Apiaceae

#### *Aletes acaulis* (Torr.) Coult. & Rose, Stemless Indian Parsley

- **Drug—Keres, Western Cathartic** Plant used as a cathartic. *Emetic* Plant used as an emetic. (171:25)

#### *Aletes anisatus* (Gray) Theobald & Tseng, Rocky Mountain Indian Parsley

- **Food—Isleta Sauce & Relish** Leaves eaten fresh as a relish. (as *Pseudocymopterus aletifolius* 32:47) Raw leaves eaten as a relish. (as *Pseudocymopterus aletifolius* 100:40) *Vegetable* Leaves cooked and used as greens. (as *Pseudocymopterus aletifolius* 32:47) Cooked leaves eaten as greens. (as *Pseudocymopterus aletifolius* 100:40)

### *Aletris*, Liliaceae

#### *Aletris farinosa* L., White Colicroot

- **Drug—Catawba Antidiarrheal** Infusion of leaves taken for dysentery. (157:188) Infusion of leaves taken for bloody dysentery. (177:7) *Gas-*

*gastrointestinal Aid* Infusion of leaves taken for colic and stomach disorders. (157:188) Cold infusion of leaves taken for colic and stomach disorders. (177:7) **Cherokee Antirheumatic (Internal)** Taken for rheumatism. *Carminative* Taken for flatulent colic. *Cough Medicine* Taken for coughs. *Febrifuge* Tonic used for child bed fever. *Gynecological Aid* Tonic used to strengthen womb and root prevented abortion. *Liver Aid* Taken for jaundice. *Pulmonary Aid* Taken for lung diseases. *Tonic* Tonic used for child bed fever and to strengthen womb. *Tuberculosis Remedy* Taken for consumption. *Urinary Aid* Taken for "strangury," a slow, painful urination. (80:57) **Micmac Abortifacient** Root used as an emmenagogue. *Gastrointestinal Aid* Root used as a stomachic. *Tonic* Root used as a tonic. (40:54) **Rappahannock Gynecological Aid** Infusion of plant given to women and girls for "female troubles." (161:34)

## **Aleurites**, Euphorbiaceae

**Aleurites moluccana** (L.) Willd., Indian Walnut

- **Drug**—Hawaiian *Abortifacient* Nutshells and gourds burned and the resulting smoke or fumes entered the vagina for swollen wombs. *Dermatological Aid* Baked nutmeats, other plants, and breadfruit milk applied to scrofulous sores, ulcers, and bad sores. *Gastrointestinal Aid* Flowers and other plants pounded and resulting liquid given to infants for stomach or bowel disorders. *Laxative* Nut oil used to make a very strong laxative. *Pediatric Aid* Flowers and other plants pounded and resulting liquid given to infants for stomach or bowel disorders. *Respiratory Aid* Bark and other plants pounded, resulting liquid heated and taken for asthma. *Strengtheners* Nutmeats baked, ground, mixed with other plants, and eaten to build up the body. *Tuberculosis Remedy* Baked nutmeats, other plants, and breadfruit milk applied to scrofulous sores. (2:56)
- **Other**—Hawaiian *Fuel* Wood used for fuel. *Lighting* Nuts dried, strung together, and burned like candles. (2:56)

**Alismataceae**, see *Alisma*, *Sagittaria*

## **Alisma**, Alismataceae

**Alisma plantago-aquatica** L., American Water Plantain

- **Drug**—Cree, Woodlands *Gastrointestinal Aid* Dried stem base eaten or grated and taken in water for heart "troubles," including heartburn. Stem base taken for stomachaches, cramps, and stomach flu. *Heart Medicine* Dried stem base eaten or grated and taken in water for heart "troubles," including heartburn. *Laxative* Stem base taken for constipation. *Misc. Disease Remedy* Stem base taken for stomach flu. *Panacea* Powdered stem base and many other herbs used for various ailments. *Stimulant* Stem base given to prevent fainting during childbirth. (109:26) **Iroquois Gynecological Aid** Infusion of plant used for "womb troubles." *Kidney Aid* Split roots used for lame back or kidneys. *Orthopedic Aid* Split root used for lame back or kidneys and leaf infusion used as a runner's liniment. *Other* Raw root chewed to strengthen veins. *Tuberculosis Remedy* Decoction of plant or roots or infusion of roots taken for consumption. (87:272)
- **Food**—Iroquois *Beverage* Plant made into a tea and used by forest runners. (141:65)

**Alisma subcordatum** Raf., American Water Plantain

- **Drug**—Cherokee *Dermatological Aid* Used as a poultice on old sores,

wounds, bruises, swellings, and ulcers. *Gastrointestinal Aid* Root used for bowel complaints, sores, wounds, and bruises. (80:61)

## **Allenrolfea**, Chenopodiaceae

**Allenrolfea occidentalis** (S. Wats.) Kuntze, Iodine Bush

- **Food**—Cahuilla *Beverage* Ground seed flour and water made into a drink. *Bread & Cake* Ground seed flour dampened, shaped, dried, and eaten as a cookie. *Porridge* Ground seed flour and water made into a mush. (15:36) **Maricopa Staple** Seeds harvested, winnowed, parched, ground, and the meal eaten. **Mohave Staple** Seeds harvested, winnowed, parched, ground, and the meal eaten. (37:187) **Pima Unspecified** Ripe seeds winnowed, roasted, ground, water added, cooked, and used for food. (47:69) **Pima, Gila River Starvation Food** Seeds used as "starvation food." (133:6) *Unspecified* Seeds used for food. (133:7) **Yuma Staple** Seeds harvested, winnowed, parched, ground, and the meal eaten. (37:187)

## **Allionia**, Nyctaginaceae

**Allionia incarnata** L., Trailing Windmills

- **Drug**—Navajo, Ramah *Dermatological Aid* Cold infusion of root used as a lotion for swellings. (191:26)

## **Allium**, Liliaceae

**Allium acuminatum** Hook., Tapertip Onion

- **Food**—Gosiute *Unspecified* Bulbs eaten in spring and early summer. (39:360) **Hoh Unspecified** Bulbs pit baked and used for food. (137:59) **Karok Unspecified** Bulbs relished by only old men and old women. (148:380) **Paiute Sauce & Relish** Leaves eaten as a relish. *Unspecified* Bulbs roasted and used for food. Seeded heads placed in hot ashes for a few minutes, seeds extracted and eaten. (104:102) *Vegetable* Onions eaten raw, boiled, or baked in a pit. (111:55) **Quileute Unspecified** Bulbs pit baked and used for food. (137:59) **Salish, Coast Unspecified** Strongly flavored bulbs eaten with other foods. (182:74) **Thompson Unspecified** Thick coated, spherical bulbs eaten. (164:482) Bulbs dug in the spring and used for food. (187:117) **Ute Unspecified** Bulbs and leaves used for food. (38:32)
- **Other**—Salish, Coast *Insecticide* Bulbs rubbed on the skin to repel insects. (182:74)

**Allium anceps** Kellogg, Twinleaf Onion

- **Food**—Paiute, Northern *Bread & Cake* Bulbs cooked on hot rocks, squeezed into cakes, and eaten. *Unspecified* Bulbs roasted in the sand and eaten. (59:44)

**Allium biceptrum** S. Wats., Twincrest Onion

- **Drug**—Mahuna *Dietary Aid* Plant juice used as an appetite restorer. (140:62)
- **Food**—Apache, White Mountain *Unspecified* Bulbs eaten raw and cooked. (136:155) **Gosiute Unspecified** Bulbs eaten in spring and early summer. (39:360) **Paiute Sauce & Relish** Leaves eaten as a relish. *Unspecified* Seeded heads placed in hot ashes for a few minutes, seeds extracted and eaten. Bulbs roasted and used for food. (104:102) **Ute Unspecified** Bulbs and leaves used for food. (38:32)

**Allium biceptrum var. palmeri** (S. Wats.) Cronq., Aspen Onion

- **Food**—Havasupai *Starvation Food* Bulbs eaten only when very hungry. (as *A. palmeri* 197:211)

**Allium bolanderi** S. Wats., Bolander's Onion

- **Food**—**Karok** *Unspecified* Bulbs relished by only old men and old women. (148:380) **Mendocino Indian** *Unspecified* Corms used for food. (41:322)

**Allium brevistylum** S. Wats., Shortstyle Onion

- **Drug**—**Cheyenne** *Dermatological Aid* Poultice of ground roots and stems applied and infusion used as a wash for carbuncles. (76:171)

**Allium canadense** L., Meadow Garlic

- **Drug**—**Cherokee** *Carminative* Used as a carminative. *Cathartic* Used as a mild cathartic. *Diuretic* Used as a diuretic. *Ear Medicine* Used "to remove deafness." *Expectorant* Used as an expectorant. *Kidney Aid* Used for "dropsy." *Misc. Disease Remedy* Used for scurvy. *Pediatric Aid* and *Pulmonary Aid* Tincture used to prevent worms and colic in children and used as a croup remedy. *Respiratory Aid* Used for asthma. *Stimulant* Used as a stimulant. (80:35) **Mahuna** *Dermatological Aid* Plant rubbed on body for protection from insect bites. Plant rubbed on body for protection from lizard, scorpion, and tarantula bites. *Snakebite Remedy* Plant rubbed on body for protection from poisonous snakebites. (140:63)
- **Food**—**Cherokee** *Vegetable* Boiled bulbs fried with grease and greens. (126:46) **Iroquois** *Vegetable* Cooked and seasoned with salt, pepper, or butter. Bulb, consisting of the fleshy bases of the leaves, eaten raw. (196:118) **Menominee** *Unspecified* Small, wild onion used for food. (151:69) **Meskwaki** *Spice* Dried bulb used for seasoning. *Winter Use Food* Dried bulb used for winter cookery. (152:262) **Potawatomi** *Soup* Very strong flavor of this plant, a valuable wild food, used in soup. (154:104)

**Allium canadense var. mobilense** (Regel) Ownbey, Meadow Garlic

- **Food**—**Dakota** *Sauce & Relish* Fresh, raw bulbs used as a relish. *Spice* Bulbs used as a flavor for meat and soup. *Unspecified* Fried bulbs used for food. **Omaha** *Sauce & Relish* Fresh, raw bulbs used as a relish. *Spice* Bulbs used as a flavor for meat and soup. *Unspecified* Fried bulbs used for food. **Pawnee** *Sauce & Relish* Fresh, raw bulbs used as a relish. *Spice* Bulbs used as a flavor for meat and soup. *Unspecified* Fried bulbs used for food. **Ponca** *Sauce & Relish* Fresh, raw bulbs used as a relish. *Spice* Bulbs used as a flavor for meats and soups. *Unspecified* Fried bulbs used for food. **Winnebago** *Sauce & Relish* Fresh, raw bulbs used as a relish. *Spice* Bulbs used as a flavor for meat and soup. *Unspecified* Fried bulbs used for food. (as *A. mutabile* 70:71)

**Allium cepa** L., Garden Onion

- **Drug**—**Mohegan** *Cold Remedy* Syrup of chopped onions taken for colds. **Shinnecock** *Cold Remedy* Syrup of chopped onions taken for colds. *Disinfectant* Used to destroy germs because of a volatile oil in roots. *Ear Medicine* Heart of onion placed in ear for earache. *Febrifuge* Onion placed in a sick room to draw fever out. *Misc. Disease Remedy* Onion placed in a sick room to draw out flu. (30:120)
- **Food**—**Haisla & Hanaksiala** *Vegetable* Bulbs used for food. (43:194) **Havasupai** *Unspecified* Bulbs used for food. (197:212) **Navajo** *Unspecified* Onions singed, to remove the strong taste, and eaten immediately. *Winter Use Food* Onions singed, to remove the strong taste, dried, and stored for winter use. (55:31) **Navajo, Ramah** *Unspecified* Species used for food. (191:20) **Neeshenam** *Unspecified* Eaten raw,

roasted, or boiled. (129:377) **Oweekeno** *Unspecified* Bulbs used for food. (43:77) **Seminole** *Unspecified* Plant used for food. (169:505)

- **Dye**—**Iroquois** *Green* Bulb peelings used as a green dye for wool. *Yellow* Bulb peelings used as a yellow dye for wool. (142:104)

**Allium cernuum** Roth, Nodding Onion

- **Drug**—**Cherokee** *Cold Remedy* Juice taken for colds. *Dermatological Aid* Juice given to children for hives. *Febrifuge* Used as poultice for feet in "nervous fever." *Gastrointestinal Aid* Infusion taken for colic. *Kidney Aid* Juice taken after "horsemint tea" for "gravel and dropsy." *Liver Aid* Juice taken for "liver complaints." *Pediatric Aid* Juice given to children for hives and croup. *Pulmonary Aid* Poultice of fried plant put on chest for croup. Juice given to children for croup. *Respiratory Aid* Juice taken for "phthisic." *Throat Aid* Juice taken for sore throat. *Urinary Aid* Juice taken after "horsemint tea" for "gravel and dropsy." (80:47) **Isleta** *Dermatological Aid* Poultice of onions applied externally for infections. *Throat Aid* Poultice of warm onions applied externally to throat for sore throat. (100:20) **Kwakiutl** *Dermatological Aid* Poultice of soaked bulbs applied to sores and swellings. - **Other**—**Delaware, Oklahoma** *Smoke Plant* Seeds sometimes mixed with tobacco and used for smoking. (175:28) **Iroquois** *Protection* Infusion of smashed roots used as wash to remove ghosts from the house. (87:401)

***Angelica breweri* Gray**, Brewer's Angelica

- **Drug**—**Miwok** *Analgesic* Root chewed for headaches. *Cold Remedy* Root chewed for colds. (12:166) **Paiute** *Cold Remedy* Decoction of roots used for colds or chest ailments. Hot decoction of roots taken for colds. *Cough Medicine* Dried root chewed for sore throats or coughs. *Dermatological Aid* Salve of mashed roots applied to cuts and sores. *Kidney Aid* Decoction of roots taken, instead of drinking water, for kidney ailments. *Throat Aid* Dried root chewed for sore throat and coughs. **Shoshoni** *Adjuvant* Plant used as an adjuvant to improve flavor or amplify effect of medicines. *Analgesic* and *Antirheumatic (External)* Poultice of pulped root applied to rheumatic pains or swellings. *Cold Remedy* Decoction of roots used for colds or chest ailments. Dried, shaved roots smoked in cigarettes for head colds. Hot decoction of roots and whisky taken for heavy chest colds. *Pediatric Aid* Decoction of split root given to children for whooping cough. *Pulmonary Aid* Decoction of split root in whisky given to children for whooping cough. Poultice of pulped roots applied for pneumonia. *Tonic* Decoction of roots taken in small doses as a tonic. *Tuberculosis Remedy* Decoction of roots taken for tuberculosis. *Veneral Aid* Decoction of roots taken and used as a wash for venereal diseases. *Veterinary Aid* Smoke from root compound inhaled by horses for distemper. **Washo** *Adjuvant* Plant used as an adjuvant to

improve flavor or amplify effect of medicines. *Cough Medicine* Dried root chewed for sore throats or coughs. *Misc. Disease Remedy* Infusion of scraped, dried root taken for influenza. *Respiratory Aid* Infusion of scraped, dried root taken for bronchitis. *Throat Aid* Dried root chewed for sore throat or coughs. (180:34, 35)

- **Other**—**Miwok** *Protection* Chewed, rubbed on body or decoction taken to ward off snakes. (12:166)

***Angelica dawsonii* S. Wats.**, Dawson's Angelica

- **Drug**—**Blackfoot** *Antihemorrhagic* Infusion of roots taken for coughing up blood. (86:70) *Antirheumatic (External)* Poultice of chewed roots applied to swellings. (86:75) *Ceremonial Medicine* Roots used as a religious power medicine. (86:40) *Dermatological Aid* Poultice of chewed roots applied to rashes, eczema, and athlete's foot. (86:75) *Dietary Aid* Infusion of roots given to children with malnutrition. *Gastrointestinal Aid* Infusion of roots taken for intestinal ailments. (86:65) *Misc. Disease Remedy* Infusion of roots applied to mumps swellings. *Other* Infusion of roots applied for a disorder characterized by sore groins and underarms. (86:75) *Pediatric Aid* Infusion of roots given to children with malnutrition. (86:65) *Unspecified* Roots used medicinally for unspecified purpose. (86:40) *Veterinary Aid* Root smudge used to fumigate horses with nasal gleet. Infusion of roots given to horses with nasal gleet. Infusion of roots used as a wash for hoof frogs and infections. (86:87)
- **Other**—**Blackfoot** *Ceremonial Items* Roots used for individual power by ceremonialists and diviners. Roots used for collective power in designated societies. Roots used by ceremonialists to bless others with long life and good luck. Root used in the rites of most age-graded societies and in the Natoas Beaver and Medicine Pipe bundles. Root used by the Horn Society in the initiation ceremonies. The root was found in the nontransferable initiation bundles. Having been distributed by the owner of the Spear Staff bundle to the others, down to the owner of the Marten, the root was kept in the mouth and used to bless the initiates. After the ritual, the root was tied to the paint application sticks, to fortify and replenish the supernatural power inherent in the paint. The same was done with a wooden scratching pin, which was either worn in the hair or attached to one's garments. This was done in preparation for the next opening ceremony. Root pieces attached to the binding of the Spear Staff (with bundle), the head staff. The Spear Staff was used during the secret ceremony of the Horns, in which the chief ceremonialist participated in a fertility rite with the initiate's wife. Root held in the mouth during Horn Society curse ceremony. Curses were indulged in by the Horn Society as a whole. In this case a special sweat lodge was constructed. A human figure representing the condemned man was drawn in the bottom of a pit intended to contain hot stones. The stones were brought in at a designated time and placed on the drawing to represent the victim's suffering. Root used during the ritual of body painting and tied to headdresses of all members of Pigeon Society. *Good Luck Charm* Roots used for luck in games of chance. Roots tied in small bundle and attached to the tail base or bridle for luck in horse racing. Roots used by ceremonialists to bless others with long life and good luck. *Malicious Charm* Root held in the rider's mouth to cast a spell so that other horses could not pass. Juice used to spray on quirt (a rod) to cause other horses to fall behind

during a race. A piece of plant was placed in the mouth, and the rider sprayed the quirt with the juice. This quirt was not used to whip the horse. When the race began, the rider would try to get on the right side of the other horses; he carried the magic quirt but whipped his horse with a regular one. At an opportune time the rider threw back the sprayed quirt, causing the other horses to fall behind. Root held in the mouth to make the other players lazy during the hand game. (86:40)

***Angelica genuflexa*** Nutt., Kneeling Angelica

- **Drug**—**Bella Coola** *Cathartic* Decoction of root or raw root taken as a purgative. **Gitksan** *Analgesic* Compound decoction of root taken for headache. *Eye Medicine* Compound decoction of root taken for weak eyes. (150:61)
- **Food**—**Hanaksiala** *Unspecified* Leaves and stems used for food. (43:211)
- **Other**—**Bella Coola** *Cooking Tools* Hollow stems used to make drinking straws. *Tools* Hollow stems used to make breathing tubes for hiding under water when in danger. (41:392) **Mohegan** *Febrifuge* Cold infusion of plant taken for fever. (174:264) Cold infusion of leaves taken for fever. (176:70, 128) *Panacea* Cold infusion of leaves thought to "benefit the entire body." (176:70) **Yuki** *Poison* Plant considered poisonous. (49:94)

### **Anthemis** sp.

- **Drug**—**Cree** *Kidney Aid* Plant and tarweed used for kidney pains. (camomile 16:494)
- **Food**—**Navajo** *Beverage* Fresh or dried plant used to make tea. (as *Cota*, Navajo tea 110:20)

### **Anthoxanthum**, Poaceae

**Anthoxanthum odoratum** L., Sweet Vernalgrass

- **Food**—**Hesquiat** *Forage* Cattle used this plant for forage. (185:56)
- **Fiber**—**Abnaki** *Basketry* Used to make baskets. (144:175) **Ojibwa** *Basketry* Grass used to make baskets. (153:419) **Potawatomi** *Basketry* Used to make baskets. *Sewing Material* Used to sew buckskin when making moccasins and articles of clothing. (154:120)
- **Other**—**Abnaki** *Containers* Used to make containers. (144:156) **Ojibwa** *Ceremonial Items* In the olden times, used ceremonially because of its persistent sweet scent. (153:419)

### **Antidesma**, Euphorbiaceae

**Antidesma pulvinatum** Hbd., Hame

- **Drug**—**Hawaiian** *Antiemetic* Leaves chewed and swallowed for vomiting spells. *Dermatological Aid* Infusion of pounded bark and other plants used as a wash for ulcers and scrofulous sores. *Tuberculosis Remedy* Infusion of pounded bark and other plants used as a wash for scrofulous sores. (2:39)

### **Antitrichia**, Leucodontaceae, moss

**Antitrichia curtipendula** (Hedw.) Brid., Hanging Moss

- **Other**—**Hanaksiala** *Cooking Tools* Plant used in earth ovens. (43:145)

**Apiaceae**, see *Aletes*, *Angelica*, *Apiastrum*, *Apium*, *Berula*, *Carum*, *Chaerophyllum*, *Cicuta*, *Conioselinum*, *Conium*, *Coriandrum*, *Cuminum*, *Cymopterus*, *Daucus*, *Erigenia*, *Eryngium*, *Ferula*, *Foeniculum*, *Heracleum*, *Hydrocotyle*, *Ligusticum*, *Lomatium*, *Musineon*, *Oenanthe*, *Oreoxis*, *Osmorhiza*, *Oxypolis*, *Pastinaca*, *Perideridia*, *Petroselinum*, *Peucedanum*, *Pimpinella*, *Polytaenia*, *Pseudocymopterus*, *Pteryxia*, *Sanicula*, *Sium*, *Sphenosciadium*, *Taenidia*, *Tauschia*, *Thaspium*, *Zizia*

### **Apiaceae** sp.

- **Food**—**Yana** *Unspecified* Roots roasted and eaten. (as *Umbelliferae* 147:251)

### **Apiastrum**, Apiaceae

**Apiastrum angustifolium** Nutt., Mock Parsley

- **Food**—**Cahuilla** *Unspecified* Hair-like plant provided a small seasonal food source in wet years. (15:39)

### **Apios**, Fabaceae

**Apios americana** Medik., Groundnut

- **Food**—**Cherokee** *Substitution Food* Uncooked seeds substituted for pinto beans in bean bread. (as *Glycine apios* 126:46) *Vegetable* Beans used for food. (80:24) Roots cooked like potatoes. (as *Glycine apios* 126:46) **Chippewa** *Vegetable* Tubers eaten. (as *A. tuberosa* 71:133) **Dakota** *Unspecified* Roasted or boiled tubers used for food. (as *Glycine apios* 70:94) **Delaware** *Bread & Cake* Roots dried, ground into flour, and made into bread. *Unspecified* Roots boiled and eaten as the cultivated potato. *Winter Use Food* Tuberos roots used as winter food. (as *A. tuberosa* 176:59) **Huron** *Starvation Food* Roots used with acorns during famine. (as *A. tuberosa* 3:63) **Iroquois** *Unspecified* Tubers eaten. (as *A. tuberosa* 196:120) **Menominee** *Vegetable* Roots cooked with maple sugar and superior to candied yams. *Winter Use Food* Peeled, parboiled, sliced roots dried for winter use. (as *A. tuberosa* 151:68) **Meskwaki** *Vegetable* Root stocks eaten raw. *Winter Use Food* Root stocks peeled, parboiled, sliced, and dried for winter use. (as *A. tuberosa* 152:259) **Mohegan** *Cooking Agent* Dried roots ground into a flour and used for thickening stews. *Unspecified* Fresh or dried roots cooked and used for food. (as *A. tuberosa* 176:83) **Omaha** *Unspecified* Thickened root boiled until the skin came off and used for food. (as *A. apios* 68:325) Roasted or boiled tubers used for food. (as *Glycine apios* 70:94) *Vegetable* Nuts boiled, peeled, and eaten as a vegetable. (as *A. tuberosa* 58:341) **Pawnee** *Unspecified* Roasted or boiled tubers used for food. **Ponca** *Unspecified* Roasted or boiled tubers used for food. (as *Glycine apios* 70:94) **Potawatomi** *Vegetable* Wild potato was appreciated. (as *A. tuberosa* 54:103) **Seminole** *Unspecified* Plant used for food. (169:492) **Winnebago** *Unspecified* Roasted or boiled tubers used for food. (as *Glycine apios* 70:94)

**Apios tuberosum**, Potato Bean

- **Food**—**Cheyenne** *Unspecified* Species used for food. (as *Alycine apios* 83:45) *Vegetable* Roots used for food. (as *Alycine apios* 76:179)

### **Apium**, Apiaceae

**Apium graveolens** L., Wild Celery

- **Drug**—**Houma** *Tuberculosis Remedy* Compound decoction of plant with whisky taken for tuberculosis. (158:64)

- **Food**—**Cahuilla Vegetable** Used as a potherb. (15:39) **Luiseño Vegetable** Plant used for greens. (155:230)

### **Apium sp.**

- **Drug**—**Mahuna Kidney Aid** Infusion of plant taken for chronic diseases of the kidneys. (American parsley 140:68)
- **Food**—**Shoshoni Spice** Steeped seeds added to dishes for flavoring. (wild celery 118:29)

### **Aplectrum**, Orchidaceae

#### **Aplectrum hyemale** (Muhl. ex Willd.) Torr., Adam and Eve

- **Drug**—**Catawba Analgesic** Pounded, powdered, boiled roots used for head pains. **Dermatological Aid** Pounded, powdered, boiled roots used for boils. (157:188) **Poultice** of beaten roots applied to boils. (177:10) **Cherokee Dietary Aid** Given to endow children with the gift of eloquence and to make them fat. **Pediatric Aid** Given to endow children with the gift of eloquence and to make them fat. (80:51)
- **Food**—**Cherokee Fodder** Roots added to the slop to make hogs fat. (80:51)

**Apocynaceae**, see *Alyxia*, *Amsonia*, *Angadenia*, *Apocynum*, *Catharanthus*, *Ochrosia*

### **Apocynum**, Apocynaceae

#### **Apocynum androsaemifolium** L., Spreading Dogbane

- **Drug**—**Cherokee Veterinary Aid** Used to bathe dogs for mange. (80:32) **Chippewa Analgesic** Root used as snuff, herbal steam, poultice or in decoction for headache. **Anticonvulsive** Compound decoction of root taken or sprinkled on chest for convulsions. (53:336) **Cold Remedy** Weak decoction of root given only to infants for colds. (53:340) **Ear Medicine** Decoction of root poured into ear for soreness. (53:360) **Heart Medicine** Decoction of root taken for heart palpitations. (53:338) **Hemostat** Decoction of root on cotton or mashed root used as a plug in nostril for nosebleed. (53:356) **Pediatric Aid** Weak decoction of root given only to infants for colds. (53:340) **Psychological Aid** Dried, pulverized root used in various ways for insanity. **Vertigo Medicine** Dried, pulverized root used in various ways for dizziness. (53:336) **Cree, Woodlands Eye Medicine** Plant used for sore eyes. **Gynecological Aid** Decoction of plant used to increase lactation. (109:28) **Iroquois Anthelmintic** Compound infusion of roots taken for worms. **Dermatological Aid** Milk used for warts. **Gastrointestinal Aid** Compound infusion of roots taken for stomach cramps. **Gynecological Aid** Compound infusion of roots taken for evacuation of the placenta. **Liver Aid** Decoction of roots taken as a liver medicine. **Veterinary Aid** Decoction of roots mixed with feed and given to horses with worms. (87:415) **Meskwaki Gynecological Aid** Compound containing rind used by a woman with “an injured womb.” **Kidney Aid** Root used for dropsy. (152:201) **Montana Indian Cathartic** Root, poisonous in large doses, used as a cathartic. **Febrifuge** Root, poisonous in large doses, used as a febrifuge. **Poison** Root poisonous in large doses and poisonous to cattle feeding on it. **Tonic** Root, poisonous in large doses, used as a tonic. (19:6) **Ojibwa Analgesic** Root smoke inhaled for headache. **Ceremonial Medicine** Root, considered sacred, eaten during the medicine lodge ceremony. (153:354, 355) Roots eaten during the medicine lodge ceremony. The roots are also chewed to keep the other witch doctors from affecting one with an evil charm. (153:428)

**Diuretic** Infusion of root taken as a diuretic during pregnancy. **Gynecological Aid** Infusion of root taken as a diuretic during pregnancy. **Oral Aid** Root used for coated tongue and headache. **Throat Aid** Root eaten for throat trouble. (153:354, 355) **Okanagan-Colville Love Medicine** Leaves chewed and the juice and pulp swallowed or dried leaves smoked as an aphrodisiac. (188:72) **Potawatomi Diuretic** Root used as a diuretic. **Heart Medicine** Decoction of green berries used as a heart medicine. **Kidney Aid** Decoction of green berries used as a kidney medicine. **Urinary Aid** Root used as a diuretic and urinary medicine. (154:38) **Salish Unspecified** Plant used as a medicine. (178:294) **Sanpoil Gynecological Aid** Infusion of roots taken about once a week as a contraceptive. (131:219)

- **Fiber**—**Bella Coola Cordage** Stems dried, pounded, and used to make twine. (184:201) **Great Basin Indian Cordage** Root and branch outer fiber used to make nets, cordage, and thread. (121:49) **Menominee Cordage** Three strands of outer bark plaited into a very strong cord and cord plaited into heavier ropes. **Sewing Material** Outer bark or rind used as the finest thread material. (151:73) **Meskwaki Sewing Material** Outer rind or bark used for thread. (152:267) **Montana Indian Cordage** Bark used as a chief source for cordage. (19:6) **Ojibwa Sewing Material** Outer rind used for fine sewing. In the fall, when mature, this plant makes one of the strongest native fibers, stronger even than the cultivated hemp to which it is related. (153:413) **Okanagan-Colville Cordage** Stems used to make fiber, as a substitute for Indian hemp. (188:72) **Potawatomi Sewing Material** Fine divisions of bark were very strong and used as a thread for sewing on the fine beadwork. (154:111) **Thompson Cordage** Inner bark fiber used as thread and twine for binding and tying. (164:497)
- **Other**—**Bella Coola Hunting & Fishing Item** Stems dried, pounded, and used to make eulachon (candlefish), nets. (184:201) **Chippewa Protection** Root chewed to counteract evil charms. (53:376) **Menominee Hunting & Fishing Item** Three strands of outer bark plaited into a very strong cord and used for bow strings. (151:73) Plant stalk sucked by hunters to imitate fawn wanting its mother, a doe magnet. (151:79) **Okanagon Fasteners** Fiber used as thread or twine for binding or tying. **Thompson Fasteners** Fiber used as thread or twine for binding or tying. (125:39)

#### **Apocynum cannabinum** L., Indian Hemp

- **Drug**—**Blackfoot Dermatological Aid** Decoction of root used as a wash “to prevent hair falling out.” **Laxative** Decoction of root taken as a laxative. (114:276) **Cahuilla Unspecified** Used for the medicinal properties and as a fibrous material. (15:39) **Cherokee Abortifacient** Root used for pox and “uterine obstructions.” **Antirheumatic (Internal)** Used for rheumatism. **Cough Medicine** Used for coughs. **Dermatological Aid** Root used for pox. **Kidney Aid** Infusion of root taken for “dropsy” and Bright’s disease. **Pulmonary Aid** Used for whooping cough. **Respiratory Aid** Used for asthma. (80:38) **Cree, Hudson Bay Cathartic** Decoction of chewed leaves and bark taken as a purgative. **Dermatological Aid** Poultice of chewed leaves and bark applied to wounds. **Emetic** Decoction of chewed leaves and bark taken as an emetic. **Unspecified** Plant used as medicine. (as *A. hypericifolium* 92:303) **Iroquois Antidiarrheal** Infusion of roots used as a wash for children with diarrhea. **Blood Medicine** Roots used as blood purifier. (87:415) **Emetic** Infusion of roots taken as a spring or summer emetic.

- ic. *Eye Medicine* Infusion of roots taken to clear up yellow eyes. (87:416) *Gastrointestinal Aid* Roots used for biliousness. *Laxative* Roots used as a laxative. *Pediatric Aid* Infusion of roots used as a wash for children with diarrhea. (87:415) **Keres, Western** *Gynecological Aid* Crushed leaves rubbed on mothers' breasts to produce more and richer milk. Infusion of plant used by mothers to produce more and richer milk. (as *A. viride* 171:27) **Kutenai** *Veterinary Aid* Tops chewed and used for horses with eyes. (82:12) **Menominee** *Anthelmintic* Decoction of root taken for worms. (as *A. pubescens* 54:131) **Meskwaki** *Kidney Aid, Misc. Disease Remedy, and Panacea* Root used as a universal remedy for many things, especially dropsy and ague. (152:201) **Micmac** *Anthelmintic* Root used as a vermifuge. (40:54) **Navajo, Kayenta** *Ceremonial Medicine* Plant used as a Waterway emetic. *Emetic* Plant used as a Waterway emetic. *Other* Plant used for immersion in cold water. (as *A. suksdorfii* var. *angustifolium* 205:36) **Navajo, Ramah** *Analgesic* Decoction of plant taken for persistent stomachache. *Ceremonial Medicine* Leaves used as a ceremonial emetic and cold infusion of leaves used as a ceremonial lotion. *Emetic* Leaves used as a ceremonial emetic. *Gastrointestinal Aid* Decoction of plant taken for persistent stomachache. (as *A. sibiricum* var. *salignum* 191:39) **Okanagan-Colville** *Contraceptive* Decoction of roots taken during monthly periods to become permanently sterile. (188:72) **Penobscot** *Anthelmintic* Infusion of root taken to expel worms. (156:310) **Thompson** *Unspecified* Decoction of root used medicinally. (164:470) *Venereal Aid* Milky stem latex used for venereal disease. (187:159)
- **Food—Isleta** *Candy* Gummy latex mixed with clean clay and used as chewing gum. (as *A. angustifolium* 32:31) Gum mixed with clean clay and used for chewing gum. (as *A. angustifolium* 100:22) **Karok** *Unspecified* Seeds eaten raw. (as *A. androsaemifolium* var. *nevadense* 148:388) **Kiowa** *Candy* Milky latex used as chewing gum. After the latex was squeezed from the plant, it was allowed to stand overnight, whereupon it hardened into a "white gum." Two kinds of gum were recognized: that which was left overnight, and that which was chewed only a few hours after it had been extracted from the plant. (192:47)
  - **Fiber—Cahuilla** *Unspecified* Used for the medicinal properties and as a fibrous material. (15:39) **California Indian** *Cordage* Outer and inner bark used to make string. (118:60) **Cherokee** *Clothing* Fibers used to weave grave cloth material. *Cordage* Used to make cords. (80:38) **Chippewa** *Cordage* Fiber considered the best available for making fine cordage. (71:140) **Kutenai** *Cordage* Used to make twine and rope. *Sewing Material* Stalks split, dried, and used as thread for sewing tepee covers. (82:12) **Luiseño** *Clothing* Plant used to make aprons. (155:201) Bark fiber made into twine and used to make front aprons worn by women. *Cordage* Inner bark fiber soaked in boiling water and used to make twine. (155:202) **Mendocino Indian** *Clothing* Inner bark formerly used to make garments. *Cordage* Inner bark fiber used to make rope. *Sewing Material* Inner bark used for making thread. (41:378) **Meskwaki** *Cordage* Outer bast fiber plaited into heavy cord and two-ply cord. *Sewing Material* Outer bast fiber used as thread. (152:267) **Modoc** *Unspecified* Used as a fiber. (45:103) **Nez Perce** *Cordage* Stalks dried, split into fibers, and used to make rope. (82:12) **Okanagan-Colville** *Cordage* Stems twisted and rolled into twine. (188:72) **Okanagon** *Clothing* Inner bark used for making garments. *Cordage* Inner bark used for making rope and twine. *Sewing Material* Inner bark used for making thread. (125:39) **Paiute, Northern** *Cordage* Stem fibers twisted and plied into cordage and nets. (60:75) **Mats, Rugs & Bedding** Used as twined weft rows for mats. (60:89) **Shuswap** *Cordage* Stems used to make bridle ropes, bowstrings, and thread for sewing baskets and buckskin. (123:57) **Thompson** *Clothing* Inner bark used for making garments. (125:39) Inner bark used for making garments. (164:498) *Cordage* Inner bark used for making rope and twine. (125:39) Inner bark used for making rope and twine. (164:498) Stems used to make string. The stems were cut in the fall, usually in October, soaked and sometimes split in half. The fibrous outer skin was peeled off and the brittle inner stem discarded. The fibrous part was then dried for indefinite storage and used to make string. Plant made into rope and used to make fish nets. (187:159) *Sewing Material* Inner bark used for making thread. (125:39) Inner bark used for making thread. (164:498) Plant made into thread and used for sewing. (187:159)
  - **Other—Luiseño** *Containers* Bark fibers made into twine and used to make large-meshed nets for carrying bulky or heavy articles. Bark fiber made into twine and used to make net sacks for carrying acorns and other small seeds. *Hunting & Fishing Item* Inner bark fiber made into twine and used to make bowstrings. Bark fiber made into twine and occasionally used to make long nets and draw nets for catching rabbits. Bark fiber made into twine and used to make fishing nets.<sup>14</sup> Bark fiber made into twine and used to make slings. (155:202) Inner bark fibers made into twine and used to make bowstrings. (155:203) Plant fiber used to make bowstrings. (155:206) **Mendocino Indian** *Hunting & Fishing Item* Inner bark used to make nets. (41:378) **Nez Perce** *Containers* Used to make bags. (82:12) **Okanagon** *Cash Crop* Inner bark traded in large quantities to the Spences Bridge band. (164:498) *Hunting & Fishing Item* Inner bark used for making nets and snares. (125:39) **Paiute, Northern** *Hunting & Fishing Item* Stem fibers twisted and plied into cordage and nets. (60:75) **Shuswap** *Stable Gear* Stems used to make bridle ropes, bowstrings, and thread for sewing baskets and buckskin. (123:57) **Songish** *Hunting & Fishing Item* Used to make purse nets. (182:78) **Thompson** *Containers* Plant fiber made into sacks and used for storing potatoes, oats, or onions. (187:159) *Hunting & Fishing Item* Inner bark used for making nets and snares. (125:39) Inner bark used for making nets and snares. (164:498) Used to make nets for catching deer. (178:246) Plants made into rope or thread and used for sewing and to make fish nets. The plants were dried, beaten with a stick to soften and loosen the fiber, and then rolled and twisted on a piece of buckskin covering the upper leg. The resulting rope or thread was used for sewing, for rope, and for fish nets. (187:159) **Yuki** *Hunting & Fishing Item* Dried, crushed stem fibers used to make fish nets and snares for deer, bears, and small game. (49:90)
- Apocynum × floribundum** Greene, Intermediate Dogbane
- **Drug—Navajo, Ramah** *Ceremonial Medicine* Leaves used as a ceremonial emetic. *Disinfectant* Plant placed on hot rocks and applied to patient's head for "deer infection." *Emetic* Leaves used as a ceremonial emetic. (as *A. medium* 191:39)
  - **Fiber—Havasupai** *Building Material* Stems used for thatch on houses. *Clothing* Bark strips braided and worn as a belt. *Cordage* Vines, with leaves removed, twisted into a rope and used by children in play. (as *A. medium* 197:236)

- **Other**—Havasupai *Toys & Games* Milky substance used by children to rub on playmates' faces and stick their eyelids together. Vines, with leaves removed, twisted into a rope and used by children in play. (as *A. medium* 197:236)

#### *Apocynum* sp., Dogbane

- **Drug**—Chippewa *Analgesic* and *Other* Snuff of dried, pulverized root used to cause sneezing for "relieving the head." (53:340)
- **Fiber**—Abnaki *Basketry* Used to make baskets. (144:156) **Shoshoni** *Cordage* Plant used to make string. (118:52) **Wintoon** *Cordage* Used to make the best string and thread. (117:276)

#### **Aquifoliaceae**, see *Ilex*, *Nemopanthus*

### *Aquilegia*, Ranunculaceae

#### *Aquilegia canadensis* L., Red Columbine

- **Drug**—Cherokee *Gynecological Aid* Cold infusion used for "flux." *Heart Medicine* Infusion taken for heart trouble. (80:30) **Iroquois** *Dermatological Aid* Compound infusion of plants taken and used as a wash for poison ivy and itch. *Kidney Aid* Infusion of roots taken before meals for the kidneys. *Witchcraft Medicine* Compound used to detect bewitchment. (87:320) **Meskwaki** *Antidiarrheal* Decoction of root and leaves taken for diarrhea. *Ceremonial Medicine* Decoction of root and leaf used as a "power of persuasion at trade or council." *Gastrointestinal Aid* Root chewed for stomach and bowel troubles. *Love Medicine* Seeds used with love medicine and for smoking. *Urine Aid* Compound containing root taken "when the contents of the bladder are thick." (152:238, 239) **Ojibwa** *Gastrointestinal Aid* Root considered a good medicine for stomach trouble. (153:383) **Omaha** *Analgesic* Infusion of crushed seeds taken for headache. *Febrifuge* Infusion of crushed seeds taken for fever. *Love Medicine* Pulverized seeds used as a love charm. **Pawnee** *Analgesic* Infusion of crushed seeds taken for headache. *Febrifuge* Infusion of crushed seeds taken for fever. *Love Medicine* Seeds used as a love charm. **Ponca** *Analgesic* Infusion of crushed seeds taken for headache. *Febrifuge* Infusion of crushed seeds taken for fever. *Love Medicine* Pulverized seeds used as a love charm. (70:82, 83)
- **Other**—**Meskwaki** *Incense & Fragrance* Ripe seeds used to perfume smoking tobacco. (152:273) **Omaha** *Incense & Fragrance* Chewed seed paste used among blankets or other effects by young men as perfume. (68:323) Chewed seed paste spread among clothing and used as perfume, especially by bachelors. **Pawnee** *Incense & Fragrance* Seeds used as perfume. **Ponca** *Incense & Fragrance* Crushed seeds spread among clothing and used as perfume, especially by bachelors. (70:82)

#### *Aquilegia coerulea* James, Colorado Blue Columbine

- **Drug**—Gosiute *Analgesic* and *Gastrointestinal Aid* Seed chewed or infusion of roots used for abdominal pains. *Heart Medicine* Plant used as a medicine for the heart. *Panacea* Seed chewed or infusion of roots used when "sick all over." (39:362)

#### *Aquilegia elegantula* Greene, Western Red Columbine

- **Drug**—Keres, Western *Blood Medicine* Infusion of plant used as a blood purifier. (171:27)

#### *Aquilegia eximia* Van Houtte ex Planch., Van Houtte's Columbine

- **Other**—Pomo, *Kashaya Ceremonial Items* Flowers used in dance wreaths at the Strawberry Festival. (72:39)

#### *Aquilegia formosa* Fisch. ex DC., Western Columbine

- **Drug**—Paiute *Analgesic* and *Antirheumatic (External)* Mashed fresh roots rubbed briskly on aching rheumatic joints. (180:37) *Cold Remedy* Decoction of leaves taken for colds. *Cough Medicine* Leaves chewed for coughs. (104:197) Decoction of roots taken as a cough remedy. (180:37) *Dermatological Aid* Poultice of chewed roots or leaves applied to bee stings. (104:196) Chewed seeds rubbed on body and clothing for perfume, and seeds used in a sachet and stored with clothing. (111:71) *Gastrointestinal Aid* Seeds chewed for stomachaches. (104:197) *Panacea* Plant used for a variety of maladies. (104:155) *Throat Aid* Leaves chewed for sore throats. (104:197) **Quileute** *Dermatological Aid* Poultice of chewed leaves or milky pulp from scraped roots applied to sores. (79:30) **Shoshoni** *Analgesic* Decoction of roots taken for stomachaches. *Antidiarrheal* Decoction of roots taken for diarrhea. *Dermatological Aid* Mashed ripe seeds rubbed into hair "to discourage head lice." *Emetic* Compound decoction of root taken to induce vomiting. *Gastrointestinal Aid* Decoction of roots and leaves taken for dizziness or biliousness. Decoction of roots taken for stomachaches. *Stimulant* Decoction of roots and leaves taken to counteract dizziness. *Venereal Aid* Decoction of whole plant taken for venereal diseases. (180:37) **Thompson** *Dermatological Aid* Decoction of whole plant used as a wash for the hair and scalp. (164:475) *Love Medicine* Plant used as a charm by women "to gain the affection of men." (164:507) *Strengtheners* Root smeared on people's legs to increase stamina before a race. *Veterinary Aid* Root smeared on horse's legs to increase stamina before a race. (187:247)
- **Food**—**Hanaksiala** *Candy* Flowers sucked by children for the sweet nectar. (43:262) **Yurok** *Unspecified* Sweet nectaries inside the sepal spurs bitten off and savored mostly by the younger people. (6:17)
- **Other**—**Okanagan-Colville** *Good Luck Charm* Flower used as a good luck charm. (188:117) **Thompson** *Good Luck Charm* Plant used as a charm by both sexes "to retain wealth and possessions." Plant used as a charm for good luck in gambling. (164:507) Whole plant kept by people as a good luck charm. (187:247)

#### *Aquilegia formosa* Fisch. ex DC. **var. formosa**, Crimson Columbine

- **Food**—**Miwok** *Vegetable* Early spring greens boiled and eaten. (as *A. truncata* 12:159) **Thompson** *Forage* Flowers used as sources of nectar by hummingbirds. (as *A. truncata* 164:516)

#### *Aquilegia micrantha* Eastw., Mancos Columbine

- **Drug**—Navajo, **Kayenta** *Gynecological Aid* Plant used to deliver placenta. *Hemostat* Plant used as a hemostatic. (205:22)

#### *Aquilegia* sp., Garden Columbine

- **Drug**—**Thompson** *Strengtheners* Root smeared on people's legs to increase stamina before a race. *Veterinary Aid* Root smeared on horse's legs to increase stamina before a race. (187:247)

#### *Aquilegia triternata* Payson, Chiricahua Mountain Columbine

- **Drug**—Navajo, **Kayenta** *Analgesic* and *Ceremonial Medicine* Plant used as a ceremonial fumigant for headaches or other severe pain. (205:22)

**Arabis**, Brassicaceae**Arabis drummondii** Gray, Drummond's Rockcress

- **Drug**—Okanagon *Analgesic* Decoction of whole plant taken for pains in the lumbar region. *Kidney Aid* Decoction of whole plant taken for kidney troubles. *Orthopedic Aid* Decoction of whole plant taken for pains in the lumbar region. *Urinary Aid* Decoction of whole plant taken for bladder troubles. (125:41) **Salish** *Veneral Aid* Decoction of plants taken for gonorrhea. (178:294) **Thompson** *Analgesic* Decoction of whole plant taken for pains in the lumbar region. (125:41) Decoction of whole plant taken as a diuretic and for lower back pains. *Dermatological Aid* Poultice of fresh or dried plant applied to sores. *Diuretic* Decoction of whole plant taken as a diuretic. (164:464) *Kidney Aid* Decoction of whole plant taken for kidney troubles. *Orthopedic Aid* Decoction of whole plant taken for pains in the lumbar region. *Urinary Aid* Decoction of whole plant taken for bladder troubles. (125:41) Decoction of whole plant taken as a kidney and bladder medicine. *Veneral Aid* Strong decoction of plant taken for gonorrhea. (164:464)

### **Arctostaphylos**, Ericaceae

#### **Arctostaphylos alpina** (L.) Spreng., Alpine Bearberry

- **Drug**—Ojibwa *Antirheumatic (External)* Infusion of pounded plants used as wash for rheumatism. *Blood Medicine* Decoction of bark taken for internal blood diseases. (135:231) *Ceremonial Medicine* Leaves used for medicine ceremonies. *Narcotic* Leaves smoked to cause intoxication. (135:238) *Panacea* Infusion of pounded plants used as wash for general illnesses. (135:231) *Unspecified* Leaves used for medicinal purposes. (135:238)
- **Food**—Alaska Native *Fruit* Berries used for food. Berry was juicy but rather insipid in flavor. Not usually available in large quantities. Picked in poor berry years and mixed with blueberries. Flavor was much improved with cooking. (85:77) Eskimo, Alaska *Fruit* Fruit used for food. (4:715) Eskimo, Arctic *Forage* Berries eaten greedily by bears and ptarmigan. (128:23) Eskimo, Inupiat *Fruit* Berries, other berries, and sugar cooked and eaten. (98:108) Koyukon *Winter Use Food* Berries stored in grease or oil and eaten with fish or meat. (119:55)

#### **Arctostaphylos canescens** Eastw., Hoary Manzanita

- **Food**—Karak *Beverage* Berries used to make a drink. *Dried Food* Berries dried and stored in storage baskets for future use. *Fruit* Dried berries pounded, mixed with salmon eggs, cooked in a basket with a hot rock, and eaten. (148:388)
- **Other**—Karak *Containers* Wood used to make reels for string. *Cooking Tools* Wood used to make spoons and scraping sticks for acorn soup. *Walking Sticks* Wood used to make canes. (148:388)

#### **Arctostaphylos × cinerea** T. J. Howell, Del Norte Manzanita

- **Food**—Tolowa *Bread & Cake* Berries mixed with salmon roe and sug-

ar, formed into patties, and baked in rocks. Yurok *Fruit* Berries used for food. (6:18)

#### **Arctostaphylos columbiana** Piper, Hairy Manzanita

- **Drug**—Pomo *Antidiarrheal* Decoction of bark taken for diarrhea. (66:14) Pomo, Kashaya *Antidiarrheal* Decoction of bark used for diarrhea. (72:69)
- **Other**—Pomo, Kashaya *Lighting* Wood used on the fire at dances and ceremonials because it made a bright light to see by. *Tools* Wood used for making tools and awl handles. (72:69)

#### **Arctostaphylos glandulosa** Eastw., Eastwood's Manzanita

- **Drug**—Cahuilla *Antidiarrheal* Infusion of leaves used for diarrhea. *Dermatological Aid* Infusion of leaves used for poison oak rash. (15:40) Pomo *Unspecified* Plant used as medicine. (66:14) Pomo, Kashaya *Antidiarrheal* Decoction of bark taken for diarrhea and bleeding diarrhea. (72:68)
- **Food**—Cahuilla *Beverage* Mashed fruit mixed with water and strained into a drink. *Dried Food* Berries sun dried and stored for future use. *Fruit* Berries eaten fresh. *Porridge* Dried berries ground into flour and used to make mush. *Sauce & Relish* Berries used to make a gelatinous substance and eaten like aspic. *Staple* Seeds ground into a meal and used to make mush or cakes. (15:40) Pomo, Kashaya *Dried Food* Dried, pounded berries stored for later use and made into pinole, cakes, or mixed with water. (72:68)
- **Fiber**—Cahuilla *Building Material* Branches used in house construction. (15:40)
- **Other**—Cahuilla *Fuel* Wood, provided a hot fire and long-lasting coals, used for firewood. *Hunting & Fishing Item* Plant provided food for wild game and therefore a rich hunting opportunity. *Smoke Plant* Leaves mixed with tobacco. *Smoking Tools* Stems used to make pipes. *Tools* Wood used to make awl handles. Stems used to make small tools. (15:40) Pomo, Kashaya *Tools* Wood used for making tools and awl handles. (72:68)

#### **Arctostaphylos glauca** Lindl., Bigberry Manzanita

- **Drug**—Cahuilla *Antidiarrheal* Infusion of leaves used for diarrhea. *Dermatological Aid* Infusion of leaves used for poison oak rash. (15:40)
- **Food**—Cahuilla *Beverage* Mashed fruit mixed with water and strained into a drink. *Dried Food* Berries sun dried and stored for future use. *Porridge* Dried berries ground into flour and used to make mush. *Sauce & Relish* Berries used to make a gelatinous substance and eaten like aspic. *Staple* Seeds ground into a meal and used to make mush or cakes. (15:40) Diegueño *Fruit* Fruit used for food. (88:219) Kawaiisu *Beverage* Berries used to make a beverage. Berries were covered with a thin layer of dirt and sifted in a yaduci, a winnowing tray, so that the dirt fell through. Then they were sprinkled with water, kneaded with the hands, mashed, and soaked “in the sun” for about a half day. The yaduci was used as a sieve to remove the berry pulp from the infusion which could be drunk thus or mixed with chia. Water could be drained through the berry pulp a second time. The liquid was said to be sweet and fattening. *Fruit* Berries eaten fresh. (206:11)
- **Fiber**—Cahuilla *Building Material* Branches used in house construction. (15:40) Diegueño *Brushes & Brooms* Branches used to make a broom. (88:219)

- **Other**—*Cahuilla Fuel* Wood, provided a hot fire and long-lasting coals, used for firewood. *Hunting & Fishing Item* Plant provided food for wild game and therefore a rich hunting opportunity. *Smoke Plant* Leaves mixed with tobacco. *Smoking Tools* Stems used to make pipes. *Tools* Wood used to make awl handles. Stems used to make small tools. (15:40) **Diegueño Fuel** Used for firewood. (88:219)

**Arctostaphylos manzanita** Parry, Whiteleaf Manzanita

- **Drug**—**Concow** *Dermatological Aid* Poultice of chewed leaves applied to sores. *Veterinary Aid* Plant used for sore backs of horses. **Mendocino Indian** *Poison* Fruit considered poisonous. (41:375) **Miwok** *Dietary Aid* Cider employed as an appetizer to create appetite. *Gastrointestinal Aid* Cider used for stomach trouble. Leaves chewed for stomachache and cramps. (12:161, 162) **Pomo, Calpella** *Cold Remedy* Infusion of leaves taken for severe colds. **Pomo, Little Lakes** *Analgesic* Decoction of leaves used as a wash for headaches. *Anti-diarrheal* Leaves used for diarrhea. (41:375)
- **Food**—**Karok** *Beverage* Berries used to make a drink. *Dried Food* Berries dried and stored in storage baskets for future use. *Fruit* Dried berries pounded, mixed with salmon eggs, cooked in a basket with a hot rock, and eaten. (148:388) **Mendocino Indian** *Beverage* Ripe berries used to make cider. *Forage* Fruits eaten by bears as forage. *Fruit* Green fruits eaten in small quantities to quench thirst. Ripe fruits eaten raw or cooked. *Unspecified* Globular, waxy flowers sucked or eaten by children. *Winter Use Food* Ripe berries stored as a winter use food. (41:375) **Miwok** *Beverage* Berries crushed for sweet, unfermented cider. *Winter Use Food* Dried berries stored for winter consumption, chewed but never swallowed. (12:161) **Numlaki** *Bread & Cake* Fruits made into bread and eaten. *Porridge* Fruits made into mush and eaten. *Staple* Fruits eaten like pinole. (41:375) **Yuki** *Beverage* Ripe fruits crushed, strained, and used to make cider. *Fruit* Ripe berries eaten raw. *Staple* Ripe berries parched and used in pinole. (49:85)
- **Other**—**Karok** *Containers* Wood used to make reels for string. *Cooking Tools* Wood used to make spoons and scraping sticks for acorn soup. *Walking Sticks* Wood used to make canes. (148:388) **Mendocino Indian** *Fuel* Wood used as an exceedingly fine fuel. **Pomo** *Soap* Leaves boiled and the yellowish red extract used as a cleansing body wash. **Yokia** *Containers* Two V-shaped branches used to carry wood on the back. (41:375)

**Arctostaphylos nevadensis** Gray, Pine Mat Manzanita

- **Drug**—**Karok** *Antidiarrheal* Leaves used for diarrhea. *Antidote* Plant used for poisoning from *Toxicodendron diversiloba*. (6:18)
- **Food**—**Karok** *Beverage* Berries pulverized and made into a drink. (6:18) Berries used to make a drink. *Dried Food* Berries dried and stored in storage baskets for future use. (148:388) *Fruit* Berries used for food. (6:18) Dried berries pounded, mixed with salmon eggs, cooked in a basket with a hot rock, and eaten. (148:388) **Paiute** *Fruit* Berries used for food. (111:101) **Tolowa** *Bread & Cake* Berries mixed with salmon roe and sugar, formed into patties, and baked in rocks. (6:18)
- **Other**—**Karok** *Containers* Wood used to make reels for string. *Cooking Tools* Wood used to make spoons and scraping sticks for acorn soup. *Walking Sticks* Wood used to make canes. (148:388) **Klamath** *Smoke Plant* Dried leaves mixed with tobacco and used for smoking. (45:102) **Paiute** *Smoke Plant* Roasted, dried leaves mixed with tobacco and smoked. (111:101)

**Arctostaphylos parryana** Lemmon, Parry Manzanita

- **Food**—**Luiseño** *Fruit* Ground berry pulp used for food. (as *A. parryi* 155:230)

**Arctostaphylos patula** Greene, Greenleaf Manzanita

- **Drug**—**Atsugewi** *Burn Dressing* Poultice of leaves applied to burns. Decoction of pounded leaves used for burns. *Dermatological Aid* Decoction of pounded leaves used for cuts. Poultice of leaves applied to cuts. (61:140) **Navajo, Kayenta** *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (205:35) **Shoshoni** *Venereal Aid* Decoction of leaves taken for venereal diseases. (180:38)
- **Food**—**Atsugewi** *Beverage* Berries made into cakes and eaten plain or put into water and drunk. Cider was made by adding water to pounded berries and was conveyed to the mouth with a deer tail sop. *Bread & Cake*, and *Winter Use Food* Berries made into flour, molded into cakes, and stored for later use. (61:138) **Karok** *Dried Food* Berries dried and eaten. (148:388) **Klamath** *Fruit* Berries used for food. (45:102) **Midoo** *Fruit* Berries used for food during an acorn crop failure. (117:308) **Navajo, Kayenta** *Fruit* Berries eaten raw. (205:35) **Paiute** *Forage* Berries eaten by bears and deer. (111:102) **Wintoon** *Fruit* Berries used for food. (117:263)
- **Other**—**Klamath** *Smoke Plant* Dried leaves mixed with tobacco and used for smoking. (45:102) **Paiute** *Smoke Plant* Fire dried, pulverized leaves smoked with other plants or alone. (111:102)

**Arctostaphylos pringlei** Parry, Pringle Manzanita

- **Food**—**Navajo** *Beverage* Crushed berries used to make a beverage. *Fruit* Berries eaten raw or cooked. *Porridge* Seeds ground into a mush. *Preserves* Berries used to make jelly. (110:23)

**Arctostaphylos pumila** Nutt., Sandmat Manzanita

- **Food**—**Costanoan (Olhonean)** *Beverage* Berries used to make cider. (117:373)

**Arctostaphylos pungens** Kunth, Pointleaf Manzanita

- **Drug**—**Cahuilla** *Antidiarrheal* Infusion of leaves used for diarrhea. *Dermatological Aid* Infusion of leaves used for poison oak rash. (15:40) **Navajo, Ramah** *Ceremonial Medicine* and *Emetic* Leaves used as a ceremonial emetic. (191:38)
- **Food**—**Cahuilla** *Beverage* Mashed fruit mixed with water and strained into a drink. *Dried Food* Berries sun dried and stored for future use. *Fruit* Berries eaten fresh. *Porridge* Dried berries ground into flour and used to make mush. *Sauce & Relish* Berries used to make a gelatinous substance and eaten like aspic. *Staple* Seeds ground into a meal and used to make mush or cakes. (15:40) **Yavapai** *Beverage* Fresh or stored pulverized berries put in mouth, solid matter spat out, and juice sucked. Sometimes the liquid was expressed by squeezing the moistened pulverized mass with the two hands. (63:213) Berries used to make a beverage. *Fruit* Berries chewed and used for food. (65:256)
- **Fiber**—**Cahuilla** *Building Material* Branches used in house construction. (15:40)
- **Other**—**Cahuilla** *Fuel* Wood, provided a hot fire and long-lasting coals, used for firewood. *Hunting & Fishing Item* Plant provided food for wild game and therefore a rich hunting opportunity. *Smoke Plant* Leaves mixed with tobacco. *Smoking Tools* Stems used to make pipes. *Tools* Wood used to make awl handles. Stems used to make

small tools. (15:40) **Navajo, Ramah Good Luck Charm** Dried leaves smoked with mountain tobacco to bring good luck. (191:38)

**Arctostaphylos rubra** (Rehd. & Wilson) Fern., Red Fruit Bearberry

- **Food**—Eskimo, Arctic *Forage* Berries eaten greedily by bears and ptarmigan. (128:23) **Eskimo, Inupiat Winter Use Food** Berries and salmonberries stored in barrels for future use. (98:109) **Tanana, Upper Fruit** Berries used for food. (102:10)
- **Other**—Tanana, *Upper Season Indicator* Red leaves indicated fattened moose and the time to hunt them. (102:10)

**Arctostaphylos sp.**, Manzanita

- **Drug**—Costanoan *Urinary Aid* Decoction of plant used for bladder ailments. (21:12) **Diegueño Kidney Aid** Infusion of leaves used for the kidneys. (84:15)
- **Food**—Costanoan *Beverage* Fruit steeped in cold water to produce a cider. *Dried Food* Fruit dried and stored for winter use. *Fruit Raw* fruit used for food. (21:252) **Diegueño Preserves** Berries used to make jelly. (151:35) **Navajo, Ramah Ceremonial Medicine** and *Emetic* Leaves used as a ceremonial emetic. (191:38) **Ojibwa Antirheumatic (External)** Infusion of pounded plants used as wash for rheumatism. *Blood Medicine* Decoction of bark taken for internal blood diseases. (135:231) *Ceremonial Medicine* Leaves used for medicine ceremonies. *Narcotic* Leaves smoked to cause intoxication. (135:238) *Panacea* Infusion of pounded plants used as wash for general illnesses. (135:231) *Unspecified* Leaves used for medicinal purposes. (135:238) **Okanagan-Colville Antihemorrhagic** Decoction of leaves and stems taken for spitting of blood. *Blood Medicine* Decoction of leaves and stems taken as a blood tonic. *Eye Medicine* Decoction of leaves and stems used as a wash for sore eyes. *Kidney Aid* Decoction of leaves and stems taken as a tonic for the kidneys. *Urinary Aid* Decoction of leaves and stems taken as a tonic for the bladder. (188:101) **Okanagon Antihemorrhagic** Decoction of leaves and stems taken for blood-spitting. *Eye Medicine* Decoction of leaves and stems used as a wash for sore eyes. *Kidney Aid* Decoction of leaves and stems taken as a tonic for kidneys. *Tonic* Decoction of leaves and stems taken as a tonic for kidneys and bladder. *Urinary Aid* Decoction of leaves and stems taken as a tonic for bladder. (125:40) **Quileute Unspecified** Leaves smoked as medicine. (137:66) **Sampoil Dermatological Aid** Green leaves dried, pulverized, and sprinkled on skin sores. Infusion of entire plant used as hair wash for dandruff and scalp diseases. Infusion of entire plant used as young girls' hair wash to insure growth. *Pediatric Aid* Infusion of entire plant used as young girls' hair wash to insure growth. (131:220) **Tanana, Upper Laxative** Raw berries eaten as a laxative. (102:10) **Thompson Antihemorrhagic** Decoction of leaves and stems taken for blood-spitting. (125:40) Decoction of root taken for "blood spitting." (164:458) *Dietary Aid* Raw leaves chewed to alleviate thirst. (187:211)

*Diuretic* Decoction of leaves and stems taken as a diuretic. *Eye Medicine* Decoction of leaves and stems used as a wash for sore eyes. (164:458) *Kidney Aid* Decoction of leaves and stems taken as a tonic for kidneys. (125:40) *Oral Aid* Infusion of leaves used as a mouthwash for canker sores and weak gums. *Orthopedic Aid* Infusion of plant taken and used as a wash for broken bones. (187:211) *Tonic* Decoction of leaves and stems taken as a tonic for kidneys and bladder. (125:40) Decoction of leaves and stems taken as a tonic for the kidneys and bladder. (164:458) *Urinary Aid* Decoction of leaves and stems taken as a tonic for bladder. (125:40) Decoction of leaves and stems taken as a tonic for the bladder. (164:458) Infusion of leaves used as a tonic, antiseptic, and astringent for bladder and urinary passage disorders. (187:211)

- **Food**—**Bella Cooola** *Special Food* Berries formerly mixed with melted mountain goat fat and served to chiefs at feasts. (184:204) **Blackfoot** *Beverage* Crushed leaves used to make tea. *Dried Food* Berries dried and later soaked with sugar. *Fruit* Berries eaten fresh. (86:101) Berries eaten raw. (97:49) Berries eaten raw or mashed in fat and fried. (114:276) *Winter Use Food* Berries preserved for later use. (97:49) **Carrier** *Fruit* Berries mixed with salmon eggs as a palatable and nutritious food. *Soup* Berries used to make soup. (89:12) **Cherokee** *Fruit* Fruit used for food. (80:25) **Chinook, Lower** *Dried Food* Berries dried in bags, mixed with oil, and eaten. *Fruit* Berries eaten fresh. (79:44) **Chippewa** *Spice* Berries cooked with meat to season the broth. (53:318) **Coeur d'Alene** *Dried Food* Berries dried and used for food. *Fruit* Berries eaten fresh. *Soup* Berries dried, boiled with roots, and eaten as soup. (178:90) **Cree, Woodlands** *Fruit* Fruit cooked in grease, pounded, mixed with raw fish eggs, and eaten. Approximate proportions of ingredients were 1 tablespoon grease, 1½ cups fruit, and 2 tablespoons whitefish eggs separated from the adhering membranes. A little sugar was added for flavor. After the fruits were lightly cooked in grease, they were pounded until they were crumbly. They were then placed in a heavy cloth folded to make a sack and pounded with the back of an ax head. The fish eggs moistened the pounded fruit. (109:29) **Eskimo, Arctic** *Fruit* Berries cooked and eaten. (128:23) **Eskimo, Inupiat** *Frozen Food* Berries frozen for future use. *Fruit* Berries eaten with salmon eggs, to prevent the eggs from sticking to the teeth. Berries and oil eaten with dry meat. *Ice Cream* Berries stored in bear fat and cracklings or in seal oil and used to make ice cream. *Winter Use Food* Berries stored in seal oil, fish oil, or rendered bear fat. (98:99) **Flathead** *Sauce & Relish* Berries dried, powdered, and used as a condiment with deer liver. (82:40) **Hanaksiala** *Fruit* Berries mashed, mixed with grease, and eaten. *Special Food* Berries mixed with high-bush cranberries or Pacific crabapples and featured at winter feasts. (43:239) **Kimsquit** *Dried Food* Berries formerly dried, boiled, mixed with boiled dumplings, and used for food. (184:204) **Koyukon** *Winter Use Food* Berries stored in grease or oil and eaten with fish or meat. (119:55) **Kwakiutl, Southern** *Fruit* Dry, mealy berries formerly used for food. (183:282) **Makah** *Fruit* Berries used for food. (67:297) **Montana Indian** *Dried Food* Fruit eaten fresh and dried. *Fruit* Fresh fruit used for food. (19:7) *Soup* Berries boiled and used to make a broth. *Starvation Food* Berries eaten raw or fried during famines. (82:40) **Nitinaht** *Forage* Fruits eaten by grouse. *Fruit* Fruits formerly eaten fresh. (186:104) **Nuxalkmc** *Fruit* Berries used for food. (43:239) **Okanagan-Colville** *Fruit* Berries used for food.

(188:101) **Okanagon** *Fruit* Insuper fruits eaten fresh. *Soup* Insuper fruits boiled in soups. (as *Arctostaphylos uva-ursi* 125:38) *Staple* Berries used as a principal food. (178:239) **Oweekeno** *Fruit* Berries used for food. (43:239) **Salish, Coast** *Fruit* Berries eaten raw or cooked. (182:82) **Sanpoil & Nespelem** *Dried Food* Berries dried and stored for future use. (188:101) *Soup* Dried berries used in soups. (131:102) **Skokomish** *Fruit* Berries eaten with salmon eggs. (79:44) **Spokan** *Fruit* Berries used for food. (178:343) **Squaxin** *Fruit* Berries occasionally eaten. (79:44) **Tanana, Upper** *Fruit* Fruit used for food. (77:28) Raw berries mixed with grease, dried or fresh, raw whitefish eggs, and eaten. Berries warmed in grease and eaten. *Winter Use Food* Raw berries mixed with grease, dried or fresh, raw whitefish eggs, and stored for later use. (102:10) **Thompson** *Beverage* Leaves and young stems boiled and drunk as a tea. (164:493) *Forage* Fruits eaten by deer. (164:514) *Fruit* Insuper fruits eaten fresh. (as *Arctostaphylos uva-ursi* 125:38) Drupes eaten fresh. (164:486) Dry, mealy fruits eaten with bear fat or fish oil because of the dryness. Washed berries fried in hot lard or salmon oil and used for food. The berries would crackle and pop “just like popcorn.” They were the only berries prepared in this manner. (187:211) *Soup* Insuper fruits boiled in soups. (as *Arctostaphylos uva-ursi* 125:38) Drupes boiled in soups. (164:486) **Tolowa** *Bread & Cake* Berries mixed with salmon roe and sugar, formed into patties, and baked in rocks. **Yurok** *Fruit* Berries used for food. (6:18)

- **Dye**—**Great Basin Indian** *Brown* Berries used to make a gray-brown dye. (121:49)
- **Other**—**Blackfoot** *Ceremonial Items* Leaves mixed with tobacco, dried cambium of red osier dogwood and used in all religious bundles. (86:14) Dried berries used in rattles. *Jewelry* Dried berries strung on necklaces. (86:107) *Season Indicator* Heavy fruit set taken by the medicine men as a sign of a severe winter to come. (97:49) *Smoke Plant* Crushed leaves smoked with tobacco. (86:101) Leaves dried and mixed with tobacco. (97:49) Dried leaves smoked as tobacco. (114:276) **Carrier** *Smoke Plant* Leaves and stems used to smoke. (31:74) Leaves mixed with tobacco and smoked. (89:12) **Cheyenne** *Smoke Plant* Leaves mixed with tobacco or red willow and used to smoke in a pipe. (76:183) Leaves mixed with skunkbush leaves in the absence of tobacco and smoked. (83:14) Leaves dried, mixed with red willow bark, and used for pipe smoking. (83:25) **Chippewa** *Smoke Plant* Used for smoking. (53:377) **Clallam** *Smoke Plant* Leaves pulverized and smoked before the introduction of tobacco and presently mixed with tobacco. (57:199) **Cree** *Smoke Plant* Leaves mixed with tobacco and smoked. (16:485) **Cree, Woodlands** *Smoke Plant* Dried leaves mixed with tobacco and smoked in a pipe. (109:29) **Eskimo, Arctic** *Smoke Plant* Leaves powdered, dried, used as a substitute for tobacco or mixed with the tobacco, and smoked. (128:23) **Eskimo, Inuktitut** *Smoke Plant* Leaves used as an additive to or substitute for tobacco. (202:191) **Great Basin Indian** *Smoke Plant* Leaves used as one of the elements in the tobacco mixture. (121:49) **Heiltsuk** *Smoke Plant* Leaves smoked like tobacco. (43:239) **Hesquiat** *Smoke Plant* Dried, toasted leaves mixed with tobacco for smoking. (185:64) **Hoh** *Ceremonial Items* Leaves smoked during religious ceremonies. *Smoke Plant* Leaves dried and smoked. (137:66) **Jemez** *Smoke Plant* Dried leaves smoked as tobacco. (44:20) **Keresan** *Smoke Plant* Leaves mixed with native-grown tobacco for smoking. (198:559) **Lakota**

*Smoke Plant* Leaves used as tobacco. (139:44) **Makah** *Cash Crop* Leaves dried and sold. (67:297) *Smoke Plant* Leaves used for smoking. (186:104) **Montana Indian** *Smoke Plant* Leaves mixed with tobacco and smoked. (19:7) **Navajo, Ramah** *Good Luck Charm* Dried leaves smoked with mountain tobacco to bring good luck. (191:38) **Nitinaht** *Smoke Plant* Leaves roasted, crushed, and smoked. (67:297) Leaves dried or roasted and smoked. **Nootka** *Smoke Plant* Leaves used for smoking. (186:104) **Nuxalkmc** *Cash Crop* Berries used for trade. (43:239) **Okanagan-Colville** *Smoke Plant* Leaves toasted and used as a tobacco. (188:101) **Okanagon** *Smoke Plant* Leaves mixed with other plant leaves and smoked. (125:39) **Oweekeno** *Cash Crop* Berries used for trade. (43:239) **Paiute** *Smoke Plant* Roasted, dried leaves mixed with tobacco and smoked. (111:100) **Pawnee** *Smoke Plant* Leaves smoked like tobacco. Leaves used for smoking, like tobacco. (as *Uva-ursi uva-ursi* 70:108) **Potawatomi** *Smoke Plant* Leaves mixed with tobacco. (154:118) **Quileute** *Ceremonial Items* Leaves smoked during religious ceremonies. *Smoke Plant* Leaves dried and smoked. (137:66) **Salish, Coast** *Smoke Plant* Leaves dried and smoked or mixed with tobacco and smoked. (182:82) **Shuswap** *Smoke Plant* Leaves roasted until dry, mashed, and mixed with tobacco. (123:62) **Skagit, Upper** *Smoke Plant* Leaves used as a tobacco substitute. (179:42) **Thompson** *Protection* Leaves placed in moc-casins or shoes after the death of a husband or wife for protection. (187:211) *Smoke Plant* Leaves mixed with other plant leaves and smoked. (125:39) Dried, toasted leaves mixed with tobacco for smoking. (164:495) Dried or toasted leaves alone or mixed with tobacco and used for smoking. Too much smoking of these leaves was said to make one dizzy. *Waterproofing Agent* Mashed berries rubbed on the inside of coiled cedar root baskets to waterproof them. The berries were used to waterproof baskets such as those used for whipping soapberries. (187:211)

**Arctostaphylos viscida** Parry, Sticky Whiteleaf Manzanita

- **Drug**—Miwok *Dietary Aid* Cider employed as an appetizer to create appetite. *Gastrointestinal Aid* Cider used for stomach trouble. Leaves chewed for stomachache and cramps. (12:161, 162)
- **Food**—Mewuk *Beverage* Berries used to make cider. *Fruit* Berries used for food. (117:336) **Midoo** *Fruit* Berries pounded and eaten. (117:311) **Miwok** *Beverage* Berries crushed for sweet, unfermented cider. *Winter Use Food* Dried berries stored for winter consumption, chewed but never swallowed. (12:161) **Wintoon** *Fruit* Berries used for food. (117:263)

**Arctostaphylos viscida ssp. mariposa** (Dudley) P.V. Wells, Mariposa Manzanita

- **Food**—Mewuk *Beverage* Berries used to make cider. *Fruit* Berries used for food. (as *A. mariposa* 117:336) **Midoo** *Fruit* Berries pounded and eaten. (as *A. mariposa* 117:311)

## **Ardisia**, Myrsinaceae

**Ardisia escallonioides** Schiede & Deppe ex Schlecht. & Cham., Island Marlberry

- **Food**—Seminole *Unspecified* Plant used for food. (169:470)
- **Other**—Seminole *Cooking Tools* Plant used to make meat roasting sticks. *Hunting & Fishing Item* Plant used to make arrows. (169:470)

**Arecaceae**, see *Cocos*, *Glaucothea*, *Sabal*, *Serenoa*, *Washingtonia*

## **Arenaria**, Caryophyllaceae

**Arenaria aculeata** S. Wats., Prickly Sandwort

- **Drug**—Shoshoni *Eye Medicine* Decoction of root used as an eye-wash. (180:38)

**Arenaria congesta** Nutt., Ballhead Sandwort

- **Drug**—Gosiute *Gastrointestinal Aid* Plant used as bowel medicine. (39:362) **Shoshoni** *Antirheumatic (External)* Poultice of steeped leaves applied for swellings. (118:42) *Blood Medicine* Infusion of flower heads and seeds taken as a blood purifier. (121:47) *Dermatological Aid* Poultice of steeped leaves and blossoms used for sun exposure. *Venereal Aid* Poultice of steeped leaves and blossoms used for gonorrheal ulcers. (118:47) **Washo** *Antirheumatic (External)* Poultice of steeped leaves applied for swellings. (118:42)

**Arenaria eastwoodiae** Rydb., Eastwood's Sandwort

- **Drug**—Hopi *Emetic* Plant used as an emetic for the stomach. (200:34, 75–76)

**Arenaria fendleri** Gray, Fendler's Sandwort

- **Drug**—Navajo, Ramah *Panacea* Root used, only in the summer, as a "life medicine." *Respiratory Aid* Powdered root used as snuff to cause sneezing for "congested nose."

**Arenaria lanuginosa ssp. saxosa** (Gray) Maguire, Spreading Sandwort

- **Drug**—Navajo, Ramah *Analgesic* Cold infusion used as lotion on forehead for headache. *Dermatological Aid* Infusion of plant used as lotion for pimples. *Eye Medicine* Infusion of plant used as eye drops. *Febrifuge* Cold infusion used as lotion on forehead for fever. *Respiratory Aid* Infusion of powdered root put in nose to cause sneezing for "congested nose." *Venereal Aid* Strong infusion of plant taken before sweat bath for venereal disease. (as *A. saxosa* 191:26)

**Arenaria macradenia** S. Wats., Mojave Sandwort

- **Drug**—Kawaiisu *Analgesic* Dried root smoke inhaled for headaches. Poultice of broken roots applied to the head for headaches. Root used as a salve for pain. *Antirheumatic (External)* Poultice of broken roots applied to area affected by rheumatism. *Dermatological Aid* Root used as a salve for pimples. *Respiratory Aid* Dried root smoke inhaled to clear the sinuses. (206:12)

**Arenaria sp.**, Sandwort

- **Drug**—Yavapai *Cathartic* Decoction of pounded root, with cathartic qualities, taken for stomachaches. *Gastrointestinal Aid* Decoction of pounded root taken for stomachaches. (65:261)
- **Other**—Shoshoni *Smoke Plant* Leaves used to make tobacco mixture for smoking. (118:61)

**Arenaria triflora var. obtusa** S. Wats.

- **Drug**—Gosiute *Cathartic* Plant used as a purgative for babies and adults with intestinal disorders. (39:350) *Gastrointestinal Aid* Plant used as a purgative for babies and adults with intestinal disorders. (39:350) Used as a bowel medicine. (39:362) *Pediatric Aid* Plant used as a purgative for babies and adults with intestinal disorders. (39:350)

## **Argemone**, Papaveraceae

**Argemone hispida** Gray, Rough Pricklypoppy

- **Drug**—Paiute *Dermatological Aid* Ground seeds used for sores. (118:44) **Shoshoni** *Cathartic* Infusion of seeds taken as a physic. (118:42)

### *Argemone munita* Dur. & Hilg., Flatbud Pricklypoppy

- **Drug**—Kawaiisu *Burn Dressing* Roasted, ripe, and mashed seeds applied as a salve to burns. (206:12)

### *Argemone polyanthemus* (Fedde) G. B. Ownbey, Crested Pricklypoppy

- **Drug**—Comanche *Eye Medicine* Sap used for sore eyes. (as *A. intermedia* 29:520) **Paiute** *Burn Dressing* and *Dermatological Aid* Salve of pulverized seeds used on burns, cuts, and sores. **Shoshoni** *Burn Dressing* Salve of pulverized seeds used on burns, sores, or cuts. *Cathartic* Roasted, mashed seeds taken as powder or pills to serve as a physic. *Dermatological Aid* Poultice of pulverized seed paste applied to bring boils to a head. Salve of moistened, pulverized seeds rubbed into hair to kill head lice. Salve of pulverized seeds used on burns, cuts, and sores. *Emetic* Roasted, mashed seeds taken as an emetic and physic. *Eye Medicine* Infusion of pulverized seeds used as a wash for sore eyes. *Toothache Remedy* Warmed root used various ways for toothache. (as *A. platyceras* 180:38, 39) **Tubatulabal** *Dermatological Aid* Poultice of pounded, ripe seeds applied to open sores. *Hemorrhoid Remedy* Poultice of pounded, ripe seeds applied to piles. (as *A. platyceras* 193:59) **Washo** *Burn Dressing* Salve of pulverized seeds used on burns, sores, or cuts. *Dermatological Aid* Salve of pulverized seeds used on burns, cuts, and sores. (as *A. platyceras* 180:38, 39)
- **Dye**—Kiowa *Unspecified* Leaf ash used under the skin for tattooing. (as *A. intermedia* 192:29) **Lakota** *Yellow* Used as a yellow dye for arrows. (139:53)
- **Other**—Hopi *Ceremonial Items* Plant used to whip children during initiation. (as *A. intermedia* 42:285)

## *Argentina*, Rosaceae

### *Argentina anserina* (L.) Rydb., Silverweed Cinquefoil

- **Drug**—Blackfoot *Antidiarrheal* Root used for diarrhea. (114:275) *Dermatological Aid* Poultice of chewed roots applied to sores and scrapes. (as *Potentilla anserina* 86:78) *Emetic* Plant soaked in water and the solution taken as an emetic for stomach disorders. (as *Potentilla anserina* 86:68) **Iroquois** *Antidiarrheal* Infusion of plant and another plant given to children for diarrhea. (as *Potentilla anserina* 141:49) *Diuretic* Infusion of leaves used as a diuretic. (as *Potentilla anserina* 142:92) *Pediatric Aid* Infusion of plant and another plant given to children for diarrhea. (as *Potentilla anserina* 141:49) **Kwakiutl** *Analgesic* and *Dermatological Aid* Decoction of root mixed with catfish oil and smeared on painful places. (20:382)
- **Food**—Montana Indian *Vegetable* Roots, tasted like sweet potatoes, used for food. (as *Potentilla anserina* 19:19) **Okanagon** *Staple* Roots used as a principal food. (as *Potentilla anserina* 178:238) *Unspecified* Roots eaten either raw or cooked. (as *Potentilla anserina* 125:37) **Shuswap** *Unspecified* Roasted roots used for food. (as *Potentilla anserina* 123:66) **Thompson** *Unspecified* Roots eaten either raw or cooked. (as *Potentilla anserina* 164:480) Roots eaten raw, but more often cooked. (as *Potentilla anserina* ssp. *anserina* 187:262)
- **Fiber**—Blackfoot *Cordage* Runners used to fix leggings in place. The leggings were tied above the knee and then folded over to the ankle,

like a boot. Runners used by girls to tie blankets. (as *Potentilla anserina* 86:119)

### *Argentina egedii* (Wormsk.) Rydb. **ssp. egedii**, Eged's Pacific Silverweed

- **Drug**—Kwakiutl *Dermatological Aid* Poultice of boiled roots and oil applied to sores and swellings. *Eye Medicine* Root juice used as a wash for inflamed eyes. (as *Potentilla pacifica* 183:289) **Tsimshian** *Unspecified* Roots used medicinally for unspecified purpose. (as *Potentilla anserina* ssp. *pacifica* 43:344)
- **Food**—Alaska Native *Vegetable* Roots eaten raw, boiled, or roasted like potatoes. (as *Potentilla pacifica* 85:127) **Bella Coola** *Unspecified* Roots used for food. (as *Potentilla pacifica* 184:209) **Haisla & Hanaksiala** *Unspecified* Roots used for food. (as *Potentilla anserina* ssp. *pacifica* var. 43:270) **Hesquiat** *Unspecified* Boiled or steamed roots eaten with oil or “stink salmon-eggs” (fermented eggs). (as *Potentilla pacifica* 185:73) **Kitasoo** *Unspecified* Roots mixed with sugar and oolichan (candlefish) grease and eaten. (as *Potentilla anserina* ssp. *pacifica* 43:344) **Kwakiutl**, **Southern** *Dried Food* Roots dried, steamed, and eaten with oil at large feasts. *Special Food* Roots dried, steamed, and eaten with oil at large feasts. (as *Potentilla pacifica* 183:289) **Makah** *Unspecified* Roots used for food. (as *Potentilla pacifica* 67:265) **Nitinaht** *Dessert* Long, fleshy roots steam cooked, dipped in oil, and eaten fresh like a dessert. *Dried Food* Roots steam cooked, dried for winter storage, soaked, briefly steamed, and eaten like dessert. (as *Potentilla pacifica* 186:118) *Unspecified* Peeled roots eaten raw or steamed. (as *Potentilla pacifica* 67:265) Roots eaten as accompaniments to cooked duck. (as *Potentilla pacifica* 186:131) Roots formerly used as an important food. (as *Potentilla pacifica* 186:63) **Oweekeno** *Unspecified* Roots used for food. (as *Potentilla anserina* ssp. *pacifica* 43:110) **Quileute** *Unspecified* Roots steamed, dipped in whale oil, and eaten. (as *Potentilla pacifica* 79:37) **Salish, Coast** *Unspecified* Fleshy taproots used for food. (as *Potentilla pacifica* 182:87)

## *Argyroschisma*, Pteridaceae, fern

### *Argyroschisma fendleri* (Kunze) Windham, Fendler's Falsecloak Fern

- **Drug**—Tewa *Dermatological Aid* Pulverized plant applied to lips for cold sores. (as *Notholaena fendleri* 138:67, 68)

## *Argythamnia*, Euphorbiaceae

### *Argythamnia cyanophylla* (Woot. & Standl.) Ingram, Charleston Mountain Silverbush

- **Drug**—Navajo *Panacea* Plant used as a “life medicine.” (as *Ditaxis cyanophylla* 90:158) **Navajo, Ramah** *Panacea* Root or whole plant used in summer as “the head of the life medicine.” (as *Ditaxis cyanophylla* 191:35)

## *Arisaema*, Araceae

### *Arisaema dracontium* (L.) Schott, Greendragon

- **Drug**—Menominee *Gynecological Aid* Plant used for “female disorders.” (151:23)
- **Other**—Menominee *Sacred Items* Root used in sacred bundles and gave the power of supernatural dreams to the owner. (151:79)

### *Arisaema triphyllum* (L.) Schott, Jack in the Pulpit

• **Drug—Cherokee Analgesic** Poultice of root used for headaches and various skin diseases. *Carminative* Used as a carminative. *Cold Remedy* Taken for colds. *Cough Medicine* Taken for dry coughs. *Dermatological Aid* Ointment used for “scald head,” ringworm, tetterworm, and “scrofulous sores.” Poultice of beaten, boiled roots mixed with meal and used on boils. *Diaphoretic* Used as a diaphoretic. *Expectorant* Used as an expectorant. *Orthopedic Aid* Used as a liniment. *Stimulant* Used as a stimulant. *Throat Aid* Infusion taken for throat irritations. *Tuberculosis Remedy* Given for “consumptions” and ointment used on “scrofulous sores.” (80:41) **Chippewa Eye Medicine** Decoction of root used as a wash for sore eyes. (53:360) **Iroquois Analgesic** Compound snuff used for headaches. Decoction or infusion of roots taken for pains. *Antidiarrheal* Decoction of plant given to children for diarrhea. *Blood Medicine* Cold infusion of roots taken “for nonconception caused by cold blood.” *Dermatological Aid* Plant used for face sores and hot poultice of plant applied to bruises. (87:276) *Eye Medicine* Steam from decoction of plant used for sore eyes. (87:277) *Febrifuge* Compound decoction steam used “when a person has cold sweats, not very sick.” *Gynecological Aid* Cold infusion of roots taken “for nonconception caused by cold blood.” (87:276) *Nose Medicine* Steam from decoction of plant used to “make you sneeze.” (87:277) *Orthopedic Aid* Compound infusion of powdered plants taken for cramps. Hot poultice of plant applied to bruises and for lameness. (87:276) Compound of powdered plant and alcohol used as a liniment for sore joints. (87:277) *Pediatric Aid* Decoction of plant given to children for diarrhea. Infusion of roots used as a wash for listless babies. *Respiratory Aid* Compound of chopped root and whisky taken for bronchial colds. Compound snuff used for catarrh. *Stimulant* Infusion of roots used as a wash for listless babies. *Tuberculosis Remedy* Compound decoction used as poultice for infected and swollen tubercular glands. (87:276) *Veterinary Aid* Ground plant added to mare’s feed to induce pregnancy and reduce listlessness. (87:275) **Malecite Dermatological Aid** Poultice of dried, pounded plants used for abscesses and boils. (116:247) **Menominee Eye Medicine** Poultice of pulverized root applied to sore eyes. (151:23) *Witchcraft Medicine* Compounded pulverized root used in lip incision to counteract “witchery” to face. (54:129) **Meskwaki Ceremonial Medicine** Seed used as a magical diagnostic medicine to predict recovery or death. *Poison* Finely chopped root put in meat for enemies, to cause pain and death. (152:202) Root cooked with meat used in abandoned vessels to poison enemy during war. (152:272) *Sedative* Compound used in very small doses for insomnia. *Snakebite Remedy* Root used for rattlesnake bite swellings. (152:202) **Micmac Dermatological Aid** Parts of plant used for boils and abscesses. *Orthopedic Aid* Parts of plant used as a liniment used for external use. (40:55) **Mohegan Analgesic** and *Antirheumatic (External)* Infusion of dried root used as a liniment for pain. (176:70, 128) *Orthopedic Aid* Infusion of plant used as a liniment. *Poison* Infusion of plant poisonous when taken internally. (174:269) Infusion of root, poisonous if swallowed, gargled for sore throat. (176:70) *Throat Aid* Infusion of root taken for sore throat. (174:269) Dilute infusion of root gargled for sore throat. (176:70, 128) **Ojibwa Eye Medicine** Root used for sore eyes. (153:356) *Unspecified* Plant used for medicinal purposes. (135:246) **Pawnee Analgesic** Crushed corm sprinkled on head and temples for headache and general pain. *Antirheumatic (External)* Poul-

tice of pulverized corm applied as counterirritant for rheumatism. (70:69) **Penobscot Orthopedic Aid** Infusion of plant used as a liniment “for general external use.” *Poison* Infusion of plant considered poisonous. (156:310) **Rappahannock Dermatological Aid** Compound dried root meal poultice applied for swelling and boils. (161:32)

- **Food—Potawatomi Unspecified** Thinly sliced roots cooked in a pit oven for 3 days to eliminate the poison. (154:95)
- **Other—Pawnee Toys & Games** Seeds used in gourd shells to make rattles. (70:69)

**Arisaema triphyllum ssp. quinatum** (Buckl.) Huttleston, Jack in the Pulpit

- **Drug—Choctaw Blood Medicine** Decoction of root taken “to make blood.” (as *A. quinatum* 25:23) Decoction of plant taken to make blood. (as *A. quinatum* 177:6)

**Arisaema triphyllum** (L.) Schott **ssp. triphyllum**, Jack in the Pulpit

- **Drug—Iroquois Contraceptive** Infusion of rhizomes used by women for temporary sterility. (as *A. atrorubens* 141:69)

**Aristida**, Poaceae

**Aristida divaricata** Humb. & Bonpl. ex Willd., Poverty Threawn

- **Drug—Keres, Western Burn Dressing** Grass ashes rubbed on burns. (171:27)

**Aristida purpurea var. longiseta** (Steud.) Vasey, Fendler Threawn

- **Food—Navajo, Ramah Fodder** Used for horse feed, if better forage was not available. Recognized as poor sheep or horse feed. (as *A. longiseta* 191:15)
- **Fiber—Hopi Brushes & Brooms** Plant used for broom material. (as *A. longiseta* 42:286) **Navajo, Ramah Brushes & Brooms** Stems used to make hairbrushes. (as *A. longiseta* 191:15)
- **Other—Hopi Ceremonial Items** Plant used in ceremonies. *Decorations* Plant used to decorate the faces of the female kachina. (as *A. longiseta* 42:286)

**Aristolochiaceae**, see *Aristolochia*, *Asarum*, *Hexastylis*

**Aristolochia**, Aristolochiaceae

**Aristolochia californica** Torr., California Dutchman’s Pipe

- **Drug—Miwok Cold Remedy** Decoction taken for colds. (12:167)

**Aristolochia macrophylla** Lam., Pipevine

- **Drug—Cherokee Dermatological Aid** Decoction of root applied externally for “swelling of feet and legs.” *Urinary Aid* Compound infusion of “stalk chips” taken for “yellowish urine.” (80:32)

**Aristolochia serpentaria** L. Virginia Snakeroot

- **Drug—Cherokee Abortifacient** Infusion taken for obstructions. *Analgesic* Infusion taken for sharp darting pains and used as an anodyne. Taken for sharp pains in the breast and used as a wash for headache. (80:55) Infusion of roots taken for breast pains. (177:20) *Antirheumatic (Internal)* Infusion taken for rheumatism. *Cold Remedy* Infusion taken or root chewed for colds and cold infusion of plant used for pain. *Cough Medicine* Taken for coughs. *Disinfectant* Used as an antiseptic. *Diuretic* Used as a diuretic. *Febrifuge* Taken for fever. *Gas-*

*trointestinal Aid* Used to “stop mortification and prevent putrefaction in the bowels,” dyspepsia. *Misc. Disease Remedy* Used as a tonic for typhus fevers and taken for ague. Used for “black-yellow” diseases. *Nose Medicine* Used as a poultice for “nose made sore by constant blowing.” *Pulmonary Aid* Infusion taken for pleurisy. *Snakebite Remedy* Root chewed and saliva spit on snakebite. *Stimulant* Used by “persons of weak, phlegmatic habits” and for dizziness or fainting. *Throat Aid* Used as a gargle for sore throat. *Tonic* Used as a tonic for typhus fevers. *Toothache Remedy* Poultice of bruised root applied to tooth for toothache. (80:55) **Choctaw Analgesic** Infusion of root taken for stomach pain. (25:24) Cold infusion of roots taken for stomach pains. (177:20) *Gastrointestinal Aid* Infusion of root taken for stomach pains. (25:24) Cold infusion of roots taken for stomach pains. (177:20) **Delaware Tonic** Used singly or combined with wintergreen to make a tonic. (176:39) **Delaware, Oklahoma Tonic** Root used alone or with wintergreen as a tonic. (175:32, 74) **Micmac Anticonvulsive** Root used for fits. (40:55) **Mohegan Snakebite Remedy** Poultice of plant applied to snakebites. (174:266) Poultice of pounded root applied to snakebite. (176:70, 128) **Nanticoke Anthelmintic** Infusion of plant taken for intestinal worms. (175:57, 84) **Natchez Febrifuge** Warm decoction of plant taken for fevers. (172:667) Decoction of plant taken for fevers. (177:20) **Penobscot Anticonvulsive** Infusion of root used for “fits.” (156:310) **Rappahannock Dermatological Aid** Compound poultice with mashed roots used as salve for spider bites. *Febrifuge* Infusion of leaves taken for chills. *Snakebite Remedy* Compound poultice with mashed roots used as salve for snakebites. (161:27)

### ***Aristolochia* sp.**, Pipevine

- **Other—Wintoon Tools** Nuts used by children in play for blowing. (117:264)

### ***Armillaria***, Tricholomataceae, fungus

#### ***Armillaria ponderosa*** (PK.) Sacc.

- **Food—Karak** *Unspecified* Species used for food. **Yurok** *Unspecified* Species used for food. (6:18)

### ***Armoracia***, Brassicaceae

#### ***Armoracia rusticana*** P. G. Gaertn., B. Mey. & Scherb., Horseradish

- **Drug—Cherokee Abortifacient** Used for “obstructed menses.” *Antirheumatic (Internal)* Used for rheumatism. *Cold Remedy* Used for colds. *Dietary Aid* Used to increase the appetite. *Diuretic* Used as a diuretic. *Gastrointestinal Aid* Used to aid digestion. *Oral Aid* Roots chewed for tongue and mouth diseases. *Respiratory Aid* Used for asthma. *Throat Aid* Infusion gargled for sore throat. *Tonic* Used as a tonic. *Urinary Aid* Used for “gravel.” (80:39) **Delaware, Ontario Analgesic** Poultice of leaves applied for neuralgia. (as *Rorippa armoracia* 175:66, 82) **Iroquois Blood Medicine** Infusion of smashed roots taken for the blood. *Misc. Disease Remedy* Plant used for sugar diabetes. (as *A. lapathifolia* 87:342) **Mohegan Toothache Remedy** Poultice of leaves, with midrib removed, bound to cheeks for toothache. (as *Rorippa amoracia* 174:266) Poultice of leaf bound to the face for toothaches. (as *Rorippa amoracia* 176:75, 132)
- **Food—Cherokee Sauce & Relish** Root used as a condiment. (as *A. lapathifolia* 126:36)

### ***Arnica***, Asteraceae

#### ***Arnica acaulis*** (Walt.) B.S.P., Common Leopardbane

- **Drug—Catawba Analgesic** Infusion of roots taken for back pain. *Orthopedic Aid* Infusion of roots taken for back pain. (157:189)

#### ***Arnica cordifolia*** Hook., Heartleaf Arnica

- **Drug—Okanagan-Colville Love Medicine** Roots used as a love medicine. Roots were mixed with a robin's heart and tongue and with ocher paint. The mixture was dried and powdered. The user went into the water and faced east, recited certain words, mentioned the name of the person he desired, and marked his face with the powdered arnica mixture. (188:75) **Shuswap Eye Medicine** Plant used for sore eyes. (123:58) **Thompson Antirheumatic (External)** Poultice of mashed plant used for swellings. *Dermatological Aid* Poultice of mashed plant used for bruises and cuts. *Tuberculosis Remedy* Infusion of plant taken for tuberculosis. (187:169)

#### ***Arnica latifolia*** Bong., Broadleaf Arnica

- **Drug—Okanagan-Colville Love Medicine** Roots used as a love medicine. (188:75) **Thompson Unspecified** Plant used medicinally for unspecified purpose. (164:473)

### ***Arnoglossum***, Asteraceae

#### ***Arnoglossum atriplicifolium*** (L.) H. E. Robins., Armoglossum

- **Drug—Cherokee Cancer Treatment** Poultice used for cancer and to draw out blood or poisonous matter. *Dermatological Aid* Poultice used for cuts and bruises. (as *Cacalia atriplicifolia* 80:58)
- **Food—Cherokee Spice** Powdered leaves used as seasoning. (as *Cacalia atriplicifolia* 80:58)

### ***Aronia***, Rosaceae

#### ***Aronia melanocarpa*** (Michx.) Ell., Black Chokeberry

- **Drug—Potawatomi Cold Remedy** Infusion of berry used for colds. (as *Pyrus melanocarpa* 154:76)
- **Food—Abnaki Fruit** Fruit used for food. (144:152) *Unspecified* Species used for food. (144:168) **Potawatomi Fruit** Berries used for food. (as *Pyrus melanocarpa* 154:107)

### ***Artemisia***, Asteraceae

#### ***Artemisia absinthium*** L., Absinth Sagewort

- **Drug—Chippewa Orthopedic Aid** Boiled plant top used as warm compress for sprain or strained muscles. (53:362) **Mohegan Anthelmintic** Infusion of leaves taken as a vermifuge. (176:70, 128) **Okanagan-Colville Cold Remedy** Decoction or infusion of twigs taken for head colds. Poultice of plant steeped in boiling water applied to stomach for gastritis. (138:54) **Thompson Unspecified** Plant used medicinally for unspecified purpose. (164:465) **Venereal Aid** Decoction of plant taken as medicine, possibly for venereal disease. (187:170) **Zuni Cold Remedy** Infusion of whole plant taken as a cold remedy. (166:42)

- **Food—Blackfoot Spice** Crushed leaves mixed with stored meat to maintain a good odor. (86:101) **Hopi Spice** Used with sweet corn when roasting. (190:167) **Isleta Forage** Plant considered excellent grazing plant for sheep and cattle. (100:22)
- **Fiber—Dakota Mats, Rugs & Bedding** Plant bunches used as towels in old times. **Omaha Mats, Rugs & Bedding** Plant bunches used as towels in old times. **Pawnee Mats, Rugs & Bedding** Plant bunches

used as towels in old times. **Ponca Mats, Rugs & Bedding** Plant bunches used as towels in old times. **Winnebago Mats, Rugs & Bedding** Plant bunches used as towels in old times. (70:134)

- **Dye—Great Basin Indian** *Green Leaves* used to make a green dye. (121:50)
- **Other—Arapaho Ceremonial Items** Whole plant used for ceremonials. (118:51) **Blackfoot Ceremonial Items** Plant used in religious rituals. (97:56) Plant tied to articles that were sacrificed to the Sun. (114:275) *Hide Preparation* Infusion of plant used to treat hides. *Incense & Fragrance* Plant stuffed into saddles, women's pillows, hide bags, and quivers as a deodorant. *Insecticide* Plant put on campfire coals and the smoke repelled the mosquitoes. (86:109) Plant put on a fire to attract horses that run to the smoke because it kept flies and mosquitoes away. (86:87) *Paper* Leaves used as toilet paper. (86:124) *Soap* Plant used to clean paint applicators made from broken buffalo shoulder blades. *Tools* Plant made into balls and used as molds to make rattles. (86:109) **Chippewa Protection** Fresh leaves in nostrils and mouth as protection when "working over the dead." (53:366) **Cree, Woodlands Hunting & Fishing Item** Used as an ingredient in trap lures. (109:30) **Great Basin Indian Ceremonial Items** Whole plant used for all ceremonies. (121:50) **Hopi Ceremonial Items** Plant used to make pahos (prayer sticks). (42:289) Sprig attached to the prayer emblem and regarded as efficacious in petitions for water. (56:21) Used on prayer sticks. (190:167) Attached to prayer sticks. (200:94) **Kutenai Ceremonial Items** Plant burned and smoke used in religious ceremonies. *Insecticide* Plant burned and used as a smudge for mosquitoes. (82:45) **Navajo Paper** Very soft leaves used as a convenient substitute for toilet paper. (55:81) **Navajo, Ramah Ceremonial Items** Plant ash applied before painting Witcheryway prayer sticks. (191:48) **Shuswap Insecticide** Plant burned to keep away mosquitoes. (123:58) **Sioux Soap** Decoction used for bathing. (82:45) **Thompson, Upper (Nicola Band) Fuel** Used for fuel in smoking skins. (164:497) **Zuni Decorations** Sprigs and corn ears attached to decorated tablets and carried by female dancers in a drama. The sprigs and corn ears were carried by female dancers in the drama of "The Coming of the Corn Maidens." *Fertilizer* Sprigs dipped in water and planted with corn so that it would grow in abundance. (166:87)

***Artemisia furcata* var. *heterophylla*** (Bess.) Hultén, Forked Sagewort

- **Drug—Luiseño Unspecified** Plant used for medicinal purposes. (as *A. heterophylla* 155:228) **Mendocino Indian Analgesic** Decoction of leaves taken for headaches. *Antidiarrheal* Decoction of leaves taken for diarrhea. *Antidote* Juice used as an antidote for effects of poison oak. *Antirheumatic (External)* Poultice of leaves applied or leaves used in sweat bath for rheumatism. *Cold Remedy* Decoction of leaves taken or bruised leaves placed in nostril for colds. *Eye Medicine* Decoction of leaves used as a wash for sore eyes. *Febrifuge* Decoction of leaves taken for fevers. *Gastrointestinal Aid* Decoction of leaves taken for colic and stomachaches. *Gynecological Aid* Poultice of leaves applied after childbirth to promote blood circulation. *Herbal Steam* Poultice of leaves applied or leaves used in sweat bath for rheumatism. *Respiratory Aid* Decoction of leaves taken for bronchitis. (as *A. heterophylla* Nutt. 41:392) **Paiute Febrifuge** and *Pediatric Aid* Steeped leaves put next to a baby's skin for fever. (as *A. heterophylla* 118:40)

- **Other—Luiseño Hunting & Fishing Item** Stems used to make small arrows. (as *A. heterophylla* 155:206) Plant used to make small boys' arrows. (as *A. heterophylla* 155:228)

***Artemisia ludoviciana*** Nutt., Louisiana Sagewort

- **Drug—Blackfoot Dermatological Aid** Leaves put into moccasins as a foot deodorant. (86:124) Poultice of leaves applied to blisters and burst boils. (86:75) *Pediatric Aid* Leaves chewed, especially by children, during the sweat for respiratory disorders. *Pulmonary Aid* Infusion of leaves taken for chest constrictions. *Respiratory Aid* Leaves chewed, especially by children, during the sweat for respiratory disorders. *Throat Aid* Infusion of leaves taken for throat constrictions. (86:71) *Veterinary Aid* Infusion of plant given to horses for coughing, sneezing, and to clean the sinuses. (86:87) **Cheyenne Analgesic** Snuff of crushed leaves used for headache. (82:44) Crushed leaves used as snuff for headaches. *Ceremonial Medicine* Plant used in ceremonies. *Hemostat* Crushed leaves used as snuff for nosebleeds. (83:18) *Nose Medicine* Leaves crushed and used as a snuff for nosebleeds. *Respiratory Aid* Leaves crushed and used as a snuff for sinuses. (82:44) Crushed leaves used as snuff for sinus attacks. (83:18) *Unspecified* Plants rubbed on the body for immunity to sickness. (82:44) **Comanche Dermatological Aid** Leaves chewed and used for insect and spider bites. (99:7) **Crow Dermatological Aid** Salve of plants and neck fat used for sores. Infusion used as an astringent for eczema, and for underarm and foot perspiration and odor. **Flathead Cold Remedy** Infusion used for colds. *Dermatological Aid* Infusion used for bruises and itching. **Gros Ventre Febrifuge** Infusion used for high fevers. (82:44) **Havasupai Unspecified** Sprays used in the sweat baths or infusion of leaves taken for sicknesses. (197:245) **Kutenai Dermatological Aid** Decoction of plants used for sores. (82:44) **Lakota Antidiarrheal** Infusion used for diarrhea. *Cold Remedy* Infusion used for colds. *Throat Aid* Infusion used for sore throats. (106:46) **Meskwaki Dermatological Aid** Poultice of leaves applied to old sores. Tincture of leaves used for old sores, especially scrofulous sores. *Throat Aid* Infusion of leaves taken for tonsillitis and sore throat. *Tuberculosis Remedy* Tincture of leaves used for old sores, especially scrofulous sores. *Veterinary Aid* Smudge of leaves used to "smoke ponies when they have the distemper." (152:211) **Mewuk Cathartic** Infusion of plant used as a mild cathartic. *Dermatological Aid* Poultice of bruised leaves applied to cuts and sores. (117:366) *Disinfectant* Infusion of plant used as a disinfectant to wash the bodies of the mourners after funerals. (117:353) *Gastrointestinal Aid* Infusion of plant used for indigestion. (117:366) *Other* Plant worn around the neck by orphans after parents death to keep the ghost away and prevent sickness. (117:353) **Panacea** Small bundles of plant made into necklaces to keep disease away. (117:336) *Unspecified* Plant used as a medicine. (as *A. ludoviciana* 117:338) Infusion of plant taken, used as a wash, or poultice applied as medicine. (117:353) *Veterinary Aid* Used for horses with sore backs. (117:366) **Navajo Unspecified** Used by the medicine men. (55:81) **Navajo, Ramah Panacea** Root used as a "life medicine." (191:48) **Ojibwa Veterinary Aid** Plant used as a horse medicine. (153:363) **Okanagan-Colville Carminative** Infusion of plant taken and splashed on the body during sweat bathing to "clear his wind." *Strengtheners* Infusion of plant taken and splashed on body during sweat bathing by hunters, to walk long distances. (188:

- 78) **Poliklah** *Eye Medicine* Poultice of plant applied to sore eyes. (117:173) **Thompson** *Antirheumatic (External)* Decoction of plant used as a "liniment" for arthritis. *Cold Remedy* Decoction of plant used as a wash for colds. Hot decoction of plant taken, especially by the elderly, for colds. *Disinfectant* Plant used as incense to disinfect the house. *Gastrointestinal Aid* Plant used for overeating or indigestion. *Misc. Disease Remedy* Hot decoction of plant taken, especially by the elderly, for influenza. *Orthopedic Aid* Poultice of plant boiled with "any kind of weeds" and used on injured areas as a bone setter. (187:170) **Yokut** *Unspecified* Used as medicine. (as *A. ludoviciana* 117:437) **Yurok, South Coast (Nererner)** *Dermatological Aid* Infusion of plant used for itching skin and as a lotion for sores. *Eye Medicine* Infusion of plant used for sore eyes. (117:169)
- **Food**—**Apache, Chiricahua & Mescalero** *Spice* Sage used to flavor meats. (33:47) **Blackfoot** *Candy* Leaves chewed as a confection. (86:101)
  - **Fiber**—**Blackfoot** *Mats, Rugs & Bedding* Used to cover the floor of the sweat lodge. (86:17) **Pomo** *Building Material* Used to thatch the sweat house. (117:282)
  - **Other**—**Blackfoot** *Ceremonial Items* Used for cleansing in the sweat lodge. Chewed by assistants to the participants during the sweat lodge rituals to relieve thirst. This thirst resulted from taboos against the consumption of liquids. (86:17) Used to wipe the sweat from their bodies during the sweat lodge ceremonies. Used to cleanse the headdresses of the Horn Society before transferring to new owners. In the transferal, the headdress was laid on a bed of man sage. Used to cleanse the singers of the All Smoking ceremony. Packed into ceremonial moccasins for storage. Used as the Holy Offering of the All Smoking ceremony and for certain Horn Society rituals. Used to cleanse the body during participation in the All Smoking Ceremony. Worn around wrists and ankles by the Lodge dancers in the Okan (Holy Lodge) of the Sun dance. Used to wipe the black paint off the one man who fasted until the Okan center pole was raised. Used as a bed for the Buffalo Stones (Iniskim) during buffalo drive rituals. *Good Luck Charm* Used to cleanse a man entered in a horse race. (86:24) *Incense & Fragrance* Plant stuffed into saddles, women's pillows, hide bags, and quivers as a deodorant. (86:109) *Insecticide* Plant put on a fire to attract horses that run to the smoke because it kept flies and mosquitoes away. (86:87) *Malicious Charm* Stems used as a curse on horses to slacken in races. Short pieces were broken from the stem and a small, flat, white stone was collected. The man first sprayed the rock with juice from his mouth. Then the stems were placed on the ground; they represented the other horses. The stone was sprayed again and shoved toward the stems, without touching them, three times. At the fourth shove the stone was pressed into the stems. Horses so cursed were sure to slacken in the race. Leaves used in defense of the use of yellow angelica by an opponent in the hand game. The loser went to his lodge and asked for a small piece of meat, which he combined with man sage leaves. Carrying this charm in his pocket, he returned to the gambling place, where he walked abruptly among the participants and took the dice in his hands. Then he pretended to sing and perform with the dice—all the while secretly rubbing them with the meat and sage mixture. After he handed back the dice, the man who had been using the yellow angelica would get a headache and grow lazy, losing all he had won. (86:40) *Paper* Leaves used as toilet paper. (86:124) *Protection* Used to cleanse a person afraid of a ghost. (86:24) **Cheyenne** *Ceremonial Items* Plant used extensively in ceremonies to drive away bad spirits, evil influences, and ominous dreams. Leaves burned as incense in ceremonies to purify implements, utensils, or persons. Plants wiped on persons who broke taboos for purification. Plants wrapped around Sundancers' eagle bone whistles for prevention of thirst. Sprigs used as ceremonial paintbrushes during the Sundance. *Tools* Sprigs used in sweat lodges to sprinkle water on the rocks. **Crow** *Ceremonial Items* Plants used extensively in ceremonies. (82:44) **Lakota** *Ceremonial Items* Used to make bracelets and head wreaths for the Sun Dance. (106:46) Plant used to make wreaths and bracelets for the sun dance and used in the sweat lodge. *Incense & Fragrance* Plant burned as incense. (139:36) *Protection* Smudged on the body and home to ward off evil spirits. (106:46) **Meskwaki** *Insecticide* Smudge of leaves used to drive away mosquitoes. (152:211) **Mewuk** *Decorations* Burned wood soot used for tattooing. (117:349) **Navajo, Ramah** *Ceremonial Items* Plant ash used as Evilway and Hand Tremblingway blackenings. Applied to unraveler strings (a woman's hair cord or buckskin string from her moccasins). (191:48) **Sioux** *Smoke Plant* Plant used in smoking tobacco. (153:417) **Thompson** *Fuel* Plant used on the fire in the first smoking of a hide during the curing process. The smoke from this plant was supposed to soften the hide. *Insecticide* Plant burned and the smoke used as a good smudge against mosquitoes. *Protection* Plant used as incense to protect one against evil influences. If one had to go into a large crowd, he could smoke himself with this plant to protect himself against strangers who might bring him harm. (187:170)
- Artemisia ludoviciana* ssp. *incompta*** (Nutt.) Keck, Mountain Sagewort
- **Drug**—**Bella Coola** *Unspecified* Used as a medicine. **Carrier, Northern** *Analgesic* Hot infusion of plant taken for headache. **Carrier, Southern** *Dermatological Aid* Poultice of chewed plant applied to sprains and swellings. *Orthopedic Aid* Poultice of chewed leaves applied to sprains. (as *A. discolor* 150:65)
  - **Food**—**Gosiute** *Unspecified* Seeds formerly used for food. (as *A. discolor* 39:362)
- Artemisia ludoviciana* Nutt. ssp. *ludoviciana***, Foothill Sagewort
- **Drug**—**Cheyenne** *Ceremonial Medicine* Plant used in ceremonies. *Psychological Aid* Plant used to drive away bad or ominous dreams. (as *A. gnaphalodes* 76:190) **Chippewa** *Antidote* Dried flowers placed on coals and the fumes used as an antidote to "bad medicine." (as *A. gnaphalodes* 53:376) Smoke of burned flowers inhaled as antidote for "bad medicine." applied to nostrils for nasal hemorrhage. (as *A. gnaphalodes* 68:334)

**Paiute Analgesic** Decoction of plant used as a soaking bath for aching feet. Hot or cold decoction of whole plant or young growth taken for stomachaches. Poultice of steamed plants or bruised leaves used for rheumatism or other aches. Poultice of steeped leaves used as a compress for headaches. *Antidiarrheal* Decoction of plant taken for diarrhea. *Antirheumatic (External)* Branches used in a sweat bath for rheumatism. Poultice of steamed plants or bruised leaves used for rheumatism or other aches. *Dermatological Aid* Decoction of plant used as a wash for rashes, itching, or skin eruptions. Poultice of leaves or stems and leaves applied to swellings, boils, and sores. *Disinfectant* Branches used as a bed in a sweat bath to steam out infection of influenza. *Eye Medicine* Decoction of leaves used as an eye-wash. *Febrifuge* Poultice of steeped leaves used, especially for babies, as a compress for fevers. *Gastrointestinal Aid* Decoction of whole plant or shoots taken for stomachaches. *Gynecological Aid* Decoction of root or entire plant taken as a tonic after childbirth. Infusion of leaves used as a regulator of menstrual disorders. *Herbal Steam and Misc. Disease Remedy* Branches used as a bed in a sweat bath to steam out infection of influenza. *Orthopedic Aid* Decoction of plant used as a soaking bath for aching feet. *Pediatric Aid* Poultice of steeped leaves used, especially for babies, as a compress for fevers. *Tonic* Decoction of root or entire plant taken as a tonic after childbirth. *Venereal Aid* Decoction of plant tops taken for venereal diseases. (as *A. gnaphalodes* 180:40–42) **Sanpoil Analgesic** Leaves placed in the nostrils for an hour for a headache. *Cold Remedy* Leaves placed in the nostrils for an hour for a cold. *Dermatological Aid* Pulverized leaves sprinkled on sores “to hasten their healing.” (as *A. vulgaris* var. *ludoviciana* 131:217) **Shoshoni Analgesic** Decoction of leaves taken for headaches. Hot or cold decoction of whole plant or young growth taken for stomachaches. Poultice of steeped leaves used, especially for babies, as a compress for fevers. *Antidiarrheal* Decoction of plant tops taken for diarrhea. *Cathartic* Decoction of whole plant or shoots taken as a physic. *Cold Remedy* Compound decoction of plant tops taken for colds. Compound decoction of whole plant taken for heavy colds. Decoction of branches taken in small doses for colds. Decoction of leaves taken for colds. Decoction of tops alone, or sometimes with roots, taken for colds. *Cough Medicine* Compound decoction of plant tops taken for coughs. Compound decoction of whole plant or plant tops taken for coughs. Compound decoction of whole plant taken for coughs. Decoction of branches taken in small doses for coughs. Simple or compound decoction of leaves taken for coughs. *Dermatological Aid* Decoction of plant used as a wash for rashes, itching, or skin eruptions. *Disinfectant* Decoction of plant tops taken for severe infections. *Eye Medicine* Infusion of leaves used as an eyewash. *Febrifuge* Compound decoction of whole plant taken for fevers. Poultice of steeped leaves used, especially for babies, as a compress for fevers. *Gastrointestinal Aid* Decoction of whole plant or shoots taken for stomachaches. *Gynecological Aid* Infusion of leaves used as a regulator of menstrual disorders. *Misc. Disease Remedy* Decoction of branches taken for influenza. *Pediatric Aid* Poultice of steeped leaves used, especially for babies, as a compress for fevers. **Washo Analgesic** Decoction of leaves taken and used as a cooling, aromatic wash for headaches. *Cold Remedy* Decoction of leaves taken for “heavy colds” and head

colds. *Cough Medicine* Decoction of leaves taken for colds, coughs, and headaches. (as *A. gnaphalodes* 180:40–42)

- **Fiber—Dakota Mats, Rugs & Bedding** Plant bunches used as towels in old times. **Omaha Mats, Rugs & Bedding** Plant bunches used as towels in old times. **Pawnee Mats, Rugs & Bedding** Plant bunches used as towels in old times. **Ponca Mats, Rugs & Bedding** Plant bunches used as towels in old times. **Winnebago Mats, Rugs & Bedding** Plant bunches used as towels in old times. (as *A. gnaphalodes* 70:134)
- **Other—Cheyenne Ceremonial Items** Plant used for many ceremonial purposes. On ceremonial occasions it is spread about the borders of a lodge in a special way. Other uses are to wipe off ceremonial paint; or to purify, by wiping off, with a bundle of the sage, the body of one who has committed some fault—violated some taboo. It is used by Contraries to wipe off the ground in a lodge where a Contrary had been seated. The dried leaves are burned on the coal to make a smoke used in purifying implements or utensils used in ceremony; or to smoke, and so purify, the body of an individual. This is to drive away bad spirits, and particularly to drive away a bad or ominous dream had by a sick person, which dream may remain in the mind of the person and trouble him. It may be mixed with “motsinists” (*Lomatium dissectum* var. *multifidum*)—a small pinch of each in about the same quantity—for the same purpose. The patient who is being smoked sits over the coal on which the sage is being sprinkled, with a blanket over the body and the coal in order to confine the smoke. (as *A. gnaphalodes* 76:190) **Lakota Ceremonial Items** Plant used to make wreaths and bracelets for the sun dance and used in the sweat lodge. *Incense & Fragrance* Plant burned as incense. (139:36) **Paiute Ceremonial Items** Plant used as wash by dancers after the Sun Dance. (as *A. gnaphalodes* 118:51)

(177:21) **Eye Medicine** Snuff of dried leaves used for head and eyes. **Febrifuge** Taken for typhus fever, “ague and fever.” **Gastrointestinal Aid** Compound infusion used for poor digestion. (80:35, 36) Decoction of plant taken to cause vomiting for stomach pain. (177:21) **Gynecological Aid** Used for “scant or painful menstruation” and infusion taken to start periods. **Heart Medicine** Compound infusion used for poor digestion and infusion of root used “for heart trouble.” **Misc. Disease Remedy** Taken for typhus fever, “ague and fever.” **Sedative** Leaves, roots, or blossoms used for hysterical or nervous debility. **Stimulant** Root used as powerful stimulant. (80:35, 36) **Chippewa Adjuvant** Root combined with other herbs to strengthen their action. (53:342) **Dermatological Aid** Compound poultice of chopped root applied to inflammations. (53:348) Roots used for bruises and contusions. (71:129) **Gastrointestinal Aid** Root cooked with foods to aid digestion. (53:342) **Orthopedic Aid** Compound poultice of root applied to fractured bones. (53:366) **Iroquois Adjuvant** “Plant may be added to all kinds of medicine to make them stronger.” (87:309) **Analgesic** Cold infusion of roots given to children with headaches and fevers. (87:308) Infusion of plant taken for long-lasting headaches. (87:309) **Anticonvulsive** Compound decoction given to children with convulsions. (87:308) Plant and other plants given to children with convulsions and fevers. (141:41) **Antiemetic** Compound decoction taken for heaves. **Blood Medicine** Complex compound decoction taken as blood purifier. (87:310) **Cathartic** Infusion of root taken as a spring tonic by the old and works as a physic. (87:309) **Cold Remedy** Decoction of roots taken for scarlet fever, colds, and “peevies.” Infusion of roots taken for colds and typhoid fever. (87:310) **Cough Medicine** Decoction of root taken for coughs and measles. (87:309) Compound decoction taken for coughs. (87:310) **Dermatological Aid** Compound used for boils. (87:311) **Diaphoretic** Cold infusion or decoction of roots taken for any kind of fever and sweating. **Dietary Aid** Decoction taken to become fit to visit the sick and for the lack of appetite. **Disinfectant** Infusion or decoction used as hand and face wash for ghost contamination. (87:309) **Febrifuge** Plant used several ways for adults and children with fevers. (87:308) Plant and other plants given to children with convulsions and fevers. (141:41) **Misc. Disease Remedy** Compound decoction of roots taken for typhoid, measles, and scarlet fever. **Pediatric Aid** Compound infusion given “when babies cry until they hold their breath.” Infusion of roots given to children with headaches, fevers, or convulsions. (87:308) Plant and other plants given to children with convulsions and fevers. (141:41) **Psychological Aid** Infusion taken to prevent bad dreams caused by the dead. (87:308) **Pulmonary Aid** Infusion taken and used as a wash for fever and chest congestion, then vomit. **Respiratory Aid** Infusion of root taken for asthma. **Stimulant** Decoction of roots taken for fevers, colds, and as a stimulant. (87:310) Compound used for laziness. (87:311) **Throat Aid** Poultice used for sore throat. (87:310) **Tonic** Infusion of root taken as a spring tonic by the old and works as a physic. (87:309) Compound infusion taken for fevers and as a general tonic. (87:311) **Tuberculosis Remedy** Compound infusion of roots taken for tuberculosis. (87:310) **Urinary Aid** Decoction of roots taken for urinary disorders and urine stoppage. (87:309) **Venereal Aid** Complex compound decoction taken for venereal disease. **Veterinary Aid** Compound decoction given to horses for coughs or heaves. (87:310) Decoction with whisky given to horses that are sick from not being used. (87:311) **Witchcraft Medicine** Plant used several ways to detect or protect people from witchcraft. (87:308) Decoction or infusion used internally or externally before visiting the sick. (87:309) **Malecite Gastrointestinal Aid** and **Pediatric Aid** Infusion of small roots used by children with cramps. (116:255) **Menominee Gastrointestinal Aid** Decoction of root used for indigestion. (54:130) Fresh or dried root used as a mild stomachic. Root eaten to protect “weak stomach” so that desired food may be eaten. (151:24, 25) **Meskwaki Adjuvant** Used as a seasoner and for sore throats. **Analgesic** Compound used for stomach cramps. **Antidote** Root cooked with spoiled meat to prevent ptomaine poisoning. **Ear Medicine** Cooked root placed in ear for earache or sore ears. **Gastrointestinal Aid** Compound used for stomach cramps. **Hunting Medicine** Root chewed and spittle put on bait to enable fisherman to catch catfish. **Pulmonary Aid** Compound used for lung trouble. **Throat Aid** Used for sore throat and as a medicine used as a seasoning. (152:204) **Micmac Analgesic** and **Gastrointestinal Aid** Root used for cramps and as a stomachic. **Tonic** Root used for cramps and as a stomachic. (40:55) **Montagnais Panacea** Plant had “general medicinal properties.” (156:314) **Ojibwa Dietary Aid** Root chewed by sick person as an appetite stimulant. (153:357) **Gastrointestinal Aid** Roots chewed or infusion of roots taken for stomach pain. (5:2250) **Potawatomi Antiemetic** Root used to help the appetite of persons who could not keep anything in their stomachs. (154:96)
- **Food**—**Chippewa Spice** Root used as an appetizer in all cooked foods. (53:318) **Meskwaki Spice** Root used as seasoning for mud catfish, to destroy the mud taste and to render them palatable. Root used to cook with an animal that had died, to remove the danger of ptomaine poisoning. (152:255) **Ojibwa Dietary Aid** Roots render any meat dish digestible by anyone, even if they are sick. **Spice** Roots processed in lye water and used to season food and take muddy taste away from fish. (153:397) **Potawatomi Spice** Root flavored meat or fish and rendered otherwise inedible food, palatable. (154:96)
- **Other**—**Cherokee Snuff** Dried leaves pounded and used for snuff.

(80:36) **Chippewa Incense & Fragrance** Slightly roasted roots made into a powder and sprinkled on clothing for perfume. (71:129)

**Asarum caudatum** Lindl., British Columbia Wildginger

- **Drug**—**Bella Coola Analgesic** Decoction of plant used externally for headache, intestinal pain, and knee pain. **Antirheumatic (External)** Decoction of plant used externally for knee pain. **Gastrointestinal Aid** Decoction of plant used externally for intestinal pain. Decoction of plant taken for stomach pain. (150:56) Decoction of roots taken for stomach pains. (184:201) **Okanagan-Colville Cold Remedy** Infusion of roots taken for colds. **Laxative** Infusion of roots taken as a laxative. (188:74) **Okanagon Gastrointestinal Aid** Decoction of rhizomes taken for stomach troubles, indigestion, and colic. (125:40) **Pomo Dermatological Aid** Poultice of heated leaves applied to boils. (66:13) **Pomo, Kashaya Dermatological Aid** Poultice of fresh, warmed leaves used to bring boils to a head. Decoction of leaves used to wash sores. **Toothache Remedy** Poultice of fresh, warmed leaves used for toothaches. (72:50) **Skagit Dietary Aid** Leaves eaten to increase appetite. **Tonic** Decoction of leaves taken as a tonic. **Tuberculosis Remedy** Dried leaves used for tuberculosis. (79:28) **Thompson Dermatological Aid** Dried, powdered leaves rubbed on the hands as a deodorant. (187:165) **Gastrointestinal Aid** Decoction of rhizomes taken for stomach troubles, indigestion, and colic. (125:40) Decoction of rhizome taken as a stomach tonic and for indigestion and colic. (164:460) **Pediatric Aid** and **Sedative** Whole plant or stems put in infant's bed to quiet baby and for illness. (164:508) **Tonic** Decoction of rhizomes taken as a tonic for the stomach. (164:460) **Unspecified** Fresh or dried leaves used as a medicine. (187:165) **Tolowa Disinfectant** Poultice of leaves applied for any infections. **Yurok Dermatological Aid** and **Pediatric Aid** Leaves used to keep a newborn baby's navel from becoming infected.<sup>17</sup> (6:19)
- **Fiber**—**Okanagon Mats, Rugs & Bedding** Plants mixed with sphagnum and used as bedding for infants. **Thompson Mats, Rugs & Bedding** Plants mixed with sphagnum and used as bedding for infants. (125:39) Plant used as a bedding for infants. (164:496)

**Asarum sp.**, Wildginger

- **Drug**—**Cherokee Dermatological Aid** Poultice of fresh leaves applied to wounds. (203:74) **Karok Unspecified** Roots used for medicine. (117:209) **Lolahnkok Emetic** Pounded leaves soaked in cold water and taken to vomit for stomach pains. (117:190) **Modesse Dermatological Aid** Poultice of fresh, large, green leaves applied as an antiseptic to cuts and boils. (117:224)
- **Other**—**Cherokee Snuff** Dried and pounded leaves used for snuff. (203:74)

**Asclepiadaceae**, see *Asclepias*, *Gonolobus*, *Matelea*, *Sarcostemma*

## **Asclepias**, Asclepiadaceae

**Asclepias asperula ssp. capricornu** (Woods.) Woods., Antelope Horns

- **Drug**—**Navajo, Kayenta Respiratory Aid** Plant used as a snuff for catarrh. (as *Asclepiodora decumbens* 205:37) **Navajo, Ramah Ceremonial Medicine** Plant used as ceremonial emetic. **Emetic** Plant used as ceremonial emetic. **Veterinary Aid** Infusion taken and used as lotion for mad dog or mad coyote bite on humans or animals. (as *Asclepiodora decumbens* 191:39)

- **Food**—**Gosiute Candy** Latex used as a chewing gum. (as *Asclepiodora decumbens* 39:363)

**Asclepias auriculata** (Engelm. ex Torr.) Holz., Eared Milkweed

- **Drug**—**Navajo, Kayenta Respiratory Aid** Plant used for nasal congestion from a cold. (as *Acerates auriculata* 205:36)

**Asclepias californica** Greene, California Milkweed

- **Drug**—**Kawaiisu Dermatological Aid** Dried, powdered plant applied to spider bites. (206:13)
- **Food**—**Kawaiisu Candy** Milky juice boiled until thick and chewed like chewing gum. Leaves roasted under hot ashes and chewed. (206:13)

**Asclepias cordifolia** (Benth.) Jepson, Heartleaf Milkweed

- **Drug**—**Miwok Unspecified** Root used as a medicine. (12:167)
- **Food**—**Karok Candy** Latex boiled, condensed, and chewed. **Yurok Candy** Dried latex chewed by the older people at their leisure. (6:19)

**Asclepias cryptoceras** S. Wats., Pallid Milkweed

- **Drug**—**Paiute Analgesic** Decoction of root used as a wash for headaches. **Dermatological Aid** Latex used for ringworm. (180:47) **Paiute, Northern Dermatological Aid** Poultice of dried, powdered roots applied to sores. (59:125) **Shoshoni Veterinary Aid** Juice of plant used for horse with sore back. (118:49)

**Asclepias eriocarpa** Benth., Woollypod Milkweed

- **Drug**—**Costanoan Cold Remedy** Decoction of plant and plant salve used for colds. **Dermatological Aid** Milky juice used to reduce corns. **Other** Powdered, dried roots inhaled to cause sneezing. **Respiratory Aid** Burning dried plant smoke inhaled for asthma. (21:12) **Mendocino Indian Dermatological Aid** Plant juice applied to cuts, sores, and warts. (41:379)
- **Food**—**Karok Candy** Milk stirred, heated, mixed with salmon fat or deer grease, and used for chewing gum. (148:388) **Luisseño Candy** Stem sap boiled in water until coagulation and used as chewing gum. (155:196) **Mendocino Indian Forage** Sweet-scented flowers used by bees as a source of nectar. (41:379)
- **Fiber**—**Concow Cordage** Used to make ropes and string. (41:379) **Luisseño Clothing** Plant used to make aprons. (155:201) Stem fiber made into twine and used to make front aprons worn by women. **Cordage** Stem fiber or decayed stem fiber used to make twine. The stems were soaked in boiling water or the decayed stems were basted with boiling water to separate the fiber. The fiber was then formed into a ball and made into twine. (155:202) **Pomo, Kashaya Clothing** Stem fibers shredded to make a woman's skirt. **Cordage** Stem fibers used to make two-ply string. (72:70)
- **Other**—**Luisseño Containers** Stem fiber made into twine and used to make large-meshed nets for carrying bulky or heavy articles. Stem fiber made into twine and used to make network sacks for carrying acorns and other small seeds. **Hunting & Fishing Item** Stem fiber made into twine and sometimes used to make bowstrings. Stem fiber made into twine, occasionally used to make long nets and draw nets for catching rabbits. Stem fiber made into twine and used to make slings. Stem fiber made into twine and used to make fishing nets.<sup>14</sup> (155:202) Plant fiber used to make bowstrings. (155:206)

**Asclepias erosa** Torr., Desert Milkweed

- **Food**—Coahuilla *Candy Sap* collected, set aside to solidify, heated over the fire, and used as a chewing gum. (13:75) **Tubatulabal Candy Juice** roasted until congealed and used as chewing gum. (193:19)
- Asclepias exaltata*** L., Poke Milkweed
- **Drug**—Omaha *Gastrointestinal Aid* Raw root eaten for stomach trouble. **Ponca Gastrointestinal Aid** Root eaten raw for stomach trouble. (70:110)
- Asclepias fascicularis*** Dcne., Mexican Whorled Milkweed
- **Drug**—California Indian *Snakebite Remedy* Poultice of fresh leaves used for snakebite. (as *A. mexicana* 118:47) **Mendocino Indian Poison** Flowers considered poisonous. (as *A. mexicana* 41:380)

**Aster, Asteraceae****Aster carolinianus** Walt., Climbing Aster

**Drug**—Seminole *Dermatological Aid* Plant used for snake sickness: itchy skin. (169:166) Decoction of leaves taken and used as a body steam for snake sickness: itchy skin. (169:239)

**Aster conspicuus** Lindl., Showy Aster

**Drug**—Okanagan-Colville *Dermatological Aid* Roots soaked in hot or cold water and used as a wash for sores, boils, wounds, and infections. Poultice of leaves applied to boils. *Hemorrhoid Remedy* Roots soaked in hot or cold water and used as a wash for hemorrhoids. Poultice of leaves applied to hemorrhoids. *Toothache Remedy* Roots applied to the tooth for toothaches. *Unspecified* Roots soaked in hot or cold water and taken for gonorrhea and other ailments. *Venereal Aid* Roots soaked in hot or cold water and taken for gonorrhea. *Veterinary Aid* Roots used for cuts with maggots on horses. (188:79)

**Aster cordifolius** L., Common Blue Wood Aster

**Drug**—Ojibwa *Hunting Medicine* Root used to make a smoke or incense to attract deer near enough to shoot it with a bow and arrow. A number of the composites as well as plants from other families are used in the hunting charms. The deer carries its scent or spoor in between its toes, and wherever the foot is impressed into the ground, other animals can detect its presence. This allows dogs to track them. It is a peculiar scent and the Ojibwe tries successfully to counterfeit it with roots and herbs. The root of this aster is but one of <sup>19</sup> that can be used. They say that the white man drives the deer away when he smokes cigarettes or cigars, but the Indian brings them closer. (153:428)

**Aster cusickii** Gray, Cusick's Aster

**Drug**—Cheyenne *Ear Medicine* Infusion of dried stems used as ear drops for earaches. (76:187)

**Aster dumosus** L., Rice Button Aster

**Food**—Tewa *Fruit* Small fruits eaten. (as *Sericotheca dumosa* 138:49)

**Aster ericoides** L. **var. ericoides**, Heath Aster

**Drug**—Meskwaki *Herbal Steam* Used in the sweat bath. *Stimulant* Used to revive an unconscious patient. (as *A. multiflorus* 152:212)

**Aster falcatus var. commutatus** (Torr. & Gray) A. G. Jones, Cluster Aster

**Drug**—Zuni *Dermatological Aid* Ground blossoms mixed with yucca suds and used to wash newborn infants and make their hair grow. *Pediatric Aid* Ground blossoms mixed with yucca suds and used to wash newborn infants. This medicine was said to make the hair grow on the head and to give strength to the body. *Strengtheners* Ground blossoms mixed with yucca suds and used as a strengthening wash for newborn infants. (as *A. incanopilosus* 166:84)

***Astragalus allochrous*** Gray, Halfmoon Milkvetch

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Leaves used as a ceremonial emetic. *Emetic* Leaves used as a ceremonial emetic. (191:31, 32)
- **Other**—Navajo *Ceremonial Items* Used in the Night Chant. (55:55)

***Astragalus americanus*** (Hook.) M. E. Jones, American Milkvetch

- **Drug**—Cree, Woodlands *Gastrointestinal Aid* Roots chewed for

stomachaches, cramps, or stomach flu. *Misc. Disease Remedy* Roots chewed for stomach flu. (109:31)

***Astragalus amphioxys*** Gray, Crescent Milkvetch

**Drug**—Zuni *Snakebite Remedy* Fresh or dried root chewed by medicine man before sucking snakebite and poultice applied to wound. (27:376)

***Astragalus australis*** (L.) Lam., Indian Milkvetch

**Food**—Canadian Indian *Unspecified* Roots used for food. (as *A. aboriginum* 97:39)

***Astragalus bisulcatus* var. *haydenianus*** (Gray) Barneby, Hayden's Milkvetch

**Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Fruit used as ceremonial emetic. *Eye Medicine* Infusion of plant used as an eye-wash. *Toothache Remedy* Poultice of chewed leaves applied for toothache. (as *A. haydenianus* 191:32)

***Astragalus calycosus* var. *scaposus*** (Gray) M. E. Jones, Torrey's Milkvetch

**Drug**—Navajo, Kayenta *Dermatological Aid* Plant used as a lotion and poultice applied to injuries from hailstones. *Other* Plant used as a lotion for illness from exposure. *Poultice* Plant used as a lotion and poultice applied to injuries from water. (as *A. scaposus* 205:27) **Shoshoni** *Venereal Aid* Decoction of scraped roots taken for venereal disease. (as *A. scaposus* 180:49)

***Astragalus canadensis*** L., Canadian Milkvetch

**Drug**—Blackfoot *Antihemorrhagic* Roots chewed or infusion of root taken for spitting up blood. (86:71) *Dermatological Aid* Poultice of chewed roots applied to cuts. (86:83) *Pediatric Aid* and *Pulmonary Aid* Root boiled and the steam used to bathe a child's aching chest. (86:71) **Dakota** *Febrifuge* and *Pediatric Aid* Infusion of roots given to children with fevers. (69:365) **Lakota** *Analgesic* Roots pulverized and chewed for chest and back pains. *Antihemorrhagic* Roots and wild licorice roots used for spitting of blood. *Cough Medicine* Infusion of roots taken for coughs. *Pulmonary Aid* Roots pulverized and chewed for chest pains. (139:45)

**Food**—Blackfoot *Staple* Root considered a staple. *Unspecified* Roots eaten fresh or boiled in blood or broth. (86:101) Roots eaten raw or boiled. (97:39) **Lakota** *Fodder* Seeds eaten by horses. (139:45)

***Astragalus canadensis* L. var. *canadensis***, Canadian Milkvetch

**Drug**—Dakota *Febrifuge* and *Pediatric Aid* Decoction of root used as a febrifuge for children. (as *A. caroliniana* 70:91)

**Food**—Blackfoot *Unspecified* Roots eaten raw or boiled. (as *A. carolinianus* 114:278)

**Other**—Omaha *Cooking Tools* Plant used as a mat to keep the meat free from dirt while butchering. *Toys & Games* Stalks with pods used by small boys as rattles in games in which they imitated tribal dances. **Ponca** *Cooking Tools* Plant used as a mat to keep the meat free from dirt while butchering. *Toys & Games* Stalks with pods used by small boys as rattles in games in which they imitated tribal dances. (as *A. caroliniana* 70:91)

***Astragalus ceramicus*** Sheldon, Painted Milkvetch

**Food**—Hopi *Candy* Sweet roots eaten by children. (42:291)

***Astragalus ceramicus*** Sheldon var. *ceramicus*, Painted Milkvetch

• **Food**—Hopi Roots eaten as a sweet. (as *A. pictus filifolius* 56:16)

***Astragalus ceramicus* var. *filifolius*** (Gray) F. J. Herm., Painted Milkvetch

• **Food**—Hopi *Unspecified* Sweet roots dug up and eaten by children. (200:79)

***Astragalus convallarius*** Greene var. *convallarius*, Timber Milkvetch

• **Drug**—Gosiute *Veterinary Aid* Plant used as a horse medicine. (as *A. junceus* 39:363)

***Astragalus crassicaarpus*** Nutt., Groundplum Milkvetch

• **Drug**—Chippewa *Anticonvulsive* Compound infusion or decoction of root taken for "fits." (51:63, 64) Compound decoction of root taken for convulsions. (53:336) *Hemostat* Compound infusion or decoction of root used on bleeding wounds. (51:63, 64) Compound decoction of root used on bleeding wounds. (53:336) *Stimulant* Compound infusion or decoction of root taken or used externally as stimulant. (51:63, 64) Compound decoction of root taken as a stimulant. *Tonic* Compound decoction of root taken as a tonic. (53:364) **Lakota** *Veterinary Aid* Used as medicine for horses. (139:46)

• **Food**—Dakota *Unspecified* Plant sometimes eaten raw and fresh. (69:365) **Lakota** *Fruit* Fruits eaten for food. (139:46)

***Astragalus crassicaarpus*** Nutt. var. *crassicaarpus*, Groundplum Milkvetch

• **Food**—Montana Indian *Unspecified* Fleshy, plum-like pods eaten raw, boiled, and used for pickles. (as *A. caryocarpus* 19:7)

• **Other**—Omaha *Ceremonial Items* Fruits gathered just before corn planting time and ceremonially soaked with seed corn.<sup>20</sup> **Ponca** *Ceremonial Items* Fruits gathered just before corn planting time and ceremonially soaked with seed corn.<sup>20</sup> (as *Geoprunnon crassicaarpum* 70:91)

***Astragalus cyaneus*** Gray, Cyanic Milkvetch

• **Food**—Keres, Western *Unspecified* Tubers eaten. (as *A. jemensis* 171:31)

***Astragalus giganteus*** S. Wats., Giant Milkvetch

• **Food**—Thompson *Fodder* Used as a rich horse and deer feed. (164:514)

***Astragalus gracilis*** Nutt., Slender Milkvetch

• **Drug**—Lakota *Gynecological Aid* Roots chewed by mothers with no milk. (139:46)

***Astragalus humistratus* var. *sonorae*** (Gray) M. E. Jones, Groundcover Milkvetch

• **Drug**—Navajo, Ramah *Ceremonial Medicine* Plant used as a ceremonial chant lotion. *Dermatological Aid* Dried plant used as a dusting powder for sores. *Panacea* Leaves or whole plant used as "life medicine." (191:32)

***Astragalus kentrophyta* var. *elatus*** S. Wats., Tall Spiny Milkvetch

• **Drug**—Navajo, Ramah *Ceremonial Medicine* Cold infusion of whole

plant used as a ceremonial chant lotion. *Panacea* Root used as a "life medicine." (as *A. impensus* 191:32)

***Astragalus kentrophyta*** Gray var. ***kentrophyta***, Spiny Milkvetch

- **Drug**—Navajo *Misc. Disease Remedy* Plant used for rabies. (as *Kentrophyta montana* 55:56)

***Astragalus lentiginosus*** var. ***diphysus*** (Gray) M. E. Jones, Speckledpod Milkvetch

- **Food**—Acoma *Unspecified* Fleshly roots eaten fresh. (as *A. diphysus* 32:17) **Apache, White Mountain Fruit** Pea fruit eaten raw and cooked. (as *A. diphysus* 136:155) **Jemez Unspecified** Pods eaten raw or cooked. **Laguna Unspecified** Fleshly roots eaten fresh. (as *A. diphysus* 32:17) **Zuni Dried Food** Pods dried for winter use. *Unspecified* Pods eaten fresh, boiled, and salted. (as *A. diphysus* 166:65)

***Astragalus lentiginosus*** var. ***palans*** (M. E. Jones) M. E. Jones, Speckledpod Milkvetch

- **Other**—Navajo, Kayenta *Ceremonial Items* Plant used as a charm in some prayers. (as *A. palans* 205:27)

***Astragalus lonchocarpus*** Torr., Rushy Milkvetch

- **Drug**—Navajo, Kayenta *Emetic* Plant used as an emetic. *Poultice* Poultice of plant applied to goiter. (205:27)

***Astragalus miser*** Dougl., Weedy Milkvetch

- **Food**—Okanagan-Colville *Unspecified* Seeds used for food. (188:105) **Thompson Unspecified** Plant placed at the top of the cooking pit in the absence of black tree lichen and wild onion. (187:222)
- **Other**—Okanagan-Colville *Season Indicator* Blooming plant indicated that the lodgepole pine cambium was ready to harvest. (188:28) Blooms indicated that pine cambium was ready to eat. (188:105) **Tools** Plant used to wipe the juice from the lodgepole pine bark before the cambium was scraped off. (188:28) Used to wipe off the turpentine-like juice from the inside of stripped pine bark. (188:105)

***Astragalus miser*** var. ***decumbens*** (Nutt. ex Torr. & Gray) Cronq., Prostrate Loco Milkvetch

- **Food**—Thompson *Fodder* Used as a rich horse and deer feed. (as *A. decumbens* 164:514)

***Astragalus mollissimus*** Torr., Woolly Milkvetch

- **Drug**—Mahuna *Poison* Plant considered poisonous. (140:36)

***Astragalus mollissimus*** var. ***matthewsii*** (S. Wats.) Barneby, Matthews's Woolly Milkvetch

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Leaves used as a ceremonial emetic. (as *A. matthewsii* 191:32)
- **Food**—Navajo, Ramah *Forage* Plant and roots eaten by sheep. (as *A. matthewsii* 191:32)
- **Other**—Navajo *Ceremonial Items* Used by the male and female shooters in the Lightning Chant. (as *A. matthewsii* 55:56)

***Astragalus pachypus*** Greene, Thickpod Milkvetch

- **Drug**—Kawaiisu *Analgesic* Decoction of roots taken for menstrual pains. *Gynecological Aid* Decoction of roots taken for menstrual pains. (206:14)

***Astragalus pattersonii*** Gray, Patterson's Milkvetch

- **Drug**—Navajo, Kayenta *Ear Medicine* Plant used for any disease of the ears. *Emetic* Plant used as an emetic. *Eye Medicine* Plant used for any disease of the eyes. *Misc. Disease Remedy* Plant used for mumps. *Other* Plant used for sore throats or swollen neck. *Throat Aid* Plant used for any disease of the throat. (205:27)

***Astragalus polaris*** Benth., Polar Milkvetch

- **Food**—Eskimo, Alaska *Unspecified* Tiny peas eaten raw or cooked. (1:36)

***Astragalus praelongus*** Sheldon, Stinking Milkvetch

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Leaves used as a ceremonial emetic. (191:32)

***Astragalus purshii*** Dougl. ex Hook., Woollypod Milkvetch

- **Drug**—Thompson *Dermatological Aid* Decoction of whole plant used as a wash for the head, hair, and whole body. (164:473, 474) *Disinfectant* Decoction of roots taken and poured on head in sweat house for purification. (164:504) *Hunting Medicine* Decoction of plant poured onto hunting equipment which had "lost its luck." (164:507)
- **Food**—Thompson *Forage* Used as a common forage plant. (164:516)

***Astragalus purshii*** var. ***tinctus*** M. E. Jones, Woollypod Milkvetch

- **Drug**—Kawaiisu *Analgesic* and *Gynecological Aid* Decoction of roots taken for menstrual pains. (206:15)

***Astragalus racemosus*** Pursh, Alkali Poisonvetch

- **Drug**—Lakota *Poison* Plant poisonous to livestock. (139:46)

***Astragalus sesquiflorus*** S. Wats., Sandstone Milkvetch

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used as a ceremonial emetic. *Dermatological Aid* Plant used as a lotion and poultice of plant applied to ringworm. *Emetic* Plant used as a ceremonial emetic. (205:28)

***Astragalus* sp.**, Vetch

- **Drug**—Alaska Native *Poison* Plant considered poisonous. (85:159) **Cahuilla Poison** Plant poisonous to stock. (15:44) **Cheyenne Poison** Plant poisonous to horses. *Veterinary Aid* Plant applied as an ointment for animals with urination troubles. (83:28) **Hopi Ceremonial Medicine** and *Emetic* Plant used as a ceremonial emetic. (200:80) **Jemez Cathartic** Roots chewed as a cathartic. (44:20) **Keresan Veterinary Aid** Plant made horses crazy or killed them, if eaten. (198:562) **Navajo Poison** Plant considered poisonous. (55:55) **Navajo, Kayenta Gastrointestinal Aid** Plant used for stomach disorders. *Orthopedic Aid* Poultice of crushed leaves applied to lame back. *Throat Aid* Plant used as a gargle for sore throats. (205:27) **Shoshoni Dermatological Aid** Infusion of root used as a wash for sores. *Eye Medicine* Infusion or decoction of root used as a wash for granulated eyelids. *Toothache Remedy* Decoction of root used as a wash for toothaches. (180:50) **Thompson Dermatological Aid** Decoction of whole plant used as a wash for the head, hair, and whole body. (164:473, 474)
- **Food**—Cahuilla *Spice* Pounded seeds mixed with other foods and used as a spice. (15:44) **Havasupai Unspecified** Seeds used for food. (197:226) **Shoshoni Spice** Steeped seeds added to dishes for flavoring. (118:29)

**Asyneuma**, Campanulaceae

**Asyneuma prenanthoides** (Dur.) McVaugh, California Harebell

**Food**—Costanoan *Winter Use Food* Bulbs eaten in winter and early spring. (as *Campanula prenanthoides* 21:254)

**Athyrium**, Dryopteridaceae, fern

**Athyrium filix-femina** (L.) Roth, Common Ladyfern

**Drug**—Chippewa *Diuretic* Compound decoction of root taken for “stoppage of urine.” (53:348) **Cowlitz** *Analgesic* Infusion of stems taken for body pains. (79:14) **Hesquiat** *Cancer Treatment* Young, unfurling fronds eaten for internal ailments, such as cancer of the womb. (185:29) **Makah** *Gynecological Aid* Decoction of pounded stems taken by women to ease labor. (79:14) **Meskwaki** *Analgesic* and *Gynecological Aid* Decoction of root taken by women for bosom pains caused by childbirth. (as *Asplenium filix-femina* 152:237) **Ojibwa** *Dermatological Aid* Grated dried root used as healing powder for sores. *Gynecological Aid* Infusion of root induced milk flow in patients with caked breast. (as *Asplenium filix-femina* 153:381) **Potawatomi** *Gynecological Aid* Infusion of root taken for caked breasts and other female disorders. (as *Asplenium filix-femina* 154:73) **Thompson** *Antihemorrhagic* Infusion of plant used for vomiting blood. (187:88)

**Food**—Quileute *Unspecified* Rhizomes roasted, peeled, and the centers eaten. **Quinault** *Unspecified* Rhizomes roasted, peeled, and the centers eaten. (79:14) **Salish, Coast** *Unspecified* New shoots and rhizomes used for food. (182:68)

**Other**—Cowlitz *Cooking Tools* Leaves used to cover camas while baking. (79:14) **Karok** *Cooking Tools* Leaves used to clean eel's blood from butchered eel. (6:20) **Kwakiutl, Southern** *Containers* Fronds used as covering for fungus placed on hot stones to make a red paint. (183:263) **Nitinaht** *Cooking Tools* Fronds placed in layers below and above food in steaming pits. (186:62) **Okanagan-Colville** *Water Indicator* Ferns considered to be a sign of water when traveling through the mountains. (188:18) **Quileute** *Cleaning Agent* Leaves used to wipe fish. (79:14) **Shuswap** *Protection* Used to cover berry baskets. (123:49)

**Athyrium filix-femina ssp. angustum** (Willd.) Clausen, Subarctic Ladyfern

**Drug**—Iroquois *Febrifuge* Infusion of rhizomes and whole New England aster plant taken by mothers with intestinal fevers. *Reproductive Aid* Infusion of plant, vinegar bark, and flower stalks taken to prevent women's water from breaking. *Venereal Aid* Infusion of rhizomes and sensitive fern used by men with venereal diseases. (as *A. angustum* 141:34)

**Athyrium filix-femina ssp. cyclosorum** (Rupr.) C. Christens., Subarctic Ladyfern

**Drug**—Bella Coola *Eye Medicine* Simple or compound decoction of root used as a wash for sore eyes. (as *Asplenium cyclosorum* 150:48)

**Atriplex**, Chenopodiaceae

**Atriplex argentea** Nutt., Silverscale Saltbush

**Drug**—Navajo, Ramah *Analgesic* Leaves used as a fumigant for pain. *Dermatological Aid* Poultice of leaves applied to spider bites. *Other* Cold infusion used for sickness from drinking bad water and to purify water. (191:24) **Zuni** *Dermatological Aid* Poultice of chewed root

applied to sores and rashes. *Gastrointestinal Aid* Infusion of root taken for stomachache. (27:374)

• **Food**—Acoma *Fruit* Fruits eaten for food. (32:18) **Hopi** *Unspecified* Leaves boiled and eaten with fat. (56:21) Boiled with meat. (190:160) *Vegetable* Young, tender leaves cooked and eaten as greens. (200:73) **Isleta** *Vegetable* Young leaves boiled and eaten as greens. (32:18) **Keres, Western** *Forage* Plant used as forage for cattle. *Unspecified* Seeds and expanded calyx eaten for food and the salty taste. (171:31) **Laguna** *Fruit* Fruits eaten for food. (32:18) **Paiute, Northern** *Porridge* Seeds parched, ground into a flour, and made into mush. (59:47) **Pueblo** *Spice* Boiled alone or with plant products and meats for flavoring. Boiled alone or with plant products and meats for flavoring. (as *A. cornuta* 32:18)

**Atriplex argentea ssp. expansa** (S. Wats.) Hall & Clements, Silverscale Saltbush

• **Food**—Navajo *Fodder* Plant used, for the salt, and stored for the winter as fodder. *Forage* Plant used, for the salt, to pasture sheep in the summer. (as *A. expansa* 55:43)

**Atriplex canescens** (Pursh) Nutt., Fourwing Saltbush

• **Drug**—Havasupai *Dermatological Aid* Leaves made into a soapy lather and used to wash the hair. *Misc. Disease Remedy* Leaves made into a soapy lather and used for itches or rashes, such as chickenpox or measles. (197:217) **Hopi** *Ceremonial Medicine* Plant used for kiva fires. (56:21) **Isleta** *Poison* Infectious wood used to make poison arrowheads for war purposes. (100:24) **Jemez** *Dermatological Aid* Poultice of crushed leaves applied to ant bites, probably to reduce the swelling and pain. *Stimulant* Leaves put unto a fire and smoke used to revive badly hurt, weak, and faint person. (44:20) **Navajo** *Dermatological Aid* Plant used for ant bites. (90:148) **Navajo, Kayenta** *Emetic* Plant used as an emetic. *Gastrointestinal Aid* Plant used for stomach disease. (205:20) **Navajo, Ramah** *Analgesic* Decoction of tops or roots taken as an emetic for gastric pain. *Ceremonial Medicine* Whole plant used as a ceremonial emetic. *Cough Medicine* Decoction of leaves or roots taken for bad cough. *Dermatological Aid* Poultice of leaves applied to ant bites. Leaf and stem ash rubbed on the scalp as a hair tonic. *Emetic* Whole plant used as a ceremonial emetic. *Gastrointestinal Aid* Decoction of tops or roots taken as an emetic for gastric pain. *Nose Medicine* Leaves used as snuff for nose trouble. *Toothache Remedy* Poultice of warm, pulverized root applied for toothache. *Veterinary Aid* Compound decoction given to sheep for bloating from overeating. (191:24) **Shoshoni** *Cathartic* Decoction of fresh roots with salt taken as a physic. (180:50) **Zuni** *Dermatological Aid* Poultice of fresh or dried flower used for ant bites. (27:374) Infusion of dried root and blossoms or poultice of blossoms used for ant bites. (166:44) *Hunting Medicine* Twigs attached to prayer plumes and sacrificed to the cottontail rabbit to ensure good hunting. (166:88)

• **Food**—Gosiute *Unspecified* Seeds used for food. (39:363) **Hopi** *Substitution Food* Ashes used instead of baking soda. (as *Calligonum canescens* 190:160) **Navajo** *Fodder* Plant used in the winter to provide salt for the sheep. *Forage* Plant used as forage for cattle, sheep, and goats, especially when other forage was scarce. (55:43) *Pie & Pudding* Flowers used to make puddings. (90:148) **Navajo, Ramah** *Fodder* Used for sheep feed. *Spice* Leaves placed on coals in pit for roasting

corn, to impart a salty taste. (191:24) **Tewa of Hano** *Cooking Agent* Ashes stirred into dough to give it a greenish blue color. (138:54)

- **Dye**—**Hopi** *Blue* Ashes used to maintain the blue coloring in blue cornmeal. (200:73) *Mordant* Ashes used as alkali to maintain blue coloring of piki. (42:292) **Navajo** *Yellow* Leaves and twigs used in coloring wool yellow. (55:43) **Navajo, Ramah** *Red* Leaf and twig ash used to intensify red color of buckskin dye. *Yellow* Young leaves and twigs used to dye wool yellow. (191:24) **Tewa** *Mordant* Ashes used as alkali to maintain blue coloring of piki. (42:292)
- **Other**—**Diegueño** *Soap* Leaves formerly used as soap. (88:217) **Hopi** *Ceremonial Items* Plant used to make pahos (prayer sticks). (42:292) **Isleta** *Weapon* Infectious wood used to carve arrowheads. The arrowheads were attached to light, swift bamboo shafts and always broke upon impact making them ideal for war purposes. (100:24) **Kawaiisu** *Hunting & Fishing Item* Hard wood used to make arrow points. (206:15) **Tewa** *Ceremonial Items* Plant used to make pahos (prayer sticks). (42:292) **Zuni** *Ceremonial Items* Twigs attached to prayer plumes and sacrificed to the cottontail rabbit to ensure good hunting. (166:88)

***Atriplex confertifolia*** (Torr. & Frém.) S. Wats., Shadscale Saltbush

- **Drug**—**Hopi** *Anticonvulsive* Plant burned and smoke inhaled for epileptic medicine. (as *A. jonesii* 42:293) **Navajo** *Veterinary Aid* Plant rubbed on horses to repel gnats. (90:149) **Paiute, Northern** *Antirheumatic (External)* Leaves boiled and used as a liniment for sore muscles and aches. *Cold Remedy* Poultice of mashed leaves applied to the chest and decoction of leaves taken for colds. (59:125)
- **Food**—**Gosiute** *Unspecified* Seeds formerly used for food. (39:363) **Hopi** *Pie & Pudding* Scented leaves boiled and water mixed with cornmeal to make a pudding. (32:17) Leaves boiled in water, the water mixed with cornmeal, and baked into a pudding. (56:20) *Spice* Plant used as flavoring with meat or other vegetables. (as *A. jonesii* 42:293) *Unspecified* Boiled with meat. (as *Obione confertifolia* 190:160) *Vegetable* Plant used for greens. (as *A. jonesii* 42:293) Young, tender leaves cooked and eaten as greens. (200:73)
- **Other**—**Kawaiisu** *Hunting & Fishing Item* Hard wood used to make arrow points. (206:15)

***Atriplex coronata*** S. Wats., Crownscale

- **Food**—**Pima** *Cooking Agent* Boiled with dried cane cactus to counteract its acidic flavor. (32:36) *Spice* Plants boiled with other foods for their salty flavor. *Unspecified* Plants roasted in pits with cactus fruits and eaten. (146:69)

***Atriplex elegans*** (Moq.) D. Dietr., Wheelscale Saltbush

- **Food**—**Pima** *Cooking Agent* Boiled with dried cane cactus to counteract its acidic flavor. (32:36) *Spice* Plants boiled with other foods for their salty flavor. *Unspecified* Plants roasted in pits with cactus fruits and eaten. (146:69) **Pima, Gila River** *Unspecified* Leaves boiled and eaten. (133:7)

***Atriplex garrettii*** Rydb., Garrett's Saltbush

- **Dye**—**Great Basin Indian** *Yellow* Whole plant used to make a yellow dye and set with bitter alum. (121:47)

***Atriplex lentiformis*** (Torr.) S. Wats., Big Saltbush

- **Drug**—**Cahuilla** *Cold Remedy* Dried leaves smoked for head colds. Fresh leaves chewed for head colds. *Nose Medicine* Crushed flowers, stems, and leaves steamed and inhaled for nasal congestion. (15:45)

**Pima** *Dermatological Aid* Poultice of powdered roots applied to sores. (47:66) Poultice of powdered root applied to sores. (146:80)

- **Food**—**Cahuilla** *Porridge* Seeds ground into a flour and used to make mush or small cakes. (15:45) **Papago** *Unspecified* Seeds used for food. (36:62) **Pima** *Dried Food* Seeds roasted, dried, parched, and stored. (32:23) *Porridge* Seeds pounded into meal, cooked, mixed with water, and eaten as mush. (95:263) Seeds pit roasted, dried, parched, added to water, and eaten as a thick gruel. (146:78) *Starvation Food* Tiny seeds formerly roasted and eaten during famines. (47:66) **Pima, Gila River** *Starvation Food* Seeds used as "starvation food." (133:6) *Unspecified* Seeds used for food. (133:7) **Yuma** *Porridge* Seeds boiled to make a mush. (37:187) *Unspecified* Seeds pounded, pit baked, ground, mixed with water to form stiff dough, and eaten raw. (37:200)
- **Other**—**Cahuilla** *Soap* Crushed leaves and roots used as a soap and rubbed into articles for cleaning. (15:45) **Pima** *Soap* Leaves rubbed in water and lather and used for washing clothing and baskets. (47:66)

***Atriplex nuttallii*** S. Wats., Nuttall's Saltbush

- **Food**—**Pima** *Bread & Cake* Stems used as stuffing for roast rabbit. (146:77) *Spice* Young stems and flower heads used as flavoring. *Unspecified* Stems cut in short lengths and used as a stuffing in cooked rabbits. (32:18) Stems boiled with wheat and used for food. (146:77)

***Atriplex obovata*** Moq., Mound Saltbush

- **Drug**—**Hopi** *Anticonvulsive* Plant burned and smoke inhaled for epileptic medicine. (42:293)
- **Food**—**Hopi** *Spice* Plant used as flavoring with meat or other vegetables. *Vegetable* Plant used for greens. (42:293) Young, tender leaves cooked and eaten as greens. (200:73)

***Atriplex polycarpa*** (Torr.) S. Wats., Cattle Saltbush

- **Drug**—**Maricopa** *Antirheumatic (External)* Moxa of dried galls burned on the affected area for rheumatism. **Pima** *Antirheumatic (External)* Moxa of galls placed on area affected by rheumatism. (47:67)
- **Food**—**Pima** *Bread & Cake* Seeds made into bread and used for food. *Forage* Used as an important forage plant. *Starvation Food* Seeds formerly roasted, ground, and eaten during famines. (47:67) **Yuma** *Unspecified* Seeds separated from hulls and eaten. (37:187)

***Atriplex powellii*** S. Wats., Powell's Saltweed

- **Food**—**Cochiti** *Vegetable* Young plants eaten as greens. **Hopi** *Unspecified* Salty leaves boiled and eaten with fat. (as *A. philonitra* 32:18) *Vegetable* Young, tender leaves cooked and eaten as greens. (200:73) **Keres, Western** *Vegetable* Young plants used for greens. (as *A. philonitra* 171:31) **Navajo, Kayenta** *Substitution Food* Used as a greens and salt substitute in foods. (205:20) **Pueblo** *Vegetable* Young plants eaten as greens. (as *A. philonitra* 32:18) **Zuni** *Porridge* Seeds mixed with ground corn to make a mush. (32:22) Seeds eaten raw before the presence of corn and afterwards, ground with cornmeal and made into a mush. (166:66)

***Atriplex rosea*** L., Tumbling Saltweed

- **Food**—**Navajo, Ramah** *Fodder* Used for sheep and horse feed and harvested for winter use. *Porridge* Seeds of dried plants threshed on a blanket, winnowed, ground, and made into a mush or used like maize. (191:24)

• **Dye**—Navajo, *Ramah Black* Used as a black dye. (191:24)

**Atriplex saccaria** S. Wats., Sack Saltbush

• **Food**—Hopi *Vegetable* Young, tender leaves cooked and eaten as greens. (200:73)

**Atriplex semibaccata** R. Br., Australian Saltbush

• **Food**—Cahuilla *Fruit Berries* gathered and eaten fresh. (15:45)

**Atriplex serenana** A. Nels., Bractscale

• **Food**—Kawaiisu *Vegetable* Leaves boiled, fried in grease, and eaten. (206:15) **Pima** *Cooking Agent* Boiled with dried cane cactus to counteract its acidic flavor. (as *A. bracteosa* 32:36) *Spice* Plants boiled with other foods for their salty flavor. *Unspecified* Plants roasted in pits with cactus fruits and eaten. (as *A. bracteosa* 146:69)

**Atriplex sp.**, Four Winged Salt Bush

• **Drug**—Hualapai *Antirheumatic (External)* Infusion of smaller leaves used as a wash for aching body, joints, and sore muscles. (195:11) **Keres, Western** *Blood Medicine* Infusion of plant used as a blood medicine. Infusion of any atriplex in which the stems or leaves have a red color was used for blood medicine. (171:32) **Navajo** *Dermatological Aid* Poultice of chewed plants applied to ant, bee, and wasp sting swellings. (55:43) **Yokut** *Cathartic* Infusion of leaves used as a cathartic. (117:437)

• **Food**—Isleta *Unspecified* Leaves characterized as having a salty taste. *Vegetable* Young, tender leaves boiled for greens. (100:24) **Paiute** *Unspecified* Species used for food. (167:244) **Pima** *Dried Food* Seeds dried, parched, ground, and eaten dry with sips of water. (146:73) *Forage* Herbaceous plants eaten by stock. (146:69) *Staple* Seeds dried, parched, ground, and eaten as pinole. (146:73)

• **Other**—Pima *Fuel* Woody plants used for fuel. (146:69)

**Atriplex torreyi** (S. Wats.) S. Wats., Torrey's Saltbush

• **Food**—Kamia *Staple* Pulverized seeds made into a meal. (62:24)

**Atriplex truncata** (Torr. ex S. Wats.) Gray, Wedgescale Saltbush

• **Food**—Gosiute *Unspecified* Seeds used for food. (39:363)

**Atriplex wrightii** S. Wats., Wright's Saltbush

• **Food**—Papago *Soup* Mixed with roasted cholla buds and eaten as a vegetable stew. (34:16) *Spice* Branches used as seasoning in cooking or in pit baking. (34:15) *Vegetable* Branches eaten as greens in summer. (34:14) Greens used for food. (36:61) **Pima** *Vegetable* Leaves boiled, strained, fried in grease, and eaten as greens. (47:69) **Pima, Gila River** *Unspecified* Leaves boiled and eaten. (133:7)

**Aulacomniaceae**, see *Aulacomnium*

**Aulacomnium**, Aulacomniaceae, moss

**Aulacomnium sp.**, Moss

• **Fiber**—Shuswap *Building Material* Moss mixed with clay and used between the logs of a log house. (123:49)

• **Other**—Shuswap *Fertilizer* Moss mixed with house plant dirt as a fertilizer to make the plants healthier. (123:49)

**Aureolaria**, Scrophulariaceae

**Aureolaria flava** (L.) Farw., Smooth Yellow False Foxglove

• **Drug**—Cherokee *Antidiarrheal* Compound decoction taken for

dysentery. *Other* Infusion taken while fasting for 4 days for apoplexy. (80:35)

**Aureolaria laevigata** (Raf.) Raf., Entireleaf Yellow False Foxglove

• **Drug**—Cherokee *Antidiarrheal* Compound decoction taken for dysentery. *Other* Infusion taken while fasting for 4 days for apoplexy. (80:35)

**Aureolaria pedicularia** (L.) Raf., Fernleaf Yellow False Foxglove

• **Drug**—Cherokee *Antidiarrheal* Compound decoction taken for dysentery. *Other* Infusion taken while fasting for 4 days for apoplexy. (80:35)

**Aureolaria pedicularia** (L.) Raf. **var. pedicularia**, Fernleaf Yellow False Foxglove

• **Drug**—Chickasaw *Emetic* Plant used as an emetic. *Misc. Disease Remedy* Plant used as an antiscorbutic. (as *Dasystema pedicularia* 28:289)

**Aureolaria virginica** (L.) Pennell, Downy Yellow False Foxglove

• **Drug**—Cherokee *Antidiarrheal* Decoction of plants taken for dysentery. (as *Gerardia virginica* 177:57)

**Avena**, Poaceae

**Avena barbata** Pott ex Link, Slender Oat

• **Food**—Cahuilla *Unspecified* Small seeds used for food. (15:46) **Miwok** *Porridge* Parched, stone boiled seeds pulverized and eaten as a mush. *Soup* Parched, stone boiled seeds pulverized and eaten as a soup. (12:152)

**Avena fatua** L., Wild Oat

• **Food**—Cahuilla *Porridge* Parched seeds ground into flour and used to make mush. (15:46) **Diegueño** *Porridge* Moistened, hulled kernels boiled and eaten as hot cereal. (84:15) **Kawaiisu** *Unspecified* Seeds pounded in a bedrock mortar hole, boiled, and eaten. (206:15) **Luiseño** *Staple* Seeds ground into a flour and used for food. (155:234) **Mendocino Indian** *Staple* Seeds parched, ground, and the flour eaten dry. (41:311) **Pomo** *Staple* Seeds used to make pinoles. (11:87) *Unspecified* Seeds used for food. (41:311) Parched, pounded seeds used for food. *Winter Use Food* Seeds stored for later use. (66:11)

**Avena sativa** L., Common Oat

• **Food**—Haisla & Hanaksiala *Unspecified* Grains used for food. (43:205) **Karok** *Unspecified* Species used for food. (148:380) **Navajo** *Fodder* Used for hay. (55:25) **Navajo, Ramah** *Fodder* Fed to horses without being thrashed and in a bad winter fed to sheep and goats. (191:15) **Pomo** *Unspecified* Seeds parched in a circular coiled basket and used for food. (66:11)

**Avena sp.**, Oat

• **Food**—Pomo, Kashaya *Staple* Grain used in pinole, a very fine dry meal. (72:85) **Yuki** *Staple* Used to make pinole. (49:85)

**Baccharis**, Asteraceae**Baccharis douglasii** DC., Saltmarsh

Baccharis

- **Drug**—Costanoan *Dermatological Aid* Decoction of plant used as a wash for wounds. Dried, powdered stems applied as a disinfectant to wounds. Poultice of heated leaves and animal fat applied to boils. *Disinfectant* Dried, powdered stems applied as a disinfectant to wounds. *Kidney Aid* Infusion of plant taken for kidney ailments. (21:26) **Luiseño** *Dermatological Aid* Decoction of leaves used as a bath for sores and wounds. (155:228)
- **Other**—Luiseño *Tools* Wood used for drilling fires. A small hole was made in a flat, extremely dry stick. The drill, a short piece of wood, was inserted into the hole and twirled to form the dust which would ignite if conditions were dry and favorable. No tinder was used. (155:209)

**Baccharis emoryi** Gray, Emory's Baccharis

- **Fiber**—Havasupai *Basketry* Used in coil basketry. *Building Material* Used to make fence posts and in brush house construction. (197:246)
- **Other**—Havasupai *Fuel* Wood used for firewood. *Tools* Wood used to make planting sticks. *Toys & Games* "Down" put onto fires by children to produce a sudden burst of flame which spread rapidly. Pith used to make "peashooters" and stems and twigs used to make the shooter. (197:246)

**Baccharis pilularis** DC., Coyotebrush

- **Drug**—Costanoan *Panacea* Infusion of plant used as a general remedy. (21:26)
- **Other**—Mendocino Indian *Hunting & Fishing Item* Light and pithy wood formerly used for arrows. (as *B. consanguinea* 41:393)

**Baccharis pteronioides** DC., Yerba de Pasmó

- **Drug**—Yavapai *Antirheumatic (External)* Decoction of leaves and roots used as wash for rheumatism. *Venereal Aid* Decoction of leaves and roots used as wash for gonorrhea. (65:261)

**Baccharis salicifolia** (Ruiz & Pavón) Pers., Mule's Fat

- **Drug**—Cahuilla *Dermatological Aid* Leaves used in a hair wash solution to prevent baldness. *Gynecological Aid* Decoction of leaves and stems used as a female hygienic agent. (as *B. viminea* 15:46) **Coahuilla** *Eye Medicine* Infusion of leaves used as an eyewash. (as *B. glutinosa* 13:78) **Costanoan** *Dermatological Aid* Infusion of leaves and twigs used as wash for scalp and hair to encourage growth. (as *B. viminea* 21:26) **Diegueño** *Dermatological Aid* Infusion of leaves used as a wash or poultice of leaves applied to bruises, wounds, or insect stings. (as *B. glutinosa* 88:220) **Navajo, Kayenta** *Febri-fuge* Compound infusion of plants used as a lotion for chills from immersion. (as *B. glutinosa* 205:45)
- **Food**—Mohave *Starvation Food* Young shoots roasted and eaten as a famine food. **Yuma** *Starvation Food* Young shoots roasted and eaten as a famine food. (as *B. glutinosa* 37:201)
- **Fiber**—Cahuilla *Building Material* Limbs and branches used in house construction. (as *B. viminea* 15:46)
- **Other**—Kawaiisu *Hunting & Fishing Item* Stems used to make one piece arrows for hunting small game. Plant burned into a black pow-

der, mixed with another ingredient, and used for gun powder. (as *B. glutinosa* 206:15)

**Baccharis sarothroides** Gray, Desert Broom

- **Drug**—Diegueño *Cough Medicine* Infusion of plant taken for coughs. *Gastrointestinal Aid* Infusion of plant taken for stomach-aches. (88:220)
- **Food**—Papago *Beverage* Seeds steeped and used as tea-like drinks for refreshment. (34:27)
- **Fiber**—Pima *Brushes & Brooms* Stalks used to make brooms. Green stalks cut, tied together with strings, and used as brooms. (47:65)
- **Other**—Papago *Hunting & Fishing Item* Wood used to make stone-tipped hunting arrows. *Weapon* Wood used to make stone-tipped war arrows. (34:71)

**Baccharis sp.**, Seep Willow

- **Drug**—Hualapai *Antirheumatic (External)* Hot poultice of leaves applied to swellings and aches. (195:17) **Keres, Western** *Analgesic* Cold infusion used to bathe the head for headaches. *Antirheumatic (External)* Infusion of leaves used as a rub for swelling. (171:32)
- **Fiber**—Hualapai *Building Material* Long, straight stems used for ramada roofs. (195:17)
- **Other**—Hualapai *Fuel* Stems used for firewood. (195:17)

**Baccharis wrightii** Gray, Wright's Baccharis

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. *Venereal Aid* Strong decoction of plant taken in large amounts for sexual infection. (191:49)

**Bacopa**, Scrophulariaceae**Bacopa caroliniana** (Walt.) B. L. Robins., Blue Waterhyssop

- **Drug**—Seminole *Cough Medicine* Plant used for turtle sickness: trembling, short breath, and cough. (as *Hydrotrida caroliniana* 169:237) **Other** Complex infusion of leaves taken for chronic conditions. (as *Hydrotrida caroliniana* 169:272) *Respiratory Aid* and *Sedative* Plant used for turtle sickness: trembling, short breath, and cough. (as *Hydrotrida caroliniana* 169:237)

**Bahia**, Asteraceae**Bahia dissecta** (Gray) Britt., Ragleaf Bahia

- **Drug**—Keres, Western *Cathartic* Infusion of plant used as a cathartic. *Emetic* Infusion of plant used as an emetic. (171:32) **Navajo, Ramah** *Analgesic* Compound decoction taken for menstrual pain. *Antirheumatic (Internal)* Compound decoction of plant taken for arthritis. *Contraceptive* Compound decoction of plant taken as contraceptive. *Gynecological Aid* Compound decoction of plant taken for menstrual pain. (191:49) **Zuni** *Analgesic* Powdered plant rubbed on affected parts for headache. *Antirheumatic (External)* Powdered plant rubbed on affected parts for rheumatism. (as *Villanova dissecta* 166:62)

**Baileya**, Asteraceae**Baileya multiradiata** Harvey & Gray ex Gray, Desert Marigold

- **Drug**—Keres, Western *Dermatological Aid* Plant rubbed under arms as deodorant. (171:32)
- **Fiber**—Jemez *Building Material* Plant mixed with clay, used in making adobes, and plant used in plaster. (44:20)

**Balsaminaceae**, see *Impatiens*

**Balsamita**, Asteraceae

**Balsamita major** Desf., Costmary

- **Drug**—Iroquois *Ear Medicine* Infusion of one smashed leaf used as drops for earaches. (as *Chrysanthemum balsamita* var. *tanacetoides* 87:472)

**Balsamorhiza**, Asteraceae

**Balsamorhiza deltoidea** Nutt., Deltoid Balsamroot

- **Drug**—Kawaiisu *Cold Remedy* Decoction of split roots taken for colds. *Cough Medicine* Decoction of split roots taken for coughing. (206:15)
- **Food**—Atsugewi *Bread & Cake* Parched, winnowed, ground seeds made into cakes and eaten without cooking. (61:139) **Karok** *Unspecified* Peduncles used for food. (6:20) **Klamath** *Unspecified* Roasted, ground seeds used for food. (45:106)

**Balsamorhiza hookeri** (Hook.) Nutt., Hooker's Balsamroot

- **Food**—Atsugewi *Bread & Cake* Parched, winnowed, ground seeds made into cakes and eaten without cooking. (61:139) **Gosiute** *Unspecified* Seeds used for food. (39:363) **Okanagan-Colville** *Unspecified* Roots pit cooked and eaten. (188:80) **Paiute, Northern** *Unspecified* Roots used for food. (59:43)

**Balsamorhiza hookeri** var. *hirsuta* (Nutt.) A. Nels., Hairy Balsamroot

- **Drug**—Paiute *Gastrointestinal Aid* Decoction of root considered good for severe stomach. *Urinary Aid* Decoction of root considered good for bladder troubles. **Washo** *Gynecological Aid* Decoction of root taken for female complaints. (as *B. hirsuta* 180:50)

**Balsamorhiza incana** Nutt., Hoary Balsamroot

- **Drug**—Cheyenne *Analgesic* Decoction of leaves, roots, and stems taken for stomach pains. Decoction of leaves, roots, and stems used as a steam bath for headaches. (76:189) *Cold Remedy* Plant used for colds. (76:189) Infusion of leaves, stems, and roots taken for colds. (83:20) *Gastrointestinal Aid* Decoction of leaves, roots and stems taken for stomach pains. (76:189) Infusion of leaves, stems, and roots taken for stomach pains. (83:20)
- **Food**—Nez Perce *Unspecified* Thick roots eaten raw. (19:7)

**Balsamorhiza sagittata** (Pursh) Nutt., Arrowleaf Balsamroot

- **Drug**—Blackfoot *Antirheumatic (Internal)* Root smudge smoke inhaled for body aches. (86:78) *Dermatological Aid* Poultice of chewed roots applied to blisters and sores. (86:75) **Cheyenne** *Analgesic* Infusion of leaves, roots, and stems taken for stomach pains and headaches. (76:189) Steam of decoction of plant inhaled for headache and used as wash on head. (75:38) Decoction of leaves, roots, and stems taken for stomach pains. (75:38, 39) *Cold Remedy* Plant used for colds. (76:189) Infusion of leaves, stems, and roots taken for colds. (83:20) *Febrifuge* Infusion of root taken for fever. (75:38) *Gastrointestinal Aid* Infusion of leaves, roots, and stems taken for stomach pains. (76:189) Decoction of leaves, roots, and stems taken for stomach pain. (75:38) Infusion of leaves, stems, and roots taken for stomach pains. (83:20) *Gynecological Aid* Decoction of root taken when labor begins, to insure easy delivery. (75:38) *Oral Aid* Root chewed

- and saliva allowed to run down throat for sore mouth and throat. *Panacea* Root chewed and rubbed over the body for any sickness. (75:38, 39) *Throat Aid* Root chewed and saliva allowed to run down throat for sore throat. *Toothache Remedy* Root chewed for toothaches. (75:38) **Flathead** *Burn Dressing* Poultice of coarse, large leaves used for burns. *Cathartic* Infusion of roots taken as a cathartic. *Pulmonary Aid* Infusion of roots taken for whooping cough. *Tuberculosis Remedy* Infusion of roots taken for tuberculosis. *Urinary Aid* Infusion of roots taken to increase urine. (82:20) **Gosiute** *Dermatological Aid* Poultice of pounded or chewed root paste applied to arrow or gunshot wounds. (39:348) Chewed roots or pounded root salve applied to fresh wounds. (39:363) *Hemostat* Poultice of plant applied to arrow or gunshot wound hemorrhages. (39:348) **Kutenai** *Dermatological Aid* Poultice of root infusion used for wounds, cuts, and bruises. (82:20) **Miwok** *Analgesic* Decoction of ground root cooled and taken for headaches. *Antirheumatic (Internal)* Decoction of ground root cooled and taken for rheumatism. *Diaphoretic* Decoction of root taken to produce profuse perspiration for rheumatism. (12:167) **Okanagan-Colville** *Burn Dressing* Poultice of dried, powdered leaves applied to severe skin burns. *Diaphoretic* Leaves placed on glowing coals and laid on to cause profuse sweating. (188:80) **Paiute** *Analgesic* Decoction of root taken for stomachaches. *Dermatological Aid* Poultice of mashed root applied to insect bites or swellings. Powdered, dried root applied to syphilitic sores. *Disinfectant* Root burned as a fumigant in the sickroom. *Gastrointestinal Aid* Decoction of root taken for stomachaches. *Tuberculosis Remedy* Root sap taken for consumption. *Venereal Aid* Decoction of root taken over a long period of time for venereal disease. Poultice of dry, powdered root applied to syphilitic sores. (180:50, 51) **Sanpoil** *Analgesic* Poultice of root prepared in various ways and applied to painful areas. *Dermatological Aid* Infusion of root rubbed into hair and scalp to help hair grow. Poultice of root prepared in various ways and applied to bruised areas. Pulverized root sprinkled on sores and boils. (131:219) **Shoshoni** *Dermatological Aid* Poultice of mashed root applied to insect bites or swellings, and to syphilitic sores. *Eye Medicine* Decoction of root used as an eyewash. *Venereal Aid* Poultice of mashed root applied to syphilitic sores. (180:50, 51) **Shuswap** *Dermatological Aid* Infusion of leaves used as a wash for poison ivy and running sores. (123:59) **Thompson** *Antidiarrheal* Seeds eaten for dysentery. (187:175) *Dietary Aid* Root sucked and chewed for hunger. (164:493) *Sedative* Young shoots, when eaten in great quantities, caused sleepiness like sleeping pills. (187:175) **Washo** *Disinfectant* Root burned as a fumigant in the sickroom. (180:50, 51)
- **Food**—Atsugewi *Bread & Cake* Parched, winnowed, ground seeds made into cakes and eaten without cooking. (61:139) **Flathead** *Unspecified* Young, immature flower stems peeled and eaten raw. Roots pit baked and used for food. (82:20) **Gosiute** *Cooking Agent* Seeds a highly prized source of oil. *Unspecified* Leaves and petioles boiled and eaten. Seeds a highly prized source of food. (39:363) **Klamath** *Unspecified* Roasted, ground seeds used for food. (45:106) **Kutenai** *Unspecified* Young, immature flower stems peeled and eaten raw. (82:20) **Miwok** *Unspecified* Cracked seeds pulverized, winnowed, and eaten. (12:152) **Montana Indian** *Staple* Roasted seeds ground into a flour. (19:8) *Unspecified* Plant heated, fermented, and eaten. (19:26) Roots eaten raw and cooked. *Vegetable* Young stems and

leaves eaten raw as a salad. (19:8) **Nez Perce** *Unspecified* Young, immature flower stems peeled and eaten raw. Seeds roasted, ground, grease added, and mixture eaten. (82:20) **Okanagan-Colville** *Dried Food* Seeds oven dried for future use. *Unspecified* Young shoots eaten raw or baked in the ground or oven. Flower bud stems peeled and succulent inner portion eaten raw or boiled. Powdered seeds eaten alone or mixed with deer grease, pine nuts, saskatoon berries, or fir sugar. (188:80) **Okanagan** *Staple* Seeds used as a principal food. (178:239) Roots used as a principal food. (178:238) *Unspecified* Young plants used for food. Old, large roots cooked and used for food. (125:36) Roots used as an important food. (178:237) Seeds roasted in baskets with hot stones and eaten. (178:240) **Paiute** *Beverage* Juice from the stems sucked when thirsty. *Candy* Root pitch chewed as gum. (111:117) *Pie & Pudding* Ground seed meal and juniper berries used to make a pudding. (118:26) *Porridge* Roasted, ground seeds made into flour and used to make mush. *Unspecified* Blooming stems peeled and eaten. *Winter Use Food* Roasted, ground seeds made into flour and stored for winter use. (111:117) **Sanpoil** *Special Food* Shoots mixed with chocolate tips and used in the “first roots” ceremony. (188:80) **Shuswap** *Unspecified* Roots steamed and eaten. (123:59) **Thompson** *Bread & Cake* Seeds mixed with deer fat or grease, boiled, cooled, and made into small cakes. (164:491) *Dessert* Dried roots cooked and eaten as a “sort of dessert” after meals.<sup>21</sup> *Dried Food* Cooked roots hung on strings, dried, and then stored on the strings or in baskets.<sup>21</sup> (187:175) *Staple* Seeds pounded and flour mixed with other foods. (164:491) *Starvation Food* Dried seed flour eaten as porridge, especially in times of famine. The seeds were laid on mats, sun dried, placed in buckskin bags, and pounded into a flour. The resulting flour was made into a porridge and eaten, especially in times of famine. One informant said that the seeds were “choky” and difficult to swallow if eaten alone. (187:175) *Unspecified* Young plants used for food. Old, large roots cooked and used for food. (125:36) Plant used for food. (164:480) Young stems eaten as a favorite food. Stalks soaked in water, peeled, and eaten raw. Crowns chewed or sucked. (164:484) Ripe seeds eaten raw. (164:491) Roots used as an important food. (178:237) Loose or skewered roots cooked overnight in a steaming pit and used for food. Young shoots chewed while eating fish. Young leafstalks, leaves, young bud stems, and fruits used for food. Root crown, with the young undeveloped leaves, used for food. (187:175) **Ute** *Unspecified* Young shoots, leaves, and roots used for food. (38:32)

- **Other**—**Blackfoot** *Cooking Tools* Leaves used in roasting camas roots. (114:277) *Incense & Fragrance* Roots used as incense during the preparatory rites for the ceremonial runner. The ceremonial runner, in pre-horse days, had the duty of herding the buffalo toward the piskun (buffalo jump). The runner bathed himself in the smoke from a smudge of the dried root; according to tradition, that would enable him to run long distances—more than 20 miles a day. The runner wore special moccasins, which were transferable annually. Roots used as incense during the Planting ceremonies of the Tobacco Society. A horse was encouraged to stand near a smudge of roots. Then a rider leapt on the horse and galloped across the planting grounds, stopping only to deposit small offerings to the Small People. Roots used as incense for the Crow feather headpiece during the transfer ceremony of Beaver bundle. (86:47) **Okanagan-Colville**

*Tools* Leaves wrapped around young boy's feet to practice walking silently and carefully in the woods. **Sanpoil** *Containers* Leaves used under cleaned and washed salmon. (188:80) **Thompson** *Cash Crop* Roots strung on long strings and used in trading. (187:175)

### **Balsamorhiza** sp.

- **Food**—**Coeur d'Alene** *Unspecified* Seeds used for food. (178:90) Growing stalks used for food. (178:91) **Spokane** *Unspecified* Roots used for food. (178:343) Seeds used for food. (178:344)

### **Balsamorhiza** × **terebinthacea** (Hook.) Nutt., Balsamroot

- **Food**—**Paiute** *Dried Food* Dried roots eaten raw. *Unspecified* Fresh roots roasted, ground, and pounded or eaten raw. (104:103)

### **Bambusa**, Poaceae

#### **Bambusa** sp., Cultivated Bamboo

- **Other**—**Navajo** *Ceremonial Items* Stems made into whistles and used in certain ceremonies. (55:25)

### **Bangiaceae**, see *Porphyra*

### **Baptisia**, Fabaceae

#### **Baptisia alba** var. **macrophylla** (Larisey) Isely, Largeleaf Wild Indigo

- **Drug**—**Choctaw** *Dermatological Aid* Poultice of roots and leaves applied to swellings. **Koasati** *Antirheumatic (Internal)* Decoction of roots taken for rheumatism. (as *B. leucantha* 177:31) **Meskwaki** *Dermatological Aid* Root used for old sores and compound used on knife or ax wounds. *Hemorrhoid Remedy* Compound containing root used for piles. *Kidney Aid* Compound infusion taken for dropsy. *Respiratory Aid* Decoction of root used for catarrh. *Snakebite Remedy* Compound containing root used for rattlesnake bite. (as *B. leucantha* 152:228)

#### **Baptisia australis** (L.) R. Br. ex Ait. f., Blue Wild Indigo

- **Drug**—**Cherokee** *Antiemetic* Cold infusion used for vomiting. *Cathartic* Used as a purgative. *Emetic* Used as an emetic. *Gynecological Aid* Poultice used “to allay inflammation and stop mortification.” *Toothache Remedy* Hot infusion of root or beaten root held against tooth for toothache. (80:40)
- **Dye**—**Cherokee** *Blue* Used to make a blue dye. (80:40)

#### **Baptisia bracteata** Muhl. ex Ell., Longbract Wild Indigo

- **Drug**—**Pawnee** *Gastrointestinal Aid* Pulverized seeds mixed with buffalo fat and applied to abdomen for colic. (70:90)

#### **Baptisia** sp., False Indigo

- **Drug**—**Cree** *Venereal Aid* Poultice of powdered rhizomes applied to syphilitic sores. Plant and catbriar used for syphilis. (16:495) **Creek** *Pediatric Aid* Decoction of root used as a wash and given to drowsy and lifeless children. (172:658) Decoction of roots used as a bath and given to drowsy and listless children. (177:30) *Stimulant* Decoction of root used as a wash and given to drowsy and lifeless children. (172:658) Decoction of roots used as a bath and given to drowsy and listless children. (177:30)

#### **Baptisia tinctoria** (L.) R. Br. ex Ait. f., Horseflyweed

- **Drug**—**Cherokee** *Antiemetic* Cold infusion used for vomiting. *Cathartic* Used as a purgative. *Emetic* Used as an emetic. *Gynecological Aid*

Poultice used "to allay inflammation and stop mortification." *Toothache Remedy* Hot infusion of root or beaten root held against tooth for toothache. (80:40) **Delaware** *Dermatological Aid* Infusion of roots used to clean cuts and ulcers. *Gynecological Aid* Infusion of roots used as a douche. (176:37) **Delaware, Oklahoma** *Dermatological Aid* Infusion of root used as a wash to clean cuts and ulcers. (175:31, 74) *Gynecological Aid* Infusion of root used as a douche. (175:31) **Iroquois** *Antirheumatic (Internal)* Compound used for rheumatism. *Gastrointestinal Aid* Decoction of roots rubbed on the stomach for cramps. *Liver Aid* Infusion of plant taken to concentrate bile. *Orthopedic Aid* Decoction of roots rubbed on the arms and legs for cramps. (87:363) **Micmac** *Antihemorrhagic* Root used for spitting blood. *Kidney Aid* Root used for kidney trouble. *Venereal Aid* Root used for gonorrhea. (40:55) **Mohegan** *Dermatological Aid* Infusion of plant used as wash for cuts and wounds. (174:266) Infusion of root used as a healing lotion for cuts or bruises. (176:70, 128) **Nanticoke** *Orthopedic Aid* Compound containing plant used as a lotion on sprains. (175:56, 84) **Ojibwa** *Unspecified* Plant used for medicinal purposes. (135:235) **Penobscot** *Antihemorrhagic* Compound infusion of plant taken for "spitting up blood." *Kidney Aid* Compound infusion of plant taken for kidney trouble. *Tonic* Compound infusion of plant taken as a tonic. *Venereal Aid* Compound infusion of plant taken for gonorrhea. (156:311)

- **Dye—Cherokee Blue** Used to make a blue dye. (80:40) Used as a blue dye. (203:74) **Ojibwa** *Unspecified* Plant used in the native coloring. (135:235)

### **Barbarea**, Brassicaceae

**Barbarea orthoceras** Ledeb., American Yellowrocket

- **Food—Alaska Native** *Vegetable* Rosettes of dark green shiny leaves cooked as a green vegetable or eaten raw in a mixed salad. (85:17)

**Barbarea verna** (P. Mill.) Aschers., Early Yellowrocket

- **Food—Cherokee** *Unspecified* Plant boiled, fried, and eaten. (204:252) *Vegetable* Leaves parboiled, rinsed, seasoned with grease and salt, and cooked until tender as potherbs. Leaves used in salads. (126:36)

**Barbarea vulgaris** Ait. f., Garden Yellowrocket

- **Drug—Cherokee** *Blood Medicine* Cooked salad eaten to purify blood. (80:31) **Mohegan** *Cough Medicine* Infusion of leaves taken every half hour for coughs. **Shinnecock** *Cough Medicine* Infusion of leaves taken every half hour for coughs. (30:118)
- **Food—Cherokee** *Unspecified* Plant boiled, fried, and eaten. (204:252) *Vegetable* Leaves parboiled, rinsed, seasoned with grease and salt, and cooked until tender as potherbs. Leaves used in salads. (126:36)

### **Barbula**, Pottiaceae, moss

**Barbula unguiculata** Hedw., Moss

- **Drug—Seminole** *Antirheumatic (External)* and *Febrifuge* Plant used for fire sickness: fever and body aches. (169:203)

### **Bazzania**, Jungermanniaceae, liverwort

**Bazzania trilobata** (L.) S. F. Gray, Liverwort

- **Dye—Montana Indian** *Yellow* Used as a yellow dye. (19:8)

### **Beckmannia**, Poaceae

**Beckmannia syzigachne** (Steud.) Fern., American Sloughgrass

- **Food—Klamath** *Unspecified* Seeds used for food. (as *B. erucaeformis* 45:91) **Montana Indian** *Unspecified* Seeds used for food. (as *B. erucaeformis* 19:8) **Navajo, Ramah** *Fodder* Used as sheep and horse feed. (191:15)
- **Fiber—Okanagan-Colville** *Mats, Rugs & Bedding* Used for bedding and pillows. (188:53)

### **Bellis**, Asteraceae

**Bellis perennis** L., Lawndaisy

- **Drug—Iroquois** *Gastrointestinal Aid* Decoction of plant clusters taken for bad stomach. (87:461)

**Berberidaceae**, see *Achlys*, *Berberis*, *Caulophyllum*, *Diphylleia*, *Jeffersonia*, *Mahonia*, *Podophyllum*, *Vancouveria*

### **Berberis**, Berberidaceae

**Berberis canadensis** P. Mill., American Barberry

- **Drug—Cherokee** *Antidiarrheal* Infusion of scraped bark taken for diarrhea. (80:48)

**Berberis fendleri** Gray, Colorado Barberry

- **Food—Jemez** *Fruit Berries* used for food. (32:19) Berries used for food. (44:21)

**Berberis** sp., Barberry

- **Food—Yana** *Porridge* Berries pounded into a flour and used to make mush. (147:251)

**Berberis vulgaris** L., Common Barberry

- **Drug—Micmac** *Oral Aid* Bark and root used for ulcerated gums. *Throat Aid* Bark and root used for sore throat. (40:55) **Mohegan** *Febrifuge* Cold, compound decoction of berries taken for fever. (174:269) Juice of berries mixed with water and used for fever. (176:70, 128) *Throat Aid* Berries used for sore throat and fever. (176:128) **Penobscot** *Oral Aid* Poultice of pounded root or bark applied to ulcerated gums. *Throat Aid* Pounded root or bark used for sore throat. (156:309) **Shinnecock** *Liver Aid* Decoction of leaves taken three times a day for jaundice. (30:119)

### **Berchemia**, Rhamnaceae

**Berchemia scandens** (Hill) K. Koch, Alabama Supplejack

- **Drug—Choctaw** *Blood Medicine* Plant used for the blood. (177:40) *Houma* *Reproductive Aid* Decoction of leaf and bark taken for "impotency in male or female." Decoction of leaves and bark taken by males or females for impotency. (158:57) **Koasati** *Cough Medicine* Cold infusion of burned stems taken as a cough medicine. (177:40) **Seminole** *Other* Complex infusion of stems taken for chronic conditions. (169:272)
- **Other—Houma** *Fasteners* Stems used to fasten dugout canoes to the shore and for general fastening purposes. (158:57)

### **Berlandiera**, Asteraceae

**Berlandiera lyrata** Benth., Lyreleaf Greeneyes

- **Drug—Keres, Western** *Psychological Aid* Dried roots burned, ground, and tossed on hot coals or smoke inhaled to give courage. *Sedative* Dried roots burned, ground, and tossed on hot coals or smoke inhaled for nervousness. (171:33)

- **Food**—Acoma *Spice* Flowers mixed with sausage as seasoning. (32:19) Keres, Western *Spice* Flowers mixed with sausage as seasoning. (171:33) Laguna *Spice* Flowers mixed with sausage as seasoning. (32:19)

## **Berula**, Apiaceae

**Berula erecta** (Huds.) Coville, Cutleaf Waterparsnip

- **Drug**—Apache, White Mountain *Unspecified* Leaves and blossoms used for medicinal purposes. (136:155) Zuni *Antirheumatic (External)* Ingredient of “schumaakwe cakes” and used externally for rheumatism. (166:44) *Dermatological Aid* Infusion of whole plant used as wash for rashes and athlete’s foot infection. (27:379) Ingredient of “schumaakwe cakes” and used externally for swelling. (166:44)
- **Food**—Apache, White Mountain *Unspecified* Leaves and blossoms used for food. (136:155)

## **Besseyia**, Scrophulariaceae

**Besseyia plantaginea** (James) Rydb., White River Coraldrops

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Plant used as ceremonial emetic. *Dermatological Aid* Dried root or leaf used as dusting powder on skin sores or infant’s sore navel. *Diuretic* Cold infusion of plant taken by hunters for anuria. *Emetic* Plant used as ceremonial emetic. *Hunting Medicine* Lotion from plant applied to body for protection while hunting and in war. *Panacea* Root used as a “life medicine.” *Pediatric Aid* Cold infusion of root used for birth injuries. Dried root or leaves used as dusting powder for skin sores or infant’s sore navel. *Witchcraft Medicine* Lotion from plant applied to body for protection from witches. (191:43)

## **Beta**, Chenopodiaceae

**Beta vulgaris** L., Common Beet

- **Food**—Anticosti *Beverage* Bulbs used to make wine. (143:65) Cherokee *Unspecified* Species used for food. (80:25)

**Betulaceae**, see *Alnus*, *Betula*, *Carpinus*, *Corylus*, *Ostrya*

## **Betula**, Betulaceae

**Betula alleghaniensis** Britt., Yellow Birch

- **Drug**—Ojibwa, South *Diuretic* Compound decoction of inner bark taken as a diuretic. (as *B. excelsa* 91:199)

**Betula alleghaniensis** Britt. **var. alleghaniensis**, Yellow Birch

- **Drug**—Delaware, Oklahoma *Cathartic* Decoction of bark taken as a cathartic. *Emetic* Decoction of bark taken as an emetic. (as *B. lutea* 175:25, 74) *Gastrointestinal Aid* and *Liver Aid* Decoction of bark taken “to remove bile from the intestines.” (as *B. lutea* 175:25) **Iroquois Blood Medicine** Complex compound used as a blood purifier. *Dermatological Aid* Complex compound decoction used as wash for affected parts of “Italian itch.” (as *B. lutea* 87:300) *Gynecological Aid* Decoction of plant used for lactation. (as *B. lutea* 87:301) **Micmac Other** Wood used as a hot-water bottle. (as *B. lutea* 40:55) **Ojibwa Blood Medicine** Decoction of bark taken for internal blood diseases. (as *B. lutea* 135:231) **Potawatomi Adjuvant** Infusion of twigs used as a seasoner for medicines. (as *B. lutea* 154:44)
- **Food**—Algonquin, Quebec *Substitution Food* Sap mixed with maple sap if the latter is not available in sufficient quantities. (as *B. lutea*

18:80) **Ojibwa Beverage** Sap and maple sap used for a pleasant beverage drink. (as *B. lutea* 153:397)

- **Fiber**—Cherokee *Building Material* Wood used for lumber. (as *B. lutea* 80:25) **Ojibwa Building Material** Bark used to build dwellings and lodges. *Canoe Material* Bark used to make birchbark canoes. (as *B. lutea* 135:241) **Potawatomi Building Material** Branches used as poles for the wigwam or medicine lodge. (as *B. lutea* 154:112)
- **Other**—Ojibwa *Ceremonial Items* Bark placed on the coffins when burying the dead. *Containers* Bark used to make storage containers, sap dishes, rice baskets, buckets, trays, and winnowing dishes. *Cooking Tools* Bark used to make dishes. (as *B. lutea* 135:241)

**Betula lenta** L., Sweet Birch

- **Drug**—Algonquin, Quebec *Unspecified* Infusion of plant used for many medicinal purposes. (18:151) Cherokee *Antidiarrheal* Leaves chewed or infusion taken for dysentery. *Cold Remedy* Infusion taken for colds. *Gastrointestinal Aid* Infusion of bark taken for the stomach. *Urinary Aid* Infusion of bark taken for “milky urine.” (80:25) **Chippewa Antidiarrheal** Decoction of bark taken for diarrhea. *Pulmonary Aid* Bark used for pulmonary troubles and decoction of bark taken for pneumonia. (71:128) **Iroquois Blood Medicine** Compound decoction taken when the “blood gets bad and cold.” *Cold Remedy* Compound infusion taken by women “when they catch cold with the menses.” *Febrifuge* Compound decoction taken for fever. *Gynecological Aid* Compound decoction taken by women who have had gonorrhea and are pregnant. *Orthopedic Aid* Compound decoction taken for soreness. *Stimulant* Compound decoction taken “when a person tires.” *Unspecified* “Highly valued medicine because it sustains the deer, the mainstay of life.” (87:300) **Mohegan Tonic** Complex compound infusion including black birch bark taken as spring tonic. (174:266) Inner bark used to make a tonic. (176:70, 128)
- **Food**—Iroquois *Beverage* Twigs steeped into a beverage. (196:148)
- **Fiber**—Ojibwa *Building Material* Bark used to build dwellings and lodges. *Canoe Material* Bark used to make birchbark canoes. (135:241)
- **Other**—Ojibwa *Ceremonial Items* Bark placed on the coffins when burying the dead. *Containers* Bark used to make storage containers, sap dishes, rice baskets, buckets, trays, and winnowing dishes. *Cooking Tools* Bark used to make dishes. (135:241)

**Betula nana** L., Bog Birch

- **Drug**—Eskimo, Western *Analgesic* and *Gastrointestinal Aid* Compound decoction of leaves taken for stomachache and intestinal discomfort. (as *B. exilis* 108:5)
- **Fiber**—Eskimo, Inuktitut *Mats, Rugs & Bedding* Wood used for “springs” under skin bedding. (202:184)
- **Other**—Eskimo, Alaska *Fuel* Shrub burned to smoke fish. (1:35) **Eskimo, Inuktitut Fuel** Used as tinder, even when wet, and for cooking fires for lack of larger wood. (202:184)

**Betula nigra** L., River Birch

- **Drug**—Cherokee *Antidiarrheal* Leaves chewed or infusion taken for dysentery. *Cold Remedy* Infusion taken for colds. *Gastrointestinal Aid* Infusion of bark taken for the stomach. *Urinary Aid* Infusion of bark taken for “milky urine.” (80:25) Decoction of inner bark taken for difficult urination with discharge. (177:15) **Chippewa Analgesic** and

*Gastrointestinal Aid* Decoction of bark taken for stomach pain. (53:342)

***Betula occidentalis*** Hook., Water Birch

- **Drug—Blackfoot** *Abortifacient* Flowers and leaves included in two separate bundles and used for conception. Decoction of flowers and leaves taken when bundle to stop conception fails. (86:60)
- **Fiber—Blackfoot** *Building Material* Wands, sharpened at both ends, used to construct the dome shape of the sweat lodge. (86:17) **Okanagan-Colville** *Basketry* Bark used to make baskets. *Canoe Material* Bark used to make canoes. *Furniture* Bark used to make cradles. (188:89)
- **Dye—Jemez** *Red* Bark, mountain mahogany bark, and alder bark boiled together and used as red dye to paint moccasins. (as *B. fontinalis* 44:21) **Okanagan-Colville** *Brown* Inner bark used to make a brown dye. (188:89)
- **Other—Blackfoot** *Cooking Tools* Wood used to make bowls. (97:33) **Navajo** *Toys & Games* Branch used for the pole in the “hoop and pole” game. (as *B. fontinalis* 55:39) **Okanagan-Colville** *Fuel* Used for fuel. (188:89) **Paiute** *Stable Gear* Wood used to make a pack saddle with posts at both ends. (as *B. fontinalis* 111:64)

***Betula papyrifera*** Marsh., Paper Birch

- **Drug—Algonquin, Quebec** *Dermatological Aid* and *Pediatric Aid* Bark powder used for diaper rash and other skin rashes. (18:152) **Chippewa** *Cathartic* Infusion of inner bark used as an enema. (53:364) **Cree, Woodlands** *Burn Dressing* Poultice of outer bark used to bandage a burn. *Dermatological Aid* Dried, finely powdered rotten wood used as baby powder to prevent rashes. Dried inner bark ground, added to pitch and grease, and used as ointment for persistent scabs and rashes. Decoction of inner bark used as a wash for skin rashes and other skin sores. *Diaphoretic* Decoction of wood taken to cause sweating. *Gynecological Aid* Decoction of wood taken to ensure an adequate supply of milk for breast feeding. Decoction of wood and inner bark used for “women’s troubles.” *Orthopedic Aid* Decoction of wood taken for back pain. *Pediatric Aid* Dried, finely powdered rotten wood used as baby powder to prevent rashes. Decoction of stems or branches taken for teething sickness. *Toothache Remedy* Decoction of stems or branches taken for teething sickness. *Venereal Aid* Wood mixed with other materials and used for gonorrhea. (109:32) **Iroquois** *Gynecological Aid* Burned bark ashes used to “shrivel the womb.” (87:300) **Koyukon** *Unspecified* Plant spirit used by the shaman to heal sick people. (119:53) **Menominee** *Antidiarrheal* Decoction of inner bark used for dysentery. *Tonic* Decoction of branch tips used as a tonic. (54:131) **Ojibwa** *Adjuvant* Root used as a seasoner for medicines. *Analgesic* Root bark cooked with maple sugar as syrup for stomach cramps. (as *B. alba* var. *papyrifera* 153:358) *Blood Medicine* Decoction of bark taken for internal blood diseases. (135:231) *Gastrointestinal Aid* Compound decoction of root bark taken to alleviate stomach cramps. (as *B. alba* var. *papyrifera* 153:358) **Potawatomi** *Adjuvant* Infusion of twigs used as a seasoner for medicines. (as *B. alba* var. *papyrifera* 154:43, 44) **Shuswap** *Analgesic* Plant used for pain. (123:60) **Tanana, Upper** *Orthopedic Aid* Bark used as casts for broken limbs. A soft material such as a cloth was placed next to the skin on the broken limb over which birch bark was wrapped and tied. The birch bark was then heated until it shrank to

- fit the limb. (102:5) **Thompson** *Cold Remedy* Sap tapped from trees in early spring and taken for colds. *Contraceptive* Bark used for contraception. One informant recalled a case in which a woman in childbirth did not want any more children. An old woman told her to take the afterbirth, stick it with an old bone awl, wrap it in fish net and then in a piece of birch bark, and place it high up on a particular kind of tree. The patient was then given an infusion of bitter cherry or saskatoon wood and after that had no more children *Cough Medicine* Sap tapped from trees in early spring and taken for coughs. (187:189)
- **Food—Algonquin, Quebec** *Sauce & Relish* Sap used to make syrup. (18:80) **Cree, Woodlands** *Preservative* Soft, rotten wood burned to make a slow, smoky fire to smoke cure meat and fish. *Sauce & Relish* Sap collected, made into syrup, and eaten on bannock. *Substitution Food* Root bark used as a tea substitute. *Unspecified* Cambium eaten fresh from the tree trunk. (109:32) **Montagnais** *Dietary Aid* Inner bark grated and eaten to benefit the diet. (156:313) **Ojibwa** *Preservative* Birch bark keeps the food stored in it from spoiling. (as *B. alba* var. *papyrifera* 153:416) **Tanana, Upper** *Unspecified* Raw sap, sometimes mixed with fish grease, used for food. Sap used for food. (102:5)
- **Fiber—Abnaki** *Basketry* Bark used to make baskets. (144:156) *Canoe Material* Bark used to make canoes. (144:164) **Algonquin, Tête-de-Boule** *Basketry* Bark used to make baskets and containers. *Building Material* Plant used to make houses, tents, and shelters. *Canoe Material* Bark used to make canoes. (132:119) **Anticosti** *Snow Gear* Used to make snowshoes. (143:65) **Bella Coola** *Basketry* Bark occasionally used to make baskets. *Canoe Material* Bark occasionally used to make canoes. (184:202) **Carrier** *Basketry* Inner bark used to make baskets. *Canoe Material* Wood used to make canoes. *Sewing Material* Roots used with spruce roots to sew things together. *Snow Gear* Wood used to make toboggans. (31:67) **Chippewa** *Building Material* Used as coverings for dwellings. (53:377) **Cree, Woodlands** *Basketry* Bark used to make baskets for food storage and berry collection. *Building Material* Bark used to make bathtubs. Bark used to cover a tepee. Wood used as poles to frame a tepee. *Canoe Material* Bark used to make canoes. Wood used to make canoe paddles. *Snow Gear* Wood used to make toboggans and snowshoes. (109:32) **Gitksan** *Basketry* Bark used to make baskets. (73:154) **Koyukon** *Basketry* Bark used to make baskets and food storage containers. *Canoe Material* Wood used to make canoe ribs. *Snow Gear* Wood used to make sleds and snowshoe frames. (119:53) **Malecite** *Canoe Material* Bark used for canoes. (160:6) **Meskwaki** *Building Material* Bark strips used as the waterproof, top coverings of wigwams. *Canoe Material* Paper birch used to make canoes. (as *B. alba* var. *papyrifera* 152:267) **Micmac** *Basketry* Bark used to make baskets. *Building Material* Bark used to make house coverings. (159:258) *Canoe Material* Bark used to make canoes. (145:56) **Montana Indian** *Canoe Material* Bark used to make canoes. (19:8) **Ojibwa** *Basketry* Bark used for buckets and baskets. (as *B. alba* var. *papyrifera* 153:413) Bark stripped and used to make emergency trays or buckets in the woods. Baskets made for gathering and storing berries, maple sugar, dried fish, meat, or any food. (as *B. alba* var. *papyrifera* 153:416) *Building Material* Bark used to build dwellings and lodges. (135:241) Bark used for wigwam coverings. (as *B. alba* var. *papyrifera* 153:413) Sheets of bark sewn together, made into rolls and used as waterproof roofing for wigwams. (as *B. alba* var. *papyrifera* 153:416) *Canoe Material* Bark used to make

birchbark canoes. (135:241) Bark used for canoes. (as *B. alba* var. *papyrifera* 153:413) Heavy pieces of bark used to make very durable canoes. (as *B. alba* var. *papyrifera* 153:414) **Okanagan-Colville Basketry** Bark used to make baskets. *Canoe Material* Bark used to make canoes. *Furniture* Bark used to make cradles. (188:89) **Potawatomi Building Material** Bark furnished a waterproof cover for the top of the wigwam. *Canoe Material* Bark furnished the outside cover of the birchbark canoe. (as *B. alba* var. *papyrifera* 154:112) **Shuswap Basketry** Gray-colored bark used to make baskets. (123:60) **Tanana, Upper Basketry** Bark used to make baskets. Bark used to make containers for cooking. To cook in a birch bark basket, clean rocks were made very hot and then placed in water in the basket. This process was repeated until the cooking was completed. *Building Material* Bark used as roofing material. Bark used in the construction of some buildings. *Canoe Material* Bark used to make canoes. *Clothing* Bark used to make hats. *Furniture* Bark used to make baby cradles. *Snow Gear* Wood used to make snowshoes, toboggans, drums, bowls, spoons, and wedges. (102:5) **Thompson Basketry** Tough, waterproof bark used as material for baskets. *Building Material* Tough, waterproof bark used as material for walls and roofing. *Canoe Material* Tough, waterproof bark used as material for canoes. *Furniture* Tough, waterproof bark used as material for cradles. (187:189)

- **Dye—Chippewa Red** Inner bark boiled, cedar ashes added and used to make a red dye. (53:370) **Ojibwa Red** Innermost bark boiled to extract a reddish dye. (as *B. alba* var. *papyrifera* 153:425) **Okanagan-Colville Brown** Inner bark used to make a brown dye. (188:89)
- **Other—Abnaki Containers** Bark used to wrap and store wood for a year. (144:164) **Algonquin, Tête-de-Boule Containers** Bark used to make canoes, baskets, and containers. *Designs* Bark folded, edges chewed, and resulting design transferred to baskets and moccasins. (132:119) **Blackfoot Cooking Tools** Wood used to make bowls. (97:33) **Carrier Cooking Tools** Inner bark made into dishes and used for processing fish, picking berries, and to eat with. (31:67) **Chippewa Cooking Tools** Used for utensils. *Designs* Used as patterns for work in decorative art. (53:377) **Cree, Woodlands Containers** Bark used to make baskets for food storage and berry collection, and to make dishes to collect birch sap and fresh cambium. *Cooking Tools* Bark used to make dippers for water, funnels, and cups. Wood used to make wooden spoons, stoppers for sturgeon skin jars, and hammers to pound fish eggs. Wood used for upright supports and cross bars of the smoke curing rack. *Fuel* Bark fragments ignited from coals or smoldering tinder and used to start a fire. *Hide Preparation* Dried rotten wood with other rotten woods used to smoke tan hides. *Hunting & Fishing Item* Bark used to make moose calls. (109:32) **Dakota Containers** Fine, shredded bark used as vessels to catch sap from trees in sugar-making time. *Cooking Tools* Fine, shredded bark used as household utensils. *Lighting* Fine, shredded bark bound into bundles and used for torches. (70:75) **Toys & Games** Papery bark chewed to a pulp and used for popgun wads. (70:116) **Flathead Containers** Bark used to line sacks and stiffen them into baskets. (19:8) **Gitksan Containers** Bark used to make containers and waterproof wrappings. *Lighting* Used to make torches. (73:154) **Koyukon Containers** Bark used to make baskets and food storage containers. *Fuel* Wood used for firewood. Bark used to start campfires or light the stove at home. *Hunting & Fishing Item* Wood used to make fish traps. (119:53) **Male-**

**cite Containers** Bark used for boxes and other containers. (160:6) **Micmac Containers** Bark used to make boxes, coffins, and other containers. *Cooking Tools* Bark used to make dishes and cooking utensils. (159:258) **Ojibwa Ceremonial Items** Bark placed on the coffins when burying the dead. *Containers* Bark used to make small vessels, pails, and trays, and to make storage containers, sap dishes, rice baskets, buckets, trays, and winnowing dishes. *Cooking Tools* Bark used to make dishes. (135:241) Nearly any kitchen utensil common to the white man, could be duplicated in birch bark by the Ojibwe. Bark used to make funnels for pouring hot lard, and to make all sorts of drying trays and shallow trays for winnowing wild rice. *Fuel* After stripping a felled tree of its bark, it was salvaged for firewood. Scraps of bark used by women to kindle or light fires. *Lighting* Bark rolled into a handy, burn-all-night torch. The Ojibwe often used a torch of rolled birch bark in lieu of candles. (as *B. alba* var. *papyrifera* 153:416) *Paper* Patterns for decorative art made upon the bark. (as *B. alba* var. *papyrifera* 153:413) Records of medicine lodge rituals kept on its virgin surface. There were many layers of bark ranging from the thinnest paper to quite heavy pieces. *Preservative* Wood had the property of protecting articles stored in it from decay. *Protection* Ojibwe claim that birch was never struck by lightning, hence offered a safe harbor in thunderstorms. *Sacred Items* Paper birch and cedar form the two most sacred trees of the Ojibwe, both of which were very useful. The Ojibwe regard the bark as a distinct “contribution from Winabojó.” No birch was gathered by the Ojibwe without due offering of tobacco to Winabojó and Grandmother Earth. Families made a pilgrimage to birch groves during the latter part of June and in July to gather their supply of birch bark, because it peels most easily at that time. (as *B. alba* var. *papyrifera* 153:414) **Omaha Toys & Games** Papery bark chewed to a pulp and used for popgun wads. **Pawnee Toys & Games** Papery bark chewed to a pulp and used for popgun wads. **Ponca Toys & Games** Papery bark chewed to a pulp and used for popgun wads. (70:116) **Potawatomi Cooking Tools** Bark used to make many of the household utensils, storage vessels, and containers. (as *B. alba* var. *papyrifera* 154:112) **Tanana, Upper Containers** Bark used to make containers for storing food and picking berries, as lining in food storage pits, and as lining in storage pits. *Cooking Tools* Bark used to make containers for storing food, picking berries, and cooking. Wood used to make bowls and spoons. *Fuel* Wood used for firewood. Black stem growth used as tinder for kindling and starting fires with a fire drill. *Hunting & Fishing Item* Wood used to make spears for hunting bears and bows for hunting both large and small game. *Musical Instrument* Wood used to make drums. *Protection* Bark made into broad-rimmed hats used by young, menstruating girls to restrict their vision. The broad-rimmed hats prevented them from looking where they were not supposed to. *Tools* Wood used to make wedges and tool handles, the bow of the fire drill, and wedges. (102:5) **Thompson Containers** Tough, waterproof bark used as a material for lining storage caches.<sup>22</sup> *Cooking Tools* Tough, waterproof bark used as a material for wrapping food.<sup>22</sup> *Decorations* Bark used for decorations. *Paper* Bark used for paper and cards. (187:189) **Wet’suwet’en Containers** Bark used to make containers and waterproof wrappings. *Lighting* Used to make torches. (73:154) **Winnebago Toys & Games** Papery bark chewed to a pulp and used for popgun wads. (70:116)

***Betula papyrifera*** Marsh. **var. *papyrifera***, Paper Birch

- **Other**—Haisla & Hanaksiala *Decorations* Wood used for carving. (43:226)

***Betula populifolia*** Marsh., Gray Birch

- **Drug**—Iroquois *Hemorrhoid Remedy* Decoction of bark taken for bleeding piles. (87:300) **Malecite** *Dermatological Aid* Inner bark scrapings used for swelling in infected cuts. (116:245) **Micmac** *Dermatological Aid* Inner bark used for infected cuts. *Emetic* Inner bark used as an emetic. (40:55)

***Betula pubescens*** Ehrh. **ssp. *pubescens***, Downy Birch

- **Drug**—Cree, Hudson Bay *Dermatological Aid* Boiled, powdered wood applied to chafed skin. (as *B. alba* 92:303)
- **Fiber**—Chippewa *Canoe Material* Bark used in boat building. The bark was stripped off at raspberry ripening time, laid away, and pressed flat until the next spring. When required for manufacture, especially in boat building, it was heated over a fire to make it pliable for shaping to the purpose. (as *B. alba* 71:128)

***Betula pumila*** var. ***glandulifera*** Regel, Glandulose Birch

- **Drug**—Ojibwa *Gynecological Aid* Infusion of cones taken during menses and for strength after childbirth. *Respiratory Aid* Smoke of cones inhaled for catarrh. (153:358)
- **Fiber**—Ojibwa *Basketry* Twigs of this dwarf birch used for the ribs of baskets. (153:417)

***Betula* sp.**, White Birch

- **Drug**—Creek *Tuberculosis Remedy* Bark used in medicine taken for pulmonary tuberculosis. (172:659) Decoction of bark taken for pulmonary tuberculosis. (177:15) **Malecite** *Unspecified* Wood heated and used like a hot-water bottle. (160:6)
- **Food**—Malecite *Beverage* Bark used to make tea. (160:6)
- **Fiber**—Eskimo, Inuktitut *Snow Gear* Wood used to make snowshoes. (202:192) **Malecite** *Brushes & Brooms* Used to make brooms. *Snow Gear* Used to make sled and toboggan runners. (160:6)
- **Other**—Eskimo, Inuktitut *Containers* Wood used to make containers. *Fuel* Bark used for tinder. *Hunting & Fishing Item* Bark used to make muskrat callers. (202:192) **Micmac** *Hunting & Fishing Item* Bark used to make trumpets for calling game. *Lighting* Bark used to make torches for night fishing. (159:258)

***Bidens***, Asteraceae***Bidens amplexans*** Sherff, Kokolau

- **Food**—Hopi *Beverage* Used to make coffee. (as *B. gracilis* 190:168)

***Bidens bipinnata*** L., Spanish Needles

- **Drug**—Cherokee *Anthelmintic* Infusion taken for worms. *Throat Aid* Leaves chewed for sore throat. (80:57)

***Bidens coronata*** (L.) Britt., Crowned Beggarticks

- **Drug**—Seminole *Analgesic* and *Antidiarrheal* Infusion of roots taken for sun sickness: eye disease, headache, high fever, and diarrhea. (169:206) *Antirheumatic (External)* Plant used for fire sickness: fever and body aches. (169:204) *Eye Medicine* Infusion of roots taken for sun sickness: eye disease, headache, high fever, and diarrhea. (169:206) Infusion of whole plant taken and used as a bath for mist sickness: eye disease, fever, and chills. (169:209) *Febrifuge* Plant used for

fire sickness: fever and body aches. (169:204) Infusion of roots taken for sun sickness: eye disease, headache, high fever, and diarrhea. (169:206) Infusion of whole plant taken and used as a bath for mist sickness: eye disease, fever, and chills. (169:209)

***Bidens laevis*** (L.) B.S.P., Smooth Beggartick

- **Food**—Paiute *Unspecified* Species used for food. (167:244)

***Bidens* sp.**, Kookoolau

- **Drug**—Hawaiian *Dietary Aid* Infusion of pounded flowers, buds, leaves, and other plants taken to stimulate the appetite. *Gastrointestinal Aid* Infusion of pounded flowers, buds, leaves, and other plants taken for stomach troubles. *Pediatric Aid* Flowers and buds chewed by mothers and given to infants for general debility. Infusion of flowers, buds, and leaves given to infants for general debility. *Respiratory Aid* Infusion of pounded flowers, buds, leaves, and other plants strained and taken for asthma. *Strengtheners* Flowers and buds chewed by mothers and given to infants for general debility. Infusion of flowers, buds, and leaves given to infants for general debility. Infusion of flowers, buds, and leaves taken for general debility. *Throat Aid* Infusion of pounded flowers, buds, leaves, and other plants taken for throat troubles. (2:53)

**Bignoniaceae**, see *Bignonia*, *Chilopsis****Bignonia***, Bignoniaceae***Bignonia capreolata*** L., Cross Vine

- **Drug**—Cherokee *Blood Medicine* Infusion of leaf taken to purify blood. (as *Anisostichus capreolata* 80:31) Infusion of leaves used to cleanse the blood. (203:74) **Choctaw** *Kidney Aid* Decoction of mashed bark used as a steam bath for dropsy. (177:57) **Creek** *Unspecified* Plant used medicinally for unspecified purpose. (as *B. crucigera* 172:670) **Houma** *Misc. Disease Remedy* Infusion of mashed root used as a gargle for diphtheria. (158:65) **Koasati** *Analgesic* Decoction of bark used as a bath and taken for headaches. *Antirheumatic (Internal)* Decoction of leaves taken for rheumatism. (177:57)

**Bixaceae**, see *Amoreuxia***Blechnaceae**, see *Asplenium*, *Blechnum*, *Sadleria*, *Woodwardia****Blechnum***, Blechnaceae, fern***Blechnum spicant*** (L.) Roth, Deer Fern

- **Drug**—Hesquiat *Cancer Treatment* Leaflets chewed for internal cancer. *Dermatological Aid* Fronds used as a good medicine for skin sores. This medicine was first learned about from watching the deer, who rub their antler stubs on this plant when their antlers break off. (185:29) **Kwakiutl** *Antidiarrheal* Compound decoction of root taken or root held in mouth for diarrhea. (as *Struthiopteris spicant* 20:381) Compound decoction of roots taken for diarrhea. (183:266) **Makah** *Gastrointestinal Aid* Green leaves chewed for stomach distress. *Pulmonary Aid* Green leaves chewed for lung trouble. **Quileute** *Orthopedic Aid* Poultice of fresh leaves applied to paralyzed parts of the body. *Panacea* Decoction of leaves taken for general ill health. **Quinault** *Gastrointestinal Aid* Raw leaves chewed for colic. (as *Struthiopteris spicant* 79:15)
- **Food**—Haisla & Hanaksiala *Forage* Plant eaten by mountain goats

and deer. (43:153) **Hesquiat** *Starvation Food* Young, tender stalks peeled and center portion eaten when hungry and there is nothing to eat. (185:29) **Makah** *Spice* Fronds used for flavor in cooking by placing them under the items to be cooked. (67:219) **Nitinaht** *Starvation Food* Fronds eaten to relieve hunger when lost in the bushes. (186:63)

- **Fiber**—Yurok *Mats, Rugs & Bedding* Leaves used for bedding. (6:20)
- **Other**—Haisla & Hanaksiala *Decorations* Plants transplanted to pots and used as house plants. (43:153) **Nitinaht** *Cooking Tools* Fronds placed below and above food in steaming pits. (186:63) **Quinault** *Cooking Tools* Leaves used with sword fern to cook baking camas. (as *Struthiopteris spicant* 79:15)

### **Blennosperma**, Asteraceae

**Blennosperma nanum** (Hook.) Blake, Common Stickyseed

- **Food**—Neeshenam *Bread & Cake* Seeds parched, ground into flour, and used to make bread. *Porridge* Seeds parched, ground into flour, and used to make mush. *Stäple* Seeds parched, ground into flour, and used for food. (as *B. californicum* 129:377)

### **Blephilia**, Lamiaceae

**Blephilia ciliata** (L.) Benth., Downy Pagodaplant

- **Drug**—Cherokee *Analgesic* Poultice of leaves used for headache. (80:45)

### **Bloomeria**, Liliaceae

**Bloomeria crocea** (Torr.) Coville, Common Goldenstars

- **Food**—Cahuilla *Unspecified* Corms eaten raw any time of the year. (15:47)
- **Other**—Kawaiisu *Fasteners* Corms rubbed on metate into an adhesive and spread on seed gathering baskets to close the interstices. (206:16)

**Bloomeria crocea** var. **aurea** (Kellogg) Ingram, Common Goldenstars

- **Food**—Luiseño *Unspecified* Bulb used for food. (as *B. aurea* 155:233)

### **Bobea**, Rubiaceae

**Bobea** sp., Ahakea

- **Drug**—Hawaiian *Blood Medicine* Bark used as a blood purifier. *Dermatological Aid* Bark used for skin ulcers. (2:5)
- **Fiber**—Hawaiian *Canoe Material* Wood used to make canoes or canoe parts. (2:5)

### **Boerhavia**, Nyctaginaceae

**Boerhavia erecta** L., Erect Spiderling

- **Other**—Hopi *Insecticide* Sticky leaves and stem hung in house to catch flies. (200:75)

### **Boisduvalia**, Onagraceae

**Boisduvalia densiflora** (Lindl.) S. Wats., Denseflower Spike Primrose

- **Food**—Mendocino Indian *Bread & Cake* Seeds used to make bread. *Staple* Seeds eaten as a pinole. (41:370) **Miwok** *Unspecified* Parched, pulverized, dried seeds used for food. Stored, unparched seeds used for food. (12:152) **Pomo** *Staple* Seeds used to make pinoles. (11:86)

**Boisduvalia stricta** (Gray) Greene, Brook Spike Primrose

- **Food**—Miwok *Unspecified* Parched, pulverized seeds used for food. (12:152)

**Boletaceae**, see *Boletus*

### **Boletus**, Boletaceae, fungus

**Boletus edulis**, Timber Mushroom

- **Food**—Pomo, Kashaya *Vegetable* Cooked on hot stones, baked in the oven, or fried. (72:132)

**Boraginaceae**, see *Amsinckia*, *Cryptantha*, *Cynoglossum*, *Echium*, *Hackelia*, *Heliotropium*, *Lappula*, *Lithospermum*, *Macromeria*, *Mertensia*, *Myosotis*, *Onosmodium*, *Plagiobothrys*, *Symphytum*, *Tiquilia*

### **Boschniakia**, Orobanchaceae

**Boschniakia glabra**

- **Drug**—Tlingit *Dermatological Aid* Compound containing root used for sores. (107:284)

**Boschniakia hookeri** Walp., Vancouver Groundcone

- **Drug**—Hesquiat *Cough Medicine* Roots used for coughs. (185:70)
- **Food**—Hesquiat *Unspecified* Peeled roots eaten raw. (185:70) **Luiseño** *Unspecified* Roots used for food. (as *Orobanche tuberosa* 155:229)

**Boschniakia rossica** (Cham. & Schlecht.) Fedtsch., Northern Groundcone

- **Food**—Tanana, Upper *Fodder* Raw roots or above ground portion of plant diced, mixed with other food, and used for puppy and dog food. (102:15)

**Boschniakia strobilacea** Gray, California Groundcone

- **Food**—Karak *Unspecified* Eaten when young. **Yurok** *Unspecified* Species used for food. (6:20)

### **Bothriochloa**, Poaceae

**Bothriochloa saccharoides** (Sw.) Rydb., Silver Bluestem

- **Drug**—Kiowa *Oral Aid* Stem used as a toothpick. Stem used as a toothpick. (192:13)

### **Botrychium**, Ophioglossaceae, fern

**Botrychium virginianum** (L.) Sw., Rattlesnake Fern

- **Drug**—Abnaki *Other* Used as a demulcent. (144:155) *Pediatric Aid* and *Unspecified* Decoction of plant given to children with illness. (144:162) **Cherokee** *Emetic* Decoction of roots taken to cause vomiting. (177:4) *Snakebite Remedy* Decoction of root “boiled down to syrup” and rubbed on snakebite. (80:34) **Chickasaw** *Diaphoretic* Plant used as a diaphoretic. (28:288, 289) *Emetic* Decoction of root used as an emetic. (28:288, 289) *Expectorant* Decoction of root used as an emetic and plant used as an expectorant. (28:288, 289) **Chippewa** *Snakebite Remedy* Poultice of mashed, fresh root applied to snakebite and used as repellent. (53:352) **Ojibwa** *Pulmonary Aid* Plant said to be good for lung trouble. *Tuberculosis Remedy* Plant said to be good for consumption. (153:377) **Ojibwa**, **South** *Dermatological Aid* Poultice of bruised root applied to cuts. (91:201) **Potawatomi** *Unspecified* Compound containing root used medicinally. (154:67)

***Botrychium virginianum*** (L.) Sw. **ssp. virginianum**, Rattlesnake Fern

- **Drug**—Iroquois *Cough Medicine* and *Tuberculosis Remedy* Cold infusion of root and liquor taken for the cough of consumption. (87:261)

## ***Bouteloua***, Poaceae

***Bouteloua curtipendula*** (Michx.) Torr., Sideoats Grama

- **Fiber**—Tewa *Brushes & Brooms* Grass bundled, dried, made into brooms, and used to sweep floors, hearths and metates. Grass bundled, dried, and used as hairbrushes. (138:64)
- **Other**—Apache, Chiricahua & Mescalero *Containers* Moist grass laid onto hot stones to prevent steam from escaping. (33:36)

***Bouteloua curtipendula*** (Michx.) Torr. **var. curtipendula**,

Sideoats Grama

- **Food**—Kiowa *Fodder* Recognized as a good fodder. (as *Atheropogon curtipendula* and *Chloris curtipendula* 192:14)
- **Other**—Kiowa *Decorations* Worn by those, who in battle, had killed an enemy with a lance; grass resembled the feathered lance. (as *Atheropogon curtipendula* and *Chloris curtipendula* 192:14)

***Bouteloua gracilis*** (Willd. ex Kunth) Lag. ex Griffiths, Blue Grama

- **Drug**—Navajo, Ramah *Antidote* Compound decoction of plant taken to counteract overdose of "life medicine." *Dermatological Aid* Roots chewed and blown on cuts. *Gynecological Aid* Decoction of whole plant taken as a postpartum medicine. *Panacea* Cold, compound infusion of root used internally and externally as "life medicine." *Veterinary Aid* Roots chewed and blown on incisions of castrated colts. (191:15, 16)
- **Food**—Apache, Western *Porridge* Seeds ground, mixed with cornmeal and water and made into a mush. (26:189) Apache, White Mountain *Bread & Cake* Seeds ground and used to make bread and pones. *Porridge* Seeds ground, mixed with meal, and water and eaten as mush. (136:149) Hopi *Forage* Used as an important forage grass. (200:64) Keres, Western *Forage* Grass used for grazing purposes. (as *B. oligostachya* 171:33) Montana Indian *Forage* Grass used for forage. (as *B. oligostachya* 19:8) Navajo, Ramah *Forage* Important forage grass. (191:15)
- **Fiber**—Apache, Western *Brushes & Brooms* Stem used as comb and broom material. (26:189) Apache, White Mountain *Brushes & Brooms* Blades bundled by a cord, the stiff end used as a hair comb and the other end used as a broom. (136:149) Hopi *Basketry* Used as the fill of coiled basketry. (200:64) Zuni *Brushes & Brooms* Grass bunches tied together and the severed end used as a hairbrush, the other as a broom. (166:83)
- **Other**—Apache, White Mountain *Cash Crop* Plant gathered and sold. (136:149) Lakota *Toys & Games* Most plants have two spikes: for sport, people would hunt for those with three. (139:29) Montana Indian *Season Indicator* Plant used to foretell winter, one fruit spike—mild winter, and more fruit spikes—severe winter. (as *B. oligostachya* 19:8) Navajo *Ceremonial Items* Tied to the end of the wand carried by the girl in the Squaw Dance. (55:25) Zuni *Cooking Tools* Grass bunches tied together and used to strain goat's milk. (166:83)

***Bouteloua hirsuta*** Lag., Hairy Grama

- **Food**—Kiowa *Fodder* Very good fodder for horses and mules. (192:14)

- **Other**—Navajo *Sacred Items* Used to make sacred charcoal for certain ceremonies. (55:25)

***Bouteloua simplex*** Lag., Matted Grama

- **Drug**—Navajo, Ramah *Dermatological Aid* Ashes applied to sores. *Throat Aid* Cold infusion used internally and externally for sore throat. (191:16)
- **Food**—Navajo, Ramah *Forage* Important forage grass for a short season. (191:16)

***Bouteloua* sp.**, Grama Grass

- **Food**—Navajo *Fodder* Used for sheep and horse feed. (55:25)
- **Other**—Apache, Chiricahua & Mescalero *Ceremonial Items* Plant used in ceremonial contexts. (33:24) Costanoan *Cooking Tools* Hollow stems used as straws. (21:255)

## ***Bovista***, Lycoperdaceae, fungus

***Bovista pila*** Berk. & Curt., Puffball

- **Drug**—Haisla & Hanaksiala *Poison* Spores dangerous, especially harmful to the eyes. (43:134)
- **Other**—Chippewa *Paint* Used as paint for the dead. (53:377)

***Bovista plumbea*** Pers., Puffball

- **Drug**—Haisla & Hanaksiala *Poison* Spores dangerous, especially harmful to the eyes. (43:134)

## ***Bovistella***, Lycoperdaceae, fungus

***Bovistella* sp.**, Puffball

- **Drug**—Haisla & Hanaksiala *Poison* Spores dangerous, especially harmful to the eyes. (43:134)

## ***Boykinia***, Saxifragaceae

***Boykinia jamesii*** (Torr.) Engl., James's Telesonix

- **Drug**—Cheyenne *Antihemorrhagic* and *Pulmonary Aid* Infusion of finely powdered plant taken for lung hemorrhage. (as *Saxifraga jamesii* 76:175)

***Boykinia occidentalis*** Torr. & Gray, Coastal Brookfoam

- **Drug**—Quileute *Tuberculosis Remedy* Raw leaves eaten for tuberculosis. (as *B. elata* 79:31) Yuki *Unspecified* Roots used medicinally for unspecified purpose. (as *Therofon elatum* 41:353)
- **Other**—Karok *Incense & Fragrance* Dried leaves sometimes worn inside basket caps for the fragrance. (as *B. elata* 148:384) Makah *Decorations* Flowers used in bouquets. (as *B. elatea* 67:257)

## ***Brachyactis***, Asteraceae

***Brachyactis frondosa*** (Nutt.) A. G. Jones, Leafy Rayless Aster

- **Drug**—Paiute *Antirheumatic (External)* Infusion of stems and flowers used as a wash for rheumatism. *Blood Medicine* and *Tonic* Infusion of dried stems taken as a general blood tonic. (as *A. frondosus* 180:48, 49)

**Brassicaceae**, see *Arabis*, *Armoracia*, *Barbarea*, *Brassica*, *Camelina*, *Capsella*, *Cardamine*, *Caulanthus*, *Cochlearia*, *Dentaria*, *Descurainia*, *Dimorphocarpa*, *Draba*, *Erysimum*, *Hirschfeldia*, *Iodanthus*, *Lepidium*, *Lesquerella*, *Lobularia*, *Moricandia*, *Parrya*, *Pennellia*, *Phoenix-caulis*, *Physaria*, *Raphanus*, *Rorippa*, *Schoenocrambe*, *Sinapis*,

*Sisymbrium*, *Stanleya*, *Streptanthus*, *Thelypodopsis*, *Thelypodium*, *Thlaspi*, *Thysanocarpus*

## **Brassica**, Brassicaceae

**Brassica juncea** (L.) Czern., India Mustard

- **Drug**—Navajo, Ramah *Gastrointestinal Aid* Plant used as a stomach medicine. (191:28)

**Brassica napus** L., Rape

- **Drug**—Cherokee *Dietary Aid* Taken to increase the appetite. *Febrifuge* Taken for fever and “nervous fever.” *Kidney Aid* Taken for “dropsy.” *Misc. Disease Remedy* Taken for “ague.” *Orthopedic Aid* Taken for palsy. *Pulmonary Aid* Used as a poultice for croup. *Respiratory Aid* Given for “phthisic” or asthma. *Stimulant* Taken as a stimulant. *Tonic* Taken as a tonic. (80:46) **Iroquois** *Dermatological Aid* Poultice of hot, dried leaves applied to sores and boils. (87:341) **Micmac** *Cold Remedy* Bark used for colds. *Cough Medicine* Bark used for coughs. *Misc. Disease Remedy* Bark used for grippe and smallpox. (40:55)
- **Food**—Cherokee *Vegetable* Leaves boiled and served with drippings, or boiled, fried with other greens, and eaten. (as *B. napa* 204:253)

**Brassica nigra** (L.) W. D. J. Koch, Black Mustard

- **Drug**—Cherokee *Dietary Aid* Taken to increase appetite. *Febrifuge* Taken for fever and “nervous fever.” *Kidney Aid* Taken for “dropsy.” *Misc. Disease Remedy* Taken for “ague.” *Orthopedic Aid* Taken for palsy. *Pulmonary Aid* Used as a poultice for croup. *Respiratory Aid* Given for “phthisic” or asthma. *Stimulant* Taken as a stimulant. *Tonic* Taken as a tonic. (80:46) **Hoh** *Unspecified* Plants used for medicine. (137:61) **Meskwaki** *Cold Remedy* Snuff of ground seeds used for head colds. (152:219) **Mohegan** *Analgesic* Poultice of mustard applied to body pains. Poultice of wilted leaves applied to the skin for headache. (30:120) Poultice of leaves bound to the skin for headache. (174:264) Poultice of fresh leaves applied to headaches. (176:71, 128) *Toothache Remedy* Poultice of wilted leaves applied to the skin for toothache. (30:120) Poultice of leaves bound to the skin for toothache. (174:264) Poultice of fresh leaves applied to toothaches. (176:71, 128) **Quileute** *Unspecified* Plants used for medicine. (137:61) **Shinnecock** *Analgesic* Poultice of mustard applied to body pains. Poultice of wilted leaves applied to the skin for headache. *Emetic* Mustard mixed with flour and water and taken to make “insides come up.” *Toothache Remedy* Poultice of wilted leaves applied to the skin for toothache. (30:120)
- **Food**—Diegueño *Vegetable* Young, spring leaves boiled and eaten as greens. (84:15) **Hoh** *Spice* Used for flavoring. *Vegetable* Plants eaten as greens. (137:61) **Iroquois** *Vegetable* Cooked and seasoned with salt, pepper, or butter. (196:117) **Luiseno** *Vegetable* Plant used for greens. (155:232) **Mohegan** *Vegetable* Combined with pigweed, plantain, dock, and nettle and used as mixed greens. (176:83) **Quileute** *Spice* Used for flavoring. *Vegetable* Plants eaten as greens. (137:61)

**Brassica oleracea** L., Cabbage

- **Drug**—Cherokee *Dermatological Aid* Poultice of wilted leaf used for boils. (80:28) **Rappahannock** *Analgesic* Poultice of green leaves bound to head for headache. (161:25)
- **Food**—Cherokee *Vegetable* Leaves used for food. (80:28) **Haisla & Hanaksiala** *Vegetable* Species used for food. (43:227) **Kitasoo** *Vegeta-*

*ble* Leaves used for food. (43:328) **Lakota** *Vegetable* Leaves eaten as greens. (106:34) **Okanagan-Colville** *Vegetable* Heads used for food. (188:92) **Seminole** *Unspecified* Plant used for food. (169:485)

- **Other**—Rappahannock *Protection* Leaves worn under the hat to protect from a strong sun. (161:25)

**Brassica rapa** L., Rape Mustard

- **Food**—Haisla & Hanaksiala *Vegetable* Roots used for food. (43:227) **Kitasoo** *Vegetable* Roots used for food. (43:329) **Okanagan-Colville** *Vegetable* Roots used for food. (188:92) **Oweekeno** *Unspecified* Roots used for food. (43:89)

**Brassica rapa** L. **var. rapa**, Birdrape

- **Drug**—Ojibwa *Unspecified* Plant used for medicinal purposes. (as *B. campestris* 135:232)
- **Food**—Cherokee *Vegetable* Leaves cooked with turnip greens, creaseys (probably *Lepidium virginicum*), and sochan (*Rudbeckia laciniata*) and eaten. (as *B. campestris* 204:253) **Mendocino Indian** *Vegetable* Young leaves eaten as greens in imitation of the first white settlers who first ate them. (as *B. campestris* 41:352)

**Brassica** sp., Turnip

- **Drug**—Rappahannock *Poultice* Hot poultice of roasted roots used for chilblains. (161:32) **Shoshoni** *Burn Dressing* Poultice of pulverized ripe seeds applied to burns. (180:52)
- **Food**—Iroquois *Vegetable* Young plants boiled and eaten as greens. (124:93) **Malecite** *Unspecified* Species used for food. (160:6) **Pomo**, **Kashaya** *Unspecified* Flowers eaten raw or cooked and young leaves eaten boiled and fried. (72:76)

## **Brickellia**, Asteraceae

**Brickellia ambigens** (Greene.) A. Nels

- **Drug**—Keres, Western *Antirheumatic (External)* Dried, ground leaves mixed with water and used as a salve. *Carminative* and *Dietary Aid* Infusion of plant taken for flatulence and overeating. *Liver Aid* Infusion of plant used as liver medicine. (171:33)
- **Fiber**—Keres, Western *Brushes & Brooms* Tied bunches of plants used as rough brooms. (171:33)

**Brickellia brachyphylla** (Gray) Gray, Plumed Brickellbush

- **Drug**—Navajo, Ramah *Disinfectant* and *Pediatric Aid* Root used with “lizard figurine” for prenatal “lizard infection.” (191:49)

**Brickellia californica** (Torr. & Gray) Gray, California Brickellbush

- **Drug**—Diegueño *Febrifuge* Infusion of leaves taken for fevers. (88:220) **Navajo, Kayenta** *Ceremonial Medicine* Plant used as a ceremonial emetic following clan incest. *Dermatological Aid* Plant used as a lotion on infant sores caused by prenatal infection. *Emetic* Plant used as a ceremonial emetic following clan incest. *Pediatric Aid* Plant used as a lotion on infant sores caused by prenatal infection. (205:45) **Navajo, Ramah** *Cough Medicine* Cold infusion of leaves taken and used as lotion for cough or fever. *Febrifuge* Infusion of leaves taken and used as lotion for cough or fever. (191:49)
- **Food**—Sanel *Substitution Food* Leaves used as a substitute for tea. (as *Coleosanthus californicus* 41:393)

**Brickellia eupatorioides** (L.) Shinners **var. eupatorioides**, False Boneset

- **Drug**—Navajo, Ramah *Cough Medicine* and *Other* Decoction of root taken for old injury or cough. (as *Kuhnia rosmarinifolia* 191:52)

**Brickellia grandiflora** (Hook.) Nutt., Tasselflower Brickellbush

- **Drug**—Gosiute *Poison* Seeds had poisonous effects. *Unspecified* Root used as medicine. (39:364) **Keres, Western** *Antirheumatic (External)* Dried, ground leaves mixed with water and used as a salve. *Carminative* Infusion of plant taken for flatulence. *Dietary Aid* Infusion of plant taken for overeating. *Liver Aid* Infusion of plant used as a liver medicine. (171:33) **Navajo, Ramah** *Analgesic* Cold infusion of dried leaves taken for headache. *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. *Misc. Disease Remedy* Cold infusion of dried leaves taken for influenza. (191:49)
- **Food**—Gosiute *Cooking Agent* Seeds and other seeds made into a meal and used as “baking powder” to improve the cakes. (39:364)
- **Fiber**—Keres, Western *Brushes & Brooms* Tied bunches of plants used as rough brooms. (171:33)
- **Other**—Navajo *Ceremonial Items* Plant and other plants used as a ceremonial liniment for the Female Shooting Life Chant. (55:83)

**Brickellia oblongifolia var. linifolia** (D. C. Eat.) B. L. Robins., Narrowleaf Brickellbush

- **Drug**—Navajo, Kayenta *Dermatological Aid* and *Pediatric Aid* Plant lotion used on infant ear and finger sores caused by prenatal infection. (205:46) **Shoshoni** *Gastrointestinal Aid* Decoction of stems and leaves taken as a stomach medicine. (180:52)

## Brodiaea, Liliaceae

**Brodiaea coronaria** (Salisb.) Engl., Harvest Clusterlily

- **Food**—Atsugewi *Unspecified* Roots boiled in water or cooked in earth oven and used for food. (61:138) **Mendocino Indian** *Forage* Corms eaten by sheep. *Unspecified* Corms roasted and used for food. (as *Hookera coronaria* 41:326) **Miwok** *Unspecified* Bulbs steamed in earth oven and eaten without salt. (12:156) **Pomo** *Unspecified* Corms roasted and eaten. (as *Hookera coronaria* 11:89) **Pomo, Kashaya** *Vegetable* Baked or boiled corms eaten like baked or boiled potatoes. (72:27)

**Brodiaea elegans** Hoover, Elegant Clusterlily

- **Food**—Yurok *Vegetable* Bulbs baked in sand with a fire built over them. (6:21)

**Brodiaea minor** (Benth.) S. Wats., Vernalpool Clusterlily

- **Food**—Yana *Unspecified* Roots steamed and eaten. (147:251)

**Brodiaea sp.**, Grass Nut

- **Drug**—Mahuna *Dermatological Aid* Plant used as a shampoo for the hair. (140:40)
- **Food**—Costanoan *Unspecified* Parched or roasted bulbs used for food. (21:255) **Miwok** *Unspecified* Cooked bulbs used for food. Bulbs used for food. (12:156)

**Bromeliaceae**, see *Ananas, Catopsis, Guzmania, Tillandsia*

## Bromus, Poaceae

**Bromus anomalus** Rupr. ex Fourn., Nodding Brome

- **Food**—Navajo, Ramah *Fodder* Used for horse feed. (191:16)

**Bromus carinatus** Hook. & Arn., California Brome

- **Drug**—Hesquiat *Poison* Long, sharp-awned fruit were said to be very dangerous if swallowed. (185:56)
- **Food**—Neeshenam *Bread & Cake* Seeds parched, ground into flour and used to make bread. *Porridge* Seeds parched, ground into flour, and used to make mush. *Staple* Seeds parched, ground into flour, and used for food. (as *Promus virens* 129:377)

**Bromus catharticus** Vahl, Rescue Grass

- **Food**—Kiowa *Fodder* Grass recognized as an important fodder. Grass recognized as an important fodder. (as *B. uniolooides* 192:14)

**Bromus ciliatus** L., Fringed Brome

- **Other**—Iroquois *Fertilizer* Decoction of plant used as a soak for corn, a “corn planting medicine.” (87:273)

**Bromus diandrus** Roth, Ripgut Brome

- **Food**—Karak *Porridge* Seeds parched, pounded into a meal, and mixed with water into a gruel. (as *B. rigidus* 148:380) **Luiseño** *Unspecified* Seeds used for food. (as *B. maximus* 155:234) **Miwok** *Unspecified* Pulverized seeds made into pinole. (as *B. rigidus* var. *gussoni* 12:152)

**Bromus hordeaceus** L., Soft Brome

- **Food**—Karak *Porridge* Seeds parched, pounded into a meal, and mixed with water into a gruel. (148:379)

**Bromus marginatus** Nees ex Steud., Mountain Brome

- **Food**—Mendocino Indian *Staple* Seeds formerly used for pinole. (41:312)
- **Fiber**—Keres, Western *Brushes & Brooms* Tied bunches of plants used as hairbrushes and light brooms. (171:34)

**Bromus marginatus var. breviaristatus** (Buckl.) Beetle, Mountain Brome

- **Food**—Gosiute *Unspecified* Seeds formerly eaten. (as *B. breviaristatus* 39:364)

**Bromus sp.**, Brome Grass

- **Food**—Thompson *Forage* Plants used as a forage crop. (164:516)
- **Fiber**—Isleta *Brushes & Brooms* Tied bunches of stems used to make brooms and brushes. (100:25)

**Bromus tectorum** L., Cheat Grass

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Infusion of plant used as a face wash for God-Impersonators. (205:15)
- **Food**—Cahuilla *Starvation Food* Seeds, a famine food, cooked into a gruel during food shortages. (15:48) **Navajo, Ramah** *Fodder* Used for sheep and horse feed. (191:16)
- **Fiber**—Paiute *Mats, Rugs & Bedding* Leaves used under bedding when camping. (111:51)

## Broussaisia, Hydrangeaceae

**Broussaisia arguta** Gaud., Kanawao

- **Drug**—Hawaiian *Pediatric Aid* Fruits eaten from conception until the child feeds itself to increase the child's survival rate. *Reproductive Aid* Fruits eaten with baked eggs to bring about conception by barren women. *Strengtheners* Fruits eaten from conception until the child feeds itself to increase the child's survival rate. (as *Broussaisia pelluoida* 2:48)

**Broussonetia**, Moraceae**Broussonetia papyrifera** (L.) L'Hér. ex Vent., Paper Mulberry

- **Drug**—Apache, Chiricahua & Mescalero *Narcotic Plant* used as a narcotic. (as *B. secundiflora* 33:54)
- **Other**—Apache, Chiricahua & Mescalero *Ceremonial Items* Seeds worn around the neck in a string during ceremonies. (as *B. secundiflora* 33:54)

**Bryaceae**, see *Bryum***Bryoria**, Alectoriaceae, lichen**Bryoria capillaris** (Ach.) Brodo & D. Hawksw., Black Tree Lichen

- **Other**—Haisla & Hanaksiala *Paint Plant* burned into black powder and used to make wood paint. (43:141)

**Bryoria glabra** (Mot.) Brodo & D. Hawksw., Black Tree Lichen

- **Other**—Haisla & Hanaksiala *Paint Plant* burned into black powder and used to make wood paint. (43:141)

**Bryoria trichodes** (Ach.) Brodo & Hawksw., Black Tree Lichen

- **Other**—Haisla & Hanaksiala *Paint Plant* burned into black powder and used to make wood paint. (43:141)

**Bryum**, Bryaceae, moss**Bryum capillare** (L.) Hedw., Moss

- **Drug**—Seminole *Antirheumatic (External)* and *Febrifuge Plant* used for fire sickness: fever and body aches. (169:203)

**Buchloe**, Poaceae**Buchloe dactyloides** (Nutt.) Engelm., Buffalo Grass

- **Drug**—Keres, Western *Dermatological Aid* Stolons crushed with yucca root or soaked in water and used as a head bath to make the hair grow. (as *Bulbilis dactyloides* 171:34)
- **Food**—Blackfoot *Forage* Used as an excellent fall and winter pasture for horses. (97:20)

**Burseraceae**, see *Bursera***Bursera**, Burseraceae**Bursera laxiflora**, Torote Prieto

- **Fiber**—Seri *Basketry* Coil for the warp of very light, shallow baskets made of a “whisp of splints” of several sorts of torote. (50:138)

**Bursera microphylla** Gray, Elephant Tree

- **Drug**—Cahuilla *Dermatological Aid* Sap used for skin diseases. *Panacea* Sap used for almost any disease. (15:48)
- **Fiber**—Seri *Basketry* Coil for the warp of very light, shallow baskets made of a “whisp of splints” of several sorts of torote. (50:138)
- **Other**—Cahuilla Good Luck Charm Sap used by players of peon, a popular gambling game, to acquire “power.” (15:48)

**Bursera simaruba** (L.) Sarg., Gumbo Limbo

- **Other**—Seminole *Containers* Wood used to make medicine bowls. (169:95)

**Butomaceae**, see *Butomus***Butomus**, Butomaceae**Butomus umbellatus** L., Flowering Rush

- **Drug**—Iroquois *Veterinary Aid* Decoction of whole plant and bark from another plant added to cow and horse feed for worms. (141:66)

**Cactaceae**, see *Carnegia*, *Cereus*, *Coryphantha*, *Echinocactus*, *Echinocereus*, *Escobaria*, *Ferocactus*, *Lophophora*, *Machaerocereus*, *Mammillaria*, *Myrtillocactus*, *Neomammillaria*, *Opuntia*, *Pachycereus*, *Peniocereus*, *Stenocereus***Caesalpinia**, Fabaceae**Caesalpinia bonduc** (L.) Roxb., Yellow Nicker

- **Drug**—Hawaiian *Blood Medicine* Beans and other plants pounded, squeezed and the resulting liquid taken to purify the blood. *Laxative* and *Pediatric Aid* Beans ground and taken as a laxative by infants, children and adults. *Pulmonary Aid* Beans and other plants pounded, squeezed, and resulting liquid taken to clear the chest of tough phlegm. (2:47)

**Caesalpinia gracilis**, Baraprieta

- **Fiber**—Seri *Basketry* Splints used to make the woof for basketry. (50:138)

**Caesalpinia jamesii** (Torr. & Gray) Fisher, James's Holdback

- **Drug**—Zuni *Veterinary Aid* Infusion of plant given to sheep to make them “prolific.” (as *Hoffmanseggia jamesii* 166:54)
- **Food**—Comanche *Unspecified Raw* or boiled tubers used for food. (as *Hoffmanseggia jamesii* 29:522)

**Caesalpinia kawaiensis** Mann, Uhiuhi

- **Drug**—Hawaiian *Blood Medicine* Bark, young leaves, and other plants pounded, squeezed, and resulting liquid taken to purify the blood. (as *Mezoneurum kauaiense* 2:38)

**Calamagrostis**, Poaceae**Calamagrostis canadensis** (Michx.) Beauv., Blue Joint

- **Fiber**—Cree, Woodlands *Mats, Rugs & Bedding* Plant used to make mattresses when nothing else was available. (109:33)
- **Other**—Cree, Woodlands *Containers* Grass used to line and cover winter storage pits for potatoes. (109:33)

**Calamagrostis rubescens** Buckl., Pine Grass

- **Drug**—Thompson *Gynecological Aid* Dried grass rubbed until soft and used as sanitary napkins. (187:140)
- **Fiber**—Okanagan-Colville *Caulking Material* Leaves mixed with mud and used to chink log cabins and as mortar in making chimneys. *Clothing* Leaves dried, softened, and used as insoles in moccasins. (188:53) **Thompson Clothing** Grass, rubbed and softened, sometimes mixed with sagebrush bark, used to make socks. (187:140)
- **Other**—Okanagan-Colville *Containers* Leaves used over and under food in pit cooking. Leaves used at the bottom of berry baskets and in a layer over the berries to keep the berries clean. *Cooking Tools* Leaves tied to a stick and used as a beater for whipping soapberries.

(188:53) **Thompson** *Cooking Tools* Tied bunches of grass used as soapberry whips. Grass used in drying soapberries. The grass was washed, braided at the ends, and laid out on a rack upon which the soapberries were placed to dry. A small fire was lit under the racks and when the berries were dried, they were stored with the grass still attached. Then, for use, the berries and grass were soaked in water and hand mixed. The grass, which helped to whip the berries, eventually floated to the top after which it was removed. Any remaining grass was removed by the person eating the berry whip. (187:140)

### **Calamovilfa**, Poaceae

**Calamovilfa gigantea** (Nutt.) Scribn. & Merr., Giant Sandreed

- **Other**—Hopi *Ceremonial Items* Plant used to make prayer sticks. Plant used to make a carrying case for a part of the wedding garments. *Decorations* Plumes used to decorate mask of kachina. *Hunting & Fishing Item* Plant used to make bows and arrows. (42:296)
- Jemez** *Decorations* Plumes used to decorate masks. (200:65)

**Calamovilfa longifolia** (Hook.) Scribn., Prairie Sandreed

- **Other**—Lakota *Decorations* Plant top, instead of a feather, worn on the head as a war charm. *Smoking Tools* Used for pipe cleaning. (139:29)

### **Calandrinia**, Portulacaceae

**Calandrinia ciliata** (Ruiz & Pavón) DC., Fringed Redmaids

- **Food**—Costanoan *Staple* Seeds, in great quantities, used for pinole. *Unspecified* Raw foliage used for food. (21:251) **Luiseno** *Unspecified* Seeds used for food. *Vegetable* Tender plant used for greens. (as *C. caulescens* 155:232) **Miwok** *Unspecified* Oily, pulverized seeds pressed into balls and cakes for eating. (as *C. caulescens* var. *mensiesii* 12:152) **Numlaki** *Staple* Tiny, jet-black seeds eaten as pinole. (as *C. elegans* 41:346)

### **Calla**, Araceae

**Calla palustris** L., Water Arum

- **Drug**—Cree, Woodlands *Orthopedic Aid* Aerial stems used for sore legs. *Poison* Plant poisonous to touch and eat. (109:33) **Gitksan** *Anti-hemorrhagic* Decoction of root taken for hemorrhage. *Eye Medicine* Decoction of root taken for "cleaning the eyes of the blind." *Misc. Disease Remedy* Decoction of roots taken for influenza and hemorrhage. *Respiratory Aid* Decoction of root taken for shortness of breath. (150:53) **Tonic** Plant used in a spiritual spring tonic. (74:26) **Iroquois** *Snakebite Remedy* Compound decoction of roots and stems used as poultice on snakebites. (87:278) **Potawatomi** *Dermatological Aid* Poultice of pounded root applied to swellings. (154:40)

### **Calliandra**, Fabaceae

**Calliandra eriophylla** Benth., Fairyduster

- **Drug**—Yavapai *Gynecological Aid* Decoction of leaves and stems taken after childbirth. (65:261)

**Calliandra humilis** Benth., Dwarf Stickpea

- **Drug**—Navajo, Ramah *Panacea* Plant used as "life medicine." (191:32) **Zuni** *Dermatological Aid* Powdered root used three times a day for rashes. (27:376)

### **Callicarpa**, Verbenaceae

**Callicarpa americana** L., American Beautyberry

- **Drug**—Alabama *Antirheumatic (External)* Decoction of roots and branches used in sweat bath for rheumatism. *Diaphoretic* Decoction of root and branch used in sweat bath for malarial fever and rheumatism. *Febrifuge* Decoction of roots and branches used in sweat bath for malarial fevers. (172:663) Decoction of roots and leaves used as sweat bath for malarial fever. *Herbal Steam* and Decoction of roots and leaves used as sweat bath for malarial fever. **Choctaw** *Anti-diarrheal* Decoction of roots taken for dysentery. (177:52) *Gastrointestinal Aid* Decoction of roots and berries taken for colic. (25:24) Decoction of roots and berries taken for colic. *Other* Decoction of roots taken during attacks of dizziness. **Koasati** *Gastrointestinal Aid* Decoction of roots taken for stomachaches. (177:52) **Seminole** *Dermatological Aid* Plant used for snake sickness: itchy skin. (169:166) Roots or stem bark used for snake sickness: itchy skin. (169:239) *Urinary Aid* Decoction of root bark taken for urine retention. (169:274)

### **Callirhoe**, Malvaceae

**Callirhoe involucrata** (Torr. & Gray) Gray, Purple Poppymallow

- **Drug**—Dakota *Analgesic* Decoction of root taken for internal pains. Smoke of dried root used to bathe aching body parts. *Cold Remedy* Root smoke inhaled for head cold. (70:103)
- **Other**—Kiowa *Decorations* Flowers, because of their beauty, have an esthetic appeal. (as *Malva involucrata* 192:42)

### **Calocedrus**, Cupressaceae, conifer

**Calocedrus decurrens** (Torr.) Florin, Incense Cedar

- **Drug**—Klamath *Herbal Steam* Branches and twigs used in administering a sweat bath. (as *Libocedrus decurrens* 45:88) **Mendocino Indian** *Gastrointestinal Aid* Decoction of leaves taken for stomach troubles. (as *Libocedrus decurrens* 41:306) **Paiute** *Cold Remedy* Infusion of leaves steam inhaled for colds. (as *Libocedrus decurrens* 111:46)
- **Food**—Round Valley Indian *Spice* Dense leaflets used as flavoring in leaching acorn meal. (as *Libocedrus decurrens* 41:306)
- **Fiber**—Cahuilla *Building Material* Bark used to make conical shaped houses for temporary use while camped to gather and process acorns. Wood used for permanent construction. (as *Libocedrus decurrens* 15:85) **Karok** *Brushes & Brooms* Boughs and twigs used to make brooms. *Building Material* Wood used to make boards. (as *Libocedrus decurrens* 148:379) **Klamath** *Basketry* Wood used for basket weaving. (as *Libocedrus decurrens* 45:88) **Maidu** *Basketry* Roots used as overlay twine warps and overlay twine weft bases in the manufacture of baskets. (as *Libocedrus decurrens* 173:71) **Paiute** *Basketry* Bark made into baskets used for picking huckleberries. *Building Material* Tree used for fence posts. (as *Libocedrus decurrens* 111:46)
- **Other**—Klamath *Fuel* Wood used for fire blocks. Twig used as a twirling stick to produce fire by friction. (as *Libocedrus decurrens* 45:88) **Round Valley Indian** *Cooking Tools* Leafy branches used to spread water gently over acorn meal. (as *Libocedrus decurrens* 41:337) Dense leaflets used to prevent sand from mixing with the meal in leaching acorn meal. *Hunting & Fishing Item* Small limbs used as bows. (as *Libocedrus decurrens* 41:306) **Washo** *Hunting & Fishing Item* Wood used to make bows. (as *Libocedrus decurrens* 118:52)

**Calochortus**, Liliaceae**Calochortus amabilis** Purdy, Short Lily

- **Food**—Pomo, Kashaya *Vegetable* Baked or boiled bulbs eaten like baked or boiled potatoes. (72:32)

**Calochortus aureus** S. Wats., Golden Mariposa Lily

- **Drug**—Hopi *Ceremonial Medicine* Plant used in the Flute ceremony. (56:18) Navajo, Ramah *Panacea* Bulb used as “life medicine.” (as *C. nuttallii* var. *aureus* 191:20)
- **Food**—Hopi *Unspecified* Roots eaten raw. (56:18) Bulbs and flowers eaten. (190:159) Navajo *Unspecified* Bulbs gathered in early spring, peeled, and eaten raw. (55:32) Navajo, Ramah *Unspecified* Bulbs used for food. (as *C. nuttallii* var. *aureus* 191:20)
- **Other**—Hopi *Ceremonial Items* Ceremonially used as the Yellow Flower associated with the northwest direction. *Toys & Games* Boys holding handfuls of this plant and larkspur above their heads chased by girls on occasions. (200:70)

**Calochortus catalinae** S. Wats., Santa Catalina Mariposa Lily

- **Food**—Cahuilla *Unspecified* Bulbs roasted in hot ash pits or steamed prior to eating. (15:50)

**Calochortus concolor** (Baker) Purdy, Goldenbowl Mariposa Lily

- **Food**—Cahuilla *Unspecified* Bulbs roasted in hot ash pits or steamed prior to eating. (15:50)

**Calochortus flexuosus** S. Wats., Winding Mariposa Lily

- **Food**—Cahuilla *Unspecified* Bulbs roasted in hot ash pits or steamed prior to eating. (15:50)

**Calochortus gunnisonii** S. Wats., Gunnison's Mariposa Lily

- **Drug**—Cheyenne *Unspecified* Dried, chopped bulbs used as an ingredient for a medicinal mixture. *Veterinary Aid* Root put into a horse's mouth before running the animal in a race. (83:12) Keres, Western *Antirheumatic (Internal)* Infusion of plant taken for swellings. (171:34) Navajo, Ramah *Ceremonial Medicine* Plant used as a ceremonial medicine. *Dermatological Aid* Juice of leaf applied to pimples. *Gynecological Aid* Decoction of whole plant taken to ease delivery of placenta. *Panacea* Bulb used as “life medicine.” (191:20)
- **Food**—Cheyenne *Dried Food* Bulbs dried and used as a winter food. (83:12) *Porridge* Dried bulbs pounded fine and meal boiled into a sweet porridge or mush. (76:172) *Unspecified* Bulbs cooked fresh and used for food. Young buds used for food. (83:12) Species used for food. (83:45) *Winter Use Food* Dried bulbs stored for winter use. (76:172) Navajo, Ramah *Unspecified* Bulbs eaten raw or gathered in the fall and boiled. (191:20)

**Calochortus leichtlinii** Hook. f., Smoky Mariposa

- **Food**—Paiute, Northern *Dried Food* Roots dried and eaten. *Soup* Roots dried and eaten or ground and cooked in soup. *Vegetable* Roots and tubers peeled and eaten roasted or raw. (59:44)

**Calochortus luteus** Dougl. ex Lindl., Yellow Mariposa Lily

- **Food**—Miwok *Unspecified* Roasted bulbs used for food. (12:157) Navajo *Unspecified* Bulbs gathered in early spring, peeled, and eaten raw. (55:32) Pomo, Kashaya *Vegetable* Baked bulbs eaten like baked potatoes. (72:64)

**Calochortus macrocarpus** Dougl., Sagebrush Mariposa Lily

- **Drug**—Okanagan-Colville *Dermatological Aid* Poultice of mashed bulbs applied to the skin for poison ivy. (188:41) Thompson *Eye Medicine* Mashed bulbs placed in cheesecloth and used for the eyes. (187:119)
- **Food**—Klamath *Unspecified* Species used for food. (45:93) Okanagan-Colville *Unspecified* Bulbs eaten raw or pit cooked with other roots. (188:41) Okanagon *Staple* Roots used as a principal food. (178:238) *Unspecified* Corms formerly cooked and used for food. Sweet flower buds used for food. (125:37) Paiute *Unspecified* Bulbs skinned and eaten fresh in spring. (104:102) *Vegetable* Bulbs eaten raw, boiled, or roasted. (111:58) Shuswap *Forage* Plant eaten by cattle and sheep. *Unspecified* Roots eaten either raw or cooked. (123:54) Thompson *Unspecified* Corms formerly cooked and used for food. Sweet flower buds used for food. (125:37) Coated, starchy corms used for food. (164:481) Sweet buds eaten. Unopened flowers eaten raw. (164:483) Corms used for food, usually raw, but sometimes cooked. (187:119)

**Calochortus nuttallii** Torr. & Gray, Segó Lily

- **Food**—Gosiute *Dried Food* Bulbs formerly dried and preserved for winter use. *Unspecified* Bulbs formerly used for food. (39:364) Great Basin Indian *Winter Use Food* Bulbs used for food during the winter. (121:47) Havasupai *Unspecified* Bulbs eaten with bread and mescal. (197:212) Hopi *Candy* Raw roots filled with sugar and eaten by children in early spring. *Unspecified* Seeds and flowers ground to make yellow pollen. (42:295) Navajo *Baby Food* Bulbs, a children's food, eaten by children while playing. (55:32) *Starvation Food* Bulbs formerly used for food in times of scarcity. *Unspecified* Bulbs eaten raw. (as *Calochortus nuttali* 110:24) Paiute, Nevada *Unspecified* Bulbs used for food during the spring. (121:47) Paiute, Northern *Dried Food* Roots dried and eaten. *Soup* Roots dried and eaten or ground and cooked in soup. *Vegetable* Roots and tubers peeled and eaten roasted or raw. (59:44) Ute *Starvation Food* Bulbs used for food in starving times. (118:15) *Unspecified* Bulbs formerly used for food. (38:33)
- **Other**—Hopi *Ceremonial Items* Yellow flower used ceremonially. In the spring, the flower is collected in quantity together with larkspur. Boys holding handfuls of these two plants above their heads are chased by the girls upon certain occasions. (42:295)

**Calochortus palmeri** S. Wats., Palmer's Mariposa Lily

- **Food**—Cahuilla *Unspecified* Bulbs roasted in hot ash pits or steamed prior to eating. (15:50) Tubatulabal *Unspecified* Bulbs used for food. (193:15)

**Calochortus pulchellus** Dougl. ex Benth., Mount Diablo Globelily

- **Food**—Karak *Unspecified* Bulbs baked in the earth oven and eaten. (148:380) Mendocino Indian *Unspecified* Corms eaten raw or roasted. (41:323) Pomo *Unspecified* Corms eaten raw or roasted. (11:89)

**Calochortus sp.**, Mariposa Lily

- **Food**—Montana Indian *Unspecified* Bulbs dug and eaten for the pleasant flavor. (19:8) Pomo *Unspecified* Corms eaten for food. (11:89)

**Calochortus tolmiei** Hook. & Arn., Tolmie Startulip

- **Food**—Mendocino Indian *Unspecified* Corms eaten mostly by children. (as *C. maweanus* 41:323) Pomo, Kashaya *Vegetable* Baked or boiled bulbs eaten like baked or boiled potatoes. (72:31) Yuki *Unspecified* Sweet corms eaten raw. (as *C. caeruleus* var. *maweanus* 49:85)

***Calochortus venustus*** Dougl. ex Benth., Butterfly Mariposa Lily

- **Food**—Miwok *Unspecified* Roasted bulbs used for food. (12:157)  
Tubatulabal *Unspecified* Bulbs used for food. (193:15)

***Calochortus vestae*** Purdy, Coast Range Mariposa Lily

- **Food**—Pomo *Unspecified* Bulbs eaten for food. (as *C. luteus* var. *oculatus* 11:90) Pomo, Kashaya *Vegetable* Baked bulbs eaten like baked potatoes. (72:63)

***Caltha***, Ranunculaceae

***Caltha leptosepala*** DC. **ssp. *leptosepala* var. *leptosepala***, White Marshmarigold

- **Drug**—Okanagon *Dermatological Aid* Poultice of chewed plant applied to inflamed wounds. Thompson *Dermatological Aid* Poultice of chewed plant applied to inflamed wounds. (as *C. rotundifolia* 125:42) Fresh plant chewed and spit on wounds and poultice of crushed plant used. (as *C. rotundifolia* 164:467)

***Caltha palustris*** L., Yellow Marshmarigold

- **Drug**—Abnaki *Poison* Plant considered poisonous. (144:155) Alaska Native *Poison* Raw leaves considered poisonous. (85:19) Chippewa *Cold Remedy* Decoction of root taken as diaphoretic, expectorant, and emetic for colds. (53:340) *Dermatological Aid* Poultice of boiled and mashed roots applied to sores. (71:130) *Diaphoretic* Decoction of root taken as a diaphoretic and emetic for colds. (53:340) *Diuretic* Compound decoction of leaves and stalks taken as a diuretic. (53:348) *Emetic* Decoction of root taken as a diaphoretic and emetic for colds. (53:340) *Gynecological Aid* Compound decoction of root taken during “confinement.” (53:360) *Tuberculosis Remedy* Poultice of mashed or powdered root applied to scrofula sores. (53:354) Eskimo, Inupiat *Poison* Young shoots poisonous, if not boiled. (98:143) Eskimo, Western *Laxative* Infusion of leaves taken for constipation. (108:14) Iroquois *Emetic* and *Love Medicine* Infusion of smashed roots taken to vomit against a love charm. (87:323)
- **Food**—Abnaki *Unspecified* Leaves boiled with lard and eaten. (144:166) *Vegetable* Seeds used for food. (144:152) Alaska Native *Unspecified* Leaves and thick fleshy smooth slippery stems cooked and eaten. Roots boiled and eaten. (85:19) Chippewa *Vegetable* Leaves cooked and used as greens. (71:130) Iroquois *Vegetable* Young plants boiled and eaten as greens. (124:93) Cooked and seasoned with salt, pepper, or butter. (196:117) Menominee *Vegetable* Leaves used as greens. (151:70) Mohegan *Unspecified* Cooked and used for food. (176:83) Ojibwa *Unspecified* Leaves cooked with pork in the springtime. (153:408)

***Caltha palustris* var. *flabellifolia*** (Pursh) Torr. & Gray, Yellow Marshmarigold

- **Food**—Eskimo, Alaska *Unspecified* Leaves and stalks boiled and eaten with seal oil. The leaves and stalks were collected before the plants flowered because after flowering commenced, the plant was apparently inedible. But boiling the plant broke down the poisonous protoanemonin that it contained, rendering it edible. (1:35)

***Caltha palustris* L. var. *palustris***, Yellow Marshmarigold

- **Food**—Eskimo, Alaska Leaves eaten fresh. (as *C. asarifolia* 4:715)

***Caltha* sp.**

- **Drug**—Aleut *Unspecified* Used medicinally. (7:29)

***Calvatia***, Lycoperdaceae, fungus

***Calvatia* sp.**

- **Drug**—Haisla & Hanaksiala *Poison* Spores dangerous, especially harmful to the eyes. (43:134)

***Calycadenia***, Asteraceae

***Calycadenia fremontii*** Gray, Frémont’s Western Rosinweed

- **Drug**—Yana *Febrifuge* Cooked, dried, pounded seeds eaten for chills. (as *Hemizonia multiglandulosa* 147:252)

**Calycanthaceae**, see *Calycanthus*

***Calycanthus***, Calycanthaceae

***Calycanthus floridus*** L., Eastern Sweetshrub

- **Drug**—Cherokee *Dermatological Aid* Bark ooze used on children’s sores and infusion used for hives. *Emetic* Roots used as a strong emetic. (80:58) Roots used as very strong emetics. (203:74) *Eye Medicine* Cold infusion of bark used as eye drops for persons losing eyesight. *Pediatric Aid* Bark ooze used on children’s sores and infusion used for hives. (80:58) *Poison* Seeds used to poison wolves. (203:74) *Urinary Aid* Roots used for urinary and bladder complaints. (80:58)
- **Other**—Cherokee *Incense & Fragrance* Used for perfume. (80:58)

***Calycanthus floridus* var. *glaucus*** (Willd.) Torr. & Gray, Eastern Sweetshrub

- **Drug**—Cherokee *Urinary Aid* Infusion of bark taken for urinary troubles. (as *C. fertilis* 177:23)

***Calycanthus occidentalis*** Hook. & Arn., Western Sweetshrub

- **Drug**—Pomo *Cold Remedy* Decoction of scraped bark taken for severe colds. (66:13) Pomo, Kashaya *Cold Remedy* Infusion of dried or fresh, peeled bark used for chest colds. *Expectorant* Infusion of dried or fresh, peeled bark used to cough up the phlegm in the chest. *Gastrointestinal Aid* Infusion of dried or fresh, peeled bark used for stomach problems. *Throat Aid* Infusion of dried or fresh, peeled bark used for sore throat. (72:109)
- **Fiber**—Mendocino Indian *Basketry* Wood and bark from fresh shoots used in basket work. (as *Butneria occidentalis* 41:348)
- **Other**—Yokia *Hunting & Fishing Item* Pithy shoots used to make arrows. (as *Butneria occidentalis* 41:348)

***Calylophus***, Onagraceae

***Calylophus hartwegii* ssp. *fendleri*** (Gray) Towner & Raven, Hartweg’s Sundrops

- **Drug**—Navajo, Ramah *Panacea* Plant used as “life medicine,” especially for internal bleeding. (as *Oenothera hartwegii* var. *fendleri* 191:38)

***Calylophus lavandulifolius*** (Torr. & Gray) Raven, Lavenderleaf Sundrops

- **Food**—Apache, Chiricahua & Mescalero *Unspecified* Pods cooked and eaten by children. (as *Galpinsia lavandulaefolia* 33:45)

***Calyпсо***, Orchidaceae

***Calyпсо bulbosa*** (L.) Oakes, Fairyslipper Orchid

- **Drug**—Thompson *Anticonvulsive* Bulbs chewed or flowers sucked for mild epilepsy. (187:135)

***Calypso bulbosa* var. *americana*** (R. Br. ex Ait. f.) Luer, Fairy-slipper Orchid

- **Drug**—Thompson *Unspecified* Plants used as charms for unspecified purpose. (as *Cytherea bulbosa* 164:506)

## ***Calystegia***, Convolvulaceae

***Calystegia longipes*** (S. Wats.) Brummitt, Paiute False Bindweed

- **Drug**—Kawaiisu *Venerial Aid* Decoction of roots taken for gonorrhoea. (206:17)

***Calystegia occidentalis* ssp. *fulcrata*** (Gray) Brummitt, Chaparral False Bindweed

- **Drug**—Karak *Love Medicine* Plant used as a love medicine. (as *Convolvulus fulcratus* 148:388)

## ***Camassia***, Liliaceae

***Camassia leichtlinii*** (Baker) S. Wats., Large Camas

- **Food**—Cowichan *Special Food* Bulbs formerly served to guests at potlatches or winter dances. (186:83) **Klamath** *Pie & Pudding* Bulbs used to make pies. (as *Quamasia leichtlinii* 45:93) **Kwakiutl, Southern Unspecified** Bulbs pit steamed and used for food. (183:272) **Nitinaht** *Dried Food* Bulbs steam cooked, flattened, and dried for future food use. *Vegetable* Bulbs formerly steam cooked, dipped in whale or seal oil, and eaten as vegetables. (186:83) **Round Valley Indian Unspecified** Bulbs roasted or cooked and used for food. (as *Quamasia leichtlinii* 41:326) **Salish** *Vegetable* Bulbs used for food. (185:55) **Salish, Coast** *Dried Food* Bulbs pit steamed, slightly dried, and used for food. *Vegetable* Bulbs pit steamed and eaten immediately as the most important vegetable food. (182:74) **Yuki Unspecified** Bulbs cooked and used for food. (as *Quamasia leichtlinii* 41:326)
- **Other**—Salish, **Halkomelem** *Cash Crop* Bulbs traded to the Nootka and Nitinaht tribes. **Salish, Straits** *Cash Crop* Bulbs traded to the Nootka and Nitinaht tribes. (186:83)

***Camassia quamash*** (Pursh) Greene, Small Camas

- **Drug**—Blackfoot *Gynecological Aid* Decoction of roots taken to induce labor. Infusion of grass taken for vaginal bleeding after birth and to help expel the afterbirth. (86:60)
- **Food**—Blackfoot *Bread & Cake* Roots pit roasted and made into loaves. (97:24) *Unspecified* Bulbs roasted and eaten. (82:14) Roots pit roasted and boiled with meat. (97:24) *Special Food* Bulbs boiled and given in soup on special events. (86:101) *Winter Use Food* Roots kept dry and preserved for future use. (97:24) **Chehalis** *Soup* Bulbs smashed, pressed together like cheese, and boiled in a stew with salmon. (79:24) **Clallam Unspecified** Bulbs cooked in pits with meat. (57:196) **Cowichan** *Special Food* Bulbs formerly served to guests at potlatches or winter dances. (186:83) **Flathead** *Beverage* Boiled and used as a sweet, hot beverage. *Sauce & Relish* Boiled with flour and eaten as a thick gravy. *Soup* Simmered with moss in blood into a soup and used for food. *Unspecified* Bulbs roasted and eaten. (82:14) **Hesquiat** *Vegetable* Steamed or boiled bulbs dipped in dogfish oil or whale oil before being eaten. (185:54) **Hoh Unspecified** Bulbs pit baked and used for food. (as *Quamasia quamash* 137:59) **Karak** *Vegetable* Bulbs used for food. Bulbs were dug up with a stick and placed in a pit 2 feet in diameter. Leaves of *Vitis californica* were placed on the bottom, a layer of bulbs, and then another layer of *V. californica*

leaves. Finally a layer of dirt was added and a fire built on top. The mush formed was pure white and eaten by itself. (6:21) **Klamath** *Dried Food* Bulbs stored for future use. *Unspecified* Steamed bulbs used for food. (as *Quamasia quamash* 45:93) **Kutenai Unspecified** Bulbs roasted and eaten. (82:14) **Kwakiutl, Southern Unspecified** Bulbs pit steamed and used for food. (183:272) **Makah Unspecified** Bulbs pit cooked and eaten. (67:338) **Montana Indian** *Bread & Cake* Oven baked bulbs squeezed into little cakes or pulverized, formed into round loaves, and stored. *Staple* Bulbs formerly fire baked and used as a sweet and nutritious staple. *Sweetener* Bulbs formerly used as a sweetening agent. (82:14) **Nisqually** *Dried Food* Bulbs cooked, sun dried, and stored for future use as food. (79:24) **Nitinaht** *Dried Food* Bulbs steam cooked, flattened, and dried for future food use. *Vegetable* Bulbs formerly steam cooked, dipped in whale or seal oil, and eaten as vegetables. (186:83) **Okanagan-Colville** *Dried Food* Bulbs pit cooked, dried, and stored for future use. *Sauce & Relish* Bulbs pit cooked, dried, ground, and mixed with water and butter to make a “gravy.” *Unspecified* Bulbs pit cooked, boiled with dried bitterroots, and eaten. (188:41) **Okanagon Unspecified** Bulbs baked and used for food. (as *Quamasia quamash* 125:37) **Paiute** *Dried Food* Roots cooked overnight, dried, and used for food. (104:102) *Pie & Pudding* Dried, ground bulbs made into a pudding. (111:56) *Unspecified* Roots cooked overnight and eaten. (104:102) *Winter Use Food* Bulbs prepared, preserved in numerous ways, and stored for winter use. (111:56) **Quileute Unspecified** Bulbs pit baked and used for food. (as *Quamasia quamash* 137:59) **Salish** *Vegetable* Bulbs used for food. (185:54) **Salish, Coast** *Dried Food* Bulbs pit steamed, slightly dried, and used for food. *Vegetable* Bulbs pit steamed and eaten immediately as the most important vegetable food. (182:74) **Skagit, Upper Unspecified** Bulbs steamed in an earth oven and eaten. (179:40) **Thompson Unspecified** Bulbs baked and used for food. (as *Quamasia quamash* 125:37) Bulbs cooked and eaten. (as *Quamasia quamash* 164:481) **Yuki Unspecified** Bulbs pit cooked and eaten. (49:86)
- **Other**—Kutenai *Cash Crop* Traded to the Blackfeet. **Nez Perce** *Cash Crop* Traded to the Gros Ventre and Crow. **Pend d’Oreille, Upper** *Cash Crop* Traded to the Kutenai. (82:14) **Salish, Halkomelem** *Cash Crop* Bulbs traded to the Nootka and Nitinaht tribes. **Salish, Straits** *Cash Crop* Bulbs traded to the Nootka and Nitinaht tribes. (186:83) **Shoshoni** *Cash Crop* Traded to the Nez Perce. (82:14)

***Camassia scilloides*** (Raf.) Cory, Atlantic Camas

- **Drug**—Creek *Unspecified* Plant used medicinally for unspecified purpose. (as *C. esculenta* 172:667)
- **Food**—Blackfoot *Unspecified* Roots baked and eaten. (as *C. esculenta* 114:278) **Coeur d’Alene** *Vegetable* Roots used as a principal vegetable food. (as *C. esculenta* 178:88) **Comanche Unspecified** Raw roots used for food. (as *C. esculenta* 29:520) **Gosiute Unspecified** Bulbs roasted in pits lined with hot stones and eaten. *Winter Use Food* Bulbs formerly preserved for winter use. (as *C. esculenta* 39:364) **Montana Indian Unspecified** Bulbs boiled for eating fresh or preserved. *Winter Use Food* Bulbs baked in the ground by hot stones and dried for winter use. (as *C. esculenta* 19:9) **Okanagon** *Staple* Roots used as a principal food. (as *C. esculenta* 178:238) *Unspecified* Roots used as an important food. (as *C. esculenta* 178:237) **Spokane Unspecified** Roots used for food. (as *C. esculenta* 178:343) **Thompson Unspecified** Roots

used as an important food. (as *C. esculenta* 178:237)

### **Camassia** sp.

- **Food**—Haisla *Vegetable* Bulbs used for food. (camas 43:194) Nitinaht *Unspecified* Bulbs formerly used as an important food. (camas 186:63) Sanpoil & Nespelem *Bread & Cake* Raw or roasted bulbs pulverized, formed into small cakes or balls, and dried for storage. Raw or roasted root pulverized, formed into small cakes or balls, and dried for storage. *Unspecified* Skinless bulb roasted until tender and used for food. Steamed or raw roots used for food. A cooking basket was filled half full of water and hot rocks added to boil the water. Then small sticks were placed crisscross in the basket above the surface of the water to hold the roots. After the roots had been added the basket was covered with a flat rock or piece of cedar plank to keep the steam from escaping. Plant, raw or cooked in underground pits, used for food. (as *Quamasia*, meadow camas 131:99)

### **Camelina**, Brassicaceae

**Camelina microcarpa** Andr. ex DC., Littlepod Falseflax

- **Food**—Apache, Chiricahua & Mescalero *Bread & Cake* Seeds threshed, winnowed, ground, and the flour used to make bread. *Unspecified* Seeds boiled and eaten. (33:49)

### **Camellia**, Theaceae

**Camellia sinensis** (L.) Kuntze, Tea

- **Drug**—Makah *Hemostat* Poultice of leaves applied to stop bleeding. (67:287)
- **Food**—Haisla & Hanaksiala *Beverage* Leaves used to make tea. (as *Thea sinensis* 43:294) Oweekeno *Beverage* Leaves used to make tea. (as *Thea sinensis* 43:119)

### **Camissonia**, Onagraceae

**Camissonia brevipes** (Gray) Raven **ssp. brevipes**, Golden Suncup

- **Food**—Mohave *Unspecified* Seeds used for food. (as *Oenothera brevipes* 37:187)

**Camissonia claviformis** (Torr. & Frém.) Raven **ssp. claviformis**, Browneyes

- **Food**—Cahuilla *Vegetable* Leaves used for greens. (as *Oenothera clavaeformis* 15:94)

**Camissonia multijuga** (S. Wats.) Raven, Froststem Suncup

- **Drug**—Navajo, Kayenta *Other* Infusion of plant used for injuries by water or hail or dreaming of it. (as *Oenothera multijuga* 205:33)

**Camissonia ovata** (Nutt. ex Torr. & Gray) Raven, Goldeneggs

- **Food**—Costanoan *Unspecified* Raw, boiled, or steamed foliage used for food. (as *Oenothera ovata* 21:250)

**Camissonia tanacetifolia** (Torr. & Gray) Raven **ssp. tanacetifolia**, Tansyleaf Eveningprimrose

- **Drug**—Navajo *Dermatological Aid* Plant rubbed on as a liniment for boils. (as *Oenothera tanacetifolia* 55:67)

**Campanulaceae**, see *Asyneuma*, *Campanula*, *Campanulastrum*, *Clermontia*, *Lobelia*, *Triodanis*

### **Campanula**, Campanulaceae

**Campanula aparinoides** Pursh, Marsh Bellflower

- **Drug**—Iroquois *Gynecological Aid* Decoction of stems taken by young women to induce childbirth. (87:451)

**Campanula divaricata** Michx, Small Bonny Bellflower

- **Drug**—Cherokee *Antidiarrheal* Infusion of root taken for diarrhea. (80:37)

**Campanula parryi** Gray, Parry's Bellflower

- **Drug**—Navajo, Kayenta *Gynecological Aid* Plant taken by pregnant woman when female baby was desired. (205:44) Navajo, Ramah *Dermatological Aid* Dry plant used as a dusting powder for sores. (191:47) Zuni *Dermatological Aid* Blossoms chewed and saliva applied to skin as a depilatory. Poultice of chewed root applied to bruises. (166:44)

**Campanula rotundifolia** L., Bluebell Bellflower

- **Drug**—Chippewa *Ear Medicine* Infusion of root used as drops for sore ear. (53:362) Cree, Woodlands *Heart Medicine* Root chewed for heart ailments. (109:34) Navajo, Ramah *Analgesic* Plant used as ceremonial fumigant for head trouble. *Ceremonial Medicine* Plant used as ceremonial fumigant for various ailments. *Disinfectant* Plant used as ceremonial fumigant for deer infection. *Eye Medicine* Plant used as ceremonial fumigant for eye. *Hunting Medicine* Plant rubbed on body for protection while hunting. *Witchcraft Medicine* Plant rubbed on body for protection from witches. (191:47) Ojibwa *Pulmonary Aid* Compound containing root used for lung troubles. (153:360) Thompson *Eye Medicine* Decoction of plant taken or used as a wash for sore eyes. (187:196)

**Campanula uniflora** L., Arctic Bellflower

- **Other**—Navajo *Ceremonial Items* Pollen used for some of the sacred ceremonies. (55:79)

### **Campanulastrum**, Campanulaceae

**Campanulastrum americanum** (L.) Small, American Bellflower

- **Drug**—Iroquois *Pulmonary Aid* Infusion of smashed roots taken for whooping cough. (87:451) Meskwaki *Cough Medicine* Leaves used for coughs. *Tuberculosis Remedy* Leaves used for consumption. (152:206)

### **Canavalia**, Fabaceae

**Canavalia galeata** (Gaud.) Vogel, 'Awikiwiki

- **Drug**—Hawaiian *Dermatological Aid* Infusion of leaves, shoots, bark, and other plants used as a bath for itch, ringworm, and skin diseases. (2:21)

### **Candelaria**, Parmeliaceae, lichen

**Candelaria concolor** (Dicks.) Stein

- **Other**—Haisla & Hanaksiala *Paint* Plant used to make paint for wooden items. (43:141)

**Candelariella vitellina** (Hoffm.) Muell. Arg.

- **Other**—Haisla & Hanaksiala *Paint* Plant used to make paint for wooden items. (43:141)

**Cannabaceae**, see *Cannabis*, *Humulus*

**Cannaceae**, see *Canna*

**Canna**, Cannaceae**Canna flaccida** Salisb., Bandanna of the Everglades

- **Other**—Seminole *Musical Instrument* Plant used to make rattle pellets. (169:503)

**Cannabis**, Cannabaceae**Cannabis sativa** L., Marijuana

- **Drug**—Iroquois *Psychological Aid* Used after patient gets well but does not think that he has recovered. *Stimulant* "This plant will get you going." (87:306)

**Canotia**, Celastraceae**Canotia holacantha** Torr., Crucifixion Thorn

- **Food**—Apache, San Carlos *Fruit* Berries used for food. (95:258)  
Apache, Western *Fruit* Berries eaten raw. (26:191)

**Cantharellaceae**, see *Cantharellus***Cantharellus**, Cantharellaceae, fungus**Cantharellus cibarius**, Chantarelle

- **Food**—Pomo, Kashaya *Vegetable* Baked on hot stones or fried with onions. (72:128)

**Capparaceae**, see *Cleome*, *Polanisia*, *Wislizenia***Caprifoliaceae**, see *Diervilla*, *Linnaea*, *Lonicera*, *Sambucus*, *Symphoricarpos*, *Triosteum*, *Viburnum***Capsella**, Brassicaceae**Capsella bursa-pastoris** (L.) Medik., Shepherd's Purse

- **Drug**—Cheyenne *Analgesic* Infusion of powdered leaves and stems taken or small quantities of powder eaten for head pains. (as *Bursa bursa-pastoris* 76:174) **Chippewa** *Analgesic* Decoction of entire plant taken for dysentery cramps. *Antidiarrheal* Decoction of whole plant taken for dysentery and cramps. *Gastrointestinal Aid* Decoction of whole plant taken for stomach cramps and dysentery. (as *Bursa bursa-pastoris* 53:344) **Costanoan** *Antidiarrheal* Infusion of plant used for dysentery. (21:9) **Mahuna** *Antidiarrheal* Infusion of plants taken for dysentery and diarrhea. (140:7) **Menominee** *Dermatological Aid* Infusion of whole plant used as a wash for poison ivy. (as *Bursa bursa-pastoris* 54:134) Infusion of plant used as a wash for poison ivy. (151:33) **Meskwaki** *Unspecified* Used as a medicine. (152:219) **Mohegan** *Analgesic* Infusion of seedpods taken for stomach pains. (176:71) *Anthelmintic* Infusion of seedpods taken for stomach, the pungency killed internal worms. (as *Bursa bursa-pastoris* 174:265) Infusion of seedpods taken as a vermifuge. (176:71, 128) *Gastrointestinal Aid* Infusion of seedpods taken for stomach, the pungency killed internal worms. (as *Bursa bursa-pastoris* 174:265) Infusion of seedpods taken for stomach pains. (176:71)
- **Food**—Apache, Chiricahua & Mescalero *Bread & Cake* Seeds winnowed, dried, stored, ground into flour, and used to make bread. *Unspecified* Seeds roasted without grinding and combined with other foods. (33:48) *Vegetable* Tops cooked alone or with meat and used as greens. (33:47) **Cahuilla** *Unspecified* Seeds gathered for food. *Vegetable* Leaves used for greens. (15:51) **Cherokee** *Spice* Mixed into other greens for flavoring. (204:253) *Vegetable* Leaves cooked and

eaten as greens. (80:54) **Mendocino Indian** *Staple* Seeds eaten as a pinole. (as *Bursa bursa-pastoris* 41:352) **Thompson** *Vegetable* Leaves soaked in water overnight and eaten raw or cooked as a green vegetable. (187:194)

**Capsicum**, Solanaceae**Capsicum annuum** L., Cayenne Pepper

- **Food**—Hopi *Dried Food* Fruits strung and dried for winter use. *Spice* Dried peppers crushed and used as flavoring for food. (200:88) **Keresan** *Soup* Used in stews. (198:560) **Navajo** *Unspecified* Chile peppers used for food. (165:221) **Papago** *Unspecified* Species used for food. **Pima** *Unspecified* Species used for food. (36:121) **Pima, Gila River** *Fruit* Fruits eaten raw and boiled. *Staple* Fruits used as a staple food. (133:7) **Sia** *Unspecified* Cultivated and eaten almost daily or sometimes at more than one meal per day. (199:106)
- **Other**—Pima, Desert *Cash Crop* Used for trade. (133:6)

**Capsicum annuum** L. **var. annuum**, Cayenne Pepper

- **Food**—Navajo, Ramah *Spice* Pepper used extensively as a condiment in soups and stews. (as *C. frutescens* var. *longum* 191:42) **Pima** *Spice* Used for seasoning. (as *C. frutescens* var. *baccatum* 36:121)

**Capsicum annuum** var. **frutescens** (L.) Kuntze, Cayenne Pepper

- **Drug**—Cherokee *Cold Remedy* Plant used for colds. *Febrifuge* Poul-tice applied to soles of feet "in nervous or low fevers." *Gastrointestinal Aid* Plant used for colics. *Poultice* Poultice used for gangrene and poultice applied to feet for fevers. *Stimulant* Plant used as a powerful stimulant. (as *C. frutescens* 80:48) **Navajo, Ramah** *Gynecological Aid* and *Pediatric Aid* Powdered chili pepper rubbed on breast to wean nursing child. (as *C. frutescens* var. *longum* 191:42)
- **Food**—Papago *Special Food* Added to meat and eaten as a delicacy. (as *C. frutescens* var. *baccatum* 34:47) *Spice* Berries used as a seasoning. (as *C. frutescens* 34:19)

**Cardamine**, Brassicaceae**Cardamine californica** (Nutt.) Greene **var. californica**, Milkmaids

- **Other**—Yurok *Season Indicator* First plant to flower in the spring. (as *Dentaria californica* 6:27)

**Cardamine concatenata** (Michx.) Sw., Cutleaf Toothwort

- **Drug**—Iroquois *Analgesic* Poultice of smashed roots applied to the head for headaches. *Cold Remedy* Used for colds. *Dietary Aid* Used to stimulate appetite and regulate stomach. *Gastrointestinal Aid* Plant used for colds, to stimulate appetite, and to regulate the stomach. (87:340) *Hallucinogen* Plant used to mesmerize. (87:339) *Heart Medicine* Roots used several ways for heart palpitations or other heart dis-eases. (87:340) *Hunting Medicine* Roots rubbed on guns, traps, fishing lines or hooks, a "hunting medicine." *Love Medicine* Roots or plant placed in pocket or mouth to attract women, a "love medicine." *Panacea* Compound infusion taken or placed on injured part, a "Little Water Medicine." (87:339)
- **Food**—Iroquois *Unspecified* Roots eaten raw with salt or boiled. (as *Dentaria laciniata* 196:120)
- **Other**—Iroquois *Ceremonial Items* Plant used for divination. (87:340)

**Cardamine diphylla** (Michx.) Wood, Crinkle Root

- **Drug**—Algonquin, Quebec *Febrifuge* Infusion of plant given to children for fevers. *Heart Medicine* Infusion of plant and sweet flag root taken for heart disease. *Pediatric Aid* Infusion of plant given to children for fevers. (as *Dentaria diphylla* 18:173) **Cherokee Analgesic** Poultice of root used for headache. *Cold Remedy* Root chewed for colds. *Throat Aid* Infusion gargled for sore throat and root chewed for colds. (80:59) **Delaware Gastrointestinal Aid** Roots used as a stomach medicine. (as *Dentaria diphylla* 176:37) *Venereal Aid* Infusion of roots combined with other plants and used for scrofula and venereal disease. (as *Dentaria diphylla* 176:34) **Delaware, Oklahoma Gastrointestinal Aid** Compound containing root used as a stomach remedy. *Tuberculosis Remedy* Compound containing root used for “scrofula.” *Venereal Aid* Compound containing root used for venereal disease. (as *Dentaria diphylla* 175:31, 76) **Iroquois Breast Treatment** Infusion of whole plant taken to strengthen the breasts. (as *Dentaria diphylla* 141:45) *Carminative* Raw root chewed for stomach gas. *Dermatological Aid* Poultice of roots applied to swellings. *Febrifuge* Cold infusion of plant taken for fever. *Love Medicine* Infusion of roots taken when “love medicine is too strong.” *Other* Cold infusion of plant taken for “summer complaint.” *Psychological Aid* Infusion of roots taken when the “heart jumps and the head goes wrong.” *Pulmonary Aid* Compound used for chest pains. (87:341) *Tuberculosis Remedy* Infusion of plant taken at the beginning of tuberculosis. (as *Dentaria diphylla* 141:45) **Malecite Pediatric Aid** Infusion of roots used as a tonic for children. (as *Dentaria diphylla* 116:252) *Throat Aid* Green or dried roots chewed and used for hoarseness. (as *Dentaria diphylla* 116:247) Green or dry roots chewed and used to clear the throat. *Tonic* Infusion of roots used as a tonic. (as *Dentaria diphylla* 116:252) **Micmac Sedative** Root used as a sedative. *Throat Aid* Root used to clear the throat and for hoarseness. *Tonic* Root used as a tonic. (as *Dentaria diphylla* 40:56)

- **Food**—Abnaki *Sauce & Relish* Used as a condiment. (*Dentaria diphylla* 144:152) *Unspecified* Species used for food. (as *Dentaria diphylla* 144:167) **Algonquin, Quebec Sauce & Relish** Ground root put into vinegar for use as a relish. (as *Dentaria diphylla* 18:86) **Cherokee Vegetable** Leaves and stems parboiled, rinsed, added to hot grease, salt, and water, and boiled until soft as potherbs. Leaves used in salads. (as *Dentaria diphylla* 126:37) **Iroquois Unspecified** Roots eaten raw with salt or boiled. (as *Dentaria diphylla* 196:120) **Ojibwa Sauce & Relish** Ground roots mixed with salt, sugar, or vinegar and used as a condiment or relish. (as *Dentaria diphylla* 5:2207)

- **Other**—Cherokee *Smoke Plant* Leaves used for smoking. (80:59)

**Cardamine douglassii** Britt., Limestone Bittercress

- **Drug**—Iroquois *Antidote* Infusion of smashed roots used to counteract any kind of poison. *Witchcraft Medicine* Infusion of smashed roots used to divine the perpetrator of witchcraft. (87:340)

**Cardamine maxima** (Nutt.) Wood, Large Toothwort

- **Drug**—Menominee *Gastrointestinal Aid* Good medicine for the stomach. (as *Dentaria maxima* 151:65) **Ojibwa Gastrointestinal Aid** Roots used as a good medicine for the stomach. (as *Dentaria maxima* 153:399)
- **Food**—Menominee *Vegetable* Roots fermented for 4 or 5 days to sweeten and cooked with corn. (as *Dentaria maxima* 151:65) **Ojibwa**

*Vegetable* Favored wild potatoes cooked with corn and deer meat or beans and deer meat. (as *Dentaria maxima* 153:399)

**Cardamine rhomboidea** (Pers.) DC., Bulbous Bittercress

- **Drug**—Iroquois *Poison* Roots used as a poison to kill. (as *C. bulbosa* 87:340)

**Carduus**, Asteraceae**Carduus sp.**, Thistle

- **Food**—Luiseño *Unspecified* Raw buds eaten for food. *Vegetable* Plant used as greens. (155:228)

**Carex**, Cyperaceae**Carex aquatilis** Wahlenb., Water Sedge

- **Food**—Alaska Native *Unspecified* Stem bases eaten raw. (85:129)

**Carex aquatilis var. dives** (Holm) Kukenth., Sitka Sedge

- **Fiber**—Hesquiat *Basketry* Leaves used to make strong handles for baskets and shopping baskets. (as *C. sitchensis* 185:53) **Makah Basketry** Used for the bottoms of trinket baskets. (as *C. sitchensis* 79:22)

**Carex atherodes** Spreng., Slough Sedge

- **Food**—Thompson *Fodder* Grass used for animal feed. *Forage* Roots sometimes eaten by muskrats. (187:114)
- **Fiber**—Thompson *Clothing* “Swamp hay” softened by rubbing and used as insoles for moccasins. (187:114)

**Carex barbarae** Dewey, Santa Barbara Sedge

- **Fiber**—Maidu *Basketry* Blades used as coil thread and overlay twine weft bases in the manufacture of baskets. (173:71) **Pomo Basketry** Woody root fibers used as the white background in baskets. (9:137) Rootstocks used to make the white or creamy groundwork for baskets. (41:315) **Pomo, Kashaya Cordage** White, woody center of the root used as a sewing element in coiled baskets and in twining. *Sewing Material* White, woody center of the root used as a sewing element in coiled baskets and in twining. (72:103)

**Carex brevior** (Dewey) Mackenzie ex Lunell, Fescue Sedge

- **Drug**—Iroquois *Gynecological Aid* Compound infusion of plant taken for evacuation of the placenta. (87:275)

**Carex concinnoides** Mackenzie, Northwestern Sedge

- **Other**—Okanagan-Colville *Containers* Used for pit cooking and various household purposes. (188:36)

**Carex douglasii** Boott, Douglas's Sedge

- **Food**—Kawaiisu *Unspecified* Raw stems used for food. (206:17)

**Carex exsiccata** Bailey, Western Inflated Sedge

- **Dye**—Shoshoni *Black* Roots used as black dye in basketry. (as *C. exsiccata* 118:8)

**Carex inops ssp. heliophila** (Mackenzie) Crins, Sun Sedge

- **Drug**—Navajo, Ramah *Disinfectant* Cold infusion of plant used as lotion for “eagle infections.” *Gastrointestinal Aid* Cold infusion of plant taken to relieve discomfort from overeating. (as *C. pensylvanica* var. *digyna* 191:19)

**Carex mendocinensis** Olney, Mendocino Sedge

- **Fiber**—Pomo *Basketry* Roots used in basketry. (118:6)

***Carex microptera*** Mackenzie, Smallwing Sedge

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (as *C. festivella* 191:19)
- **Food**—Navajo, Ramah *Forage* Plant browsed by sheep. (as *C. festivella* 191:19)

***Carex nebrascensis*** Dewey, Nebraska Sedge

- **Drug**—Cheyenne *Ceremonial Medicine* Plant used in the Sun Dance and Massaum ceremonies. (83:7)
- **Food**—Blackfoot *Forage* Leaves thought to be a favorite food of the buffalo. (97:22) Favorite grass of the buffalo. (114:277)
- **Other**—Blackfoot *Ceremonial Items* Leaves tied around the horn of the sacred buffalo skull used in ceremonials. (97:22) Grass tied by medicine men to horns of the sacred buffalo head used in the Sun Dance ceremony. (114:277) Plant tied around the horns of the buffalo head in the Sun Dance. (118:51)

***Carex obnupta*** Bailey, Slough Sedge

- **Food**—Thompson *Fodder* Grass used for animal feed. *Forage* Roots sometimes eaten by muskrats. (187:114)
- **Fiber**—Hesquiat *Basketry* Leaves used to make fine, closely woven baskets. (185:18) Dried, split leaves used to make the finest baskets. (185:50) *Clothing* Leaves used to make fine, closely woven hats. (185:18) *Makah Basketry* Leaves used for the horizontal strands in basketry. (67:330) *Nitinaht Basketry* Leaves extensively used as wrapping and twining material for “grass” baskets. *Nootka Basketry* Leaves extensively used as wrapping and twining material for “grass” baskets. (186:79) **Thompson Clothing** “Swamp hay” softened by rubbing and used as insoles for moccasins. (187:114)
- **Other**—Hesquiat *Tools* Sharp edged leaves used by men for shaving. (185:50)

***Carex oligosperma*** Michx., Fewseed Sedge

- **Drug**—Iroquois *Emetic* Compound decoction taken as an emetic before running or playing lacrosse. (87:275)

***Carex plantaginea*** Lam., Plantainleaf Sedge

- **Drug**—Menominee *Snakebite Remedy* Root used as a charm to prevent snakebite and spittle from chewed root used on snakebite. (151:34)

***Carex platyphylla*** Carey, Broadleaf Sedge

- **Drug**—Iroquois *Other* Used several ways to “wash the snowsnake,” a snowsnake medicine. (87:274)

***Carex prasina*** Wahlenb., Drooping Sedge

- **Drug**—Iroquois *Emetic* Decoction taken as an emetic. *Gastrointestinal Aid* Decoction taken “when stomach is bad from an unknown cause.” *Veterinary Aid* Decoction given to hunting dogs “when stomach is bad from an unknown cause.” (87:275)

***Carex rostrata*** Stokes, Beaked Sedge

- **Food**—Thompson *Fodder* Grass used for animal feed. (187:114) *Forage* Used as a forage plant. (164:514) Roots sometimes eaten by muskrats. *Unspecified* Bulbs used for food. (187:114)

***Carex* sp.**, Sedge

- **Drug**—Cherokee *Antidiarrheal* Infusion of leaf taken to “check bowels.” (80:54) *Gosiute Unspecified* Root used as medicine. (39:365)

*Songish Abortifacient* Leaves eaten to induce abortions. (182:73)

- **Food**—Klamath *Beverage* Pith juice used as beverage. *Unspecified* Fresh stems used for food. Tuberos base of stem used for food. (45:92) **Montana Indian Unspecified** Young stems used for food. (19:9) **Navajo, Kayenta Porridge** Seeds ground, cooked into a mush, and eaten. (205:16) **Thompson Forage** Used as a general forage plant. (164:515) Leaves eaten by goats, horses, and other animals. (187:114)
- **Fiber**—Blackfoot *Clothing* Grass used in moccasins to protect the feet during winter horse stealing expeditions. (97:22) **Costanoan Basketry** Roots of many species used in basketry. (21:255) **Klamath Mats, Rugs & Bedding** Leaves woven into mats. (45:92) **Mendocino Indian Basketry** Rootstocks used to make strong and durable baskets. *Cordage* Rootstocks formerly used to make rope. (41:314) **Montana Indian Mats, Rugs & Bedding** Leaves woven into mats. (19:9) **Pomo Basketry** Roots used for basket body material. Roots split finely and used for black design material in fine baskets. (117:296) *Cordage* Roots used as a sewing element in coiled baskets. (66:11) **Salish, Coast Basketry** Fibrous leaves used to make baskets. *Cordage* Fibrous leaves used to make twine. (182:73) **Thompson Brushes & Brooms** Leaves used as brushes for cleaning things. (187:114) **Wailaki Basketry** Roots and leaves used for baskets. *Clothing* Leaves used to weave hats. (41:315) **Yuki Basketry** Large roots used to make baskets. (49:93)
- **Other**—Jemez *Ceremonial Items* and *Sacred Items* Plant considered sacred and used in the kiva. (44:21) **Paiute Cooking Tools** Woven sedge used to make spoons. (111:52) **Pomo Hunting & Fishing Item** Used in tending “hako fish traps.” *Lighting* Dried plant tied in tight bundles for torches and used for travel by night like a lantern. (66:12)

***Carex utriculata*** Boott, Northwest Territory Sedge

- **Food**—Gosiute *Unspecified* Lower, tender stems and root parts eaten by children. (39:365)

***Carex vicaria*** Bailey, Western Fox Sedge

- **Food**—Mendocino Indian *Forage* Foliage cut for hay and used for forage. (41:314)

***Carex vulpinoidea*** Michx., Fox Sedge

- **Drug**—Iroquois *Other* Compound decoction of roots used as a “rooster fighting medicine.” (87:275)

**Caricaceae**, see *Carica****Carica***, Caricaceae***Carica papaya*** L., Papaya

- **Drug**—Hawaiian *Breast Treatment* Infusion of fruit taken by mothers for dry breasts. *Dermatological Aid* Milk and other plants mixed and applied to deep cuts. (2:43)
- **Food**—Hawaiian *Fruit* Fruit used for food. (2:43) **Seminole Unspecified** Plant used for food. (169:486)

***Carnegia***, Cactaceae***Carnegia gigantea*** (Engelm.) Britt. & Rose, Saguaro

- **Drug**—Pima *Gynecological Aid* Plant used to make the milk flow after childbirth. *Orthopedic Aid* Dead ribs used as splints for broken bones. (47:53)
- **Food**—Apache, Chiricahua & Mescalero *Fruit* Fruit used for food. (33:40) *Substitution Food* Syrup used in the absence of sugar to

sweeten an intoxicating drink. (33:50) **Apache, San Carlos Bread & Cake** Fruits sun dried, made into large cakes, and used for food. *Fruit* Fruits eaten raw. (as *Cereus giganteus* 95:257) **Apache, Western Beverage** Juice used as a drink. *Bread & Cake* Squeezed pulp dried and made into cakes. *Dried Food* Seeds washed and dried. *Fruit* Fruit eaten raw. *Pie & Pudding* Seeds ground with corn into a pudding. *Porridge* Seeds roasted, ground, and mixed with water to make a mush. (26:178) **Apache, White Mountain Fruit** Fruit used for food. (as *Cereus gigantea* 136:156) *Preserves* Fruit used to make a kind of butter. (as *Cercus gigantea* 136:147) **Maricopa Beverage** Juice fermented to make an intoxicating drink. (as *Cereus gigantea* 37:204) **Papago Beverage** Pulp boiled with water, strained, boiled again, and used as a ceremonial drink. (34:20) Juice mixed with water, fermented, and used as an intoxicating drink in ceremonies to bring rain. (34:26) *Bread & Cake* Seeds parched, stored, and used to make meal cakes. *Cooking Agent* Seeds parched, ground, water added, and oil extracted. (34:20) *Dried Food* Fruits dried, stored in jars, and used as sweets. (34:46) *Fodder* Seeds parched and used as a chicken feed. (34:20) *Fruit* Fruits used as an important article of diet. *Preserves* Fruits made into a conserve. (32:19) Juice made into cactus jam and used as the most important sweet in the diet. Pulp boiled to a sweet, sticky mass and used like raspberry jam. (34:20) Fruits made into jam. (34:46) *Sauce & Relish* Fruits boiled to make a syrup. (32:19) Fruits made into a syrup. (34:46) *Staple* Seeds ground into flour. (32:19) Seeds made into flour and used for food. (34:20) Used as a staple food. (34:45) *Unspecified* Oil extracted from the seeds. (32:19) Pulp eaten fresh. (34:20) Fruits and seeds used for food. (36:59) **Papago & Pima Candy** Used to make candy. (35:17) *Fruit* Fruit used for food. (35:11) *Preserves* Fruit boiled, without sugar, to make preserves. (35:17) *Sauce & Relish* Fruit used to make syrup. (35:11) **Pima Beverage** Ripe, dried fruits shaped into balls, boiled, fermented, and used to make wine. (47:53) Fruits boiled, fermented, and used as an intoxicating liquor. *Bread & Cake* Seeds ground, put into water, meal combined with other meal and baked to make bread. (as *Cereus giganteus* 146:71) *Dessert* Pulp eaten as dessert. (47:53) *Dried Food* Ripe fruits made into balls and dried for future use. (32:20) Fruits dried in balls and used for food. (as *Cereus giganteus* 146:71) *Fodder* Seeds fed to chickens. (47:53) *Fruit* Ripe fruits eaten fresh. (32:20) Ripe fruits eaten raw. (as *Cereus giganteus* 146:71) *Porridge* Seeds dried, roasted, ground, and eaten as a moist and sticky mush. (47:53) Fresh or dried fruits boiled, residue ground into an oily paste and eaten. (as *Cereus giganteus* 146:71) *Sauce & Relish* Fresh or dried fruits boiled to make a syrup. (32:20) Pulp boiled, seeds strained, boiled again, and sealed in jars until thick as honey. Ripe, dried fruits shaped into balls, boiled, and used to make a syrup. (47:53) Fresh or dried fruits boiled and used as a syrup. *Staple* Seeds ground, put into water, and eaten as pinole. (as *Cereus giganteus* 146:71) *Substitution Food* Seeds ground, passed through a sieve or left mixed with husks, and used as a substitute for lard. (47:53) *Unspecified* Seeds eaten raw. (as *Cereus giganteus* 146:71) **Pima, Gila River Beverage** Pulp made into a syrup and fermented for the annual wine feast, an elaborate liturgical celebration intended to bring rain and to continue it through the growing season. Ripe fruit used to make a cold drink. (133:4) *Candy* Fruits used as sweets. (133:6) *Dried Food* Pulp dried whole for future use. *Porridge* Seeds ground, mixed with grains, and used to make a por-

ridge. *Preserves* Pulp used to make jam. Seeds ground, mixed with grains, and used to make a paste resembling peanut butter. *Sauce & Relish* Pulp used to make syrup. (133:4) *Staple* Fruits used as a staple food. (133:7) **Seri Fruit** Fruits eaten for food. *Porridge* Seeds ground to a powder and made into a meal or paste. (50:134) **Southwest Indians Fruit** Fruit used for food. (17:15) **Yavapai Beverage** Fruit mixed with water and liquid scooped with hand. Dried fruit pressed into bricks and kept for later use, pieces broken off and stirred in water. *Bread & Cake* Dried, parched, seeds ground to consistency of peanut butter and squeezed into cakes. *Dried Food* Dried fruit smeared with fresh fruit juice, made into slabs, and dried for later use. Dried fruit pressed into bricks and kept for later use. *Fruit* Fruit used for food. (as *Cereus giganteus* 65:260)

- **Fiber—Papago Basketry** Ribs used as one of the chief warp materials. *Building Material* Ribs used for roofing. Slats joined with one or two rows of deer hide thong and used to make screen doors. (34:53) Used for the roofing of houses. (34:66) **Seri Caulking Material** Dried plant skeletons and sea lion oil used as a caulking compound. (50:136)
- **Other—Apache, Western Ceremonial Items** Whole fruit mashed, water added, and mixture drunk after a 2-day burial in a dry place. The drink was consumed immediately after the 2-day burial and said to be better than tiswin, a fermented beverage. *Containers* Burls used as containers. *Cooking Tools* Burls used as vessels or cups. (26:178) **Papago Cooking Tools** Ribs made into a drying rack for datil fruit. (34:23) *Hunting & Fishing Item* Ribs split, made into rough cages, and used to trap Gambel quail and morning doves. (34:43) *Musical Instrument* Ribs with shallow, close-spaced notches used as soft rattles for certain songs. (34:68) *Season Indicator* Saguaro harvest marked the beginning of the new year. (36:59) *Tools* Giant ribs split in two and used as wooden tongs for gathering cholla joints and buds. (34:15) Four needles tied in a row and used as piercing instruments for tattooing. (34:51) Ribs used to make several kinds of light tools. (34:53) Ribs used as the larger of the two pieces of twisters used to make rope. (34:62) Ribs used for the handles of skin scrapers. (34:69) Perforations bored in sticks and used to smooth rough cords. (34:70) **Papago & Pima Tools** Trunks used to make cactus fruit picking poles. (35:14) **Pima Season Indicator** Saguaro harvest marked the beginning of the new year. (36:59) **Seri Tools** Dried plant skeletons used as a straight, slender pole for knocking off ripe fruit. (50:136) **Southwest Indians Containers** Seeds spread on saguaro ribs to dry. (17:16)

## **Carpinus**, Betulaceae

**Carpinus caroliniana** Walt., American Hornbeam

- **Drug—Cherokee Antidiarrheal** Compound infusion taken for flux. *Dermatological Aid* Compound infusion taken for "navel yellowness." Compound infusion of astringent inner bark taken for flux. *Urinary Aid* Compound infusion taken for cloudy urine. (80:39) Decoction of inner bark taken for difficult urination with discharge. (177:15) **Delaware, Ontario Gynecological Aid** Compound infusion of root or bark taken for "diseases peculiar to women." *Tonic* Compound infusion of root or bark taken for "general debility." (175:68) **Iroquois Antidiarrheal** Decoction used as a wash or infusion of vine given to babies with diarrhea. *Dermatological Aid* Complex compound decoction used as wash for affected parts of "Italian itch."

*Gynecological Aid* Compound decoction taken to facilitate childbirth and for parturition. *Other* Compound used for "big injuries." *Pediatric Aid* Decoction used as a wash or infusion of vine given to babies with diarrhea. *Tuberculosis Remedy* Compound decoction of bark chips taken for consumption. (87:299)

- **Fiber**—Chippewa *Building Material* Tree used for the main supporting posts for the ridge pole of the wigwam or tent. (71:127)

## **Carpobrotus**, Aizoaceae

**Carpobrotus aequilateralis** (Haw.) N. E. Br., Baby Sunrose

- **Food**—Luiseño *Fruit* Fruit used for food. (as *Mesembryanthemum aequilaterale* 155:232) **Pomo** *Fruit* Raw fruit used for food. (as *Mesembryanthemum aequilaterale* 66:13) **Pomo, Kashaya** *Fruit* Fruit eaten raw. (as *Mesembryanthemum chilense* 72:48)

## **Carthamus**, Asteraceae

**Carthamus tinctorius** L., Safflower

- **Food**—Hopi *Cooking Agent* Flowers used as a yellow coloring for paper bread. (56:20) Flowers used to color wafer bread yellow. (200:95)
- **Dye**—Hopi *Yellow* Flowers used to color bread yellow for certain dances. (190:167)

## **Carum**, Apiaceae

**Carum carvi** L., Caraway

- **Drug**—Abnaki *Analgesic* Used as an analgesic. (144:155) **Cree, Woodlands** *Pediatric Aid* and *Sedative* Seed given to a crying child to quiet him or her. (109:34) **Iroquois** *Veterinary Aid* Rhizomes given to pigs to make them stronger. (141:55)
- **Food**—Cree, **Woodlands** *Spice* Seeds added as a flavoring to bannock. *Staple* Seeds ground into flour. (109:34)

## **Carya**, Juglandaceae

**Carya alba** (L.) Nutt. ex Ell., Mockernut Hickory

- **Drug**—Cherokee *Abortifacient* Used for female obstructions. *Analgesic* Used for poliomyelitis pain. *Cold Remedy* Used for colds. *Dermatological Aid* Bark used as a dressing for cuts. Astringent and detergent inner bark used as dressing for cuts. *Diaphoretic* Used as a diaphoretic. *Emetic* Used as an emetic. *Gastrointestinal Aid* Used to invigorate the stomach. *Liver Aid* Used for bile. *Misc. Disease Remedy* Used for poliomyelitis pain. *Oral Aid* Bark chewed for sore mouth. (as *C. tomentosa* 80:38) Chewed inner bark used for sore mouth. (as *C. tomentosa* 177:14) *Orthopedic Aid* Infusion of bark taken by ballplayers to make limbs supple. (as *C. tomentosa* 80:38) **Delaware, Ontario** *Gynecological Aid* Compound infusion of bark taken for "female disorder." *Tonic* Compound infusion of bark taken as a tonic for general debility. (175:82)
- **Food**—Cherokee *Unspecified* Species used for food. (as *C. tomentosa* 80:38) **Choctaw** *Soup* Pounded nutmeat boiled, made into a paste, and eaten as a broth or soup. (as *Juglans squamosa* 25:8)
- **Fiber**—Cherokee *Basketry* Inner bark used to finish baskets. *Furniture* Inner bark used to make chair bottoms. (as *C. tomentosa* 80:38)
- **Other**—Cherokee *Containers* Wood used to make barrel hoops. *Cooking Tools* Wood used to make corn beaters. *Fuel* Wood used for firewood. *Hunting & Fishing Item* Wood used to make blowgun darts and arrow shafts. *Tools* Wood used to make tool handles. (as *C. to-*

*mentosa* 80:38) **Choctaw** *Insecticide* Leaves "scattered about to drive away fleas." (as *Juglans squamosa* 25:24)

**Carya cordiformis** (Wangenh.) K. Koch, Bitternut Hickory

- **Drug**—Iroquois *Dermatological Aid* Nutmeat oil formerly used for the hair, either alone or mixed with bear grease. (196:123) **Meskwaki** *Diuretic* Infusion of bark taken "to make the urine free." *Laxative* Infusion of bark taken "to make the bowels loose." **Panacea** Infusion of bark taken for "simple sicknesses." (152:224)
- **Food**—Iroquois *Beverage* Fresh nutmeats crushed, boiled, and liquid used as a drink. *Bread & Cake* Fresh nutmeats crushed and mixed with bread. (124:99) Nuts crushed, mixed with cornmeal and beans or berries, and made into bread. (196:123) *Pie & Pudding* Fresh nutmeats crushed and mixed with corn pudding. (124:99) *Sauce & Relish* Nuts pounded, boiled, resulting oil seasoned with salt and used as gravy. *Soup* Nutmeats crushed and added to corn soup. (196:123) *Special Food* Fresh nutmeats crushed, boiled, and oil used as a delicacy in corn bread and pudding. (124:99) Nutmeat oil added to the mush used by the False Race Societies. *Staple* Nutmeats crushed and added to hominy. *Unspecified* Nutmeats, after skimming off the oil, seasoned and mixed with mashed potatoes. (196:123)
- **Fiber**—Iroquois *Furniture* Bark used to make chairs. (141:39) **Omaha** *Snow Gear* Hickory rims used to make snowshoes tied with thongs of rawhide woven across. (as *Hicoria minima* 68:324)
- **Other**—Iroquois *Insecticide* Nutmeat oil mixed with bear grease and used as a preventive for mosquitoes. (196:123)

**Carya glabra** (R. Mill.) Sweet **var. glabra**, Pignut Hickory

- **Fiber**—Omaha *Snow Gear* Hickory rims used to make snowshoes tied with thongs of rawhide woven across. (as *Hicoria glabra* 68:324)

**Carya illinoensis** (Wangenh.) K. Koch, Pecan

- **Drug**—Comanche *Dermatological Aid* Pulverized leaves rubbed on affected part for ringworm. (29:520) **Kiowa** *Tuberculosis Remedy* Decoction of bark taken for tuberculosis. (as *C. pecan* 192:20)
- **Food**—Comanche *Unspecified* Nuts used for food. (29:520) *Winter Use Food* Nuts stored for winter use. (29:531)

**Carya laciniosa** (Michx. f.) G. Don, Shellbark Hickory

- **Drug**—Cherokee *Abortifacient* Used for female obstructions. *Analgesic* Used for poliomyelitis pain. *Cold Remedy* Used for colds. *Dermatological Aid* Bark used as a dressing for cuts. Astringent and detergent inner bark used as dressing for cuts. *Diaphoretic* Used as a diaphoretic. *Emetic* Used as an emetic. *Gastrointestinal Aid* Used to invigorate the stomach. *Liver Aid* Used for bile. *Misc. Disease Remedy* Used for poliomyelitis pain. *Oral Aid* Bark chewed for sore mouth. *Orthopedic Aid* Infusion of bark taken by ballplayers to make limbs supple. (80:38)
- **Food**—Cherokee *Unspecified* Species used for food. (80:38)
- **Fiber**—Cherokee *Basketry* Inner bark used to finish baskets. *Furniture* Inner bark used to make chair bottoms. (80:38) **Omaha** *Snow Gear* Hickory rims used to make snowshoes tied with thongs of rawhide woven across. (as *Hicoria laciniosa* 68:324)
- **Other**—Cherokee *Containers* Wood used to make barrel hoops. *Cooking Tools* Wood used to make corn beaters. *Fuel* Wood used for firewood. *Hunting & Fishing Item* Wood used to make blowgun darts and arrow shafts. *Tools* Wood used to make tool handles. (80:38)

**Carya ovata** (P. Mill.) K. Koch, Shagbark Hickory

- **Drug—Chippewa Analgesic** Fresh, small shoots steamed as inhalant for headache. *Herbal Steam* Fresh small shoots placed on hot stones as herbal steam for headache. (as *Hicoria alba* 53:338) **Delaware, Ontario Gynecological Aid** Compound infusion of bark taken for “diseases peculiar to women.” *Tonic* Compound infusion of bark taken for “general debility.” (175:68) **Iroquois Anthelmintic** Compound decoction with white from inside bark taken by adults for worms. *Antirheumatic (External)* Decoction of bark applied as a poultice for arthritis. *Antirheumatic (Internal)* Decoction of bark taken for arthritis. (87:297) *Dermatological Aid* Nutmeat oil formerly used for the hair, either alone or mixed with bear grease. (196:123)
- **Food—Dakota Soup** Nuts used to make soup. *Sweetener* Sap used to make sugar. Hickory chips boiled to make sugar. *Unspecified* Nuts eaten plain or with honey. (as *Hicoria ovata* 70:74) **Iroquois Baby Food** Fresh nutmeats crushed, boiled, and oil used as a baby food. *Beverage* Fresh nutmeats crushed, boiled, and liquid used as a drink. *Bread & Cake* Fresh nutmeats crushed and mixed with bread. (124:99) Nuts crushed, mixed with cornmeal and beans or berries, and made into bread. (196:123) *Pie & Pudding* Fresh nutmeats crushed and mixed with corn pudding. (124:99) *Sauce & Relish* Nuts pounded, boiled, resulting oil seasoned with salt and used as gravy. *Soup* Nutmeats crushed and added to corn soup. (196:123) *Special Food* Fresh nutmeats crushed, boiled, and oil used as a delicacy in corn bread and pudding. (124:99) Nutmeat oil added to the mush used by the False Face Societies. *Staple* Nutmeats crushed and added to hominy. *Unspecified* Nutmeats, after skimming off the oil, seasoned and mixed with mashed potatoes. (196:123) **Lakota Unspecified** Nuts used for food. (139:49) **Meskwaki Winter Use Food** Nuts stored for winter use. (152:259) **Ojibwa Unspecified** Edible nuts were appreciated. (153:405) **Omaha Soup** Nuts used to make soup. *Sweetener* Sap used to make sugar. Hickory chips boiled to make sugar. *Unspecified* Nuts eaten plain or with honey. **Pawnee Soup** Nuts used to make soup. *Sweetener* Sap used to make sugar. Hickory chips boiled to make sugar. *Unspecified* Nuts eaten plain or with honey. **Ponca Soup** Nuts used to make soup. *Sweetener* Sap used to make sugar. Hickory chips boiled to make sugar. *Unspecified* Nuts eaten plain or with honey. (as *Hicoria ovata* 70:74) **Potawatomi Winter Use Food** Hickory nuts gathered for winter use. (154:103) **Winnebago Soup** Nuts used to make soup. *Sweetener* Sap used to make sugar. Hickory chips boiled to make sugar. *Unspecified* Nuts eaten plain or with honey. (as *Hicoria ovata* 70:74)
- **Fiber—Omaha Snow Gear** Hickory rims used to make snowshoes tied with thongs of rawhide woven across. (as *Hicoria alba* 68:324)
- **Other—Chippewa Hunting & Fishing Item** Used for bows. (as *Hicoria alba* 53:377) **Iroquois Insecticide** Nutmeat oil mixed with bear grease and used as a preventive for mosquitoes. (196:123) **Ojibwa Hunting & Fishing Item** Wood used for making bows. Some are quite particular about the piece of wood they select, choosing a billet from the tree that includes heartwood on one side and sapwood on the other. The heartwood is the front of the bow in use, while the sapwood is nearest the user. It is a wood of general utility. (153:419) **Potawatomi Hunting & Fishing Item** Strong, elastic wood used to make bows and arrows. (154:113)

**Carya pallida** (Ashe) Engl. & Graebn., Sand Hickory

- **Drug—Cherokee Abortifacient** Used for female obstructions. *Analgesic* Used for poliomyelitis pain. *Cold Remedy* Used for colds. *Dermatological Aid* Bark used as a dressing for cuts. Astringent and detergent inner bark used as dressing for cuts. *Diaphoretic* Used as a diaphoretic. *Emetic* Used as an emetic. *Gastrointestinal Aid* Used to invigorate the stomach. *Liver Aid* Used for bile. *Misc. Disease Remedy* Used for poliomyelitis pain. *Oral Aid* Bark chewed for sore mouth. *Orthopedic Aid* Infusion of bark taken by ballplayers to make limbs supple. (80:38)
- **Food—Cherokee Unspecified Species** used for food. (80:38)
- **Fiber—Cherokee Basketry** Inner bark used to finish baskets. *Furniture* Inner bark used to make chair bottoms. (80:38)
- **Other—Cherokee Containers** Wood used to make barrel hoops. *Cooking Tools* Wood used to make corn beaters. *Fuel* Wood used for firewood. *Hunting & Fishing Item* Wood used to make blowgun darts and arrow shafts. *Tools* Wood used to make tool handles. (80:38)

**Carya sp.**, Hickory

- **Food—Cherokee Cooking Agent** Wood ash and water used as a lye to skin corn, corn ground into a fine meal and made into bread. *Dried Food* Nuts dried in the rafters for future use. *Soup* Nuts and shells ground into a fine meal and used to make soup. *Spice* Wood ash, salt, and black pepper used to cure pork. (126:40) **Seminole Unspecified** Plant used for food. (169:491)
- **Other—Cherokee Cooking Tools** Dried leaves used to wrap around ball of meal, boiled for 1 hour and used for bread. (126:40) **Seminole Hunting & Fishing Item** Plant used to make bows and arrows. (169:492)

**Caryophyllaceae**, see *Arenaria*, *Cerastium*, *Drymaria*, *Honckenya*, *Paronychia*, *Pseudostellaria*, *Saponaria*, *Silene*, *Stellaria***Cassiope**, Ericaceae**Cassiope mertensiana** (Bong.) D. Don, Western Moss Heather

- **Drug—Thompson Tuberculosis Remedy** Decoction of plant taken over a period of time for tuberculosis and spitting up blood. (187:215)

**Cassiope sp.**

- **Drug—Thompson Tuberculosis Remedy** Decoction of several unidentified species of *Cassiope* taken over a period of time for tuberculosis and spitting up blood. (187:215)

**Cassiope tetragona** (L.) D. Don, White Arctic Mountain Heather

- **Fiber—Eskimo, Alaska Building Material** Plant, mosses, and lichens gathered for insulating houses against cold. (4:715)
- **Other—Eskimo, Inuktitut Fuel** Used for tinder, burned green and even frozen, and fuel. (202:185)

**Cassytha**, Lauraceae**Cassytha filiformis** L., Devil's Gut

- **Drug—Hawaiian Gynecological Aid** Plant pounded, water added, and taken by women to remove blood from the womb while giving birth. *Respiratory Aid* Plant and other plants pounded, water added, and taken to remove phlegm causing congestion in the chest. (2:46)

**Castanea**, Fagaceae**Castanea dentata** (Marsh.) Borkh., American Chestnut

- **Drug**—**Cherokee** *Cough Medicine* Compound decoction of leaves used as cough syrup. *Dermatological Aid* Leaves from young sprouts dipped in hot water and put on sores. *Gastrointestinal Aid* Infusion given for the stomach. *Gynecological Aid* Cold, compound infusion of bark used to stop bleeding after childbirth. *Heart Medicine* Infusion of year-old leaves taken for heart trouble. *Misc. Disease Remedy* Infusion given for typhoid. *Pediatric Aid* Warmed galls applied to make infant's navel recede. (80:29) **Iroquois** *Dermatological Aid* Compound decoction used as wash for parts affected by "Italian itch." Compound wood powder used for chafed babies. (87:302) Nutmeat oil formerly used for the hair, either alone or mixed with bear grease. - **Other**—**Lakota** *Paint* Roots chewed and smeared on the body and be impervious to wounding. (139:43)

## *Celtis*, Ulmaceae

*Celtis laevigata* Willd., Sugarberry

- **Drug**—**Houma** *Throat Aid* Decoction of bark taken for sore throat. *Venereal Aid* Compound decoction of bark with powdered shells taken for venereal disease. (158:57)
- **Food**—**Comanche** *Fruit* Fruits beaten to a pulp, mixed with fat, rolled into balls, and roasted over fire. (29:521) **Seminole** *Unspecified* Plant used for food. (169:489)
- **Other**—**Seminole** *Tools* Plant used to make squirting tubes. (169:489)

*Celtis laevigata* var. *brevipes* (S. Wats.) Sarg., Sugarberry

- **Food**—**Yavapai** *Unspecified* Ground, boiled, and used for food. (65:256)

*Celtis laevigata* var. *reticulata* (Torr.) L. Benson, Netleaf Hackberry

- **Drug**—**Navajo**, **Kayenta** *Gastrointestinal Aid* Plant used for indigestion. (as *C. reticulata* 205:18)
- **Food**—**Acoma** *Fruit* Berries extensively used as food. (as *C. reticulata* 32:21) **Apache**, **Chiricahua** & **Mescalero** *Bread & Cake* Fruit ground, caked, and dried for winter use. *Fruit* Fruit eaten fresh. *Preserves* Fruit used to make jelly. (as *C. reticulata* 33:46) **Hualapai** *Dried Food* Fruit dried for winter use. *Fruit* Fruit eaten fresh. (as *C. reticulata* 195:6) **Laguna** *Fruit* Berries extensively used as food. (as *C. reticulata* 32:21) **Navajo** *Fruit* Berries ground and eaten. (as *C. reticulata* 55:41) **Papago** *Fruit* Fruits eaten for food. **Pueblo** *Fruit* Berries used for food. (as *C. reticulata* 32:21) **Tewa** *Fruit* Berries eaten. (as *C. reticulata* 138:39)
- **Fiber**—**Papago** *Clothing* Bark used to make sandals. (as *C. reticulata* 34:49)
- **Dye**—**Navajo** *Red-Brown* Leaves and branches boiled into a dark brown or red dye for wool. (as *C. reticulata* 55:41)

- **Other**—**Havasupai** *Fuel* Wood used for firewood. (as *C. reticulata* 197:215) **Navajo** *Tools* Wood used to make tubes for bellows. (as *C. reticulata* 55:41) **Tewa** *Tools* Wood used to make handles for axes and hoes. (as *C. reticulata* 138:39)

*Celtis occidentalis* L., Common Hackberry

- **Drug**—**Houma** *Throat Aid* Decoction of bark taken for sore throat. *Venereal Aid* Compound decoction of bark with powdered shells taken for venereal disease. (158:57) **Iroquois** *Abortifacient* Decoction taken "for suppressed menses in girls, cause: working in the sun." *Cold Remedy* Compound decoction taken by "women when they catch cold with the menses." *Gynecological Aid* Decoction of bark used as "woman's medicine" and regulated menses. (87:306) **Meskwaki** *Veterinary Aid* Inner bark fed to ponies as a conditioner. (152:250)
- **Food**—**Dakota** *Spice* Dried fruit pounded to make a condiment used for seasoning meat in cooking. (69:362) Berries used to flavor meat. (70:76) **Keres**, **Western** *Fruit* Berries used extensively for food. (171:35) **Meskwaki** *Porridge* Ground, hard berries made into a mush. (152:265) **Omaha** *Fruit* Berries used occasionally for food. **Pawnee** *Fruit* Berries pounded fine, mixed with a little fat, and parched corn and used for food. (70:76)
- **Other**—**Kiowa** *Fuel* Wood used as fuel for the altar fire in the peyote ceremony. (192:22)

*Celtis occidentalis* L. var. *occidentalis*, Western Hackberry

- **Food**—**Kiowa** *Fruit* Berries pounded into a paste-like consistency, molded onto a stick, and baked over an open fire. (192:23)

## *Cenchrus*, Poaceae

*Cenchrus calyculatus*, Ka-mano-mano

- **Drug**—**Hawaiian** *Dermatological Aid* Shoots, leaves, roots, and other plants pounded and resulting liquid used on fresh, deep cuts. *Tuberculosis Remedy* Shoots, leaves, roots, and other plants pounded and resulting liquid used on scrofulous sores. (2:48)

## *Centaurea*, Asteraceae

*Centaurea americana* Nutt., American Star Thistle

- **Drug**—**Kiowa** *Dermatological Aid* Poultice of leaves applied to skin sores. (192:58)

*Centaurea melitensis* L., Maltese Star Thistle

- **Drug**—**Mahuna** *Kidney Aid* Plant used for the kidneys. (140:69)

*Centaurea* sp., Bachelor Buttons

- **Drug**—**Rappahannock** *Dermatological Aid* Bruised leaves used as a salve for sores. (161:33)

## *Centaureium*, Gentianaceae

*Centaureium exaltatum* (Griseb.) W. Wight ex Piper, Desert Centaury

- **Drug**—**Miwok** *Analgesic* Decoction of stems and leaves taken for internal pains. *Gastrointestinal Aid* Decoction of stems and leaves taken for stomachache. *Toothache Remedy* Decoction of stems and leaves taken for toothaches. *Tuberculosis Remedy* Decoction of stems and leaves taken for consumption. (12:168)

***Centaurium muehlenbergii*** (Griseb.) W. Wight ex Piper, Muhlenberg's Centaury

- **Drug**—Mahuna *Febrifuge*, *Gastrointestinal Aid*, and *Laxative* Infusion of plants taken for constipation caused by stomach fevers. (as *Erythaea muehlenbergii* 140:8)

***Centaurium venustum*** (Gray) B. L. Robins., Charming Centaury

- **Drug**—Luiseño *Febrifuge* Infusion of plant taken for fevers. (as *Erythraea venusta* 155:230) Miwok *Febrifuge* Decoction of flowers and leaves taken for fever. *Misc. Disease Remedy* Decoction of flowers and leaves taken for ague. *Pulmonary Aid* Decoction of flowers, leaves, and brandy taken for pneumonia. (12:168)

## ***Cephalanthus***, Rubiaceae

***Cephalanthus occidentalis*** L., Common Buttonbush

- **Drug**—Chickasaw *Eye Medicine* Poultice of warmed roots applied to the head for eye troubles. (177:58) Choctaw *Antidiarrheal* Strong decoction of tree bark taken as a favorite medicine for dysentery. (28:287) *Eye Medicine* Decoction of bark used as wash for sore eyes. (25:24) Decoction of bark used as a bath for sore eyes. (177:58) *Febrifuge* Root bark and bark used as a febrifuge. *Tonic* Root bark and bark used as a tonic. (28:287) *Toothache Remedy* Bark chewed for toothache. (25:24) Bark chewed for toothaches. (177:58) Kiowa *Antihemorrhagic* Decoction of roots taken for hemorrhages. (192:51) Koasati *Antirheumatic (Internal)* Decoction of leaves taken for rheumatism. *Orthopedic Aid* Decoction of roots taken for enlarged muscles. (177:58) Meskwaki *Emetic* Inner bark, very important medicine, used as an emetic. (152:243) Seminole *Analgesic* Decoction of bark taken for headaches. (169:283) *Antidiarrheal* Decoction of plant taken for wolf ghost sickness: diarrhea and painful defecation. (169:228) *Antiemetic* Decoction of roots or berries used for horse sickness: nausea, constipation, and blocked urination. (169:189) *Blood Medicine* Decoction of roots taken for menstruation sickness: yellow eyes and skin, weakness, and shaking head.<sup>13</sup> (169:247) *Cathartic* Decoction of plant taken for wolf ghost sickness: diarrhea and painful defecation. (169:283) *Laxative* Decoction of roots or berries used for horse sickness: nausea, constipation, and blocked urination. (169:189) *Other* and *Strengtheners* Decoction of roots taken for menstruation sickness: yellow eyes and skin, weakness, and shaking head.<sup>13</sup> (169:247) *Unspecified* Plant used for medicinal purposes. (169:162) *Urinary Aid* Decoction of roots or berries used for horse sickness: nausea, constipation, and blocked urination. (169:189) Plant taken for urine retention. (169:273)
- **Other**—Comanche *Toys & Games* Wood used to make game sticks. (29:521)

## ***Cerastium***, Caryophyllaceae

***Cerastium arvense*** L., Field Chickweed

- **Drug**—Iroquois *Dermatological Aid* Decoction of plant used as an astringent. *Gynecological Aid* Decoction of plant taken for injuries and miscarriage. Decoction taken to “stop bleeding and stops child from passing through uterus.” (87:317)

***Cerastium beeringianum*** Cham. & Schlecht., Bering Chickweed

- **Drug**—Navajo, Ramah *Veterinary Aid* Cold infusion of plant used for

sheep or horses with eye troubles. (191:26)

***Cerastium fontanum* ssp. *vulgare*** (Hartman) Greuter & Burdet, Big Chickweed

- **Drug**—Cherokee *Anthelmintic* and *Pediatric Aid* Compound infusion of stem and root given to children for worms. (as *C. holosteoides* 80:29)

## ***Cerasus***, Rosaceae

***Cerasus crenulata*** Greene, Wild Plum

- **Dye**—Navajo *Purple Roots* used to color wool purple. (55:52)

## ***Cercis***, Fabaceae

***Cercis canadensis*** L., Eastern Redbud

- **Drug**—Alabama *Febrifuge* Cold infusion of roots and inner bark taken for fever. (177:31) *Pulmonary Aid* Infusion of root and inner bark taken for congestion. (172:665) *Respiratory Aid* Cold infusion of roots and inner bark taken for congestion. (177:31) Cherokee *Pulmonary Aid* Infusion of bark given for whooping cough. (80:52) Delaware *Antiemetic* Infusion of bark used as a cold drink for vomiting. *Febrifuge* Infusion of bark used as a cold drink for fever. (176:30) Delaware, Oklahoma *Antiemetic* Infusion of bark taken for vomiting. *Febrifuge* Infusion of bark taken for fever. (175:25, 74)
- **Food**—Cherokee *Unspecified* Blossoms eaten by children. (203:74)
- **Other**—Kiowa *Fuel* Slender stems used for fuel during the winter. *Season Indicator* Flower welcomed as a sign of spring. This plant was esteemed because it is one of the earliest shrubs to flower in the spring. The red or pink flowers that appear before the leaves gave rise to their saying “pink flowers form into leaves.” Flowering branches were used in the homes to “drive winter out.” (192:32)

***Cercis canadensis* var. *texensis*** (S. Wats.) M. Hopkins, California Redbud

- **Drug**—Mendocino Indian *Febrifuge* Bark used for chills and fever. (as *C. occidentalis* 41:356)
- **Food**—Navajo *Unspecified* Pods roasted in ashes and seeds eaten. (as *C. occidentalis* 32:21) Seeds roasted and eaten. (as *C. occidentalis* 55:56) Navajo, Kayenta *Unspecified* Pods roasted in ashes and seeds eaten. (as *C. occidentalis* 205:28)
- **Fiber**—Havasupai *Building Material* Wood used to make fence posts. (as *C. occidentalis* 197:226) Maidu *Basketry* Peeled withes used as coarse twine and coil thread in the manufacture of baskets. (as *Cercus occidentalis* 173:71) Mendocino Indian *Basketry* Wood used for withes in constructing basket skeletons. *Cordage* Bark and wood of young sprouts used like thread or wool to twine in and out of twined baskets. (as *Cercis occidentalis* 41:356) Mewuk *Basketry* Used as the outside strands in coiled basketry. (as *C. occidentalis* 117:328) Modesse *Basketry* Used for the red design in baskets. (as *C. occidentalis* 117:223) Neeshenam *Basketry* Wood used for the wool in basket making. (as *C. occidentalis* 129:375) Pomo *Basketry* Red bark used as design material for baskets. White, inner bark used in basketry. (as *C. occidentalis* 9:138) Split strands used for basket body material. (as *C. occidentalis* 117:296) Pomo, Kashaya *Basketry* Strips of switch bark used for brown design or bark peeled to show the white used to make baskets. (as *C. occidentalis* 72:96) Yuki *Basketry* Red bark used as design material on twined basketry. (as *C. occidentalis* 9:138) Used as

basket material. *Sewing Material* Wood, sapwood, and roots used for sewing material. (as *C. occidentalis* 103:423)

- **Other**—**Havasupai** *Hunting & Fishing Item* Wood used to make bows. *Tools* Wood used to make tool handles. (as *C. occidentalis* 197:226) **Maidu** *Decorations* Unpeeled withes used as decorative coil thread in the manufacture of baskets. (as *Cercus occidentalis* 173:71) **Navajo** *Incense & Fragrance* Leaves used as an incense in the Mountain Chant. (as *Cercis occidentalis* 55:56)

### *Cercis* sp., Redbud

- **Fiber**—**Wintoon** *Basketry* Branches used in the making and decorating of baskets. (117:275)

## *Cercocarpus*, Rosaceae

### *Cercocarpus intricatus* S. Wats., Littleleaf Mountain Mahogany

- **Other**—**Hopi** *Ceremonial Items* and **Tewa** *Ceremonial Items* Plant used during midwinter ceremonial to make prayer sticks. (42:299)

### *Cercocarpus ledifolius* Nutt., Curlleaf Mountain Mahogany

- **Drug**—**Gosiute** *Burn Dressing* Poultice of powdered green wood applied to burns. (39:350) Charred wood powder applied to burns. (39:365) **Kawaiisu** *Ear Medicine* Dried, powdered plant exudation applied for earaches. Dried exudation ground into a powder and applied to earaches. *Gynecological Aid* Decoction of bark and leaves taken for “women’s disease.” *Venereal Aid* Decoction of bark taken for gonorrhea. (206:18) **Paiute** *Analgesic* Decoction of bark taken for stomachaches. *Antidiarrheal* Compound infusion of scraped bark given to children for diarrhea. Decoction of bark taken for diarrhea. *Blood Medicine* Cold decoction of bark taken as a blood tonic. *Burn Dressing* Powder or paste of bark or wood applied to burns. (180:53–55) *Cold Remedy* Infusion of bark taken for colds. (118:38) Decoction or infusion of dried bark or leaves taken for colds and coughs. *Cough Medicine* Decoction of bark or infusion of bark or leaves taken for coughs and colds. *Dermatological Aid* Powder or paste of bark or wood applied to sores, cuts, or wounds. *Gastrointestinal Aid* Decoction of bark taken for stomachaches and stomach ulcers. *Heart Medicine* Decoction of leaves or bark taken for heart disorders. *Pediatric Aid* Compound infusion of scraped bark given to children for diarrhea. *Pulmonary Aid* Decoction of bark taken for pneumonia. *Tuberculosis Remedy* Simple or compound decoction of dried bark used for tuberculosis. *Venereal Aid* Decoction of bark taken for venereal diseases. Pulverized wood sprinkled on syphilitic sores. (180:53–55) **Paiute, Northern** *Antihemorrhagic* Decoction of dried bark taken for spitting up blood. *Tuberculosis Remedy* Decoction of dried bark taken for tuberculosis. (59:129) **Shoshoni** *Antidiarrheal* Compound infusion of scraped bark given to children for diarrhea. *Blood Medicine* Cold decoction of bark taken as a blood tonic. *Burn Dressing* Powder or paste of bark or wood applied to burns. *Cold Remedy* Decoction of bark taken for colds. *Cough Medicine* Decoction of bark taken for coughs. *Dermatological Aid* Poultice of pulverized leaves and bark applied to swellings. Powder or paste of bark or wood applied to sores, cuts, or wounds. *Eye Medicine* Strained decoction of inner bark used as a wash for eye diseases. *Heart Medicine* Decoction of leaves or bark taken for heart disorders. *Misc. (as *C. betuloides* 118:62) **Hopi Ceremonial Items** Wood used to make pahos (prayer sticks). *Tools* Wood used to make implements. (as *C. betuloides* 42:298) **Karok Tools** Hard wood used to make digging sticks. (as *C. betuloides* 148:384) **Kawaiisu Smoking Tools** Wood carved into a pipe head and used with a hollowed section of a honeysuckle twig as a pipestem. (as *C. betuloides* 206:18) **Mendocino Indian Hunting & Fishing Item** Wood formerly used to make arrow tips. *Tools* Wood formerly used to make tools for digging Indian potatoes and worms out of the ground. *Weapon* Large sticks used for war spears and fighting clubs. (as *C. betuloides* 41:354) **Modesse Hunting & Fishing Item** Wood used for spear points. *Tools* Wood used for digging sticks. (as *C. parvifolius* 117:223) **Wintoon Tools** Wood used to make digging sticks. (as *C. betuloides* 117:264) **Yuki Hunting & Fishing Item** Wood used to make bows. *Walking Sticks* Wood used to make canes. (as *C. betuloides* 49:93)

**Cercocarpus sp.**, Mountain Mahogany

- **Dye**—Keresan *Red* Used to make a red dye for staining moccasins. (198:562)

**Cereus**, Cactaceae

**Cereus sp.**

- **Food**—Apache, White Mountain *Fruit* Fruit used for food. *Preserves* Fruit used to make a kind of butter. (136:156)

**Cetraria**, Parmeliaceae, lichen

**Cetraria crispa** (Ach.) Nyl., Shield Lichen

- **Food**—Eskimo, Inuktitut *Spice* Used as a soup condiment. (202:183)

**Cetraria cucullata** (Bellard) Ach., Curled Shield Lichen

- **Food**—Eskimo, Inuktitut *Sauce & Relish* Used as a condiment for fish or duck soup. (202:188)

**Chaenactis**, Asteraceae

**Chaenactis douglasii** (Hook.) Hook. & Arn., Douglas's Dustymaiden

- **Drug**—Gosiute *Analgesic* and *Orthopedic Aid* Mashed plant rubbed on limbs for soreness or aching. (39:365) **Great Basin Indian Heart Medicine** and *Pediatric Aid* Infusion of whole plant given to children to slow their heartbeats. (121:50) **Okanagan Dermatological Aid** Infusion used as wash for chapped hands, pimples, boils, tumors, and swellings. *Snakebite Remedy* Infusion of plant used as wash for insect and snake bites. (125:42) **Paiute Analgesic** Infusion of young leaves taken or put on the hair for headaches. (111:118) *Cold Remedy* Decoction of plant or leaves taken for colds. *Cough Medicine* Decoction of plant or leaves taken for coughs. (180:55, 56) *Dermatological Aid* Poultice of crushed leaves applied to swellings. (104:196) Poultice of crushed, fresh plants or leaves applied to swellings. *Heart Medicine* Infusion of plant used as a heart depressant. (180:55, 56) *Orthopedic Aid* Poultice of crushed leaves applied to sprains. (104:

196) *Snakebite Remedy* Poultice of pulped leaves and stems applied to rattlesnake bites. (180:55, 56) **Sanpoil Cathartic** Decoction of roots taken by family of dead one as a purge to avoid illness. *Tuberculosis Remedy* Decoction of roots taken by family of dead one to avoid taking consumption. (131:221) **Shoshoni Dermatological Aid** Poultice of crushed fresh plants or leaves applied to swellings. *Emetic* Decoction of plant taken as an emetic for indigestion. *Gastrointestinal Aid* Decoction of plant taken as an emetic for indigestion or sour stomach. *Kidney Aid* Decoction of plants used as a bath for swollen limbs or dropsical conditions. (180:55, 56) **Thompson Dermatological Aid** Infusion of plant used as wash for chapped hands, pimples, boils, and tumors. Infusion of whole plant taken for swellings. (125:42) Decoction of plant used on various skin conditions and insect bites. Decoction of whole plant taken for any kind of swellings. *Gastrointestinal Aid* Mild decoction taken as a tonic for the stomach. (164:473) *Snakebite Remedy* Infusion of plant used as wash for insect and snake bites. (125:42) Strong decoction of entire plant applied to insect and snake bites. *Stimulant* Mild decoction of entire plant taken as a tonic for the stomach and lassitude. *Tonic* Mild decoction taken as a tonic for the stomach and lassitude. (164:473) *Unspecified Plant* considered a good medicine. (187:178)

**Chaenactis douglasii** (Hook.) Hook. & Arn. **var. douglasii**, Douglas's Dustymaiden

- **Drug**—Okanagan-Colville *Eye Medicine* Infusion of roots used as an eyewash. (188:82)

**Chaenactis glabriuscula** DC., Yellow Chaenactis

- **Food**—Cahuilla *Porridge* Parched seeds ground into flour, mixed with other seeds, and used to form a mush. (15:52)

**Chaenactis santolinoides** Greene, Santolina Pincushion

- **Drug**—Kawaiisu *Analgesic* and *Orthopedic Aid* Decoction of roots taken for sore chest, sore shoulders, and internal soreness. (206:19)

**Chaenactis stevioides** Hook. & Arn., Steve's Dustymaiden

- **Drug**—Nevada Indian *Heart Medicine* and *Pediatric Aid* Infusion of plant used to slow down heartbeats of children with fevers. (118:40)
- **Other**—Navajo, Kayenta *Fasteners* Juice used as glue to mend broken ceremonial items. (205:46)

**Chaerophyllum**, Apiaceae

**Chaerophyllum procumbens** (L.) Crantz, Spreading Chervil

- **Drug**—Chickasaw *Emetic* and *Poison* Poisonous root used as an emetic. (28:289)

**Chaetopappa**, Asteraceae

**Chaetopappa ericoides** (Torr.) Nesom, Rose Heath

- **Drug**—Havasupai *Gastrointestinal Aid* Decoction of whole plant or roots taken or used as a wash for digestive troubles. *Pediatric Aid* Decoction of whole plant or roots given or used as a wash for children with digestive troubles. (as *Leucelene ericoides* 197:248) **Hopi Nose Medicine** Infusion of root used to "aid a sore nose." (as *Aster leucelene* 200:34, 95) *Panacea* Root used as a universal panacea. *Pediatric Aid* Infusion of herb used to "quiet the baby." (as *Aster leucelene* 200:95) *Reproductive Aid* Plant used to determine the sex of a child. This is quite an ambiguous reference. The text says this: "This plant is

used by the Hopi Indians as genetic factor among the Indian clans. Genetic factor refers to the choice of a small (female) or large (male) plant to assist in determining the sex of a child." It is, therefore, unclear if the plant is used to detect whether the fetus is male or female, or to cause the child to be one or the other. Elsewhere, this author tells us that the Hopi make a decoction of the leaves of juniper "which is said to be a laxative and is taken by women who desire a female child." This suggests that the second possibility may be the correct one, with administration of large plants if you want a son and small ones if you want a daughter. (as *Aster arenosus* 42:290) *Sedative* Infusion of root used to "quiet the baby." (as *Aster leucelene* 200:36, 95) *Stimulant* Plant used as a stimulant. (as *Aster leucelene* 200:31) **Keres, Western Antirheumatic (External)** Poultice or infusion of plant used for swellings. (as *Leucelene ericoides* 171:52) **Navajo, Kayenta Kidney Aid** Infusion of plant with sumac berries taken for kidney disease. *Urinary Aid* Infusion of plant with sumac berries taken for bladder disease. (as *Aster ericaefolius* 205:45) **Navajo, Ramah Nose Medicine** Dried pulverized plant used as snuff or cold infusion used as drops for "nose trouble." *Snakebite Remedy* Poultice of chewed leaves applied and infusion taken for snakebite. *Toothache Remedy* Leaves chewed for toothache. (as *Aster arenosus* 191:48) **Zuni Analgesic** Infusion of pulverized plant applied for pain from cold or rheumatism. *Antirheumatic (External)* Infusion of whole plant rubbed on body for swelling and rheumatic pain. *Cold Remedy* Infusion of whole plant rubbed on body for pain from a cold. *Dermatological Aid* Infusion of pulverized plant rubbed over body for swellings. *Gynecological Aid* Warm infusion of plant taken to "hasten parturition." (as *Leucelene ericoides* 166:55)

## **Chamaebatia**, Rosaceae

**Chamaebatia foliolosa** Benth., Sierran Mountain Misery

- **Drug**—Miwok *Antirheumatic (Internal)* Infusion of leaves taken for rheumatism. *Cold Remedy* Decoction of leaves taken for colds. *Cough Medicine* Decoction of leaves taken for coughs. *Misc. Disease Remedy* Infusion of leaves taken for chickenpox, measles, and smallpox. *Venereal Aid* Leaves used as ingredient in medicines for venereal diseases. (12:168)

## **Chamaebatiaria**, Rosaceae

**Chamaebatiaria millefolium** (Torr.) Maxim., Fernbush

- **Drug**—Gosiute *Venereal Aid* Plant used for gonorrhea. (39:365) Poultice of plant applied or plant used as wash for venereal diseases. (as *Spiraea millefolium* 39:351) **Navajo, Ramah Hunting Medicine** Leaves rolled in corn husk smoked for good luck in hunting. (191:30) **Paiute Orthopedic Aid** Compound decoction of young shoots taken for lumbago. **Shoshoni Analgesic** and *Gastrointestinal Aid* Decoction of fresh or dried leaves taken for stomachaches or cramps. (180:56, 57)
- **Food**—Navajo, Ramah *Fodder* Used as sheep, goat, and deer feed and not eaten by cattle. (191:30)

## **Chamaecrista**, Fabaceae

**Chamaecrista fasciculata** (Michx.) Greene, Sleepingplant

- **Drug**—Cherokee *Sports Medicine* Root medicine used to keep ball-players from tiring. *Stimulant* Compound infusion given for fainting spells. (as *Cassia fasciculata* 80:54) **Seminole Antiemetic** Cold decoc-

tion of plant used for nausea. (as *Chamaecrista brachista* 169:276)

- **Other**—Seminole *Tools* Plant used as a bed for ripening persimmons. (as *C. brachiata* 169:496)

**Chamaecrista nictitans** (L.) Moench **ssp. nictitans**  
**var. nictitans**, Partridge Pea

- **Drug**—Cherokee *Sports Medicine* Root medicine used to keep ball-players from tiring. *Stimulant* Compound infusion given for fainting spells. (as *Cassia nictitans* 80:54)

## **Chamaecyparis**, Cupressaceae, conifer

**Chamaecyparis lawsoniana** (A. Murr.) Parl., Port Orford Cedar

- **Fiber**—Karak *Brushes & Brooms* Branches used to make brooms. *Building Material* Wood made into planks and used to build sweat houses. Wood used as the main post in house construction. *Furniture* Wood used to make circular stools and headrests for the sweat house. *Mats, Rugs & Bedding* Wood used to make pillows for the sweat house. (148:379)
- **Other**—Yurok *Toys & Games* Fruits used by children to throw at each other. (6:23)

**Chamaecyparis nootkatensis** (D. Don) Spach, Alaska Cedar

- **Drug**—Bella Coola *Adjuvant* Soft bark used as cover for poultices of *Trautvetteria grandis* and *Ranunculus acris*. (150:49) **Kwakiutl Antirheumatic (External)** Plant used in sweat baths for arthritis and rheumatism. *Dermatological Aid* Infusion of branch tips used as a wash for sores and swellings. Poultice of chewed leaves applied to sores. Sharp boughs rubbed on sores and swellings until skin was broken. *Herbal Steam* Plant used in sweat baths for arthritis and rheumatism. *Kidney Aid* Compound decoction of leaves applied to swelling on woman's kidney. *Panacea* Infusion of branch tips taken for general illness. *Strengtheners* Bark ash and oil used as a lotion to give strength to the very ill. (183:266) **Kwakiutl, Southern Antirheumatic (External)** Branches placed on top of burning sea wrack as part of a steam treatment for rheumatism. *Strengtheners* Branches placed on top of burning sea wrack as part of a steam treatment for general sickness. (183:261)
- **Fiber**—Bella Coola *Clothing* Inner bark used for weaving capes. *Mats, Rugs & Bedding* Inner bark used for weaving mats and blankets. (184:197) **Haisla Clothing** Inner bark fiber used to make clothing for the nobility. (73:153) **Haisla & Hanaksiala Canoe Material** Wood used to make regular and racing paddles for canoes. Wood used to make boat ribs. *Clothing* Inner bark woven into capes and loincloths. *Mats, Rugs & Bedding* Inner bark woven into blankets. (43:159) **Hesquiatic Canoe Material** Wood used for making wedge-shaped block for the back of a canoe, used to keep the feet dry. *Clothing* Wood used for making ornamental dishes and headdresses. Bark softened with special oil and used for weaving capes and other clothing of head chiefs. *Mats, Rugs & Bedding* Bark softened with special oil and used for weaving blankets. (185:33) **Hoh Canoe Material** Used to make canoes and paddles. (137:57) **Kitasoo Basketry** Inner bark used to make baskets. *Building Material* Wood used for construction. *Canoe Material* Wood used to make bows, adz handles, paddles, and storage containers. *Clothing* Inner bark used to make hats. Inner bark pounded and used to make fine quality clothing. *Cordage* Inner bark used to make cordage. *Mats, Rugs & Bedding* Inner bark used to make mats.

Inner bark pounded and used to make fine quality blankets. (43:313) **Kwakiutl, Southern Canoe Material** Wood used to make canoe paddles. (183:266) *Clothing* Inner bark used to make clothing. (183:296) *Furniture* Wood used to make chests. (183:266) *Mats, Rugs & Bedding* Inner bark used to make mats and blankets. (183:296) **Nitinaht Canoe Material** Wood used to make light paddles and canoes. *Clothing* Inner bark pounded and spun to make baby clothing, skirts, capes, and hats. Inner bark finely shredded and used to make face towels. (186:65) *Cordage* Bark fibers, nettle fibers, and dog hair used to make a stronger rope. (67:227) *Mats, Rugs & Bedding* Inner bark pounded and spun to make blankets. (186:65) **Oweekeno Canoe Material** Wood used to make canoes and canoe bailers. *Clothing* Inner bark used to make robes. *Cordage* Bark used to make cordage. *Mats, Rugs & Bedding* Inner bark used to make blankets. (43:61) **Quileute Canoe Material** Used to make canoes and paddles. (137:57)

- **Other—Bella Coola Decorations** Inner bark used for decorating masks. (184:197) **Haisla & Hanaksiala Decorations** Wood used to make carved items and masks. *Fasteners* Wooden pegs used to hold together bent boxes of red cedar. *Hunting & Fishing Item* Wood used to make bows. Rods struck with Pacific crabapple sticks or yew wood to make noise to herd animals while hunting. (43:159) **Hesquiat Cooking Tools** Wood used for making ornamental dishes and head-dresses. (185:33) **Kitasoo Containers** Wood used to make storage containers. *Hunting & Fishing Item* Wood used to make bows and paddles. *Tools* Wood used to make adz handles. (43:313) **Kwakiutl, Southern Cooking Tools** Wood used to make dishes. *Hunting & Fishing Item* Wood used to make bows. (183:266) **Nitinaht Containers** Wood used to make small charcoal mixing boxes. *Fuel* Inner bark finely shredded and used as tinder. *Sacred Items* Wood used to carve totem pole models and talking sticks. (186:65) **Oweekeno Containers** Wood used to make containers. *Decorations* Wood carved into totem poles and masks. *Tools* Wood used to make implements. (43:61)

**Chamaecyparis thyoides** (L.) B.S.P., Atlantic White Cedar

- **Drug—Ojibwa, South Analgesic** Decoction of leaves used as herbal steam for headache and backache. Poultice of crushed leaves and bark applied for headache. (as *Cupressus thyoides* 91:198)

## Chamaedaphne, Ericaceae

**Chamaedaphne calyculata** (L.) Moench, Leather Leaf

- **Drug—Potawatomi Dermatological Aid** Poultice of leaves applied to inflammations. *Febrifuge* Infusion of leaves used for fevers. (154:56)
- **Food—Ojibwa Beverage** Fresh or dried leaves used as a beverage tea. (153:400)

## Chamaemelum, Asteraceae

**Chamaemelum nobile** (L.) All., Garden Dogfennel

- **Drug—Cherokee Abortifacient** Infusion of flower or herb used for "female obstructions." *Antiemetic* Used for vomiting. *Dermatological Aid* Used as poultice for ulcers and "hard swellings." *Gastrointestinal Aid* Used for colic and bowel complaints. *Sedative* Infusion of flower or herb used for "hysterical affections." (as *Anthemis nobilis* 80:28) **Mahuna Gastrointestinal Aid** Plant used to regulate unsettled stomachs or for babies suffering from colic. *Pediatric Aid* Plant used for babies suffering from colic. (as *Anthemis nobilis* 140:7)

## Chamaesaracha, Solanaceae

**Chamaesaracha coronopus** (Dunal) Gray, Greenleaf Five Eyes

- **Drug—Navajo, Kayenta Dermatological Aid** Plant used for swellings. *Other* Compound containing plant used in cases of drowning. (205:41)

## Chamaesyce, Euphorbiaceae

**Chamaesyce albomarginata** (Torr. & Gray) Small, Whitemargin Sandmat

- **Drug—Diegueño Dermatological Aid** Decoction of plant used to wash sores. (as *Euphorbia albinomarginata* 84:21) **Kawaiisu Snakebite Remedy** Ground leaves and flowers used as a salve for rattlesnake bites. *Veterinary Aid* Poultice applied or decoction of leaves given to animals with snakebites. (as *Euphorbia albomarginata* 206:31) **Keres, Western Eye Medicine** Crushed plant rubbed on sore eyes. *Gynecological Aid* Leaves rubbed on mothers' breasts to produce more and richer milk. (as *Euphorbia albomarginata* 171:44) **Navajo, Ramah Analgesic** Cold infusion used for stomachache. *Gastrointestinal Aid* Cold infusion of plant taken for stomachache. *Hemostat* Poultice of plant used as a hemostatic. (as *Euphorbia albomarginata* 191:35) **Shoshoni Snakebite Remedy** Poultice of crushed, whole plant applied to snakebites. *Tonic* Decoction of plant taken as a tonic for general debility. (as *Euphorbia albomarginata* 180:73, 74) **Zuni Gynecological Aid** Leaves and roots eaten to promote lactation. (as *Euphorbia albomarginata* 27:376)

**Chamaesyce fendleri** (Torr. & Gray) Small, Fendler's Sandmat

- **Drug—Hopi Dietary Aid** Young roots fed to sick baby whose mother's milk was failing. (200:84) *Oral Aid* Dried, ground plant used as soothing lip balm. (200:33, 83–84) *Pediatric Aid* Young roots fed to sick baby whose mother's milk was failing. (200:84)

**Chamaesyce fendleri** (Torr. & Gray) Small **var. fendleri**,

Fendler's Sandmat

- **Drug—Navajo Gastrointestinal Aid** Infusion of plant taken for stomachache. (as *Euphorbia fendleri* 90:151) **Navajo, Ramah Analgesic** Cold infusion or decoction used for stomachache and diarrhea. *Antidiarrheal* Cold infusion or decoction of plant taken for diarrhea. *Ceremonial Medicine* Plant used as a ceremonial medicine. *Dermatological Aid* Plant used topically for warts and poison ivy. *Gastrointestinal Aid* Cold infusion or decoction of plant taken for stomachache. *Gynecological Aid* Pulverized plant used topically as a galactagogue and for breast injuries. *Hemostat* Poultice of chewed plant applied to cuts as a hemostatic. *Toothache Remedy* Hot poultice of plant applied for toothache. *Veterinary Aid* Milky juice applied to snakebite in livestock. (as *Euphorbia fendleri* 191:35)

**Chamaesyce geyeri** (Engelm.) Small, Geyer's Sandmat

- **Drug—Lakota Preventive Medicine** Used as a medicine as protection for the head. (as *Euphorbia geyeri* 139:45)

**Chamaesyce glyptosperma** (Engelm.) Small, Ribseed Sandmat

- **Drug—Iroquois Gland Medicine** Compound decoction of stems taken and used as a wash for goiter. *Gynecological Aid* Plant used to stimulate lactation. (as *Euphorbia glyptosperma* 87:369) **Thompson Snakebite Remedy** Fresh plant rubbed on all snakebites, but especially rattlesnake bites. (as *Euphorbia glyptosperma* 164:462)

***Chamaesyce hypericifolia*** (L.) Millsp., Graceful Sandmat

- **Drug**—Cherokee *Urinary Aid* Infusion of bruised roots taken for yellow urine. (as *Euphorbia hypericifolia* 177:35)

***Chamaesyce lata*** (Engelm.) Small, Hoary Sandmat

- **Drug**—Navajo *Cathartic Plant* used as a purge. *Gastrointestinal Aid Plant* used for upset stomachs. (as *Euphorbia lata* 90:151)

***Chamaesyce maculata*** (L.) Small, Spotted Sandmat

- **Drug**—Cherokee *Cancer Treatment* Decoction prepared with herbs and taken for cancer. *Cathartic* Taken as a purgative. *Dermatological Aid* "Juice rubbed on skin eruptions, especially on children's heads." Juice used as ointment for "sores and sore nipples." *Gynecological Aid* Infusion taken for bleeding after childbirth. *Pediatric Aid* "Juice rubbed on skin eruptions, especially on children's heads." *Toothache Remedy* Root used for toothache. *Urinary Aid* Infusion of bruised root taken for urinary diseases. *Veneral Aid* Decoction taken for gonorrhea and "similar diseases." (as *Euphorbia maculata* 80:45) **Costanoan** *Blood Medicine* Infusion of plant taken to purify the blood. *Dermatological Aid* Decoction of plant used as a wash for cuts. Milky juice applied to pimples and infusion of foliage used as a hair wash. *Eye Medicine* Decoction of plant used as a wash for eyes. (as *Euphorbia maculata* 21:9)

***Chamaesyce melanadenia*** (Torr.) Millsp., Squaw Sandmat

- **Drug**—Cahuilla *Dermatological Aid* Sap used for bee stings and sores. *Ear Medicine* Sap used for earaches. (as *Euphorbia melanadenia* 15:73)

***Chamaesyce multiformis*** (Hook. & Arn.) Croizat & Deg.  
**var. multiformis**, Variable Sandmat

- **Drug**—Hawaiian *Breast Treatment* Plant milk and other ingredients taken for dry breasts. *Dietary Aid* Buds or leaves chewed by the mother for the benefit of the nursing baby. Buds or leaves chewed by nursing mothers to stimulate the appetite, helpful in milk production. *Laxative* Buds or leaves chewed by nursing mothers as a laxative. *Pediatric Aid* Buds chewed by the mother and given to babies till the age of 6 months. Buds or leaves chewed by the mother for the benefit of the nursing baby. *Reproductive Aid* Buds, leaves, and other plants pounded and resulting liquid taken for female reproductive organ weakness. *Strengtheners* Buds and leaves used for general debility of the body. *Tuberculosis Remedy* Poultice of plant milk and other ingredients applied to scrofulous sores. *Unspecified* Buds chewed by the mother and given to babies till the age of 6 months. (as *Euphorbia multiformis* 2:11)

***Chamaesyce nutans*** (Lag.) Small, Eyebane

- **Drug**—Houma *Dermatological Aid* Milk from stem rubbed on skin for itching and eczema. Poultice of crushed leaves applied to bad sores. (as *Euphorbia nutans* 158:65, 66) *Gastrointestinal Aid* Cool decoction of plant in milk given to babies for sickness from bad milk. (as *Euphorbia nutans* 158:65) *Pediatric Aid* Cool decoction of plant in milk given to babies for sickness from bad milk. (as *Euphorbia nutans* 158:65, 66)

***Chamaesyce ocellata* ssp. arenicola** (Parish) Thorne, Contura Creek Sandmat

- **Drug**—Paiute *Dermatological Aid* Poultice of mashed plant applied

to swellings. (as *Euphorbia arenicola* 180:74) *Eye Medicine* Infusion of whole plant used as an eyewash. (as *Euphorbia arenicola* 118:39) Decoction of leaves used as an eyewash. (as *Euphorbia arenicola* 180:74)

***Chamaesyce ocellata*** (Dur. & Hilg.) Millsp. **ssp. ocellata**, Contura Creek Sandmat

- **Drug**—Miwok *Blood Medicine* Decoction of leaves taken as a blood purifier. *Snakebite Remedy* Mashed leaves rubbed into snakebite to prevent swelling. (as *Euphorbia ocellata* 12:169)

***Chamaesyce polycarpa*** (Benth.) Millsp. ex Parish  
**var. polycarpa**, Smallseed Sandmat

- **Drug**—Luiseño *Snakebite Remedy* Plant used for rattlesnake bites. (as *Euphorbia polycarpa* 155:231) **Pima** *Dermatological Aid* Poultice of plant applied to scorpion and snakebites. *Diaphoretic* Plant chewed to cause vomiting and sweating for snakebites. *Emetic* Roots chewed to vomit for stomach troubles, snakebites, and constipation. *Gastrointestinal Aid* Roots chewed to vomit and loosen bowels for stomach troubles. *Laxative* Roots chewed to loosen bowels for stomach troubles and constipation. *Poison* Plant considered poisonous. *Snakebite Remedy* Plant chewed to cause vomiting and sweating for snakebites. Plant juice used as wash and poultice of plant applied to snakebites. (as *Euphorbia polycarpa* 47:99) **Shoshoni** *Eye Medicine* Infusion of plant used as an eyewash. *Tonic* Infusion of plant taken as a tonic "for any general, indisposed feeling." (as *Euphorbia polycarpa* 180:74) **Zuni** *Gynecological Aid* Warm gruel made with plant and white cornmeal taken to promote milk flow. (as *Euphorbia polycarpa* 166:51)

***Chamaesyce revoluta*** (Engelm.) Small, Threadstem Sandmat

- **Drug**—Navajo, Kayenta *Dermatological Aid* Plant used as a lotion for chafing and sores. (as *Euphorbia revoluta* 205:30)

***Chamaesyce serpyllifolia*** (Pers.) Small, Thymeleaf Sandmat

- **Drug**—Omaha *Antidiarrheal* Dried leaves rubbed into abdominal scratches for children's dysentery. *Gastrointestinal Aid* Dried leaves rubbed into abdominal scratches for children's bloating. **Ponca** *Gynecological Aid* Decoction of plant taken to encourage milk flow in nursing mothers. (70:99) Decoction of plant taken by young mothers for scanty or lack of milk. (94:151)

***Chamaesyce serpyllifolia*** (Pers.) Small **ssp. serpyllifolia**, Thymeleaf Sandmat

- **Drug**—Apache, White Mountain *Oral Aid* Plant chewed to sweeten the saliva. (as *Euphorbia serpyllifolia* 136:158) **Miwok** *Dermatological Aid* Decoction of leaves used as wash for running sores. *Snakebite Remedy* Poultice of plant applied, must be done immediately, to rattlesnake bites. (as *Euphorbia serpyllifolia* 12:170) **Navajo, Ramah** *Analgesic* Cold infusion or decoction of plant taken for stomachache. *Antidiarrheal* Cold infusion or decoction of plant taken for diarrhea. *Ceremonial Medicine* Plant used as a ceremonial medicine. *Dermatological Aid* Plant used topically for warts and poison ivy. *Gastrointestinal Aid* Cold infusion or decoction of plant taken for stomachache. *Gynecological Aid* Pulverized plant used topically as a galactagogue and for breast injuries. *Hemostat* Poultice of chewed plant applied to cuts as a hemostatic. *Toothache Remedy* Hot poultice of plant applied for toothache. *Veterinary Aid* Milky juice applied to

snakebite in livestock. (as *Euphorbia serpyllifolia* 191:35) **Zuni Cathartic** Plant used as a cathartic. **Emetic Plant** used as an emetic. **Gynecological Aid** Plant used to increase the flow of milk in nursing mother. (as *Euphorbia serpyllifolia* 166:51)

- **Food—Apache, White Mountain Beverage** Roots used to make a fermented, intoxicating drink. (as *Euphorbia serpyllifolia* 136:151) **Cooking Agent** Roots chewed and used as a yeast preparation for the wedding cake. **Dried Food** Roots dried for future use. (as *Euphorbia serpyllifolia* 136:148) **Zuni Candy** Leaves chewed for the pleasant taste. **Sweetener** Root pieces used to sweeten cornmeal. After the mouth had been thoroughly cleansed, the women who sweetened the corn placed a piece of it in their mouths. The root remained in the mouth for 2 days, except to take refreshment and to sleep. Each time the root was removed from the mouth, the mouth was cleansed with cold water before returning the root to it. Finally, when they began sweetening the corn, either yellow or black corn was used. The women, with their fingers, placed as much cornmeal as possible into their mouths and held it there, without chewing, until the accumulation of saliva forced ejection of the mass. (as *Euphorbia serpyllifolia* 166:67)

## **Chaptalia**, Asteraceae

**Chaptalia tomentosa** Vent., Woolly Sunbonnets

- **Drug—Seminole Antirheumatic (External)** Decoction of leaves rubbed on body and body steamed for deer sickness: numb, painful limbs and joints. (169:192) **Urinary Aid** Decoction of roots taken for urine retention. (169:274)

## **Chasmanthium**, Poaceae

**Chasmanthium latifolium** (Michx.) Yates, Indian Woodoats

- **Food—Cocopa Porridge** Seeds dried, ground, and made into mush. (as *Uniola palmeri* 37:187) **Unspecified** Seeds used for food. **Winter Use Food** Seeds stored for later use. (as *Uniola palmeri* 64:267)

## **Cheilanthes**, Pteridaceae, fern

**Cheilanthes covillei** Maxon, Coville's Lipfern

- **Food—Kawaiisu Beverage** Stems and leaves used to make tea. (206:19)

**Cheilanthes fendleri** Hook., Fendler's Lipfern

- **Drug—Keres, Western Gynecological Aid** Infusion of plant used as a douche after childbirth. (171:36)
- **Food—Apache, Chiricahua & Mescalero Beverage** Leaves and young stems boiled to make a nonintoxicating beverage. (33:53)

**Cheilanthes wootonii** Maxon, Beaded Lipfern

- **Drug—Navajo, Ramah Dermatological Aid** Cold infusion of plant used as a lotion for gunshot wounds. **Panacea** Plant used as "life medicine." (191:11)

## **Cheirodendron**, Araliaceae

**Cheirodendron gaudicchaudii**, Olapa

- **Drug—Hawaiian Respiratory Aid** Root bark and other plants pounded, squeezed, and the resulting liquid taken for asthma. (as *C. caudicchaudii* 2:33)
- **Other—Hawaiian Fuel** Wood used for fuel. (as *C. caudicchaudii* 2:33)

## **Chelidonium**, Papaveraceae

**Chelidonium majus** L., Greater Celandine

- **Drug—Iroquois Veterinary Aid** Infusion of whole plant, another plant, and milk given to pigs that drool and have sudden movements. (141:45)

**Chelone glabra** L., White Turtlehead

- **Drug—Algonquin, Quebec Unspecified** Infusion of roots and cedar bark used as a medicinal tea. (18:230) **Cherokee Anthelmintic** Infusion of blooms taken for worms. **Dermatological Aid** Used for sores or skin eruptions. **Dietary Aid** Taken to increase appetite. **Febrifuge** Infusion of blooms taken for fevers. **Laxative** Infusion of blooms taken as a laxative. (80:59) **Iroquois Liver Aid** Compound decoction of roots taken for too much gall. **Witchcraft Medicine** Infusion of smashed roots taken as an anti-witchcraft medicine. (87:434) **Malecite Contraceptive** Infusion of plants used to prevent pregnancy. (116:258) **Micmac Contraceptive** Herb used to prevent pregnancy. (40:55)
- **Food—Cherokee Unspecified** Young shoots and leaves boiled, fried, and eaten. (204:253)

**Chelone sp.**, Deer Tongue

- **Food—Cherokee Vegetable** Leaves and stems parboiled, rinsed, and cooked in grease until tender. (126:55)

**Chenopodiaceae**, see *Allenrolfea*, *Arthrocnemum*, *Atriplex*, *Beta*, *Chenopodium*, *Cycloloma*, *Kochia*, *Krascheninnikovia*, *Monolepis*, *Salicornia*, *Salsola*, *Sarcobatus*, *Sarcocornia*, *Suaeda*

## **Chenopodium**, Chenopodiaceae

**Chenopodium album** L., Lamb's Quarters

- **Drug—Carrier Blood Medicine** Decoction of plant taken to improve the blood. (31:86) **Cherokee Dietary Aid** Cooked salad greens eaten to "keep healthy." (80:42) **Cree, Woodlands Antirheumatic (External)** Decoction of plant used as wash for painful limbs. **Antirheumatic (Internal)** Decoction of plant taken for painful limbs. (109:35) **Eskimo, Inupiat Carminative** Leaves and stems cooked with beans to reduce the intestinal gas from eating the beans. (98:64) **Iroquois Anti-diarrheal** Cold infusion of whole plant taken for diarrhea. (87:315) **Burn Dressing** Compound used as salve on burns. (87:316) **Gynecological Aid** Compound decoction used as wash and applied as poultice when bothered by milk flow. (87:315) **Mendocino Indian Gastrointestinal Aid** Leaves used for stomachaches. (41:346) **Meskwaki Dermatological Aid** Infusion of root used for urethral itching. (152:209) **Navajo Dietary Aid** Plant used as a nutrient. (90:149) **Navajo, Kayenta Burn Dressing** Poultice of plant applied to burns. (205:20) **Navajo, Ramah Antidote** Stem, 3 inches long, made into snake figurine for snake infection. (191:24) **Paiute Emetic** Leaf chewed as an emetic. (as *C. alba* 167:317) **Potawatomi Misc. Disease Remedy** Plant considered a medicinal food used to prevent or cure scurvy. (154:47) Leaves included in the diet for scurvy or to prevent it. (154:98)
- **Food—Alaska Native Dietary Aid** Fresh leaves, properly cooked, furnished significant amounts of vitamins C and A. **Substitution Food** Young, tender leaves and stems used as a substitute for spinach or other greens. **Vegetable** Young, tender leaves and stems cooked in a small amount of boiling water and eaten. (85:21) **Apache Vegetable**

Young plants cooked as greens. (32:16) **Apache, Chiricahua & Mes-calero** *Unspecified* Eaten without preparation or cooked with green chile and meat or animal bones. (as *C. alba* 33:46) **Cherokee Spice** Young growth mixed with mustard leaves, morning glory leaves, or potato leaves for flavoring. *Unspecified* Young growth parboiled, fried, and eaten. (204:253) **Vegetable** Leaves mixed with other leaves, parboiled, and cooked in grease until tender. Leaves mixed with other leaves and used for greens. (126:32) **Dakota Soup** Young, tender plant cooked as pottage. (70:78) *Unspecified* Young plants boiled for food. (as *C. albidum* 69:361) **Diegueño** *Vegetable* Leaves cooked and eaten as greens. (84:17) **Eskimo, Inupiat** *Dried Food* Leaves and stems dried for future use. *Frozen Food* Leaves and stems frozen for future use. *Vegetable* Leaves and stems eaten raw or cooked as hot greens with beans. (98:64) **Hopi** *Porridge* Ground seeds used to make mush. (190:160) *Unspecified* Leaves cooked with meat. (32:16) Leaves boiled and eaten with fat. (56:18) Boiled and eaten with other foods. (200:73) **Iroquois** *Vegetable* Cooked and seasoned with salt, pepper, or butter. (196:117) **Kawaiisu** *Vegetable* Upper leaves boiled, "rinsed" in cold water, and fried in grease and salt. (206:19) **Lakota** *Vegetable* Used as cooked greens. (139:43) **Luiseño** *Vegetable* Leaves used as greens. (155:233) **Mendocino Indian** *Vegetable* Young leaves boiled and eaten as greens. (41:346) **Miwok** *Dried Food* Boiled greens dried and stored for later use. *Vegetable* Boiled greens used for food. (12:159) **Mohegan** *Unspecified* Cooked and used for food. (176:83) **Montana Indian** *Staple* Seeds ground into flour and made into bread. *Vegetable* Young plant used as a potherb. (19:9) **Navajo** *Dried Food* Seeds dried and used like corn. (55:43) *Staple* Seeds ground and eaten as a nutrient. (90:149) *Vegetable* Young, tender plants eaten raw, boiled as herbs alone or with other foods. (55:43) **Navajo, Ramah** *Bread & Cake*, and *Special Food* Seeds winnowed, ground with maize, made into bread, and used as a ceremonial food in Nightway. *Winter Use Food* Seeds stored for winter use. (191:24) **Ojibwa** *Vegetable* Young plant cooked as greens. (5:2209) Leaves eaten as greens. (135:240) **Omaha** *Soup* Young, tender plant cooked as pottage. (70:78) **Paiute** *Staple* Seeds parched, ground, and eaten as meal. (104:98) *Unspecified* Species used for food. (167:244) **Papago** *Soup* Mixed with roasted cholla buds and eaten as a vegetable stew. (as *C. alba* 34:16) **Pawnee** *Soup* Young, tender plant cooked as pottage. (70:78) **Pima, Gila River** *Unspecified* Leaves used for food. (133:7) **Potawatomi** *Vegetable* Leaves used as a relish food for salads and spring greens. (154:98) **Pueblo** *Vegetable* Young plants cooked as greens. (32:16) **Shuswap** *Vegetable* Leaves boiled with butter, salt, and pepper and used for greens. (123:61) **Spanish American** *Vegetable* Young plants cooked as greens. (32:16) **Thompson** *Vegetable* Boiled leaves eaten as greens. (187:203) **Zuni** *Vegetable* Young plants cooked as greens. (32:16)

- **Other—Pawnee** *Paint* Plant formerly used for painting bows and arrows. (70:78)

### ***Chenopodium ambrosioides*** L., Mexican Tea

- **Drug—Creek** *Febrifuge* *Unspecified* plant part used "in cases of fever." (172:657) Plant used as a fever medicine. (177:22) **Panacea** Plant used for "a great many ailments." **Tonic** Plant used as "a sort of spring tonic." (172:657) Plant used as a spring tonic. (177:22) **Houma** *Analgesic* Poultice of crushed leaves applied for headaches. *Anthel-*

*mintic* and *Pediatric Aid* Decoction of leaves in milk given to children for worms. (158:63) **Koasati** *Anthelmintic* Decoction of leaves taken for worms. (177:22) **Mahuna** *Abortifacient* Roots used for delayed menstrual period. (140:14) **Miwok** *Antirheumatic (External)* Plant used as wash for rheumatic parts. *Dermatological Aid* Poultice of boiled or raw plant applied to swellings. *Toothache Remedy* Plant used for toothache or an ulcerated tooth. *Venereal Aid* Plant used as wash for gonorrhoea and injected into affected parts. (12:168) **Natchez** *Anthelmintic* Plant given to children for worms. *Febrifuge* Plant used as a fever medicine. *Pediatric Aid* Plant given to children for worms. (177:22) **Rappahannock** *Anthelmintic* Stewed seeds taken for worms. **Tonic** Stewed seeds taken as a tonic. (161:30) **Seminole** *Blood Medicine* Decoction of whole plant taken for worm sickness: pale skin and laziness. (169:241) *Gastrointestinal Aid* Infusion of root bark taken for stomach troubles. (169:276) *Pulmonary Aid* and *Sedative* Plant taken and rubbed on the body for lion disease: chest cramps, nervousness, and walking continually. (169:233) *Stimulant* Decoction of whole plant taken for worm sickness: pale skin and laziness. (169:241)

### ***Chenopodium botrys*** L., Jerusalem Oak Goosefoot

- **Drug—Cherokee** *Analgesic* Cold infusion taken orally and used to moisten head for headache. *Anthelmintic* Decoction of any part of plant in sweet milk given for worms. *Cold Remedy* Cold infusion taken orally and used to moisten head for colds. *Misc. Disease Remedy* Warm infusion of root taken in winter for "fever diseases." (80:41)
- **Other—Thompson** *Incense & Fragrance* Plant wound in necklaces, stuffed in pillows, bags, baskets, or tied to clothes as a scent. (164:503)

### ***Chenopodium californicum*** (S. Wats.) S. Wats., California Goosefoot

- **Drug—Cahuilla** *Gastrointestinal Aid* Decoction of entire plant used for stomach disorders. (15:52) **Costanoan** *Orthopedic Aid* Decoction of root applied as a poultice for numb or paralyzed limbs. (21:11) **Kawaiisu** *Dermatological Aid* Plant used as a hair wash. *Emetic* Decoction of leaves and stems taken as an emetic. *Poison* Plant considered poisonous. (206:19)
- **Food—Cahuilla** *Candy* Milky sap used to make gum. *Staple* Parched seeds ground into flour. *Vegetable* Boiled shoots and leaves eaten as greens. (15:52) **Luiseño** *Unspecified* Seeds used for food. (155:233)
- **Other—Costanoan** *Soap* Scraped roots and water used to produce detergent foam. (21:249) **Diegueño** *Soap* Mashed root used to clean and whiten clothes. (84:17) **Kawaiisu** *Soap* Grated root used as soap. (206:19) **Luiseño** *Soap* Grated root used as soap. (155:210)

### ***Chenopodium capitatum*** (L.) Aschers., Blite Goosefoot

- **Drug—Navajo, Kayenta** *Dermatological Aid* Plant used as a lotion for head bruises. *Eye Medicine* Plant used as a lotion for black eyes. (205:21) **Potawatomi** *Pulmonary Aid* Juice of seeds and infusion of plant used for lung congestion. (154:47)
- **Food—Alaska Native** *Dietary Aid* Leaves properly cooked and used as a good source of vitamins C and A. *Vegetable* Young, tender leaves used in raw salad mixture or cooked like garden spinach. (85:23) **Gosiute** *Unspecified* Seeds used for food. (39:366)

- **Other**—**Cahuilla Hunting & Fishing Item** Wood used to make bows. **Protection** Tree usually comfortable to camp under, providing some shade for the desert dweller. **Tools** Long limbs used as sticks to reach fruits and nuts too high to grasp by hand. (15:53)

**Chimaphila**, Ericaceae

**Chimaphila maculata** (L.) Pursh, Striped Prince's Pine

- **Drug**—**Cherokee Analgesic** Poultice of root used for pain. **Antirheumatic (Internal)** Tops and roots used for rheumatism. **Cancer Treatment** Used as a wash for cancer and ulcers. **Cold Remedy** Infusion of leaves used for colds. **Dermatological Aid** Decoction used for tetter and ringworm. **Emetic** Infusion given to make baby vomit and poultice of root used for pain. **Febrifuge** Infusion of leaves used for fevers. **Pediatric Aid** Infusion given to make baby vomit and poultice of root used for pain. **Poison** Infusion used to kill rats. **Tuberculosis Remedy** Used as a wash for scrofula. **Urinary Aid** Tops and roots used for urinary problems. **Veterinary Aid** Infusion given for "milksick." (80:62) **Nanticoke Misc. Disease Remedy** Plant used for ague. (175:84)
- **Food**—**Cherokee Snack Food** Leaves used for a nibble. (126:38)

**Chimaphila menziesii** (R. Br. ex D. Don) Spreng., Little Prince's Pine

- **Drug**—**Karok Gynecological Aid** Decoction of leaves taken for female troubles. **Kidney Aid** and **Urinary Aid** Decoction of leaves taken for kidney and bladder troubles. (6:23)

**Chimaphila umbellata** (L.) W. Bart., Pipsissewa

- **Drug**—**Abnaki Cold Remedy** Used for head colds. (144:154) **Nose**

**Medicine** Powdered leaves mixed with bark from another plant and used as snuff for nasal inflammation. (144:170) **Catawba Analgesic** and **Orthopedic Aid** Plant used for backache. (177:47) **Chippewa Eye Medicine** Decoction of root used as drops for sore eyes. (53:360) **Venerale Aid** Plant used for gonorrhea. (71:138) **Cree, Woodlands Anti-hemorrhagic** Infusion or decoction of plant with other species used for coughing up blood. Decoction of plant taken for coughing up blood. **Heart Medicine** Used for pain and fever caused by chest ailments due to heart conditions such as angina pectoris. **Orthopedic Aid** Decoction of plant used for backaches. **Pulmonary Aid** Decoction of plant used for stabbing pain in the chest. (109:35) **Delaware Blood Medicine** Infusion of plant, mallow root, elder flowers, and dwarf elder bark used as a blood purifier. **Dermatological Aid** Infusion of plant used for blisters. **Pulmonary Aid** Infusion of plant, mallow root, elder flowers, and dwarf elder bark used to remove lung mucus. **Urinary Aid** Infusion of plant, mallow root, elder flowers, and dwarf elder bark used for bladder inflammation. **Venerale Aid** Infusion of plant, mallow root, elder flowers, and dwarf elder bark used for scrofula. (176:35) **Delaware, Oklahoma Blood Medicine** Compound containing plant taken as a blood purifier. **Dermatological Aid** Infusion of plant applied to blisters. **Expectorant** Compound containing plant taken to help remove mucus from the lungs. **Tuberculosis Remedy** Compound containing plant taken for "scrofula." **Urinary Aid** Compound containing plant used for bladder inflammation. (175:29, 74) **Flathead Eye Medicine** Solution of plant used as eye medicine. (82:34) **Karok Orthopedic Aid** Poultice of plant applied or infusion of leaves taken for backaches. (148:387) **Kutenai Eye Medicine** Solution of plant used as eye medicine. **Kidney Aid** Infusion of plant used for kidney trouble. (82:34) **Malecite Blood Medicine** Infusion of plants used as a blood purifier. (116:253) **Tuberculosis Remedy** Infusion of plants and juniper roots used for consumption. (116:251) **Menominee Adjuvant** Plant used as a seasoner to make female remedies taste good. (151:35) **Blood Medicine** Decoction of leaves taken to "clear the blood." (54:129) **Gynecological Aid** Compound decoction of root taken after childbirth to aid internal healing. (54:133) **Micmac Antirheumatic (Internal)** Herb used for rheumatism. **Blood Medicine** Herb used as a blood purifier. **Dermatological Aid** Herb used for blisters. **Gastrointestinal Aid** Herb used for stomach trouble. **Kidney Aid** Herb used for kidney trouble. (40:56) Used for kidney pains. (145:57) **Misc. Disease Remedy** Herb used for smallpox. **Tuberculosis Remedy** Herb used for consumption. **Urinary Aid** Herb used for "cold in bladder." (40:56) Infusion of roots, hemlock, parsley, and curled dock used for colds in the bladder. (116:259) **Mohegan Dermatological Aid** Infusion of plant applied to blisters. (174:265) Infusion of leaves applied to blisters. (176:71, 128) **Montagnais Diaphoretic** Decoction of plant taken to induce sweating. (156:316) **Montana Indian Febrifuge** Decoction of the herb or root used as a febrifuge for fevers. (19:9) Infusion taken for fever. (82:34) **Nanticoke Misc. Disease Remedy** Infusion of plant taken for ague. (175:56) **Ojibwa Gastrointestinal Aid** Infusion of plant used for stomach troubles. (153:368) **Okanagan-Colville Blood Medicine** Infusion of roots and leaves taken as a blood purifier. Decoction of whole plant taken as a blood purifier. **Cold Remedy** Infusion of roots and leaves taken for long-lasting colds. **Dietary Aid** Decoction of whole plant taken as an appetizer. **Kidney Aid** Infusion of roots and leaves taken to "clean

- out" the kidneys. *Tuberculosis Remedy* Infusion of roots and leaves taken for tuberculosis. (188:101) **Okanagon** *Dermatological Aid* Poultice of crushed plant applied to leg and foot swellings. *Gynecological Aid* Plant chewed or infusion of leaves taken by women before and after childbirth. (125:42) **Penobscot** *Dermatological Aid* Infusion of plant applied to blisters. (156:309) **Rappahannock** *Blood Medicine* Infusion of roots taken to benefit blood. *Dietary Aid* Infusion of dried roots in brandy taken or chewed for the appetite. *Gastrointestinal Aid* Infusion of dried roots in brandy taken or chewed for the stomach. *Tonic* Infusion of dried roots in brandy used as a tonic for feeling low. *Veterinary Aid* Crushed and dried leaves mixed with the feed of mules to remove "bot worms." (161:26) **Saanich** *Antirheumatic (External)* Leaves put in bath water of sprinters and canoers as a liniment for sore muscles. (182:83) **Thompson** *Dermatological Aid* Poultice of crushed plant applied to leg and foot swellings. (125:42) *Gynecological Aid* Plant chewed or infusion of leaves taken by women before and after childbirth. (125:41) Plant chewed at childbirth to ease confinement. (164:462) Warm decoction of leaves taken before and after childbirth. *Orthopedic Aid* Poultice of crushed, fresh plant applied to leg and foot swellings. *Tonic* Decoction of leaves taken as a tonic for general indisposition. (164:477)
- **Other—Blackfoot** *Smoke Plant* Dried leaves used as the favorite smoking tobacco. (114:277) **Montana Indian** *Smoke Plant* Leaves dried and smoked. (82:34)

***Chimaphila umbellata* ssp. *cisatlantica*** (Blake) Hultén,  
Pipsissewa

- **Drug—Iroquois** *Adjuvant* Plant mixed, as a medicine strengthener, with any medicine. (87:408) *Analgesic* Compound decoction of roots taken for urinating pain. *Anthelmintic* Infusion of plants given to babies with worms. (87:407) *Antirheumatic (Internal)* Compound decoction of plants taken for rheumatism. (87:408) *Blood Medicine* Decoction of roots or stems taken to purify bad blood or for blood chills. *Cancer Treatment* Decoction of stalks and roots taken for stomach cancer. *Dermatological Aid* Infusion of dried roots taken for pimples and sores on the face and neck. *Diuretic* Leaves and stems used as a diuretic. *Febrifuge* Infusion of plants taken by feverish and drowsy pregnant women. *Gynecological Aid* Compound decoction of bark and roots taken to induce pregnancy. Compound infusion of leaves and bark taken for miscarriage. Infusion of plants taken by feverish and drowsy pregnant women. (87:407) *Kidney Aid* Compound decoction of roots taken for the kidneys and dropsy. (87:408) *Laxative* Compound decoction of roots taken as a laxative. *Pediatric Aid* Infusion of plants given to babies with worms. *Stimulant* Infusion of plants taken by feverish and drowsy pregnant women. (87:407) *Tonic* Compound decoction of roots and bark taken as a tonic. (87:408) *Urinary Aid* Compound decoction of roots taken for urinating pain. *Venereal Aid* Compound decoction taken as blood purifier and for venereal disease. (87:407)

***Chimaphila umbellata* ssp. *occidentalis*** (Rydb.) Hultén,  
Pipsissewa

- **Drug—Yurok** *Antirheumatic (External)* Leaves used for various aches and pains and to relax the muscles. *Kidney Aid* Leaves used for kidney ailments. (6:23)
- **Food—Thompson** *Beverage* Stem and roots boiled and drunk as a

tea. Leaves made into a tea. (164:494)

- **Other—Blackfoot** *Smoke Plant* Leaves used in the tobacco mixture. (97:49)

## ***Chionanthus*, Oleaceae**

### ***Chionanthus virginicus*** L., White Fringetree

- **Drug—Choctaw** *Dermatological Aid* Decoction of bark used as wash or poultice as dressing for cuts or bruises. (25:23) Decoction of roots or bark used as a wash for infected sores and wounds. Poultice of beaten bark applied to cuts and bruises. *Disinfectant* Decoction of roots used as a wash for infected sores. **Koasati** *Dermatological Aid* Decoction of bark used as a wash for cuts. (177:50)

## ***Chloracantha*, Asteraceae**

### ***Chloracantha spinosa*** (Benth.) Nesom, Spiny Chloracantha

- **Food—Mohave** *Starvation Food* Young shoots roasted and eaten as a famine food. (as *Aster spinosus* 37:201) **Navajo** *Candy* Stems chewed for gum. (as *Aster spinosus* 55:83)

## ***Chlorogalum*, Liliaceae**

### ***Chlorogalum angustifolium*** Kellogg, Narrowleaf Soapplant

- **Other—Karak** *Soap* Bulbs pounded, mixed with water, and used as a detergent for washing clothes and buckskin blankets. (148:380)

### ***Chlorogalum parviflorum*** S. Wats., Smallflower Soapplant

- **Food—Luiseño** *Unspecified* Bulb used for food. (155:233)

### ***Chlorogalum pomeridianum*** (DC.) Kunth, Wavyleaf Soapplant

- **Drug—Cahuilla** *Dermatological Aid* Saponaceous material used as a dandruff shampoo. (15:54) **Costanoan** *Dermatological Aid* Pounded stalks used as a wash for dandruff. *Poison* Bulb used as a fish poison. (21:28) **Mendocino Indian** *Dermatological Aid* Plant used as a hair wash for dandruff. *Poison* Root considered poisonous. (41:319) **Mewuk** *Poison* Plant considered poisonous. (117:336) **Pomo** *Dermatological Aid* Plant juice rubbed on area affected by poison oak. (41:319) Bulb used as a soap for washing the hair and to prevent lice. (66:12) **Pomo, Kashaya** *Dermatological Aid* Bulb used as soap for washing body, hair, and utensils. (72:107) **Wailaki** *Analgesic* Bulb rubbed on body for cramps. *Antirheumatic (External)* Bulb rubbed on body for rheumatism. *Carminative* Decoction of bulbs taken for gas. *Dermatological Aid* Poultice of roasted bulbs used antiseptically for sores. *Disinfectant* Poultice of roasted bulbs used antiseptically for sores. *Diuretic* Decoction of bulbs taken as a diuretic. *Gastrointestinal Aid* Decoction of bulbs taken for stomachaches. *Laxative* Decoction of bulbs taken as a laxative. (41:319)
- **Food—Cahuilla** *Vegetable* Young, spring shoots used as a potherb. (15:54) **Costanoan** *Unspecified* Leaves of immature plant used for food. (21:255) **Karak** *Unspecified* Bulbs roasted and eaten. (148:380) **Mendocino Indian** *Unspecified* Young shoots used for food. (41:319) **Miwok** *Unspecified* Soaproot used for food. *Winter Use Food* Stored, dried bulbs used for food. (12:157) **Yuki** *Forage* Bulbs eaten by pigs. (49:93)
- **Fiber—Cahuilla** *Brushes & Brooms* Coarse husk fibers from the bulb tied together and used as a cleaning brush and as a hairbrush. (15:54) **Costanoan** *Brushes & Brooms* Fibrous bulb covers tied in bundles to make brushes. (21:255) **Karak** *Brushes & Brooms* Bulb fibers used

to make a small brush. (148:380) **Kawaiisu** *Brushes & Brooms* Upper fiber ends dipped in starch, tied together, and used as brushes. The brush was used in the following ways: (1) to clean out the bedrock mortar hole before tobacco leaves were pounded and to remove the pulverized tobacco afterwards—a usage that probably applied to other materials; (2) to sweep fine meal off the sifting tray; (3) to brush the hair—an old brush must be used for this purpose or “the hair ends will split”; and (4) when wet, to scrub things clean. (206:19) **Luiseño** *Brushes & Brooms* Bulb fiber made into small brushes used for sweeping up scattered meal after pounding acorns. (155:203) Bulb fibers used to make a brush. (155:233) **Maidu** *Brushes & Brooms* Plant made into brushes and used to sweep meal off the sifting baskets. (as *Chorogalum pomeridianum* 173:68) **Mendocino Indian Mats, Rugs & Bedding** Fiber used occasionally for bedding. (41:319) **Mewuk** *Caulking Material* Made into a white mucilaginous paste and used to coat baskets. (117:336) **Pomo, Kashaya** *Brushes & Brooms* Bulb fibers tied into bundles to make scrub brushes and hairbrushes. (72:107) **Round Valley Indian** *Brushes & Brooms* Outer fibers made into brushes and used to scrape meal off the ground. (41:336)

- **Other—Cahuilla** *Hunting & Fishing Item* Saponaceous material used as a stupefying agent and placed into streams to catch fish. *Soap* Crushed bulb used as soap. (15:54) **Costanoan** *Hunting & Fishing Item* Bulbs produced a detergent foam used as fish poison. *Soap* Bulbs produced a detergent foam used in washing. (21:255) **Karok** *Soap* Bulbs pounded, mixed with water, and used as a detergent for washing clothes and buckskin blankets. (148:380) **Kawaiisu** *Fasteners* Bulbs boiled into liquid starch and applied to twined seed gathering baskets to close the interstices. (206:19) **Luiseño** *Soap* Grated root used as soap. (155:210) **Mahuna** *Soap* Fibrous bulbs used as soap bars for washing clothes. (140:39) **Mendocino Indian** *Cooking Tools* Outer portion of the bulbs made into small brushes and used for grinding acorns. Fresh, green leaves used to cover acorn bread dough while cooking. *Decorations* Green leaves formerly pricked into the skin to form tattoo marks. *Fasteners* Bulbs roasted and the juice used as a substitute for glue in attaching feathers to arrows. *Hunting & Fishing Item* Bulbs formerly mashed, stirred in rivers, and used as a poison to stupefy fish and eels. *Paint* Juice diluted, smeared over the back of a bow, and soot applied to produce a permanent black color. (41:319) **Pomo, Kashaya** *Hunting & Fishing Item* Bulb used for fish poison. *Soap* Bulb used as soap for washing body, hair, and utensils. (72:107) **Yuki** *Hunting & Fishing Item* Bulbs crushed, placed in still waters, and used as a fish poison. *Soap* Bulbs pounded, rubbed between the hands, and used as hair shampoo. (49:93)

***Chlorogalum pomeridianum* var. *divaricatum*** (Lindl.)

Hoover, Wavyleaf Soapplant

- **Food—Neeshenam** *Unspecified* Eaten raw, roasted, or boiled. (as *C. divaricatum* 129:377)

***Chlorogalum* sp.**, Soap Root

- **Other—Mewuk** *Fasteners* Bulbs made into glue and used to fasten sinew on the backs of the sinew-backed bows. (117:352) **Pomo** *Cooking Tools* Long leaves used to line the ground ovens while baking acorn bread. (117:290)

***Chorizanthe***, Polygonaceae

***Chorizanthe staticoides*** Benth., Turkish Rugging

- **Drug—Tubatulabal** *Dermatological Aid* Infusion of entire plant used as lotion for pimples. (193:59)

**Chrysobalanaceae**, see *Chrysobalanus*, *Licania*

***Chrysobalanus***, Chrysobalanaceae

***Chrysobalanus icaco*** L., Icaco Coco Plum

- **Drug—Seminole** *Love Medicine* Decoction of wood ashes placed on the tongue to cleanse the body and strengthen the marriage. (169:250)
- **Food—Seminole** *Unspecified* Plant used for food. (169:484)
- **Other—Seminole** *Hunting & Fishing Item* Plant used to make arrows. (169:484)

***Chrysophyllum***, Sapotaceae

***Chrysophyllum oliviforme*** L., Satinleaf

- **Drug—Seminole** *Love Medicine* Decoction of wood ashes placed on the tongue to cleanse the body and strengthen the marriage. (169:250)
- **Food—Seminole** *Unspecified* Plant used for food. (169:481)

***Chrysopsis***, Asteraceae

***Chrysopsis mariana*** (L.) Ell., Maryland Goldenaster

- **Drug—Delaware** *Pediatric Aid* Infusion of roots used to quiet infants. Infusion of roots used as a tonic for sickly children. *Sedative* Infusion of roots used to quiet infants. *Tonic* Infusion of roots used as a tonic for sickly children. (176:33) **Delaware, Oklahoma** *Sedative* Infusion of root given to infants to quiet them. *Tonic* Infusion of root used as a tonic for “sickly children.” (175:28, 74)

***Chrysothamnus***, Asteraceae

***Chrysothamnus depressus*** Nutt., Longflower Rabbitbrush

- **Drug—Navajo, Ramah** *Gynecological Aid* Decoction of plant used to facilitate labor and delivery of placenta. (191:49)
- **Other—Hopi** *Decorations* Used as prayer stick decorations. (200:96)

***Chrysothamnus Greenei*** (Gray) Greene, Greene’s Rabbitbrush

- **Drug—Navajo** *Dermatological Aid* and *Misc. Disease Remedy* Infusion of plant tops used as a wash for chickenpox and measles eruptions. (55:83)
- **Other—Hopi** *Decorations* Used as prayer stick decorations. (200:96)

***Chrysothamnus nauseosus*** (Pallas ex Pursh) Britt., Rubber Rabbitbrush

- **Drug—Cahuilla** *Toothache Remedy* Decoction of twigs taken for toothaches. (15:54) **Cheyenne** *Cold Remedy* Infusion of flower parts taken or burning plant smoke inhaled for colds. *Cough Medicine* Infusion of flower parts taken for coughs. (83:20) *Dermatological Aid* Decoction of leaves and stem used as wash and taken for sores, especially smallpox. (as *C. nauseosa* 75:39, 40) Infusion of leaves and stems used as a wash or taken for eruptions or body sores. (76:187) Infusion of leaves and stems used for sores and skin eruptions. (83:20) *Misc. Disease Remedy* Decoction of leaves and stem taken for smallpox. (as *C. nauseosa* 75:39, 40) Infusion of leaves and stems taken for smallpox. (76:187) *Psychological Aid* Burning leaf and branch

smoke used to drive away the cause of nightmares. *Tuberculosis Remedy* Infusion of flower parts taken for tuberculosis. (83:20) **Coahuilla** *Analgesic* Infusion of twigs taken for chest pain. *Cough Medicine* Infusion of twigs taken for coughs. (as *Bigelovia graveolens* 13:79) **Klamath** *Dermatological Aid* Poultice of herbage used to raise blisters. (as *Chondrophora nauseosa* 45:106) Poultice of smashed herbs applied to blisters. (as *Chondrophora nauseosa* 163:131) **Okanagan-Colville** *Gynecological Aid* Leaves used as a sanitary napkin. Leaves used as a sanitary napkin particularly after childbirth, to "heal the insides." (188:83) **Thompson** *Antidiarrheal* Decoction of plant taken for diarrhea. *Cold Remedy* Decoction of plant taken for colds. *Gastrointestinal Aid* Decoction of plant taken for stomach cramps. *Other* Plant used as a medicine for "drinking and bathing." *Panacea* Decoction of plant taken for "all diseases." *Tuberculosis Remedy* Decoction of plant taken for tuberculosis. *Urinary Aid* Decoction of plant taken for colds, venereal diseases, bladder trouble, and tuberculosis. *Venereal Aid* Decoction of plant taken for venereal disease. (187:178)

- **Food—Blackfoot** *Forage* Plant used as a fall and winter forage for horses. (97:56) **Kawaiisu** *Spice* Sharpened twig, stripped of bark and leaves, threaded with pinyon nuts to improve their flavor. (206:20) **Navajo** *Forage* Plants browsed by animals. (90:159) **Paiute** *Candy* Roots used as chewing gum. (111:115) **Paiute, Northern** *Candy* Root bark chewed like gum. (59:53)
- **Fiber—Hopi** *Building Material* Brush used to make windbreaks. (42:303) **Keres, Western** *Brushes & Brooms* Plant used for rough brooms. (as *Chrysothamnus confinis* 171:37)
- **Dye—Hopi** *Green* Bark used to make green dye. *Yellow* Flowers used as yellow dye. (42:303)
- **Other—Hopi** *Ceremonial Items* Plant used to weave the wedding belt. Plant used on the Po-wa-mu altar and used in Caquol ceremony. *Decorations* Stems used to make wicker plaques. *Hunting & Fishing Item* Stems used to make arrows. (42:303) **Keres, Western** *Hunting & Fishing Item* Plant used for arrows. (as *C. confinis* 171:37) **Navajo** *Cash Crop* Source of a commercial volatile oil. *Fuel* Used as a kiva fuel. (90:159) **Paiute** *Tools* Peeled stems used for piercing ears in preparation for wearing earrings. (111:115)

***Chrysothamnus nauseosus* ssp. *albicaulis*** (Nutt.) Hall & Clements, Rubber Rabbitbrush

- **Drug—Sanpoil** *Veterinary Aid* Container of brush lighted and held under horse's nostrils for distemper. Salve of branches and leaves used on horses to keep horseflies and gnats away. (131:217) **Shoshoni** *Antidiarrheal* Decoction of roots and tops taken for bloody diarrhea. *Cold Remedy* Compound decoction of stems taken for colds. Infusion of leaves taken as a cold medicine. *Cough Medicine* Compound decoction of stems taken for coughs. Decoction of stems and leaves taken for coughs. *Gastrointestinal Aid* Infusion of leaves taken for stomach disorders. *Tonic* Infusion of dried leaves and flowers taken as a general tonic. (180:57)
- **Other—Sanpoil** *Insecticide* Salve of branches and leaves used on horses to keep horseflies and gnats away. (131:217)

***Chrysothamnus nauseosus* ssp. *bigelovii*** (Gray) Hall & Clements, Rubber Rabbitbrush

- **Drug—Navajo, Kayenta** *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (205:46) **Navajo, Ramah** *Analgesic* Leaves

made into a lotion and used for headache and decoction of root used for menstrual pain. *Cathartic* Compound decoction of leaves used as a cathartic. (191:49, 50) *Ceremonial Medicine* Leaves used as a ceremonial emetic. (191:49) *Cold Remedy* Strong decoction of root taken for colds. *Cough Medicine* Strong decoction of root taken for cough. *Emetic* Leaves used as an emetic for several ceremonies. *Feb-rifuge* Strong decoction of root taken for fever. *Gynecological Aid* Strong decoction of root taken for menstrual pain. (191:49, 50) **Tewa** *Oral Aid* and *Pediatric Aid* White galls from plants hung around babies' necks to stop dribbling. (as *C. bigelovii* 138:45)

- **Food—Apache, White Mountain** *Unspecified* Seeds ground and used for food. (as *C. bigelovii* 136:156) **Navajo, Kayenta** *Unspecified* Cooked with cornmeal mush and used for food. (205:46)
- **Fiber—Navajo, Ramah** *Mats, Rugs & Bedding* Branches used to carpet the sweat house floor. (191:49) **Zuni** *Basketry* Stems used to make baskets. The outer bark was removed and the stems were covered with sand to render them more pliable. The stems were often dyed and some of the completed baskets were decorated with color. (as *C. bigelovii* 166:81)
- **Dye—Apache, White Mountain** *Yellow* Blossoms used as a yellow dye. (as *C. bigelovii* 136:156) **Navajo, Ramah** *Yellow* Flowers used as a yellow dye for wool. Flowers and buds boiled overnight and used as a yellow dye for basket material. (191:49) **Tewa** *Yellow* Flowers boiled to make a yellow dye for woolen yarn. (as *C. bigelovii* 138:45) **Zuni** *Yellow* Blossoms used to make a yellow dye. (as *C. bigelovii* 166:80)
- **Other—Hopi** *Protection* Used to make windbreaks and other shelters for melon plants and young peach trees. (as *C. bigelovii* 138:45) **Navajo, Ramah** *Ceremonial Items* Branch used to make Enemyway prayer stick. (191:49) **Tewa** *Protection* Used to make windbreaks and other shelters for melon plants and young peach trees. (as *C. bigelovii* 138:45)

***Chrysothamnus nauseosus* ssp. *consimilis*** (Greene) Hall & Clements, Rubber Rabbitbrush

- **Food—Paiute** *Candy* Roots chewed until gummy as a "chewing gum." (104:104)
- **Dye—Hopi** *Green* Bark used to obtain a green dye. *Yellow* Yellow flowers used to make a yellow dye. (as *C. pinifolius* Greene 200:95)
- **Other—Hopi** *Decorations* Stems used to make wicker plaques. (as *C. pinifolius* 200:95)

***Chrysothamnus nauseosus* ssp. *graveolens*** (Nutt.) Piper, Rubber Rabbitbrush

- **Dye—Hopi** *Green* Bark used to obtain a green dye. *Yellow* Yellow flowers used to make a yellow dye. (as *C. graveolens* 200:95) **Navajo** *Green* Immature flowers, leaves, or green bark boiled with heated alum and used as a green dye for wool. *Yellow* Mature flowering tops boiled with heated alum and used as a yellow dye for wool. (55:83)
- **Other—Hopi** *Decorations* Stems used to make wicker plaques. (as *C. graveolens* 200:95) **Navajo** *Ceremonial Items* Plant used to remove evil spells in the Witch, Wind, and other chants. (55:83)

***Chrysothamnus nauseosus* ssp. *hololeucus*** (Gray) Hall & Clements, Rubber Rabbitbrush

- **Dye—Hopi** *Green* Bark used to obtain a green dye. *Yellow* Yellow flowers used to make a yellow dye. (as *C. speciosus gnaphalodes* 200:95)

- **Other**—Hopi *Decorations* Stems used to make wicker plaques. (as *C. speciosus gnaphalodes* 200:95)

***Chrysothamnus nauseosus* ssp. *latisquameus*** (Gray) Hall & Clements, Rubber Rabbitbrush

- **Drug**—Isleta *Poison Wood* used to make poisonous war arrows. (as *C. latisquameus* 100:26)
- **Dye**—Navajo *Yellow Twigs* and flowers used as a yellow dye for wool. (as *C. latisquameus* 55:83)
- **Other**—Isleta *Lighting Wood*, burned slowly and brightly, used as candles. *Weapon Wood* used to make poisonous war arrows that broke upon impact and could not be shot back. (as *C. latisquameus* 100:26)

***Chrysothamnus nauseosus* var. *occidentalis***, Rubber Rabbitbrush

- **Other**—Karak *Decorations* Stems and flowers tied by girls onto the end of hair rolls as imitation mink skins. (148:389)

***Chrysothamnus parryi*** (Gray) Greene, Parry's Rabbitbrush

- **Fiber**—Hopi *Building Material* Used in rows in the sand to act as a sand break. (as *Linostyris howardi* 190:167)

***Chrysothamnus parryi* ssp. *howardii*** (Parry ex Gray) Hall & Clements, Howard's Rabbitbrush

- **Drug**—Hopi *Ceremonial Medicine* Plant used in initiatory ceremonies. (as *Bigelovia howardii* 56:20)
- **Fiber**—Hopi *Building Material* Used in rows in the sand to act as a sand break. (as *C. howardii* 190:167)
- **Dye**—Hopi *Green Bark* used to obtain a green dye. *Yellow Yellow* flowers used to make a yellow dye. (as *C. howardi* 200:95)
- **Other**—Hopi *Decorations* Stems used to make wicker plaques. (as *C. howardi* 200:95) *Fuel* Dried plant used as one of the four prescribed kiva fuels. *Paint* Flowers and chalky stones used as a bright yellow pigment for personal decoration in ceremonies. (as *Bigelovia howardii* 56:20)

***Chrysothamnus* sp.**, Rabbitbrush

- **Drug**—Isleta *Febrifuge* Decoction of entire plant, except the roots, used as a bath for fevers. *Toothache Remedy* Small bit of stem used in cavities for toothache. It was believed that if the cavity was not sealed in some manner after the stem was inserted, the tooth would break. *Veneral Aid* Decoction of entire plant, except the roots, taken for venereal diseases. (100:25) **Jemez** *Cold Remedy* Plant used for chest colds. (44:21) Plant used for chest colds. (100:25) *Oral Aid* Decoction of green parts tied with cedar boughs or twigs and used as a gargle. (44:21) *Throat Aid* Plant used as a gargle. (100:25) **Keres, Western** *Psychological Aid* Infusion of plant used to relieve fright. (171:36) **Keresan** *Emetic* Infusion taken as an emetic. *Gastrointestinal Aid* Infusion taken for stomach trouble. (198:563)
- **Dye**—Navajo *Yellow* Used as a yellow dye. (55:83)

***Chrysothamnus viscidiflorus*** (Hook.) Nutt., Green Rabbitbrush

- **Drug**—Hopi *Dermatological Aid* Poultice of chewed plant tips applied to boils. (as *Bigelovia douglasii* 56:20) **Paiute** *Cold Remedy* Infusion of crushed leaves taken or used as a wash for colds. (104:197) Infusion of crushed leaves taken for colds. *Cough Medicine* Decoction of young growth taken for coughs. *Diaphoretic* Branches used as

a bed in the sweat bath for rheumatism. **Shoshoni** *Antirheumatic (External)* Poultice of moistened, crushed stems and leaves applied for rheumatism. *Misc. Disease Remedy* Hot compound decoction of plant taken for influenza. *Toothache Remedy* Finely mashed leaves inserted in tooth cavities for toothaches. (180:57, 58)

- **Food**—Gosiute *Candy Roots* used as chewing gum. (as *Bigelovia douglasii* 39:364) **Hopi** *Spice Plant* used as an herb. (42:302) **Paiute** *Candy Roots* used as chewing gum. (111:115)
- **Fiber**—Hopi *Building Material* Used as a sand break to protect young corn and melons. (as *Bigelovia douglasii* var. *stenophylla* 190:167) **Navajo** *Building Material* Plant used as thatch to prevent the sand on top of the sweat house from sifting through. (55:84) **Yavapai** *Brushes & Brooms* Stems used to brush off spines on fruits. (65:257)
- **Dye**—Hopi *Yellow Blossoms* used as a yellow dye for wools and cotton yarn. (42:302) **Navajo** *Orange Flowers* boiled with roasted alum and used as a light orange dye for leather, wool, and basketry. *Yellow Flowers* boiled with roasted alum and used as a yellow dye for leather, wool, and basketry. (55:84)
- **Other**—Hopi *Ceremonial Items* Plant used for ceremonies. *Cooking Tools* Plant used for roasting corn. (42:302) **Paiute** *Tools* Peeled stems used for piercing ears in preparation for wearing earrings. (111:115)

***Chrysothamnus viscidiflorus* ssp. *viscidiflorus* var. *stenophyllus*** (Gray) Hall, Green Rabbitbrush

- **Fiber**—Hopi *Building Material* Used as a sand break to protect young corn and melons. (as *C. stenophyllus* 190:167)
- **Other**—Hopi *Decorations* Used as prayer stick decorations. (as *C. stenophyllus* 200:96)

***Chrysothamnus viscidiflorus*** (Hook.) Nutt. **ssp. *viscidiflorus* var. *viscidiflorus***, Green Rabbitbrush

- **Drug**—Navajo *Emetic* Plant used to make a sick person vomit. (55:84)

***Cibotium***, Cyatheaceae, fern

***Cibotium chamissoi*** Kaulfuss, Chamisso's Manfern

- **Drug**—Hawaiian *Analgesic* Infusion of powdered bark and other plants taken for chest pains. *Antirheumatic (External)* Very fine, downy hairs burned and the heat applied to hardened muscles and tired limbs. *Blood Medicine* Infusion of powdered bark and other plants taken to purify the blood. *Dietary Aid* Infusion of powdered bark and other plants taken to stimulate the appetite, and taken for weight loss. *Sedative* Very fine, downy hairs burned and the heat applied for nervousness. (as *Cibotium whamissoi* 2:43)
- **Fiber**—Hawaiian *Mats, Rugs & Bedding* Down used for pillows. (as *Cibotium whamissoi* 2:43)

***Cicer***, Fabaceae

***Cicer arietinum*** L., Chick Pea

- **Food**—Papago *Dried Food* Threshed, dried on the ground or roofs, stored, and used for food. (34:33) *Unspecified* Species used for food. **Pima** *Unspecified* Species used for food. (36:120)

***Cichorium***, Asteraceae

***Cichorium intybus*** L., Chicory

- **Drug**—Cherokee *Tonic* Infusion of root used as a tonic for nerves.

(80:29) **Iroquois** *Dermatological Aid* Decoction of roots used as a wash and poultice applied to chancres and fever sores. (87:476)

## *Cicuta*, Apiaceae

*Cicuta douglasii* (DC.) Coult. & Rose, Western Water Hemlock

- **Drug**—Alaska Native *Poison* Roots considered poisonous. (85:153) **Bella Coola** *Cathartic* Roots used as a purgative. (150:61) *Emetic* Infusion of grated tubers taken as an emetic to “clean out the bile in the stomach.” (184:200) **Haisla & Hanaksiala** *Poison* Roots considered poisonous. (43:212) **Kawaiisu** *Analgesic* and *Orthopedic Aid* “Mashed root put on a hot stone and sore limbs laid directly over it.” *Poison* Plant considered poisonous. (206:20) **Kutenai** *Dermatological Aid* Roots pounded and used for sores. *Emetic* Infusion of roots taken with large amounts of warm water as an emetic. This remedy was used cautiously because of the poisonous effects of larger doses of water hemlocks. (82:71) **Kwakiutl** *Antidiarrheal* Cold, compound infusion of burned, pulverized bark taken for diarrhea. (183:270) *Cathartic* Poultice of soaked roots applied to the stomach as a purgative. *Dermatological Aid* Poultice of roots applied to draw out thorns and splinters. *Emetic* Root extract and grease taken to induce vomiting. *Misc. Disease Remedy* Roots smashed, steamed, peeled, powdered, mixed with oil, and taken for any serious disease. *Poison* Plant considered highly poisonous. (183:276) **Montana Indian** *Analgesic* Roots used for headaches. *Snakebite Remedy* Poultice of split roots used for rattlesnake bites. (82:71) **Okanagan-Colville** *Poison* Plant considered a very bad poison. (188:60) **Paiute** *Antirheumatic (External)* Decoction of mashed roots used as a soothing solution for “rheumatism” and tired and aching feet. (111:96) **Salish, Coast** *Cathartic* Used with caution as a purgative. *Emetic* Used with caution to induce vomiting. (182:89) **Shuswap** *Poison* Plant considered poisonous. (123:56) **Thompson** *Analgesic* Poultice of root used for severe pain in the legs and back. Decoction of plant used as a wash for aching bones. *Orthopedic Aid* Boiled, roots used by bedridden patients, or poultice of roots used for broken hips. The bedridden patient’s back was splashed with water and the boiled, mashed roots placed on the back to help the patient recover. The informant warned that the poultice should not be left on for more than half an hour and that because of its toxicity it should never be taken internally. Decoction of plant used as a wash for broken bones. (187:150) *Panacea* Root eaten to protect against disease and give feeling of “perfect wellness.” (as *Cicuta vagans* 164:476) *Poison* Roots known to be poisonous to both humans and animals. (as *Cicuta vagans* 164:513) Considered one of the most toxic plants in North America for people, horses, cattle, and sheep. (187:150) *Veterinary Aid* Roots known to be poisonous to animals. (as *Cicuta vagans* 164:513)
- **Other**—Okanagan-Colville *Weapon* Roots powdered and used as an arrow poison during warfare. (188:60)

*Cicuta maculata* L., Spotted Water Hemlock

- **Drug**—Alaska Native *Poison* Roots considered poisonous. (85:153) **Cherokee** *Ceremonial Medicine* Root chewed, if dizziness occurred person would die soon, if not, long life. *Contraceptive* Roots eaten for four consecutive days “to become sterile forever.” (80:31) Roots chewed and swallowed by women as form of contraception and become sterile. (177:45) **Cree, Woodlands** *Antirheumatic (External)*

Dried roots powdered, made into a liniment, and applied externally. (109:35) **Iroquois** *Dermatological Aid* Poultice of smashed roots applied for lameness, running sores, or cuts. *Disinfectant* Handling plants caused fits and decoction used as floor wash to prevent disease. *Orthopedic Aid* Decoction of plants used on bruises, sprains, sore joints, or broken bones. *Poison* Roots chewed to commit suicide. *Veterinary Aid* Poultice of smashed roots applied to horses for lameness or running sores. (87:398) **Klamath** *Poison* Poisonous roots mixed with rattlesnake poison or decomposed animal liver and used to poison arrows. (45:101) **Lakota** *Poison* Plant poisonous to humans. (139:33) **Ojibwa** *Hunting Medicine* Root used in hunting medicine smoked to attract the buck deer near enough to shoot with bow and arrow. (153:432) *Unspecified* Root used medicinally. (153:390)

- **Other**—Cherokee *Insecticide* Infusion of root used to soak corn before planting to repel insect pests. (80:31) **Chippewa** *Smoke Plant* Seeds mixed with tobacco and smoked. (53:377)

*Cicuta maculata* var. *angustifolia* Hook., Spotted Water Hemlock

- **Drug**—Montana Indian *Poison* Fleshy roots known as a virulent poison and sometimes used for suicide. (as *Cicuta occidentalis* 19:10) **Paiute** *Analgesic* Poultice of roasted roots applied to “deadened muscular pain.” *Antirheumatic (External)* Poultice of roasted roots applied to rheumatic joints. *Dermatological Aid* Poultice of roasted roots applied for ordinary swellings. *Orthopedic Aid* Poultice of roasted roots applied to “deadened muscular pain.” *Snakebite Remedy* Poultice of pulped root applied to rattlesnake bites for the swelling. **Shoshoni** *Eye Medicine* Cool decoction of root used as a wash for sore eyes or granulated lids. *Orthopedic Aid* Poultice of roots applied to “deadened muscular pain.” *Poison* Root pulp considered poisonous for open wounds. (as *Cicuta occidentalis* 180:58, 59)

*Cicuta maculata* L. var. *maculata*, Spotted Water Hemlock

- **Drug**—Seminole *Febrifuge* Decoction of leaves, roots, and stems used as a bath for high fevers. (as *Cicuta curtissii* 169:282)

*Cicuta* sp., Water Hemlock

- **Drug**—Eskimo, Arctic *Poison* Roots considered poisonous. (128:17) **Mendocino Indian** *Poison* Plant considered poisonous. (41:372)

*Cicuta virosa* L., Mackenzie’s Water Hemlock

- **Drug**—Alaska Native *Poison* Roots considered poisonous. (as *Cicuta mackenziana* 85:153) **Eskimo, Inupiat** *Poison* Whole plant considered poisonous. (as *Cicuta mackenziana* 98:137) **Eskimo, Kuskokwagmiut** *Poison* Root “considered to be poisonous to people.” (as *Cicuta mackenziana* 122:21) **Eskimo, Western** *Poison* Roots considered poisonous. (as *Cicuta mackenziana* 108:17) **Haisla & Hanaksiala** *Poison* Roots considered poisonous. (as *Cicuta mackenzieana* 43:212)
- **Food**—Eskimo, Inuktitut *Unspecified* Leaves boiled with fresh fish. (as *Cicuta mackenziana* 202:192)

## *Cimicifuga*, Ranunculaceae

*Cimicifuga racemosa* (L.) Nutt., Black Bugbane

- **Drug**—Cherokee *Abortifacient* Used to stimulate menstruation. *Analgesic* Used as an anodyne. (80:30) Infusion of root “in spirits” used for rheumatic pains. (203:73, 74) *Antirheumatic (Internal)* Infu-

sion of roots in alcoholic spirits used for rheumatism. (80:30) Infusion of root "in spirits" used for rheumatic pains. (203:73, 74) *Cold Remedy* Infusion taken for colds. *Cough Medicine* Infusion taken for coughs. *Dermatological Aid* Given for hives. Infusion of slightly astringent plant taken for rheumatism. *Diuretic* Used as a diuretic. *Laxative* Infusion taken for constipation. *Pediatric Aid* and *Sedative* Given to make babies sleep. *Stimulant* Given for fatigue. *Tonic* Used as a tonic. *Tuberculosis Remedy* Infusion taken for colds, coughs, "consumption," and constipation. (80:30) **Delaware Tonic** Used with elecampane and stone root to make a tonic. (176:33) Combined with elecampane and stone roots to make a tonic. (176:39) **Delaware, Oklahoma Tonic** Compound containing root used as a tonic. (175:32, 74) **Iroquois Antirheumatic (External)** Decoction of roots or plants used as a soak and steam bath for rheumatism. (87:320) *Blood Medicine* Root used as a blood purifier. (87:321) *Gynecological Aid* Infusion of roots taken to "promote the flow of milk in women." *Orthopedic Aid* and *Pediatric Aid* Poultice of smashed leaves applied to babies with sore backs. (87:320) **Micmac Kidney Aid** Root used for kidney trouble. (40:56) **Penobscot Kidney Aid** Root used to make a medicine and taken for kidney trouble. (156:310, 311)

## **Cinchona**, Rubiaceae

### **Cinchona calisaya**, Quinine

- **Drug—Cherokee Reproductive Aid** Infusion of plant taken for impotence. *Tonic* Used to make a tonic. (as *C. ledgeriana* 80:49)

## **Cinna**, Poaceae

### **Cinna arundinacea** L., Sweet Woodreed

- **Drug—Iroquois Misc. Disease Remedy** Compound decoction of plants taken for sugar diabetes. (87:274)
- **Food—Gosiute Unspecified** Seeds used for food. (as *C. arundinacea* var. *pendula* 39:366)

## **Circaea**, Onagraceae

### **Circaea lutetiana ssp. canadensis** (L.) Aschers. & Magnus, Broadleaf Enchanter's Nightshade

- **Drug—Iroquois Dermatological Aid** Plant used on wounds. *Other* Compound infusion taken and used as wash on injured part, a "Little Water Medicine." (87:391)

## **Cirsium**, Asteraceae

### **Cirsium altissimum** (L.) Hill, Tall Thistle

- **Drug—Cherokee Analgesic** Infusion of leaves taken for neuralgia. *Gastrointestinal Aid* Warm infusion of roots taken to help person who overeats. *Poultice* Roots used as poultice and decoction of bruised plant used to poultice sore jaw. (as *Carduus altissimus* 80:58)
- **Other—Cherokee Hunting & Fishing Item** Down used as the tail for blow darts. (as *Carduus altissimus* 80:58)

### **Cirsium arvense** (L.) Scop., Canadian Thistle

- **Drug—Abnaki Anthelmintic** Used as a vermifuge. (144:155) Decoction of roots used by children for worms. *Pediatric Aid* Decoction of roots used by children for worms. (144:173) **Iroquois Oral Aid** Infusion of roots used for mouth sickness. (141:63) **Mohegan Oral Aid** and *Pediatric Aid* Infusion of leaves used as a mouthwash for infants. (176:71, 128) *Pulmonary Aid* Plant used for lung trouble. (176:128)

*Tuberculosis Remedy* Decoction of plant taken for consumption. (174:269) **Montagnais Tuberculosis Remedy** Decoction of plant used for consumption. (156:314) Decoction of plant taken for consumption. (174:269) **Ojibwa Gastrointestinal Aid** Plant used as a "bowel tonic." (153:364)

### **Cirsium brevistylum** Cronq., Clustered Thistle

- **Food—Cowichan Unspecified** Large taproots peeled and eaten raw or cooked. (182:81) **Hesquiat Unspecified** Flower heads chewed to get the nectar. (185:61) **Saanich Unspecified** Large taproots peeled and eaten raw or cooked. (182:81)
- **Fiber—Nitinaht Clothing** Down spun with yellow cedar inner bark and used for baby clothing. (186:97)
- **Other—Nitinaht Protection** Leaves or roots dried and placed around the house for protection from evil influences. (186:97) **Saanich Protection** Sharp leaves placed in bath water for protection from evil spirits, particularly before feasts. (182:81)

### **Cirsium calcareum** (M. E. Jones) Woot. & Standl., Cainville Thistle

- **Drug—Hopi Anthelmintic** Plant used as a worm remedy. (as *C. pulchellum* 200:34, 95, 96) *Dermatological Aid* Plant used for itching. (as *C. pulchellum* 200:32, 95, 96) *Laxative* Plant used as a laxative. *Throat Aid* Decoction of plant used for tickling throat caused by a cold. (as *C. pulchellum* 200:34, 95–96) **Navajo, Ramah Eye Medicine** Cold infusion of root used as a wash for sore eyes. (191:50)

### **Cirsium californicum** Gray, California Thistle

- **Food—Kawaiisu Unspecified** Spring stems skinned and eaten raw. (206:20)

### **Cirsium congonii** Moore & Frankton, Rosette Thistle

- **Food—Kawaiisu Unspecified** Spring stalks peeled and eaten raw. (206:20)

### **Cirsium discolor** (Muhl. ex Willd.) Spreng., Field Thistle

- **Drug—Cree Dermatological Aid** Poultice of root paste applied to linen cloths and bound to the wound. (16:490) **Iroquois Dermatological Aid** Compound decoction of roots taken or poultice of roots applied to boils. *Hemorrhoid Remedy* Compound decoction of plants taken for piles. (87:475) **Meskwaki Analgesic** Infusion of root used for stomachaches. *Gastrointestinal Aid* Infusion of root taken for stomachache. (152:213)

### **Cirsium drummondii** Torr. & Gray, Dwarf Thistle

- **Food—Atsugewi Unspecified** Young, raw stalks used for food. (61:139) **Cahuilla Unspecified** Bud, at the base of the thistle, used for food. (15:55) **Gosiute Unspecified** Stems formerly used for food. (as *Cnicus drummondii* 39:366)

### **Cirsium eatonii** (Gray) B. L. Robins., Eaton's Thistle

- **Drug—Gosiute Dermatological Aid** Plant used for wounds, cuts, or sores. (as *Cnicus eatoni* 39:349, 366)
- **Food—Gosiute Unspecified** Stems used for food. (as *Cnicus eatoni* 39:366)

### **Cirsium edule** Nutt., Edible Thistle

- **Food—Cheyenne Special Food** Young stems eaten raw as a "luxury food." (83:20) *Unspecified* Peeled stem used for food. (76:191) Tender, spring shoots eaten raw. (83:46) **Hoh Vegetable** Young shoots eaten

as greens. (as *Carduus edulis* 137:69) **Okanagon Unspecified** Roots boiled and used for food. (as *Carduus edulis* 125:36) **Quileute Vegetable** Young shoots eaten as greens. (as *Carduus edulis* 137:69) **Thompson Dried Food** Roots dried and stored for future use.<sup>23</sup> **Soup** Dried roots rehydrated, scraped, chopped, and cooked in stews.<sup>23</sup> (187:178) **Unspecified** Roots boiled and used for food. (as *Carduus edulis* 125:36) Fresh roots eaten cooked.<sup>23</sup> (187:178)

***Cirsium hookerianum*** Nutt., White Thistle

• **Food—Okanagon Unspecified** Roots boiled and used for food. (as *Carduus hookerianus* 125:36) **Thompson Dried Food** Roots dried and stored for future use.<sup>23</sup> Dried roots rehydrated, scraped, chopped, and cooked in stews.<sup>23</sup> (187:178) **Unspecified** Roots boiled and used for food. (as *Carduus hookerianus* (125:36) Deep, thick roots cooked and eaten. (164:480) Fresh roots eaten cooked.<sup>23</sup> (187:178)

***Cirsium horridulum*** Michx., Yellow Thistle

• **Drug—Houma Dermatological Aid** Infusion of leaves and root in whisky recognized as a strong astringent. **Expectorant** Infusion of leaf and root in whisky taken to clear phlegm from lungs and throat. **Throat Aid** Infusion of leaves and root in whisky taken to clear throat and lungs of phlegm. (158:57)

• **Food—Houma Unspecified** Tender, white hearts eaten raw. (158:57)

• **Other—Seminoles Hunting & Fishing Item** Plant used to make blow-gun darts. (169:507)

***Cirsium neomexicanum*** Gray, New Mexico Thistle

• **Drug—Navajo Febrifuge** Plant used for chills and fevers. (55:96) **Navajo, Ramah Eye Medicine** Cold infusion of root used as a wash for eye diseases. **Panacea** Root used as a “life medicine.” Cold infusion of plant taken when one “feels bad all over.” **Veterinary Aid** Cold infusion of root used as a wash for livestock with eye diseases. (191:50)

• **Food—Yavapai Unspecified** Raw, peeled stems used for food. (65:256)

***Cirsium occidentale*** (Nutt.) Jepson, Cobwebby Thistle

• **Food—Kawaiisu Unspecified** Spring stems skinned and eaten raw. (206:20) **Tubatulabal Unspecified** Stalks used extensively for food. (193:15)

***Cirsium ochrocentrum*** Gray, Yellowspine Thistle

• **Drug—Kiowa Burn Dressing** Decoction of blossoms used as wash for burns. **Dermatological Aid** Decoction of blossoms used as wash for sores. (192:58) **Zuni Contraceptive** Infusion of root taken by both partners as a contraceptive. (27:374) **Diaphoretic** Infusion of whole plant taken as a diaphoretic for syphilis. **Diuretic** Infusion of whole plant taken as a diuretic for syphilis. **Emetic** Infusion of whole plant taken as an emetic for syphilis. (as *Carduus ochrocentrus* 166:44, 45) **Misc. Disease Remedy** Infusion of fresh or dried root taken three times a day for diabetes. **Veneral Aid** Infusion of whole plant taken for syphilis. (27:374) Infusion of whole plant taken for syphilis. (as *Carduus ochrocentrus* 166:44, 45)

• **Food—Kiowa Unspecified** Roots used for food. (192:58)

• **Other—Kiowa Protection** Blossoms used to cover graves of those recently buried to keep the wolves from digging up the body. (192:58)

***Cirsium pallidum*** Woot. & Standl., Pale Thistle

• **Drug—Keres, Western Diuretic** Roots used as a diuretic. (171:37)

• **Food—Apache, Chiricahua & Mescalero Bread & Cake** Seeds

threshed, winnowed, ground, and the flour used to make bread. **Unspecified** Seeds boiled and eaten. (33:49)

***Cirsium parryi*** (Gray) Petrak, Parry's Thistle

• **Other—Keres, Western Unspecified** Plant known and named but no use was specified. (171:37)

***Cirsium pastoris*** J. T. Howell, Snowy Thistle

• **Food—Paiute Unspecified** Stems peeled and eaten raw. (as *C. occidentale* var. *candidissimum* 104:103)

***Cirsium remotifolium*** (Hook.) DC., Fewleaf Thistle

• **Drug—Kwakiutl Oral Aid** Root skins dried, soaked in water, and used as a wash for mouth rashes and cankers. Infusion of root used to wipe out child's mouth for rash and cankers. Root held in mouth for rash or cankers in mouth and infusion used for children. **Pediatric Aid** Infusion of root used to wipe out child's mouth for rash and cankers. (as *Carduus remaliflorus* 20:383)

***Cirsium rothrockii*** (Gray) Petrak, Rothrock's Thistle

• **Drug—Navajo, Kayenta Febrifuge** Plant used for fevers caused by injuries. **Misc. Disease Remedy** Roots used as a lotion or eaten raw for smallpox. **Panacea** Plant used as a life medicine. (205:46)

***Cirsium scariosum*** Nutt., Meadow Thistle

• **Food—Flathead Unspecified** Roots eaten raw or pit baked. **Kutenai Unspecified** Roots eaten raw or pit baked. **Nez Perce Unspecified** Roots eaten raw or pit baked. (82:13)

***Cirsium* sp., Thistle**

• **Drug—Cherokee Poultice** Roots of various species used as poultices. (203:74) **Chippewa Analgesic** Compound decoction of root taken for back pain. **Gynecological Aid** Compound decoction of root taken for “female weakness.” (53:356) Compound infusion of root taken to produce postpartum milk flow. (53:360) **Costanoan Analgesic** Raw stalks chewed for stomach pain. **Dermatological Aid** Pounded stalk pulp used for face sores. **Disinfectant** Pounded stalk pulp used to dry infections. **Gastrointestinal Aid** Raw stalks chewed for stomach pain. **Respiratory Aid** Decoction of roots taken for asthma. (21:26) **Kwakiutl Oral Aid** Dried outer root held in the mouth for cankers and gum sores. (183:278) **Lummi Gynecological Aid** Decoction of roots and tips taken by women at childbirth. (79:49)

• **Food—Blackfoot Unspecified** Flower head pedicels eaten fresh. (86:102) **Costanoan Unspecified** Raw or boiled stems used for food. (21:254) **Havasupai Starvation Food** Leaves held in flames to burn the spines off and eaten by hunting parties when food was scarce. (197:247)

***Cirsium tiogianum*** (Congd.) Petrak var. *tiogianum*, Tioga Thistle

• **Food—Paiute Unspecified** Roots eaten raw or roasted. (as *C. aculeolens* 104:103)

***Cirsium undulatum*** (Nutt.) Spreng., Wavyleaf Thistle

• **Drug—Comanche Veneral Aid** Decoction of root used for gonorrhea. (29:521) **Navajo, Ramah Eye Medicine** Cold infusion of root used as a wash for eye diseases. **Panacea** Root used as a “life medicine.” Cold infusion of plant taken when one “feels bad all over.” **Veterinary Aid** Cold infusion of root used as a wash for livestock with eye diseases.

(191:50) **Shuswap** *Gastrointestinal Aid* Root used for the stomach and body. (123:59)

- **Food**—**Comanche** *Unspecified* Raw roots used for food. (29:521) **Gosiute** *Unspecified* Stems used for food. (as *Cnicus undulatus* 39:366) **Montana Indian** *Vegetable* Early spring roots eaten raw or cooked with meat. Young, summer stalks eaten like asparagus and greens. (as *Cnicus eriocephalus* 19:10) **Okanagon** *Staple* Roots used as a principal food. (as *Cnicus undulatus* 178:238) **Shuswap** *Unspecified* Young roots roasted and eaten. (123:59) **Spokan** *Unspecified* Roots used for food. (as *Cnicus undulatus* 178:343) **Thompson** *Dried Food* Dried roots rehydrated, scraped, chopped, and cooked in stews.<sup>23</sup> Roots dried and stored for future use.<sup>23</sup> (187:178) *Unspecified* Root cooked and eaten. (164:480) Fresh roots eaten cooked.<sup>23</sup> (187:178)

### **Cirsium vulgare** (Savi) Ten., Bull Thistle

- **Drug**—**Cherokee** *Analgesic* Infusion of leaves taken for neuralgia. *Gastrointestinal Aid* Warm infusion of roots taken to help person who overeats. *Poultice* Roots used as poultice and decoction of bruised plant used to poultice sore jaw. (as *Carduus lanceolatus* 80:58) **Delaware** *Antirheumatic (External)* Hot infusion of roots or twigs used as a steam treatment for muscular swellings and stiff joints. (as *Cirsium lanceolatum* 176:36) **Delaware, Oklahoma** *Antirheumatic (External)* Infusion of whole plant used as herbal steam for rheumatism. (as *C. lanceolatum* 175:30, 74) *Herbal Steam* Infusion of roots or twigs used as herbal steam for rheumatism. (as *C. lanceolatum* 175:30) **Iroquois** *Cancer Treatment* Plant used for cancer. *Hemorrhoid Remedy* Plant used for bleeding piles. (as *C. lanceolatum* 87:475) Decoction of whole plant taken and poultice of plant and wool applied to hemorrhoids. (as *C. lanceolatum* 141:63) *Hemostat* Plant used for bleeding piles. (as *C. lanceolatum* 87:475) **Meskwaki** *Adjuvant* Root used as a seasoner for medicines. (as *C. lanceolatum* 152:213) **Navajo** *Emetic* Decoction of plant taken to induce vomiting. (as *C. lanceolatum* 55:84) **Ojibwa** *Analgesic* and *Gastrointestinal Aid* Root used by men and women for stomach cramps. (as *C. lanceolatum* 153:364) **Potawatomi** *Adjuvant* Fresh flower centers chewed to mask unpleasant flavors in medicines. (as *C. lanceolatum* 154:51)
- **Food**—**Hesquiat** *Unspecified* Flower heads chewed to get the nectar. (185:61) **Thompson** *Dried Food* Dried roots rehydrated, scraped, chopped, and cooked in stews.<sup>23</sup> Roots dried and stored for future use.<sup>23</sup> *Unspecified* Fresh roots eaten cooked.<sup>23</sup> (187:178)
- **Other**—**Cherokee** *Hunting & Fishing Item* Down used as the tail for blow darts. (as *Carduus lanceolatus* 80:58)

### **Cissus**, Vitaceae

**Cissus verticillata** (L.) D. H. Nicols. & Jarvis, Seasonvine

- **Other**—**Seminole** *Ceremonial Items* Plant used at the busk ceremonies. *Hunting & Fishing Item* Plant used to make bow strings. (as *C. sicyoides* 169:474)

**Cistaceae**, see *Helianthemum*, *Hudsonia*, *Lechea*

### **Cistanthe**, Portulacaceae

**Cistanthe monandra** (Nutt.) Hershkovitz, Common Pussypaws

- **Food**—**Kawaiisu** *Unspecified* Seeds used for food. (as *Calyptridium monandrum* 206:16)

### **Citrullus**, Cucurbitaceae

**Citrullus lanatus** (Thunb.) Matsumura & Nakai, Watermelon

- **Food**—**Apalachee** *Fruit* Fruit used for food. (81:98)

**Citrullus lanatus** (Thunb.) Matsumura & Nakai **var. lanatus**, Watermelon

- **Drug**—**Cherokee** *Kidney Aid* Infusion of seeds taken for kidney trouble. *Pediatric Aid* and *Urinary Aid* Seeds chewed for bed-wetting. (as *C. vulgaris* 80:61) **Cheyenne** *Diuretic* Decoction of seeds taken as a diuretic. (as *C. vulgaris* 83:24) **Chickasaw** *Urinary Aid* Decoction of mashed seeds taken for blood in the urine. (as *C. vulgaris* 177:59) **Iroquois** *Urinary Aid* Compound decoction of roots and seeds taken for urine stoppage. (as *C. vulgaris* 87:451) **Kiowa** *Poison* Unripened plant considered poisonous. (as *C. vulgaris* 192:53) **Rappahannock** *Kidney Aid* Infusion of seeds taken for gravel (kidney stones). *Veterinary Aid* Infusion of seeds given to horses for gravel (kidney stones). (as *C. vulgaris* 161:30)
- **Food**—**Cahuilla** *Fruit* Eaten fresh. *Winter Use Food* Cut, peeled into strips, and dried for winter use. (as *C. vulgaris* 15:55) **Cherokee** *Unspecified* Species used for food. (as *C. vulgaris* 80:61) **Cocopa** *Dried Food* Dried, whole seeds used for food. *Fruit* Ripe melon scooped with fingers and used for food. *Winter Use Food* Ripe and green melons stored in pits and the green melons ripened in storage. (as *C. vulgaris* 64:266) **Havasupai** *Fruit* Fruit eaten fresh. (as *C. vulgaris* 197:66) *Porridge* Seeds parched and ground to make sumkwini (mush) and other dishes. (as *C. vulgaris* 197:243) **Hopi** *Cooking Agent* Seeds ground and used to oil the “piki” stones. *Staple* Eaten and considered to be almost a staple food. *Unspecified* Seeds parched and eaten with parched corn and “piki.” (as *C. vulgaris* 200:92) **Iroquois** *Bread & Cake* Fresh or dried flesh boiled, mashed, and mixed into the paste when making corn bread. *Dried Food* Flesh cut into strips, dried, and stored away. *Special Food* Squash eaten at feasts of ceremonial importance and longhouse ceremonies. *Vegetable* Flesh boiled, baked in ashes or boiled, mashed with butter and sugar, and eaten. Flesh fried and sweetened or seasoned with salt, pepper, and butter. (as *Cucurbita citrullus* 196:113) **Kamia** *Unspecified* Species used for food. (as *Citrullus vulgaris* 62:21) **Meskwaki** *Unspecified* Melon used for food. (as *C. citrullus* 152:257) **Navajo** *Dried Food* Fruit cut into strips, wound upon sticks in the form of a rope, sun dried, and stored for months. (as *C. vulgaris* 165:222) **Navajo, Ramah** *Unspecified* Watermelon cultivated and used for food. *Winter Use Food* Watermelon sliced into strips, dried, and stored for winter use. (as *C. vulgaris* 191:46) **Okanagan-Colville** *Unspecified* Species used for food. (as *C. vulgaris* 188:98) **Pima** *Fruit* Fruits eaten as one of the most important foods. (as *C. vulgaris* 146:75) **Seminole** *Unspecified* Plant used for food. (as *C. vulgaris* 169:479) **Sia** *Unspecified* Cultivated watermelons used for food. (as *C. vulgaris* 199:106)
- **Other**—**Havasupai** *Planting Seeds* Seeds stored for future planting. (as *C. vulgaris* 197:243)

### **Citrus**, Rutaceae

**Citrus aurantifolia** (Christm.) Swingle, Key Lime

- **Food**—**Seminole** Plant used for food. (169:513)

**Citrus aurantium** L., Sour Orange

- **Food**—**Seminole** Plant used for food. (169:511)

- **Other**—Seminole *Hunting & Fishing Item* Plant used to make bows. (169:511)

**Citrus limon** (L.) Burm. f., Lemon

- **Food**—Haisla & Hanaksiala *Fruit* Fruit used for food. (43:284) **Seminole Unspecified** Plant used for food. (169:512) **Thompson Fruit** Fruit much prized for food after it became available. (187:275)
- **Other**—Seminole *Hunting & Fishing Item* Plant used to make bows for boys. (169:512)

**Citrus medica** L., Citron

- **Food**—Thompson *Fruit* Fruit much prized for food after it became available. (187:275)

**Citrus × paradisi** Macfad., Paradise Citrus

- **Food**—Seminole *Unspecified* Plant used for food. (169:512)

**Citrus reticulata** Blanco, Tangerine

- **Food**—Seminole *Unspecified* Plant used for food. (169:512)

**Citrus sinensis** (L.) Osbeck, Sweet Orange

- **Food**—Haisla & Hanaksiala *Fruit* Fruit used for food. (43:284) **Seminole Unspecified** Plant used for food. (169:513) **Thompson Fruit** Fruit much prized for food after it became available. (187:275)

**Cladium**, Cyperaceae

**Cladium mariscus ssp. jamaicense** (Crantz) Kukenth., Jamaica Swamp Sawgrass

- **Fiber**—Mewuk *Basketry* Roots used to make small baskets. (as *Mariscus cladium* 117:328)
- **Other**—Seminole *Tools* Stems used to make medicine tubes. (as *Mariscus jamaicensis* 169:172) Plant used to make medicine blowing tubes. (as *Mariscus jamaicensis* 169:498)

**Cladium sp.**, Tulare

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used with ceremonial tobacco in some chants. *Dermatological Aid* Plant used for ant bites. (205:25)

***Cleome multicaulis*** DC., Slender Spiderflower

- **Food**—Navajo *Sauce & Relish* Leaves used to make a gravy. *Soup* Leaves used to make a watery stew. *Special Food* Leaves made into tea and taken at a general feast after finishing the masks for the Night Chant. *Vegetable* Leaves used for greens. (as *C. sonorae* 55:51)
- **Other**—Navajo *Tools* Stalks used as a drill to start fires. The brittle stalks, about an inch in diameter, were used for the drills which were whirled between the palms of the hands and were made to revolve on the edge of a larger stalk into which a notch had been cut. A pinch of sand was sometimes placed under the point of the drill which caused the wood to become a fine powder. This powder then ran down the notch and formed a little pile on the ground. Smoke was produced in less than a minute, and in about 2 minutes tiny sparks dropped onto the pile of dry powder which took fire from them. By carefully feeding the fire with bits of dried bark and grass and with much blowing, a blaze was produced. (as *C. sonorae* 55:51)

***Cleome serrulata*** Pursh, Rocky Mountain Beeplant

- **Drug**—Gosiute *Eye Medicine* Poultice of pounded, soaked leaves applied to sore eyes. (as *C. integrifolia* 39:366) **Navajo, Ramah** *Blood Medicine* Decoction of seeds used ceremonially to give "good blood." *Ceremonial Medicine* Decoction of seeds used ceremonially to improve voice and give "good blood." *Dermatological Aid* Cold infusion of leaves used as a body and shoe deodorant. *Throat Aid* Decoction of seeds used ceremonially to improve voice. (191:29) **Oregon Indian** *Febrifuge* Infusion of whole plant taken for fever. (32:24) Tender leaves usually boiled with corn, on or off the cob, and highly seasoned with chile. (as *Peritoma serrulatum* 166:69)
- **Dye**—Isleta *Unspecified* Roots formerly used to make a dye. (100:26)
- **Other**—Keresan *Paint* Used to make the black paint for pottery decoration. (as *Peritoma serrulatum* 198:559) **Tewa** *Paint* Young plants boiled, dried, soaked in hot water, and used as black paint for pottery decorations. (as *Peritoma serrulatum* 138:58) **Zuni** *Ceremonial Items* Plant paste used with black mineral paint to color sticks of plume offerings to anthropic gods.<sup>26</sup> (as *Peritoma serrulatum* 166:96) *Decorations* Whole plant except for the root used in pottery decorations. The whole plant except for the root was boiled for a considerable amount of time and the water was allowed to evaporate. The firm paste secured from precipitation was used in conjunction with a black mineral paint for decorating pottery. (as *Peritoma serrulatum*

166:82) *Paint* Plant paste used with black mineral paint to color sticks of plume offerings to anthropic gods.<sup>26</sup> (as *Peritoma serrulatum* 166:96)

## *Clermontia*, Campanulaceae

*Clermontia arborescens* (Mann) Hbd., 'Oha Wai Nui

- **Drug**—Hawaiian *Breast Treatment* Milk and other plants mixed, poured into a sweet potato, and eaten for restoring or producing milk. *Dermatological Aid* Milk, breadfruit milk, and a finely ground plant mixed and put into bad and deep cuts. *Respiratory Aid* Fruits with other plants pounded, squeezed, and the resulting liquid taken for asthma. (2:30)
- **Food**—Hawaiian *Fruit* Fruit used for food. (2:30)

**Clethraceae**, see *Clethra*

## *Clethra*, Clethraceae

*Clethra acuminata* Michx., Mountain Sweetpepperbush

- **Drug**—Cherokee *Antiemetic* Decoction of bark scrapings taken for vomiting bile. (177:47) *Emetic* Inner bark used to make a drink taken to induce vomiting of "disordered bile." (80:22) Decoction of inner bark taken to cause vomiting when unable to retain food. (177:47) *Febrifuge* Decoction of bark and "wild cherry" bark taken to break high fever. *Gastrointestinal Aid* Hot infusion of bark taken for "bowel complaint." (80:22) Decoction of inner bark taken to cause vomiting when unable to retain food. *Liver Aid* Decoction of bark scrapings taken for vomiting bile. (177:47)

## *Clintonia*, Liliaceae

*Clintonia andrewsiana* Torr., Western Bluebeadlily

- **Drug**—Pomo *Poison* Plant considered poisonous. (66:12) Pomo, Kashaya *Poison* Plant considered poisonous. (72:34)

*Clintonia borealis* (Ait.) Raf., Yellow Bluebeadlily

- **Drug**—Algonquin, Quebec *Dermatological Aid* Poultice of leaves applied to open wounds. *Disinfectant* Poultice of leaves applied to infections. (18:138) Algonquin, Tête-de-Boule *Dermatological Aid* Poultice of leaves applied to wounds and ulcers. (132:126) Chippewa *Burn Dressing* Poultice of fresh leaf applied to burns. *Dermatological Aid* Decoction of leaves applied externally to scrofulous sores. (53:354) Iroquois *Heart Medicine* Decoction of plant taken for the heart. *Misc. Disease Remedy* Compound decoction of smashed whole plants taken for sugar diabetes. (87:283) Menominee *Antidote* Plant put on bite of dog which has eaten plant, to draw out the poison. (151:40, 41) Ojibwa *Antidote* Root applied to draw poison from bite made by dog which has eaten the plant. (153:373) *Dermatological Aid* Poultice of roots used on wound caused by dog's northern clintonia-poisoned teeth. (153:430) *Gynecological Aid* Infusion of root used to aid parturition. (153:373) *Poison* Roots chewed by dogs to poison their teeth and kill animals they bite. (153:430) Potawatomi *Unspecified* Plant used as a medicine for unspecified ailments. (154:62)
- **Other**—Algonquin, Tête-de-Boule *Insecticide* Crushed leaves rubbed on the face and hands as protection from mosquitoes. (132:126) Chippewa *Toys & Games* Patterns bitten into leaves for entertainment. (53:377)

*Clintonia umbellulata* (Michx.) Morong, White Bluebeadlily

- **Drug**—Iroquois *Basket Medicine* Decoction of whole plant "makes people buy baskets," a basket medicine. *Febrifuge* Infusion of whole plant taken for chills. (87:283)

*Clintonia uniflora* (Menzies ex J. A. & J. H. Schultes) Kunth, Bride's Bonnet

- **Drug**—Bella Coola *Dermatological Aid* Decoction of plant used as a wash for the body. Poultice of toasted leaf applied to wounds. *Eye Medicine* Poultice of toasted leaf applied to eyes. (150:53) Cowlitz *Dermatological Aid* Juice from smashed plants used as a wash for cuts. *Eye Medicine* Juice from smashed plants used as a wash for sore eyes. (79:25) Haisla & Hanaksiala *Dermatological Aid* Poultice of plant applied to wounds and decoction of plant used to wash the body. *Eye Medicine* Poultice of plant applied to the eyes. (43:194) Micmac *Urinary Aid* Root juice taken with water for gravel. (as *Smi-lacrina borealis* 156:317)
- **Food**—Bella Coola *Forage Berries* eaten by wolves. (184:199)
- **Dye**—Thompson *Unspecified* Mashed, blue, berry-like fruits used as a dye or stain. Large quantities of the fruits had to be used in order for the dye or stain to be effective. (187:121)

## *Clitoria*, Fabaceae

*Clitoria mariana* L., Atlantic Pigeonwings

- **Drug**—Cherokee *Oral Aid* Infusion held in mouth for 10 to 20 minutes for thrush. (80:47)

**Clusiaceae**, see *Hypericum*, *Triadenum*

## *Cneoridium*, Rutaceae

*Cneoridium dumosum* (Nutt.) Hook. f. ex Baill., Bush Rue

- **Drug**—Luiseño *Unspecified* Plant used for medicinal purposes. (155:231)

## *Coccoloba*, Polygonaceae

*Coccoloba diversifolia* Jacq., Tietongue

- **Food**—Seminole *Unspecified* Plant used for food. (as *Coccolobis laurifolia* 169:475)

## *Cocculus*, Menispermaceae

*Cocculus carolinus* (L.) DC., Carolina Coralbead

- **Drug**—Houma *Blood Medicine* Root used to make a drink taken as a blood clarifier. (158:63)

## *Cochlearia*, Brassicaceae

*Cochlearia officinalis* L., Common Scurvygrass

- **Food**—Alaska Native *Vegetable* Leaves eaten raw in mixed salads or cooked as greens. (85:27)

## *Cochlearia* sp.

- **Food**—Aleut *Unspecified* Species used for food. (7:29)

## *Cocos*, Arecaceae

*Cocos nucifera* L., Coconut Palm

- **Drug**—Hawaiian *Abortifacient* Fruit shells burned and the smoke used for swollen wombs. *Dermatological Aid* Young shoots used for deep cuts. *Other* Young meat applied as a rub for the brain. *Strength-*

*ener* Dried meat ash used for general debility of the body. *Unspecified* Oil used as a good rub. (2:73)

- **Food**—Seminole *Unspecified* Plant used for food. (169:503)
- **Other**—Seminole *Ceremonial Items* Plant used to make dance rattles. *Cooking Tools* Plant used to make spoons and cups. (169:503)

## **Coeloglossum**, Orchidaceae

**Coeloglossum viride** var. **virescens** (Muhl. ex Willd.) Luer, Long-bract Frog Orchid

- **Drug**—Iroquois *Gynecological Aid* Compound decoction with plant taken to bring away placenta after childbirth. (as *Habenaria viridis* ssp. *bracteata* 87:289) **Ojibwa** *Love Medicine* Root smuggled into another's food as an aphrodisiac. (as *Habenaria bracteata* 153:377) Plant used as a sort of love charm and often put to bad use. (as *Habenaria bracteata* 153:431)

## **Coix**, Poaceae

**Coix lacryma-jobi** L., Job's Tears

- **Drug**—Cherokee *Pediatric Aid* Seeds strung around baby's neck for teething. *Toothache Remedy* Seeds strung around baby's neck for teething. *Unspecified* Long strands of seeds used for various unspecified medicinal purposes. (80:41)
- **Food**—Cherokee *Bread & Cake* Seeds used to make bread. (80:41)
- **Other**—Cherokee *Jewelry* Seeds used to make beads. (80:41)

## **Coleogyne**, Rosaceae

**Coleogyne ramosissima** Torr., Blackbrush

- **Drug**—Kawaiisu *Venereal Aid* Decoction of bark taken for gonorrhea. (206:21)
- **Food**—Havasupai *Fodder* Plant used as a good feed for stock in the absence of grass. (197:223)

## **Collinsia**, Scrophulariaceae

**Collinsia parviflora** Lindl., Smallflower Blue Eyed Mary

- **Drug**—Navajo, Kayenta *Veterinary Aid* Plant used to make a horse run fast. (205:42) **Ute** *Dermatological Aid* Plant used externally for sore flesh. (38:33)

**Collinsia violacea** Nutt., Violet Blue Eyed Mary

- **Drug**—Creek *Tuberculosis Remedy* Infusion of root taken for colds, coughs, consumption, and whooping cough. **Natchez** *Cold Remedy* Infusion of root taken for colds. *Cough Medicine* Infusion of root taken for coughs. (172:667) Infusion of roots taken for coughs. (177:56) *Pulmonary Aid* Infusion of root taken for consumption and whooping cough. (172:667) *Tuberculosis Remedy* Infusion of roots taken for consumption. (177:56)

## **Collinsonia**, Lamiaceae

**Collinsonia canadensis** L., Rich Weed

- **Drug**—Cherokee *Breast Treatment* Compound used for swollen breasts. (80:52) Decoction of plant applied for swollen breasts. (177:53) *Dermatological Aid* Mashed flowers and leaves used as a deodorant. (80:52) *Emetic* Decoction of plant taken to cause vomiting. (177:53) *Veterinary Aid* Infusion used as a drench for horses with colic. (80:52) **Iroquois** *Analgesic* Poultice of powdered leaves applied to the forehead for headaches. *Antidiarrheal* Compound decoction of roots

taken for diarrhea with blood. *Antirheumatic (External)* Decoction of roots taken and used as foot, back, and leg soak for rheumatism. *Antirheumatic (Internal)* Compound decoction of roots taken and used as foot soak for rheumatism. *Blood Medicine* Roots used as a blood medicine. *Dermatological Aid* Roots used for boils. *Heart Medicine* Decoction of roots taken for heart trouble. *Kidney Aid* Decoction of roots taken for kidney trouble. *Panacea* Decoction of roots taken for any ailment. *Pediatric Aid* Infusion of smashed roots given to strengthen listless children. *Stimulant* Infusion of smashed roots given to children for listlessness. (87:429) *Strengtheners* Infusion of smashed roots used as a wash for babies to give them strength. (87:428)

## **Collomia**, Polemoniaceae

**Collomia grandiflora** Dougl. ex Lindl., Largeflower Mountain-trumpet

- **Drug**—Okanagan-Colville *Febrifuge* Infusion of roots taken for high fevers. *Laxative* Infusion of leaves and stalks taken for constipation and to "clean out your system." Infusion of roots taken as a laxative. (188:111)
- **Other**—Paiute *Containers* Leaves used as a protective covering for filled berry containers. (111:106)

**Collomia linearis** Nutt., Narrowleaf Mountaintrumpet

- **Drug**—Gosiute *Dermatological Aid* Poultice of mashed plant applied to wounds and bruises. (as *Gilia linearis* 39:370)

## **Colocasia**, Araceae

**Colocasia esculenta** (L.) Schott, Coco Yam

- **Drug**—Hawaiian *Laxative* Flesh and other plants pounded, squeezed, and resulting liquid taken as a laxative. (as *Colocasia antiquorum* 2:47) *Unspecified* Plant used to make a draft and given to the sick. (as *Arum esculentum* 112:67)
- **Food**—Hawaiian *Unspecified* Roots beaten into poi and eaten. Plant mixed with coconut meat and eaten. *Vegetable* Leaves and stems cooked and eaten as greens. (as *Arum esculentum* 112:67) **Seminole** *Unspecified* Plant used for food. (169:465)

## **Comandra**, Santalaceae

**Comandra umbellata** (L.) Nutt., Bastard Toadflax

- **Drug**—Cherokee *Dermatological Aid* Juice applied to cut or sore. *Kidney Aid* Compound infusion used for kidneys. (80:24) **Meskwaki** *Analgesic* Infusion of leaf taken for lung pains. *Cold Remedy* Medicine licked to ease labored breathing caused by a cold or other illness. *Pulmonary Aid* Infusion of leaf taken for lung pains. *Respiratory Aid* Medicine of immature florets licked to ease labored breathing from cold, etc. (152:246)
- **Food**—Okanagan-Colville *Sweetener* Flowers sucked by children for the sweet nectar. (188:138)

**Comandra umbellata** ssp. **pallida** (A. DC.) Piehl, Pale Bastard Toadflax

- **Drug**—Navajo *Dermatological Aid* Decoction of plant used as a foot bath for corns. (as *C. pallida* 90:150) **Navajo, Kayenta** *Eye Medicine* Plant used for sore eyes. *Narcotic* Plant used as a narcotic. *Oral Aid* Plant used as a mouthwash for canker sores. (as *Comandra pallida*

205:18) **Thompson** *Dermatological Aid* Decoction of plant used as a wash for sores. (187:281) *Eye Medicine* Fresh roots mixed with woman's milk and used as a wash for sore or inflamed eyes. (as *Comandra pallida* 164:459) **Ute** *Analgesic* Roots used for headaches. (as *Comandra pallida* 38:33)

- **Food**—Navajo, Kayenta *Unspecified* Seeds used for food. (as *Comandra pallida* 205:18) **Okanagon** *Staple* Seeds or nuts used as a principal food. (as *Comandra pallida* 178:239) **Paiute** *Unspecified* Small, round seeds eaten as nuts by children. (as *C. pallida* 111:66)
- **Dye**—Arapaho *Blue Area* next to the root bark used as a blue dye. (as *C. pallida* 121:50)

## **Comarum**, Rosaceae

**Comarum palustre** L., Purple Marshlocks

- **Drug**—Chippewa *Antidiarrheal* Decoction of root taken for dysentery. (as *Potentilla palustris* 53:344) **Ojibwa** *Analgesic* Plant used alone for stomach cramps. *Gastrointestinal Aid* Plant used for stomach cramps. (as *Potentilla palustris* 153:384, 385)
- **Food**—Eskimo, Alaska *Beverage* Dried leaves used to make a hot, tea-like beverage before the availability of imported tea. (as *Potentilla palustris* 1:36)

**Combretaceae**, see *Conocarpus*

**Commelinaceae**, see *Commelina*, *Murdannia*, *Tradescantia*

## **Commelina**, Commelinaceae

**Commelina dianthifolia** Delile, Birdbill Dayflower

- **Drug**—Keres, Western *Tuberculosis Remedy* Infusion of plant used as a strengthener for weakened tuberculosis patients. (171:38) **Navajo**, **Ramah** *Veterinary Aid* Cold simple or compound infusion given to livestock as an aphrodisiac. (191:19)

**Commelina erecta** var. **angustifolia** (Michx.) Fern., White-mouth Dayflower

- **Drug**—Seminole *Other* Mucilaginous sap used to soothe irritations. (as *C. angustifolia* 169:303)

## **Comptonia**, Myricaceae

**Comptonia peregrina** (L.) Coult., Sweet Fern

- **Drug**—Algonquin, Quebec *Analgesic* Infusion of leaves taken or crushed leaf perfume inhaled for headaches. (18:149) **Cherokee** *Anthelmintic* Infusion taken for roundworms. (80:58) **Chippewa** *Ceremonial Medicine* Burned, dried leaves used as incense in religious ceremonies. *Febrifuge* Infusion of leaves taken for fevers. *Unspecified* Leaves used for medicine. (as *Myrica asplenifolia* 71:127) **Delaware** *Blood Medicine* Infusion of plant, mallow root, elder flowers, and dwarf elder used as a blood purifier. *Dermatological Aid* Infusion of plant used for blisters. *Pulmonary Aid* Infusion of plant, mallow root, elder flowers, and dwarf elder used to remove mucus from the lungs. *Urinary Aid* Infusion of plant, mallow root, elder flowers, and dwarf elder used for bladder inflammation. *Veneral Aid* Infusion of plant, mallow root, elder flowers, and dwarf elder used for scrofula. (as *Myrica asplenifolia* 176:35) **Delaware**, **Oklahoma** *Blood Medicine* Infusion of plant taken as a blood purifier. *Dermatological Aid* Infusion of plant applied to blisters and leaves used for poison ivy rash. *Ex-*

*pectorant* Infusion of plant taken to help remove mucus from the lungs. *Tuberculosis Remedy* Plant used for scrofula. *Urinary Aid* Complex compound containing plant used for bladder inflammation. (as *Myrica asplenifolia* 175:29, 76) **Malecite** *Dermatological Aid* Infusion of plant and yarrow used as a liniment for swelling. (as *Myrica asplenifolia* 116:245) *Respiratory Aid* Plants smoked and used for catarrh. (as *Myrica asplenifolia* 116:248) **Menominee** *Adjuvant* Plant used as a seasoner and potent medicine in childbirth. *Gynecological Aid* Decoction of plants used as a potent medicine in childbirth. *Poison* Compound containing leaves sprinkled on medicine to kill a hated person. (as *Myrica asplenifolia* 151:42) *Tonic* Compound decoction of root taken as a mild tonic. (54:133) **Micmac** *Analgesic* Root used for headache and inflammation. *Dermatological Aid* Leaves used for sprains, swellings, poison ivy, and inflammation. (40:56) Leaves used for swellings and poison ivy. (as *Myrica asplenifolia* 40:58) *Orthopedic Aid* Leaves used for sprains. (40:56) Leaves used for sprains, swellings, and poison ivy. (as *Myrica asplenifolia* 40:58) *Respiratory Aid* Leaves used for catarrh. (40:56) Leaves used for catarrh and poison ivy. (as *Myrica asplenifolia* 40:58) *Stimulant* Berries, bark, and leaves used as an "exhilarant" and beverage. (40:56) **Mohegan** *Dermatological Aid* Infusion of leaves used as a wash for poison ivy. (as *Myrica asplenifolia* 174:264) Infusion of leaves used as poison ivy lotion. (as *Myrica asplenifolia* 176:74, 130) **Ojibwa** *Analgesic* Infusion of leaves taken for flux and stomach cramps. *Antidiarrheal* Infusion of leaves taken for stomach cramps and flux. *Gastrointestinal Aid* Decoction of leaves taken for stomach cramps and flux. (as *Myrica asplenifolia* 153:375) **Penobscot** *Dermatological Aid* Infusion of leaves rubbed on skin for poison ivy. (as *Myrica asplenifolia* 156:309) **Potawatomi** *Dermatological Aid* Infusion of leaves used for itch. (as *Myrica asplenifolia* 154:65) **Shinnecock** *Dermatological Aid* Infusion of leaves rubbed on the skin for itch. (30:119)
- **Food**—Chippewa *Beverage* Leaves used to make a hot, tea-like beverage. (as *Myrica asplenifolia* 71:127) **Ojibwa** *Preservative* Leaves used to line buckets when picking blueberries and cover them to prevent spoiling. (as *Myrica asplenifolia* 153:420)
- **Other**—Chippewa *Incense & Fragrance* Leaves used for perfume. *Tools* Sprigs used to sprinkle water on the hot stones of the vapor bath. (as *Myrica asplenifolia* 71:127) **Potawatomi** *Insecticide* Leaves thrown onto the fire to make a smudge and keep away mosquitoes. (as *Myrica asplenifolia* 154:121)

## **Condalia**, Rhamnaceae

**Condalia globosa** I. M. Johnston, Bitter Snakewood

- **Food**—Papago *Fruit* Fruits eaten raw. (as *Condalis spathulata* 34:19)

**Condalia hookeri** M. C. Johnston var. **hookeri**, Hooker's Blue-wood

- **Food**—Maricopa *Fruit* Fruits eaten raw. (as *C. obovata* 95:262) Black berries used for food. (as *C. obovata* 95:265) **Pima** *Fruit* Fruits eaten raw. Fruits roasted and used for food. *Sauce & Relish* Berries cooked, strained, and juice boiled to make syrup. (as *C. obovata* 95:262)

## **Conioselinum**, Apiaceae

**Conioselinum chinense** (L.) B.S.P., Chinese Hemlockparsley

- **Drug**—Micmac *Urinary Aid* Infusion of roots, hemlock, prince's pine, and curled dock used for colds in the bladder. (116:259)

**Conioselinum gmelinii** (Cham. & Schlecht.) Steud., Pacific Hemlockparsley

- **Drug**—Aleut *Cold Remedy* Leaves used to make a tonic for colds. *Throat Aid* Leaves used to make a soothing drink for sore throats. (8:427) **Kwakiutl** *Antirheumatic (External)* and *Herbal Steam* Plant used in sweat baths for arthritis and rheumatism. (as *C. pacificum* 183:266) Plant used in steam bath for general weakness. *Stimulant* Plant used in steam bath for general weakness. (as *C. pacificum* 183:276)
- **Food**—Haihais *Unspecified* Roots used for food. Haisla *Unspecified* Roots used for food. (as *C. pacificum* 43:83) Haisla & Hanaksiala *Unspecified* Roots steamed and eaten with oolichan (candlefish) grease. (as *C. pacificum* 43:213) Hanaksiala *Unspecified* Roots used for food. Heiltzuk *Unspecified* Roots used for food. (as *C. pacificum* 43:83) Kitasoo *Vegetable* Roots used for food. (as *C. pacificum* 43:325) Kwakwaka'wakw *Unspecified* Roots used for food. Nuxalkmc *Unspecified* Roots used for food. Oweekeno *Unspecified* Roots used for food. (as *C. pacificum* 43:83)

**Conioselinum scopulorum** (Gray) Coult. & Rose, Rocky Mountain Hemlockparsley

- **Drug**—Navajo, Kayenta *Blood Medicine* Plant used as a postpartum blood purifier. *Gynecological Aid* Plant used as a postpartum blood purifier. *Respiratory Aid* Plant smoked for catarrh. *Snakebite Remedy* Infusion of plant used as a snake repellent. (205:34)
- **Food**—Navajo, Kayenta *Unspecified* Leaves cooked with meat and used for food. (205:34)

**Conioselinum** sp.

- **Food**—Aleut *Unspecified* Species used for food. (7:29)

**Conium**, Apiaceae

**Conium maculatum** L., Poison Hemlock

- **Drug**—Klallam *Love Medicine* Roots rubbed on woman's body to attract the attention of a man. *Poison* Roots considered poisonous. (79:42) Lakota *Poison* All plant parts very poisonous. (139:33) Snohomish *Poison* Roots considered poisonous. (79:42)

**Conocarpus**, Combretaceae

**Conocarpus erectus** L., Button Mangrove

- **Dye**—Seminole *Unspecified* Plant used as a buckskin dye. (169:468)
- **Other**—Seminole *Fuel* Wood used for barbecue firewood. (169:468)

**Conocephalaceae**, see *Conocephalum*

**Conocephalum**, Conocephalaceae, liverwort

**Conocephalum conicum**, Cone Headed Liverwort

- **Drug**—Haisla & Hanaksiala *Burn Dressing* Plant pulverized, mixed with mountain goat fat, and used for sunburns. (as *C. conicum* 43:145) Nitinaht *Eye Medicine* Plant used as an eye medicine and for cataracts. *Kidney Aid* Plant formerly used for kidney troubles. *Psychological Aid* Plant eaten to stop recurring dreams of having sex with the deceased. (as *C. conicum* 186:58)
- **Other**—Haisla & Hanaksiala *Paint* Plant used to make a green paint for wood. (as *C. conicum* 43:145)

**Conopholis**, Orobanchaceae

**Conopholis alpina** var. **mexicana** (Gray ex S. Wats.) Haynes, Mexican Squawroot

- **Drug**—Keres, Western *Tuberculosis Remedy* Infusion of plant used as a strengthener for weakened tuberculosis patients. (as *C. mexicana* 171:38)
- **Other**—Jemez *Good Luck Charm* Dried plant used to rub the ground before the race to make runner more swift-footed. (as *C. mexicana* 44:21)

**Consolida**, Ranunculaceae

**Consolida ajacis** (L.) Schur, Doubtful Knight's Spur

- **Drug**—Cherokee *Heart Medicine* Infusion taken "for heart." *Poison* Root "makes cows drunk and kills them." (as *Delphinium ajacis* 80:42)

**Convolvulaceae**, see *Calystegia*, *Convolvulus*, *Evolvulus*, *Ipomoea*, *Jacquemontia*, *Merremia*

**Convolvulus**, Convolvulaceae

**Convolvulus arvensis** L., Field Bindweed

- **Drug**—Navajo, Ramah *Dermatological Aid* Cold infusion of plant taken and used as a lotion for spider bites. *Gastrointestinal Aid* Cold infusion taken with food after swallowing a spider. (191:39) Pomo *Gynecological Aid* Decoction of plant taken for excessive menstruation. (66:15) Pomo, Kashaya *Gynecological Aid* Decoction of stem with leaves taken for excessive menstruation. (72:73)
- **Fiber**—Okanagan-Colville *Cordage* Stems used as a "pack rope" for carrying birds and marmots home after hunting. (188:96)

**Conyza**, Asteraceae

**Conyza canadensis** (L.) Cronq., Canadian Horseweed

- **Drug**—Cahuilla *Antidiarrheal* Infusion of leaves used for diarrhea. (15:56)

**Conyza canadensis** (L.) Cronq. var. **canadensis**, Canadian Horseweed

- **Drug**—Blackfoot *Antidiarrheal* Plant used for chronic diarrhea. *Antihemorrhagic* Plant used for childbirth hemorrhage. (as *Erigeron canadensis* 97:56) Chippewa *Analgesic* Decoction of root and leaves taken for stomach pain. *Gastrointestinal Aid* Decoction of root and leaves taken for stomach pain. (as *Erigeron canadensis* 53:342) *Gynecological Aid* Infusion of whole plant taken for "female weakness." (as *Erigeron canadensis* 53:356) Cree, Hudson Bay *Antidiarrheal* Plant used as a diarrhea medicine. (as *Erigeron canadensis* 92:303) Hawaiian *Antirheumatic (External)* Leaves and other plant parts pounded and resulting liquid applied to sore joints. *Orthopedic Aid* Leaves and other plant parts pounded and resulting liquid applied to sprains and backaches. Leaves, shoots, and other plants pounded and resulting liquid used for injuries caused by accidents. (as *Erigeron canadense* 2:25) Hopi *Analgesic* Poultice of rubbed plant applied to temples for headache. (as *Erigeron canadensis* 200:33, 96) Houma *Gynecological Aid* Hot infusion of root taken for leukorrhea. (as *Erigeron canadense* 158:64) Iroquois *Anticonvulsive*, *Febrifuge*, and *Pediatric Aid* Infusion of whole plant and roots from another plant used for children with convulsions and fevers. (as *Erigeron canadensis* 141:65) Keres, Western *Burn Dressing* Crushed plant rubbed on

sunburns. *Dermatological Aid* Plant beaten into a paste and rubbed on the skin for blotches or liver spots. (as *Leptilon canadense* 171:51) **Meskwaki** *Diaphoretic* Used as a steaming agent in sweat bath. (as *Erigeron canadensis* 152:213) **Navajo, Kayenta** *Dermatological Aid* Plant used as a lotion for pimples. *Disinfectant* Hot poultice of plant applied to infants with prenatal infection. *Ear Medicine* Hot poultice of plant applied for earaches. *Gastrointestinal Aid* Plant used for stomachaches. *Pediatric Aid* Hot poultice of plant applied to infants with prenatal infection. (as *Erigeron canadensis* 205:47) **Navajo, Ramah** *Dermatological Aid* Poultice of crushed leaves or cold infusion of leaves used as a lotion for pimples. *Snakebite Remedy* Cold infusion taken or used as lotion for snakebite. (as *Erigeron canadensis* 191:50) **Ojibwa** *Hunting Medicine* Disk florets smoked as one of the hunting charms. (as *Erigeron canadensis* 153:429) **Potawatomi** *Veterinary Aid* Plant used as a medicine for horses. (as *Erigeron canadensis* 154:51, 52) **Seminole** *Cold Remedy* Infusion of leaves and bark taken and steam inhaled for runny nose, stuffy head, and sore throat. *Cough Medicine* Infusion of leaves and bark taken and steam inhaled for coughs. (as *Leptilon canadense* 169:279) *Love Medicine* Plant rubbed on the body by a doctor to rid himself of his wife. (as *Leptilon canadense* 169:401) *Respiratory Aid* Infusion of leaves and bark taken and steam inhaled for asthma. (as *Leptilon canadense* 169:279) **Zuni** *Respiratory Aid* Crushed flowers inserted in nostrils to cause sneezing, relieving "rhinitis." (as *Leptilon canadense* 166:55)

- **Food—Miwok** *Vegetable* Raw, pulverized leaves and tender tops, flavor similar to onions, used for food. (as *Erigeron canadensis* 12:159)

## **Coprosma**, Rubiaceae

**Coprosma** sp., Maile-kaluhea

- **Drug—Hawaiian** *Dermatological Aid* Infusion of pounded vines, roots, and other plants strained and used as a wash for skin ulcers, and for skin diseases. *Tuberculosis Remedy* Infusion of pounded vines, roots, and other plants strained and used as a wash for scrofulous sores. (2:69) *Unspecified* Whole plant dried, stored, and used under the direction of a medicine man. (2:72)

## **Coptis**, Ranunculaceae

**Coptis macrosepala**, Goldthread

- **Drug—Tlingit** *Pulmonary Aid* Compound infusion of plant used for lung inflammations. (107:283)

**Coptis trifolia** (L.) Salisb., Threeleaf Goldthread

- **Drug—Iroquois** *Anthelmintic* Compound decoction or infusion of roots taken for stomach cramps and worms. *Antiemetic* Infusion or decoction of roots taken, especially for babies, for vomiting. *Blood Medicine* Complex compound decoction taken as a blood purifier and blood remedy. *Emetic* Decoction of roots taken to vomit for jaundice, for the eyeballs, and dizziness. *Eye Medicine* Infusion or decoction of roots taken or used as drops for sore eyes. *Gastrointestinal Aid* Compound decoction of roots taken for stomach cramps and worms. Infusion of roots taken for vomiting, biliousness, and jaundice. *Oral Aid* Infusion of roots used for sore mouths of children and trench mouth. *Pediatric Aid* Decoction of roots given to "little babies when they throw up often." Infusion of roots used as a wash or poultice applied to sore mouths of children. (87:322) Decoction of plant given to babies with sickness caused by bad blood from moth-

er. (87:323) *Throat Aid* Cold, compound infusion with plant taken for trench mouth and raw throat. (87:322) *Unspecified* Decoction of plant given to babies with sickness caused by bad blood from mother. (87:323) *Venereal Aid* Complex compound decoction taken as a blood purifier and for venereal disease. (87:322) **Malecite** *Oral Aid* and *Pediatric Aid* Infusion of plant used for children with sore mouths. (116:245) **Menominee** *Oral Aid* Astringent root used as a wash for oral cankers and babies' teething pains. *Pediatric Aid* Root yielded astringent mouthwash for sore throat and teething babies. *Throat Aid* Roots used in astringent mouthwash for babies with sore throats. *Toothache Remedy* Roots used in astringent mouthwash for teething babies. (151:48) **Micmac** *Oral Aid* Herb used for sore and diseased mouth. (40:56) **Mohegan** *Oral Aid* Infusion of plant used as a mouthwash for babies. (174:265) Infusion of leaves used as a mouthwash for infants. (176:72, 128) *Pediatric Aid* Infusion of plant used as a mouthwash for babies. (174:265) Infusion of leaves used as a mouthwash for infants. (176:72, 128) **Ojibwa** *Oral Aid* Decoction of root used as a wash for sore mouth and to soothe mouth of teething baby. *Pediatric Aid* Decoction of root used to soothe mouth of teething baby. (153:383) **Penobscot** *Oral Aid* Stems chewed for mouth sores and mouths irritated by tobacco smoking. (156:309) **Potawatomi** *Analgesic* Root used for babies with teething pains. *Oral Aid* Roots used for sore gums and especially for pain of teething babies. *Pediatric Aid* Roots used especially for pain of teething babies. (154:74)

- **Dye—Chippewa** *Yellow* Long, slender roots used to make a bright yellow dye. (53:374) Roots used to make a yellow dye. (71:130) **Ojibwa** *Yellow* Roots boiled to obtain a yellow dye. (96:114) Golden-colored roots added to other plant dyes to emphasize the yellow color. (153:426) **Potawatomi** *Yellow* Roots cooked with the cloth to dye an indelible yellow. (154:122)

**Coptis trifolia** ssp. **groenlandica** (Oeder) Hultén, Threeleaf Goldthread

- **Drug—Abnaki** *Cold Remedy* Decoction of plant and another plant used for colds. (as *C. groenlandica* 144:167) *Cough Medicine* Used for coughs. (as *C. groenlandica* 144:154) **Algonquin, Quebec** *Antidiarrheal* Infusion of rhizomes taken for diarrhea. *Eye Medicine* Infusion of rhizomes used as an eyewash. *Heart Medicine* Infusion of rhizomes taken for heart disease. *Toothache Remedy* Infusion of rhizomes taken for toothaches. (as *C. groenlandica* 18:167) **Algonquin, Tête-de-Boule** *Cold Remedy* Boiled roots used for serious colds. *Respiratory Aid* Boiled roots used for respiratory troubles. (as *C. groenlandica* 132:126) **Iroquois** *Ear Medicine* Infusion of plant, with another plant, used as ear drops for earaches. *Gastrointestinal Aid* Infusion of roots taken to ease digestion. (as *C. groenlandica* 141:42) *Oral Aid* Roots chewed for mouth pains. (as *C. groenlandica* 142:87) **Malecite** *Unspecified* Used for medicines. (as *C. groenlandica* 160:6) **Micmac** *Unspecified* Roots chewed for medicinal use. (as *C. groenlandica* 159:258)

## **Corallorrhiza**, Orchidaceae

**Corallorrhiza maculata** (Raf.) Raf., Summer Coralroot

- **Drug—Navajo, Kayenta** *Dermatological Aid* Infusion of plant used as a lotion for ringworm or skin disease. (205:17) **Nevada Indian** *Cold Remedy* Infusion of dried, whole plant bits taken for colds. (118:

37) **Paiute Blood Medicine** Decoction of stalks used to “build up the blood” of pneumonia patients. **Pulmonary Aid** Infusion of dried stalks taken to “build up the blood” of pneumonia patients. **Shoshoni Blood Medicine** Decoction of stalks used to “build up the blood” of pneumonia patients. **Pulmonary Aid** Infusion of dried stalks taken to “build up the blood” of pneumonia patients. (180:60)

**Corallorrhiza maculata** (Raf.) Raf. **ssp. maculata**, Summer Coralroot

- **Drug**—**Iroquois Basket Medicine** Infusion of pounded root used as a basket medicine. (87:290) **Hunting Medicine** Root placed in a half cup of water and used to wash guns and clothes as a hunting medicine. **Love Medicine** Infusion of pounded roots used as a love medicine. **Tuberculosis Remedy** Compound infusion of roots taken for tuberculosis. (87:291) **Veterinary Aid** Infusion of whole plant added to horse's grain for heaves. **Witchcraft Medicine** Infusion of pounded roots used as an anti-witch medicine. (87:290)

## **Cordylanthus**, Scrophulariaceae

**Cordylanthus ramosus** Nutt. ex Benth., Bushy Bird's Beak

- **Drug**—**Navajo Emetic** Infusion of plant taken to induce vomiting. **Gynecological Aid** Infusion of plant taken by menstruating women to stop menses. **Hemostat** Infusion of plant used by men for nosebleeds. (55:76) **Orthopedic Aid** Plant used to prevent broken ribs. (55:96) **Venereal Aid** Infusion of plant taken for syphilis. (55:76) **Shoshoni Venereal Aid** Decoction of plant taken for venereal disease, or “bad disease.” (180:60)

**Cordylanthus sp.**, Sunflower

- **Drug**—**Luiseño Emetic** Plant used as an emetic. (155:229)
- **Food**—**Yavapai Unspecified** Parched, ground seeds eaten dry or dampened. (65:256)

**Cordylanthus wrightii** Gray, Wright's Bird's Beak

- **Drug**—**Navajo Venereal Aid** Decoction of plant used for syphilis. (55:76) **Navajo, Kayenta Ceremonial Medicine** Plant used for ceremonial purposes. **Gynecological Aid** Plant used for prolapse of the uterus. (205:42) **Navajo, Ramah Analgesic** Decoction of plant taken for menstrual pain and by men for leg or body aches. **Gynecological Aid** Decoction of plant taken for menstrual pain. (191:44)

## **Cordyline**, Agavaceae

**Cordyline fruticosa** (L.) Chev., Tiplant

- **Drug**—**Hawaiian Febrifuge** Leaves applied to the head, chest, and abdomen for dry fevers. **Nose Medicine** Flowers and other plants pounded and resulting liquid fumes inhaled for nose growths. **Pulmonary Aid** Leaves, shoots, and other plants mixed with water and taken for chest congestion from tough phlegm. **Respiratory Aid** Flowers and other plants pounded, resulting liquid mixed with potato or poi and eaten for asthma. **Sedative** Leaves made into a wreath and worn to provide a restful condition of the nerves and body. (as *C. terminalis* 2:49)
- **Food**—**Hawaiian Beverage** Roots fermented into a very powerful alcohol. **Unspecified** Roots cooked and used for food. (as *C. terminalis* 2:49) Roots pit baked and eaten. (as *C. terminalis* 112:68)
- **Other**—**Hawaiian Containers** Leaves used for underground oven covers or as containers for cooking fish or pork. **Hunting & Fishing**

*Item* Leaves used for fishing drags. (*C. terminalis* 2:49)

## **Coreopsis**, Asteraceae

**Coreopsis bigelovii** (Gray) Hall, Bigelow's Tickseed

- **Food**—**Kawaiisu Sweetener** Stems chewed for the sweet juice. **Vegetable** Whole plant eaten fresh or cooked and fried in grease and salt. Raw, bruised leaves eaten boiled or with salt. (206:21) **Tubatulabal Unspecified** Leaves used extensively for food. (193:15)

**Coreopsis leavenworthii** Torr. & Gray, Leavenworth's Tickseed

- **Drug**—**Seminole Other** Infusion of plant used for heat prostration. (169:303)

**Coreopsis palmata** Nutt., Stiff Tickseed

- **Drug**—**Meskwaki Orthopedic Aid** Decoction of seeds used internally and as a poultice for one who is crippled. (152:213)

**Coreopsis sp.**, Tickseed

- **Dye**—**Cherokee Red** Whole plant used to give a red coloring. (203:74)

**Coreopsis tinctoria** Nutt., Golden Tickseed

- **Drug**—**Cherokee Antidiarrheal** Infusion of root taken for flux. (80:59)
- **Food**—**Lakota Beverage** Used to make tea. (139:37)
- **Dye**—**Cherokee Red** Used to make a red dye. (80:59)

**Coreopsis tinctoria** Nutt. **var. tinctoria**, Golden Tickseed

- **Drug**—**Navajo, Ramah Ceremonial Medicine** Plant used in ceremonial chant lotion. **Disinfectant** Cold infusion of dried plant taken with salt for “lightning infection.” **Panacea** Root used as a “life medicine.” **Venereal Aid** Plant used as fumigant for sexual infection. (as *C. cardaminefolia* 191:50) **Zuni Reproductive Aid** Infusion of whole plant, except for the root, taken by women desiring female babies. (as *C. cardaminefolia* 166:84)
- **Food**—**Zuni Beverage** Plant formerly used to make a hot beverage until the introduction of coffee by traders. The plant was folded while fresh, a number of folds being attached one below the other, and hung on the wall to dry. When the beverage was desired, a fold was detached from the wall and used to make a hot beverage. (as *C. cardaminefolia* 166:66)
- **Dye**—**Apache, White Mountain Red** Used as a dark, rich red dye. (as *C. cardaminefolia* 136:156) **Zuni Red** Blossoms used with other flowers as a mahogany red dye for yarn. (as *C. cardaminefolia* 166:80)

**Coreopsis tripteris** L., Tall Tickseed

- **Drug**—**Meskwaki Analgesic** Decoction of stems taken for internal pains. **Antihemorrhagic** Decoction of stems taken for internal bleeding. (152:213)

## **Corethrogyne**, Asteraceae

**Corethrogyne filaginifolia** (Hook. & Arn.) Nutt., Common Sand-aster

- **Drug**—**Kawaiisu Cold Remedy, Diaphoretic, and Herbal Steam** Infusion of twigs and leaves used as steam bath to induce sweating for colds. (206:22)

## **Coriandrum**, Apiaceae

**Coriandrum sativum** L., Chinese Parsley

- **Food**—**Hopi Sauce & Relish** Plant dipped into a stew and eaten as a condiment. (56:20) **Spice** Used as flavoring in cooking. (200:86) **Unspecified** Dipped into water, eaten raw and green. (190:164) **Keresan Spice** Seeds used to flavor soups and stews. (198:560) **Zuni Sauce & Relish** Powdered seeds ground with chile and used as a condiment with meat. **Vegetable** Leaves used as a salad. (166:66)

**Cornaceae**, see *Cornus*, *Nyssa*

## **Cornicularia**, Alectoriaceae, lichen

**Cornicularia divergens** Ach., Caribou Moss

- **Food**—**Eskimo, Inuktitut Fodder** Plant given to fawns to try to get them to eat from their hands. (202:191)
- **Other**—**Eskimo, Inuktitut Fuel** Dried plant used for tinder. (202:191)

## **Cornus**, Cornaceae

**Cornus alternifolia** L. f., Alternateleaf Dogwood

- **Drug**—**Cherokee Analgesic** Bark chewed for headache. **Anthelmintic** Compound infusion of bark and root used for childhood diseases like worms and measles. **Antidiarrheal** Compound infusion taken for diarrhea. **Antidote** Infusion of beaten bark used for bathing after “poisons of any kind.” **Blood Medicine** Infusion taken “for blood.” **Dermatological Aid** Root bark astringent and compound infusion taken for diarrhea. Root bark used for unspecified poultices and poultice of bark ooze applied to ulcers. **Diaphoretic** Infusion of flower taken “to sweat off flu.” **Disinfectant** Root bark used as an antiseptic and astringent. **Febrifuge** Root bark used as a febrifuge. **Gastrointestinal Aid** Infusion of flower taken for colic. **Gynecological Aid** Infusion of bark used by women for backache. **Misc. Disease Remedy** Compound infusion of bark and root used for childhood diseases like worms and measles. Infusion of flower taken “to sweat off flu.” **Pediatric Aid** Compound infusion of bark and root used for childhood diseases like worms and measles. **Stimulant** Root bark used as a stimulant. **Throat Aid** Infusion of inner bark taken for “lost voice.” **Tonic** Root bark used as a tonic. (80:32) **Chippewa Cough Medicine** Inner bark used as a cough remedy. (71:138) **Eye Medicine** Compound decoction of root used as a wash or compress for sore eyes. Infusion of scraped root used as a wash or on a compress for sore eyes. (53:360) **Hunting Medicine** Roots used as a charm on muskrat traps. (53:376) **Iroquois Cold Remedy** Compound decoction of bark taken for colds. **Cough Medicine** Compound decoction of bark taken for coughing. (87:407) **Dermatological Aid** Poultice of powdered bark applied to heal the navel and blisters. (87:406) Infusion of bark applied as poultice to swollen areas. **Emetic** Compound decoction of bark taken as an emetic, especially for coughs. (87:407) **Eye Medicine** Plant used in a wash for eyes. **Gynecological Aid** Compound decoction of bark taken by pregnant women who have had gonorrhea. **Pediatric Aid** Poultice of powdered bark applied to heal navel. **Respiratory Aid** Decoction of bark taken to vomit for coughs or bronchial coughs. (87:406) **Tuberculosis Remedy** Compound decoction of bark taken for tuberculosis. (87:407) **Venereal Aid** Compound infusion used as wash on parts affected by venereal disease. (87:406) **Menominee Antidiarrheal** Bark liquid injected rectally and poultice of bark applied to anus for diarrhea. **Cancer Treatment** One reported case: poultice of bark plus something else cured facial cancer. **Hemorrhoid**

- Remedy** Bark used to make a liquid and injected rectally for piles. (151:32, 33) **Ojibwa Emetic** Inner bark used as an emetic. (153:366) **Potawatomi Eye Medicine** Infusion of bark used as a wash for granulation of the eyelids. (154:54)
- **Fiber**—**Ojibwa Building Material** Twigs used for thatching and various other purposes. (153:417)
- **Other**—**Cherokee Decorations** Wood used to carve. **Tools** Wood used to make loom shuttles. (80:32) **Chippewa Weapon** Wood used to make awl handles, mauls, and war clubs because it would not split or check. (71:138) **Menominee Smoke Plant** Plant used for Indian tobacco, known as kinnikinnick. (151:32, 33) Toasted inner bark used for smoking tobacco. (151:80) **Ojibwa Hunting & Fishing Item** Root boiled to wash muskrat traps and make it lure the muskrat. (153:429) **Smoke Plant** Bark used for “kinnikinnick” smoking mixture. (153:417)

**Cornus amomum** P. Mill., Silky Dogwood

- **Drug**—**Iroquois Analgesic** Compound decoction of roots taken for urinating pain. **Dermatological Aid** Infusion of bark used as wash or powdered bark applied to gonorrhea sores. (87:402) Complex compound decoction used as wash for affected parts of “Italian itch.” **Emetic** Decoction of bark taken as an emetic. (87:403) **Laxative** Compound decoction of roots taken as a laxative. **Pediatric Aid** Infusion of bark used as wash to make babies sleep. (87:402) **Poultice** Poultice of smashed bark applied for goiter. **Pulmonary Aid** Infusion of bark taken for chest congestion. (87:403) **Sedative** Infusion of bark used as wash to make babies sleep. **Urinary Aid** Compound decoction of roots taken for urinating pain. **Venereal Aid** Infusion of bark used as wash or powdered bark applied to gonorrhea sores. (87:402) **Menominee Antidiarrheal** Plant known as maimakwukwa and infusion of bark injected rectally for diarrhea. **Ceremonial Medicine** Plant known as kinnikinnick and bark smoked ceremonially. (151:32)
- **Other**—**Dakota Smoke Plant** Dried inner bark used for smoking. (69:367) Fragrant inner bark dried and used for smoking. (70:107) **Menominee Smoke Plant** Toasted inner bark used for smoking tobacco. (151:80) **Omaha Smoke Plant** Dried inner bark used either alone or with tobacco for smoking. (68:331) Fragrant inner bark dried and used for smoking. **Pawnee Smoke Plant** Fragrant inner bark dried and used for smoking. **Ponca Smoke Plant** Fragrant inner bark dried and used for smoking. (70:107) Inner bark used as an additive to tobacco. (94:47) **Winnebago Smoke Plant** Fragrant inner bark dried and used for smoking. (70:107)

**Cornus amomum ssp. obliqua** (Raf.) J. S. Wilson, Silky Dogwood

- **Drug**—**Iroquois Gastrointestinal Aid** Infusion of bark taken for dyspepsia. (as *C. obliqua* 141:54)
- **Other**—**Iroquois Tools** Branches used to stretch rat skins while drying. (as *C. obliqua* 141:54)

**Cornus asperifolia** Michx., Toughleaf Dogwood

- **Other**—**Comanche Hunting & Fishing Item** Stems used to make arrow shafts. (29:521) **Omaha Hunting & Fishing Item** Wood considered the favorite for arrow shafts. **Pawnee Hunting & Fishing Item** Wood considered the favorite for arrow shafts. **Ponca Hunting & Fishing Item** Wood considered the favorite for arrow shafts. **Winnebago Hunting & Fishing Item** Wood considered the favorite for arrow shafts. (70:107)

***Cornus canadensis*** L., Bunchberry Dogwood

- **Drug**—**Abnaki Analgesic** Used for side pains. (144:155) Decoction of whole plant taken for side pains. (144:170) **Algonquin, Quebec Cathartic** Infusion of leaves used as a cathartic tea. (18:211) **Algonquin, Tête-de-Boule Cold Remedy** Decoction of plant and other plants used for colds. **Gynecological Aid** Plant mixed with other plants and used by women for stomachaches. (132:128) **Carrier, Northern Unspecified** Used as a medicine for unspecified malady. **Carrier, Southern Eye Medicine** Strong decoction of plant, without berries, used as an eyewash. (150:62) **Delaware Analgesic** Bark used for body pains. (176:31) **Delaware, Oklahoma Analgesic** Compound containing bark used for body pain. (175:26, 74) **Hoh Tonic** Infusion of bitter bark used as a tonic. (137:66) **Iroquois Cold Remedy** Decoction of whole plant taken for coughs. **Febrifuge** Decoction of whole plant taken for fevers. **Tuberculosis Remedy** Decoction of whole plant taken for tuberculosis. (87:402) **Malecite Anticonvulsive** Infusion of roots, leaves, and berries used for fits. (116:256) **Micmac Anticonvulsive** Berries, roots, and leaves used for fits. (40:56) **Montagnais Orthopedic Aid** Infusion of plant used as a medicine for paralysis. (156:315) **Ojibwa Gastrointestinal Aid** Infusion of root used for infant colic. **Pediatric Aid** Infusion of root used for infant colic. (153:366, 367) **Paiute Eye Medicine** Mashed roots strained through a clean cloth and used as an eyewash for the removal of foreign objects. Mashed roots strained through a clean cloth and used as an eyewash for eye soreness. (111:98) **Quileute Tonic** Infusion of bitter bark used as a tonic. (137:66) **Thompson Dermatological Aid** Leaf ash or powdered, toasted leaves sprinkled on sores. (164:458)
- **Food**—**Abnaki Fruit** Fruits eaten for food. (144:170) **Algonquin, Quebec Snack Food** Berries used as a nibble food. (18:102) **Chippewa Fruit** Berries eaten raw. (53:321) **Cree, Woodlands Snack Food** Fruit eaten as a fresh nibble. (109:36) **Eskimo, Alaska Fruit** Gathered and mixed with other berries. (4:715) **Haisla & Hanaksiala Dessert** Berries mashed, mixed with oolichan (candlefish) grease, and eaten as a dessert. **Dried Food** Berries dried for winter use. (43:234) **Hesquiat Special Food** Raw berries eaten with dogfish oil by the elders of the village at a big feast. (185:63) **Kwakiutl, Southern Fruit** Pulpy berries extensively used for food. (183:281) **Makah Fruit** Berries eaten fresh. (79:43) **Nitinaht Fruit** Berries eaten fresh and raw. (186:102) **Potawatomi Fruit** Berries used for food. (154:98) **Salish Fruit** Berries used for food. (182:81)
- **Other**—**Hoh Ceremonial Items** Berries used in ceremonies. **Smoke Plant** Leaves dried and smoked. **Quileute Ceremonial Items** Berries used in ceremonies. **Smoke Plant** Leaves dried and smoked. (137:66)

***Cornus drummondii*** C. A. Mey., Roughleaf Dogwood

- **Drug**—**Iroquois Venereal Aid** Infusion of switches taken for gonorrhea. (87:403)

***Cornus florida*** L., Flowering Dogwood

- **Drug**—**Cherokee Analgesic** Bark chewed for headache. **Anthelmintic** Compound infusion of bark and root used for childhood diseases like worms and measles. (80:32) Infusion of bark used as a bath and given to children with worms. (177:46) **Antidiarrheal** Compound infusion taken for diarrhea. **Antidote** Infusion of beaten bark used for bathing after “poisons of any kind.” **Blood Medicine** Compound infusion taken for “for blood.” **Dermatological Aid** Root bark astringent

and compound infusion taken for diarrhea. Root bark used for unspecified poultices and poultice of bark ooze applied to ulcers. (80:32) Root bark used for wounds. (203:74) **Diaphoretic** Infusion of flower taken “to sweat off flu.” **Disinfectant** Root bark used as an antiseptic and astringent. **Febrifuge** Root bark used as a febrifuge. **Gastrointestinal Aid** Infusion of flower taken for colic. **Gynecological Aid** Infusion of bark used by women for backache. **Misc. Disease Remedy** Compound infusion of bark and root used for childhood diseases like worms and measles. Infusion of flower taken “to sweat off flu.” **Pediatric Aid** Compound infusion of bark and root used for childhood diseases like worms and measles. (80:32) Infusion of bark used as a bath and given to children with worms. (177:46) **Poultice** Root bark used in poultices. (203:74) **Stimulant** Root bark used as a stimulant. **Throat Aid** Infusion of inner bark taken for “lost voice.” (80:32) Decoction of inner bark taken to loosen phlegm for hoarseness. (177:46) **Tonic** Root bark used as a tonic. (80:32) **Delaware Tonic** Roots used as a tonic. (176:31) **Delaware, Oklahoma Tonic** Compound containing root used as a tonic. (175:26, 74) **Houma Febrifuge** Decoction of root or bark scrapings taken for fever. **Misc. Disease Remedy** Decoction of root or bark scrapings taken for malaria. (158:55) **Iroquois Blood Medicine** Compound decoction of stems and roots taken for blood chills. (87:402) **Rappahannock Antidiarrheal** Infusion of root bark taken for diarrhea. **Blood Medicine** Decoction of dried bark from roots used to purify the blood. **Tonic** Decoction of dried bark from roots used as a tonic. (161:33)

- **Other**—**Cherokee Decorations** Wood used to carve. **Tools** Wood used to make loom shuttles. (80:32)

***Cornus foemina*** P. Mill., Stiff Dogwood

- **Drug**—**Cherokee Throat Aid** Infusion used for “lost voice.” (as *C. stricta* 80:30, 31) **Houma Febrifuge** Decoction of root or bark scrapings taken for fever. **Misc. Disease Remedy** Decoction of root or bark scrapings taken for malaria. (as *C. stricta* 158:55)
- **Other**—**Micmac Smoke Plant** Dried bark mixed with tobacco and used for smoking. (as *C. stricta* 156:317)

***Cornus glabrata*** Benth., Brown Dogwood

- **Fiber**—**Modesse Basketry** Long shoots used for some of the baskets. (117:223) **Winton Basketry** Straight stems used for making baskets. (117:264) **Yuki Basketry** Branches used to make coarse baskets. (49:92)

***Cornus nuttallii*** Audubon ex Torr. & Gray, Pacific Dogwood

- **Drug**—**Green River Group Cathartic** Plant used as a physic. **Emetic** Plant used as an emetic. (79:42) **Hoh Tonic** Infusion of bitter bark used as a tonic. (137:66) **Karok Herbal Steam** Boughs used in the fire of the sweat house. (148:387) **Lummi Laxative** Decoction of bark taken as a laxative. (79:42) **Quileute Tonic** Infusion of bitter bark used as a tonic. (137:66) **Thompson Blood Medicine** Decoction of two bark strips and two cascara bark strips taken as a “blood purifier.” (187:204) **Gastrointestinal Aid** Decoction of wood or bark taken for stomach trouble. (164:461) Decoction of two bark strips and two cascara bark strips taken for ulcers. **Psychological Aid** Strained decoction of flower heads used to wash the skin for “seven year itch.” **Pulmonary Aid** Decoction of two bark strips and two cascara bark strips taken to improve hunters lungs before hiking. (187:204)

- **Fiber**—Pomo, *Kashaya Furniture* Long, slender branches used in making baby baskets. (72:42)
- **Dye**—Thompson *Black Bark* and fir bark boiled into a black dye and used to dye bitter cherry bark for imbricating baskets. *Brown Bark* boiled to make an intense brown dye and used to color bitter cherry bark for imbricating baskets. (187:204)
- **Other**—Green River Group *Toys & Games* Wood used to make disks for gambling games. (79:42) Hoh *Ceremonial Items* Berries used in ceremonies. *Smoke Plant* Leaves dried and smoked. (137:66) Karok *Good Luck Charm* Plant used as a good luck charm. (148:387) Klallam *Toys & Games* Wood used to make disks for gambling games. (79:42) Quileute *Ceremonial Items* Berries used in ceremonies. *Smoke Plant* Leaves dried and smoked. (137:66) Quinault *Decorations* Charcoal used for tattooing. (79:42) Saanich *Preservative* Bark used to tan articles like cedar bark bailers. Salish, *Coast Hunting & Fishing Item* Wood used to make bows and arrows. *Smoke Plant* Bark occasionally mixed with tobacco and used for smoking. (182:81) Skagit *Hunting & Fishing Item* Dry wood used to make foreshafts of salmon harpoons. *Toys & Games* Wood used to make disks for gambling games. Snohomish *Cooking Tools* Sticks used to pound brake ferns after roasting. (79:42) Thompson *Hunting & Fishing Item* Wood used to make bows. *Tools* Wood used to make implement handles. (164:496)

#### *Cornus racemosa* Lam., Gray Dogwood

- **Drug**—Iroquois *Dermatological Aid* Decoction of bark applied as poultice to cuts. (as *C. paniculata* 87:405) *Gastrointestinal Aid* Compound decoction taken, used as wash, and poultice applied to swollen abdomen. *Orthopedic Aid* Compound poultice of bark applied to swollen legs after the birth of a baby. *Venereal Aid* Compound powder poultice “put in bag, place penis in bag and tie around waist.” (as *C. paniculata* 87:406) *Veterinary Aid* Decoction of bark applied as poultice to cuts on horses. (as *C. paniculata* 87:405) Meskwaki *Analgesic* Infusion of bark held in mouth for neuralgia. *Antidiarrheal* Infusion of bark used, especially for children, as an enema for flux. *Oral Aid* Infusion of bark held in mouth for toothache. *Pediatric Aid* Infusion of bark given, often to children, as an enema for flux. *Stimulant* Smudged bark used to revive an unconscious patient. *Tuberculosis Remedy* Infusion of root used for consumption. (as *C. paniculata* 152:218, 219) Ojibwa *Antidiarrheal* Infusion of bark used for flux. *Hemorrhoid Remedy* Bark forced into the anus for piles. (as *C. paniculata* 153:367)
- **Other**—Meskwaki *Smoke Plant* Smoked at ceremonies. (as *C. paniculata* 152:272) Ojibwa *Smoke Plant* Bark used to make “kinnikinnick” for smoking. (as *C. paniculata* 153:418) Peeled, toasted, shredded twig bark used in the “kinnikinnick” or native smoking tobacco. (as *C. paniculata* 153:399)

#### *Cornus rugosa* Lam., Roundleaf Dogwood

- **Drug**—Iroquois *Cathartic* Bark taken as a general cathartic or emetic. *Emetic* Decoction of bark taken as an emetic. *Kidney Aid* Compound decoction of roots taken for the kidneys. *Tuberculosis Remedy* Compound infusion of smashed roots taken for tuberculosis. (87:405)
- **Other**—Chippewa *Smoke Plant* Used for smoking. (53:377)

#### *Cornus sericea* L. Red Osier Dogwood

- **Drug**—Cree, Hudson Bay *Cold Remedy* Decoction of bark taken as

an emetic for colds. *Cough Medicine* Decoction of bark taken as an emetic for coughs. *Emetic* Decoction of bark taken as an emetic for coughs, colds, and fevers. *Febrifuge* Decoction of bark taken as an emetic for fevers. (92:303) Ojibwa *Ceremonial Medicine* Bark smoked for various ceremonies. *Unspecified* Bark used for medicinal purposes. (135:237) Thompson *Anthelmintic* Fruit considered a good “tonic,” especially for intestinal worms. *Antidiarrheal* Decoction of branches, wild rose, and chokecherry branches taken for diarrhea. *Antiemetic* Decoction of branches, wild rose, and chokecherry branches taken for vomiting. *Cold Remedy* Decoction of branches taken for colds. *Panacea* Plant used as a medicine for anything by the elderly. *Pediatric Aid* Decoction of plant, squaw currant, branches, and fir or tamarack used as a baby bath.<sup>27</sup> *Poison* Sap used on arrowheads for the poisonous effect upon animals. *Strengtheners* Decoction of plant, squaw currant branches, and fir or tamarack used as a baby bath.<sup>27</sup> (187:204)

- **Food**—Thompson *Dessert* Fruit eaten as dessert. *Dried Food* Berries and saskatoon berries smashed together, dried, rehydrated, and eaten in the winter. The berries were also pounded with chokecherries, seeds and all, and used for food. *Fruit Bitter*, seedy fruits eaten alone or mashed with dried, “white” saskatoon berries. (187:204)
- **Fiber**—Thompson *Furniture* Branches used to make the bow at the top of a baby’s cradle. (187:204)
- **Other**—Thompson *Hunting & Fishing Item* Flexible branches used to make the frame of a cylindrical basketry trap. The frame was tied together with “gray willow” rope. Twisted branches used to make gill nets. Sap used on arrowheads for the poisonous effect upon animals. (187:204)

#### *Cornus sericea* ssp. *occidentalis* (Torr. & Gray) Fosberg, Western Dogwood

- **Drug**—Hoh *Tonic* Infusion of bitter bark used as a tonic. Quileute *Tonic* Infusion of bitter bark used as a tonic. (as *C. occidentalis* 137:66) Snohomish *Eye Medicine* Infusion of bark used for sore eyes. (as *C. pubescens* 79:42) Thompson *Gynecological Aid* Compound decoction of twigs taken by women after childbirth. (as *C. pubescens* 164:461) Simple or compound decoction of various plant parts taken after childbirth. (as *C. pubescens* 164:475)
- **Food**—Nitinah *Fruit* Berries eaten fresh. (as *C. stolonifera* var. *occidentalis* 186:103) Okanagan *Staple* Berries used as a principal food. (as *C. pubescens* 178:238) Sanpoil & Nespelem *Fruit* Berries eaten fresh. (as *C. pubescens* 131:102) Spokane *Fruit* Berries used for food. (as *C. pubescens* 178:343) Thompson *Unspecified* Little, white drupes eaten occasionally. (as *C. pubescens* 164:490)
- **Other**—Hoh *Ceremonial Items* Berries used in ceremonies. *Smoke Plant* Leaves dried and smoked. Quileute *Ceremonial Items* Berries used in ceremonies. *Smoke Plant* Leaves dried and smoked. (as *C. occidentalis* 137:66) Thompson *Smoke Plant* Leaves occasionally smoked as tobacco. (as *C. pubescens* 164:495)

#### *Cornus sericea* L. ssp. *sericea*, Red Osier Dogwood

- **Drug**—Abnaki *Eye Medicine* Used for sore eyes. (as *C. stolonifera* 144:155) Decoction of bark and bark from two other plants used for eye pain. (as *C. stolonifera* 144:170) Algonquin, Quebec *Cold Remedy* Infusion of bark shavings taken for colds. *Hemorrhoid Remedy* Bark shavings used to stop bleeding. (as *C. stolonifera* 18:211) Apache,

**White Mountain Ceremonial Medicine** Plant used in medicine ceremonies. (as *Svida stolonifera* 136:161) **Bella Coola Eye Medicine** Infusion of inner bark used for sties and other eye infections. (as *C. stolonifera* 184:203) **Blackfoot Cold Remedy** Infusion of bark taken for chest colds. (as *C. stolonifera* 86:71) **Liver Aid** Infusion of cambium taken for liver troubles and related disorders. (as *C. stolonifera* 86:66) **Poison** Chewed berry spittle used on arrow points and musket balls to cause infections in the wound. (as *C. stolonifera* 86:84) **Carrier Analgesic** Poultice of water-soaked, inner bark applied with warmed ashes as a painkiller. **Pulmonary Aid** Bark scraped, mixed with tobacco, and smoked for lung sickness. (as *C. stolonifera* 31:71) **Carrier, Northern Dermatological Aid** Compound decoction of bark taken for body sores. **Orthopedic Aid** Compound decoction of bark taken for weakness or paralysis. **Stimulant** Compound decoction of bark taken for constitutional weakness. (as *C. stolonifera* 150:62) **Chippewa Antidiarrheal** Infusion of bark taken for diarrhea. **Dermatological Aid** Infusion of bark taken for eruptions caused by poison ivy. (as *C. stolonifera* 71:138) **Eye Medicine** Compound decoction of root used as a wash or compress for sore eyes. (as *C. stolonifera* 53:360) **Costanoan Febrifuge** Decoction of inner bark used for fevers. (as *C. californica* 21:24) **Cree, Woodlands Eye Medicine** Fruit or pith used to make a wash for snow-blindness. Pith used for cataracts. (as *C. stolonifera* 109:36) **Gosiute Narcotic** Plant used for the similar effect to opium. (as *C. stolonifera* 39:366) **Iroquois Analgesic** Infusion of bark taken for headaches. (as *C. alba* ssp. *stolonifera* 87:403) **Cold Remedy** Plant used for colds. (as *C. alba* ssp. *stolonifera* 87:405) **Cough Medicine** Infusion of bark taken for coughs. **Emetic** Decoction or infusion of bark taken as an emetic, especially for consumption. (as *C. alba* ssp. *stolonifera* 87:403) **Eye Medicine** Plant used in a wash for eyes. (as *C. alba* ssp. *stolonifera* 87:405) **Hemostat** Infusion of bark taken for nose or mouth hemorrhages. **Oral Aid** Infusion of bark taken for nose or mouth hemorrhages. (as *C. alba* ssp. *stolonifera* 87:403) **Panacea** Bark smoked for every ailment. **Psychological Aid** Compound decoction of bark taken for craziness. (as *C. alba* ssp. *stolonifera* 87:404) **Pulmonary Aid** Compound infusion of bark taken for pain or congestion of the chest. 237) **Okanagan-Colville Blood Medicine** Decoction of inner bark and chokecherry bark or alder bark taken to clear the blood, taken to help circulation, and taken for the blood after childbirth. **Cold Remedy** Inner bark dried, mixed with kinnikinnick or tobacco, and smoked for colds. Poultice of inner bark alone or mixed with goose oil applied to babies for a chest cold. **Contraceptive** Decoction of inner bark and other bark taken after childbirth to prevent frequent pregnancies. **Dermatological Aid** Decoction of sticks taken for poison ivy rashes. Decoction of inner bark and chokecherry bark or alder bark taken for sores and rashes. Decoction of wood and bark used to wash skin, hair, and scalp for dandruff, falling hair, and itchy scalp. Decoction of wood, bark, cow parsnip roots, and chokecherry wood and bark used for sores and scabs. Berries rubbed into the scalp to prevent graying hair. **Gastrointestinal Aid** Decoction of sticks taken in the sweat house to cause vomiting for an upset stomach condition. **Gynecological Aid** Decoction of inner bark and chokecherry or alder bark taken to clean out the womb after childbirth. Poultice of inner bark applied to the back and belly to "heal a woman's insides" after childbirth. **Heart Medicine** Infusion of inner cambium taken for "heart conditions." **Other** Decoction of inner bark and chokecherry bark or alder bark taken to heal the body. **Panacea** Decoction of inner bark and chokecherry bark or alder bark taken for any kind of sickness. **Pediatric Aid** Poultice of inner bark alone or mixed with goose oil applied to babies for a chest cold. **Unspecified** Decoction of bark or entire branch used as a medicine. (as *C. stolonifera* 188:96) **Okanagon Gynecological Aid** Decoction of bark or leaves taken by women soon after childbirth. (as *C. stolonifera* 125:42) **Potawatomi Antidiarrheal** Root bark used for diarrhea and flux, "the most efficacious remedy." (as *C. stolonifera* 154:55) **Saanich Gastrointestinal Aid** Bark soaked in warm water and taken to induce vomiting to clean out the stomach. **Respiratory Aid** Bark soaked in warm water and taken to induce vomiting for improved breathing. (as *C. stolonifera* 182:81) **Shuswap Kidney Aid** Plant used for weak kidneys. **Pediatric Aid** and **Urinary Aid** Plant used for children for bed-wetting. (as *C. stolonifera* 123:61) **Thompson Gynecological Aid** Decoction of bark or leaves taken by women soon after childbirth. (as *C. stolonifera* 125:42) Simple or compound decoction of various plant parts taken after childbirth. (as *C. stolonifera* 164:475) **Wet'suwet'en Dermatological Aid** Bark used to make a skin wash. **Febrifuge** Bark used for fevers. **Hemorrhoid Remedy** Bark used for postpartum hemorrhaging. (as *C. stolonifera* 73:152)

- **Food—Blackfoot Fruit** Berries eaten ripe. (as *C. stolonifera* 86:102) **Snack Food** Berries and saskatoon berries used as a favorite snack reserved for men. (as *C. stolonifera* 86:100) **Flathead Fruit** Berries occasionally eaten raw. Berries mixed with serviceberries and sugar and eaten as a "sweet and sour" dish. (as *C. stolonifera* 82:21) **Haisla & Hanaksiala Forage** Berries eaten by bears. (43:233) **Hesquiat Dessert** Berries, sugar, and water whipped with salal branches until foamy and eaten as a confectionery dessert. (as *Shepherdia stolonifera* 185:64) **Kutenai Fruit** Berries occasionally eaten raw. Berries mixed with serviceberries and sugar and eaten as a "sweet and sour" dish. (as *C. stolonifera* 82:21) **Okanagan-Colville Forage** Berries eaten by black bears. **Fruit** Berries pounded, mixed with chokecherries or saskatoon berries, or boiled and eaten alone. (as *C. stolonifera* 188:96) **Shuswap Fruit** Berries used for food. **Preservative** Used with narrow leaf cot-

tonwood to smoke salmon. *Spice* Scraped wood, tasted like salt, used for barbecuing meat. (as *C. stolonifera* 123:61)

- **Fiber**—**Costanoan Basketry** Stems used in basketry. (as *C. californica* 21:252) **Cree, Woodlands Basketry** Stem used as a birch bark basket rim. (as *C. stolonifera* 109:36) **Gosiute Snow Gear** Wood used to make snowshoes. (as *C. stolonifera* 39:366) **Iroquois Basketry** Branches used to make baskets. (as *C. stolonifera* 142:95) **Okanagan-Colville Building Material** Large limbs used as frame poles. *Cordage* Bark twisted into rope and used to lash fish traps, raised caches, and other structures. (as *C. stolonifera* 188:96) **Paiute Furniture** Wood used for cradleboard frames. (as *C. stolonifera* 111:98) **Washo Basketry** Twigs used for the foundation of baskets. (as *C. stolonifera* 121:49)
- **Dye**—**Chippewa Black** Used with grindstone dust or black earth to make a black dye. (as *C. stolonifera* 53:372) **Red** Inner bark boiled, cedar ashes added, and used to make a red dye. Outer bark boiled, cedar ashes added, and used to make a red dye. (as *C. stolonifera* 53:370) **Yellow** Used with bloodroot and wild plum to make a yellow dye. (as *C. stolonifera* 53:374) **Costanoan Unspecified** Decoction of inner bark used as a dye. (as *C. californica* 21:252) **Cree, Woodlands Brown** Infusion of outer bark used to color leather from tan to brown. (as *C. stolonifera* 109:36)
- **Other**—**Abnaki Smoke Plant** Bark used for smoking. (as *C. stolonifera* 144:159) Shredded bark used for smoking. (as *C. stolonifera* 144:170) **Bella Coola Cooking Tools** Branches used for barbecue racks. (as *C. stolonifera* 184:203) **Blackfoot Ceremonial Items** Plant mixed with tobacco, kinnikinnick, or dried cambium, and used in all religious bundles. (as *C. stolonifera* 86:14) **Smoke Plant** Dried cambium greased, crushed, and mixed with smoking tobacco. (as *C. stolonifera* 86:102) Inner bark used in the tobacco mixture. (as *C. stolonifera* 97:49) **Smoking Tools** Stems used to make pipestems and tamps. (as *C. stolonifera* 86:111) **Toys & Games** Bark used to cover split beaver teeth for gambling wheels. (as *C. stolonifera* 82:21) Bark used to cover a circle of split beaver teeth and used as a gambling wheel. (as *C. stolonifera* 97:49) **Cheyenne Ceremonial Items** Plant smoked ceremonially. (as *C. stolonifera* 83:23) **Hunting & Fishing Item** Branches used to make arrows. (as *C. stolonifera* 82:21) **Smoke Plant** Dried, pulverized under bark mixed with tobacco, and used for smoking. (as *C. stolonifera* 76:183) Inner bark mixed with skunkbush leaves in the absence of tobacco and smoked. (as *C. stolonifera* 83:14) Bark mixed with dried “kinnikinnick” leaves and used for pipe smoking. (as *C. stolonifera* 83:25) **Cree Smoke Plant** Bark mixed with tobacco and used for smoking. (as *C. stolonifera* 16:485) **Cree, Woodlands Smoke Plant** Dried inner bark pulverized, mixed with tobacco, and used for smoking. (as *C. stolonifera* 109:36) **Crow Fasteners** Branches used to make tepee stakes and pins. **Musical Instrument** Branches used to make drumsticks. **Tools** Branches used to make forks for sweat lodge rocks. (as *C. stolonifera* 82:21) **Dakota Smoke Plant** Plant used for smoking. (as *C. stolonifera* 70:107, 108) **Flathead Hunting & Fishing Item** Branches used to make arrows. (as *C. stolonifera* 82:21) **Gosiute Smoke Plant** Inner bark smoked as a tobacco. (as *C. stolonifera* 39:366) **Great Basin Indian Smoke Plant** Winter bark used to make “kinnikinnick.” (as *C. stolonifera* 121:49) **Haisla & Hanaksiala Cleaning Agent** Leaves used to wipe fish. **Hanaksiala Hunting & Fishing Item** Branches used to string fish. (43:233) **Jemez Hunting & Fishing Item** Tough branches used to make bows and arrows. (as *C. instolo-*

*nea* 44:22) **Karok Hunting & Fishing Item** Branches used for arrows with tips of western serviceberry wood. (as *C. californica* 148:387) **Kutenai Tools** Wood used to make pelt stretchers. (as *C. stolonifera* 82:21) **Lakota Smoke Plant** Inner bark mixed with tobacco and smoked. (as *C. stolonifera* 106:43) Bark mixed with tobacco and used for smoking. (as *C. stolonifera* 139:44) **Montana Indian Ceremonial Items** Ribbons of inner bark roasted, mixed with tobacco, and used for ceremonial or religious pipe smoking. (as *C. stolonifera* 82:21) **Hunting & Fishing Item** Twisted branches used to make fish nets. (as *C. stolonifera* 19:11) Branches twisted and used to make fish nets. (as *C. stolonifera* 82:21) **Smoke Plant** Inner bark dried and mixed with tobacco as a substitute for kinnikinnick. (as *C. stolonifera* 19:11) **Okanagan-Colville Cooking Tools** Branches used to make spatulas. **Hunting & Fishing Item** Branches used to make fish traps. **Preservative** Old branches used in smoking hides. **Smoke Plant** Inner bark dried, mixed with kinnikinnick or tobacco, and smoked. (as *C. stolonifera* 188:96) **Okanagon Smoke Plant** Leaves mixed with other plant leaves and smoked. (as *C. stolonifera* 125:39) **Omaha Smoke Plant** Plant used for smoking. (as *C. stolonifera* 70:107, 108) **Oweekeno Hunting & Fishing Item** Branches used to make arrows. Wood used to make fishing hooks and salmon tethering poles. **Tools** Stems used to make drying frames for beaver skins. (43:92) **Ponca Smoke Plant** Plant used for smoking. (as *C. stolonifera* 70:107, 108) **Potawatomi Smoke Plant** Toasted, shredded bark used as kinnikinnick or smoking material. (as *C. stolonifera* 123:61) **Thompson Smoke Plant** Leaves mixed with other plant leaves and smoked. (as *C. stolonifera* 125:39) Leaves occasionally smoked as tobacco. (as *C. stolonifera* 164:495) **Washo Designs** Bark used for the patterns in baskets. (as *C. stolonifera* 121:49)

### *Cornus* sp., Dogwood

- **Drug**—**Alabama Antidiarrheal** Decoction of inner bark taken for dysentery. (177:46) **Algonquin, Quebec Unspecified** Valued as a medicine. Source states that a plant sample was identified by the common name “willow” but was actually *Cornus*. (18:213)
- **Fiber**—**Yuki Basketry** Used as basket material. (103:423)

### *Cornus suecica* L., Lapland Cornel

- **Food**—**Eskimo, Alaska Fruit** Fresh, ripe berries used for food. (1:37) Gathered and mixed with other berries. (4:715)

### *Cornus unalaschkensis* Ledeb., Western Cordilleran Bunchberry

- **Food**—**Bella Coola Fruit** Ripe berries eaten with sugar and grease. (184:204) **Haisla & Hanaksiala Dessert** Berries mashed, mixed with oolichan (candlefish) grease, and eaten as a dessert. **Dried Food** Berries dried for winter use. (43:234) **Kitasoo Fruit** Fruit used for food. (43:331) **Oweekeno Forage** Berries eaten by bears. **Fruit** Berries used for food. (43:93)

### *Coronilla*, Fabaceae

#### *Coronilla varia* L., Purple Crownvetch

- **Drug**—**Cherokee Antirheumatic (External)** Plant crushed and rubbed on rheumatism. **Emetic** Used as an emetic. (80:60) Decoction of bark taken as an emetic. (177:31) **Orthopedic Aid** Plant crushed and rubbed on cramps. (80:60)

**Corydalis**, Papaveraceae**Corydalis aurea** Willd., Scrambledeggs

- **Drug**—Navajo, Kayenta *Antidiarrheal* Plant used for diarrhea. *Dermatological Aid* Plant used for hand sores. *Disinfectant* and *Gynecological Aid* Plant used for puerperal infection. *Veterinary Aid* Plant sprinkled on livestock for snakebites. (205:23) **Ojibwa Stimulant** Root smoke inhaled to clear the head and revive the patient. (153:370)
- **Food**—Navajo, Ramah *Fodder* Used for sheep feed. (191:28)
- **Other**—Navajo, Ramah *Fertilizer* Cold infusion used to soak watermelon seeds to increase production. (191:28)

**Corydalis aurea ssp. occidentalis** (Engelm. ex Gray) G. B. Ownbey, Scrambledeggs

- **Drug**—Navajo *Antirheumatic (Internal)* Plant used as a rheumatic remedy. (as *C. montana* 55:96) **Navajo, Ramah Analgesic** Cold infusion taken for stomachache and used as lotion for backache. *Gastrointestinal Aid* Cold infusion of plant taken for stomachache. *Gynecological Aid* Compound decoction of plant used for menstrual difficulties. *Orthopedic Aid* Cold infusion of plant used as a lotion for backache. *Other* Plant used for injuries. *Throat Aid* Cold infusion of plant taken and used as a lotion for sore throat. (191:28)
- **Food**—Navajo, Ramah *Fodder* Used for sheep feed. (191:28)
- **Other**—Keres, Western *Unspecified* Plant known and named but no use was specified. (as *C. montanum* 171:38) **Navajo, Ramah Fertilizer** Cold infusion used to soak watermelon seeds to increase production. (191:28)

**Corydalis sempervirens** (L.) Pers., Rock Harlequin

- **Drug**—Iroquois *Hemorrhoid Remedy* Compound decoction of plants taken and used as a wash for piles. (87:339)

**Corylus**, Betulaceae**Corylus americana** Walt., American Hazelnut

- **Drug**—Cherokee *Dermatological Aid* Infusion of scraped bark taken for hives. *Emetic* Compound of inner bark taken "to vomit bile." (80:37) Decoction of inner bark taken to induce vomiting when unable to retain food. (177:16) **Chippewa Analgesic** Compound containing charcoal pricked into temples with needles for headache. (53:338) **Iroquois Antidiarrheal** and *Antiemetic* Compound decoction taken for "summer disease—vomiting, diarrhea and cramps." *Antihemorrhagic* Raw nuts taken for hay fever, childbirth hemorrhage, and prenatal strength. (87:297) *Blood Medicine* Compound infusion taken as a blood purifier and for prenatal strength. (87:298) *Dermatological Aid* Nutmeat oil formerly used for the hair, either alone or mixed with bear grease. (196:123) *Gastrointestinal Aid* Compound decoction taken for summer disease: vomiting, diarrhea, and cramps. *Gynecological Aid* Decoction or raw nuts taken for childbirth hemorrhage and prenatal strength. *Pediatric Aid* Compound decoction of roots given when "baby's teeth are coming in." (87:297) Compound infusion taken or raw nuts eaten for prenatal strength. *Respiratory Aid* Compound decoction of buds taken for hay fever. (87:298) *Toothache Remedy* Compound decoction of roots given when "baby's teeth are coming in." (87:297) **Menominee Adjuvant** Inner bark used "with other herbs as a binder to cement the virtues of all." (151:26) **Ojibwa Dermatological Aid** Poultice of boiled bark applied to help close and heal cuts. (153:359)

- **Food**—Cherokee *Unspecified* Nuts used for food. (80:37) **Chippewa Unspecified** Nuts used for food in season. *Winter Use Food* Nuts stored for winter use. (71:127) **Dakota Soup** Nuts used as a body for soup. *Unspecified* Nuts eaten raw with honey. (70:74) **Iroquois Beverage** Fresh nutmeats crushed, boiled, and liquid used as a drink. *Bread & Cake* Fresh nutmeats crushed and mixed with bread. (124:99) Nuts crushed, mixed with cornmeal and beans or berries, and made into bread. (196:123) *Pie & Pudding* Fresh nutmeats crushed and mixed with corn pudding. (124:99) *Sauce & Relish* Nuts pounded, boiled, resulting oil seasoned with salt and used as gravy. *Soup* Nutmeats crushed and added to corn soup. (196:123) *Special Food* Fresh nutmeats crushed, boiled, and oil used as a delicacy in corn bread and pudding. (124:99) Nutmeat oil added to the mush used by the False Face Societies. *Staple* Nutmeats crushed and added to hominy. *Unspecified* Nutmeats, after skimming off the oil, seasoned and mixed with mashed potatoes. (196:123) **Menominee Unspecified** Nuts, in the milk stage, eaten. *Winter Use Food* Nuts, in the milk stage, dried for winter use. (151:63) **Meskwaki Unspecified** Nuts eaten in the milk stage or ripe. *Winter Use Food* Nuts stored for winter use. (152:256) **Ojibwa Unspecified** Nuts eaten as food and newly gathered nuts before the kernel had hardened were favored. (153:397) **Omaha Soup** Nuts used as a body for soup. (70:74) *Unspecified* Nuts eaten plain or mixed with honey. (68:326) Nuts eaten raw with honey. **Ponca Soup** Nuts used as a body for soup. *Unspecified* Nuts eaten raw with honey. **Winnebago Soup** Nuts used as a body for soup. *Unspecified* Nuts eaten raw with honey. (70:74)
- **Fiber**—**Meskwaki Basketry** Twigs used in making twig baskets. *Brushes & Brooms* Twigs made into brushes for cleaning the earthen floors of the wigwams. (152:267) **Ojibwa Basketry** Finer twigs used as ribs in making woven baskets for collecting/storing acorns or hard fruits. *Brushes & Brooms* Finer twigs bound into a bundle, with the tips sheared, to serve as a broom or brush. (153:417)
- **Dye**—**Chippewa Black** Boiled with butternut to make a black dye. Burs boiled with inner bark of bur oak, added to black earth and butternut, and used as a black dye. (53:372) **Ojibwa Mordant** Seed hulls and butternut boiled together and the hull tannic acid sat the black butternut color. (153:425)
- **Other**—**Chippewa Musical Instrument** Used for drumming sticks. (53:377) **Iroquois Insecticide** Nutmeat oil mixed with bear grease and used as a preventive for mosquitoes. (196:123) **Ojibwa Musical Instrument** Crooked stick with an enlarged base made the favorite drum stick. (153:417)

**Corylus cornuta** Marsh., Beaked Hazelnut

- **Drug**—**Abnaki Eye Medicine** Used for sore eyes. (144:155) Decoction of bark and bark from two other plants used for eye pain. (144:165) **Algonquin, Quebec Gastrointestinal Aid** Infusion of branches and leaves used for intestinal disorders. *Heart Medicine* Infusion of branches and leaves used for heart troubles. (18:151) **Algonquin, Tête-de-Boule Heart Medicine** Infusion of branch tips taken for heart problems. (132:128) **Iroquois Antirheumatic (External)** Poultice of branches applied for rheumatism. (142:85) *Emetic* Compound decoction of bark taken to vomit. *Pediatric Aid* Decoction of bark given to children for teething. (87:298) Infusion of stems and other plant stems made into a necklace used by children for teething pain. (141:

38) *Psychological Aid* Compound decoction of bark used as a wash for loneliness. *Toothache Remedy* Decoction of bark given to children for teething. (87:298) Infusion of stems and other plant stems made into a necklace used by children for teething pain. (141:38) **Thompson Throat Aid** Buds chewed to become a good singer. (187:190)

- **Food—Algonquin, Quebec Unspecified Nuts** used for food. (18:79) **Cree, Woodlands Unspecified Nuts** used for food. *Winter Use Food* Nuts collected in quantity to use at a later time. (109:37) **Iroquois Fruit** Fruit roasted and eaten. (142:85) **Salish, Coast Unspecified Nuts** used for food. (182:79) **Thompson Snack Food** Nuts eaten for refreshments. (187:190)
- **Other—Okanagan-Colville Cash Crop** Nuts used as a trading item. (188:90) **Salish, Coast Cash Crop** Nuts used as a common trade article. *Hunting & Fishing Item* Straight suckers used for arrows. (182:79) **Thompson Cash Crop** Nuts used for trade. *Cooking Tools* Young suckers used as salmon spreaders in the absence of saskatoon branches. *Hunting & Fishing Item* Young branch softened with urine, twisted, and used to make a dip net hoop. (187:190)

***Corylus cornuta* var. *californica*** (A. DC.) Sharp, California  
Hazelnut

- **Food—Chehalis Unspecified Nuts** eaten fresh. *Winter Use Food* Nuts eaten during the winter. (as *C. californica* 79:27) **Costanoan Unspecified Nuts** used for food but only late in season. (21:248) **Cowlitz Winter Use Food** Nuts eaten during the winter. (as *C. californica* 79:27) **Karok Unspecified Nuts** used for food. (6:25) **Klamath Unspecified Nuts** used for food. (as *C. californica* 45:94) **Lummi Unspecified Nuts** eaten fresh. (as *C. californica* 79:27) **Okanagon Unspecified Species** used for food. (as *C. californica* 125:39) **Paiute Unspecified Nutmeat** eaten raw. *Winter Use Food* Nutmeat stored for future use. (as *C. californica* 111:64) **Sanpoil & Nespelem Unspecified Nuts** stored without removing the shells. Nutmeat eaten whole or pulverized before use. (as *C. californica* 131:104) **Shuswap Unspecified Nuts** used for food. (as *C. californica* 123:60) **Skagit Unspecified Nuts** cracked with stones and eaten fresh. (as *C. californica* 79:27) **Skagit, Upper Unspecified Nuts** eaten fresh. *Winter Use Food* Nuts stored for winter use. (as *C. californica* 125:39)

***Corylus cornuta* Marsh. var. *cornuta***, Beaked Hazelnut

- **Drug—Ojibwa Anthelmintic** Hairs of husk used as a medicine to expel worms. *Dermatological Aid* Poultice of boiled bark applied to help close and heal cuts. (as *C. rostrata* 153:359) **Potawatomi Dermatological Aid** Inner bark used as an astringent. (as *C. rostrata* 154:44)
- **Food—Karok Unspecified Nuts** used for food. *Winter Use Food* Nuts stored for winter use. (as *C. rostrata* var. *californica* 148:382) **Miwok Unspecified Nuts** used for food. (as *C. rostrata* var. *californica* 12:153) **Ojibwa Unspecified Species** used for food. (as *C. rostrata* 135:242) Nuts eaten as a food. (as *C. rostrata* 153:398) **Potawatomi Winter Use Food** Mature or “in the milk” nut gathered and used as a favorite food during the winter. (as *C. rostrata* 154:97) **Yuki Unspecified Nuts** eaten raw. (as *C. rostrata* var. *californica* 49:87)
- **Fiber—Karok Basketry** Sticks used to make baskets. Young shoots used to make baby baskets and carrying baskets. *Cordage* Withes twisted to make rope. *Snow Gear* Wood used as the heavy part of the frame for snowshoes. (as *C. rostrata* var. *californica* 148:382) **Potawatomi Brushes & Brooms** Bunch of twigs bound together and used as a broom. (as *C. rostrata* 154:112) **Yuki Basketry** Used as basket material. (as *C. rostrata* var. *californica* 103:423)
- **Other—Karok Hunting & Fishing Item** Wood made into poles and used on the fish trigger or set net. (as *C. rostrata* var. *californica* 148:382)

***Corylus* sp.**, Hazel

- **Drug—Chippewa Antihemorrhagic** Compound infusion of root taken for lung hemorrhages. *Pulmonary Aid* Compound infusion of root taken for lung hemorrhage. (53:340)
- **Fiber—Hahwunkwut Basketry** Roots used to make carrying baskets, baby baskets, and other coarse baskets. (117:183) **Poliklah Basketry** Used to make baskets. (117:170)

***Coryphantha*, Cactaceae**

***Coryphantha* sp.**, Cactus

- **Other—Comanche Weapon** Spines used to punish unfaithful wives. (29:521)

***Cosmos*, Asteraceae**

***Cosmos parviflorus*** (Jacq.) Pers., Southwestern Cosmos

- **Drug—Navajo, Ramah Ceremonial Medicine** Cold infusion of dried leaves used as ceremonial chant lotion. (191:50)

***Cosmos* sp.**, Jilla Flower

- **Drug—Navajo Burn Dressing** Plant used for burns. (90:150)

**Costaria**, Laminariaceae, alga**Costaria costata** (Turner) Saunders, Short Kelp

- **Food**—Hesquiat *Dried Food* Stipes and fronds with attached herring eggs dried for later use.<sup>6</sup> (185:24)
- **Fiber**—Hesquiat *Sporting Equipment* Dried stipes use as “pucks” and hitting sticks.<sup>5</sup> (185:24)

**Coursetia**, Fabaceae**Coursetia glandulosa** Gray, Rosary Babybonnets

- **Other**—Papago *Fasteners* Transparent, yellowish brown gum mixed with adobe and used to make jars of syrup air tight. (34:21)

**Cowania**, Rosaceae**Cowania** sp.

- **Fiber**—Southwest Indians *Clothing* Bark used to make coiled sandals. (17:30)
- **Other**—Walapai *Toys & Games* Bark made into a ring used in a hoop and pole game. (17:54)

**Crassulaceae**, see *Dudleya*, *Sedum*, *Sempervivum***Crataegus**, Rosaceae**Crataegus calpodendron** (Ehrh.) Medik., Pear Hawthorn

- **Drug**—Meskwaki *Analgesic* Infusion of twigs used for a pain in the side and bladder trouble. *Stimulant* Infusion of root bark used in cases of “general debility.” *Urinary Aid* Fruit used for bladder ailments. (as *C. tomentosa* 152:241)
- **Food**—Meskwaki *Fruit* Fruit eaten raw and cooked. (as *C. tomentosa* 152:263)

**Crataegus chrysocarpa** Ashe, Fireberry Hawthorn

- **Drug**—Blackfoot *Laxative* Decoction of dried berries taken during the winter as a mild laxative. (86:66) **Ojibwa**, **South Antidiarrheal** Compound decoction of root taken for diarrhea. (as *C. coccinea* 91:200) **Potawatomi** *Gastrointestinal Aid* Fruit used for stomach complaints. (as *C. rotundifolia* var. *bicknellii* 154:76)
- **Food**—Blackfoot *Fruit* Berries used for food. Certain conditions had to be met before the berries were eaten. Otherwise, they would cause stomach cramps. The procedure was to offer the tree a gift, for boys a little bow and arrow made from the thorns, for girls a pair of miniature moccasins fashioned from the leaves. In return, the tree would not allow its berries to “bite” the stomach. The gifts were placed on the tree and the berries collected. (86:102) **Lakota** *Fruit* Fruits eaten for food. (139:56) **Ojibwa** *Fruit* Fruit used for food. (as *C. coccinea* 135:236) **Omaha** *Beverage* Twigs used to make a hot, aqueous, tea-like beverage. (as *C. coccinea* 68:329) *Fruit* Fruit eaten by children fresh from the hand. (as *C. coccinea* 68:326) Fruit sometimes used for food, but mostly as a famine food. (70:87) *Starvation Food* Fruit eaten by adults in times of famine. (as *C. coccinea* 68:326) Fruit sometimes used for food, but mostly as a famine food. **Ponca** *Fruit* and *Starvation Food* Fruit sometimes used for food, but mostly as a famine food. (70:87) **Potawatomi** *Fruit* Fruit eaten by deer, bears, and sometimes the Indians. (as *C. rotundifolia* var. *bicknellii* 154:107) **Winnebago** *Fruit* and *Starvation Food* Fruit sometimes used for food, but mostly as a famine food. (70:87)

**Crataegus columbiana** T. J. Howell, Columbian Hawthorn

- **Food**—Montana Indian *Fruit* Fruit eaten fresh. *Winter Use Food* Fruit mixed with chokecherries and serviceberries pressed into cakes and dried for winter use. (19:11) **Okanagan-Colville** *Bread & Cake* Berries mashed and formed into cakes, dried, and eaten like cookies. *Fruit* Berries eaten fresh. (188:123) **Okanagon** *Fruit* Fruits eaten for food. (125:38) **Oregon Indian** *Fruit* Fresh or dried fruit used for food. (118:22) **Sanpoil & Nespelem** *Fruit* Whole berries eaten fresh or mashed in a mortar. (131:103) **Thompson** *Fruit* Fruits eaten for food. (125:38) *Unspecified* Scarlet, pear-shaped pomes eaten. (164:487)
- **Other**—Montana Indian *Tools* Wood used for making “camas sticks” for digging these and other roots. (19:11) **Thompson** *Hunting & Fishing Item* Spines used as pins and fishhooks. (164:454) Spines used to make fishhooks. *Tools* Spines used as probes for ripe boils and ulcers. (164:497)

**Crataegus douglasii** Lindl., Black Hawthorn

- **Drug**—Kwakiutl *Dermatological Aid* Poultice of chewed leaves applied to swellings. (183:288) **Okanagan-Colville** *Antidiarrheal* Infusion of shoots given to children for diarrhea. *Antirheumatic (External)* Thorn used to pierce areas affected by arthritic pain. The upper end of the thorn was ignited and burned down to the point buried into the skin. This treatment was very painful, but after a scab had formed and disappeared, the arthritic pain also disappeared. *Oral Aid* Infusion of new shoots used to wash a baby's mouth for mouth sores. *Pediatric Aid* Infusion of new shoots used to wash a baby's mouth for mouth sores. Infusion of shoots given to children for diarrhea. (188:124) **Okanagon** *Dermatological Aid* Spines used as probes for boils and ulcers. *Gastrointestinal Aid* Decoction of sapwood, bark, and roots taken as a stomach medicine. (as *C. brevispina* 125:40) **Thompson** *Antidiarrheal* Fruit considered a good health food for diarrhea. Infusion of bark taken for diarrhea and dysentery. (187:258) *Dermatological Aid* Spines used as probes for boils and ulcers. (as *C. brevispina* 125:40) Spines used as probes “for ripe boils and ulcers.” (164:457) *Gastrointestinal Aid* Decoction of sapwood, bark, and roots taken as a stomach medicine. (as *C. brevispina* 125:40) Decoction of sap, bark, wood, or root taken as stomach medicine. (164:457) **Panacea** Fruit considered a good health food for general sickness. (187:258)
- **Food**—Bella Coola *Fruit* Berries used for food. (184:208) **Cheyenne** *Dried Food* Fruits dried and used as a winter food. *Fruit* Fresh fruits cooked and used for food. (83:34) *Winter Use Food* Pulverized, dried berries saved for winter use. (76:176) **Kwakiutl**, **Southern** *Fruit* Berries used for food. (183:288) **Okanagan-Colville** *Bread & Cake* Berries mashed and dried into thin, hard cakes. Sometimes the cakes were decorated. The dried cakes were eaten as a snack on winter evenings and were used as crackers to dip into deer marrow soup to soak up the fat. *Forage* Berries eaten by bears and other animals. (188:124) **Okanagon** *Fruit* Fruits eaten for food. (125:38) **Paiute** *Dried Food* Berries formerly dried and eaten. *Fruit* Berries formerly eaten fresh. (104:100) Fruit eaten raw or boiled. (111:84) **Salish**, **Coast** *Fruit* Dry, sweetish fruits eaten in late fall. (182:86) **Sanpoil & Nespelem** *Dried Food* Berries boiled, dried, and stored. *Fruit* Berries eaten raw. (as *C. brevispina* 131:103) **Shuswap** *Preserves* Berries used to make jelly. (123:66) **Thompson** *Dried Food* Mashed fruit dried for winter use.

(187:258) *Fruit* Fruits eaten for food. (125:38) Fruit, without the seeds, eaten fresh or pureed. *Preserves* Fruit made into jam or jelly. (187:258) *Unspecified* Pomes eaten. (164:486)

- **Fiber**—Okanagan-Colville *Building Material* Wooden withes used to repair barbed wire fences. (188:124)
- **Other**—Okanagan-Colville *Season Indicator* Ripened berries indicated that the mountain huckleberries in Sanpoil areas were beginning to ripen. (188:124) **Thompson** *Hunting & Fishing Item* Spines used for fishhooks. (187:258) *Tools* Spines used to probe ripe boils and ulcers. (164:454) Strong wood used for digging sticks and ax handles. Spines used for piercing ears. (187:258)

***Crataegus douglasii*** Lindl. var. ***douglasii***, Douglas's Hawthorn

- **Food**—Haisla & Hanaksiala *Fruit* Fruit used for food. (43:263)

***Crataegus erythropoda*** Ashe, Cerro Hawthorn

- **Food**—Apache, Chiricahua & Mescalero *Bread & Cake* Fruit pressed into pulpy cakes, dried, and stored. *Fruit* Fruits eaten fresh. *Winter Use Food* Fruit pressed into pulpy cakes, dried, and stored for winter use. (as *C. cerronis* 33:44)

***Crataegus macrosperma*** Ashe, Bigfruit Hawthorn

- **Food**—Cherokee *Fruit* Fresh fruit used for food. (126:56)

***Crataegus mollis*** Scheele, Arnold Hawthorn

- **Food**—Omaha *Beverage* Twigs used to make a hot, aqueous, tea-like beverage. (68:329) *Fruit* Fruit eaten by children fresh from the hand. *Starvation Food* Fruit eaten by adults in times of famine. (68:326)

***Crataegus pruinosa*** (Wendl. f.) K. Koch, Waxyfruit Hawthorn

- **Food**—Iroquois *Bread & Cake* Fruit mashed, made into small cakes, and dried for future use. (196:128) Used to make bread. (196:82) *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128)

***Crataegus punctata*** Jacq., Dotted Hawthorn

- **Drug**—Iroquois *Gastrointestinal Aid* Infusion of little branches without leaves and other plants taken for large stomachs. (141:46) *Gynecological Aid* Compound decoction of shoots and bark taken to stop menstrual flow. *Witchcraft Medicine* Decoction taken to prevent "breaking out like cancer" caused by witchcraft. (87:351)

***Crataegus rivularis*** Nutt., River Hawthorn

- **Drug**—Mendocino Indian *Poison* Thorns considered poisonous. (41:355)
- **Food**—Okanagon *Staple* Berries used as a principal food. (178:238)
- **Other**—Mendocino Indian *Fuel* Wood used for fuel. (41:355)

***Crataegus* sp.**, Thorn Apple

- **Drug**—Chippewa *Analgesic* Compound decoction of root taken for back pain. *Gynecological Aid* Compound decoction of root taken for "female weakness." (53:356) *Tuberculosis Remedy* Roots used for consumption. (71:132) **Iroquois** *Gastrointestinal Aid* Infusion of little branches without leaves and other plants taken for large stomachs. (141:46) **Ojibwa** *Gynecological Aid* Fruit and bark used to make a medicine for women only. (153:384)
- **Food**—Abnaki *Fruit* Fruits eaten by children. (144:168) **Algonquin**,

- Quebec** *Fruit* Fruit used for food. (18:91) **Chippewa** *Bread & Cake* Fruits squeezed, made into little cakes, dried, and stored for winter use. (53:321) **Coeur d'Alene** *Bread & Cake* Fresh berries boiled, spread on layers of grass, juice poured on them, dried, and made into cakes. Berries mashed, made into cakes, dried, and used for food. (178:93) *Fruit* Berries eaten fresh. (178:89) **Comanche** *Candy* Inner bark chewed as gum. *Fruit* Fruit used for food. (29:521) **Ojibwa** *Fruit* Haw apples used as a food in the fall. (153:409) **Spokane** *Fruit* Berries used for food. (178:343)
- **Other**—Chippewa *Tools* Thorns used as awls. (53:377) **Coeur d'Alene** *Tools* Wood used to make root diggers. (178:91) **Ojibwa** *Hunting & Fishing Item* Bark smoked to attract deer while hunting. (153:431) *Tools* Sharp thorns used for sewing awls on finer work such as buckskin sewing with sinew. (153:422)

***Crataegus spathulata*** Michx., Littlehip Hawthorn

- **Drug**—Cherokee *Dietary Aid* Berries eaten "for appetite." *Heart Medicine* Infusion of bark taken for good circulation. *Preventive Medicine* Infusion of bark taken "to prevent current spasms." (80:37)
- **Fiber**—Cherokee *Sporting Equipment* Bark tea taken or bathed in by ballplayers "to ward off tacklers." (80:37)
- **Other**—Cherokee *Protection* Infusion of bark taken or bathed in by ballplayers "to ward off tacklers." (80:37)

***Crataegus submollis*** Sarg., Quebec Hawthorn

- **Drug**—Iroquois *Witchcraft Medicine* Decoction and doll used to "make a person break out like cancer." (87:351)
- **Food**—Iroquois *Bread & Cake* Fruit mashed, made into small cakes, and dried for future use. (196:128) Used to make bread. (196:82) *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128)

## ***Crepis***, Asteraceae

***Crepis acuminata*** Nutt., Longleaf Hawksbeard

- **Drug**—Shoshoni *Analgesic* Poultice of seeds or plant applied to sore breasts after childbirth. *Eye Medicine* Pulverized root sprinkled in eye to dislodge object and clear inflammation. *Gynecological Aid* Poultice of seeds or whole plant applied to sore breasts to induce milk flow. (180:62)
- **Food**—Karak *Vegetable* Stems peeled and eaten raw as greens. (148:389)

***Crepis atribarba*** Heller, Slender Hawksbeard

- **Drug**—Okanagan-Colville *Orthopedic Aid* Infusion of pounded green tops used in a foot bath for a "sweaty feet" condition. (188:83)

***Crepis modocensis*** Greene, Siskiyou Hawksbeard

- **Drug**—Paiute *Dermatological Aid* Latex applied to bee stings or insect bites. **Shoshoni** *Eye Medicine* Decoction of root used as a wash for sore eyes. *Gynecological Aid* Poultice of mashed plant applied to women's caked breasts. (as *C. scopulorum* 180:62)

***Crepis occidentalis*** Nutt., Largeflower Hawksbeard

- **Food**—Paiute *Unspecified* Leaves eaten raw. (104:103)

***Crepis runcinata*** (James) Torr. & Gray, Fiddleleaf Hawksbeard

- **Drug**—Meskwaki *Cancer Treatment and Dermatological Aid* Poultice of whole plant applied “to open up a carbuncle or cancer.” (152:213)

- **Drug**—Keres, Western *Psychological Aid* Infusion of young plants drunk for homesickness and lonesomeness. (as *C. glauca* 171:40)
- **Food**—Gosiute *Unspecified* Leaves used for food. (as *C. glauca* 39:367)

**Crossosomataceae**, see *Glossopetalon*

***Crotalaria***, Fabaceae

***Crotalaria rotundifolia*** Walt. ex J. F. Gmel., Rabbitbells

- **Drug**—Seminoles *Throat Aid* Infusion of pods used for sore throats. (as *C. maritima* 169:281)

***Crotalaria sagittalis*** L., Arrowhead Rattlebox

- **Drug**—Delaware *Narcotic* Roots used as a strong narcotic. *Venereal Aid* Roots used for venereal disease. (176:34) Delaware, Oklahoma *Narcotic* Root considered to be a very strong narcotic. *Venereal Aid* Root used for venereal disease. (175:29, 74) Mohegan *Blood Medicine* Root taken as a blood purifier. (176:72, 128)

***Croton***, Euphorbiaceae

***Croton californicus*** Muell.-Arg., California Croton

- **Drug**—Cahuilla *Ear Medicine* and *Pediatric Aid* Warm decoction of mashed stems and leaves placed in the child’s ear for earaches. *Poison* Toxic plant used only in small dosages for illnesses. *Respiratory Aid* Hot decoction of mashed stems and leaves taken for congestion caused by colds. (15:56) Diegueño *Cough Medicine* Decoction of whole plant taken for coughs. (88:218) Luiseño *Abortifacient* Plant used for abortions. (155:231)

***Croton monanthogynus*** Michx., Prairie Tea

- **Other**—Comanche *Hide Preparation* Leaves mixed with animal brains and used for tanning. (29:521)

***Croton pottsii*** (Klotzsch) Muell.-Arg. **var. *pottsii***, Potts’s Leatherweed

- **Drug**—Mahuna *Kidney Aid* Infusion of plant taken for kidney infections. (as *C. corymbosus* 140:68)

***Croton setigerus*** Hook., Croton

- **Drug**—Concow *Analgesic* Poultice of fresh, bruised leaves applied to chest for internal pains. *Febrifuge* Decoction of plant used as a bath or decoction taken for chills and fevers. *Misc. Disease Remedy* Decoction of plant used as a bath for typhoid and other fevers. (41:363) Costanoan *Antidiarrheal* Decoction of roots used for dysentery. (as *Eremocarpus setigerus*, turkey mullein 21:8) Diegueño *Veterinary Aid* Mashed stems and leaves placed in wormy, open wounds on horses to kill the worms and heal the sores. (as *Eremocarpus setigerus*, turkey mullein 84:20) Kawaiisu *Analgesic* Decoction of plant used as a wash or taken for headaches. *Heart Medicine* Infusion of plant taken for heart palpitations. (as *Eremocarpus setigerus*, turkey mullein 206:28) Modesse *Kidney Aid* Plant dried for a year to take on great power and used for dropsy. (as *Eremocarpus setigerus*, turkey mullein 117:224) Neeshenam *Misc. Disease Remedy* Decoction of plants taken for

ague. (as *Eremocarpus setigerus*, turkey mullein 129:376) Pomo *Antidiarrheal* Decoction of smashed plant used for bleeding diarrhea.

*Poison* Plant considered poisonous. (as *Eremocarpus setigerus*, turkey mullein 66:13) Pomo, Kashaya *Antidiarrheal* Decoction of mashed, boiled root taken for bleeding diarrhea. (as *Eremocarpus setigerus*, turkey mullein 72:75)

- **Food**—Mendocino Indian *Forage* Shiny, bean-like seeds eaten by wild mourning doves and turkeys. (41:363)
- **Other**—Costanoan *Hunting & Fishing Item* Pounded roots thrown into freshwater pools or dammed streams to stupefy fish. (as *Eremocarpus setigerus*, turkey mullein 21:249) Mahuna *Hunting & Fishing Item* Plants used as fish poison to make them easy to catch. (140:61) Mendocino Indian *Hunting & Fishing Item* Bruised leaves used as a substitute for soaproot to poison fish and make them easier to catch. (41:363) Used as a poison to stupefy fish. (41:321)

***Croton texensis*** (Klotzsch) Muell.-Arg., Texas Croton

- **Drug**—Apache, White Mountain *Cathartic* Infusion of plant taken as a purgative. *Gastrointestinal Aid* Infusion of plant taken for stomach troubles. (136:156) Hopi *Emetic* Plant used as an emetic to “relieve the stomach.” (200:34, 84) Eye *Medicine* Plant used in a very strong eyewash. (200:33, 84) Isleta *Ear Medicine* Seeds used in ears as a hearing aid in cases of partial deafness. *Laxative* Infusion of leaves taken or fresh leaves eaten as a laxative. (100:27) Jemez *Analgesic* Decoction of ground whole plant, roots, and salt taken for headaches. *Anti-rheumatic (Internal)* Decoction of ground whole plant, roots, and salt taken for body aches. *Misc. Disease Remedy* Decoction of ground whole plant, roots, and salt taken for gripe. (44:22) Keres, Western *Cathartic* Infusion of plant used as a cathartic. *Dermatological Aid* Ground seed powder used on open sores. *Hemorrhoid Remedy* Crushed roots used as a salve for piles. (171:40) Lakota *Gastrointestinal Aid* Infusion of leaves taken for stomach pains. (139:45) Pawnee *Pediatric Aid* Decoction of leaves used to bathe sick babies. (70:99) Zuni *Antiemetic* Decoction of plant taken for “sick stomach.” *Cathartic* Decoction of plant taken as a purgative. *Diuretic* Decoction of plant taken as a diuretic. (166:45) *Gastrointestinal Aid* Infusion of leaves taken for stomachaches. (27:375) *Snakebite Remedy* Fresh or dried root chewed by medicine man before sucking snakebite and poultice applied to wound. (27:376) *Venereal Aid* Infusion of leaves taken for gonorrhea. Infusion of leaves taken for syphilis. (27:375)
- **Food**—Hopi *Fodder* Used as food for wild doves. (200:84)
- **Other**—Navajo, Ramah *Incense & Fragrance* Used on large fire to smoke clothes and remove skunk smell. (191:35) Oglala *Toys & Games* Plant used as a headdress by little boys while playing. (70:99)

***Cryptantha***, Boraginaceae

***Cryptantha cinerea*** (Greene) Cronq. **var. *cinerea***, James’s Catseye

- **Drug**—Navajo, Kayenta *Disinfectant* and *Pediatric Aid* Plant given to newborn infant for prenatal snake or toad infection. *Snakebite Remedy* Poultice of plant applied or plant used as lotion for snakebites. *Veterinary Aid* Poultice of plant applied or plant used as lotion for livestock with snakebites. (as *C. jamesii* var. *multicaulis* 205:40) Navajo, Ramah *Ceremonial Medicine* Root used as ceremonial medicine. *Dermatological Aid* Poultice of root or powdered root applied

to sores. *Panacea* Cold infusion of root used as "life medicine." *Pediatric Aid* Cold infusion of whole plant used for birth injury. (as *C. jamesii* var. *multicaulis* 191:40)

***Cryptantha cinerea* var. *jamesii*** Cronq., James's Catseye

- **Drug**—Hopi *Analgesic* Poultice of pounded plant applied for body pains. (as *Cryptantha jamesii* 200:32, 88) **Zuni** *Dermatological Aid* Powdered root used for a sore anus. (as *Cryptantha jamesii* 27:374)
- **Food**—Navajo, Ramah *Fodder* Used for sheep feed. (as *C. jamesii* 191:40)

***Cryptantha crassisepala*** (Torr. & Gray) Greene, Thicksepal Catseye

- **Drug**—Hopi *Dermatological Aid* Plant used for boils or any swelling. (200:32, 33, 38) **Keres, Western** *Poison* Plant considered a bad, poisonous weed. (171:40) **Navajo, Kayenta** *Dermatological Aid* Plant used as a lotion for itching. (205:39) **Zuni** *Stimulant* Hot infusion of pulverized plant applied to limbs for fatigue. (166:45)

***Cryptantha fendleri*** (Gray) Greene, Sanddune Catseye

- **Drug**—Navajo, Ramah *Cough Medicine* Decoction of plant taken for coughs. (191:40)
- **Food**—Navajo, Ramah *Fodder* Used for sheep feed, a nuisance because the ripe fruits stick in the wool. (191:40)

***Cryptantha flava*** (A. Nels.) Payson, Brenda's Yellow Catseye

- **Drug**—Hopi *Cancer Treatment* Plant used for the cancer and growth in the throat. (42:301) **Navajo, Kayenta** *Eye Medicine* Plant used as a dusting powder for sore eyes. *Gastrointestinal Aid* Plant used for intestinal inflammation. *Gynecological Aid* Plant used for postpartum purification. (205:39)

***Cryptantha fulvocanescens*** (S. Wats.) Payson, Tawny Catseye

- **Drug**—Navajo *Gynecological Aid* Decoction of plants taken at childbirth. (90:150) **Navajo, Ramah** *Snakebite Remedy* Cold infusion used as lotion for snakebite. *Toothache Remedy* Poultice of leaves applied for toothache. (191:40)

***Cryptantha fulvocanescens*** (S. Wats.) Payson var. *fulvocanescens*, Tawny Catseye

- **Drug**—Navajo *Analgesic* Plant used for pain from a fall. *Cold Remedy* Plant chewed for colds. *Cough Medicine* Plant chewed for coughs. (as *Oreocarya fulvocanescens* 55:72)

***Cryptantha sericea*** (Gray) Payson, Silky Catseye

- **Drug**—Ute *Gastrointestinal Aid* Roots used as a stomach medicine. (as *Krynitzkia sericea* 38:35)

(198:560) **Navajo** *Dried Food* Fruit cut into strips, wound upon sticks in the form of a rope, sun dried, and stored for months. *Sauce & Relish* Dried fruit boiled with sugar and eaten like apple sauce. (165:222) **Navajo, Ramah** *Unspecified* Muskmelon cultivated and used for food. (191:46) **Okanagan-Colville** *Unspecified* Species used for food. (188:98) **Seminole** *Unspecified* Plant used for food. (169:480) **Sia** *Unspecified* Cultivated cantaloupes used for food. (199:106) **Thompson** *Fruit* Fruit used for food. (187:206)
- **Other**—Hopi *Ceremonial Items* Seeds mixed with juniper charcoal and water and made into a ceremonial body paint. (200:93)

***Cucumis sativus*** L., Garden Cucumber

- **Food**—Iroquois *Bread & Cake* Fresh or dried flesh boiled, mashed, and mixed into the paste when making corn bread. *Dried Food* Flesh cut into strips, dried, and stored away. *Special Food* Squash eaten at feasts of ceremonial importance and longhouse ceremonies. *Vegetable* Flesh boiled, baked in ashes or boiled, mashed with butter and sugar, and eaten. Fruit preserved in brine made with salt and sheep sorrel. Flesh fried and sweetened or seasoned with salt, pepper, and butter. (as *Cucurbita sativus* 196:113) **Ojibwa** *Vegetable* Cucumbers eaten raw and sometimes flavored with maple sap vinegar and powdered maple sugar. (153:399) **Seminole** *Unspecified* Plant used for food. (169:478)

***Cucumis* sp.**, Muskmelon

- **Food**—Cocopa *Bread & Cake* Stored flesh washed in water, pounded, made into cakes, and sun dried. *Dried Food* Flesh sun dried and stored in pottery jars for later use. *Fruit* Fresh flesh used for food. *Unspecified* Seeds boiled with dried pumpkin, mashed, and eaten or whole seeds eaten without husking. (64:266) **Kamia** *Unspecified* Species used for food. (62:21) **Thompson** *Unspecified* Seeds eaten in quantities, especially by children. (164:492)

**Cucurbitaceae**, see *Citrullus*, *Cucumis*, *Cucurbita*, *Echinocystis*, *Lagenaria*, *Marah*, *Melothria*, *Sicyos*

***Cucurbita***, Cucurbitaceae

***Cucurbita digitata*** Gray, Fingerleaf Gourd

- **Food**—Pima, Gila River *Snack Food* Seeds roasted and eaten as a snack food. (133:7)

***Cucurbita foetidissima*** Kunth, Missouri Gourd

- **Drug**—Apache, Western *Veterinary Aid* Poultice of mashed stems, leaves, and roots soaked in hot water and applied to sores on horses' backs. (26:192) **Cahuilla** *Cathartic* Decoction of dried roots used as a

physic. *Dermatological Aid* Ground fruit shell used as a hair shampoo. Macerated roots applied to ulcers. Pulp used for open sores. *Emetic* Decoction of dried roots used as an emetic. *Other* Dried gourds used to make ladles, syringes for feminine hygiene, and rattles. *Veterinary Aid* Poultice of crushed pulp applied to saddle sores on horses. (15:57) **Coahuilla** *Veterinary Aid* Poultice of crushed root and sugar applied to saddle sores on horses. (as *Cucurbita perennis*, mock orange 13:80) **Dakota** *Panacea* Root used for any ailment, according to the doctrine of signatures. (as *Pepo foetidissima* 70:116, 117) **Isleta** *Pulmonary Aid* Decoction of roots used for chest pains. (100:27) **Keres, Western** *Dermatological Aid* Poultice of crushed roots applied to boils or other sores. (171:40) **Kiowa** *Emetic* Decoction of peeled roots taken as an emetic. (192:53) **Omaha** *Analgesic* Pulverized root mixed with water and taken for pains. (as *Cucurbita perennis* 58:584) *Dietary Aid* Plant used as an appetizer. (68:335) *Gynecological Aid* Root used in cases of protracted labor. (as *C. perennis* 58:585) *Panacea* Root used for any ailment, according to the doctrine of signatures. (as *Pepo foetidissima* 70:116, 117) *Tonic* Plant used as a tonic. (68:335) **Paiute** *Cathartic* Decoction of root taken as a physic for venereal disease. *Dermatological Aid* Decoction of root used to kill maggots in wounds. *Emetic* Decoction of root taken as an emetic for venereal disease. *Venereal Aid* Decoction of root taken as an emetic and physic for venereal diseases. Pulverized seeds sprinkled on venereal sores. (180:62, 63) **Pawnee** *Panacea* Root used for any ailment, according to the doctrine of signatures. **Ponca** *Panacea* Root used for any ailment, according to the doctrine of signatures. (as *Pepo foetidissima* 70:116, 117) **Shoshoni** *Cathartic* Decoction of root taken as a physic for venereal disease. *Emetic* Decoction of root taken as an emetic for venereal disease. (180:62, 63) *Venereal Aid* Infusion of plant taken for gonorrhea and syphilis. (118:47) Decoction of root taken as an emetic and physic for venereal diseases. (180:62, 63) *Veterinary Aid* Infusion of plant given to horses for bloat or worms. (118:48) **Tewa** *Laxative* Infusion of pulverized root taken as a laxative. (138:63) **Winnebago** *Panacea* Root used for any ailment, according to the doctrine of signatures. (as *Pepo foetidissima* 70:116, 117) **Zuni** *Antirheumatic (External)* Poultice of powdered seeds, flowers, and saliva applied to swellings. (27:375)

- **Food—Cahuilla** *Porridge* Seeds ground into a flour and used to make mush. (15:57) **Isleta** *Fruit* Fruit formerly used for food. (100:27) **Luiseño** *Unspecified* Seeds used for food. (155:229) **Pima** *Unspecified* Seeds roasted and eaten. (146:70)
- **Dye—Cahuilla** *Unspecified* Yellow blossoms used as a dye. (15:57)
- **Other—Apache, White Mountain** *Ceremonial Items* Leaves ground and used as “green paint” in making sand paintings. (as *C. perennis* 136:156) **Cahuilla** *Ceremonial Items* Dried gourds used to make rattles. *Cooking Tools* Dried gourds used to make ladles. *Soap* Root and pepo (fruit) useful as a soap and bleach. (15:57) **Diegueño** *Soap* Mashed pulp and seeds boiled in with the wash to whiten the clothes. (84:17) **Havasupai** *Toys & Games* Fruits used by girls for juggling. Roots made into a wooden ball and used in playing the “four hills” game. (197:243) **Kawaiisu** *Soap* Gourds used as soap when washing clothes. (206:22) **Keres, Western** *Ceremonial Items* Ripe gourds used as rattles in dances. *Toys & Games* Ripe gourds used as children’s rattles. (171:40) **Kiowa** *Soap* Fruit used to cleanse hides and clothes by rubbing the dried fruit into the stains before washing. (as *Pepo foeti-*

*dissimus* 192:53) **Luiseño** *Soap* Fruit used as soap to clean miscellaneous articles. (155:210) **Mahuna** *Soap* Gourds used for washing buckskin cloths and blankets. Roots used as soap bars for washing clothes. (140:39) **Papago** *Soap* Fruits dried, grated into soapy water, and used to bleach clothes. (34:52)

### ***Cucurbita maxima*** Duchesne, Winter Squash

- **Drug—Hawaiian** *Dermatological Aid* Fruit meat and water taken for bad skin blotches. *Gynecological Aid* Fruits and shoots or buds with other plants pounded, mixed with water, and used for fallen wombs. *Laxative* Fruits mixed with water and used for internal cleaning of the bowels. *Psychological Aid* Leaves and young shoots eaten for partial insanity due to lack of sleep. (2:28) **Ojibwa** *Diuretic* Infusion of seeds taken as a diuretic. (153:367)
- **Food—Hopi** *Unspecified* Species used for food. (200:93) **Iroquois** *Bread & Cake* Fresh or dried flesh boiled, mashed and mixed into the paste when making corn bread. *Dried Food* Flesh cut into strips, dried, and stored away. *Special Food* Squash eaten at feasts of ceremonial importance and longhouse ceremonies. *Vegetable* Flesh boiled, baked in ashes or boiled, mashed with butter and sugar, and eaten. Flesh fried and sweetened or seasoned with salt, pepper, and butter. (196:113) **Navajo, Ramah** *Spice* Blossoms used as seasoning for soup. *Unspecified* Squash cultivated and used for food. *Winter Use* Squash peeled, cut into strips, sun dried, and stored in cellars or ground holes for winter use. (191:46) **Ojibwa** *Dried Food* Squash rings dried for winter use. (153:399) **Papago** *Fruit* Fruit grown for food. **Pima** *Fruit* Fruit grown for food. (36:101) **Sia** *Unspecified* Cultivated pumpkins used for food. (199:106)

### ***Cucurbita moschata*** (Duchesne ex Lam.) Duchesne ex Poir., Crookneck Squash

- **Food—Cahuilla** *Dried Food* Cooked, cut into strips, and dried. *Unspecified* Cooked and eaten fresh. (15:58) **Havasupai** *Dried Food* Seeds dried, parched, shelled, and eaten. *Porridge* Seeds ground to form a paste or mixed with corn into a mush. (197:244) *Soup* Seeds parched, ground, and used to make soup or mush. (197:67) Flowers and amaranth leaves boiled, ground, and fresh or dried corn and water added to make soup. (197:74) *Vegetable* Fruit baked and the flesh eaten. (197:66) **Hopi** *Cooking Agent* Seeds used to oil the “piki” stones. *Dried Food* Meat cut spirally, wound into long bundles, tied in pairs, and dried for winter use. *Special Food* Flowers used to make special foods. *Unspecified* Meat boiled or baked. Seeds roasted and eaten. (200:93) **Iroquois** *Bread & Cake* Fresh or dried flesh boiled, mashed, and mixed into the paste when making corn bread. *Dried Food* Flesh cut into strips, dried, and stored away. *Special Food* Squash eaten at feasts of ceremonial importance and longhouse ceremonies. *Vegetable* Flesh boiled, baked in ashes or boiled, mashed with butter and sugar, and eaten. Flesh fried and sweetened or seasoned with salt, pepper, and butter. (196:113) **Maricopa** *Dried Food* Fruit peeled, cut spirally into strips, dried, and stored. Fruit cut spirally into strips, dried, and stored. *Fruit* Fruits cut into pieces and boiled with mesquite pods. *Vegetable* Pumpkin eaten as a cooked, mushy vegetable. (37:111) **Navajo** *Dried Food* Fruit cut into strips and dried for future use, could be kept for years. *Preserves* Dried fruit boiled with large amounts of sugar into a preserve. *Sauce & Relish* Dried fruit boiled and eaten with sugar as a sauce. (165:221) **Papago**

*Dried Food* Rind hung in long spirals from house roofs to dry, tied in bundles, stored, and used for food. (34:36) *Fruit* Fruit grown for food. (36:101) **Pima** *Dried Food* Seeds parched and eaten. (146:71) *Fruit* Fruit grown for food. (36:101) **Seminole** *Unspecified* Plant used for food. (169:490) **Sia** *Unspecified* Cultivated pumpkins used for food. (199:106) **Yuma** *Dried Food* Seed sun dried, parched, cracked, and the meat eaten. (37:111)

- **Other—Cocopa** *Hide Preparation* Seeds used to tan hides. (37:113) **Havasupai** *Containers* Rinds sun dried, filled with seeds and beans, and hidden from enemy raiders. (197:244) Rind baked, cleaned, dried, and used as a storage container for seeds. (197:66) *Planting Seeds* Seeds stored for future planting. (197:244) **Hopi** *Containers* Dried shell used by children to carry parched corn. *Musical Instrument* Shell dried and used as a sounding board for musical rasps. (200:93)

### *Cucurbita pepo* L., Field Pumpkin

- **Drug—Cherokee** *Anthelmintic* Seeds eaten for worms. *Ceremonial Medicine* Used as an ingredient in green corn medicine. *Diuretic* Taken as a diuretic. *Kidney Aid* Taken for “dropsy.” *Urinary Aid* Browned seeds eaten for bed-wetting. Taken for “gravel,” “scalding of the urine,” and spasms of urinary passage. (80:51) **Iroquois** *Diuretic* and *Pediatric Aid* Infusion of seeds given to children with reduced urination. (141:61) **Menominee** *Diuretic* Pulverized seeds taken in water “to facilitate the passage of urine.” (151:33) **Meskwaki** *Gynecological Aid* Decoction of stem used for “female ills.” (152:220) **Navajo** *Gastrointestinal Aid* Leaves used for upset stomachs. (90:150) **Pima** *Dermatological Aid* Ground seed paste used to cleanse and soften the skin. (47:72) **Zuni** *Antirheumatic (External)* and *Dermatological Aid* Ingredient of “schumaakwe cakes” and used externally for rheumatism and swelling. Poultice of seeds and blossoms applied to cactus scratches. (166:45, 46)
- **Food—Apache, White Mountain** *Bread & Cake* Blossoms baked as parts of certain kinds of cakes. *Unspecified* Flesh used for food. Blossoms used for food. (136:156) **Cherokee** *Unspecified* Species used for food. (80:51) *Vegetable* Flesh used for food. (80:21) **Cocopa** *Dried Food* Dried flesh strips stored and mixed with flesh of stored whole pumpkins to improve flavor. *Unspecified* Parched seeds used for food. *Vegetable* Fresh flesh boiled with rind on and sometimes mixed with maize meal. Roasted flesh eaten with fingers. (64:266) **Iroquois** *Bread & Cake* Fresh or dried flesh boiled, mashed, and mixed into the paste when making corn bread. Dried flesh pounded, sifted, soaked in cold water, sweetened, grease added, and baked into cakes. *Dried Food* Flesh cut into strips, dried and stored away. *Pie & Pudding* Flesh boiled, cornmeal, and sugar added and eaten as a pudding with sugar and milk. *Sauce & Relish* Dried flesh pounded into a fine meal or flour, boiled, sweetened, grease added, and used as a sauce. *Special Food* Squash eaten at feasts of ceremonial importance and longhouse ceremonies. *Vegetable* Flesh boiled, baked in ashes or boiled, mashed with butter and sugar, and eaten. ***Cynodon dactylon*** (L.) Pers. **var. dactylon**, Bermuda Grass

- **Drug—Keres, Western Veterinary Aid** Infusion of diseased grass used as a wash in castrating domestic animals. (as *Capriola dactylon* 171:35)

***Cynoglossum***, Boraginaceae

***Cynoglossum grande*** Dougl. ex Lehm., Pacific Hound's Tongue

- **Drug—Concow Burn Dressing** Grated roots used for inflamed burns and scalds. **Pomo, Potter Valley Gastrointestinal Aid** Grated roots used for stomachaches. *Venereal Aid* Root used for venereal diseases. (41:382)
- **Food—Yuki Unspecified** Roots cooked and used for food. (41:382)

***Cynoglossum officinale*** L., Gypsyflower

- **Drug—Iroquois Antihemorrhagic** Compound infusion of plants taken for consumption with hemorrhage. (87:420) *Cancer Treatment* Decoction of plant used as a wash and applied as poultice to leg cancer. *Dermatological Aid* Compound infusion used as wash and applied as poultice to running sores. *Kidney Aid* Compound infusion used as wash and applied as poultice for dropsy. (87:421) *Tuberculosis Remedy* Compound infusion of plants taken for consumption with hemorrhage. (87:420) *Venereal Aid* Decoction of roots taken and used as a wash for internal venereal disease. (87:421)

***Cynoglossum virginianum*** L., Wild Comfrey

- **Drug—Cherokee Cancer Treatment** Root used for cancer. *Ceremonial Medicine* Used as an ingredient in green corn medicine. *Dermatological Aid* Compound decoction of roots given for itch. (as *Gynoglossum virginianum* 80:30) Decoction of roots used as a bath and taken for itching genitals. (177:52) *Psychological Aid* Compound decoction taken every 4 days for "bad memory." *Urinary Aid* Root syrup taken for milky urine and compound decoction used for bad memory. (as *Gynoglossum virginianum* 80:30)

***Cynoglossum virginianum* var. boreale** (Fern.) Cooperrider, Wild Comfrey

- **Drug—Ojibwa Analgesic** Plant burned on live coals and fumes inhaled for headaches. (as *C. boreale* 153:359, 360)

**Cyperaceae**, see *Carex*, *Cladium*, *Cyperus*, *Eleocharis*, *Eriophorum*, *Scirpus*

***Cyperus***, Cyperaceae

***Cyperus erythrorhizos*** Muhl., Redroot Flatsedge

- **Food—Kamia Porridge** Pulverized seeds cooked as mush. (62:24)

***Cyperus esculentus*** L., Chufa Flatsedge

- **Drug—Navajo, Ramah Ceremonial Medicine** and *Emetic* Plant used as a ceremonial emetic. (191:19) **Pima Cold Remedy** Roots chewed for colds. *Cough Medicine* Roots chewed for coughs. *Snakebite Remedy* Poultice of chewed roots applied to snakebites. *Veterinary Aid* Chewed roots placed in horse's nostrils as a stimulant. (47:98)
- **Food—Costanoan Unspecified** Tubers eaten. (21:255) **Paiute, Northern Dried Food** Roots dried, ground, and mixed with other foods. *Unspecified* Roots eaten raw. (59:44) **Pomo, Kashaya Vegetable** Tubers on the rootstock eaten raw, baked, or boiled like potatoes. (72:78)

***Cyperus fendlerianus*** Boeckl., Fendler's Flatsedge

- **Food—Apache, Chiricahua & Mescalero Fodder** Flowers salted and fed to horses. Seeds salted and fed to horses. *Unspecified* Tubers eaten raw or peeled and cooked. (33:47)

***Cyperus laevigatus*** L., Smooth Flatsedge

- **Drug—Hawaiian Cold Remedy** Stalks crushed into fine particles and

used as a snuff for hard head colds. *Dermatological Aid* Stalks crushed into fine particles and used for deep cuts, boils, skin ulcers, and other skin diseases. *Strengtheners* Flower and stalk ashes and kukui nut juice mixed and rubbed on the tongue for general debility. *Venereal Aid* Stalks crushed into fine particles, mixed with water and clay, and taken for penis burning disease. (2:9)

- **Fiber**—**Hawaiian** *Cordage* Stem fibers woven into strings and ropes. (2:9)
- **Other**—**Hawaiian** *Tools* Stem fibers used to remove all impurities in liquids. (2:9)

**Cyperus odoratus** L., Fragrant Flatsedge

- **Food**—**Cocopa** *Unspecified* Seeds used for food. **Mohave** *Unspecified* Seeds used for food. (as *C. ferax* 37:192) **Pima** *Unspecified* Tubers eaten. (as *C. ferax* 47:99)

**Cyperus rotundus** L., Nut Grass

- **Food**—**Paiute** *Porridge* Tubers made into meal and cooked as cereal. *Unspecified* Raw tubers used for food. (118:16)

**Cyperus schweinitzii** Torr., Schweinitz's Flatsedge

- **Food**—**Kiowa** *Fodder* Considered an excellent fodder for fattening horses. (192:17)

**Cyperus sp.**, Kaa

- **Drug**—**Hawaiian** *Antirheumatic (External)* Buds, leaves, roots, and other plants pounded and resulting liquid used as a bath for body aches. (2:45) **Tanana, Upper** *Cold Remedy* Infusion of underground stems taken for colds. (as *Cyperaceae* sp. 102:9) **Yavapai** *Cold Remedy* Decoction of dried, pulverized root taken for colds. *Dermatological Aid* Dried, pulverized root dusted on sores. *Gastrointestinal Aid* Decoction of dried, pulverized root taken for stomachaches. (65:261)
- **Food**—**Pima, Gila River** *Snack Food* Tubers eaten as snack food primarily by children. (133:5) *Unspecified* Roots boiled and eaten. (133:7)

**Cyperus squarrosus** L., Bearded Flatsedge

- **Food**—**Acoma** *Unspecified* Small, tuberous roots eaten as food. (as *C. inflexus* 32:25) **Keres, Western** *Vegetable* Tubers eaten. (as *C. inflexus* 171:41) **Laguna** *Unspecified* Small, tuberous roots eaten as food. (as *C. inflexus* 32:25)

**Cypripedium**, Orchidaceae

**Cypripedium acaule** Ait., Pink Lady's Slipper

- **Drug**—**Algonquin, Quebec** *Gynecological Aid* Roots used for menstrual disorders. *Venereal Aid* Roots used for venereal disease. (18:143) **Algonquin, Tête-de-Boule** *Gastrointestinal Aid* Infusion of roots used for stomachaches. *Kidney Aid* and *Pediatric Aid* Infusion of roots used by children for kidney troubles. *Urinary Aid* Infusion of roots used for urinary tract problems. (132:128) **Cherokee** *Analgesic* Root used for neuralgia and other pain and infusion taken for "rupture pains." *Anthelmintic* Infusion of root given for worms. *Anticonvulsive* Roots used for "spasms" and "fits." *Cold Remedy* Infusion of root taken for colds and hot infusion of root taken for flu. *Gastrointestinal Aid* Compound infusion taken for stomach cramps. *Gynecological Aid* Infusion taken for "female trouble." *Kidney Aid* Compound infusion taken for kidney trouble. *Misc. Disease Remedy* Infusion taken for diabetes and hot infusion of root taken for flu. *Seda-*

*tive* Roots used for "fits" and "hysterical affections." (80:42) **Iroquois** *Analgesic* Decoction taken for pains all over the skin and body, caused by bad blood. *Dermatological Aid* Poultice of smashed leaves bound to bite of mad dog. (87:289) **Menominee** *Urinary Aid* Root used in "male disorders." (151:44) **Meskwaki** *Love Medicine* Compound containing root used as a love medicine. (152:233, 234) **Micmac** *Sedative* Root used for nervousness. (40:56) **Penobscot** *Sedative* Infusion of plant taken for "nervousness." (156:310) **Rappahannock** *Panacea* Compound of dried roots and whisky taken for general ailments. (161:32)

**Cypripedium arietinum** Ait. f., Ramhead Lady's Slipper

- **Drug**—**Iroquois** *Analgesic* and *Gastrointestinal Aid* Decoction of whole plant taken for intestinal trouble with inflation and pains. (87:288)

**Cypripedium montanum** Dougl. ex Lindl., Mountain Lady's Slipper

- **Drug**—**Okanagan-Colville** *Reproductive Aid* Infusion of leaves and stalks taken by a pregnant woman to have a small baby. (188:52)

**Cypripedium parviflorum** Salisb., Lesser Yellow Lady's Slipper

- **Drug**—**Cherokee** *Analgesic* Root used for neuralgia and other pain and infusion taken for "rupture pains." *Anthelmintic* Infusion of root given for worms. *Anticonvulsive* Roots used for "spasms" and "fits." *Cold Remedy* Infusion of root taken for colds and hot infusion of root taken for flu. *Gastrointestinal Aid* Compound infusion taken for stomach cramps. *Gynecological Aid* Infusion taken for "female trouble." *Kidney Aid* Compound infusion taken for kidney trouble. *Misc. - **Drug**—Apache, White Mountain *Ceremonial Medicine* Powdered roots used in the religious-medicine ceremonies. *Disinfectant* Plant juice or ground flowers and roots used as a disinfectant. *Narcotic* Powdered roots used as a narcotic. (as *D. meteloides* 136:156) **Cahuilla** *Analgesic* Powdered leaves made into an ointment and applied as a painkiller in setting bones, and applied for pain in specific areas of the body. *Antidote* Plant paste used for poisonous tarantula, snake, spider, and insect bites. *Antirheumatic (External)* Powdered leaves made into an ointment and applied to swellings. *Hallucinogen* Most universally used hallucinogenic and medicinal plant known to humans. Used by the shaman to transcend reality and enter other worlds. *Datura* offered the shaman not only a means to transcend reality and come into contact with specific guardian spirits, it also enabled him to go on magical flights to other worlds or transform himself into other life forms such as the mountain lion or eagle. Such magical flights were a necessary and routine activity for Cahuilla shaman. A shaman might use the drug to visit the land of the dead, returning to the profane world with information useful to his people, or he might pursue a falling star to recapture a lost soul and return it to its owner. *Hunting Medicine* Used by hunters on long treks to increase strength, allay hunger, and gain power to capture game. *Other* Plant used to diagnose ailments and permitted the shamans to “see” the pain or disease. Plant used to divine cures for diseases. *Poison* An extremely poisonous plant. *Respiratory Aid* Leaves steamed and vapor inhaled for severe bronchial or nasal congestion. *Snakebite Remedy* Plant paste used for poisonous tarantula, snake, spider, and insect bites. *Sports Medicine* Used to enhance mental perception when playing “peon,” the gambling game. *Toothache Remedy* Powdered leaves made into an ointment and applied for toothache pain. *Unspecified* Crushed leaves and roots, with other parts, mixed into a medicinal paste. Most universally used hallucinogenic and medicinal plant known to humans. *Veterinary Aid* Plant paste used for saddle sores on horses. **Chumash** *Hallucinogen* and *Unspecified* Most universally used hallucinogenic and medicinal plant known to humans. (as *D. meteloides* 15:60) **Coahuilla** *Hallucinogen* Plant used as a “deliriant,” but with extreme danger, as it can cause death. (as *D. meteloides* 13:80) *Poison* Pulverized plant given with water to cause death and now almost wholly avoided. (as *D. meteloides* 13:75) *Veterinary Aid* Crushed plant mixed with water and rubbed into saddle sores on horses. (as *D. meteloides* 13:80) **Costanoan** *Analgesic* Poultice of heated leaves applied for chest pains. *Cathartic* Dried leaves smoked as a purgative. *Dermatological Aid* Ground leaves used as a salve for boils. *Eye Medicine* Flower dew used as an eyewash. *Hallucinogen* Dried leaves smoked as a hallucinogen. *Love Medicine* Seeds and tobacco smoked as an aphrodisiac. *Respiratory Aid* Poultice of heated leaves applied for respiratory problems. (as *D. meteloides* 21:14) **Diegueño** *Hallucinogen* Most universally used hallucinogenic and medicinal plant known to humans. (as *D. meteloides* 15:60) Well known as a hallucinogenic plant used in rites marking boys’ initiation into the toloache cult. *Poison* Plant considered poisonous. (as *D. meteloides* 84:17) *Unspecified* Most universally used hallucinogenic and medicinal plant known to humans. **Gabrielino** *Hallucinogen* and *Unspecified* Most universally used hallucinogenic and medicinal plant known to humans. (as *D. meteloides* 15:60) **Havasupai** *Derma-*

*tological Aid* Leaf folded several times and rubbed onto red ant bite. *Narcotic* Leaves or seeds, when eaten, made a person intoxicated for a day or more. (as *D. meteloides* 197:239) **Hopi** *Hallucinogen* Root chewed to induce visions by medicine man while making a diagnosis. (as *D. meteloides* 42:306) Roots chewed by doctor to induce visions while making diagnosis. (as *D. meteloides* 200:31, 89) *Narcotic* Plant used as a narcotic. (as *D. meteloides* 42:306) Plant well known for the narcotic properties. (as *D. meteloides* 200:89) *Other* Used to cure meanness. (as *D. meteloides* 200:37) *Poison* Plant sometimes fatal and given to a person “who is mean” to cure “meanness.” (as *D. meteloides* 200:89) *Psychological Aid* Plant used as a cure for “meanness.” (as *D. meteloides* 42:306) *Stimulant* Plant rarely used as a stimulant as it was sometimes fatal. (as *D. meteloides* 200:31, 89) **Kawaiisu** *Analgesic* Infusion of mashed roots taken for the pain of broken bones. Plant used for pain and swellings. *Antirheumatic (External)* Infusion of mashed roots used as a bath for rheumatic and arthritic limbs. *Ceremonial Medicine* Plant used for the puberty ceremony. *Dermatological Aid* Plant used for swellings and as a wash for cuts. *Hallucinogen* Plant used as a hallucinogen to induce dreams and visions. *Orthopedic Aid* Infusion of mashed roots taken for the mending of broken bones. *Pediatric Aid* Plant used for the puberty ceremony. *Poison* Plant considered poisonous. (206:23) **Keres, Western** *Dermatological Aid* Poultice of crushed leaves or roots used for boils. Poultice of burned, ground leaves used for boils. *Poison* Root killed any humans or other animals if eaten. (as *D. metefoides* 171:41) **Luiseño** *Ceremonial Medicine* Root juice used in boys’ puberty ceremony to induce stupefaction. (as *D. meteloides* 155:229) *Hallucinogen* Most universally used hallucinogenic and medicinal plant known to humans. (as *D. meteloides* 15:60) *Narcotic* Root juice used in boys’ puberty ceremony to induce stupefaction. (as *D. meteloides* 155:229) *Unspecified* Most universally used hallucinogenic and medicinal plant known to humans. (as *D. meteloides* 15:60) **Mahuna** *Dermatological Aid* Plant used as an antivenin for tarantula bites. *Narcotic* Smoked leaves or infusion of leaves taken as a narcotic. *Poison* Plant considered poisonous. *Snakebite Remedy* Plant used as an antivenin for rattlesnake bites. (as *D. meteloides* 140:43) **Miwok** *Hallucinogen* Root eaten to induce delirium which achieved supernatural power. Decoction of plant taken to induce delirium which achieved supernatural power. (as *D. meteloides* 12:169) **Navajo** *Veterinary Aid* Infusion of leaf used as wash for wounds of sheep after castration. (as *D. meteloides* 90:160) **Navajo, Kayenta** *Narcotic* Plant used as a narcotic. *Orthopedic Aid* Poultice of plant applied for sprains and fractures. (as *D. meteloides* 205:41) **Navajo, Ramah** *Analgesic* Cold infusion of root taken and used as a lotion for injury pain, a narcotic. *Ceremonial Medicine* Plant used as a ceremonial medicine. *Hallucinogen* Plant caused hallucinations and made “you drunk like from whisky.” *Hunting Medicine* Plant mixed with pollen and smoked by hunters to make deer tame. *Narcotic* Cold infusion of root taken and used as a lotion for injury pain, a narcotic. *Veterinary Aid* Cold infusion of flower used as an eyewash for blindness in horses and lotion used for sores. *Witchcraft Medicine* Plant used by witches, but cannot harm one who knows how to use it. (as *D. meteloides* 191:42) **Paiute** *Blood Medicine* Decoction of ground, soaked roots taken for blood poisoning in the foot. *Hallucinogen* Decoction of ground, soaked roots taken to have visions, especially visitations from the dead. Seeds eaten

to see dead relatives. (as *D. meteloides* 167:318) *Narcotic* Roots used to make a narcotic tea and not used medicinally. (as *D. meteloides* 180:66, 67) *Other* Plant enabled one to ascertain one’s life span and those “whose days were numbered.” Plant taken to find lost objects and remember where things were hidden. (as *D. meteloides* 167:318) **Paiute, Northern** *Hallucinogen* Roots eaten to discover things or see things that could not be seen with ordinary powers. *Poison* Plant poisonous if used incorrectly. (as *D. meteloides* 59:126) **Shoshoni** *Hallucinogen* Decoction of root taken to become unconscious and have visions. (as *D. meteloides* 118:50) *Narcotic* Roots used to make a narcotic tea and not used medicinally. (as *D. meteloides* 180:66, 67) **Tu-batulabal** *Antirheumatic (Internal)* Infusion of plant taken for rheumatism. *Dermatological Aid* Plant used for wounds. Poultice of dried, pounded root applied to inflamed sores. *Gastrointestinal Aid* Plant used for bloat. *Laxative* Plant used for constipation. *Sedative* Cold infusion of plant taken to fall into a stupor. (as *D. meteloides* 193:59) **Ute** *Narcotic* Used as a narcotic. (as *D. meteloides* 34:26) **Yavapai** *Hunting Medicine* Decoction of leaves taken or leaves eaten for success in deer hunt. (as *D. meteloides* 65:261) **Yokut** *Ceremonial Medicine* Decoction of roots used as a ceremonial narcotic. *Gastrointestinal Aid* Decoction of roots taken for inflammation of the bowels (appendicitis). *Other* Decoction of roots taken for many different diseases. (as *D. meteloides* 117:423) **Yuma** *Narcotic* Used as a narcotic. (as *D. meteloides* 34:26) **Zuni** *Anesthetic* Powdered root given as an anesthetic for surgery. *Dermatological Aid* Poultice of root and flower meal applied to wounds to promote healing. (as *D. meteloides* 166:46, 48) *Narcotic* Used as a narcotic. (as *D. meteloides* 34:26) Powdered root given as a narcotic for surgery. (as *D. meteloides* 166:46, 48)

- **Food—Apache, White Mountain** *Beverage* Juice or powdered roots used to make a fermented, intoxicating drink. (as *D. meteloides* 136:151) **Navajo** *Dried Food* Fruits dried and used in the winter after soaking and boiling. *Fruit* Fruits ground and eaten without further preparation. (as *D. meteloides* 32:26) *Special Food* Seeds eaten in ceremonies. (as *D. meteloides* 55:74) **Papago** *Beverage* Roots ground, infused, and used as a beverage. (as *D. meteloides* 34:26)
- **Other—Cahuilla** *Ceremonial Items* Roots used to make a drink taken at rituals. Plant offered a means of coming into contact with the sacred world. Used ritually in male puberty ceremonies. *Good Luck Charm* Vial of the plant carried for “good luck.” *Smoke Plant* Leaves used to smoke. (as *D. meteloides* 15:60) **Diegueño** *Ceremonial Items* Plant used to make a tea given to young men learning to become dancers for ceremonies. Well known as a hallucinogenic plant used in rites marking boys’ initiation into the toloache cult. (as *D. meteloides* 84:17) **Keres, Western** *Smoke Plant* Dried leaves used as tobacco. (as *D. metefoides* 171:41) **Luiseño** *Ceremonial Items* Roots pounded in a mortar and used at boys’ puberty ceremonies. (as *D. meteloides* 155:207) **Paiute** *Good Luck Charm* Seeds eaten for good luck while gambling and enabled the eater to guess correctly in the hand game. (as *D. meteloides* 167:318) **Zuni** *Ceremonial Items* Powdered root used by rain priests in a number of ways to ensure fruitful rains. Root pieces chewed by a robbery victim in order to find out the thief’s identity. The root was given to the victim by a rain priest. - **Other**—Navajo, Ramah *Hunting & Fishing Item* Petals and other blue flowers, ground and used for luck in hunting. (191:27)

**Delphinium sp.**, Larkspur

- **Drug**—Blackfoot *Poison* Plant considered poisonous. *Unspecified* Plant used medicinally. (97:34)
- **Food**—Miwok *Vegetable* Young, boiled greens used for food. (12:159)
- **Dye**—Great Basin Indian *Blue* Flower blossoms used to make a blue dye. (121:47)

**Delphinium tenuisectum** Greene, Carrotleaf Larkspur

- **Other**—Navajo, Ramah *Ceremonial Items* Petals and other blue flowers ground and used ceremonially. (191:27)

**Delphinium tricorne** Michx., Dwarf Larkspur

- **Drug**—Cherokee *Heart Medicine* Infusion taken “for heart.” *Poison* Root “makes cows drunk and kills them.” (80:42)

**Dendromecon**, Papaveraceae

**Dendromecon rigida** Benth., Tree Poppy

- **Food**—Kawaiisu *Unspecified* Seeds used for food. (206:25)
- **Other**—Kawaiisu *Smoke Plant* One or two leaves put into the liquid and used in the preparation of the tobacco plug. (206:25)

**Dennstaedtiaceae**, see *Dennstaedtia*, *Microlepia*, *Pteridium*

**Dennstaedtia**, Dennstaedtiaceae, fern

**Dennstaedtia punctilobula** (Michx.) T. Moore, Eastern Hayscented Fern

- **Drug**—Cherokee *Febrifuge* Compound infusion taken for chills. (80:33, 34) Mahuna *Antihemorrhagic* Plant used for lung hemorrhages. (140:19)

**Dentaria**, Brassicaceae

**Dentaria sp.**, Toothwort

- **Food**—Cherokee *Unspecified* Plants cooked with other greens and used for food. (204:252)

**Dentinum**, Hydnaceae, fungus

**Dentinum repandum**, Hedgehog Mushroom

- **Food**—Pomo, Kashaya *Vegetable* Baked on hot stones, in the oven, or fried. (72:130)

**Deschampsia**, Poaceae

**Deschampsia cespitosa** (L.) Beauv., Tufted Hairgrass

- **Food**—Gosiute *Unspecified* Seeds used for food. (39:367)

**Deschampsia danthonioides** (Trin.) Munro, Annual Hairgrass

- **Food**—Kawaiisu *Porridge* Seeds pounded, cooked into a mush and eaten. (206:26)

**Descurainia**, Brassicaceae

**Descurainia incana** (Bernh. ex Fisch. & C. A. Mey.) Dorn **ssp. incana**, Mountain Tansymustard

- **Food**—Paiute, Northern *Beverage* Seeds dried, cooked, ground, water added, kneaded, water added to make a fine batter, and drunk. *Unspecified* Seeds roasted, cooled, ground, mixed with cold water, and eaten. *Winter Use Food* Seeds stored for winter use. (as *D. richardsonii* 59:47)

**Descurainia incana ssp. incisa** (Engelm.) Kartesz & Gandhi, Mountain Tansymustard

- **Drug**—Gitksan *Dermatological Aid* Mashed and applied to bad cuts. (as *Sisymbrium incisum* 150:57) Navajo, Kayenta *Dermatological Aid* Plant used as a lotion for frozen body parts. *Throat Aid* Plant used as a lotion for sore throats. (as *D. incisa* 205:23)
- **Food**—Apache, Chiricahua & Mescalero *Bread & Cake* Seeds threshed, winnowed, ground, and the flour used to make bread. *Unspecified* Seeds boiled and eaten. (as *Sophia incisa* 33:49) Klamath *Unspecified* Parched, ground seeds used for food. (as *Sisymbrium incisum* 45:96–97) Montana Indian *Unspecified* Parched seeds ground for food. (as *Sisymbrium incisum* 19:24)

**Descurainia obtusa** (Greene) O. E. Schulz, Blunt Tansymustard

- **Food**—Cocopa *Vegetable* Young plants boiled as greens. (37:187) Hopi *Vegetable* Plant used as greens. (42:309)

**Descurainia pinnata** (Walt.) Britt., Western Tansymustard

- **Drug**—Cahuilla *Gastrointestinal Aid* Ground seeds used for stomach ailments. (15:66) Navajo, Ramah *Toothache Remedy* Poultice of plant applied for toothache. (191:28)
- **Food**—Cahuilla *Spice* Ground seeds used to flavor soups or used as a condiment with corn. *Vegetable* Leaves used as potherbs. (15:66) Cocopa *Staple* Seeds harvested, winnowed, parched, ground, and the meal eaten. (37:187) Hopi *Spice* Plant used as flavoring with meat or other vegetables. *Vegetable* Plant cooked alone as greens. (42:310) Greens pit baked, cooled and served in salted water with corn dumplings, boiled bread, or piki bread. (120:19) Kawaiisu *Beverage* Seeds parched, pounded, sifted, mixed with cold water, and taken as a nourishing beverage. *Winter Use Food* Pounded or raw seeds stored for future use. (206:26) Navajo, Ramah *Bread & Cake* Ground seeds used to make cakes. *Fodder* Used as sheep feed. (191:28) Paiute, Northern *Beverage* Seeds dried, cooked, ground, water added, kneaded, water added to make a fine batter, and drunk. *Unspecified* Seeds roasted, cooled, ground, mixed with cold water, and eaten. *Winter Use Food* Seeds stored for winter use. (59:47) Pima, Gila River *Beverage* Seeds mixed with water to make a drink. *Porridge* Seeds used to make a mucilaginous mass and eaten. *Staple* Seeds ground, parched and used to make pinole. (133:5) *Unspecified* Seeds mixed with water and eaten. (133:7)

**Descurainia pinnata ssp. halictorum** (Cockerell) Detling, Western Tansymustard

- **Food**—Navajo *Porridge* Parched seeds ground, made into a gruel, and used to dip bread in. (as *Sophia halictorum* 165:223) Pueblo

*Dried Food* Young plants boiled, pressed, rolled into balls, dried, and stored for winter use. *Soup* Plant made into a stew with wild onions, wild celery, tallow, or bits of meat. *Unspecified* Young plants boiled, pressed, rolled into balls, and eaten. *Vegetable* Young plants boiled with a pinch of salt and eaten as greens. (as *Sophia halictorum* 32:25)

- **Other—Keres, Western Fertilizer** Leaves buried with seed corn as a fertilizer or fungicide. Infusion of plant used to soak seed corn for faster maturity. *Preservative* Leaves stored with corn to prevent spoiling. (as *Sophia halictorum* 171:70)

***Descurainia pinnata*** (Walt.) Britt. **ssp. *pinnata***, Western Tansymustard

- **Drug—Pima Dermatological Aid** Infusion of leaves used for sores. (as *Sophia pinnata* 146:77) **Ute Unspecified** Used as medicine. (as *Sisymbrium canescens* 38:36)
- **Food—Atsugewi Bread & Cake** Parched, winnowed, ground seeds made into cakes and eaten without cooking. (as *Sisymbrium pinnatum* 61:139) **Gosiute Porridge** Seeds used to make a mush. (as *Sisymbrium canescens* 39:382) **Hopi Unspecified** Leaves boiled or roasted between hot, flat stones and eaten. (as *Sisymbrium canescens* 32:25) Leaves boiled or roasted and eaten. (as *Sisymbrium canescens* 56:15) *Vegetable* Plant, salty in flavor, eaten as greens in the spring. (as *Sisymbrium canescens* 42:310) Eaten as greens in the spring. (as *Sophia pinnata* (200:77) **Papago Beverage** Seeds steeped and used as tea-like drinks for refreshment. (as *Sophia pinnata* 34:27) *Dried Food* Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (as *Sophia pinnata* 34:24) *Unspecified* Seeds used for food. (as *Sophia pinnata* 36:62) **Pima Dried Food** Seeds parched, ground, and eaten mixed with hot or cold water. (as *Sophia pinnata* 95:263) *Staple* Seeds parched, ground, mixed with water, and eaten as pinole. (as *Sophia pinnata* 146:77)
- **Other—Hopi Paint** Plant used in the preparation of pottery paint. (as *Sisymbrium canescens* 42:310) Flowers mixed with dark iron pigment used as a black color for pottery decoration. (as *Sisymbrium canescens* 56:15)

***Descurainia sophia*** (L.) Webb ex Prantl, Herb *Sophia*

- **Drug—Navajo, Ramah Toothache Remedy** Poultice of plant applied for toothache. (191:28) **Paiute Dermatological Aid** Poultice of ground seeds applied to burns and sores, including sores on horses. *Veterinary Aid* Poultice of ground seeds applied to sores on horses. (111:74)
- **Food—Kawaiisu Beverage** Seeds parched, pounded, sifted, mixed with cold water, and taken as a nourishing beverage. *Winter Use Food* Pounded or raw seeds stored for future use. (206:26) **Navajo, Ramah Bread & Cake** Ground seeds used to make cakes. *Fodder* Used as sheep feed. (191:28) **Paiute Beverage** Roasted, ground seeds mixed with water and used as a cooling beverage for hot weather. (111:74) *Ice Cream* Seeds mixed with snow and eaten as ice cream. *Staple* Seeds parched, ground, and eaten as meal. (59:47) **Pueblo Dried Food** Young plants boiled, pressed, rolled into balls, dried, and stored for winter use. *Soup* Plant made into a stew with wild onions, wild celery, tallow, or bits of meat. *Unspecified* Young plants

boiled, pressed, rolled into balls, and eaten. *Vegetable* Young plants boiled with a pinch of salt and eaten as greens. (as *Sophia sophia* 32:25)

- **Other—Keres, Western Fertilizer** Leaves buried with seed corn as a fertilizer or fungicide. Infusion of plant used to soak seed corn for faster maturity. *Preservative* Leaves stored with corn to prevent spoiling. (as *Sophia sophia* 171:70)

***Descurainia* sp.**, Tansymustard

- **Food—Havasupai Beverage** Seeds ground and added to water to make a refreshing, summer drink. (197:66) *Preserves* Seeds parched, ground, kneaded into seed butter, and eaten with fruit drinks or spread on bread. (197:67) *Staple* Seeds parched and ground into a flour. (197:220) **Pima Beverage** Seeds roasted, mixed with water, and eaten like atole. (47:84) **Tewa of Hano Unspecified** Cooked and eaten in the spring. (as *Sophia* 138:60)
- **Other—Tewa of Hano Paint** Plants moistened, steamed, liquid squeezed, and the remaining mass used as paint to decorate pottery. (as *Sophia* 138:60)

***Desmanthus***, Fabaceae

***Desmanthus illinoensis*** (Michx.) MacM. ex B. L. Robins. & Fern., Prairie Bundleflower

- **Drug—Paiute Eye Medicine** Five seeds placed in eye at night for trachoma and washed out in morning. (180:67) **Pawnee Dermatological Aid** Decoction of leaves used as a wash for itch. (as *Acuan illinoensis* 70:89)
- **Other—Keres, Western Unspecified** Plant known and named but no use was specified. (as *Acuan illinoensis* 171:24) **Omaha Toys & Games** Mature plant, with the seed-filled pods, used as rattles by little boys. The little boys used the rattles as they mimicked some of the native dances in play. **Pawnee Toys & Games** Mature plant, with seed-filled pods, used as rattles by little boys, to mimic native dances. **Ponca Toys & Games** Mature plant, with seed-filled pods, used as rattles by little boys, to mimic native dances. (as *Acuan illinoensis* 70:89)

***Desmodium***, Fabaceae

***Desmodium canadense*** (L.) DC., Showy Ticktrefoil

- **Drug—Iroquois Gastrointestinal Aid** Decoction of root taken for biliousness. (87:364)

***Desmodium glutinosum*** (Muhl. ex Willd.) Wood, Pointedleaf Ticktrefoil

- **Drug—Iroquois Basket Medicine** Cold infusion of smashed roots used as a "basket medicine." (87:364)

***Desmodium illinoense*** Gray, Illinois Ticktrefoil

- **Drug—Meskwaki Adjuvant** Plant in combination with others used as a powerful medicine. (152:228)

***Desmodium incanum*** DC. **var. *incanum***, Zarzabacoa Comun

- **Drug—Seminole Analgesic** Plant used for adult's sickness caused by adultery: headache, body pains, and crossed fingers. (as *D. supina* 169:256) Decoction of leaves taken for headaches. *Febrifuge* Decoction of leaves taken for fevers. *Gastrointestinal Aid* Decoction of leaves taken for stomachaches. (as *D. supinum* 169:282)

***Desmodium nudiflorum*** (L.) DC., Nakedflower Ticktrefoil

- **Drug—Cherokee Analgesic** Infusion of root used as a wash for cramps. *Oral Aid* Roots chewed for sore gums and mouth, including pyorrhea. (80:59)

***Desmodium paniculatum*** (L.) DC., Panicleleaf Ticktrefoil

- **Drug—Houma Analgesic and Stimulant** Infusion of root in whisky taken for weakness or cramps. (158:63)

***Desmodium perplexum*** Schub., Perplexed Ticktrefoil

- **Drug—Cherokee Analgesic** Infusion of root used as a wash for cramps. *Oral Aid* Roots chewed for sore gums and mouth, including pyorrhea. (80:59)

***Desmodium sandwicense*** E. Mey., Hawaii Ticktrefoil

- **Drug—Hawaiian Cold Remedy** Leaves sun dried, crushed into a powder, mixed with tea, and taken for head colds. *Respiratory Aid* Leaves sun dried, crushed, and smoked in a pipe for asthma. *Strengtheners* Leaves sun dried, crushed into a powder, mixed with tea, and taken for general debility. *Tuberculosis Remedy* Decoction of whole plant and other plants used as a wash for scrofulous sores. (as *D. uncinatum* 2:51)

***Desmodium* sp.**, Ticktrefoil

- **Drug—Alabama Cold Remedy** Infusion of plant taken to cause vomiting for bad lung cold. (177:31) Plant used as an emetic for bad colds. (as *Meibomia* 172:663) *Emetic* Infusion of plant taken to cause vomiting for bad lung cold. (177:31) Plant used as an emetic for lung trouble or bad colds. (as *Meibomia* 172:663) *Pulmonary Aid* Infusion of plant taken to cause vomiting for bad lung cold. (177:31) Plant used as an emetic for lung troubles. (as *Meibomia* 172:663)

**Diapensiaceae**, see *Galax*

***Dicentra***, Papaveraceae

***Dicentra chrysantha*** (Hook. & Arn.) Walp., Golden Eardrops

- **Drug—Kawaiisu Analgesic and Heart Medicine** Dried, mashed roots placed in heated bag and applied to the heart for heart pains. (206:26)

***Dicentra cucullaria*** (L.) Bernh., Dutchman's Breeches

- **Drug—Iroquois Sports Medicine** Compound infusion of leaves used as liniment by runners to strengthen limbs. (87:339) **Menominee Love Medicine** Plant, most important love charm, thrown by young swain at his intended to hit her with it. Root chewed by young swain and breath attracts girl, even against her will. (151:81)

***Dicentra formosa*** (Andr.) Walp., Pacific Bleedinghearts

- **Drug—Skagit Anthelmintic** Decoction of pounded roots taken as a worm medicine. *Dermatological Aid* Infusion of crushed plants used as a wash to make hair grow. *Toothache Remedy* Raw roots chewed for toothaches. (79:31) **Thompson Unspecified** Root used as some kind of medicine. (187:225)

***Dichantheium***, Poaceae

***Dichantheium laxiflorum*** (Lam.) Gould, Openflower Rosette Grass

- **Drug—Seminole Analgesic** Infusion of leaves rubbed on the abdomen for labor pains. (as *Panicum xalapense* 169:323) *Antirheumatic*

(*External*) Whole plant used for rabbit sickness: muscular cramps. (as *Panicum xalapense* 169:194) *Cough Medicine*, *Pulmonary Aid*, and *Throat Aid* Infusion of plant taken and used as bath for gopher-tortoise sickness: cough, dry throat, noisy chest. (as *Panicum xalapense* 169:236)

***Dichantheium oligosanthes*** (J. A. Schultes) Gould var. ***oligosanthes***, Heller's Rosette Grass

- **Drug—Lakota Poison** Plant poisonous to horses. (as *Panicum oligosanthes* 139:30)

***Dichantheium oligosanthes* var. *scribnerianum*** (Nash) Gould, Scribner's Rosette Grass

- **Drug—Navajo, Ramah Ceremonial Medicine and Disinfectant** Decoction of plant used ceremonially for "snake infection." (as *Panicum scribnerianum* 191:17)
- **Food—Kiowa Fodder** Used to fatten horses very quickly. (as *Panicum scribnerianum* 192:16)

***Dichantheium strigosum* var. *glabrescens*** (Griseb.) Freckmann, Roughhair Rosette Grass

- **Drug—Seminole Analgesic** Infusion of leaves rubbed on the abdomen for labor pains. (as *Panicum polycaulon* 169:323) *Antirheumatic* (*External*) Whole plant used for rabbit sickness: muscular cramps. (as *Panicum polycaulon* 169:194) *Cough Medicine*, *Pulmonary Aid*, and *Throat Aid* Infusion of plant taken and used as bath for gopher-tortoise sickness: cough, dry throat, noisy chest. (as *Panicum polycaulon* 169:236)

***Dichelostemma***, Liliaceae

***Dichelostemma ida-maia*** (Wood) Greene, Ida May's Snakelily

- **Other—Karak Decorations** Flowers used for bouquets. (6:27) Seed-pods dried and hung up as ornaments. (as *Brodiaea ida-maia* 148:380)

***Dichelostemma multiflorum*** (Benth.) Heller, Roundtooth Snakelily

- **Food—Atsugewi Unspecified** Cooked in earth oven and used for food. (as *Brodiaea multiflora* 61:138) **Karak Unspecified** Raw bulbs used for food. (6:27)

***Dichelostemma pulchellum*** (Salisb.) Heller, Congested Snakelily

- **Food—Apache, San Carlos Unspecified** Bulbs eaten raw or cooked in spring. Blue flowers eaten raw. (as *Dichelostemma*, var. *brodiaea capitata pauciflora* 95:258) **Cahuilla Unspecified** Corms eaten raw or cooked. (as *Brodiaea pulchella* 15:47) **Karak Unspecified** Bulbs used for food. (6:27) **Luiseno Unspecified** Bulb used for food. (as *Brodiaea capitata* 155:233) **Mendocino Indian Unspecified** Bulbs eaten raw or cooked. (as *D. capitatum* 41:323) **Miwok Unspecified** Bulbs steamed in earth oven and eaten. (as *Brodiaea pulchella* 12:156) **Neeshenam Unspecified** Eaten raw, roasted, or boiled. (as *Brodiaea congesta* 129:377) **Paiute Dried Food** Roots dried and stored. *Staple* Roots roasted and ground into flour. *Unspecified* Fresh roots eaten raw. (as *Brodiaea capitata* 167:245) **Papago Unspecified** Bulbs eaten raw in spring before other crops appeared. (as *Brodiaea capitata* var. *pauciflora* 34:17) Bulbs eaten raw in early spring before other foods available. (as *Brodiaea capitata* var. *pauciflora* 36:60) **Pima, Gila River Baby Food** Raw roots eaten primarily by children. (133:7) *Snack Food* Bulbs

eaten primarily by children as snack food. (133:5) **Pomo Unspecified** Bulbs eaten raw or cooked. (as *D. capitatum* 11:90) **Pomo, Kashaya Vegetable** Baked or boiled corms eaten like baked or boiled potatoes. (as *Brodiaea pulchella* 72:26) **Yuki Unspecified** Sweet bulbs used for food. (as *Brodiaea pulchella* 49:86)

- **Other—Kawaiisu Fasteners** Corms rubbed on metate into an adhesive and spread on seed gathering baskets to close the interstices. (206:16)

***Dichelostemma volubile*** (Kellogg) Heller, Twining Snakelily

- **Food—Neeshenam Unspecified** Eaten raw, roasted, or boiled. (as *Brodiaea volubilis* 129:377) **Pomo Unspecified** Bulbs eaten for food. (as *Hookera volubilis* 11:90)

**Dicranaceae**, see *Dicranum*

***Dicranum***, Dicranaceae, moss

***Dicranum bonjeanii*** De Not, Woodmoss

- **Fiber—Chippewa Other** Used as an absorbent. (53:377)

***Dicranum* sp.**, Moss

- **Fiber—Shuswap Building Material** Moss mixed with clay and used between the logs of a log house. (123:49)
- **Other—Shuswap Fertilizer** Moss mixed with house plant dirt as a fertilizer to make the plants healthier. (123:49)

***Diervilla***, Caprifoliaceae

***Diervilla lonicera*** P. Mill., Northern Bush Honeysuckle

- **Drug—Algonquin, Tête-de-Boule Diuretic** Leaves used as a diuretic. (132:128) **Chippewa Analgesic** Compound decoction of leaves taken for stomach pain. (53:342) **Eye Medicine** Infusion of bark used as an eyewash. (71:141) **Gastrointestinal Aid** Compound decoction of leaves taken for stomach pain. (53:342) **Laxative** Infusion of bark taken for constipation. (71:141) **Cree, Woodlands Eye Medicine** Cooled infusion or decoction of roots or stems put into the eyes for soreness. **Gynecological Aid** Infusion of roots taken to ensure a good supply of breast milk. (109:37) **Iroquois Blood Medicine** Decoction of plant or roots taken as a blood medicine. **Gynecological Aid** Compound decoction of bark and plants taken for prolapse of the uterus. **Pediatric Aid** Decoction of plant or roots given to “spoiled babies with adulterous mother.” **Urinary Aid** Compound decoction of bark and plants taken by old men who cannot retain urine. **Venereal Aid** Compound decoction of roots taken for gonorrhea. (87:442) **Menominee Blood Medicine** Compound decoction of stalk used to “clear the blood.” (54:129) **Diuretic** Infusion of root taken as a mild diuretic. **Psychological Aid** Infusion of root used for senility and as a mild diuretic. (151:27) **Meskwaki Urinary Aid** Infusion of root taken by “one who is urinating blood.” **Venereal Aid** Compound decoction of root taken for gonorrhea. (152:206, 207) **Ojibwa Urinary Aid** Compound containing root used as a valued urinary remedy. (153:360) **Potawatomi Diuretic** Simple or compound infusion of root taken as a diuretic. **Other** Compound infusion of twigs used for vertigo. **Venereal Aid** Infusion of root taken for gonorrhea. (154:45)

***Digitalis***, Scrophulariaceae

***Digitalis purpurea*** L., Purple Foxglove

- **Other—Hoh Ceremonial Items** Flowers used for decorations in cere-

monies. **Quileute Ceremonial Items** Flowers used for decorations in ceremonies. (137:68)

***Digitaria***, Poaceae

***Digitaria cognata*** (J. A. Schultes) Pilger, Carolina Crabgrass

- **Food—Hopi Staple** Seeds ground into meal. (as *Panicum autumnale* 190:158)

***Digitaria cognata*** (J. A. Schultes) Pilger **var. cognata**, Fall Witchgrass

- **Food—Hopi Staple** Seeds ground into meal. (as *Leptoloma cognatum* 190:158)

***Digitaria setigera*** Roth ex Roemer & J. A. Schultes, East Indian Crabgrass

- **Drug—Hawaiian Antihemorrhagic** Grass pounded, mixed with water, strained, and taken for stomach and bowel hemorrhage. **Eye Medicine** Shoots chewed into a thick liquid and blown into the eye for cataracts. **Laxative** Leaves chewed by mothers and fed to children as a laxative. Shoot chewed and swallowed as a laxative. **Pediatric Aid** Shoots chewed by mothers and given to infants for run-down condition. Leaves chewed by mothers and fed to children as a laxative. **Strengtheners** Shoots chewed by mothers and given to infants for run-down condition. Shoots chewed for run-down condition. (as *Panicum pruricus* 2:55)

***Dimorphocarpa***, Brassicaceae

***Dimorphocarpa wislizeni*** (Engelm.) Rollins, Touristplant

- **Drug—Apache, White Mountain Ceremonial Medicine** Infusion of plant taken at medicine ceremonies. **Dermatological Aid** Infusion of plant used as wash for swellings. **Throat Aid** Infusion of plant used as wash for throat troubles. (as *Dithyrea wislizeni* 136:157) **Hopi Dermatological Aid** Pods ground and sprinkled on wounds. (as *Dithyrea wislizeni* 42:311) Dried, powdered leaves sprinkled on abrasions. (as *Biscutella wislizeni* 56:15) Ground stalk used as a salve for all kinds of sores. (as *Dithyrea wislizenii* 190:163) Powdered plant sprinkled on wounds. (as *Dithyrea wislizeni* 200:32, 77) **Keres, Western Nose Medicine** Crushed seeds and leaves inhaled for catarrh or sore nose. (as *Dithyrea wislizeni* 171:41) **Navajo, Kayenta Dermatological Aid** Infusion of plant taken and used as lotion for centipede or sand cricket bites. **Hemorrhoid Remedy** Poultice of plant applied to hemorrhoids. **Pediatric Aid** and **Toothache Remedy** Plant chewed by children to strengthen teeth. (as *Dithyrea wislizeni* 205:24) **Navajo, Ramah Dermatological Aid** Cold infusion of plant used as a lotion for itch. Poultice of leaves used to remove scabs. (as *Dithyrea wislizenii* 191:28) **Zuni Dermatological Aid** Warm infusion of pulverized plant applied to swelling, especially the throat. (as *Dithyrea wislizeni* 166:48, 49) **Emetic** Flower and fruit eaten as an emetic for stomachaches. (as *Dithyrea wislizeni* 27:375) **Psychological Aid** Decoction of entire plant given for delirium. (as *Dithyrea wislizeni* 166:48, 49) Infusion of plant taken by men to “loosen their tongues so they may talk like fools & drunken men.” It was said that this infusion should never be given to women because they “should not be made to talk too much.” (as *Dithyrea wislizeni* 166:91)
- **Food—Navajo Forage** Plant used by sheep for forage. (as *Dithyrea wislizeni* 55:49)

- **Other**—Hopi *Toys & Games* Plant, a powerful irritant, placed in arm-pit as a practical joke. (as *Dithyrea wislizeni* 42:311) **Keres, Western Snuff** Crushed seeds and leaves used for snuff. (as *Dithyrea wislizeni* 171:41) **Navajo, Kayenta Ceremonial Items** Mixed with paint and used on prayer sticks or ceremonial figurines of water animals. (as *Dithyrea wislizeni* 205:24)

## *Dionaea*, Droseraceae

*Dionaea muscipula* Ellis, Venus Flytrap

- **Other**—Cherokee *Hunting & Fishing Item* Small piece of plant chewed and spat on bait for fishing. (80:60)

## Dioscoreaceae, see *Dioscorea*

## *Dioscorea*, Dioscoreaceae

*Dioscorea bulbifera* L., Air Yam

- **Food**—Hawaiian *Fruit* Bitter fruit cooked, grated, washed several times, strained, and eaten. (112:68)

*Dioscorea pentaphylla* L. Fiveleaf Yam

- **Food**—Hawaiian *Unspecified* Tubers oven cooked and eaten. (112:68)

*Dioscorea* sp., Uhi-keokeo

- **Drug**—Hawaiian *Febrifuge* Bulb scrapings, other plant scrapings, and water taken for a heated body and excessive sweating. (2:37) *Unspecified* Tubers used to make a drink for the sick. (112:67)
- **Food**—Hawaiian *Unspecified* Bulbs used for food. (2:37) *Vegetable* Tubers baked or roasted and eaten. (112:67)

*Dioscorea villosa* L., Wild Yam

- **Drug**—Meskwaki *Analgesic* Root used by women for pain at childbirth. *Gynecological Aid* Root used by women for pain at childbirth. (152:220)

## *Diospyros*, Ebenaceae

*Diospyros texana* Scheele, Texas Persimmon

- **Food**—Comanche *Fruit* Fruits eaten for food. (as *Brayodendron texanum* 29:520)

*Diospyros virginiana* L., Common Persimmon

- **Drug**—Cherokee *Antidiarrheal* Syrup taken for bloody discharge from bowels. *Dermatological Aid* Astringent plant used for sore throat and mouth. *Gastrointestinal Aid* Bark chewed for heartburn. Compound used in steam bath for indigestion or biliousness. *Hemorrhoid Remedy* Used as a wash for piles. *Liver Aid* Cold infusion of bark taken for bile and liver. *Oral Aid* Syrup used for thrush. *Throat Aid* Syrup used for sore throat. *Toothache Remedy* Compound infusion used for toothache. *Venereal Aid* Used for venereal diseases. (80:49) **Rappahannock Oral Aid** Infusion of inner bark used as a wash for thrash. *Throat Aid* Infusion of north side bark taken for sore throat. (161:25)
- **Food**—Cherokee *Fruit* Fruit used for food. *Pie & Pudding* Fruit used to make pudding. (126:38) **Comanche Fruit** Fruits eaten for food. (29:521) **Rappahannock Beverage** Fruits rolled in cornmeal, brewed in water, drained, baked, and mixed with hot water to make a beer. (161:25) **Seminole Unspecified** Plant used for food. (169:495)

## *Diphylleia*, Berberidaceae

*Diphylleia cymosa* Michx., American Umbrellaleaf

- **Drug**—Cherokee *Diaphoretic* Infusion taken as a diaphoretic. *Disinfectant* Used as an antiseptic. *Diuretic* Taken as a diuretic. *Misc. Disease Remedy* Infusion taken for smallpox. (80:59, 60)

## *Diplacus*, Scrophulariaceae

*Diplacus aurantiacus* (W. Curtis) Jepson, Orange Bush Monkeyflower

- **Drug**—Tubatulabal *Gastrointestinal Aid* Decoction of leaves and flowers taken for stomachaches. (193:59)

*Diplacus aurantiacus* (W. Curtis) Jepson **ssp. aurantiacus**, Orange Bush Monkeyflower

- **Drug**—Costanoan *Kidney Aid* Decoction of plant used for kidney problems. *Urinary Aid* Decoction of plant used for bladder problems. (as *Mimulus aurantiacus* 21:15) **Mahuna Antidiarrheal** Infusion of leaves, flowers, and stems taken for diarrhea. (as *Dipsacus glutinosus* 140:6) **Pomo, Kashaya Eye Medicine** Strained decoction of flower, stem, and leaves used as an eyewash for sore eyes. (as *Mimulus aurantiacus* 72:72)

*Diplacus longiflorus* Nutt., Southern Bush Monkeyflower

- **Drug**—Tubatulabal *Gastrointestinal Aid* Decoction of leaves and flowers taken for stomachaches. (193:59)

## *Diplazium*, Dryopteridaceae, fern

*Diplazium meyenianum* K. Presl, Meyen's Twinsorus Fern

- **Drug**—Hawaiian *Dermatological Aid* Young shoots powdered, mixed with milk and nuts, and applied to boils. (as *Dilazium arnottii* 2:44)
- **Food**—Hawaiian *Unspecified* Young shoots used for food. (as *Dilazium arnottii* 2:44)

## Dipsacaceae, see *Dipsacus*

## *Dipsacus*, Dipsacaceae

*Dipsacus fullonum* L., Fuller's Teasel

- **Drug**—Iroquois *Dermatological Aid* Infusion of leaves used as a wash for acne or "worms in the face." *Poison* Powdered roots considered poisonous. (as *D. sylvestris* 87:450)
- **Other**—Navajo *Tools* Used to card wool. (as *D. sylvestris* 55:78)

## *Dirca*, Thymelaeaceae

*Dirca palustris* L., Eastern Leatherwood

- **Drug**—Algonquin, Quebec *Laxative* Infusion of inner bark taken as a laxative tea. (18:202) **Chippewa Cathartic** Infusion of stalk taken or green stalk chewed as a physic. (53:346) *Dermatological Aid* Compound decoction of root used as wash to strengthen hair and make it grow. (53:350) *Pulmonary Aid* Infusion of roots taken for pulmonary troubles. (71:137) **Iroquois Analgesic** Compound infusion of bark and roots taken for back pains. *Blood Medicine* Compound decoction or infusion of roots taken to purify the blood. (87:388) *Cathartic* Bark and wood used as a strong purgative. (141:50) *Dermatological Aid* Decoction of branches applied as poultice to swellings on the leg or limbs. (87:387) Compound infusion taken for dark circles and puffiness around the eyes. Compound used for neck sores. (87:388) *Emet-*

- ic Infusion of bark and wood used as an emetic to remove yellow from the stomach. The yellow in the stomach was a sickness brought by the Europeans. As they introduced tea, butter, and tobacco, the yellow accumulated in the stomach and could not be evacuated. (141:50) *Eye Medicine* Compound infusion taken for dark circles and puffiness around the eyes. *Gynecological Aid* Compound decoction of bark and roots taken to induce pregnancy. *Internal Medicine* Root used for internal inflammation. *Kidney Aid* Compound infusion of bark and roots taken for kidney troubles. *Laxative* Decoction or infusion of smashed roots or bark taken as a laxative. (87:388) *Love Medicine* Decoction of stems used as an aphrodisiac. (87:389) *Misc. Disease Remedy* Infusion of smashed roots taken for typhoid fever. (87:388) *Orthopedic Aid* Infusion of roots taken for a strained back or back pains. (87:387) *Strengtheners* Decoction of stems used to increase strength. (87:389) *Tonic* Compound decoction of roots taken as a blood medicine or tonic. *Tuberculosis Remedy* Whole plant used for consumption. *Urinary Aid* Compound infusion of roots taken for kidneys or for male urination problems. *Venereal Aid* Compound infusion of powdered roots taken for gonorrhea and syphilis. Decoction of roots taken to remove venereal germs from the blood. (87:388) *Menominee Diuretic* Infusion of roots taken as a diuretic. *Kidney Aid* Infusion of root taken as a diuretic for kidney troubles. (151:54) *Ojibwa Diuretic* Infusion of bark taken as a diuretic. (153:390) *Urinary Aid* Infusion of twigs taken for urinary infections. (5:2306) **Potawatomi Diuretic** Infusion of inner bark taken as a diuretic. (154:85)
- **Fiber**—Iroquois *Cordage* Bark twisted into cordage. (141:50) **Menominee Cordage** Bark or twigs used for cordage. (151:76) **Potawatomi Cordage** Tough, stringy bark made a good substitute for twine. (154:114)
  - **Other**—Chippewa *Fasteners* Tough, pliant bark used for tying and binding. (71:137) **Ojibwa Fasteners** Used for withes. (135:240)

### *Disporum*, Liliaceae

*Disporum hookeri* (Torr.) Nichols., Drops of Gold

- **Drug**—Costanoan *Kidney Aid* Fruit used for the kidneys. (21:28)
- **Food**—Thompson *Fruit* Fruit occasionally used for food, but not considered important. (187:121)

*Disporum hookeri* var. *oreganum* (S. Wats.) Q. Jones, Oregon Drops of Gold

- **Drug**—Klallam *Poison* Plant considered poisonous. **Makah Love Medicine** Plant used as a love medicine. (as *D. oreganum* 79:25)
- **Food**—Nitinaht *Forage* Berries eaten by wolves. (186:86)

*Disporum smithii* (Hook.) Piper, Largeflower Fairybells

- **Drug**—Makah *Love Medicine* Plant used as a love medicine. (79:25)
- **Food**—Karak *Forage* Berries eaten by squirrels. (148:381)

### *Disporum* sp.

- **Drug**—Thompson *Analgesic* Compound decoction of roots taken for internal pains. (164:459)

*Disporum trachycarpum* (S. Wats.) Benth. & Hook. f., Roughfruit Fairybells

- **Drug**—Blackfoot *Eye Medicine* Fresh seed used to clear matter from the eye. A fresh seed was inserted and the closed eye rubbed until the seed was watered out with the matter clinging to it. Seeds placed

in the eye overnight and infusion of bark used as an eyewash for snow-blindness. (86:80) **Okanagan-Colville Dermatological Aid** Infusion of leaves used as a wash for wounds. *Hemostat* Poultice of dampened, bruised leaves applied to bleeding wounds. *Unspecified* Berries used to make medicine. (188:44)

- **Food**—Blackfoot *Fruit* Berries used for food. (86:102) Berries eaten raw. (97:25) Berries eaten raw. (114:277) **Shuswap Fruit** Berries used for food. (123:54)

### *Distichlis*, Poaceae

*Distichlis spicata* (L.) Greene, Inland Saltgrass

- **Drug**—Kawaiisu *Dermatological Aid* Decoction of plant taken for doodlebug bites that cause pimples. *Heart Medicine* Infusion of plant taken “when the heart beats fast.” *Laxative* Infusion of plant taken as a laxative. *Venereal Aid* Cold infusion of plant taken for gonorrhea. (206:26) **Yokut Cold Remedy** Decoction of salt cooked into a gum, placed in the mouth, and allowed to melt for bad colds.<sup>28</sup> *Dietary Aid* Decoction of salt cooked into a gum, placed in the mouth, and allowed to melt for loss of appetite.<sup>28</sup> (117:423)
- **Food**—Cahuilla *Spice* Leaves burned into ashes to remove the salt and used as a condiment. (15:66) **Kawaiisu Beverage** Dried grass cakes used to make a beverage. Green grass immersed in cold water, strained, and used as a beverage. (206:26) **Tubatulabal Unspecified** Leaves and stems used extensively for food. (193:15)
- **Fiber**—Cahuilla *Scouring Material* Leaves used as a brushing material for cleaning implements or removing cactus thorns from objects. (15:66)

### *Dodecatheon*, Primulaceae

*Dodecatheon hendersonii* Gray, Mosquito Bills

- **Drug**—Pomo, Kashaya *Sedative* Flowers hung on baby baskets to make the baby sleepy. (as *D. hendersonii* 72:105)
- **Food**—Yuki *Unspecified* Leaves and roots formerly roasted in ashes and eaten. (41:378)
- **Other**—Mendocino Indian *Decorations* Flowers used by women as ornaments for dances. (41:378)

*Dodecatheon jeffreyi* Van Houtte, Tall Mountain Shootingstar

- **Drug**—Thompson *Love Medicine* Flowers used by women “to obtain the love of men and to help them control men.” (164:506)
- **Other**—Thompson *Good Luck Charm* Flowers used as a charm “to obtain wealth & to make people give presents.” (164:506)

*Dodecatheon pulchellum* (Raf.) Merr., Darkthroat Shootingstar

- **Other**—Thompson *Designs* Flower used as a pattern for beadwork on gloves, moccasins, vests, and jackets. (187:245)

*Dodecatheon pulchellum* ssp. *pauciflorum* (Greene) Hultén, Pride of Ohio

- **Drug**—Okanagan-Colville *Eye Medicine* Infusion of roots used as a wash for sore eyes. (as *D. pauciflorum* 188:117)
- **Dye**—Okanagan-Colville *Red* Flowers mashed and smeared on arrows to color them pink. (as *D. pauciflorum* 188:117)

*Dodecatheon pulchellum* (Raf.) Merr. ssp. *pulchellum*, Darkthroat Shootingstar

- **Drug**—Blackfoot *Eye Medicine* Cooled infusion of leaves used for

eye drops. (as *D. radicum* 86:81) *Oral Aid* and *Pediatric Aid* Infusion of leaves gargled, especially by children, for cankers. (as *D. radicum* 86:76)

## *Dodonaea*, Sapindaceae

*Dodonaea viscosa* (L.) Jacq., Florida Hopbush

- **Drug**—Hawaiian *Ceremonial Medicine* Infusion of leaves and other plants used as a wash to keep evil influences away. *Dermatological Aid* Infusion of leaves and other plants used as a wash for rash and itch. *Misc. Disease Remedy* Infusion of leaves and other plants used as a wash for contagious diseases. (2:3)

## *Draba*, Brassicaceae

*Draba helleriana* Greene, Heller's Whitlowgrass

- **Drug**—Keres, Western *Other* Plant made into a drink and taken when not feeling well. (171:42) Navajo, Ramah *Ceremonial Medicine* Plant used in various ways as a ceremonial medicine. *Cough Medicine* Decoction of leaves taken for bad cough, sore kidney, or gonorrhea. *Emetic* Whole plant used as a ceremonial emetic. *Eye Medicine* Cold infusion of leaves used as ceremonial eyewash. *Kidney Aid* Decoction of leaves taken for sore kidney, bad cough, or gonorrhea. *Panacea* Root used as a "life medicine." *Venereal Aid* Decoction of leaves taken for gonorrhea, sore kidney, or bad cough. *Witchcraft Medicine* Cold infusion of plant taken and used as a lotion to protect against witches. (191:28)

*Draba incerta* Payson, Yellowstone Whitlowgrass

- **Drug**—Blackfoot *Abortifacient* Plant used to cause abortions. (86:60) *Nose Medicine* Infusion of roots taken for nosebleeds. (86:71)

*Draba rectifruca* C. L. Hitchc., Mountain Whitlowgrass

- **Drug**—Navajo *Diuretic* Infusion of plants taken as a diuretic. (as *D. montana* 55:49)

*Draba reptans* (Lam.) Fern., Carolina Whitlowgrass

- **Drug**—Navajo, Ramah *Dermatological Aid* Poultice of crushed leaves applied to sores. (191:28)

## *Dracocephalum*, Lamiaceae

*Dracocephalum parviflorum* Nutt., American Dragonhead

- **Drug**—Navajo, Kayenta *Antidiarrheal* Plant used for infants with diarrhea. *Panacea* Plant used as a life medicine. *Pediatric Aid* Plant used for infants with diarrhea. (as *Moldavica parviflora* 205:40) Navajo, Ramah *Analgesic* Cold, compound infusion of leaves taken for headache. *Eye Medicine* Cold infusion of leaves used as an eye-wash. *Febrifuge* Cold, compound infusion of leaves taken for fever. (as *Moldavica parviflora* 191:41)
- **Food**—Apache, Chiricahua & Mescalero *Spice* Leaves used as flavoring. (33:47) Gosiute *Unspecified* Seeds used for food. (39:367)

**Droseraceae**, see *Dionaea*, *Drosera*

## *Drosera*, Droseraceae

*Drosera capillaris* Poir., Pink Sundew

- **Drug**—Seminole *Dermatological Aid* Sticky, plant glands rubbed on ringworm sores. (169:211)

*Drosera rotundifolia* L., Roundleaf Sundew

- **Drug**—Kwakiutl *Dermatological Aid* Plant used for corns, warts, and bunions. *Love Medicine* Plant used as a "medicine to make women love-crazy," a love charm. (183:281)

## *Drymaria*, Caryophyllaceae

*Drymaria glandulosa* K. Presl, Fendler's Drymary

- **Drug**—Navajo, Ramah *Dermatological Aid* Poultice of chewed plant applied to mouse bite. (as *D. fendleri* 191:26)

**Dryopteridaceae**, see *Athyrium*, *Cystopteris*, *Diplazium*, *Dryopteris*, *Gymnocarpium*, *Matteuccia*, *Onoclea*, *Polystichum*, *Woodsia*

## *Dryopteris*, Dryopteridaceae, fern

*Dryopteris arguta* (Kaulfuss) Watt, Coastal Woodfern

- **Drug**—Costanoan *Dermatological Aid* Infusion of fronds used as a hair wash. (21:5) Mewuk *Antiemetic* Decoction of roots taken for vomiting. *Antihemorrhagic* Decoction of roots taken for spitting blood and other internal bleeding. (as *D. rigida arguta* 117:366)
- **Food**—Costanoan *Unspecified* Rhizomes gathered in spring and eaten. (21:247) Thompson *Unspecified* Rootstocks used for food. (187:88) Yurok *Cooking Agent* Leaves used to clean meats and to lay over meat to keep the flies off. (6:28)
- **Other**—Karok *Cooking Tools* Leaves used to clean eels. Yurok *Containers* Leaves used to clean meats and to lay over meat to keep the flies off. *Designs* Spores used to make designs on hands. (6:28)

*Dryopteris campyloptera* Clarkson, Mountain Woodfern

- **Drug**—Eskimo, Western *Analgesic* and *Gastrointestinal Aid* Compound decoction of leaves taken for stomachache and intestinal discomfort. (as *D. austriaca* 108:5) Hesquiat *Cancer Treatment* Young shoots used cancer of the womb. (as *D. austriaca* 185:29)
- **Food**—Eskimo, Inuktitut *Ice Cream* Boiled roots added to "Eskimo ice cream." (as *D. dilatata* ssp. *americana* 202:193) Kwakiutl, Southern *Unspecified* Rhizomes cooked in steaming pits and used for food. (as *D. austriaca* 183:264) Salish, Coast *Unspecified* Rhizomes used for food. (as *D. austriaca* 182:69)
- **Other**—Kwakiutl, Southern *Fuel* Thin, wiry roots used as the burning material in a "slow match." (as *D. austriaca* 183:264) Nitinaht *Cooking Tools* Fronds placed in layers below and above food in steaming pits. (as *D. austriaca* 186:62)

*Dryopteris carthusiana* (Vill.) H. P. Fuchs, Spinulose Woodfern

- **Drug**—Bella Coola *Antidote* Root eaten as an antidote for poison from eating shellfish in early summer. (as *Aspidium spinulosum* 150:48)
- **Food**—Alaska Native *Unspecified* Old leaf stalks on the underground stem roasted, peeled, and the inner portion eaten. *Vegetable* Young, curled fronds boiled or steamed and eaten like asparagus with butter, margarine, or cream sauce. (as *D. spinulosa* 85:29)

*Dryopteris cristata* (L.) Gray, Crested Woodfern

- **Drug**—Ojibwa *Gastrointestinal Aid* Infusion of root used for stomach trouble. (as *Aspidium cristatum* 153:381)

*Dryopteris expansa* (K. Presl) Fraser-Jenkins & Jermy, Spreading Woodfern

- **Drug**—**Klallam** *Dermatological Aid* Poultice of pounded roots applied to cuts. **Snohomish** *Dermatological Aid* Infusion of leaves used as a hair wash. (as *D. dilatata* 79:14)
- **Food**—**Clallam** *Unspecified* Rhizomes used for food. (as *D. dilatata* 57:194) **Cowlitz** *Unspecified* Rhizomes pit baked overnight and the insides used for food. (as *D. dilatata* 79:14) **Eskimo, Alaska Soup** Fiddleheads, with the chaffy coverings removed, added to soups. *Unspecified* Fiddleheads, with the chaffy coverings removed, boiled and eaten with seal oil and dried fish. (as *D. dilatata* 1:34) **Thompson** *Unspecified* Rootstocks used for food. (as *D. assimilis* 187:88)

### *Dryopteris filix-mas* (L.) Schott, Male Fern

- **Drug**—**Bella Coola** *Antidote* Rhizomes eaten raw to neutralize plant and shellfish poisoning. (184:197) **Cherokee** *Anthelmintic* Infusion of root taken for worms. (80:34)
- **Food**—**Bella Coola** *Dietary Aid* Rhizomes eaten raw for losing weight. *Unspecified* Rhizomes eaten raw or steamed. (184:197)

### *Dryopteris fragrans* (L.) Schott, Fragrant Woodfern

- **Fiber**—**Eskimo, Inuktitut** *Mats, Rugs & Bedding* Used for bedding. (202:184)

### *Dryopteris marginalis* (L.) Gray, Marginal Woodfern

- **Drug**—**Cherokee** *Antirheumatic (Internal)* Infusion of root used alone or in a compound for rheumatism. *Emetic* Infusion of root taken as an emetic. *Toothache Remedy* Warm infusion held in mouth for toothache. (80:34)

### *Dryopteris* sp., Woodfern

- **Drug**—**Kitasoo** *Antidote* Rhizomes used as an antidote for food poisoning. (43:312)
- **Food**—**Haisla & Hanaksiala** *Forage* Rootstocks eaten by mountain goats. **Hanaksiala** *Unspecified* Rhizomes, rootstocks, and stipe bases steamed and eaten. (43:149) **Kitasoo** *Vegetable* Rhizomes and stipe bases used for food. (43:312) **Oweekeno** *Unspecified* Roots used for food. (43:53) **Thompson** *Unspecified* Rootstocks used for food. (187:88)
- **Fiber**—**Iroquois** *Mats, Rugs & Bedding* Made into pillows and used by children under their lower backs to prevent bed-wetting. (142:82)
- **Other**—**Haisla & Hanaksiala** *Containers* Fronds used to pack freshly caught salmon to prevent them from drying out. (43:149) **Oweekeno** *Ceremonial Items* Roots used as a shamanistic device in the tsaika ritual. (43:53)

## *Dudleya*, Crassulaceae

### *Dudleya lanceolata* (Nutt.) Britt. & Rose, Lanceleaf Liveforever

- **Food**—**Neeshenam** *Vegetable* Leaves eaten raw as greens. (as *Echeveris lanceolata* 129:377)

### *Dudleya pulverulenta* (Nutt.) Britt. & Rose, Chalk Liveforever

- **Drug**—**Diegueño** *Dermatological Aid* Fleshy leaves used to remove corns and calluses. Three descriptions of its use, essentially the same but differing in detail, were given by the three consultants: (1) Prick the leaf all over with a pin or needle, put it on the stove, and bake it on one side, then the other. Place the leaf over the corn or callus and leave it there to remove the growth. (2) Heat the leaf over the fire, peel the skin off one side, place the leaf over the corn or callus—peeled side down—and leave it there to remove the corn or callus.

(3) Cook the leaf over a flame, peel one side, and prick the peeled side with a needle and bind the leaf over the corn or callus to remove it. *Respiratory Aid* Decoction of roots taken for asthma. (84:19)

- **Food**—**Diegueño** *Unspecified* Leaves chewed, with or without salt, by children. (84:19)

### *Dudleya* sp., Pygmy Weed

- **Food**—**Cahuilla** *Unspecified* Leaves and flowering stems eaten raw. (15:67)

## *Dugaldia*, Asteraceae

### *Dugaldia hoopesii* (Gray) Rydb., Owlsclaws

- **Drug**—**Great Basin Indian** *Analgesic* Snuff of crushed blossoms and string plant leaves inhaled for headaches. *Respiratory Aid* Snuff of crushed blossoms inhaled for hay fever. (as *Helenium hoopesii* 121:50) **Navajo** *Antiemetic* Plant used to inhibit vomiting. (as *Helenium hoopesii* 55:87)
- **Food**—**Navajo** *Candy* Roots used as a chewing gum. (as *Helenium hoopesii* 55:87)
- **Dye**—**Navajo** *Yellow* Crushed flowers boiled with juniper ash and used as a yellow dye. (as *Helenium hoopesii* 55:87)

## *Dyssodia*, Asteraceae

### *Dyssodia papposa* (Vent.) A. S. Hitchc., Fetid Marigold

- **Drug**—**Dakota** *Veterinary Aid* Plant given to horses for coughs. (as *Boebera papposa* 69:369) Compound decoction of plant used for horses with coughs. (as *Boebera papposa* 70:132, 133) **Keres, Western** *Febrifuge* Infusion of fresh or dried plants taken or used as a rub for fever. *Other* Plant smoked for epileptic fits. (as *Boebera papposa* 171:33) **Lakota** *Analgesic* Plant breathed in for headaches. *Antihemorrhagic* Decoction of plant and gumweed blossoms taken for the spitting of blood. *Reproductive Aid* Pulverized leaves used for breathing difficulties. (139:37) **Navajo, Ramah** *Dermatological Aid* Poultice of chewed leaves applied to ant bites. *Gastrointestinal Aid* Cold infusion of plant taken after swallowing a red ant. (191:50) **Omaha** *Analgesic* Leaves stuffed up nostrils to cause nosebleed for headache. (as *Boebera papposa* 70:132, 133)
- **Food**—**Apache, Chiricahua & Mescalero** *Bread & Cake* Seeds winnowed, dried, stored, ground into flour, and used to make bread. *Unspecified* Seeds roasted without grinding and combined with other foods. (33:48) *Vegetable* Tops cooked alone or with meat and used as greens. (33:47) **Dakota** *Forage* Plant considered a choice prairie dog food. (as *Boebera papposa* 69:369). Plant eaten by prairie dogs. (as *Boebera papposa* 70:132)

**Ebenaceae**, see *Diospyros*

## *Echeandia*, Liliaceae

*Echeandia flavescens* (J. A. & J. H. Schultes) Cruden, Torrey's Craglily

- **Drug**—**Navajo, Ramah** *Gynecological Aid* Cold infusion of root taken to ease delivery of placenta. *Veterinary Aid* Cold infusion of root used as a lotion on sheep's swollen leg. Cold simple or compound

infusion given to livestock as an aphrodisiac. (as *Anthericum torreyi* 191:20)

## **Echinacea**, Asteraceae

### **Echinacea angustifolia** DC., Blacksamson Echinacea

• **Drug—Blackfoot** *Toothache Remedy* Roots chewed to cause mouth numbness for toothaches. (97:56) **Cheyenne** *Analgesic* Infusion of powdered leaves and roots used as a wash for sore and painful necks. *Oral Aid* Infusion of powdered leaves and roots taken or root chewed for sore mouth or gums. Root used to stimulate the flow of saliva. *Orthopedic Aid* Infusion of powdered leaves and roots used as a wash for sore and painful necks. (76:188) *Throat Aid* Infusion of leaves and roots taken for sore throat. (75:188) Infusion of powdered leaves and roots taken or root chewed for sore throat. (76:188) *Toothache Remedy* Root juice or infusion of powdered leaves and roots used for toothaches. (76:188) **Dakota** *Analgesic* Juice used as wash for pain from burns. Plant used in smoke treatment for headache. *Antidote* Plant used as an antidote for many poisonous conditions. *Burn Dressing* Juice used as wash for pain from burns. Juice used by jugglers as wash for arms, to protect against boiling water. *Misc. Disease Remedy* Poultice of plant applied to enlarged glands, as in mumps. *Other* Plant used in the steam bath to “render the great heat endurable.” *Snakebite Remedy* Plant used for snake and other venomous bites and stings in unspecified ways. *Toothache Remedy* Plant applied to tooth for toothache. *Veterinary Aid* Plant used in smoke treatment for horses with distemper. (70:131) **Lakota** *Antirheumatic (External)* Poultice of chewed roots applied to swellings. (139:37) *Dermatological Aid* Poultice used for wounds and sores. (106:47) *Gastrointestinal Aid* Plant chewed for stomachaches. *Oral Aid* Plant chewed when thirsty. *Other* Plant chewed for overperspiring. (139:37) *Throat Aid* Roots chewed for tonsillitis. *Toothache Remedy* Roots chewed or powdered and used for toothache. (106:47) Plant chewed for toothaches. (139:37) **Montana Indian** *Oral Aid* Dried root with “smarting, acrid taste” caused a profuse flow of saliva. *Snakebite Remedy* Root used as an antidote for rattlesnake bites. (19:11) **Omaha** *Analgesic* Juice used as wash for pain from burns. Plant used in smoke treatment for headache. (70:131) *Anesthetic* Poultice of smashed roots applied as an anesthetic to arms and hands. *Antidote* Poultice of smashed roots applied to septic diseases. (68:333) Plant used as an antidote for many poisonous conditions. (70:131) *Blood Medicine* Poultice of smashed roots applied to septic diseases. (68:333) *Burn Dressing* Juice used as wash for pain from burns. Juice used by jugglers as wash for arms, to protect against boiling water. (70:131) *Dermatological Aid* Poultice of smashed roots applied to stings and septic diseases. (68:333) *Eye Medicine* Plant used for sore eyes and roots used for eye troubles. (68:335) *Misc. Disease Remedy* Poultice of plant applied to enlarged glands, as in mumps. *Other* Plant used in the steam bath to “render the great heat endurable.” (70:131) *Snakebite Remedy* Poultice of smashed roots applied to snakebites. (68:333) Plant used for snake and other venomous bites and stings in unspecified ways. *Toothache Remedy* Plant applied to tooth for toothache. *Veterinary Aid* Plant used in smoke treatment for horses with distemper. **Pawnee** *Analgesic* Juice used as wash for pain from burns. Plant used in smoke treatment for headache. *Antidote* Plant used as an antidote for many poisonous conditions. *Burn Dressing* Juice

used as wash for pain from burns. Juice used by jugglers as wash for arms, to protect against boiling water. *Misc. Disease Remedy* Poultice of plant applied to enlarged glands, as in mumps. *Other* Plant used in the steam bath to “render the great heat endurable.” *Snakebite Remedy* Plant used for snake and other venomous bites and stings in unspecified ways. *Toothache Remedy* Plant applied to tooth for toothache. *Veterinary Aid* Plant used in smoke treatment for horses with distemper. **Ponca** *Analgesic* Juice used as wash for pain from burns. Plant used in smoke treatment for headache. *Antidote* Plant used as an antidote for many poisonous conditions. *Burn Dressing* Juice used as wash for pain from burns. Juice used by jugglers as wash for arms, to protect against boiling water. *Misc. Disease Remedy* Poultice of plant applied to enlarged glands, as in mumps. *Other* Plant used in the steam bath to “render the great heat endurable.” *Snakebite Remedy* Plant used for snake and other venomous bites and stings in unspecified ways. *Toothache Remedy* Plant applied to tooth for toothache. *Veterinary Aid* Plant used in smoke treatment for horses with distemper. (70:131) **Sioux, Teton** *Analgesic* Root used for bowel pain. *Gastrointestinal Aid* Root used for bowel pain. *Throat Aid* Root used for tonsillitis. *Toothache Remedy* Root used as toothache remedy. (52:270) **Winnebago** *Analgesic* Juice used as wash for pain from burns. Plant used in smoke treatment for headache. *Antidote* Plant used as an antidote for many poisonous conditions. *Burn Dressing* Juice used as wash for pain from burns. Juice used by jugglers as wash for arms, to protect against boiling water. Plant used to make mouth insensitive to hot coals put in mouth for show. *Misc. Disease Remedy* Poultice of plant applied to enlarged glands, as in mumps. *Other* Plant used in the steam bath to “render the great heat endurable.” *Snakebite Remedy* Plant used for snake and other venomous bites and stings in unspecified ways. *Toothache Remedy* Plant applied to tooth for toothache. *Veterinary Aid* Plant used in smoke treatment for horses with distemper. (70:131)

### **Echinacea angustifolia** DC. **var. angustifolia**, Blacksamson Echinacea

• **Drug—Kiowa** *Cough Medicine* Ground root chewed for coughs. *Throat Aid* Ground root chewed for sore throats. (as *Brauneria angustifolia* 192:57) **Meskwaki** *Analgesic* Root used for stomach cramps and fits. *Anticonvulsive* Compound containing root used for stomach cramps and fits. *Gastrointestinal Aid* Root used for stomach cramps and fits. (as *Brauneria angustifolia* 152:212)

### **Echinacea pallida** (Nutt.) Nutt., Pale Purple Coneflower

• **Drug—Cheyenne** *Antirheumatic (Internal)* Decoction of roots and leaves taken for rheumatism and arthritis. (82:38) Decoction of roots taken for rheumatism and arthritis. (83:20) *Burn Dressing* Decoction of roots used for burns. (82:38) Decoction of roots used as a wash for burns. *Cold Remedy* Root chewed for colds. (83:20) *Dermatological Aid* Roots mixed with puffball mushroom spores and skunk oil and used for boils. (82:38) Roots used for boils. *Dietary Aid* Root chewed to increase the flow of saliva and prevent thirst. *Febrifuge* Decoction of roots used as a wash for fevers. (83:20) *Misc. Disease Remedy* Decoction of roots and leaves taken for mumps and measles. (82:38) Decoction of roots taken for smallpox, mumps, and measles. (83:20) *Oral Aid* Infusion of powdered roots and leaves taken for sore mouth and gums. *Throat Aid* Infusion of powdered roots and leaves taken

for sore throat. *Toothache Remedy* Roots chewed for toothache. (82:38) Root chewed for toothaches, especially cavities. (83:20) *Crow Cold Remedy* Roots chewed and used for colds. *Gastrointestinal Aid* Infusion of roots taken for colic. *Toothache Remedy* Roots chewed for toothache. (82:38) **Dakota Anthelmintic** Decoction of roots taken as a vermifuge. (as *Brauneria pallida* 69:361) *Dermatological Aid* Poultice of roots applied to inflammation to relieve the burning sensation. (as *Brauneria pallida* 69:368) *Eye Medicine* Decoction of roots used for sore eyes. (as *Brauneria pallida* 69:367) *Snakebite Remedy* Plant used as an antidote for snakebites. (as *Brauneria pallida* 69:368) **Sioux Analgesic** Plant used in the smoke treatment for headache. *Antidote* Used as an antidote for rattlesnake and other venomous bites, stings, and poisonous conditions. *Burn Dressing* Decoction of roots used for burns. *Toothache Remedy* Roots chewed for toothache. *Veterinary Aid* Plant used in the smoke treatment for horses with distemper. (82:38)

- **Other—Sioux Protection** Juice used by “jugglers” for protection in handling hot meat. (82:38)

### *Echinacea purpurea* (L.) Moench, Eastern Purple Coneflower

- **Drug—Choctaw Cough Medicine** Root chewed, saliva swallowed, and tincture of root used for cough. *Gastrointestinal Aid* Root chewed, saliva swallowed, and tincture of root used for dyspepsia. (28:288) **Delaware Venereal Aid** Roots combined with staghorn sumac roots and used for venereal disease. (as *Brauneria purpurea* 176:33) Infusion of roots used for advanced cases of venereal disease. (as *Brauneria purpurea* 176:35) **Delaware, Oklahoma Venereal Aid** Simple or compound infusion of root, highly effective, taken for gonorrhoea. (as *Brauneria purpurea* 175:29, 74)

### *Echinacea* sp., Purple Coneflower

- **Drug—Comanche Throat Aid** Decoction of root taken for sore throat. *Toothache Remedy* Root held against tooth for toothaches. (29:521)

## *Echinocactus*, Cactaceae

### *Echinocactus polycephalus* Engelm. & Bigelow, Cottontop Cactus

- **Food—Cahuilla Staple** Berries and stems were an important and dependable food source. (15:49)
- **Other—Kawaiisu Tools** Spines used as awls in the making of coiled basketry. (206:27) **Panamint Tools** Thorns formerly used as awls in basket making. (105:83)

### *Echinocactus* sp., Water Barrel Cactus

- **Drug—Mahuna Oral Aid** Plant used for the prevention of salivary gland swelling. (140:47)
- **Food—Havasupai Dried Food** Seeds dried for future use. *Porridge* Fresh or dried seeds parched, ground, and made into mush. (197:232)
- **Other—Havasupai Containers** Pieces of plant used as tray for baked mescal. *Cooking Tools* Used as improvised cooking vessels particularly on hunting expeditions. *Jewelry* Red spines fire warmed and bent into finger rings. (197:232) **Mahuna Hunting & Fishing Item** Thorns used as fishhooks for deep-water fishing. (140:47)

### *Echinocactus williamsii* Lem., Mescal

- **Drug—Omaha Other** Plant used for alcohol addiction. (68:318)

## *Echinocereus*, Cactaceae

### *Echinocereus coccineus* Engelm., Scarlet Hedgehog Cactus

- **Drug—Navajo Heart Medicine** Plant used as a heart stimulant. *Poison Plant* considered poisonous. (55:64)
- **Food—Apache, Chiricahua & Mescalero Fruit** Raw fruit used for food. (33:41) **Navajo, Ramah Fruit** Fruit used for food. (191:37)
- **Other—Keres, Western Unspecified** Plant known and named but no use was specified. (171:42)

### *Echinocereus engelmannii* (Parry ex Engelm.) Lem., Saints Cactus

- **Food—Pima Fruit** Ripe fruits freed from spines and eaten raw. (47:57) **Pima, Gila River Snack Food** Fruit eaten primarily by children as a snack food. (133:5) **Yavapai Fruit** Raw fruit used for food. *Unspecified* Boiled buds used for food. (as *Cereus engelmannii* 65:256)

### *Echinocereus engelmannii* var. *chrysocentrus* (Engelm. & Bigelow) Ruml., Saints Cactus

- **Food—Apache, Chiricahua & Mescalero Fruit** Raw fruit used for food. (33:41)

### *Echinocereus fendleri* (Engelm.) F. Seitz, Pinkflower Hedgehog Cactus

- **Food—Apache, Chiricahua & Mescalero Fruit** Raw fruit used for food. (33:41) **Cochiti Unspecified** Stems pit roasted and eaten. (32:26) **Hopi Sweetener** Fruits dried and used as a source of sweetening. (200:85)

### *Echinocereus polyacanthus* Engelm., Mojave Mound Cactus

- **Food—Apache, Chiricahua & Mescalero Fruit** Raw fruit used for food. (33:41)

### *Echinocereus rigidissimus* (Engelm.) Haage f., Rainbow Hedgehog Cactus

- **Food—Apache, Chiricahua & Mescalero Fruit** Raw fruit used for food. (33:41)

### *Echinocereus* sp., Coccinia

- **Drug—Isleta Antirheumatic (External)** Poultice of roasted leaves used for swellings. (100:28)
- **Food—Apache, Mescalero Fruit** Fruits eaten for food. (14:45) **Navajo Fruit** Fruits eaten for food. (55:64)

### *Echinocereus triglochidiatus* Engelm., Kingcup Cactus

- **Food—Isleta Beverage** Water extracted from pulp in emergencies. (100:27) **Bread & Cake** Pulp macerated and cooked with sugar to make cakes. (32:26) Pulp baked with sugar and used to make cakes. (100:27) **Candy** Pulp baked with sugar to make candy. (32:26) Pulp baked with sugar and used to make candy. (100:27) **Fruit** Fruits, with spines removed by burning, eaten fresh. (32:26) Fruit eaten fresh. (100:27) **Preserves** Fruits, with spines removed by burning, made into a conserve. (32:26) Fruit eaten as conserves. (100:27) **Sauce & Relish** Pulp baked with sugar to make sweet pickles. *Unspecified* Pulp sliced and baked like squash. (32:26) **Vegetable** Sliced pulp baked like squash and used for food. Pulp baked with sugar and used to make a sweet pickle. (100:27)
- **Other—Isleta Lighting** Dried pulp used as candles. (100:27)

***Echinocereus triglochidiatus*** Engelm. **var. *triglochidiatus***, Kingcup Cactus

- **Food**—Cochiti *Unspecified* Stems pit roasted and eaten. *Isleta Bread & Cake* Pulp macerated and cooked with sugar to make cakes. *Candy* Pulp baked with sugar to make candy. *Fruit* Fruits, with spines removed by burning, eaten fresh. *Preserves* Fruits, with spines removed by burning, made into a conserve. *Sauce & Relish* Pulp baked with sugar to make sweet pickles. *Unspecified* Pulp sliced and baked like squash. (as *E. gonocanthus* 32:26) **Keres, Western Fruit** Tunas used for food. (as *E. gonocanthus* 171:42)

***Echinochloa***, Poaceae

***Echinochloa colona*** (L.) Link, Jungle Rice

- **Food**—Cocopa *Porridge* Seeds parched, ground, and the flour cooked into a mush. *Staple* Seeds parched, ground, and the flour eaten dry. (as *E. colonum* 37:187)

***Echinochloa crus-galli*** (L.) Beauv., Barnyard Grass

- **Food**—Cocopa *Unspecified* Seeds used for food. *Winter Use Food* Seeds stored for later use. (as *E. crusgalli* 64:267) **Paiute Unspecified** Species used for food. (as *E. crusgalli* 167:243) **Tubatulabal Unspecified** Used extensively for food. (193:15) **Yuma Porridge** Seeds pounded, winnowed, ground, made into mush, and used to cook with fish. *Staple* Seeds pounded, winnowed, parched, and ground into a meal. (as *E. crusgalli* 37:187) *Unspecified* Wild seeds eaten for food. (as *E. crusgalli* 37:173)

***Echinochloa crus-pavonis* var. *macera*** (Wieg.) Gould, Gulf Cockspur Grass

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (as *E. crusgalli* var. *zelayensis* 191:16)
- **Food**—Navajo, Ramah *Fodder* Used for horse feed. (as *E. crusgalli* var. *zelayensis* 191:16)

***Echinocystis***, Cucurbitaceae

***Echinocystis brandegei*** Cogn.

- **Drug**—Tubatulabal *Dermatological Aid* Burned, ripe seeds rubbed on pimples and newborn baby's navel. *Pediatric Aid* Burned, ripe seeds rubbed on newborn baby's navel. (193:59)

***Echinocystis lobata*** (Michx.) Torr. & Gray, Wild Cucumber

- **Drug**—Cherokee *Abortifacient* Taken for "obstructed menses." *Anti-rheumatic (Internal)* Infusion taken for rheumatism. *Febrifuge* Taken for chills and fevers. *Kidney Aid* Infusion taken for kidneys. (80:40) **Menominee Analgesic** Poultice of pulverized root used for headache. *Love Medicine* Root used in love potions. *Panacea* Plant considered to be "the greatest of all medicines" and always useful. *Tonic* Decoction of root taken as a bitter tonic. (151:33, 34) **Meskwaki Analgesic** Poultice of pounded root applied for headache. *Panacea* Compound containing root used as a universal remedy for all sicknesses. (152:220) **Ojibwa Gastrointestinal Aid** Infusion of root used as a bitter medicine for stomach troubles. *Tonic* Infusion of root used as a tonic. (153:367, 368)
- **Other**—Oglala *Jewelry* Seeds used for beads. (as *Micrampelis lobata* 70:129)

***Echinocystis* sp.**, Wild Cucumber

- **Drug**—California Indian *Kidney Aid* Roasted seeds eaten for kidney troubles. (118:41)

***Echium***, Boraginaceae

***Echium vulgare*** L., Common Vipersbugloss

- **Drug**—Cherokee *Urinary Aid* Compound taken for milky urine. (80:60) **Iroquois Gynecological Aid** Compound infusion of roots taken for the evacuation of the placenta. (87:421) **Mohegan Kidney Aid** Infusion of root taken for the kidneys. (174:266) Leaves or root, "a rare plant," used for kidney disorders. (176:72, 130)
- **Other**—Cherokee *Jewelry* Seeds used to make beads. (80:60)

***Egregia***, Alariaceae, alga

***Egregia menziesii*** (Turner) Areschoug, Boa Kelp

- **Food**—Bella Coola *Dried Food* Whole plants with attached herring spawn dried and used as a winter food. *Unspecified* Whole plants with attached herring spawn eaten fresh. (184:195) **Haisla & Hanak-siala Dried Food** Plant used to collect herring roe, dried, and eaten with the roe. (43:125) **Kitasoo Unspecified** Plant eaten with herring roe. (43:302) **Oweekeno Dried Food** Plant and herring eggs dried for future use. *Unspecified* Plant eaten with herring roe. *Winter Use Food* Plant and herring eggs salted and stored for future use. (43:44)
- **Other**—Bella Coola *Hunting & Fishing Item* Used to collect herring spawn. (184:195) **Hesquiat Fertilizer** Considered a good fertilizer for potatoes. (185:23)

**Elaeagnaceae**, see *Elaeagnus*, *Shepherdia*

***Elaeagnus***, Elaeagnaceae

***Elaeagnus commutata*** Bernh. ex Rydb., Silverberry

- **Drug**—Blackfoot *Dermatological Aid* and *Pediatric Aid* Strong decoction of bark and grease used as a salve for children with frostbite. (86:85) **Thompson Venereal Aid** Decoction of roots and sumac roots taken for syphilis. This medicine was considered very poisonous and had to be taken with fish head soup to counteract the poison. One informant who was treated with this medicine recovered from syphilis but, afterwards, could never have children. (187:207)
- **Food**—Alaska Native *Fruit* Berries fried in moose fat and eaten. (85:144) **Blackfoot Candy** Peeled berries mixed with grease, stored in a cool place, and eaten as a confection. *Fruit* Peeled berries used for food. *Soup* Peeled berries used to make soups and broths. (86:102) **Cree Beverage** Berries used to make wine. *Fruit* Berries used for food. (as *Elaeagnus argentea* 16:485) **Montana Indian Fruit** Fruit used for food. (as *Elaeagnus argentea* 19:11) **Okanagan-Colville Fruit** Berries used for food. (188:99) **Okanagon Staple** Seeds used as a principal food. (as *E. argentea* 178:239) **Paiute Unspecified** Seeds used for food. (as *Elaeagnus asgentae* 167:244) **Tanana, Upper Fruit** Berries mixed with grease, cooked, and eaten. Berries eaten raw. *Soup* Berries used to make soup. (102:13)
- **Fiber**—Blackfoot *Cordage* Bark used to make strong rope. (as *Elaeagnus argentea* 114:277) **Cree Cordage** Bark used to make cordage. (as *Elaeagnus argentea* 16:485) **Okanagan-Colville Clothing** Inner bark twisted to make clothing. *Cordage* Inner bark twisted to make ropes. *Mats, Rugs & Bedding* Inner bark twisted to make blankets. (188:99) **Thompson Clothing** Inner bark stripped off, shredded, and

the fiber used to make clothing. (as *Elaeagnus argentea* 164:496) Bark made into two-ply twine and used for twining bags, capes, skirts, and other clothing.<sup>29</sup> *Cordage* Bark made into two-ply twine and used for twining mats, bags, capes, skirts, and other clothing.<sup>29</sup> (187:207) *Mats, Rugs & Bedding* Inner bark stripped off, shredded, and the fiber used to make mats. (as *E. argentea* 164:496) Bark made into two-ply twine and used for twining mats.<sup>29</sup> (187:207)

- **Other—Arapaho** *Jewelry* Berries used to make necklaces. Boiled seeds strung on sinew and used as necklaces. (121:49) **Blackfoot** *Jewelry* Seeds cleaned, boiled, threaded, dried, greased, and made into necklaces. (86:112) Seeds used to make necklaces. (as *Elaeagnus argentea* 118:56) *Soap* Berries used to make soap. (as *Elaeagnus argentea* 114:277) *Toys & Games* Braided bark used to whip stone tops spun by children on the ice during the winter. (86:112) **Cree** *Jewelry* Seeds used to make beads. (as *Elaeagnus argentea* 16:485) **Okanagan-Colville** *Containers* Inner bark twisted to make sacks. Bark used to imbricate clematis bags. *Cooking Tools* Inner bark twisted to make soapberry beaters. (188:99) **Tanana, Upper** *Jewelry* Seeds sometimes used as beads. (102:13) **Thompson** *Ceremonial Items* Bark made into a headband and worn by the man chosen to sing when newborn twins first cried. (as *Elaeagnus argentea* 164:508) *Containers* Bark made into two-ply twine and used for twining mats, bags, capes, skirts, and other clothing.<sup>29</sup> *Cooking Tools* Bark twine used in drying roots and bunches of tied bark used as soapberry whippers. The bark was peeled off in as long strips as possible in the spring or fall when it was “kind of dry” and split with a knife (originally of stone). The grayish outer bark was removed and the inner bark scraped, cleaned, and cut into desired widths. At this stage, the bark could be dried for future use. The long, even strands of the fresh or dried bark, after it was soaked, could be spun on the bare leg into a strong, two-ply twine used for many different purposes. The bark wine was used in twining mats, bags, capes, skirts, and other clothing and also to thread bitterroots, avalanche lily corms, and other roots for drying. *Decorations* Seeds, sometimes painted gold, used to decorate Christmas cards. (187:207) *Jewelry* Seeds strung and worn as necklaces. (as *E. argentea* 164:496) Cleaned, polished seeds, with holes drilled in them, strung and used as necklaces. (187:207)

## *Eleocharis*, Cyperaceae

*Eleocharis equisetoides* (Ell.) Torr., Jointed Spikesedge

- **Other—Seminole** *Jewelry* Plant used to make beads. (169:498)

*Eleocharis geniculata* (L.) Roemer & J. A. Schultes, Canada Spikesedge

- **Drug—Seminole** *Analgesic* Infusion of leaves taken as an emetic for rainbow sickness: fever, stiff neck, and backache. (as *E. caribaea* 169:210) Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. *Antidiarrheal* Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *E. caribaea* 169:213) *Antirheumatic (External)* Plant used for fire sickness: fever and body aches. (as *E. caribaea* 169:203) *Emetic* Infusion of leaves taken as an emetic for rainbow sickness: fever, stiff neck, and backache. (as *E. caribaea* 169:210) Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *E. caribaea* 169:213) *Febrifuge* Plant used for

fire sickness: fever and body aches. (as *E. caribaea* 169:203) Infusion of leaves taken as an emetic for rainbow sickness: fever, stiff neck, and backache. (as *E. caribaea* 169:210) Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *E. caribaea* 169:213) *Unspecified* Plant used for medicinal purposes. (as *E. caribaea* 169:162) *Urinary Aid* Decoction of plant taken for urine retention. (as *E. caribaea* 169:274) *Vertigo Medicine* Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *E. caribaea* 169:213)

*Eleocharis montevidensis* Kunth, Sand Spikerush

- **Drug—Navajo, Ramah** *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (191:19)

*Eleocharis palustris* (L.) Roemer & J. A. Schultes, Common Spikerush

- **Food—Paiute, Northern** *Unspecified* Sap eaten. (59:49)
- **Fiber—Okanagan-Colville** *Mats, Rugs & Bedding* Used as bedding, for pillows, and for sitting on in the sweat house. (188:36)

*Eleocharis rostellata* (Torr.) Torr., Beaked Spikerush

- **Drug—Navajo, Ramah** *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (191:19)

*Eleocharis* sp., Spikerush

- **Food—Paiute** *Unspecified* Bulbs used for food. (167:245)
- **Fiber—Cheyenne** *Basketry* Rushes made into large baskets and used to hold small utensils or carry loads on the back. (76:170) *Other* Used in weaving. (83:46)
- **Other—Cheyenne** *Cooking Tools* Rushes made into small baskets and used as dishes to serve food. *Protection* Rushes fastened to the head of a baby's board to form a shade for the face. *Toys & Games* Rushes made into small baskets and used as children's playthings. (76:170)

## *Elliottia*, Ericaceae

*Elliottia pyroliflorus* (Bong.) S. W. Brim & P. F. Stevens, Copperbush

- **Drug—Kitasoo** *Dietary Aid* Decoction of plant used as an appetite stimulant. (as *Cladothamnus pyroliflorus* 43:332)

## *Elodea*, Hydrocharitaceae

*Elodea canadensis* Michx., Canadian Waterweed

- **Drug—Iroquois** *Emetic* Infusion of plant taken as a strong emetic. (as *Anacharis canadensis* 141:66)

## *Elymus*, Poaceae

*Elymus canadensis* L., Canada Wildrye

- **Drug—Iroquois** *Ceremonial Medicine* Decoction of plant with other plants used as medicine to soak corn seeds before planting. (196:19) *Kidney Aid* Compound decoction of roots taken for the kidneys. *Other* Compound decoction of plants taken for stricture. (87:274)
- **Food—Gosiute** *Unspecified* Seeds formerly used for food. (39:368)
- **Ute** *Unspecified* Seeds formerly gathered for food. (38:34)
- **Other—Iroquois** *Fertilizer* Decoction of roots used as a soak for “corn medicine.” (87:274)

***Elymus canadensis* L. var. *canadensis***, Canada Wildrye

- **Food**—Kiowa *Fodder* Foliage and lemmas used as a palatable fodder for livestock. (as *E. robustus* 192:15)

***Elymus elymoides* (Raf.) Swezey**, Bottlebrush Squirreltail

- **Food**—Navajo, Ramah *Fodder* Young plants used for sheep and horse feed, mature plants made animals' mouths sore. (as *Sitanion hystrix* 191:17)

***Elymus glaucus* Buckl.**, Blue Wildrye

- **Drug**—Karak *Other* Plant used as a medicine to settle quarrels between families or individuals. (148:380)
- **Food**—Karak *Porridge* Seeds parched, pounded into a flour, and mixed with water into a paste. (148:380)
- **Other**—Keres, Western *Unspecified* Plant known and named but no use was specified. (171:42)

***Elymus glaucus* Buckl. ssp. *glaucus***, Blue Wildrye

- **Food**—Costanoan *Staple* Seeds used in pinole. (21:255)

***Elymus hystrix* L. var. *hystrix***, Eastern Bottlebrush Grass

- **Drug**—Iroquois *Ceremonial Medicine* Decoction of leaves and reed grass rootstocks used as medicine to soak corn seeds before planting. (as *Hystrix patula* 196:18)

***Elymus multisetus* M. E. Jones**, Big Squirreltail

- **Food**—Kawaiisu *Porridge* Seeds parched, pounded, and cooked into a thin mush. (as *Sitanion jubatum* 206:64)

***Elymus sibiricus* L.**, Siberian Wildrye

- **Food**—Gosiute *Unspecified* Seeds formerly used for food. (39:368)

***Elymus* sp.**, Rye Grass

- **Drug**—Comanche *Eye Medicine* Single looped blades used as eye scrapers for removing cataracts. (99:5)
- **Food**—Pomo, Kashaya *Staple* Grain grounded into a fine powder and used in pinole. (72:101)
- **Fiber**—Aleut *Other* Used for weaving. (7:29)

***Elymus trachycaulus* (Link) Gould ex Shinners**

**ssp. *trachycaulus***, Slender Wheatgrass

- **Drug**—Navajo, Ramah *Veterinary Aid* Leaves eaten by dogs, causing emesis. (as *Agropyron trachycaulum* 191:15)
- **Food**—Navajo, Ramah *Fodder* Used for horse feed and sometimes harvested for winter use. (as *Agropyron trachycaulum* 191:15)
- **Thompson Fodder** Cut and fed to horses as hay. (as *Agropyron tenerum* 164:515)

***Elytrigia*, Poaceae**

***Elytrigia repens* (L.) Desv. ex B. D. Jackson var. *repens***, Quack Grass

- **Drug**—Cherokee *Orthopedic Aid* Decoction used to wash swollen legs and infusion taken for "gravel." *Urinary Aid* Infusion taken for "gravel" and "[in]continence and bedwetting." (as *Agropyron repens* 80:31) **Iroquois** *Anthelmintic* Used as a worm remedy. (as *Agropyron repens* 87:274) *Urinary Aid* Infusion of rhizomes and stems from another plant used for thick urine. (as *Agropyron repens* 141:67)
- **Food**—Apache, White Mountain *Fodder* Plant used for hay. *Unspecified* Seeds used for food. (as *Agropyron repens* 136:155) **Gosiute** *Un-*

*specified* Seeds formerly eaten. (as *Agropyron repens* 39:360)

- **Other**—Okanagan-Colville *Containers* Used under and over the food in pit cooking. (as *Agropyron repens* 188:52)

**Empetraceae**, see *Empetrum*

***Empetrum*, Empetraceae**

***Empetrum nigrum* L.**, Black Crowberry

- **Drug**—Bella Coola *Cathartic* Decoction of green leaves taken as a purgative. (150:60) **Cree, Woodlands** *Diuretic* and *Pediatric Aid* Leafy branches used, especially for children with a fever, as a diuretic.<sup>30</sup> (109:38) **Tanana, Upper Antidiarrheal** Decoction or infusion of stems taken for diarrhea. Berries cooked and eaten for diarrhea. *Cold Remedy* Decoction of leaves, stems, Hudson bay tea, and young spruce tree tip used for colds. *Eye Medicine* Cooled decoction of roots used as an eyewash to remove a growth. *Kidney Aid* Decoction of leaves and stems taken for kidney troubles. (102:12)
- **Food**—Alaska Native *Pie & Pudding* Berries mixed with other berries and used to make pie. *Preserves* Berries mixed with other berries and used to make jelly. (as *Empetrum nigrum* 85:79) **Cree, Woodlands** *Fruit* Fruit eaten in the fall. (109:38) **Eskimo, Alaska** *Fruit* Fruit used for food. (4:715) **Eskimo, Arctic** *Frozen Food* Berries stored frozen and eaten with seal blubber or oil. *Fruit* Berries eaten fresh. (128:21) **Eskimo, Inupiat** *Dessert* Berries cooked with sourdock and eaten as a dessert. *Fruit* Berries eaten with oil and sugar or mixed with other berries, sourdock, ice cream, or fish livers. This was a favorite food made just the same way and still just as good as it had been for centuries. It was one food one could eat all one wanted, for any meal, day after day, and still like it. It was good fresh or leftover and as a main meal, side dish, or dessert. The sweet acidic berries and fat fish livers balanced each other and also were exceptionally nutritious. The only limiting factor in how much one ate was picking enough berries and catching enough fish to have the ingredients. The recipe was as follows: pick clean, ripe blackberries, at least 1 gallon. Save the livers from four large, freshly caught fall trout. Pinch out the bile sack, without breaking it, and discard. Soak the livers in a bowl of cold water while you finish caring for the fish. Rinse the livers, throw out the soak water. Simmer the livers in clean water until just done, 5 to 10 minutes. Lift the livers out to drain and cool. They could be stored a few days this way in the refrigerator. Skim the oil off the broth and save to add. Mash the livers thoroughly in a bowl, every tiny lump, using your hand or a fork. Mix in a little water as you mash to make a smooth paste, like thick hot cake batter. Stir in the whole blackberries until all the paste was taken up coating the berries. No salt or sugar was ever used or needed. Newcomers would prefer trout livers, which were mild, but after a while began to crave the stronger taste and more satisfying oiliness of tom cod livers. *Pie & Pudding* Berries, cornstarch, water, and butter used to make pie. Berries cooked with blueberries and used to make pie and ice cream. *Winter Use Food* Berries mixed with salmonberries and stored for winter use. Berries stored in seal oil, a sealskin poke, or plastic bag for future use. (98:92) **Koyukon** *Beverage* Berries eaten by hunters to quench their thirst in the waterless high country. (119:55) **Ojibwa** *Fruit* Fruit used for food. (135:243) **Tanana, Upper** *Frozen Food* Berries frozen for future use. (102:12) *Fruit* Fruit used for food. (77:28) Berries eaten raw,

plain, or mixed raw with sugar, grease, or the combination of the two. Berries fried in grease with sugar or dried fish eggs. Berries boiled with sugar and flour to thicken. *Pie & Pudding* Berries used to make pies. *Preserves* Berries used to make jam and jelly. *Winter Use Food* Berries preserved alone or in grease and stored in a birch bark basket in an underground cache. (102:12) *Tsimshian Fruit* Berries used for food. (43:332)

***Empetrum nigrum* ssp. *hermaphroditum*** (Lange ex Hagerup)  
Böcher, Black Crowberry

- **Food**—Eskimo, Alaska *Fruit* Berries eaten alone. *Ice Cream* Berries added to ice cream. *Winter Use Food* Berries preserved in seal oil for use in fall and winter. (1:37)

## ***Encelia*, Asteraceae**

***Encelia farinosa*** Gray ex Torr., Goldenhills

- **Drug**—Cahuilla *Toothache Remedy* Decoction of blossoms, leaves, and stems held in the mouth for toothaches. (15:69) **Pima** *Analgesic* Poultice of plant applied for pain. (47:102)
- **Food**—Papago *Candy* Gum secretions chewed by children. (34:28) **Pima** *Candy* Resin used as a primitive chewing gum. (47:102) Amber-colored gum used for chewing gum. (95:265)
- **Other**—Papago *Fasteners* “Gum” used to fasten arrow points to the slit ends of arrow twigs. (34:71) *Waterproofing Agent* Gum-like secretions formerly smeared on tall, slender water bottles. (34:59) **Pima** *Fuel* Resinous branches used to make quick fires. *Paint* Resin melted and used as a varnish. (47:102)

***Encelia frutescens* var. *resinosa*** M. E. Jones, Button Brittlebush

- **Drug**—Navajo, Kayenta *Dermatological Aid* Plant used for shingles. (205:47)
- **Food**—Navajo, Kayenta *Spice* Used as a seasoning for broth. (205:47)

***Encelia virginensis* var. *actonii*** (Elmer) B. L. Turner, Acton's Brittlebush

- **Drug**—Kawaiisu *Analgesic* and *Antirheumatic (External)* Decoction of leaves and flowers used as a wash for rheumatic pains. *Veterinary Aid* Decoction of leaves used as a wash for horses with cuts and bruises. (206:27) **Tubatulabal** *Antirheumatic (External)* Compound decoction of roots used as a wash for rheumatism. (as *E. actoni* 193:59)

## ***Enceliopsis*, Asteraceae**

***Enceliopsis nudicaulis*** (Gray) A. Nels., Nakedstem Sunray

- **Drug**—Shoshoni *Antidiarrheal* Decoction of root taken for bloody diarrhea. *Cough Medicine* Decoction of leaves taken for coughs. *Venereal Aid* Decoction of root taken for venereal disease. (180:67, 68)

## ***Enteromorpha*, Ulvaceae, alga**

***Enteromorpha intestinalis*** (L.) Link, Tubular Green Alga

- **Food**—Hesquiat *Forage* Plants float upright during high tide and the brant geese like to pick at them. (185:23)

**Epacridaceae**, see *Styphelia*

**Ephedraceae**, see *Ephedra*

## ***Ephedra*, Ephedraceae, conifer**

***Ephedra antisiphilitica*** Berl. ex C. A. Mey., Clapweed

- **Drug**—Pima *Venereal Aid* Plant used for syphilis. (146:80) **Tewa** *Antidiarrheal* Leaves and stems chewed or decoction taken for diarrhea. (138:46)

***Ephedra californica*** S. Wats., California Jointfir

- **Drug**—Diegueño *Blood Medicine* Infusion of branches taken to purify the blood. *Dietary Aid* Infusion of branches taken to improve the appetite. (84:19) *Gastrointestinal Aid* Infusion of plant taken for stomach aches caused by eating too much food or eating bad food. (88:216) *Kidney Aid* Infusion of branches taken for the kidneys. (84:19)
- **Food**—Kawaiisu *Beverage* Stems used to make tea. *Unspecified* Seeds formerly used for food. (206:27)
- **Other**—Kawaiisu *Tools* Wood provided the best charcoal for tattooing. The charcoal was mashed, a little water added, and a design made with it on the skin. (206:27)

***Ephedra fasciculata*** A. Nels., Arizona Jointfir

- **Drug**—Pima *Dermatological Aid* Poultice of dried, powdered roots applied to sores. *Venereal Aid* Poultice of dried, powdered roots applied for syphilis. (47:76)
- **Food**—Havasupai *Beverage* Upper portions of plant boiled into tea. (197:207) **Pima** *Beverage* Ends of branches boiled and made into a beverage. **Pima, Lehi** *Beverage* Roots used as a tea. (47:76)

***Ephedra nevadensis*** S. Wats., Nevada Jointfir

- **Drug**—Apache, White Mountain *Venereal Aid* Infusion of stems and leaves taken for gonorrhea or first stages of syphilis. (136:157) **Cahuilla** *Blood Medicine* Decoction of fresh or dried twigs used to purify the blood. *Other* Decoction of fresh or dried twigs used to “clear the system.” (15:70) **Coahuilla** *Unspecified* Plant used for unspecified medicinal purposes. (13:73, 74) **Navajo** *Kidney Aid* Infusion of stems and leaves taken for kidney troubles. *Venereal Aid* Infusion of stems and leaves taken for venereal troubles. (136:157) **Paiute** *Adjuvant* Twigs used in medicines “to lessen disagreeable flavors.” *Burn Dressing* Compound decoction of plant used as a salve for burns. *Venereal Aid* Decoction of twigs and branches taken for venereal diseases. **Shoshoni** *Dermatological Aid* Poultice of powdered twigs and branches applied to sores. *Diuretic* Decoction of twigs and branches taken to stimulate urination. *Venereal Aid* Decoction of twigs and branches taken for venereal diseases. (180:68) **Zuni** *Venereal Aid* Infusion of stems and leaves taken for venereal troubles. (136:157) Infusion of whole plant, except root, taken for syphilis. (166:49)
- **Food**—Apache, White Mountain *Beverage* Stems used to make tea. (136:157) **Cahuilla** *Beverage* Fresh or dried twigs boiled to make tea. (15:70) **Coahuilla** *Beverage* Used to make a pleasant and refreshing beverage. (13:73) **Havasupai** *Beverage* Upper portions of plant boiled into tea. (197:207) **Kawaiisu** *Beverage* Stems used to make tea. *Unspecified* Seeds formerly used for food. (206:27) **Papago** *Beverage* Seeds steeped and used as tea-like drinks for refreshment. (34:27) **Zuni** *Beverage* Plant without the root occasionally used to make a hot, tea-like beverage. (166:67)
- **Other**—Kawaiisu *Tools* Wood provided the best charcoal for tattooing. (206:27)

***Ephedra* sp.**, Indian Tea

- **Drug**—Hualapai *Unspecified* Infusion of green branches taken for medicinal purposes. (195:34) **Mahuna** *Analgesic* Infusion of roots

taken for painful bloating of the stomach. (140:68) *Blood Medicine* Infusion of plants taken to purify the blood. (140:21) *Gastrointestinal Aid* Infusion of roots taken for painful bloating of the stomach. (140:68) *Kidney Aid* Infusion of plants taken to flush the kidneys. (140:21) Infusion of leaves and blossoms taken for pleurisy of the kidneys. *Venereal Aid* Infusion of roots taken for gonorrhea. (140:68)

- **Food—Paiute Beverage** Dried twigs made into an aromatic tea. **Shoshoni Beverage** Parched, ground seeds used for coffee. (118:17)
- **Fiber—Havasupai Mats, Rugs & Bedding** Twigs used to make drying mat for pulp. (17:17)

***Ephedra torreyana*** S. Wats., Torrey's Jointfir

- **Drug—Hopi Venereal Aid** Plant used for syphilis. (200:35, 63) **Isleta Dermatological Aid** Decoction of leaves and stems used to make a lotion for itching skin. (100:28) **Keres, Western Cough Medicine** Infusion of stems used as a cough medicine. *Diaphoretic* Stems used as an ingredient in the sweat bath. *Kidney Aid* Infusion of stems taken or stems chewed for kidney trouble. *Urinary Aid* Infusion of stems taken or stems chewed for bladder trouble. (171:42) **Navajo, Ramah Cough Medicine** Decoction of whole plant taken for bad cough. *Gastrointestinal Aid* Decoction of whole plant taken for stomachache. (191:14)
- **Food—Havasupai Beverage** Upper portions of plant boiled into tea. (197:207) **Navajo Beverage** Branches used to make tea. (55:24)

***Ephedra trifurca*** Torr. ex S. Wats., Longleaf Jointfir

- **Drug—Cocopa Dermatological Aid** Poultice of pulverized or boiled stems and leaves applied to sores. (64:268) **Navajo Gastrointestinal Aid** Infusion of dried plants taken for stomach troubles. *Kidney Aid* Infusion of dried plants taken for kidney affections. *Venereal Aid* Infusion of dried plants taken for venereal disease. Wood burned for venereal disease. Wood burned with charcoal, buffalo hair, wood rat hair, and bat hair in a hole in the middle of the hogan. The person with venereal disease sits over the hole and the smudge covers his exposed parts and cures him. (55:24) **Pima Dermatological Aid** Moxa used to burn the boils caused by "bad disease." Poultice of plant applied to bleeding sores caused by venereal disease. *Other* Plant used as an "antileuretic." *Venereal Aid* Poultice of plant applied to bleeding sores caused by venereal disease. (47:76)

***Ephedra viridis*** Coville, Mormon Tea

- **Drug—Havasupai Emetic** Used to make a draft and taken to vomit for bowel complaints. *Laxative* Used to make a draft and taken to clear the bowels. (162:285) **Hopi Tonic** Dried flowers and stems taken as a tonic. *Venereal Aid* Plant used for syphilis. (42:312) Plant used for syphilis. (200:64) **Kawaiisu Blood Medicine** Infusion of stems taken for anemia. *Orthopedic Aid* Infusion of stems taken for backaches. (206:27) **Navajo Cough Medicine** Decoction of plant tops taken as a cough medicine. (55:24) *Venereal Aid* Strong infusion of plant used for syphilis. (110:19) **Paiute Antidiarrheal** Compound infusion of plant given to children for diarrhea. *Antirheumatic (Internal)* Infusion or decoction of twigs or branches taken for rheumatism. *Blood Medicine* Infusion or decoction of twigs or branches taken as a blood purifier. *Cold Remedy* Infusion or decoction of twigs or branches taken for colds. *Dermatological Aid* Dried, powdered stems applied to sores. *Gastrointestinal Aid* Infusion or decoction of twigs or branches used for stomach ulcers and disorders. *Kidney Aid* Infusion or decoc-

tion of twigs or branches taken as a kidney regulator. *Pediatric Aid* Compound infusion of plant given to children for diarrhea. *Tonic* Infusion or decoction of twigs or branches taken as a tonic. *Urinary Aid* Infusion or decoction of twigs or branches used as a kidney regulator and for bladder. *Venereal Aid* Decoction of twigs taken for syphilis or gonorrhea. (180:68–70) **Paiute, Northern Dermatological Aid** Poultice of dried, powdered stems applied to sores. (59:128) **Shoshoni Antidiarrheal** Compound infusion of plant given to children for diarrhea. *Blood Medicine* Infusion or decoction of twigs or branches taken as a blood purifier. *Burn Dressing* Poultice of moistened, powdered stems applied to burns. *Cathartic* Decoction of root or salted decoction of stems taken as a physic. *Cold Remedy* Infusion or decoction of twigs or branches taken for colds. *Dermatological Aid* Dried, powdered stems alone or mixed with pitch and used as a salve for sores. *Gastrointestinal Aid* Infusion or decoction of twigs or branches taken for stomach disorders. *Kidney Aid* Infusion or decoction of twigs or branches taken as a kidney regulator. *Pediatric Aid* Compound infusion of plant given to children for diarrhea. *Tonic* Infusion or decoction of twigs or branches taken as a tonic. *Urinary Aid* Infusion or decoction of twigs or branches used as a kidney regulator and for bladder. *Venereal Aid* Simple or compound decoctions of plant parts taken for syphilis or gonorrhea. (180:68–70) **Tewa Tonic** Dried flowers and stems taken as a tonic. *Venereal Aid* Plant used for syphilis. (42:312) **Tubatulabal Blood Medicine** Decoction of stalks and leaves used for the blood. *Venereal Aid* Decoction of stalks and leaves used for syphilis. (193:59) **Washo Gynecological Aid** Infusion or decoction of twigs or branch used for delayed or difficult menstruation. (180:68–70)

- **Food—Havasupai Beverage** Upper portions of plant boiled into tea. (197:207) Twigs boiled into a tea. (197:66) **Kawaiisu Beverage** Stems used to make tea. *Unspecified* Seeds formerly used for food. (206:27) **Navajo Beverage** Roasted stems used to make tea. Stems chewed to relieve thirst when on the move and away from water supplies. (110:19) **Paiute Beverage** Leafless needles boiled into a drink. (167:245) **Paiute, Northern Beverage** Stems used to make tea. (59:128) Stalks boiled in water to make tea. (59:53) **Tubatulabal Unspecified** Leaves and stalks used for food. (as *E. viridis* 193:15)
- **Dye—Navajo Brown** Twigs and leaves boiled with alum and used as a light tan dye. (110:19)
- **Other—Kawaiisu Tools** Wood provided the best charcoal for tattooing. (206:27)

## ***Epicampes***, Poaceae

### ***Epicampes*** sp.

- **Fiber—Shoshoni Basketry** Grass used to make grass coil baskets. (117:446)

## ***Epifagus***, Orobanchaceae

### ***Epifagus virginiana*** (L.) W. Bart., Beech Drops

- **Drug—Iroquois Antidiarrheal** Infusion of plants taken for diarrhea caused by menstruating women. (87:437)

## ***Epigaea***, Ericaceae

### ***Epigaea repens*** L., Trailing Arbutus

- **Drug—Algonquin, Quebec Kidney Aid** Infusion of leaves used for

kidney disorders. (18:216) **Cherokee Analgesic** Decoction of plant taken to cause vomiting for abdominal pains. *Antidiarrheal* Infusion of plant given to children with diarrhea. *Emetic* Decoction of plant taken to cause vomiting for abdominal pains. (177:48) *Gastrointestinal Aid* Compound infusion taken for indigestion. (80:23) Decoction of plant taken to cause vomiting for abdominal pains. (177:48) *Kidney Aid* Infusion taken for kidneys and "chest ailment." (80:23) *Pediatric Aid* Infusion of plant given to children with diarrhea. (177:48) *Pulmonary Aid* Infusion used for "chest ailment." (80:23) **Iroquois Analgesic** Compound used for labor pains in parturition. *Antirheumatic (Internal)* Compound decoction of plant taken for rheumatism. *Gastrointestinal Aid* Decoction of leaves taken to aid digestion. *Gynecological Aid* Compound used for labor pains in parturition. *Kidney Aid* Decoction of whole plant or roots, stalks, and leaves taken for the kidneys. (87:410)

- **Other—Potawatomi Sacred Items** Tribal flower of Forest Potawatomi and considered these flowers came directly from their divinity. (154:118)

## *Epilobium*, Onagraceae

### *Epilobium angustifolium* L., Fireweed

- **Drug—Abnaki Cough Medicine** Roots used for coughs. (144:154) **Algonquin, Tête-de-Boule Dermatological Aid** Poultice of boiled roots applied to "sick" skin. (132:128) **Bella Coola Dermatological Aid** Poultice of roasted and mashed root applied to boils. (150:60) Poultice of roasted and mashed roots applied to boils. (184:207) **Blackfoot Dermatological Aid** Powdered inner cortex rubbed on the hands and face to protect them from the cold during the winter. (86:112) *Laxative* and *Pediatric Aid* Infusion of roots and inner cortex given to babies as an enema for constipation. (86:66) **Chippewa Dermatological Aid** Poultice of moistened fresh or dried leaf used for bruises or to remove a sliver. (53:352) **Cree, Woodlands Dermatological Aid** Poultice of barked, macerated roots applied to boils, abscesses, or wounds to draw out the infection. Poultice of leaves applied to bruises. Poultice of barked, chewed roots applied to cuts and wounds. (109:38) **Eskimo, Alaska Laxative** Infusion of old, dry leaves used as a laxative. (1:36) **Eskimo, Western Analgesic** and *Gastrointestinal Aid* Compound decoction of leaves taken for stomachache and intestinal discomfort. (108:5) **Iroquois Analgesic** Infusion of bark applied as poultice for pain anywhere in the body. *Basket Medicine* Infusion of plant used as a "basket medicine." *Internal Medicine* Decoction of roots taken for internal injuries from lifting. (87:389) *Kidney Aid* Compound infusion of roots taken for kidneys or for male urination problems. *Orthopedic Aid* Poultice of smashed roots applied to swollen knees. (87:390) **Panacea** Compound infusion of twigs and roots taken as a panacea for pain. *Tuberculosis Remedy* Compound decoction of roots taken for consumption. *Urinary Aid* Infusion of roots taken for burning urination and other urination problems. *Witchcraft Medicine* Compound decoction of plants and a doll used for black magic. (87:389) **Kwakiutl Cancer Treatment** Poultice of seeds, down, and oil applied to wound after cutting open the tumor. *Dermatological Aid* Poultice of seeds, down, and oil applied to wound after cutting open the tumor. (183:287) **Menominee Dermatological Aid** Root used to make a wash for swellings. (151:43) **Navajo, Kayenta Gastrointestinal Aid** Plant used for gastritis. (205:32) **Ojibwa Derma-**

*tological Aid* Poultice of pounded root applied to boils and carbuncles. (153:376) **Potawatomi Unspecified** Plant used as a medicine for unspecified ailments. (154:66) **Skokomish Tuberculosis Remedy** Infusion of roots taken for tuberculosis. **Snohomish Throat Aid** Infusion of roots taken for sore throats. **Swinomish Other** Decoction of whole plants used as a bath for invalids. *Poison* Infusion of plant considered poisonous. (79:41) **Thompson Dermatological Aid** Decoction of plant used as a wash for sores. (187:235)

- **Food—Alaska Native Dietary Aid** Young, tender greens, properly prepared, used as a good source of vitamin C and provitamin A. *Unspecified* Young stems peeled and eaten raw. *Vegetable* Young shoots mixed with other greens and eaten. (85:31) **Bella Coola Vegetable** Young shoots eaten as greens in spring. (184:207) **Blackfoot Unspecified** Fresh roots used for food. (86:102) **Clallam Beverage** Roots boiled and used as a drink. (57:201) **Eskimo, Alaska Unspecified** Young shoots eaten raw or blanched, with seal oil. (1:36) Young shoots gathered, boiled, and mixed with other plants and sometimes bacon. (4:715) **Eskimo, Inuktitut Unspecified** Young shoots used for food. (202:192) **Eskimo, Inupiat Sweetener** Pith used as a berry sweetener and eaten by children. *Vegetable* Violet stems, with dark purple leaves, used in salads. Pink stems with leaves boiled and eaten or steamed and served with cream sauce or cheese sauce. *Winter Use Food* Violet stems, with dark purple leaves, preserved in seal oil. (98:23) **Gitksan Unspecified** Shoots and stems used for food in summer. **Haisla Unspecified** Shoots and stems used for food in summer. (73:154) **Okanagan-Colville Forage** Plant eaten by horses and deer. (188:110) **Okanagan Unspecified** Young shoots eaten raw. (125:38) **Saanich Beverage** Young leaves boiled to make a refreshing tea. (182:85) **Tanana, Upper Fodder** Shoots cooked with fish for dog feed. *Preservative* Used for smoking fish and as a mosquito repellent. *Unspecified* Shoots eaten raw or boiled. (102:16) **Thompson Fodder** Stalks used for pig feed. (187:235) *Unspecified* Young shoots eaten raw. (125:38) Young shoots peeled and eaten. Stalks eaten raw like celery, boiled, or steamed. (187:235) **Wet'suwet'en Unspecified** Shoots and stems used for food in summer. (73:154)
- **Fiber—Clallam Clothing** Puffs mixed with dog hair and used for weaving cloth. (57:201) **Cree, Woodlands Sewing Material** Stem fibers used for thread. (109:38) **Quinalt Mats, Rugs & Bedding** Cotton combined with duck feathers and used as blankets. **Skokomish Mats, Rugs & Bedding** Cotton combined with duck feathers and used as blankets. (79:41)
- **Other—Blackfoot Waterproofing Agent** Flowers rubbed on rawhide thongs and mittens for waterproofing. (86:112) **Cree, Woodlands Season Indicator** Flowering coincided with the season of moose fattening. Comas coincided with the moose mating season which followed fattening. (109:38) **Kitasoo Hunting & Fishing Item** Fibers used to make fishing nets. (43:339) **Shuswap Decorations** Used in bouquets with roses. (123:64) **Tanana, Upper Insecticide** Used for smoking fish and as a mosquito repellent. *Tools* Stem used to draw the pus out of a boil or cut. (102:16) **Thompson Containers** Leaves put in cooking pits by old-timers, to protect the food while cooking. *Hunting & Fishing Item* Plant blooms indicated that the deer would be fat. (187:235)

### *Epilobium angustifolium* L. ssp. *angustifolium*, Fireweed

- **Drug—Cheyenne Antihemorrhagic** Infusion of dried, pulverized

leaves taken for bowel hemorrhage. *Gastrointestinal Aid* Infusion of dried leaves or dried roots taken for bowel hemorrhages. (as *Chamoenerion angustifolium* 76:181)

***Epilobium angustifolium* ssp. *circumvagum*** Mosquin, Fireweed

- **Food**—Haisla & Hanaksiala *Unspecified* Young shoots used for food. (43:257) Oweekeno *Unspecified* Young shoots eaten as a spring food. (43:106)
- **Fiber**—Haisla *Cordage* Stem fibers possibly used to make cordage. (43:106) Haisla & Hanaksiala *Cordage* Plant used to make twine, cordage, and binding. (43:257) Hanaksiala *Cordage* Stem fibers possibly used to make cordage. Heiltzuk *Cordage* Stem fibers possibly used to make cordage. Oweekeno *Cordage* Stem fibers possibly used to make cordage. (43:106)
- **Other**—Haisla *Cleaning Agent* Leaves used to wipe hands, especially after handling slimy fish. Haisla & Hanaksiala *Hunting & Fishing Item* Plant used to make oolichan (candlefish) nets. (43:257)

***Epilobium brachycarpum*** K. Presl, Autumn Willowweed

- **Drug**—Okanagan-Colville *Dermatological Aid* Infusion of plant tops applied to the hair as a conditioner for dandruff and hair manageability. (as *E. paniculatum* 188:111)

***Epilobium canum* ssp. *angustifolium*** (Keck) Raven, Hummingbird Trumpet

- **Drug**—Costanoan *Dermatological Aid* Decoction of plant used for infected sores. *Disinfectant* Decoction of plant used for infected sores. *Febrifuge* Decoction of plant used for infant's fever. *Panacea* Decoction of plant used as a general remedy. *Pediatric Aid* Decoction of plant used for infant's fever. *Urinary Aid* Decoction of plant used for urinary problems. (as *Zauschneria californica* 21:22) Miwok *Anti-hemorrhagic* Used by women after parturition for hemorrhages. *Cathartic* Decoction of leaves taken as a cathartic. *Gynecological Aid* Used by women after parturition for hemorrhages. *Kidney Aid* Decoction of leaves taken for kidney trouble. *Tuberculosis Remedy* Decoction of leaves taken for tuberculosis. *Urinary Aid* Decoction of leaves taken for bladder trouble. *Venereal Aid* Used for syphilis. (as *Zauschneria californica* 12:174)

***Epilobium canum* ssp. *latifolium*** (Hook.) Raven, Hummingbird Trumpet

- **Food**—Karok *Unspecified* Blossoms sucked for the nectar. (as *Zauschneria latifolia* 148:386)

***Epilobium ciliatum*** Raf. **ssp. *ciliatum***, Coast Willowweed

- **Drug**—Hopi *Analgesic* Plant used for leg pains. (as *E. adenocaulon* 200:33, 86) Navajo, Kayenta *Orthopedic Aid* Infusion used as lotion and poultice of roots applied to muscular cramps. (as *E. adenocaulon* 205:32) Potawatomi *Antidiarrheal* Infusion of root used "to check diarrhea." (as *E. adenocaulon* 154:66)

***Epilobium latifolium*** L., Dwarf Fireweed

- **Drug**—Eskimo, Inupiat *Dermatological Aid* Leaves, rich in vitamins A and C, eaten for healthy, beautiful skin. *Eye Medicine* Leaves, rich in vitamins A and C, eaten for healthy, beautiful eyes. (98:26)
- **Food**—Alaska Native *Vegetable* Young, tender greens, properly prepared, used as a good source of vitamin C and provitamin A. (85:33)

Eskimo, Arctic *Vegetable* Flowers eaten raw as a salad. Leaves cooked and eaten. Eskimo, Greenland *Vegetable* Flowers and leaves eaten raw with seal blubber. (128:25) Eskimo, Inuktitut *Unspecified* Young shoots used for food. (202:192) Eskimo, Inupiat *Unspecified* Leaves preserved in seal oil and eaten within 48 hours with walrus blubber. (98:26)

***Epilobium minutum*** Lindl. ex Lehm., Small Willowweed

- **Drug**—Okanagan-Colville *Antidiarrheal* and *Pediatric Aid* Infusion of roots and stems given to children for diarrhea. (188:111)

***Epilobium* sp.**, Willowweed

- **Drug**—Abnaki *Cough Medicine* Infusion of roots and bark from other plants taken for persistent coughs. (144:164) Thompson *Unspecified* Plant used medicinally for unspecified purpose. (164:468)
- **Fiber**—Mewuk *Building Material* Used to line acorn caches. (117:362)
- **Other**—Thompson *Good Luck Charm* Plant used as an "especially efficacious" charm for good luck in gambling. (164:506)

***Epipactis***, Orchidaceae

***Epipactis gigantea*** Dougl. ex Hook., Giant Helleborine

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used in girl's puberty rite. *Other* Plant used for general body disease. *Pediatric Aid* Plant used to purify a newborn infant and plant used in girl's puberty rite. (205:17)
- **Other**—Karok *Decorations* Flowers used for their prettiness. (148:381)

***Epixiphium***, Scrophulariaceae

***Epixiphium wislizeni*** (Engelm. ex Gray) Munz, Balloonbush

- **Drug**—Keres, Western *Antirheumatic (External)* Leaves heated with stones and rubbed on swellings. *Snakebite Remedy* Leaves heated with stones and rubbed onto snakebites. (as *Maurandia wislizeni* 171:53)
- **Food**—Apache, Chiricahua & Mescalero *Unspecified* Pods eaten fresh or boiled. (as *Maurandia wislizeni* 33:45)

**Equisetaceae**, see *Equisetum*

***Equisetum***, Equisetaceae, horsetail

***Equisetum arvense*** L., Field Horsetail

- **Drug**—Blackfoot *Dermatological Aid* Poultice of stem pieces applied to rash under the arm and in the groin. (86:76) *Diuretic* Infusion of fertile stem roots used as a powerful diuretic. (86:69) *Orthopedic Aid* Powdered stems put in moccasins to avoid foot cramps when traveling long distances. (86:112) *Veterinary Aid* Infusion of fertile stem roots given to horses as a diuretic. Infusion of fertile stem roots rubbed on the groins of horses. Powdered stems and water given to perk a horse up. (86:88) Cherokee *Kidney Aid* Infusion taken for kidneys. *Laxative* Strong infusion taken for constipation. (80:39) Cheyenne *Veterinary Aid* Infusion of leaves and stems given to horses with a hard cough. (76:169) Chippewa *Urinary Aid* Decoction of stems taken for dysuria. (71:122) Iroquois *Analgesic* Used for headaches and pains. *Antirheumatic (Internal)* Used for rheumatism. *Orthopedic Aid* Used for joint aches. *Pediatric Aid* Raw stems chewed by

teething babies. (87:261) Infusion of rhizomes and hazel stems given to children for teething. (141:33) *Toothache Remedy* Raw stems chewed by teething babies. (87:261) Infusion of rhizomes and hazel stems given to children for teething. (141:33) **Kwakiutl** *Dermatological Aid* Poultice of rough leaves and stems applied to cuts and sores. (183:263) **Ojibwa** *Kidney Aid* Infusion of whole plant used for dropsy. (153:368) **Okanagan-Colville** *Antirheumatic (Internal)* Infusion of stems taken for lumbago. *Dermatological Aid* Plant pounded, mixed with water, and used to wash areas of the body affected by poison ivy. *Diuretic* Infusion of stems taken as a diuretic to stimulate the kidneys. *Orthopedic Aid* Infusion of stems taken for backaches. *Stimulant* Infusion of stems taken for sluggishness due to a cold. *Venereal Aid* Decoction of plant and false box taken or used as a bath for syphilis and gonorrhea. *Veterinary Aid* Given to thin, old horses with diarrhea after eating fresh grass in spring. (188:17) **Pomo, Kashaya** *Dermatological Aid* Decoction of plant used as a wash for itching or open sores. (72:58) **Potawatomi** *Analgesic* Infusion of whole plant used for lumbago. *Kidney Aid* Infusion of plant used for kidney trouble. *Orthopedic Aid* Infusion of plant used for lumbago. *Urinary Aid* Infusion of plant used for bladder trouble. (154:55, 56) **Saanich** *Blood Medicine* Tender, young shoots eaten raw or boiled and thought to be “good for the blood.” (182:68) **Thompson** *Dermatological Aid* Decoction or infusion of stems used after childbirth to expel the afterbirth more quickly.<sup>31</sup> *Urinary Aid* Decoction of new plant tops taken for “stoppage of urine.” (187:86)

- **Food—Chinook, Lower** *Unspecified* Young shoots used as food. (79:15) **Eskimo, Alaska** *Unspecified* Black, edible nodules attached to roots used for food. The effort of collecting the nodules was considerable and therefore rarely done. However, these nodules were often obtained from underground caches of roots and tubers collected by lemmings and other tundra rodents. The caches were raided by the people and the “mouse nuts” were used for food. (1:33) **Haisla & Hanaksiala** *Forage* Plant eaten by geese. (43:156) **Hesquiat** *Vegetable* Tender, young, vegetative shoots peeled and eaten raw. These shoots were green but had not yet branched out, and the segments were still very close together. The leaf sheaths were peeled off two at a time and the succulent stems eaten raw. They were “nothing but juice.” The Hesquiat people traveled up towards Esteven Point especially to get these shoots, and sometimes they would collect 20 or more kilograms of them at a time. When they returned home, the harvesters would call together all their relatives and friends and have a feast of horsetail shoots. The white, fertile shoots were apparently not eaten, although they are in other areas of the Northwest Coast. (185:28) **Meskwaki** *Fodder* Plant fed to captive wild geese to make them fat in a week. (152:272) **Ojibwa** *Fodder* Plant gathered to feed domesticated ducks and fed to ponies to make their coats glossy. (153:400) **Okanagan-Colville** *Fodder* Used in winter for fodder during hay shortage. (188:17) **Saanich** *Unspecified* Tender, young shoots eaten raw or boiled. (182:68) **Tanana, Upper** *Unspecified* Tubers eaten. (102:9) **Tewa** *Forage* Plant eaten by horses. (138:68)
- **Fiber—Costanoan** *Basketry* Roots used in basketry. (21:247) **Kwakiutl, Southern** *Scouring Material* Rough leaves and stems used for polishing canoes and other wooden articles. (183:264) **Okanagan-Colville** *Scouring Material* Stems used as sandpaper to polish bone tools and soapstone pipes. Used to polish fingernails. (188:17)

- **Dye—Blackfoot** *Red* Crushed stems used as a light pink dye for porcupine quills. (86:112)
- **Other—Blackfoot** *Soap* Plant used by children to shine their bouncing arrows. (86:112) **Chippewa** *Malicious Charm* Plant pieces carried in men’s pockets to prevent their rivals from having good luck. (71:122) **Okanagan-Colville** *Containers* Hollow stems used to administer medicines to babies. (188:17) **Shoshoni** *Musical Instrument* Plant used for whistles. (118:57) **Shuswap** *Tools* Used as a file. (123:49)

### *Equisetum hyemale* L., Scouringrush Horsetail

- **Drug—Blackfoot** *Veterinary Aid* Infusion used as a drench for horse medicine. (82:58) Decoction of foliage used in horse medicine as a drench. (97:16) Decoction of plant used as a horse medicine. (114:276) **Carrier** *Kidney Aid* Decoction of plant taken for kidney problems. *Urinary Aid* Decoction of plant taken for the inability to pass water. (31:84) **Cherokee** *Kidney Aid* Infusion taken for kidneys. *Laxative* Strong infusion taken for constipation. (80:39) **Cheyenne** *Veterinary Aid* Plant used as a medicine for horses. (83:4) **Chippewa** *Disinfectant* Leaves burned as a disinfectant. (53:366) **Cree** *Abortifacient* Used for irregular menstruation. (82:58) Decoction of plant and two unknown roots used to correct menstrual irregularities. (97:16) **Crow** *Analgesic* Poultice used for bladder and prostate pains. *Diuretic* Infusion of stems used as a diuretic. **Flathead** *Diuretic* Infusion of stems used as a diuretic. (82:58) **Hoh** *Ceremonial Medicine* Rootstocks eaten during medicinal ceremonies. (137:57) **Iroquois** *Urinary Aid* Infusion of rhizomes taken by old people “when the urine is too red.” (141:33) **Karok** *Ceremonial Medicine* Plant used in ceremonial cleansing for the priests in First Salmon ceremony. *Eye Medicine* Decoction of plant used as a wash or poultice of stalks applied for sore eyes. (148:378) **Mahuna** *Urinary Aid* Infusion of dried plants taken for prostate gland troubles. (140:21) **Makah** *Antidiarrheal* Raw shoots chewed for diarrhea. (79:15) **Menominee** *Gynecological Aid* Decoction of rushes taken after childbirth “to clear up the system.” *Kidney Aid* Decoction of rushes taken for kidney troubles. (151:34) **Meskwaki** *Venereal Aid* Infusion of whole plant taken by both men and women for gonorrhea. (152:220) **Ojibwa** *Unspecified* Plant used as a medicine. (153:418) **Okanagan-Colville** *Antirheumatic (Internal)* Infusion of stems taken for lumbago. *Dermatological Aid* Decoction of stems used as a wash on children for skin sores. Plant pounded, mixed with water, and used to wash areas of the body affected by poison ivy. *Diuretic* Infusion of stems taken as a diuretic to stimulate the kidneys. *Eye Medicine* Stem fluid used as an eyewash. *Orthopedic Aid* Infusion of stems taken for backaches. *Pediatric Aid* Decoction of stems used as a wash on children for skin sores. *Stimulant* Infusion of stems taken for sluggishness due to a cold. *Venereal Aid* Decoction of plant and false box taken or used as a bath for syphilis and gonorrhea. *Veterinary Aid* Given to thin, old horses with diarrhea after eating fresh grass in spring. (188:17) **Quileute** *Ceremonial Medicine* Rootstocks eaten during medicinal ceremonies. (137:57) **Sports Medicine** Plant rubbed on swimmers to make them feel strong. **Quinault** *Abortifacient* Decoction taken to regulate menses, informant insisted not an abortive. *Eye Medicine* Infusion of roots or root juice used as a wash for sore eyes. (79:15) **Sanpoil** *Adjuvant* Used as a drinking tube for medicine and used for giving medicine to infants. *Pediatric Aid* Used as a drinking tube for medicine and used for giving

ing medicine to infants. (131:218) **Thompson** *Eye Medicine* Stem liquid used for sore eyes or decoction of stems used for sore, itchy eyes or cataracts.<sup>32</sup> *Gynecological Aid* Decoction of roots taken during difficult childbirth, to accelerate it. Decoction or infusion of stems taken after childbirth to expel the afterbirth more quickly.<sup>31</sup> *Urinary Aid* Decoction of new growths taken for bladder trouble. (187:86)

- **Food—Blackfoot** *Beverage* Blades boiled to make a drink. (114:276) **Cowlitz** *Dried Food* Stalk tops dried, mashed, mixed with salmon eggs, and eaten. (79:15) **Iloh** *Dried Food* Rootstocks dried and used for food. *Special Food* Rootstocks eaten during puberty ceremonies. *Unspecified* Rootstocks used for food. (137:57) **Lakota** *Fodder* Plant given to horses to fatten them. (139:25) **Meskwaki** *Fodder* Plant fed to ponies to make them fat in a week. (152:273) **Okanagan-Colville** *Fodder* Used in winter for fodder during hay shortage. (188:17) **Quileute** *Dried Food* Rootstocks dried and used for food. *Special Food* Rootstocks eaten during puberty ceremonies. *Unspecified* Rootstocks used for food. (137:57)
- **Fiber—Bella Coola** *Scouring Material* Stems formerly used for sandpaper to smooth wooden objects. (184:196) **Chippewa** *Scouring Material* Used for scouring. (53:377) **Costanoan** *Basketry* Roots used in basketry. (21:247) **Cowlitz** *Scouring Material* Used to polish arrow shafts. (79:15) **Klamath** *Scouring Material* Used to smooth arrow shafts. (45:88) **Menominee** *Scouring Material* Used as a scouring rush for pots and pans. (151:75) **Meskwaki** *Scouring Material* Used to scour pots and pans. (152:268) **Missouri River Indian** *Mats, Rugs & Bedding* Used to make mats. **Montana Indian** *Scouring Material* Abrasive stems used to polish pipes, bows, and arrows and formerly used to scrub tins and floors. (82:58) **Ojibwa** *Scouring Material* Handful of stems used to scour the kettles and pans. (153:418) **Okanagan-Colville** *Scouring Material* Stems used as sandpaper to polish bone tools and soapstone pipes. Used to polish fingernails. (188:17) **Quinault** *Scouring Material* Used to polish arrow shafts. (79:15) **Sanpoil & Nespelem** *Basketry* Roots used to imbricate woven bags and baskets. (188:17) **Thompson** *Scouring Material* Rough, silicon-impregnated stems used to smooth and polish implements of wood, bone, and steatite.<sup>33</sup> (187:86)
- **Other—Cowlitz** *Insecticide* Decoction of stalks used as a wash for hair infested with vermin. (79:15) **Gosiute** *Toys & Games* Used by children as whistles. (39:368) **Havasupai** *Tools* Joints pulled apart and used by children to produce a whistling sound. (197:204) **Okanagan-Colville** *Containers* Hollow stems used to administer medicines to babies. (188:17) **Sioux** *Toys & Games* Stems formerly used by children to make whistles. (82:58) **Thompson** *Fertilizer* Stem liquid used to kill any type of weed.<sup>34</sup> (187:86)

***Equisetum hyemale* var. *affine*** (Engelm.) A. A. Eat., Scouring-rush Horsetail

- **Drug—Iroquois** *Diuretic* Decoction of plant taken for urinating too infrequently. *Eye Medicine* Infusion of whole plant used as an eye-wash for white spot on the eye. *Kidney Aid* Decoction of plant taken for kidney trouble. *Other* Decoction of plant taken for backache or “summer complaint.” *Urinary Aid* Decoction of plant taken for urinating too much. Decoction used by women with excessive urination who are ruptured. *Venereal Aid* Compound decoction of roots taken for gonorrhea. (87:262)

- **Fiber—Karok** *Scouring Material* Dried stalks used to sharpen mussel shell scrapers and for polishing arrows. (148:378)

***Equisetum laevigatum*** A. Braun, Smooth Horsetail

- **Drug—Costanoan** *Abortifacient* Decoction of plant used for retarded menstruation. *Contraceptive* Decoction of plant used as a contraceptive. *Dermatological Aid* Decoction of stalks used as a hair wash. *Urinary Aid* Decoction of plant used for bladder ailments. (21:4) **Diegueño** *Hypotensive* Infusion of stems taken for high blood pressure. (84:19) **Hoh** *Ceremonial Medicine* Rootstocks eaten during medicinal ceremonies. (137:57) **Hopi** *Ceremonial Medicine* Dried, ground plant used for ceremonial bread. (56:17) **Keres, Western** *Hemorrhoid Remedy* Plant chewed before meals for piles. (171:42) **Navajo, Kayenta** *Analgesic and Orthopedic Aid* Infusion of plant taken or cold infusion used as a lotion for backaches. (as *E. kansanum* 205:15) **Navajo, Ramah** *Disinfectant* Compound decoction of plant used for “lightning infection.” (191:11) **Okanagan-Colville** *Antirheumatic (Internal)* Infusion of stems taken for lumbago. *Cold Remedy* Decoction of plant and chokecherry twigs given to children for colds. *Dermatological Aid* Plant pounded, mixed with water, and used to wash areas of the body affected by poison ivy. *Diuretic* Infusion of stems taken as a diuretic to stimulate the kidneys. *Orthopedic Aid* Infusion of stems taken for backaches. *Pediatric Aid* Decoction of plant and chokecherry twigs given to children for colds. *Stimulant* Infusion of stems taken for sluggishness due to a cold. *Venereal Aid* Decoction of plant and false box taken or used as a bath for syphilis and gonorrhea. *Veterinary Aid* Given to thin, old horses with diarrhea after eating fresh grass in spring. (188:17) **Okanagon** *Burn Dressing* Poultice of plant ash and grease applied to burns. (125:41) **Pomo, Kashaya** *Kidney Aid* Decoction of whole plant taken for kidney trouble and associated back trouble. (as *E. funstoni* 72:59) **Quileute** *Ceremonial Medicine* Rootstocks eaten during medicinal ceremonies. (137:57) **Thompson** *Burn Dressing* Poultice of plant ash and grease applied to burns. (125:41) *Eye Medicine* Stem liquid used for sore eyes or decoction of stems used for sore, itchy eyes or blindness.<sup>32</sup> *Gynecological Aid* Decoction of roots taken to accelerate a difficult childbirth. Decoction or infusion of stems taken after childbirth to expel the afterbirth more quickly.<sup>31</sup> *Urinary Aid* Decoction of new growths taken for bladder trouble. (187:86)
- **Food—Hoh** *Dried Food* Rootstocks dried and used for food. *Special Food* Rootstocks eaten as a delicacy. Rootstocks eaten during puberty ceremonies. (137:57) **Isleta** *Fodder* Plant used for horse feed. (100:28) **Okanagan-Colville** *Fodder* Used in winter for fodder during hay shortage. *Unspecified* Heads used for food. (188:17) **Quileute** *Dried Food* Rootstocks dried and used for food. *Special Food* Rootstocks eaten as a delicacy. Rootstocks eaten during puberty ceremonies. (137:57) **San Felipe** *Porridge* Plant dried and ground to make mush. (32:27)
- **Fiber—Karok** *Scouring Material* Stems used to sandpaper madrone spoons. (6:29) **Okanagan-Colville** *Scouring Material* Stems used as sandpaper to polish bone tools and soapstone pipes. Used to polish fingernails. (188:17) **Okanagon** *Scouring Material* Used for sharpening and polishing bone tools. **Thompson** *Scouring Material* Used for sharpening and polishing bone tools. (125:39) Rough, silicon-impregnated stems used to smooth and polish implements of wood, bone, and steatite.<sup>33</sup> (187:86)

(188:17) **Thompson Fertilizer** Stem liquid used to kill any type of weed.<sup>34</sup> (187:86) **Ute Toys & Games** Used by children as whistles. (38:34)

#### *Equisetum palustre* L., Marsh Horsetail

- **Drug**—Ojibwa *Gastrointestinal Aid* Infusion or decoction of plants taken for stomach or bowel troubles. *Laxative* Decoction of plants taken for sick stomach, bowels, or for constipation. (135:231)

#### *Equisetum pratense* Ehrh., Meadow Horsetail

- **Food**—Eskimo, Inupiat *Unspecified* Raw roots eaten with seal oil. *Winter Use Food* Roots stored in oil for future use. (98:121)

#### *Equisetum scirpoides* Michx., Dwarf Scouringrush

- **Food**—Haisla & Hanaksiala *Forage* Plant eaten by grizzly bears. (43:156)

#### *Equisetum* sp., Mare's Tail

- **Drug**—Aleut *Poison* Decoction of plant fed to hated guest as a magical poison. (8:428) **Costanoan Abortifacient** Decoction of plant used for retarded menstruation. *Contraceptive* Decoction of plant used as a contraceptive. *Urinary Aid* Decoction of plant used for bladder ailments. (21:4) **Miwok Unspecified** Stems used for medicine. (12:169) **Modesse Cough Medicine** Infusion of plant taken for coughs. *Urinary Aid* Infusion of plant taken for bladder troubles. (117:224) **Shoshoni Kidney Aid** Decoction of plant taken for kidney trouble. (180:70) **Thompson Burn Dressing** Poultice of stem ash of several species used alone or with grease on burns. (164:462) *Eye Medicine* Stem liquid used for sore eyes or decoction of stem used for sore, itchy eyes or blindness.<sup>32</sup> *Gynecological Aid* Decoction or infusion of stems taken after childbirth to expel the afterbirth more quickly.<sup>31</sup> *Urinary Aid* Decoction of new growths taken for bladder trouble. (187:86)
- **Food**—Skagit, Upper *Unspecified* Tender shoots eaten. (179:42)
- **Fiber**—Cahuilla *Scouring Material* Used for a cleaning pad as a cleansing agent. (15:70) **Koyukon Mats, Rugs & Bedding** Blades used as dog bedding. (119:56) **Modesse Scouring Material** Used to polish arrows. (117:224) **Omaha Scouring Material** Plant used like sandpaper for polishing. **Pawnee Scouring Material** Plant used like sandpaper for polishing. **Ponca Scouring Material** Plant used like sandpaper for polishing. (70:63) **Thompson Scouring Material** Used to smooth and finish soapstone pipes. (164:497) Rough, silicon-impregnated stems used to smooth and polish implements of wood, bone, and steatite.<sup>33</sup> (187:86)
- **Other**—Koyukon *Fuel* Blades used to produce smoke in smudge fires. (119:56) **Paiute Toys & Games** Stalk sections used by children to make whistles. (111:37) **Thompson Ceremonial Items** Stem used to hold lice found in girls' hair and thrown in a stream during puberty ceremonies. (164:510) *Fertilizer* Stem liquid used to kill any type of weed.<sup>34</sup> (187:86) *Tools* Stems used to sharpen and polish bone. (164:497) **Winnebago Toys & Games** Stems used by children to make whistles. The elders warned children not to use the stems as whistles as they might cause the appearance of snakes. (70:63)

#### *Equisetum sylvaticum* L., Woodland Horsetail

- **Drug**—Eskimo, Alaska *Antihemorrhagic* Infusion of branches and

stems used for internal bleeding. Green plants could be used, but a stronger medicine could be made from plants collected in autumn. The plant was also dried for future use, but only the stems and branches were used. The tea from this plant was strong and bitter. (1:33) **Menominee Hemostat** Poultice of pulverized stem applied to stop bleeding. *Kidney Aid* Infusion of stems used for dropsy. (151:35) **Ojibwa Kidney Aid** Infusion of plant used for kidney trouble and dropsy. (153:368)

#### *Equisetum telmateia* Ehrh., Giant Horsetail

- **Drug**—Kwakiutl *Dermatological Aid* Poultice of rough leaves and stems applied to cuts and sores. (183:263) **Saanich Blood Medicine** Tender, young shoots eaten raw or boiled and thought to be "good for the blood." (182:68) **Thompson Urinary Aid** Decoction of new plant tops used for "stoppage of urine." (187:86) **Yuki Diuretic** Decoction of plant taken as a diuretic. (49:47)
- **Food**—Clallam *Unspecified* Sprouts peeled and eaten raw or pit baked and eaten. (57:193) **Cowlitz Unspecified** Root stock bulbs cooked and eaten. Bulbs eaten raw. (79:15) **Klallam Unspecified** Reproductive and vegetative sprouts used for food. (78:197) **Makah Unspecified** Young stems peeled and eaten raw. (79:15) **Nitinaht Substitution Food** Hollow, water-filled stem segments used when water scarce. *Unspecified* Young shoots eaten in spring. (186:60) **Quileute Fodder** Used as fodder for horses. *Unspecified* Young stems peeled and eaten raw. **Quinault Fodder** Used as fodder for horses. *Unspecified* Young stems peeled and eaten raw. Roots eaten with whale or seal oil. (79:15) **Saanich Unspecified** Tender, young shoots eaten raw or boiled. (182:68) **Swinomish Unspecified** Bulbs eaten raw. (79:15)
- **Fiber**—Cowlitz *Basketry* Black roots used for imbrication on coiled baskets. (79:15) **Kwakiutl, Southern Scouring Material** Rough leaves and stems used for polishing canoes and other wooden articles. (183:264) **Quileute Basketry** Black roots used for imbrication on coiled baskets. (79:15) **Salish, Coast Basketry** Stems used for black imbrication in basket making. (182:68) **Skokomish Scouring Material** Used with dogfish as sandpaper. **Swinomish Basketry** Black roots used for imbrication on coiled baskets. *Scouring Material* Used to polish arrow shafts. (79:15) **Yuki Scouring Material** Stalks used to smooth Indian hemp stems and to polish arrows. (49:92)

#### *Equisetum telmateia* var. *braunii* (Milde) Milde, Giant Horsetail

- **Drug**—Pomo, Kashaya *Gynecological Aid* Decoction of stem taken for menstrual cramps. (72:58) **Tolowa Oral Aid and Pediatric Aid** Stem rubbed on child's teeth to keep them from gritting their teeth. (6:29)
- **Food**—Makah *Unspecified* Young, sterile or fertile shoots peeled, washed, or soaked in cold water and eaten raw. Strobili boiled in water for 10 minutes and eaten. **Nitinaht Beverage** Vegetative shoots used as a source of drinking water when traveling. *Unspecified* Fertile and sterile shoots used for food. (67:215) **Yurok Unspecified** Very small, fresh sprouts used for food. (6:29)
- **Other**—Pomo, Kashaya *Fasteners* Plant used as binding to fasten feathers onto the coat of a wale-pu. *Tools* Leafless, fertile stems used as sandpaper in smoothing arrow shafts and drill shafts. (72:58)

#### *Equisetum variegatum* Schleich. ex F. Weber & D. M. H. Mohr, Variegated Scouringrush

- **Drug**—Yuki *Eye Medicine* Plant used for sore eyes. (41:304)

- **Food**—Mendocino Indian *Forage* Used as an occasional forage food for horses. (41:304)
- **Fiber**—Mendocino Indian *Scouring Material* Silicious stems used as a substitute for sandpaper in finishing off arrows and other wood-work. (41:304)

## *Eragrostis*, Poaceae

*Eragrostis mexicana* (Hornem.) Link, Mexican Lovegrass

- **Food**—Cocopa *Porridge* Seeds parched, ground, and the flour cooked into a mush. *Staple* Seeds parched, ground, and the flour eaten dry. (37:187)

*Eragrostis secundiflora* J. Presl, Red Lovegrass

- **Food**—Paiute *Unspecified* Species used for food. (167:243)

## *Eremalche*, Malvaceae

*Eremalche exilis* (Gray) Greene, White Mallow

- **Food**—Pima, Gila River *Unspecified* Leaves boiled and eaten. (133:7) *Vegetable* Leaves boiled, or boiled, strained, refried, and eaten as greens.<sup>11</sup> (133:5)

## *Eremocrinum*, Liliaceae

*Eremocrinum albomarginatum* (M. E. Jones) M. E. Jones, Lonely Lily

- **Drug**—Navajo, Kayenta *Snakebite Remedy* Plant used for snakebites. (205:17)

## *Eriastrum*, Polemoniaceae

*Eriastrum densifolium* (Benth.) Mason, Giant Woolstar

- **Drug**—Kawaiisu *Dermatological Aid* and *Venereal Aid* Dried, pounded flowers and roots used as a salve for venereal sores. (206:28)

*Eriastrum eremicum* (Jepson) Mason, Desert Woolstar

- **Drug**—Paiute *Antidiarrheal* Decoction of plant taken for diarrhea. *Gastrointestinal Aid* Decoction of plant taken as a stomach medicine. *Pediatric Aid* Infusion of plant used for children with tuberculosis. *Tuberculosis Remedy* Infusion of plant used for children with tuberculosis. (as *Gilia eremica* var. *arizonica* 180:80)

*Eriastrum filifolium* (Nutt.) Woot. & Standl., Lavender Woolstar

- **Drug**—Paiute *Cathartic* Decoction of plant taken as a physic. *Emetic* Decoction of plant taken as an emetic. *Shoshoni Analgesic* and *Antirheumatic (External)* Decoction of plant used as a bath for rheumatic pains. *Cathartic* Decoction of plant taken as a physic. *Emetic* Decoction of plant taken as an emetic. *Venereal Aid* Decoction of plant taken for venereal disease. (as *Gilia filifolia* var. *sparsiflora* 180:80, 81)

*Eriastrum sparsiflorum* (Eastw.) Mason, Great Basin Woolstar

- **Drug**—Paiute, Northern *Gastrointestinal Aid* Decoction of stalks taken as an emetic for stomach troubles. (59:128)

*Eriastrum virgatum* (Benth.) Mason, Wand Woolstar

- **Drug**—Paiute *Throat Aid* Decoction of entire plant used as a gargle for sore throats. (as *Hugelia virgata* 167:317)

**Ericaceae**, see *Andromeda*, *Arbutus*, *Arctostaphylos*, *Cassiope*, *Chamaedaphne*, *Chimaphila*, *Elliottia*, *Epigaea*, *Gaultheria*, *Gaylussacia*, *Kalmia*, *Ledum*, *Leiophyllum*, *Leucothoe*, *Lyonia*, *Menziesia*,

*Moneses*, *Monotropa*, *Orthilia*, *Oxydendrum*, *Phyllodoce*, *Pterospora*, *Pyrola*, *Rhododendron*, *Vaccinium*

## *Ericameria*, Asteraceae

*Ericameria arborescens* (Gray) Greene, Goldenfleece

- **Drug**—Miwok *Antirheumatic (External)* Decoction of leaves used for rheumatism. Poultice of twigs and leaves applied to rheumatic parts. *Dermatological Aid* Poultice of leaves applied to bring boils to a head. *Gastrointestinal Aid* Decoction of leaves taken for stomach trouble. *Gynecological Aid* Decoction of leaves taken during menstruation and after parturition for pain. *Orthopedic Aid* Poultice of leaves applied to foot sores. (as *Haplopappus aborescens* 12:170)

*Ericameria bloomeri* (Gray) J. F. Macbr., Rabbitbush Heathgoldenrod

- **Drug**—Klamath *Dermatological Aid* Poultice of leaves used to draw blisters. (as *Chrysothamnus bloomeri* 45:106) Poultice of smashed leaves applied to blisters. (as *Chrysothamnus bloomeri* 163:131)

*Ericameria brachylepis* (Gray) Hall, Chaparral Heathgoldenrod

- **Drug**—Diegueño *Dermatological Aid* Decoction of fresh or dried, entire plant used as a wash for wounds. *Misc. Disease Remedy* Decoction of fresh or dried, entire plant taken for “pasmó,” a malady with chills. (as *Aplopappus propinquus* 88:219)

*Ericameria cooperi* (Gray) Hall, Cooper's Heathgoldenrod

- **Drug**—Tubatulabal *Antirheumatic (External)* Compound decoction of stalks and flowers used as a wash for rheumatism. (as *E. monactis* 193:59)

*Ericameria cuneata* (Gray) McClatchie var. *cuneata*, Cliff Heathgoldenrod

- **Drug**—Miwok *Cold Remedy* Decoction of stems taken for colds. (as *Haplopappus cuneatus* 12:170)

*Ericameria linearifolia* (DC.) Urbatsch & Wussow, Narrowleaf Heathgoldenrod

- **Drug**—Kawaiisu *Antirheumatic (External)* Decoction of leaves and flowers applied to limbs for rheumatism. *Dermatological Aid* Decoction of leaves and flowers applied to soreness, bruises, and cuts. Decoction of roots used as a hair wash to make the hair grow. *Orthopedic Aid* Decoction of roots used as a wash for tired feet. *Veterinary Aid* Decoction of leaves and flowers applied to sore backs of horses. (as *Haplopappus linearifolius* var. *interior* 206:33) **Tubatulabal** *Antirheumatic (External)* Compound decoction of leaves and flowers used as a wash for rheumatism. (as *Stenotopsis linearifolius* 193:59)

*Ericameria nana* Nutt., Dwarf Heathgoldenrod

- **Drug**—Paiute *Antidiarrheal* Decoction of plant taken for diarrhea. *Cold Remedy* Decoction of flowering heads and stems or stems alone used for colds. *Cough Medicine* Decoction of flowering heads and stems used for coughs and colds. *Eye Medicine* Decoction of roots used as a wash for sore eyes. *Febrifuge* Decoction of whole plant taken for high fevers. *Gastrointestinal Aid* Decoction of whole plant taken for stomach troubles. *Misc. Disease Remedy* Decoction of whole plant taken for gripe and high fever. *Shoshoni Analgesic* Decoction of flowering tops taken for stomachaches or stomach cramps. *Cold Remedy* Decoction of flowering heads and stems or whole plant used

for colds. *Cough Medicine* Decoction of flowering heads and stems used for coughs and colds. *Eye Medicine* Decoction of roots used as a wash for sore eyes. *Gastrointestinal Aid* Decoction of flowering tops taken for stomachaches or cramps. (as *Aplopappus nanus* 180:36)

***Ericameria palmeri* var. *pachylepis*** (Hall) Nesom, Palmer's Heathgoldenrod

- **Other**—Kawaiisu *Hunting & Fishing Item* Straight stems used as arrow foreshafts. (as *Haplopappus palmeri* ssp. *pachylepus* 206:34)

***Ericameria palmeri*** (Gray) Hall var. ***palmeri***, Palmer's Heathgoldenrod

- **Drug**—Cahuilla *Dermatological Aid* Poultice of boiled leaves applied to sores. *Throat Aid* Leaves soaked in a pan of boiling water and steam inhaled for sore throats. (as *Haplopappus palmeri* 15:75) Coahuilla *Analgesic* Poultice of leaves and twigs applied to feet for swelling and pain. *Orthopedic Aid* Hot poultice of leaves and twigs bound to feet for swelling and pain. (as *Aplopappus palmeri* 13:78)
- **Fiber**—Cahuilla *Building Material* Plant used to build fences as a protection from cold winds. (as *Haplopappus palmeri* 15:75)

***Ericameria parishii*** (Greene) Hall, Parish's Heathgoldenrod

- **Drug**—Luiseño *Unspecified* Plant used for medicinal purposes. (as *Bigelovia parishii* 155:228)
- **Food**—Luiseño *Unspecified* Seeds used for food. (as *Haplopappus parishii* 155:228)

## ***Erigenia*, Apiaceae**

***Erigenia bulbosa*** (Michx.) Nutt., Harbinger of Spring

- **Drug**—Cherokee *Toothache Remedy* Chewed for toothache. (80:48)

## ***Erigeron*, Asteraceae**

***Erigeron aphanactis*** (Gray) Greene var. ***aphanactis***, Rayless Shaggy Fleabane

- **Drug**—Paiute *Analgesic* Decoction of whole plant taken for stomachaches and cramps. *Cathartic* Decoction of whole plant, a violent remedy, taken as a physic. *Emetic* Decoction of whole plant, a violent remedy, taken as an emetic. *Gastrointestinal Aid* Decoction of plant taken for stomachaches and cramps. **Shoshoni** *Analgesic* Decoction of whole plant taken for stomachaches and cramps. *Eye Medicine* Decoction of plant used as an eyewash. *Gastrointestinal Aid* Decoction of plant taken for stomachaches and cramps. (as *E. concinnus* var. *aphanactis* 180:70, 71)

***Erigeron asper*** Nutt., Rough Fleabane

- **Fiber**—Keres, Western *Brushes & Brooms* Tied bunches of plants used for brooms. (171:42)

***Erigeron bellidiastrum*** Nutt., Western Daisy Fleabane

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Cold infusion of dried leaves used as ceremonial chant lotion. (191:50)

***Erigeron caespitosus*** Nutt., Tufted Fleabane

- **Drug**—Paiute *Antidiarrheal* Strong decoction of root taken for diarrhea. *Eye Medicine* Cool decoction of root used as an eyewash. (180:70)

***Erigeron canus*** Gray, Hoary Fleabane

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Plant used in ceremo-

nial chant lotion. *Disinfectant* Plant used for "deer infection." (191:50)

***Erigeron compositus*** Pursh, Cutleaf Daisy

- **Drug**—Thompson *Dermatological Aid* Plant chewed, possibly taken internally, and spit on sores. (164:465) *Orthopedic Aid* Decoction of plant and any kind of "weeds" used for broken bones. (187:180)

***Erigeron concinnus*** (Hook. & Arn.) Torr. & Gray, Navajo Fleabane

- **Drug**—Navajo, Ramah *Analgesic* Cold infusion taken and used as lotion for general body pain. *Disinfectant* Plant used for "antelope infection." (191:50) **Shoshoni** *Venereal Aid* Infusion of whole plant taken for gonorrhoea. (118:47)

***Erigeron concinnus* var. *condensatus*** D. C. Eat., Navajo Fleabane

- **Drug**—Navajo, Kayenta *Analgesic* Plant used as a lotion for headaches. *Gynecological Aid* Plant used for difficult labor. (205:47)

***Erigeron divergens*** Torr. & Gray, Spreading Fleabane

- **Drug**—Navajo *Gynecological Aid* Infusion of plant taken by women as an aid for deliverance. (55:85) Navajo, Kayenta *Analgesic* Plant used as a snuff for headaches. (205:47) Navajo, Ramah *Ceremonial Medicine* Plant used ceremonially in several ways. *Disinfectant* Cold infusion of plant taken and used as a lotion for "lightning infection." *Eye Medicine* Cold, compound infusion of plant used as an eyewash. *Panacea* Root used as a "life medicine." *Snakebite Remedy* Compound used for snakebites. (191:50)
- **Other**—Kiowa *Good Luck Charm* Plant considered an omen of good fortune and brought into the home. (192:60)

***Erigeron eximius*** Greene, Sprucefir Fleabane

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Cold infusion of plant taken and used ceremonially as a lotion for various ills. *Cough Medicine* Cold infusion of plant taken and used as a lotion for cough. *Feb-rifuge* Cold infusion of plant taken and used as a lotion for fever. *Hunting Medicine* Infusion of plant used internally and externally for protection in warfare or hunting. *Misc. Disease Remedy* Cold infusion of plant taken and used as a lotion for influenza. *Witchcraft Medicine* Cold infusion of plant taken and used as a lotion for protection from witches. (as *E. superbus* 191:51)

***Erigeron filifolius*** (Hook.) Nutt., Threadleaf Fleabane

- **Drug**—Thompson *Dermatological Aid* Toasted, powdered stems and leaves sprinkled on sores, cuts, and wounds. (164:473) Plant chewed, possibly taken internally, and spit on sores. (164:465) *Unspecified* Decoction of plant and any kind of "weeds" used for broken bones. (187:180)

***Erigeron flagellaris*** Gray, Trailing Fleabane

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Cold infusion of leaves used ceremonially as a medicine and as a fumigant. (as *E. nudiflorus* 191:50, 51) *Dermatological Aid* Poultice of chewed leaves applied to spider bites and used as a hemostat. (191:50) *Disinfectant* Cold infusion of leaves used ceremonially for "lightning infection." (as *E. nudiflorus* 191:50, 51) *Hemostat* Poultice of chewed leaves applied as a hemostatic. *Snakebite Remedy* Compound poultice of plant applied to snakebite. *Veterinary Aid* Cold infusion of leaves used as eyewash for livestock. (as *E. nudiflorus* 191:50, 51)

- **Fiber**—Keres, Western *Brushes & Brooms* Tied bunches of plants used for brooms. (171:42)

***Erigeron foliosus* var. *stenophyllus*** (Nutt.) Gray, Leafy Fleabane

- **Drug**—Kawaiisu *Analgesic* Infusion of roots used as a wash for headaches. *Toothache Remedy* Root held between the teeth for toothache. (206:28) **Miwok** *Dermatological Aid* Decoction of root and vinegar weed used as a bath for pustules and skin eruptions from smallpox. (12:173, 174) *Febrifuge* Decoction of washed and pounded root taken for fever. *Misc. Disease Remedy* Decoction of washed and pounded root taken for ague. *Toothache Remedy* Root chewed and placed in cavity. (12:169)

***Erigeron formosissimus*** Greene, Beautiful Fleabane

- **Drug**—Navajo, Ramah *Hunting Medicine* Cold, compound infusion taken and used as lotion for good luck in hunting. (191:50)

***Erigeron grandiflorus*** Hook., Largeflower Fleabane

- **Drug**—Gosiute *Poison* Roots used for arrow poison. (39:368)

***Erigeron linearis*** (Hook.) Piper, Desert Yellow Fleabane

- **Drug**—Okanagan-Colville *Tuberculosis Remedy* Decoction of whole plant taken for tuberculosis. (188:83)

***Erigeron neomexicanus*** Gray, New Mexico Fleabane

- **Drug**—Navajo, Kayenta *Dermatological Aid* Powdered plant applied to dog or bear bite sores. *Gastrointestinal Aid* Plant used for stomachaches caused by eating unripe fruit. (205:47)

***Erigeron peregrinus* ssp. *callianthemus*** (Greene) Cronq., Subalpine Fleabane

- **Drug**—Cheyenne *Analgesic* and *Orthopedic Aid* Infusion of dried, pulverized roots, stems, and flowers used as a steam bath or taken for backaches. *Other* Infusion of dried, pulverized roots, stems, and flowers used as a steam bath or taken for dizziness. *Stimulant* Infusion of roots, stems and flowers used as steam bath when dizzy and drowsy. (as *E. salsuginosus* 76:187) Infusion of dried, pulverized roots, stems, and flowers used as a steam bath or taken for drowsiness. (as *E. salsuginosus* 76:187)
- **Fiber**—Thompson *Basketry* Plant used as a pattern in basketry. (as *E. salsuginosus* 164:497)

***Erigeron philadelphicus*** L., Philadelphia Fleabane

- **Drug**—Blackfoot *Antidiarrheal* Plant used for chronic diarrhea. *Antihemorrhagic* Plant used for childbirth hemorrhage. (97:56) **Cherokee** *Abortifacient* Taken for “suppressed menstruation.” *Analgesic* Used as a poultice for headache. *Anticonvulsive* and *Antihemorrhagic* Used for hemorrhages, “spitting of blood,” and epilepsy. *Cold Remedy* Cold infusion of root taken and root chewed for colds. *Cough Medicine* Taken for coughs. *Dermatological Aid* Astringent plant boiled, mixed with tallow, and used on sores. Boiled plant mixed with tallow and used on sores. *Diaphoretic* Used as a sudorific. *Diuretic* Used as a diuretic. *Eye Medicine* Taken for “dimness of sight.” *Kidney Aid* Taken for gout and infusion taken “for kidneys.” (80:35) **Houma** *Gynecological Aid* Decoction of root taken for “menstruation troubles.” (158:62) **Iroquois** *Dermatological Aid* Compound infusion of plants used as wash for poison ivy and itch. Poultice of plants applied to running sores. *Pulmonary Aid* Decoction of whole plant taken to open the lungs. (87:464) **Meskwaki** *Analgesic* Snuff of powdered florets used

for sick headaches. (152:213, 214) *Cold Remedy* Powdered disk florets used as snuff to make one sneeze for cold or catarrh. (152:213) *Respiratory Aid* Snuff of powdered florets used to make patient sneeze for catarrh. (152:213, 214) **Ojibwa** *Cold Remedy* Smoke of dried flowers inhaled for head cold. Snuff of pulverized flowers used to cause sneezing to loosen head colds. *Febrifuge* Infusion of flowers used to break fevers. (153:364) **Okanagan-Colville** *Analgesic* Infusion of leaves and blossoms taken for headaches. (188:83)

- **Food**—Ojibwa *Forage* Plant eaten by deer and cows. (153:398)
- **Other**—Ojibwa *Hunting & Fishing Item* Disk florets smoked to attract the buck deer. They say that cows and deer eat the blossoms. (153:429) *Smoke Plant* Plant used in the smoking tobacco or “kinnikinnick” mixture. (153:398)

***Erigeron pulchellus*** Michx., Robin's Plantain

- **Drug**—Cherokee *Abortifacient* Taken for “suppressed menstruation.” *Analgesic* Used as a poultice for headache. *Anticonvulsive* and *Antihemorrhagic* Used for hemorrhages, “spitting of blood,” and epilepsy. *Cold Remedy* Cold infusion of root taken and root chewed for colds. *Cough Medicine* Taken for coughs. *Dermatological Aid* Astringent plant boiled, mixed with tallow, and used on sores. Boiled plant mixed with tallow and used on sores. *Diaphoretic* Used as a sudorific. *Diuretic* Used as a diuretic. *Eye Medicine* Taken for “dimness of sight.” *Kidney Aid* Taken for gout and infusion taken “for kidneys.” (80:35) **Iroquois** *Cold Remedy* Decoction of roots taken for colds. *Cough Medicine* Decoction of roots taken for coughs. *Tuberculosis Remedy* Decoction of plants and flowers taken for consumption. (87:464)

***Erigeron pumilus*** Nutt., Shaggy Fleabane

- **Drug**—Okanagan-Colville *Eye Medicine* Infusion of roots used to wash the eyes as an “eye tonic.” (188:84)

***Erigeron* sp.**, Fleabane

- **Drug**—Thompson *Analgesic* Salve of toasted, crushed plant and grease rubbed on painful area. (164:468) Decoction of plant taken for backache, stomachache, or menstrual cramps. (187:180) *Dermatological Aid* Salve of toasted, crushed plant and grease rubbed on painful, swollen areas. (164:468) Toasted, powdered stems and leaves sprinkled on sores, ulcers, cuts, and wounds. (164:473) *Gastrointestinal Aid* Decoction of plant taken for stomachache. (187:180) *Gland Medicine* Salve of toasted, crushed plant and grease rubbed on swollen glands. (164:468) *Gynecological Aid* Decoction of plant taken for menstrual cramps. (187:180) *Throat Aid* Salve of crushed plant used on throat or plant chewed for sore throat. (164:468)

***Erigeron speciosus* var. *macranthus*** (Nutt.) Cronq., Aspen Fleabane

- **Drug**—Navajo, Ramah *Analgesic* Compound decoction taken for menstrual pain and as a contraceptive. *Contraceptive* Compound decoction of plant used as a contraceptive. *Gynecological Aid* Compound decoction of plant used for menstrual pain. (as *E. macranthus* 191:50)

***Erigeron strigosus*** Muhl. ex Willd. **var. *strigosus***, Prairie Fleabane

- **Drug**—Catawba *Heart Medicine* Infusion of roots taken for heart troubles. (as *E. ramosus* 157:191) Infusion of roots taken for heart

troubles. (as *E. ramosus* 177:61) **Ojibwa Analgesic** Plant used for sick headache. (as *E. ramosus* 153:364)

## *Eriochloa*, Poaceae

*Eriochloa aristata* Vasey, Bearded Cupgrass

- **Food**—**Cocopa Porridge** Seeds parched, ground, and the flour cooked into a mush. **Staple** Seeds parched, ground, and the flour eaten dry. (37:187)

## *Eriodictyon*, Hydrophyllaceae

*Eriodictyon angustifolium* Nutt., Narrowleaf Yerbasanta

- **Drug**—**Hualapai Dermatological Aid** Decoction of leaves used as a wash for cuts. **Gastrointestinal Aid** Decoction of leaves taken for indigestion. **Laxative** Decoction of leaves taken as a laxative. **Orthopedic Aid** Decoction of leaves used as a wash for tired feet. (195:48) **Paiute Antidiarrheal** Decoction of leaves taken for diarrhea. **Antiemetic** Decoction of leaves taken for vomiting. **Cold Remedy** Decoction of leaves or shoots taken for colds. **Cough Medicine** Decoction of leaves or shoots taken for coughs. **Expectorant** Decoction of leaves or plant tops used as an expectorant for lungs or tuberculosis. **Pulmonary Aid** Infusion of leaves or tops taken as an expectorant for pulmonary troubles. **Tuberculosis Remedy** Decoction of leaves or plant tops used as an expectorant for lungs or tuberculosis. **Shoshoni Analgesic** Infusion of leaves taken for stomachaches. Poultice of decoction of stems, leaves, and flowers applied for rheumatic pains. **Antirheumatic (External)** Decoction of plant used in hot compresses for rheumatic pains. **Cold Remedy** Decoction of leaves or shoots taken for colds. **Cough Medicine** Decoction of leaves or shoots taken for coughs. **Expectorant** Decoction of leaves or plant tops used as an expectorant for lungs or tuberculosis. **Gastrointestinal Aid** Decoction of leaves taken for stomachaches. **Pulmonary Aid** Infusion of leaves or tops taken as an expectorant for pulmonary troubles. **Tuberculosis Remedy** Decoction of leaves or plant tops used as an expectorant for lungs or tuberculosis. **Venereal Aid** Decoction of leaves taken for venereal disease. (180:71, 72)

*Eriodictyon californicum* (Hook. & Arn.) Torr., California Yerbasanta

- **Drug**—**Atsugewi Antirheumatic (External)** Branches and leaves used in a steam bath for rheumatism. Steam of burned branches and leaves used for rheumatism. **Cold Remedy** Juice of chewed plant used for colds. Plant chewed and juice swallowed for colds. **Herbal Steam** Branches and leaves used in a steam bath for rheumatism. **Pulmonary Aid** Plant chewed and juice swallowed for whooping cough. Juice of chewed plant used for whooping cough. (61:140) **Coahuilla Analgesic** Decoction of leaves used as a wash for "sore parts" or painful, fatigued limbs. **Dermatological Aid** Poultice of leaves applied to men and animals with sores. **Orthopedic Aid** Decoction of leaves used as a wash for painful or fatigued limbs. **Veterinary Aid** Poultice of leaves applied to men and animals with sores. (191:23) Zuni *Emetic* Root eaten as an emetic for stomachaches. (27:378) *Other* Infusion of powdered root taken after a fall and relieve general misery. (166:49)
- **Food**—Navajo *Unspecified* Roots used for food. (55:42) Navajo, Ramah *Porridge* Ground seeds made into a mush with milk. *Unspecified* Root chewed by children. (191:23)
- **Other**—Navajo *Ceremonial Items* Plant used in the Life or Knife Chant. (55:42)

**Eriogonum androsaceum** Benth., Rockjasmine Buckwheat

- **Drug**—Thompson *Analgesic* Decoction of plant taken for internal pains, especially stomach pain. Plants used in steam bath for rheumatism, stiff and aching joints and muscles. *Antirheumatic (Exter-*

*nal)* Plants used in steam bath for aching and rheumatic joints. Plants steamed in sweat bath for rheumatism and various aches and stiffness. *Dermatological Aid* Salve of dry leaves or leaf ash mixed with grease used for swellings. *Gastrointestinal Aid* Decoction of plant taken for stomach pain. *Herbal Steam* Plants steamed in sweat bath for rheumatism and various aches and stiffness. *Orthopedic Aid* Plants used in steam bath for sprains, stiff and aching joints and muscles. *Other* Mild or medium decoction taken for general indisposition. *Venerical Aid* Strong decoction of plant used for syphilis. (164:470)

**Eriogonum angulosum** Benth., Anglestem Buckwheat

- **Food**—Kawaiisu *Unspecified* Seeds pounded in a bedrock mortar hole and eaten "without boiling." (206:29)

**Eriogonum annuum** Nutt., Annual Buckwheat

- **Drug**—Lakota *Diuretic* Infusion of plant used for urination problems. *Oral Aid* and *Pediatric Aid* Infusion of plant used for children with sore mouths. (139:54) Navajo, Ramah *Ceremonial Medicine* Plant used as a ceremonial medicine. *Dermatological Aid* Cold infusion taken or used as lotion for red ant bite. *Disinfectant* Cold infusion taken for "lightning infection." *Other* Cold infusion taken or used as lotion for sickness from swallowing an ant. *Panacea* Plant used as a "life medicine," "the boss of all medicines." *Witchcraft Medicine* Cold infusion used for protection against witches. (191:23)
- **Dye**—Kiowa *Unspecified* Leaves rubbed on buffalo or deer hides in the process of staining and tanning. (192:24) Lakota *White Blossoms*, brains, liver or gall and spleen rubbed into hides to bleach them. (139:54)
- **Other**—Kiowa *Hide Preparation* Leaves rubbed on buffalo or deer hides in the process of staining and tanning. The leaves were applied fresh, or, if the hide was dry, the leaves were moistened before application. (192:24)

**Eriogonum baileyi** S. Wats., Bailey's Buckwheat

- **Drug**—Tubatulabal *Dermatological Aid* Infusion of entire plant used as lotion for pimples. (193:59)
- **Food**—Kawaiisu *Beverage* Seeds pounded into a meal, mixed with water, and used as a beverage. *Staple* Seeds pounded into a meal and eaten dry. (206:29)

**Eriogonum cernuum** Nutt., Nodding Buckwheat

- **Drug**—Navajo, Kayenta *Dermatological Aid* Plant used for rashes. *Kidney Aid* Infusion of plant used for kidney disease. (205:19) Navajo, Ramah *Dermatological Aid* Poultice of chewed leaves applied to red ant bite. (191:23)
- **Food**—Navajo, Kayenta *Porridge* Seeds made into a mush and used for food. (205:19)

**Eriogonum compositum** Dougl. ex Benth., Arrowleaf Buckwheat

- **Drug**—Okanagan-Colville *Cold Remedy* Decoction of roots and stems taken for colds. *Dermatological Aid* Decoction of roots and stems used to wash infected cuts. Poultice of mashed leaves applied to cuts or infusion of leaves used as a wash for cuts and sores. (188:112) Sanpoil *Antidiarrheal* Decoction of root taken for diarrhea. (131:218)
- **Other**—Okanagan-Colville *Toys & Games* Stems used by children to play a game.<sup>35</sup> (188:112)

***Eriogonum corymbosum*** Benth., Crippleleaf Buckwheat

- **Drug**—Havasupai *Analgesic* Decoction of leaves taken three times a day for headaches. (197:216)
- **Food**—Hopi *Bread & Cake* Leaves boiled, mixed with water and cornmeal, and baked into a bread. (56:21) *Dried Food* Boiled stalks pressed into cakes, dried, and eaten with salt. (190:159)

***Eriogonum davidsonii*** Greene, Davidson's Buckwheat

- **Food**—Kawaiisu *Staple* Seeds pounded into a meal and eaten dry. (206:29)

***Eriogonum divaricatum*** Hook., Divergent Buckwheat

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used for "Big Snake chant." *Orthopedic Aid* Poultice of plant applied to back for leg paralysis. *Snakebite Remedy* Plant smoked for snakebites. (205:19)

***Eriogonum elatum*** Dougl. ex Benth., Tall Woolly Buckwheat

- **Drug**—Mahuna *Cathartic* Branch chewed or infusion of plant taken as a physic. (140:20)
- **Other**—Paiute *Toys & Games* Stems used in game similar to wish-bone pulling. When the plant has matured and the stems are dry and brittle, the stout, long-branched flowering stems of this plant are used to play a game. Two children fashion a hook for themselves from the branching portion of the stem. These hooks are interlocked, and the participants pull on them until one of the hooks is broken. The person with the unbroken hook is considered to be the winner. (111:68)

***Eriogonum elongatum*** Benth., Longstem Buckwheat

- **Drug**—Mahuna *Blood Medicine* Plant used as a blood tonic. *Hypotensive* Plant used for high blood pressure and hardening of arteries. (140:22)
- **Other**—Tubatulabal *Cooking Tools* Tubular sections of jointed stalks used to collect and roast juice for chewing gum. (193:19)

***Eriogonum fasciculatum*** Benth., Eastern Mojave Buckwheat

- **Drug**—Coahuilla *Analgesic* Decoction of leaves taken for headache and stomach pain. *Eye Medicine* Infusion of flower used as an eye-wash. *Gastrointestinal Aid* Decoction of leaves taken for stomach pain and headache. (13:78) *Costanoan Urinary Aid* Decoction of plant used for urinary problems. (21:11) *Diegueño Antidiarrheal* Decoction of flowers given to babies for diarrhea. *Emetic* Decoction of flowers taken to "throw up badness in the stomach." (84:21) *Heart Medicine* Decoction of dried flowers or dried roots taken for a healthy heart. (88:216) *Pediatric Aid* Decoction of flowers given to babies for diarrhea. (84:21) *Navajo Witchcraft Medicine* Decoction of plants used as an anti-witchcraft medicine. (55:42) *Omaha Dermatological Aid* Poultice of powdered root applied to wounds. (58:49) *Zuni Dermatological Aid* Poultice of powdered root applied to cuts and arrow or bullet wounds. *Gynecological Aid* Decoction of root taken after parturition to heal lacerations. *Throat Aid* Decoction of root taken for hoarseness and colds involving the throat. (166:49)

***Eriogonum fasciculatum* var. *polifolium*** (Benth.) Torr. & Gray, Eastern Mojave Buckwheat

- **Drug**—Tubatulabal *Antidiarrheal* Decoction of dried flowers given to children for bloody flux. Infusion of dried heads taken for diarrhea. *Gastrointestinal Aid* Infusion of dried heads taken for stomachaches.

*Pediatric Aid* Decoction of dried flowers given to children for bloody flux. (193:59)

- **Other**—Kawaiisu *Containers* Leaves used to line the acorn granary to prevent the acorns from getting wet. *Tools* Wood used to pierce ears. (206:29)

***Eriogonum flavum*** Nutt., Yellow Eriogonum

- **Food**—Blackfoot *Unspecified* Roots used for food. (97:33)

***Eriogonum gracillimum*** S. Wats., Rose and White Buckwheat

- **Drug**—Tubatulabal *Dermatological Aid* Infusion of entire plant used as lotion for pimples. (193:59)

***Eriogonum heracleoides*** Nutt., Parsnipflower Buckwheat

- **Drug**—Okanagan-Colville *Cold Remedy* Decoction of roots and stems taken for colds. *Dermatological Aid* Decoction of roots and stems used to wash infected cuts. Poultice of mashed leaves applied to cuts or infusion of leaves used as a wash for cuts and sores. (188:112) *Sanpoil Antidiarrheal* Decoction of root taken for diarrhea. (131:218) *Thompson Analgesic* Decoction of plant taken for internal pains, especially stomach pain. Plants used in steam bath for rheumatism, stiff and aching joints and muscles. *Antirheumatic (External)* Plants used in steam bath for aching and rheumatic joints. Plants steamed in sweat bath for rheumatism and various aches and stiffness. (164:470) *Ceremonial Medicine* Decoction of whole plant used as a purifying ceremonial wash in the sweat house. (164:505) *Dermatological Aid* Salve of dry leaves or leaf ash mixed with grease used for swellings. (164:470) Infusion of plant used as a wash for sores. (187:237) *Disinfectant* Decoction of whole plant used as a purifying ceremonial wash in the sweat house. (164:505) *Eye Medicine* Decoction of leaves used as a wash for sore eyes. (187:237) *Gastrointestinal Aid* Decoction of plant taken for stomach pain. *Herbal Steam* Plants steamed in sweat bath for rheumatism and various aches and stiffness. *Orthopedic Aid* Plants used in steam bath for sprains, stiff and aching joints and muscles. *Other* Mild or medium decoction taken for general indisposition. (164:470) *Pulmonary Aid* Decoction of washed, clean plant taken for sickness on the lung. *Tuberculosis Remedy* Decoction of washed, clean plant taken for tuberculosis. Infusion of plant taken in large quantities for tuberculosis. *Unspecified* Decoction of plant taken or used as a wash for an unspecified illness. (187:237) *Venereal Aid* Strong decoction of plant used for syphilis. (164:470)
- **Other**—Okanagan-Colville *Toys & Games* Stems used by children to play a game.<sup>35</sup> (188:112)

***Eriogonum hookeri*** S. Wats., Hooker's Buckwheat

- **Food**—Hopi *Spice* Boiled with mush for flavor. (190:160)

***Eriogonum inflatum*** Torr. & Frém., Native American Pipeweed

- **Drug**—Navajo, Kayenta *Dermatological Aid* Plant used as a lotion for bear or dog bite. (205:19)
- **Food**—Havasupai *Vegetable* Leaves boiled for 5 to 10 minutes and eaten. (197:216) Young, fresh, tender leaves boiled, drained, balled into individual portions, and served. (197:66) *Kawaiisu Porridge* Seeds pounded into a meal and eaten mixed with water. *Staple* Seeds pounded into a meal and eaten dry. (206:29)
- **Other**—Havasupai *Cooking Tools* Stems cut at both ends and used as drinking tubes. (197:216) *Yavapai Smoking Tools* Dried stem used as tobacco pipe if pottery pipe lacking, burned with tobacco. (65:263)

***Eriogonum insigne*** S. Wats., Ladder Buckwheat

- **Other**—Kawaiisu *Smoking Tools* Stems used as a substitute for “cane” as a pipe. (206:30)

***Eriogonum jamesii*** Benth., James’s Buckwheat

- **Drug**—Apache, White Mountain *Ceremonial Medicine* Plant used in medicine ceremonies. *Oral Aid* Plant chewed to sweeten the saliva. *Unspecified* Plant used for medicinal purposes. (136:157) **Keres, Western Heart Medicine** Roots chewed for a heart medicine. *Psychological Aid* Infusion of roots used for despondency. (171:43) **Navajo, Kayenta Psychological Aid** Plant smoked when disturbed by dreaming of tobacco worms. (205:19) **Navajo, Ramah Analgesic** Decoction of whole plant taken to ease labor pains. *Contraceptive* Root used as a contraceptive. *Gastrointestinal Aid* Cold infusion of whole plant taken to kill a swallowed red ant. *Gynecological Aid* Decoction of whole plant taken to ease labor pains. *Panacea* Root used as a “life medicine.” (191:23) **Zuni Eye Medicine** Root soaked in water and used as a wash for sore eyes. *Gastrointestinal Aid* Fresh or dried root eaten for stomachaches. (27:378) *Oral Aid* Root carried in mouth for sore tongue, then buried in river bottom. (166:50)
- **Other**—Zuni *Ceremonial Items* Ground blossom powder given to ceremonial dancers impersonating anthropic gods to bring rain. The blossom powder was given to the dancers after they were dressed for the ceremony. The dance director placed it in the mouth of each dancer so that the dance would bring rain. Each dancer ejected the medicine from his mouth over his body and apparel. (166:91)

***Eriogonum latifolium*** Sm., Seaside Buckwheat

- **Drug**—Costanoan *Cold Remedy* Decoction of root, stalk, and leaves taken for colds. *Cough Medicine* Decoction of root, stalk, and leaves taken for coughs. (21:11) **Round Valley Indian Analgesic** Decoction of leaves, stems, and roots taken for stomach pains and headaches. *Eye Medicine* Decoction of roots used for sore eyes. *Gastrointestinal Aid* Decoction of leaves, stems, and roots taken for stomach pains. *Gynecological Aid* Decoction of leaves, stems, and roots taken for female complaints. (41:345)
- **Food**—Mendocino Indian *Unspecified* Young stems eaten by children in early summer. (41:345)

***Eriogonum leptophyllum*** (Torr. & Gray) Woot. & Standl., Slenderleaf Buckwheat

- **Drug**—Navajo, Ramah *Analgesic* Decoction of whole plant used for postpartum pain. *Gynecological Aid* Decoction of whole plant used for postpartum pain and to aid in placenta delivery. *Panacea* Decoction of whole plant used as a “life medicine.” *Snakebite Remedy* Decoction of whole plant used internally and externally for snakebite. (191:23)

***Eriogonum longifolium*** Nutt., Longleaf Buckwheat

- **Drug**—Comanche *Gastrointestinal Aid* Infusion of root taken for stomach trouble. (29:521)
- **Food**—Kiowa *Unspecified* Root used for food. (192:25)

***Eriogonum microthecum*** Nutt., Slender Buckwheat

- **Drug**—Paiute *Tuberculosis Remedy* Decoction of roots or tops used for tuberculosis. *Urinary Aid* Decoction of stems and leaves used for bladder trouble. **Shoshoni Antirheumatic (External)** Decoction of

plant used in hot compresses or as a wash for lameness or rheumatism. *Cough Medicine* Decoction of roots and sometimes tops taken for tubercular cough. *Orthopedic Aid* Decoction of whole plant used as a wash or as a compress for lameness. *Tuberculosis Remedy* Decoction of roots or tops used for tuberculosis. (180:72)

- **Food**—Havasupai *Beverage* Used to make tea. (197:217)

***Eriogonum niveum*** Dougl. ex Benth., Snow Buckwheat

- **Drug**—Okanagan-Colville *Cold Remedy* Decoction of roots and stems taken for colds. *Dermatological Aid* Decoction of roots and stems used to wash infected cuts. Poultice of mashed leaves applied to cuts or infusion of leaves used as a wash for cuts and sores. (188:112)
- **Other**—Okanagan-Colville *Toys & Games* Stems used by children to play a game.<sup>35</sup> (188:112)

***Eriogonum nudum*** Dougl. ex Benth., Naked Buckwheat

- **Food**—Karak *Vegetable* Sour tasting, young stems eaten raw as greens. (148:383) **Miwok Vegetable** Raw greens, sour flavor, used for food. (12:159)
- **Fiber**—Miwok *Brushes & Brooms* Twigs and leaves used as a brush to clear ground under manzanita bushes before knocking off berries. (12:161)
- **Other**—Karak *Toys & Games* Stems used by children to play a game by hooking each other’s plant. (148:383) **Kawaiisu Cooking Tools** Hollow stems used as drinking tubes. *Smoking Tools* Hollow stems used as pipes for smoking. (206:30)

***Eriogonum nudum* var. *oblongifolium*** S. Wats., Naked Buckwheat

- **Drug**—Karak *Gastrointestinal Aid* Roots used for abdominal ailments. (6:30)
- **Food**—Karak *Unspecified* Young shoots used for food. (6:30) *Vegetable* Sour tasting, young stems eaten raw as greens. (148:383)
- **Other**—Karak *Toys & Games* Stems used by children to play a game by hooking each other’s plant. (148:383)

***Eriogonum nudum* var. *pauciflorum*** S. Wats., Naked Buckwheat

- **Drug**—Kawaiisu *Cold Remedy* Infusion of roots taken for colds. *Cough Medicine* Infusion of roots taken for coughs. (206:30)
- **Other**—Kawaiisu *Cooking Tools* Hollow stems used as drinking tubes. *Smoking Tools* Hollow stems used as pipes for smoking. (206:30)

***Eriogonum nudum* var. *pubiflorum*** Benth., Naked Buckwheat

- **Food**—Kawaiisu *Unspecified* Dried flowers mixed with valley stickweed seeds and eaten. (206:30)

***Eriogonum ovalifolium*** Nutt., Cushion Buckwheat

- **Drug**—Gosiute *Eye Medicine* Plant used as an eye medicine. *Gastrointestinal Aid* Plant used for stomachaches. (39:369) *Venereal Aid* Poultice of plant applied or plant used as wash for venereal diseases. (39:351) **Paiute Cold Remedy** Decoction of root taken as a cold remedy. **Shoshoni Cold Remedy** Decoction of root taken as a cold remedy. (180:72) **Ute Unspecified** Used as medicine. (38:34)

***Eriogonum plumatella*** Dur. & Hilg., Yucca Buckwheat

- **Food**—Kawaiisu *Porridge* Seeds pounded, cooked into a mush, and eaten. (206:30)

***Eriogonum pusillum*** Torr. & Gray, Yellowturbans

- **Food**—**Kawaiisu** *Staple* Seeds pounded and eaten dry. *Unspecified* Flowers mixed with valley stickweed seeds and eaten. (206:30)

***Eriogonum racemosum*** Nutt., Redroot Buckwheat

- **Drug**—**Navajo, Kayenta** *Analgesic* Plant used for backaches and side aches. *Orthopedic Aid* Plant used for backaches and side aches. (205:19) **Navajo, Ramah** *Blood Medicine* Cold infusion of whole plant taken for blood poisoning or internal injuries. (191:23)
- **Food**—**Navajo, Kayenta** *Unspecified* Leaves and stems eaten raw. (205:19)

***Eriogonum roseum*** Dur. & Hilg., Wand Buckwheat

- **Drug**—**Tubatulabal** *Dermatological Aid* Infusion of entire plant used as lotion for pimples. (as *E. virgatum* 193:59)
- **Food**—**Kawaiisu** *Beverage* Seeds pounded into a meal, mixed with water, and used as a beverage. *Staple* Seeds pounded into a meal and eaten dry. (206:30)

***Eriogonum rotundifolium*** Benth., Roundleaf Buckwheat

- **Drug**—**Keres, Western** *Emetic* Infusion of roots used as an emetic to eliminate the ozone in cases of lightning shock. *Psychological Aid* Plant eaten by children to become good looking. *Sedative* Infusion of roots used for lightning shock. (171:43) **Navajo** *Emetic* Plant taken to vomit after swallowing ants. (55:42) *Throat Aid* Leaves used for sore throats. *Unspecified* Roots used as medicine. (90:150)
- **Food**—**Navajo** *Unspecified* Stems used for food. (90:150)

***Eriogonum* sp.**, Buckwheat

- **Drug**—**Cahuilla** *Cathartic* Leaves, growing near the root, used as a physic. *Eye Medicine* Infusion of flowers used as an eyewash. *Gastrointestinal Aid* Infusion of flowers used to clean out the intestines. *Gynecological Aid* Infusion of plant taken to shrink the uterus and reduce dysmenorrhea. (15:72) **Hopi** *Analgesic* Plant used for severe pain in hips and back. Plant used for severe pain in hips and back, especially in pregnant state. (42:314) Plant used for pain in hips and back, especially during pregnancy. (200:35) *Antihemorrhagic* Plant used for hemorrhage. *Gynecological Aid* Plant used as menstruation medicine. Plant used to expedite childbirth. (42:314) Plant used for pain in hips and back, especially during pregnancy. (200:35) Plant used to ease menstrual difficulties and ease childbirth. (200:35, 73) *Orthopedic Aid* Plant used for pain in hips and back. (200:35) **Kawaiisu** *Antidiarrheal* Decoction of roots taken for diarrhea. *Heart Medicine* Root used as heart medicine. (206:30) **Mahuna** *Oral Aid* Infusion of flowers and leaves used as a mouthwash for pyorrhea. (140:25) **Navajo** *Antidiarrheal* Cold infusion of roots taken for diarrhea. (55:42) *Gynecological Aid* Plant used during confinement after childbirth. (90:150) **Navajo, Kayenta** *Gastrointestinal Aid* Plant used for stomach disease. (205:18) **Thompson** *Analgesic* Decoction of plant taken for internal pains, especially stomach pain. Plants used in steam bath for rheumatism, stiff and aching joints and muscles. Plants steamed in sweat bath for rheumatism and various aches and stiffness. *Antirheumatic (External)* Plants used in steam bath for aching and rheumatic joints. *Dermatological Aid* Salve of dry leaves or leaf ash mixed with grease used for swellings. *Gastrointestinal Aid* Decoction of plant taken for stomach pain. *Herbal Steam* Plants steamed in sweat bath for rheumatism and various aches and stiff-

ness. *Orthopedic Aid* Plants used in steam bath for sprains, stiff and aching joints and muscles. *Other* Mild or medium decoction taken for general indisposition. *Venereal Aid* Strong decoction of plant used for syphilis. (164:470)

- **Food**—**Cahuilla** *Unspecified* Shoots and seeds used for food. (15:72) **Tubatulabal** *Unspecified* Seeds used for food. (193:15)
- **Fiber**—**Yavapai** *Brushes & Brooms* Stems used to brush off spines on fruits. (65:257)

***Eriogonum sphaerocephalum*** Dougl. ex Benth., Rock Buckwheat

- **Drug**—**Paiute** *Antidiarrheal* Decoction of root taken for diarrhea. *Cold Remedy* Decoction of root taken for colds. **Shoshoni** *Antidiarrheal* Decoction of root taken for diarrhea. (180:73)

***Eriogonum tenellum*** Torr., Tall Buckwheat

- **Drug**—**Keres, Western** *Febrifuge* Hot infusion of plant given to mothers after childbirth for fever. *Gynecological Aid* Infusion of roots or raw roots given to women during difficult labor. Infusion of plant used as a douche after childbirth. (171:43)

***Eriogonum umbellatum*** Torr., Sulphur Wildbuckwheat

- **Drug**—**Kawaiisu** *Dermatological Aid* and *Venereal Aid* Mashed flowers used as a salve for gonorrhoeal sores. (206:30) **Mahuna** *Gastrointestinal Aid* Infusion of blossoms taken for ptomaine poisoning. (140:49) **Navajo, Kayenta** *Disinfectant* Plant used as a fumigant for biliousness. *Emetic* Plant used as an emetic for biliousness. *Gastrointestinal Aid* Plant used as a fumigant or emetic for biliousness. (205:20) **Nevada Indian** *Cold Remedy* Infusion of roots taken for colds. (118:37) **Paiute** *Analgesic* Decoction of roots taken for stomachaches. *Antirheumatic (External)* Poultrice of mashed leaves, often with roots, used for lameness or rheumatism. (180:73) *Cold Remedy* Infusion of roots taken for colds. (167:317) Hot decoction of roots taken for colds. *Gastrointestinal Aid* Decoction of root taken for stomachaches. *Orthopedic Aid* Poultrice of leaves, and sometimes roots, applied for lameness or rheumatism. **Shoshoni** *Antirheumatic (External)* Poultrice of mashed leaves, often with roots, used for lameness or rheumatism. *Cold Remedy* Hot decoction of roots taken for colds. *Orthopedic Aid* Poultrice of leaves, and sometimes roots, applied for lameness or rheumatism. (180:73)

***Eriogonum umbellatum* var. *majus*** Hook., Sulphurflower Buckwheat

- **Drug**—**Cheyenne** *Gynecological Aid* Infusion of powdered stems and flowers taken for lengthy menses. (as *E. subalpinum* 76:172) Stems and flowers powdered, made into a tea, and used for menses that ran too long. (83:32)
- **Food**—**Blackfoot** *Beverage* Leaves boiled to make tea. (as *E. subalpinum* 97:33)

***Eriogonum umbellatum* var. *stellatum*** (Benth.) M. E. Jones, Sulphurflower Buckwheat

- **Drug**—**Klamath** *Burn Dressing* Leaves placed on burns to soothe the pain. (as *E. stellatum* 45:95) Poultrice of leaves applied to burns. (as *E. stellatum* 163:131)

***Eriogonum wrightii*** Torr. ex Benth., Bastardsage

- **Drug**—**Navajo, Kayenta** *Emetic* Plant used as an emetic. (205:20)

- **Food**—**Kawaiisu** *Beverage* Seeds pounded into a meal, mixed with water, and used as a beverage. *Staple* Seeds pounded into a meal and eaten dry. (206:30)

## *Erioneuron*, Poaceae

*Erioneuron pulchellum* (Kunth) Tateoka, Low Woollygrass

- **Drug**—**Havasupai** *Laxative* Decoction of blades taken as a laxative. (as *Tridens pulchellus* 197:210)

## *Eriophorum*, Cyperaceae

*Eriophorum angustifolium* Honckeney, Tall Cottongrass

- **Drug**—**Eskimo**, **Kuskokwagmiut** *Panacea* Raw stems eaten to restore good health to persons in generally poor health. (122:27)
- **Food**—**Alaska Native** *Unspecified* Stem bases eaten raw with seal oil. “Mouse nuts” found in mice caches, cooked and eaten with seal oil. (85:131) **Eskimo**, **Inupiat** *Unspecified* Roots eaten raw or boiled. *Winter Use Food* Roots stored in seal oil for future use. (98:119)
- **Fiber**—**Eskimo**, **Alaska** *Mats, Rugs & Bedding* Dried leaves and stems woven into soft mats or covers for coarse grass mattresses. (1:34)

*Eriophorum angustifolium* ssp. *subarcticum* (Vassiljev)

- Hultén, Tall Cottongrass
- **Drug**—**Eskimo**, **Inuktitut** *Unspecified* “Female” stems used medicinally. (202:184)
- **Food**—**Eskimo**, **Inuktitut** *Unspecified* “Female” stems used for food. (202:184)
- **Fiber**—**Eskimo**, **Inuktitut** *Clothing* “Female” stems dried, split, and inserted into boot welts to seal them. *Mats, Rugs & Bedding* “Female” stems dried, split, and used for weaving. (202:184)

*Eriophorum callitrix* Cham. ex C. A. Mey., Arctic Cottongrass

- **Drug**—**Ojibwa** *Hemostat* Matted fuzz used as a “hemostatic.” (153:368)

*Eriophorum russeolum* Fries ex Hartman, Red Cottongrass

- **Drug**—**Eskimo**, **Western** *Dermatological Aid* Poultice of “cotton” from plant applied to boils to absorb the pus. (108:17) *Eye Medicine* “Cotton” from plant put in corner of eye to absorb fluid from “watery eyes.” (108:22)

*Eriophorum scheuchzeri* Hoppe, White Cottongrass

- **Drug**—**Eskimo**, **Western** *Dermatological Aid* Poultice of “cotton” from plant applied to boils to absorb the pus. (108:17)
- **Fiber**—**Eskimo**, **Inuktitut** *Clothing* Dried stems used in summer for boot insoles. (202:186)

*Eriophorum* sp., Cottongrass

- **Other**—**Eskimo**, **Inuktitut** *Lighting* Seed head bristles used to make wicks for oil lamps. (202:184) **Tanana**, **Upper** *Hunting & Fishing Item* Flower used as a lure for catching grayling. (102:9)

## *Eriophyllum*, Asteraceae

*Eriophyllum ambiguum* (Gray) Gray, Beautiful Woollysunflower

- **Food**—**Kawaiisu** *Dried Food* Seeds parched, pounded, and eaten dry. (206:30)

*Eriophyllum confertiflorum* (DC.) Gray, Yellow Yarrow

- **Food**—**Cahuilla** *Staple* Parched seeds ground into flour. (15:72)

*Eriophyllum lanatum* (Pursh) Forbes, Woolly Eriophyllum

- **Drug**—**Chehalis** *Love Medicine* Dried flowers used as a love charm. **Skagit** *Dermatological Aid* Leaves rubbed on the face to prevent chapping. (79:49)

*Eriophyllum lanatum* var. *leucophyllum* (DC.) W. R. Carter, Common Woollysunflower

- **Drug**—**Miwok** *Antirheumatic (External)* Poultice of leaves bound on body over aching parts. (as *E. caespitosum* 12:169)

## *Erodium*, Geraniaceae

*Erodium cicutarium* (L.) L'Hér. ex Ait., Redstem Stork's Bill

- **Drug**—**Costanoan** *Misc. Disease Remedy* Infusion of leaves used for typhoid fever. (21:8) **Jemez** *Gynecological Aid* Plant and roots eaten by women to produce more milk for the nursing children. (44:22) **Navajo**, **Kayenta** *Dermatological Aid* Plant used for wildcat, bobcat, or mountain lion bites. *Disinfectant* Plant used for infections. (205:29) **Zuni** *Dermatological Aid* Poultice of chewed root applied to sores and rashes. *Gastrointestinal Aid* Infusion of root taken for stomach-ache. (27:376)
- **Food**—**Costanoan** *Unspecified* Raw stems used for food. (21:252) **Diegueño** *Vegetable* Leaves picked early in the spring before the flowers appeared and cooked as greens. (84:21) **Hopi** *Candy* Roots chewed by children, sometimes as gum. (42:313) **Isleta** *Forage* High moisture content of leaves and stems made it a good grazing plant for livestock. (100:28) **Kawaiisu** *Forage* Plant eaten by horses, cows, and rabbits. (206:31) **Navajo**, **Ramah** *Fodder* Used for sheep feed. (191:34)
- **Other**—**Jemez** *Protection* Dried plant powder mixed with watermelon seeds during storage and planting stops watermelon disease. (44:22) **Navajo**, **Kayenta** *Ceremonial Items* Used on prayer sticks. (205:29)

*Erodium* sp., Filaree

- **Drug**—**Hualapai** *Gastrointestinal Aid* Roots used for stomach disorders. (195:43)
- **Food**—**Cahuilla** *Vegetable* Used as a potherb. Leaves eaten fresh or cooked. (15:72)

## *Eryngium*, Apiaceae

*Eryngium alismifolium* Greene, Modoc Eryngo

- **Drug**—**Paiute** *Antidiarrheal* Infusion of whole plant used for diarrhea. (118:42) Infusion of plant taken for diarrhea. (180:73)

*Eryngium aquaticum* L., Rattlesnakemaster

- **Drug**—**Alabama** *Emetic* Infusion of plant taken as an emetic. **Cherokee** *Emetic* and *Gastrointestinal Aid* Infusion of plant taken to cause vomiting for nausea. (177:45) **Choctaw** *Antidote* Root used as an “anti-poison”; especially good for snakebite. *Diuretic* Root used as a powerful diuretic. *Expectorant* Root used as a powerful expectorant. *Snakebite Remedy* Root used as an “anti-poison”; especially good for snakebite. *Stimulant* Root used as a powerful stimulant. *Venereal Aid* Plant used for gonorrhea. (28:287) **Delaware** *Anthelmintic* Used for intestinal tape and “pin” worms. (176:35) **Delaware**, **Oklahoma** *Anthelmintic* Root used for tapeworms and pinworms. *Venereal Aid* Root used alone and in compound for venereal disease. (175:29, 76) **Koasati** *Emetic* Decoction of roots taken as an emetic. (177:45)

***Eryngium yuccifolium*** Michx., Button Eryngo

- **Drug—Cherokee Pulmonary Aid** Decoction used to prevent whooping cough. *Snakebite Remedy* Used as snakebite remedy. *Toothache Remedy* Infusion held in mouth for toothaches. (80:27) **Creek Analgesic** Cold infusion of root taken for neuralgia and kidney troubles. (172:655, 656) Cold infusion of pounded roots taken for neuralgia. (177:45) **Antirheumatic (Internal)** Plant used with “deer potato” for rheumatism. *Blood Medicine* Infusion of root taken “to cleanse the system and purify the blood.” (172:655, 656) Plant used to cleanse the system and purify the blood. (177:45) **Cathartic** Plant used as a physic called “the war physic.” *Gastrointestinal Aid* Plant used for diseases of the spleen. *Kidney Aid* Cold infusion of root taken for kidney troubles and neuralgia. (172:655, 656) Cold infusion of pounded roots taken for kidney troubles. (177:45) **Panacea** Infusion of root used to produce “an access of health.” **Sedative** Plant used to produce a feeling of peace and tranquillity. *Snakebite Remedy* Infusion of root used for snakebite. (172:655, 656) Plant used for snakebites. (177:45) **Venereal Aid** Compound infusion of root taken for “the clap.” (172:655, 656) **Meskwaki Antidote** Root used as an antidote for poisons and for bladder trouble. **Ceremonial Medicine** Leaves and fruit formerly introduced into rattlesnake medicine song and dance. *Snakebite Remedy* Root used for rattlesnake bites and bladder trouble. **Urinary Aid** Root used for bladder trouble and as an antidote for poisons. (152:248) **Natchez Antidiarrheal** Infusion of parched leaves taken for dysentery. **Hemostat** Stem and leaves chewed for nosebleeds. (177:45)

***Eryngium yuccifolium* var. *synchaetum*** Gray ex Coult. & Rose, Button Eryngo

- **Drug—Seminole Analgesic** Plant used for pains. (as *E. synchaetum* 169:161) Decoction of roots used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. (as *E. synchaetum* 169:191) Infusion of plant taken by men for menstruation sickness: stomachache, headache, and body soreness. (as *E. synchaetum* 169:248) Decoction of plant taken for dead people's sickness.<sup>36</sup> (as *E. synchaetum* 169:257) **Antidiarrheal** Decoction of roots used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. (as *E. synchaetum* 169:191) Infusion of plant taken for otter sickness: severe diarrhea, bloody stools, and severe stomachache. **Antihemorrhagic** Infusion of plant taken for otter sickness: severe diarrhea, bloody stools, and severe stomachache. (as *E. synchaetum* 169:223) **Antirheumatic (External)** Cold infusion of plant used as a bath for body aches. (as *E. synchaetum* 169:215) **Antirheumatic (Internal)** Infusion of plant taken by men for menstruation sickness: stomachache, headache, and body soreness. (as *E. synchaetum* 169:248) **Ceremonial Medicine** Plant used as a ceremonial emetic. (as *E. synchaetum* 169:161) Roots used as an emetic in purification after funerals, at doctor's school, and after death of patient. (25:23) **Creek** *Analgesic* Cold infusion of root taken by women for bowel pain. (172:666) **Seminole** *Antiemetic* Decoction of roots or berries used for horse sickness: nausea, constipation, and blocked urination. (169:188) *Antirheumatic (External)* Decoction of “beans” or inner bark used as a body rub and steam for deer sickness: numb, painful limbs and joints. (169:192) *Laxative and Urinary Aid* Decoction of roots or berries used for horse sickness: nausea, constipation, and blocked urination. (169:188)

***Erythrina sandwicensis*** O. Deg., Wili Wili

- **Drug**—Hawaiian *Veneral Aid* Flowers used for venereal diseases. Infusion of pounded bark taken for sexual organ diseases. (as *E. monosperma* 2:74)

***Erythronium*, Liliaceae*****Erythronium americanum*** Ker-Gawl., American Troutlily

- **Drug**—Cherokee *Dermatological Aid* Warmed leaves crushed and juice poured over “wound that won’t heal.” *Febrifuge* Infusion of root given for fever. *Hunting Medicine* Root chewed and spit into river to make fish bite. *Stimulant* Compound infusion given for fainting. (80:43) **Iroquois** *Contraceptive* Raw plants, except the roots, taken by young girls to prevent conception. *Dermatological Aid* Poultice of smashed roots used for swellings and removing slivers. (87:282)

***Erythronium grandiflorum*** Pursh, Dogtooth Lily

- **Drug**—Montana Indian *Dermatological Aid* Poultice of crushed bulb-like roots applied to boils. (19:11) **Okanagan-Colville** *Cold Remedy* Corms used for bad colds. (188:45)
- **Food**—Blackfoot *Soup* Bulbs eaten with soup. *Unspecified* Bulbs eaten fresh. (86:102) **Montana Indian** *Forage* Plants eaten by bears and ground squirrels. (82:24) *Unspecified* Bulb-like roots used for food. (19:11) Bulbs occasionally eaten raw or boiled. (82:24) **Okanagan-Colville** *Dried Food* Corms dried for future use. *Unspecified* Corms eaten fresh. (188:45) **Okanagan** *Staple* Roots used as a principal food. (178:238) *Unspecified* Steamed and eaten as a sweet, mealy, and starchy food. (125:37) Roots used as an important food. (178:237) **Shuswap** *Winter Use Food* Roots dried for winter use. (123:54)

**Thompson** *Candy* Small root ends of corms eaten as candy by children. *Dried Food* Raw corms dried for future use in soups or stews. The corms were laid out loosely on a scaffold and allowed to partially dry until they had wilted so that they would not split when strung. Then they were strung with needles onto long strings or thin sticks and allowed to dry completely. The strings were tied at the ends to make a large necklace-like loop which could be hung up for storage. *Pie & Pudding* Corms used to make a traditional kind of pudding. The pudding was made by boiling together such traditional ingredients as dried black tree lichen, dried saskatoon berries, cured salmon eggs, tiger lily bulbs, or bitterroot and deer fat. Some of these ingredients, including avalanche lily corms, were optional. Nowadays flour is often used as a substitute for black tree lichen and sugar is added. *Soup* Raw, dried corms used in soups and stews. (187:121) *Unspecified* Steamed and eaten as a sweet, mealy, and starchy food. (125:37) Corms cooked and eaten. (164:481) Roots used as an important food. (178:237) Corms considered an important traditional food source. Because raw corms were considered poisonous, most of the corms were pit cooked, either immediately after harvesting or at a later date after they had been strung and dried. In the latter case, they were soaked for a few minutes in lukewarm water until they had regained about two-thirds of their moisture before being placed in the cooking pit. They could be eaten immediately or redried for later use, when they could be cooked again very quickly. One informant confirmed that the corms cooked and eaten immediately after harvesting were not as sweet and good as those that had been stored first. Corms eaten with meat and fish as the vegetable portion of a meal, like potatoes. Deep-fried corms used for food. (187:121)

- **Other**—Thompson *Cash Crop* Strings of dried corms used as trading items. *Toys & Games* Corms used as wagers in gambling. Some of the women used to climb up the valley sides to dig sacks of corms which they used as wagers in gambling. The winners would stagger down the hillside with several sacks of corms, while others, who had worked just as hard, would return home empty-handed, having lost in the gambling. (187:121)

***Erythronium grandiflorum*** Pursh **ssp. grandiflorum**, Yellow Avalanche Lily

- **Food**—Thompson *Unspecified* Corms cooked and eaten. (164:481)

***Erythronium mesochoreum*** Knerr, Midland Fawnlily

- **Food**—Winnebago *Unspecified* Raw plant, freshly dug in springtime, eaten avidly by children. (70:71)

***Erythronium oregonum*** Applegate, Giant White Fawnlily

- **Food**—Kwakiutl *Dried Food* Bulbs dried and used for food. *Unspecified* Bulbs eaten raw, baked, or boiled. (182:75)

***Erythronium oregonum*** Applegate **ssp. oregonum**, Oregon Fawnlily

- **Drug**—Wailaki *Dermatological Aid* Poultice of crushed plant applied to boils. (as *E. giganteum* 41:320)

***Erythronium revolutum*** Sm., Mahogany Fawnlily

- **Food**—Kwakiutl, Southern *Dried Food* Bulbs sun dried, boiled, mixed with grease, and eaten at large feasts. *Unspecified* Bulbs eaten raw, baked, or steamed. (183:272)

**Eschscholzia**, Papaveraceae**Eschscholzia californica** Cham., California Poppy

- **Drug**—California Indian *Toothache Remedy* Leaves used for toothache. (as *Escholtzia californica* 118:45) **Costanoan Pediatric Aid** Flowers laid underneath bed to put child to sleep. *Poison* “Plant avoided by pregnant or lactating women as smell may be poisonous.” *Sedative* Flowers laid underneath bed to put child to sleep. (21:9) **Mahuna Poison** Plant considered poisonous. (140:34) **Mendocino Indian Analgesic** Root juice used as a wash for headaches. *Dermatological Aid* Root juice used as a wash for suppurating sores. *Emetic* Root juice taken as an emetic. *Gastrointestinal Aid* Root juice taken for stomachaches. *Gynecological Aid* Root juice used as a wash by women to stop the secretion of milk. *Narcotic* Root used for the stupefying effect. *Toothache Remedy* Root placed in cavity of tooth for toothaches. *Tuberculosis Remedy* Root juice taken for consumption. - **Food**—**Algonquin, Quebec Unspecified** Nuts used, mainly by men working in the bush, for food. (18:80) **Chippewa Unspecified** Nuts used for food. People sought stores of beechnuts that had been put away by chipmunks. These hoards saved the labor not only of gathering, but also of shucking, and were certain to contain only sound nuts. The people had observed that chipmunks never stored any that were not good. (71:128) **Iroquois Beverage** Fresh nutmeats crushed, boiled, and liquid used as a drink. *Bread & Cake* Fresh nutmeats crushed and mixed with bread. (124:99) Nuts crushed, mixed with cornmeal and beans or berries, and made into bread. (196:123) *Pie & Pudding* Fresh nutmeats crushed and mixed with corn pudding. (124:99) *Sauce & Relish* Nuts pounded, boiled, resulting oil seasoned with salt, and used as gravy. *Soup* Nutmeats crushed and added to

corn soup. (196:123) *Special Food* Fresh nutmeats crushed, boiled, and oil used as a delicacy in corn bread and pudding. (124:99) Nutmeat oil added to the mush used by the False Face Societies. *Staple* Nutmeats crushed and added to hominy. *Unspecified* Nutmeats, after skimming off the oil, seasoned and mixed with mashed potatoes. (196:123) **Menominee** *Winter Use Food* Beechnuts stored for winter use. (151:66) **Ojibwa** *Unspecified* Sweet nuts much appreciated and never enough to store for winter. (153:401) **Potawatomi** *Unspecified* Beechnuts used for food. The hidden stores of the small deer mouse was what the Indians relied upon. The deer mouse is outdone by no other animal in laying up winter stores. Its favorite food is the beechnut. It will lay up, in some safe log or hollow tree, from 4 to 8 quarts, shelled in the most careful manner. The Indians easily found the stores, when the snow was on the ground, by the refuse on the snow. (154:100)

- **Fiber**—**Cherokee** *Building Material* Wood used for lumber. (80:25) **Micmac** *Snow Gear* Used to make snowshoe frames. (159:258)
- **Other**—**Cherokee** *Fasteners* Wood used to make buttons. (80:25) **Iroquois** *Insecticide* Nutmeat oil mixed with bear grease and used as a preventive for mosquitoes. (196:123) **Potawatomi** *Cooking Tools* Wood used to make food or chopping bowls. (154:113)

## *Fallugia*, Rosaceae

*Fallugia paradoxa* (D. Don) Endl. ex Torr., Apache Plume

- **Drug**—**Navajo**, **Kayenta** *Witchcraft Medicine* Plant used as witchcraft to cause insanity. (205:26) **Navajo**, **Ramah** *Ceremonial Medicine* Cold infusion of leaves used as a ceremonial lotion and leaves used as a ceremonial emetic. *Emetic* Leaves used as an emetic in various ceremonies. (191:30, 31) **Tewa** *Dermatological Aid* Infusion of leaves used as shampoo, to promote growth of hair. (138:46, 47)
- **Fiber**—**Havasupai** *Basketry* Used for the top ring of baskets. *Furniture* Used for the ladder-back rungs of the cradleboards. (197:223) **Hualapai** *Furniture* Branches used to make cradleboard hoods and beds. (195:37) **Jemez** *Brushes & Brooms* Branches bound together and used as a broom for outdoor sweeping and to separate chaff from the wheat. (44:22) **Keres**, **Western** *Brushes & Brooms* Brush used for rough brooms, especially in Acoma. (171:44) **Keresan** *Brushes & Brooms* Used to make arrows and brooms. (198:558) **Tewa** *Brushes & Brooms* Slender branches bound together and used as brooms for rough outdoor sweeping. (138:46)
- **Other**—**Hopi** *Hunting & Fishing Item* Stems used for arrows. (200:78) **Isleta** *Hunting & Fishing Item* Slender, smooth, straight branches used to make arrow shafts. (100:29) **Keres**, **Western** *Hunting & Fishing Item* Straight sticks used for arrow shafts. (171:44) **Keresan** *Hunting & Fishing Item* Used to make arrows and brooms. (198:558) **Tewa** *Hunting & Fishing Item* Straight, slender branches used to make arrows. (138:46)

## *Fendlera*, Hydrangeaceae

*Fendlera rupicola* Gray, Cliff Fendlerbush

- **Drug**—**Navajo** *Gastrointestinal Aid* Infusion of inner bark taken for swallowed ants. (55:51) **Navajo**, **Kayenta** *Cathartic* Plant used as a cathartic. *Ceremonial Medicine* Plant used for Plumeway, Nightway, Male Shootingway, and Windway ceremonies. (205:25)
- **Other**—**Havasupai** *Hunting & Fishing Item* Wood used to make arrow

foreshafts. (197:221) **Hopi** *Ceremonial Items* Used in religious ceremonies. (42:318) **Navajo** *Ceremonial Items* Notched stick rubbed with a smooth stick instead of beating a drum in the Mountain Chant Ceremony. Used by the Home God in the Mountain Chant Ceremony. *Hunting & Fishing Item* Wood used to make arrow shafts. *Insecticide* Plant used to kill hair lice. *Tools* Wood used to make weaving forks, planting sticks, and knitting needles. (55:51) **Navajo**, **Kayenta** *Ceremonial Items* Boiled with juniper berries, pinyon buds and cornmeal, and used in mush-eating ceremonies. (205:25)

## *Ferocactus*, Cactaceae

*Ferocactus coulteri*, Barrelcactus

- **Food**—**Seri** *Beverage* Plant provided drinking water. (50:136)

*Ferocactus cylindraceus* (Engelm.) Orcutt **var. cylindraceus**, California Barrelcactus

- **Food**—**Cahuilla** *Beverage* Plant used to obtain water. The barrel cactus provided a desert reservoir, one which had long been familiar to many desert travelers at times of emergency. To obtain water, the top of the cactus was sliced off, a portion of the pulp was removed to create a depression, and then the pulp was squeezed by hand in the depression until water was released from the spongy mass. *Dried Food* Buds sun dried for storage. Flowers sun dried for storage. (as *Echinocactus acanthodes* 15:67) *Staple* Berries and stems were an important and dependable food source. (as *Echinocactus acanthodes* 15:49) *Unspecified* Buds eaten fresh, parboiled, or baked in a pit. Flowers eaten fresh, parboiled, or baked in a pit. (as *Echinocactus acanthodes* 15:67)
- **Other**—**Cahuilla** *Cooking Tools* Body of the plant used as a cooking vessel. The top was cut off of the cactus and the interior was dug out. Water was then put into the depression and heated with hot stones. (as *Echinocactus acanthodes* 15:67)

*Ferocactus cylindraceus* **var. lecontei** (Engelm.) H. Bravo, Leconte's Barrelcactus

- **Food**—**Pima** *Beverage* Juice extracted from pulp and used to quench thirst. *Candy* Used to make cactus candy. (as *Echinocactus lecontei* 47:55) *Unspecified* Plants sliced, cut into small pieces, boiled with mesquite beans, and eaten as a sweet dish. (as *Echinocactus lecontei* 47:56)

*Ferocactus* **sp.**, Barrelcactus

- **Food**—**Hualapai** *Dried Food* Fruits dried, pounded, and eaten. *Fruit* Fruits eaten for food. (195:42) **Pima**, **Gila River** *Special Food* Flesh prepared as a special dish with mesquite pods. (133:5) *Unspecified* Pulp boiled and eaten. (133:7)

*Ferocactus wislizeni* (Engelm.) Britt. & Rose, Candy Barrelcactus

- **Food**—**Apache**, **San Carlos** *Beverage* Juice used for extreme thirst. *Porridge* Small, black seeds parched, ground, boiled, and eaten as mush. (as *Echinocereus wislizeni* 95:257) **Papago** *Beverage* Plant tops pounded and the juice used as a drink. (as *Echinocactus wislizeni* 34:17) *Vegetable* Pulp eaten as greens in May. (as *Echinocactus wislizeni* 34:14) **Pima** *Beverage* Juice extracted from pulp and used to quench thirst. *Candy* Used to make cactus candy. (as *Echinocactus wislizeni* 47:55) *Substitution Food* Pulp used in lieu of water for thirst. (as *Echinocactus wislizeni* 146:77) *Unspecified* Plants sliced, cut into

small pieces, boiled with mesquite beans, and eaten as a sweet dish. (as *Echinocactus wislizeni* 47:56) Pulp cut in strips, boiled, and used for food. (as *Echinocactus wislizeni* 146:77) **Seri Beverage** Plant provided drinking water. (50:136)

- **Other**—**Pima Hunting & Fishing Item** Thorns used to make fish-hooks. (as *Echinocactus wislizeni* 47:56) **Yuma Hunting & Fishing Item** Spines heated and bent to make fishing hooks. (as *Echinocactus wislizeni* 37:222)

## **Ferula**, Apiaceae

### **Ferula dissoluta**

- **Food**—**Okanagon Staple** Roots used as a principal food. (178:238)

## **Festuca**, Poaceae

**Festuca brachyphylla** J. A. Schultes ex J. A. & J. H. Schultes  
**ssp. brachyphylla**, Alpine Fescue

- **Food**—**Gosiute Unspecified** Seeds used for food. (as *F. ovina* var. *bre-vifolia* 39:369)

**Festuca idahoensis** Elmer, Idaho Fescue

- **Fiber**—**Navajo, Ramah Scouring Material** Bunch about a foot long, tied with string or yucca fiber, used as a brush for cleaning metates. (191:16)

### **Festuca sp.**

- **Food**—**Costanoan Staple** Seeds used in pinole. (21:255)

**Festuca subverticillata** (Pers.) Alexeev, Nodding Fescue

- **Drug**—**Iroquois Heart Medicine** Decoction of smashed roots taken for heart disease. **Other** Compound used as a "corn medicine." (as *F. obtusa* 87:273)

## **Ficus**, Moraceae

**Ficus aurea** Nutt., Florida Strangler Fig

- **Drug**—**Seminole Dermatological Aid** Poultice of mashed bark applied to cuts and sores. (169:300)
- **Food**—**Seminole Candy** Plant used for chewing gum. **Unspecified** Plant used for food. (169:481)
- **Other**—**Seminole Cooking Tools** Plant used for meat stringing. **Fasteners** Plant used to make house lashings and cane mill lashings. (169:481) Root bark twisted and used to bind together the pole frame of the medical training school house. (169:95) **Hunting & Fishing Item** Plant used to make arrows, bowstrings, and fish line. (169:481)

**Ficus carica** L., Common Fig

- **Food**—**Havasupai Beverage** Plant used to make a drink. (197:66) **Dried Food** Fruit sun dried and stored in sacks for winter use. **Fruit** Fruit eaten fresh. **Winter Use Food** Fallen fruit ground, mixed with water into a thick paste, dried in sheets, and eaten during the winter. (197:216)

## **Filipendula**, Rosaceae

**Filipendula rubra** (Hill) B. L. Robins., Queen of the Prairie

- **Drug**—**Meskwaki Heart Medicine** Root used as an important medicine for various heart troubles. **Love Medicine** Compound containing root used as a love medicine. (152:241, 242)

## **Foeniculum**, Apiaceae

**Foeniculum vulgare** P. Mill., Sweet Fennel

- **Drug**—**Cherokee Carminative** Used for colic and given to children for flatulent colic. **Cold Remedy** Used as a tonic and given for colds and to children for flatulence. **Gastrointestinal Aid** Used for colic and given to children for flatulent colic. **Gynecological Aid** Used as a tonic and given to women in labor. **Pediatric Aid** Used for colic and given to children for flatulent colic. **Tonic** Used as a tonic. (80:33) **Pomo, Kashaya Eye Medicine** Strained decoction of seeds used as an eye-wash. **Gastrointestinal Aid** Seeds chewed for upset stomach, indigestion, and heartburn. (72:44)
- **Other**—**Hopi Smoke Plant** Plant used as a substitute for tobacco. (as *F. officinale* 56:20) Plant used as a substitute for tobacco. (as *F. officinale* 200:86, 87)

## **Fomes**, Polyporaceae, fungus

**Fomes igniarius** (L. ex Fries) Kickx, Shelf Fungus

- **Drug**—**Eskimo, Inuktitut Laxative** Infusion of plant taken as a laxative. (202:187)
- **Other**—**Eskimo, Inuktitut Cash Crop** Plant collected and widely traded. **Insecticide** Plant added to tobacco as a mosquito repellent. (202:187)

### **Fomes sp.**

- **Fiber**—**Cowlitz Unspecified** Used to draw pictures on. (bracket fungus 79:50)
- **Other**—**Chehalis Toys & Games** Used as a target for archery. (bracket fungus 79:50) **Keres, Western Unspecified** Fungus known and named but no use was specified. (bracket fungus 171:44) **Haisla & Hanaksiala Ceremonial Items** Plant used for some aspects of the secret society rituals. **Protection** Plant used as hand protection for handling live coals during a secret society ritual. Plant placed at entrance of special shamanistic dance house as protection from bad spirits and ghosts. **Toys & Games** Plant thrown into the stream and used as a target by young boys for spear practice. Plant used as a ball in a women's and children's game. (shelf fungus 43:135) **Oweekeno Paint** Whole plant made into a white powder, sometimes mixed with coloring, and used to make a paint. (shelf fungus 43:49) **Snohomish Toys & Games** Used as a target for archery. (bracket fungus 79:50)

## **Fomitopsis**, Polyporaceae, fungus

**Fomitopsis officinalis** (Vill ex Fries) Bond. & Sing.

- **Drug**—**Haisla & Hanaksiala Tuberculosis Remedy** Decoction of ground plant taken for tuberculosis. (43:138)

**Fomitopsis pinicola** (Sw. ex Fr.) Karst., Shelf Fungus

- **Other**—**Nitinaht Protection** Used for protection against people with ill feelings and wishes toward others. (186:56)

**Fomitopsis sp.**, Shelf Fungus

- **Other**—**Haisla & Hanaksiala Ceremonial Items** Plant used for some aspects of the secret society rituals. **Protection** Plant placed at entrance of special shamanistic dance house as protection from bad spirits and ghosts. Plant used as hand protection for handling live coals during a secret society ritual. **Toys & Games** Plant used as a ball in a women's and children's game. Plant thrown into the stream and used as a target by young boys for spear practice. (43:135)

**Forestiera**, Oleaceae**Forestiera acuminata** (Michx.) Poir., Eastern Swampprivet

- **Drug**—Houma *Panacea* Decoction of roots and bark taken as a “health beverage.” (158:63)

**Forestiera pubescens** Nutt. **var. pubescens**, Stretchberry

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Leaves used as a ceremonial emetic. *Disinfectant* Plant used for “bear infection.” *Emetic* Leaves used as a ceremonial emetic. (as *F. neomexicana* 191:39)
- **Food**—Apache, Chiricahua & Mescalero *Fruit* Raw fruits occasionally eaten as food. (as *F. neomexicana* 33:44)
- **Other**—Hopi *Ceremonial Items* Used to make pahos (prayer sticks). *Tools* Used for digging stick. (as *F. neomexicana* 42:319) Wood used for digging sticks. (as *F. neomexicana* 200:87) **Isleta** *Water Indicator* Large shrubs considered water indicators because wells dug where plants grew always produced water. (as *F. neomexicana* 100:29) **Jemez** *Ceremonial Items* Berry juice mixed with white clay and used as purple body paint for summer dances. (as *F. neomexicana* 44:22) **Navajo** *Ceremonial Items* Used to make prayer sticks. (as *F. neomexicana* 55:68) **Navajo, Ramah** *Ceremonial Items* Stem used to make Evilway big hoop. (as *F. neomexicana* 191:39)

**Forestiera segregata** (Jacq.) Krug & Urban **var. segregata**, Florida Swampprivet

- **Other**—Seminole *Hunting & Fishing Item* Plant used to make arrows. (as *F. porulosa* 169:492)

**Fortunella**, Rutaceae**Fortunella** sp., Kumquat

- **Food**—Seminole *Unspecified* Plant used for food. (169:513)

**Fouquieriaceae**, see *Fouquieria***Fouquieria**, Fouquieriaceae**Fouquieria** sp., Ocotillo

- **Drug**—Hualapai *Orthopedic Aid* Roots used in a soothing bath for swollen feet. (195:22)
- **Fiber**—Hualapai *Building Material* Branches used to construct huts. (195:22)

**Fouquieria splendens** Engelm., Ocotillo

- **Drug**—Mahuna *Blood Medicine* Plant used as a blood specific, purifier, and tonic. (140:28)
- **Food**—Cahuilla *Beverage* Fresh blossoms soaked in water and used to make a summer drink. *Porridge* Parched seeds ground into a flour and used to make mush or cakes. *Unspecified* Fresh blossoms used for food. (as *Fourquieria splendens* 15:74) **Papago** *Special Food* Nectar pressed out of blossoms, hardened like rock candy, and chewed as a delicacy. (34:28) **Yavapai** *Snack Food* Flowers sucked by children for nectar. (65:256)
- **Fiber**—Cahuilla *Building Material* Wood used to make fences to prevent rodents from attacking cultivated crops. (as *Fourquieria splendens* 15:74) **Papago** *Building Material* Used for the warp of wrapped weaving in house frames. (34:53) Withes used to bind together the house dome ribs. (34:66) Used for house construction. **Pima** *Building Material* Stalks freed from thorns, bound together with rawhide or wire, and used as shelves. (47:89) **Seri** *Building Material* Branches

used to make sun and wind shelters. (50:136)

- **Other**—Cahuilla *Fuel* Wood used for firewood. (as *Fourquieria splendens* 15:74) **Papago** *Ceremonial Items* Flexible rods used as the basis of ceremonial structures representing clouds or mountains. (34:54) *Tools* Thorns used to pierce the ears of both sexes. (34:51) **Pima** *Decorations* Plants grown around gardens for decorations. (47:89)

**Fragaria**, Rosaceae**Fragaria** × **ananassa** **var. cuneifolia** (Nutt. ex T. J. Howell)

Staudt, Hybrid Strawberry

- **Food**—Chehalis *Fruit* Berries eaten fresh. (as *F. cuneifolia* 79:36) **Klallam** *Fruit* Berries used for food. Fruits eaten fresh in early summer. (as *F. cuneifolia* 78:197) Berries eaten fresh. **Squaxin** *Fruit* Berries eaten fresh. (as *F. cuneifolia* 79:36)

**Fragaria chiloensis** (L.) P. Mill., Beach Strawberry

- **Drug**—Quileute *Burn Dressing* Poultice of chewed leaves applied to burns. (79:36)
- **Food**—Alaska Native *Dietary Aid* Berries used as a rich source of vitamin C. *Fruit* Berries eaten raw. *Preserves* Berries made into a jam. (85:81) **Clallam** *Fruit* Berries eaten fresh. (57:202) **Hesquiat** *Fruit* Berries used for food. (185:72) **Hoh** *Fruit* Fruits eaten raw. Fruits stewed and used for food. (137:63) **Kitasoo** *Fruit* Fruit used for food. (43:342) **Makah** *Fruit* Fruit eaten fresh. (67:262) Berries eaten fresh immediately after picking. (79:36) *Preserves* Fruit used to make jams and jellies. (67:262) **Nitinaht** *Fruit* Berries eaten fresh. (186:117) **Oweekeno** *Fruit* Berries eaten fresh. *Preserves* Berries used to make jam. (43:108) **Pomo, Kashaya** *Fruit* Berries eaten fresh. (72:109) **Quileute** *Fruit* Berries eaten after fish. (79:36) Fruits eaten raw. Fruits stewed and used for food. (137:63) **Quinault** *Special Food* Berries served by young women to their guests at parties. (79:36) **Salish, Coast** *Beverage* Leaves dried and used to make tea. *Fruit* Fruits eaten fresh. (182:86) **Tolowa** *Fruit* Fresh fruit used for food. **Yurok** *Fruit* Fresh fruit used for food. (6:31)
- **Other**—Pomo, Kashaya *Ceremonial Items* Berry used in the flower dance at the Strawberry Festival, danced by young girls.<sup>38</sup> (72:109)

**Fragaria chiloensis** ssp. **lucida** (Vilm.) Staudt, Beach Strawberry

- **Food**—Haisla & Hanaksiala *Fruit* Berries eaten fresh. *Preserves* Berries used to make jam. (43:264)

**Fragaria chiloensis** ssp. **pacifica** Staudt, Pacific Beach Strawberry

- **Food**—Haisla & Hanaksiala *Fruit* Berries eaten fresh. *Preserves* Berries used to make jam. (43:264)

**Fragaria** sp., Wild Strawberry

- **Drug**—Blackfoot *Antidiarrheal* Infusion of plant used for diarrhea. (86:66) **Carrier** *Antihemorrhagic* Decoction of stems taken for stomach bleeding. (31:78) **Iroquois** *Abortifacient* Infusion of whole plant taken by women to regulate menses. *Antidiarrheal* Compound decoction of roots taken for diarrhea with blood. *Blood Medicine* Compound decoction of roots taken by all ages as blood remedy. *Eye Medicine* Decoction of roots used as a wash for sties. *Gastrointestinal Aid* Plant used for babies with colic. *Gynecological Aid* Plant used for gonorrhea. *Heart Medicine* Compound used for stroke. *Oral Aid* Decoction of roots used as a wash for chancre sores. *Pediatric Aid* and

*Toothache Remedy* Compound decoction of plant given when “baby’s teeth are coming in.” (87:352) **Skokomish Antidiarrheal** Decoction of whole plant taken for diarrhea. (79:36)

- **Food—Carrier Fruit** Berries used for food. (31:78) **Chinook, Lower Fruit** Berries eaten fresh. (79:36) **Costanoan Fruit** Raw fruits used for food. (21:249) **Montana Indian Fruit** Berries eaten fresh. *Winter Use Food* Berries dried and stored for winter use. (19:12) **Nisqually Fruit** Berries mashed and eaten. (79:36) **Paiute Fruit** Berries eaten fresh. (111:80) **Puyallup Fruit** Berries mashed and eaten. (79:36) **Skagit, Upper Dried Food Fruit** pulped and dried for winter use. *Fruit* Fruit eaten fresh. (179:38) **Skokomish Fruit** Berries mashed and eaten. (79:36)

***Fragaria vesca* L.**, Woodland Strawberry

- **Drug—Okanagan-Colville Dermatological Aid** Poultice of leaf powder and deer fat applied to sores. *Disinfectant* Leaf powder applied to any open sore as a disinfectant. *Oral Aid* and *Pediatric Aid* Leaf powder dusted into baby’s sore mouth. (188:125) **Potawatomi Gastrointestinal Aid** Root used for stomach complaints. (154:76, 77) **Thompson Antidiarrheal** Infusion of roots or whole plant taken for diarrhea or dysentery. Decoction of leaves taken for diarrhea. *Pediatric Aid* Infusion of roots or whole plant bottle fed to babies for diarrhea or dysentery. Decoction of leaves given to children for diarrhea. (187:259)
- **Food—Bella Coola Fruit** Berries used for food. (184:208) **Clallam Fruit** Berries eaten fresh. (57:202) **Gosiute Fruit** Berries used for food in season. (39:370) **Hesquiat Fruit** Berries used for food. (185:72) **Kitasoo Fruit** Fruit used for food. (43:342) **Lakota Fruit** Fruits eaten fresh. Fruits eaten with other foods. (106:37) Fruits eaten for food. (139:56) **Nitinaht Fruit** Berries eaten fresh. (186:117) **Okanagan-Colville Fruit** Berries eaten fresh. *Winter Use Food* Berries canned for future use. (188:125) **Oweekeno Fruit** Berries eaten fresh. *Preserves* Berries used to make jam. (43:108) **Potawatomi Dried Food** Berries sometimes dried for winter use. *Winter Use Food* Berries sometimes dried and at other times preserved for winter use. (154:107) **Salish, Coast Beverage** Leaves dried and used to make tea. *Fruit* Fruits eaten fresh. (182:86) **Thompson Dried Food** Berries, if plentiful, dried for future use. *Fruit* Berries eaten fresh. (187:259)

***Fragaria vesca* ssp. *americana*** (Porter) Staudt, Woodland Strawberry

- **Food—Chippewa Fruit** Strawberries considered an important part of the diet. (as *F. americana* 71:132) **Dakota Fruit** Fruit used for food. (as *F. americana* 70:84) **Iroquois Bread & Cake** Fruit mashed, made into small cakes and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:127) **Omaha Fruit** Fruit used for food. **Pawnee Fruit** Fruit used for food. **Ponca Fruit** Fruit used for food. (as *F. americana* 70:84) **Thompson Fruit** Large, wild berries eaten as a favorite food. (as *F. vesca americana* 164:487) **Winnebago Beverage** Young leaves used to make a tea-like beverage. *Fruit* Fruit used for food. (as *F. americana* 70:84)

***Fragaria vesca* ssp. *bracteata*** (Heller) Staudt, Woodland Strawberry

- **Food—Apache Special Food** Fruits eaten as a delicacy. (as *F. bracteata*

*ta* 32:29) **Apache, Chiricahua & Mescalero Fruit** Raw fruits occasionally eaten as food. (as *F. bracteata* 33:44) **Cochiti Special Food** Fruits eaten as a delicacy. (as *F. bracteata* 32:29) **Cowlitz Beverage** Leaves used for a beverage. *Dried Food* Berries dried and used for food. *Fruit* Berries eaten fresh. (as *F. bracteata* 79:36) **Haisla & Hanaksiala Fruit** Berries eaten fresh. *Preserves* Berries used to make jam. (43:264) **Isleta Fruit** Flavorful fruit considered a delicacy. (as *F. bracteata* 100:29) *Special Food* Fruits eaten as a delicacy. **Navajo Special Food** Fruits eaten as a delicacy. (as *F. bracteata* 32:29) Fruits used for food and considered a delicacy. (as *F. bracteata* 55:53) **Swinomish Fruit** Berries eaten fresh. (as *F. bracteata* 79:36)

***Fragaria vesca* ssp. *californica*** (Cham. & Schlecht.) Staudt, California Strawberry

- **Drug—Diegueño Antidiarrheal** Decoction of leaves taken for diarrhea. (84:21) **Navajo, Ramah Panacea** Whole plant used as “life medicine.” (as *F. californica* 191:31)
- **Food—Cahuilla Fruit** Fruit always eaten fresh. (as *F. californica* 15:74) **Coeur d’Alene Fruit** Berries eaten fresh. Berries mashed and eaten. (as *F. californica* 178:90) **Diegueño Fruit** Fruit eaten fresh with cream. (84:21) **Karok Fruit** Fresh fruit used for food. (6:31) Berries used for food. (as *F. californica* 148:384) **Mendocino Indian Fruit** Berries eaten fresh by children. (as *F. californica* 41:354) **Navajo, Ramah Unspecified** Very small fruit, hard to find, used for food. (as *F. californica* 191:31) **Okanagon Staple** Berries used as a principal food. (as *F. californica* 178:239) **Pomo Fruit** Raw berries used for food. (as *F. californica* 66:13) **Pomo, Kashaya Fruit** Berries eaten fresh. (as *F. californica* 72:110) **Spokane Fruit** Berries used for food. (as *F. californica* 178:343) **Thompson Dried Food** Berries washed, dried, and stored for winter use. *Fruit* Berries eaten fresh. (as *F. californica* 164:488) *Spice* Flowers and stems used to flavor roots. (as *F. californica* 164:478) **Yurok Fruit** Fresh fruit used for food. (6:31)
- **Other—Pomo, Kashaya Ceremonial Items** Berry used in the flower dance at the Strawberry Festival, danced by young girls.<sup>38</sup> (as *F. californica* 72:110) **Thompson Incense & Fragrance** Leaves made into pads and worn under the armpits to make them smell sweet. (as *F. californica* 164:509)

***Fragaria virginiana*** Duchesne, Virginia Strawberry

- **Drug—Blackfoot Antidiarrheal** Decoction of roots used for diarrhea. (97:38) **Cherokee Antidiarrheal** Infusion taken for dysentery. *Gastrointestinal Aid* Taken for visceral obstructions. *Kidney Aid* Taken for disease of the kidneys. *Liver Aid* Taken for jaundice. *Misc. Disease Remedy* Taken for scurvy. *Psychological Aid* Kept in home to insure happiness. *Sedative* Infusion taken to calm nerves. *Toothache Remedy* Fruit held in mouth to remove tartar from teeth. *Urinary Aid* Taken for disease of the bladder. (79:43) **Skagit, Upper** *Other* Infusion of leaves taken as a convalescent tea. (179:38) **Swinomish** *Cough Medicine* Infusion of leaves taken for coughs. *Tuberculosis Remedy* Infusion of leaves taken for tuberculosis. (79:43)

- **Food—Alaska Native** *Fruit* Berry-like fruits used for food. (85:83) **Bella Coola** *Bread & Cake* Berries dried in cakes and used as a winter food. (184:204) **Clallam** *Bread & Cake* Berries mashed, dried in cakes, soaked, dipped in oil, and eaten. (57:200) **Haisla & Hanaksiala** *Fruit* Berries used for food. (43:240) **Hesquiat** *Dried Food* Dried, caked berries rehydrated and eaten with oil. *Spice* Branches, with leaves attached, layered between fish heads and fish for flavoring. (185:65) **Karok** *Fruit* Berries used for food. (148:387) **Kitasoo** *Fruit* Fruit used for food. (43:333) **Klallam** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil, and eaten. (79:43) **Kwakiutl, Southern** *Dried Food* Berries mashed, dried over fire, and resulting cakes used as a winter food. (183:282) *Special Food* Berries mashed with stink currant berries and eaten by chiefs and their wives. (183:286) Ripe berries dipped into oil and eaten fresh at feasts. (183:282) **Makah** *Beverage* Leaves used as a remedy for thirst. *Bread & Cake* Berries mashed, formed into cakes, and sun or air dried for winter use. (67:299) Berries mashed, dried, made into cakes, dipped in whale or seal oil, and eaten. (79:43) *Dried Food* Berries dried for future use. *Fruit* Fruit used for food. Berries eaten fresh. *Pie & Pudding* Berries used to make pies. *Preserves* Berries used to make jellies. *Spice* Leaves used to flavor smoked fish. Leaves steamed with halibut heads for flavoring. **Nitinaht** *Dried Food* Berries dried for future use. (67:299) Berries mashed, dried into rectangular cakes, soaked, boiled, and eaten in winter. *Frozen Food* Berries frozen and used for food. (186:104) *Fruit* Fruit used for food. (67:299) Berries eaten fresh. *Preserves* Berries made into jam and used for food. *Spice* Branches and leaves used in steam cooking pits to flavor the cooking food. *Starvation Food* Leaves chewed by those lost in the bushes to alleviate hunger. (186:104) **Okanagon** *Bread & Cake* Fruits pressed into cakes and used as a winter food. *Fruit* Fruits eaten fresh. (125:39) **Owekeno** *Fruit* Berries eaten as fresh fruit. Berries mixed with stink currants, sugar, and oolichan (candlefish) grease and eaten. *Preserves* Berries used to make jam or jelly. (43:96) **Pomo** *Fruit* Raw or cooked berries used for food. (66:14) **Pomo, Kashaya** *Fruit* Berries eaten fresh from the vine. *Pie & Pudding* Berries used in pies. (72:101) **Quileute** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil, and eaten. *Fruit* Berries dipped in whale oil, and eaten fresh. **Quinault** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil and eaten. (79:43) **Salish, Coast** *Bread & Cake* Berries boiled, poured into frames, sun or fire dried into cakes, and used as a winter food. *Fruit* Berries eaten fresh. (182:83) **Samish** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil, and eaten. **Skagit** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil,

and eaten. (79:43) **Skagit, Upper** *Dried Food* Fruit pulped and dried for winter use. *Fruit* Fruit eaten fresh. (179:38) **Skokomish** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil, and eaten. **Snomish** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil, and eaten. **Swinomish** *Bread & Cake* Berries mashed, dried, made into cakes, dipped in whale or seal oil, and eaten. (79:43) **Thompson** *Bread & Cake* Fruits pressed into cakes and used as a winter food. (125:39) Berries picked with the stems attached, washed, destemmed, dried, and made into cakes for later use. (187:213) *Fruit* Fruits eaten fresh. (125:39) Berries picked with the stems attached, washed, destemmed, and eaten fresh with other berries. *Pie & Pudding* Berries made into pies. *Preserves* Berries made into jams. (187:213) **Tolowa** *Fruit* Fresh fruit used for food. **Yurok** *Fruit* Fresh fruit used for food. (6:31)

- **Dye—Karok** *Black* Berries rubbed over basket caps as a black stain. (148:387) **Nitinaht** *Yellow* Infusion of leaves used as a greenish yellow dye. (186:104)
- **Other—Hesquiat** *Cooking Tools* Branches, with leaves attached, used as beaters for whipping soapberries. Branches, with leaves attached, layered between fish heads and fish to prevent sticking. Leaves, folded around like a cone, made a good drinking cup. (185:65) **Makah** *Cooking Tools* Branches used to whip soapberries into a froth. (67:299) *Smoke Plant* Leaves dried, pulverized, and smoked with kinnikinnick. (79:43) **Nitinaht** *Cooking Tools* Branches and leaves used in steam cooking pits to circulate steam and keep food from burning. *Paint* Leaves crushed, mixed with salmon roe, and used as paint for masks and wooden item designs. (186:104) **Owekeno** *Cooking Tools* Branches tied into a bunch and used for whipping soapberries. (43:96)

## *Gaura*, Onagraceae

*Gaura coccinea* Nutt. ex Pursh, Scarlet Beeblossom

- **Drug—Navajo, Ramah** *Antiemetic* Cold infusion given to settle child's stomach after vomiting. *Panacea* Plant used as "life medicine," especially for serious internal injury. *Pediatric Aid* Cold infusion given to settle child's stomach after vomiting. (191:37)
- **Other—Lakota** *Stable Gear* Plant chewed and rubbed on hands to catch horses. (139:52)

*Gaura hexandra* ssp. *gracilis* (Woot. & Standl.) Raven & Gregory, Harlequinbush

- **Drug—Navajo, Ramah** *Gastrointestinal Aid* Infusion of plant taken for stomachache. (as *G. gracilis* 191:37)

*Gaura parviflora* Dougl. ex Lehm., Velvetweed

- **Drug—Hopi** *Snakebite Remedy* Decoction of root taken for snakebite. (200:86) **Isleta** *Dermatological Aid* Fresh, soft leaves worn as a headband for their cooling effect in hot weather. (100:30) **Keres, Western** *Febrifuge* Leaves used for fever and the cooling effect. *Sedative* Fresh leaves used in pillows to overcome insomnia. (171:44) **Navajo** *Burn Dressing* Infusion of plant used for burns. *Dermatological Aid* Infusion of plant used for inflammation. (55:66) **Navajo, Kayenta** *Disinfectant* Plant used as a fumigant. *Gynecological Aid* Poultice of plant applied for postpartum sore breast. (205:33) **Zuni** *Snakebite Remedy* Fresh or dried root chewed by medicine man before sucking snakebite and poultice applied to wound. (27:377)

- **Food**—Navajo, Kayenta *Unspecified* Roots stewed with meat or roasted and used for food. (205:33)
- **Other**—Navajo *Protection* Plant used to keep the dancers from burning themselves during the Fire Dance at the Mountain Chant. (55:66)

## Gaylussacia, Ericaceae

**Gaylussacia baccata** (Wangenh.) K. Koch, Black Huckleberry

- **Drug**—Cherokee *Antidiarrheal* Infusion of leaves and infusion of bark taken for dysentery. *Kidney Aid* Infusion of leaves taken for Bright's disease and dysentery. (80:39) **Iroquois** *Blood Medicine* Berries considered "good" for the blood. (124:96) *Ceremonial Medicine* Berries used ceremonially by those desiring health and prosperity for the coming season. (196:142) *Liver Aid* Berries considered "good" for the liver. (124:96)
- **Food**—Cherokee *Bread & Cake* Berries mixed with flour or cornmeal, soda, and water and made into bread. *Frozen Food* Berries frozen for future use. *Fruit* Berries used for food. *Pie & Pudding* Berries used to make cobblers and pies. *Preserves* Berries used to make jam and canned for future use. (126:39) *Unspecified* Species used for food. (80:39) **Iroquois** *Bread & Cake* Fruits dried, soaked in water and used in bread. (124:96) Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. (196:128) *Fruit* Fruits eaten raw. (124:96) Dried fruit taken as hunting food. (196:128) *Pie & Pudding* Fruits dried, soaked in water and used in pudding. *Porridge* Berries dried, soaked in cold water, heated slowly, and mixed with bread meal or hominy in winter. *Sauce & Relish* Fruits dried, soaked in water, and used as a sauce. Berries dried, soaked in cold water, heated slowly, and used as a winter sauce. (124:96) Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) *Soup* Fruits dried, soaked in water, and used in soups. (124:96) **Ojibwa** *Unspecified* Species used for food. (as *G. resinosa* 135:238)

**Gaylussacia sp.**, Huckleberry

- **Drug**—Chickasaw *Psychological Aid* and *Sedative* Roots used for delirium. (177:48) **Rappahannock** *Gastrointestinal Aid* Infusion of dried or fresh roots taken for the stomach. (161:34)

**Gaylussacia ursina** (M. A. Curtis) Torr. & Gray ex Gray, Bear Huckleberry

- **Food**—Cherokee *Preserves* Berries made into jelly or canned for future use. (126:39)

## Gayophytum, Onagraceae

**Gayophytum ramosissimum** Torr. & Gray, Pinyon Groundsmoke

- **Drug**—Navajo, Kayenta *Dermatological Aid* Plant used as a lotion for cuts. *Psychological Aid* Plant used for the effects of a dream of a spider bite. (205:33) **Navajo, Ramah** *Hemostat* Poultice applied to cuts as a hemostatic. (191:37)

## Geastrum, Lycoperdaceae, fungus

**Geastrum sp.**, Earth Star

- **Drug**—Isleta *Dermatological Aid* Spores used as baby powder similar to talcum. (100:30) **Keres, Western** *Ear Medicine* Spores used in the ear for running ear. (171:45)

## Gelsemium, Loganiaceae

**Gelsemium sempervirens** St.-Hil., Evening Trumpetflower

- **Drug**—Delaware *Blood Medicine* Roots used as a blood purifier. (176:33) **Delaware, Oklahoma** *Blood Medicine* Root used as a blood purifier. *Dermatological Aid* Compound containing root used as a salve. (175:28, 76)

**Gentianaceae**, see *Centaurium*, *Frasera*, *Gentiana*, *Gentianella*,

*Gentianopsis*, *Obolaria*, *Sabatia*

## Gentiana, Gentianaceae

**Gentiana affinis** Griseb., Pleated Gentian

- **Drug**—Navajo *Analgesic* Plant used as a snuff for headaches. *Stimulant* Plant used for fainting. *Witchcraft Medicine* Plant used as an antidote for witchcraft. (55:69)
- **Other**—Blackfoot *Decorations* Flowers used for their attractiveness. (97:49)

**Gentiana alba** Muhl. ex Nutt., Plain Gentian

- **Drug**—Potawatomi *Alterative* Infusion of root taken as an alterative. (as *G. flavida* 154:58, 59)

**Gentiana andrewsii** Griseb., Closed Bottle Gentian

- **Drug**—Iroquois *Analgesic* Infusion of roots used as a wash and taken for pain and headaches. *Eye Medicine* Infusion of roots used as drops for sore eyes. (87:413) *Febrifuge* Infusion of roots taken for chills. *Liver Aid* Compound used as a liver medicine. *Orthopedic Aid* Poultice of roots applied for muscular soreness. *Psychological Aid* Compound infusion of roots taken and used as wash for lonesomeness and craziness. *Witchcraft Medicine* Dried root hung in house as an anti-witch charm. Infusion of dried roots taken for headaches and to cure jealous witchcraft. (87:414) **Meskwaki** *Gynecological Aid* Root used for "caked breast." *Snakebite Remedy* Root used for snakebite. (152:222)

**Gentiana douglasiana** Bong., Swamp Gentian

- **Food**—Hanaksiala *Candy* Flowers sucked by children for the sweet nectar. (43:252)

**Gentiana saponaria** L., Harvestbells

- **Drug**—Dakota *Tonic* Simple or compound decoction of root taken as a tonic. **Winnebago** *Tonic* Simple or compound decoction of root taken as a tonic. (as *Dasystephana puberula* 70:109)

## Gentianella, Gentianaceae

**Gentianella propinqua** (Richards.) J. Gillett, Fourpart Dwarf-gentian

- **Drug**—Tanana, Upper *Cold Remedy* Decoction of leaves, stems, and flowers taken for colds. *Cough Medicine* Decoction of leaves, stems, and flowers taken for coughs. (102:17)

**Gentianella quinquefolia** (L.) Small, Agueweed

- **Drug**—Cherokee *Cathartic* Root used as a cathartic. *Gastrointestinal Aid* Used for "dyspepsy," "weak stomach and hysterical affections." *Laxative* Root used as a laxative. *Sedative* Used for "weak stomach and hysterical affections." *Stimulant* Root used as a stimulant. *Tonic* Root used as a tonic. (80:35) **Iroquois** *Anthelmintic* Plant used for worms. *Antidiarrheal* Infusion of plants taken for diarrhea. *Gastrointestinal Aid* Plant used for stomachaches. *Pulmonary Aid* Infusion of

plants taken for sore chest. (87:414) **Meskwaki** *Hemostat* Liquid from root used for hemorrhages. (152:222)

## **Gentianopsis**, Gentianaceae

**Gentianopsis crinita** (Froel.) Ma, Greater Fringedgentian

- **Drug**—Delaware *Blood Medicine* Infusion of roots used as a blood purifier. *Gastrointestinal Aid* Infusion of roots used as a stomach strengthener. (176:39) **Delaware, Oklahoma** *Blood Medicine* Infusion of root taken as a blood purifier. *Gastrointestinal Aid* Infusion of root taken as a “stomach strengthener.” (175:32, 76) **Rappahannock** *Blood Medicine* An ingredient of a blood medicine. (161:31)

## **Geocaulon**, Santalaceae

**Geocaulon lividum** (Richards.) Fern., False Toadflax

- **Drug**—Cree, Hudson Bay *Cathartic* Decoction of chewed leaves and bark taken as a purgative. *Dermatological Aid* Poultice of chewed leaves and bark applied to wounds. *Emetic* Decoction of chewed leaves and bark taken as an emetic. *Unspecified* Plant used as medicine. (as *Comandra livida* 92:303)
- **Food**—Alaska Native *Fruit* Fruit used for food. (85:144)

**Geraniaceae**, see *Erodium*, *Geranium*

## **Geranium**, Geraniaceae

**Geranium atropurpureum** Heiler, Western Purple Cranesbill

- **Drug**—Navajo, Kayenta *Other* Plant used for overexertion. (205:29) Navajo, Ramah *Panacea* Plant used as “life medicine.” (191:34)
- **Fiber**—Jemez *Cordage* Split epidermis used to sew moccasins. (44:22)
- **Other**—Navajo, Kayenta *Ceremonial Items* Blossoms dipped into white shell containing sea water, dipped into white shell containing salt, then dipped into white shell containing plants that grow near water, to bring rain. (205:29)

**Geranium caespitosum** James, Pineywoods Geranium

- **Drug**—Keres, Western *Dermatological Aid* Roots bruised into a paste for sores. (171:45)
- **Food**—Keres, Western *Fodder* Considered good turkey food. (171:45)

**Geranium caespitosum var. fremontii** (Torr. ex Gray) Dorn, Frémont's Geranium

- **Drug**—Gosiute *Antidiarrheal* Decoction of roots used for diarrhea. *Dermatological Aid* Plant used as an astringent. (as *G. fremontii* 39:370)

**Geranium erianthum** DC., Woolly Geranium

- **Drug**—Aleut *Throat Aid* Leaves used in a gargle for sore throat. (8:428)

**Geranium lentum** Woot. & Standl., Mogollon Geranium

- **Drug**—Navajo, Ramah *Dermatological Aid* Poultice of moist leaves and root applied to injuries, a “life medicine.” *Panacea* Decoction of plant taken for internal injury, a “life medicine.” (191:34)

**Geranium maculatum** L., Spotted Geranium

- **Drug**—Cherokee *Dermatological Aid* Astringent, compound decoction used as a wash for thrush in child's mouth. Used for open wounds and to remove canker sores. *Hemostat* Used as a styptic.

*Oral Aid* and *Pediatric Aid* Decoction and fox grapes used to wash children's mouths for “thrush.” (80:35) **Chippewa** *Antidiarrheal* Infusion of roots taken for diarrhea. (71:134) *Oral Aid* Dried, pulverized root put in mouth, especially by children, for sores. *Pediatric Aid* Dried, powdered root placed in mouth, especially by children, for soreness. (53:342) **Choctaw** *Dermatological Aid* Root used as powerful astringent. *Venereal Aid* Root used for “the venereal.” (28:287) **Iroquois** *Antidiarrheal* Infusion of plant taken for diarrhea. (87:367) *Dermatological Aid* Decoction of roots used as a wash for face sores or parts infected with itch. Poultice of powdered or chewed roots applied to unhealed navel of babies. (87:366) *Emetic* Decoction of roots taken as an emetic. *Heart Medicine* Decoction of roots taken for heart trouble. *Laxative* Infusion of plant used to “clean out the in-nards.” *Love Medicine* Root placed in victim's tea to counteract a love medicine. (87:367) *Oral Aid* Roots used several ways for sore mouth, trench mouth, and chancre sores. *Pediatric Aid* Decoction of roots given to child with sore mouth, trench mouth, or chancre sores. (87:366) Poultice of chewed or powdered roots applied to severed umbilical cord. *Throat Aid* Decoction of smashed roots used as a wash for sore throats. (87:367) *Venereal Aid* Compound infusion of root used as wash on parts affected by venereal disease. Decoction of roots taken for venereal disease. (87:366) **Menominee** *Antidiarrheal* Root used for “flux and like troubles.” (151:36, 37) **Meskwaki** *Analgesic* Infusion of root used for neuralgia and toothache. *Antidiarrheal* Compound containing root used for diarrhea. *Burn Dressing* Poultice of decoction of root applied to burns and infusion used for toothache. *Hemorrhoid Remedy* Poultice of pounded root bound on the anus to cause piles to recede. *Oral Aid* Infusion of root used for pyorrhea, sore gums, and toothache. *Toothache Remedy* Infusion of root used for aching teeth and sore gums. (152:222, 223) **Ojibwa** *Antidiarrheal* Root used for flux and sore mouth. *Oral Aid* Root used for sore mouths and flux. (153:370, 371)

**Geranium oreganum** T. J. Howell, Oregon Geranium

- **Drug**—Miwok *Antirheumatic (External)* Decoction of root rubbed on aching joints. (as *G. incisum* 12:170) **Montana Indian** *Antidiarrheal* Root used for diarrhea. *Dermatological Aid* Root used as an astringent. (as *G. incisum* 19:12) **Salish** *Oral Aid* Leaf held between lips for sore lips. (as *G. incisum* 178:293)

**Geranium richardsonii** Fisch. & Trautv., Richardson's Geranium

- **Drug**—Cheyenne *Hemostat* Infusion of dried roots taken or powdered leaves used as snuff for nosebleed. *Nose Medicine* Pulverized leaf rubbed on the nose and powder snuffed up the nostrils for nosebleeds. Infusion of powdered roots taken for nosebleeds. (76:179) Navajo, Ramah *Panacea* Plant used as “life medicine.” (191:34) **Thompson** *Unspecified* Plant used medicinally for unspecified purpose. (164:461)

**Geranium viscosissimum** Fisch. & C. A. Mey. ex C. A. Mey., Sticky Geranium

- **Drug**—Blackfoot *Cold Remedy* Infusion of leaves and simple sweat bath taken for colds. (86:72) *Eye Medicine* Infusion of leaves used for sore eyes. (86:81) *Other* Infusion of leaves applied to the head and eaten for large head, from dropsy or severe malnutrition. Two cases were described of a young girl and a woman whose heads became

abnormally large, as with dropsy or severe malnutrition. An infusion of the leaves was applied to the head and consumed, effecting temporary recovery, but both lost their hair and died later. (86:82) **Okanagan-Colville** *Unspecified* Poultice of pounded, heated roots applied medicinally. (188:106) **Sanpoil** *Dermatological Aid* Poultice of crushed leaves applied to sores. *Eye Medicine* Decoction of roots used as a wash for sore eyes. (131:219) **Thompson** *Gynecological Aid* Plant used as a medicine for women. *Love Medicine* Plant used as a love charm or love potion. (187:225) *Unspecified* Plant used medicinally for unspecified purpose. (164:461) Roots used for medicine. *Witchcraft Medicine* Flowers possibly used for witchcraft. (187:225)

- **Food—Blackfoot** *Spice* Leaves kept in food storage bags to mask the spoiling of the contents. (86:103)

**Gesneriaceae**, see *Cyrtandra*

## **Geum**, Rosaceae

**Geum aleppicum** Jacq., Yellow Avens

- **Drug—Cree, Woodlands** *Diaphoretic* Decoction of root and other herbs used to make a person sweat. *Panacea* Powdered roots used in a many herb remedy for various ailments. *Pediatric Aid* Decoction of root alone or with other herbs used for teething sickness. *Throat Aid* Decoction of root used for sore throats. *Toothache Remedy* Decoction of root alone or with other herbs used for teething sickness. Decoction of root used for sore teeth. (109:39) **Iroquois** *Anticonvulsive* Decoction of roots taken for convulsions. *Antidiarrheal* Compound infusion or decoction of roots taken for diarrhea. *Emetic* Compound decoction of roots taken to vomit as cure for love medicine. *Febrifuge* Decoction of roots taken for high fevers. *Love Medicine* Compound decoction of roots taken to vomit as cure for love medicine. *Veterinary Aid* Compound decoction mixed with horse feed and used as nose drops for cramps. (87:353) **Malecite** *Cough Medicine* Infusion of one root used by children with coughs. *Pediatric Aid* Infusion of one root used by children with croup. Infusion of one root used by children with coughs. *Pulmonary Aid* Infusion of one root used by children with croup. (as *G. strictum* 116:249) **Micmac** *Cough Medicine* Roots used for coughs and croup. *Pulmonary Aid* Root used for coughs and croup. (as *G. strictum* 40:57) **Ojibwa, South** *Analgesic* Weak decoction of root taken for chest soreness. *Cough Medicine* Weak decoction of root taken for cough. *Pulmonary Aid* Weak decoction of root taken for chest soreness. (as *G. strictum* 91:200)

**Geum calthifolium** Menzies ex Sm., Calthaleaf Avens

- **Drug—Aleut** *Cold Remedy* Decoction of root taken as a tonic for colds and sore throat. *Dermatological Aid* Poultice of plant applied to sores “that refused to heal.” *Throat Aid* Decoction of root taken as a tonic for colds and sore throats. *Tonic* Decoction of root taken as a tonic. (8:427)

**Geum canadense** Jacq., White Avens

- **Drug—Chippewa** *Gynecological Aid* Root used for “female weakness.” (53:356) **Iroquois** *Love Medicine* Decoction of whole plant used as a love medicine. *Panacea* Compound infusion taken or placed on injured part, a “Little Water Medicine.” (87:353)

**Geum macrophyllum** Willd., Largeleaf Avens

- **Drug—Bella Coola** *Analgesic* Decoction of root taken for stomach

pain. *Dermatological Aid* Poultice of chewed or bruised leaves applied to boils. *Gastrointestinal Aid* Decoction of root taken for stomach pain. **Carrier, Southern** *Dermatological Aid* Poultice of boiled leaves applied to bruises. *Panacea* Decoction of leaves taken for any sickness. (150:59) **Chehalis** *Contraceptive* Infusion of leaves taken to avoid conception. (79:37) **Clallam** *Dermatological Aid* Leaves used for boils. (57:202) **Gosiute** *Unspecified* Decoction of roots used as a medicine. (39:370) **Hesquiat** *Gastrointestinal Aid* Entire plant, including the roots, eaten as a medicine for stomach pains or excess acid. *Gynecological Aid* Young, small leaves chewed after childbirth to heal the womb. (185:72) **Klallam** *Gynecological Aid* Raw leaves chewed during labor. (79:37) **Ojibwa** *Gynecological Aid* Plant used as a female remedy. (153:384) **Okanagan-Colville** *Gynecological Aid* Infusion of roots taken by women after childbirth. (188:126) **Quileute** *Dermatological Aid* Poultice of leaves applied to boils. **Quinault** *Dermatological Aid* Poultice of smashed leaves applied to cuts. *Gynecological Aid* Raw leaves chewed during labor. (79:37) *Panacea* Leaves chewed as a universal remedy, “good for everything.” (201:276) **Snohomish** *Dermatological Aid* Poultice of leaves applied to boils. (79:37)

- **Other—Salish, Coast** *Protection* Leaves eaten before seeing a dying person for protection from germs. (182:86)

**Geum macrophyllum var. perincisum** (Rydb.) Raup, Largeleaf Avens

- **Drug—Cree, Woodlands** *Pediatric Aid* and *Toothache Remedy* Decoction of root with other herbs used for teething sickness. (109:39)

**Geum rivale** L., Purple Avens

- **Drug—Algonquin, Tête-de-Boule** *Antihemorrhagic* Decoction of roots boiled four times and used for the spitting of blood. (132:129) **Iroquois** *Antidiarrheal* Infusion of roots taken for diarrhea. *Febrifuge* Infusion of roots taken for fevers. (87:354) **Malecite** *Antidiarrheal* and *Pediatric Aid* Infusion of one root used by children with diarrhea. (116:255) **Micmac** *Antidiarrheal* Root used for diarrhea or dysentery. (40:57) Decoction of root taken, especially by children, for dysentery. *Cold Remedy* Decoction of root taken, especially by children, for colds. *Cough Medicine* Decoction of root taken, especially by children, for coughs. *Pediatric Aid* Decoction of root taken, especially by children, for dysentery, coughs, and colds. (as *G. nivale* 156:316)

**Geum sp.**, Avens

- **Drug—Thompson** *Analgesic* Plants used in sweat bath for sprains, stiff or aching joints or muscles. *Antirheumatic (External)* Fresh plants used as a bed in the sweat bath for rheumatism. *Herbal Steam* Plants used in sweat bath for sprains, stiff or aching joints or muscles. (164:464) *Love Medicine* Plant used by men as a charm “for gaining a woman's affection.” (164:507) *Misc. Disease Remedy* Decoction of root taken for diseases with rash: measles, chickenpox, and smallpox. (164:476) *Orthopedic Aid* Plants used in sweat bath for sprains, stiff or aching joints or muscles. (164:464) *Unspecified* Plants used as charms for unspecified purpose. (164:506)

**Geum triflorum** Pursh, Prairie Smoke

- **Drug—Blackfoot** *Cough Medicine* Infusion of plant taken as a general tonic for severe coughs. (86:72) *Dermatological Aid* Infusion of roots and grease applied as a salve to sores, rashes, blisters, and flesh wounds. (86:76) Infusion of roots applied to wounds. (86:84) *Eye Med-*

*icine* Decoction of roots used for sore or swollen eyes. (97:38) *Oral Aid* Infusion of roots used as a mouthwash for cankers. (as *G. polycephalum* 152:214, 215) **Montagnais Cough Medicine** Decoction of plant taken for coughing. **Tuberculosis Remedy** Decoction of plant taken for consumption. (as *G. polycephalum* 156:314) **Rappahannock Febrifuge** Infusion of roots taken for chills. **Respiratory Aid** Infusion of dried stems or dried leaves smoked in a pipe for asthma. (161:29)

- **Food—Rappahannock Candy** Leaves chewed for "fun." (161:29)

**Gnaphalium sp.**, Everlasting

- **Drug—Karak Unspecified** Used for medicine. (117:209) **Pomo Dermatological Aid** and **Pediatric Aid** Poultice of crushed leaves applied to the baby's navel string. (117:284) **Weyot Unspecified** Plant used to make a strong medicine. (117:180)

**Gnaphalium stramineum** Kunth, Cotton Batting Plant

- **Drug—Kawaiisu Analgesic** Hot poultice of leaves or stems applied to parts of body affected by pain. (as *G. chilense* 206:33) **Navajo, Ramah Ceremonial Medicine** and **Emetic** Plant used as a ceremonial emetic. **Panacea** Plant used as "life medicine." (as *G. chilense* 191:51) **Pomo Dermatological Aid** Poultice of boiled plant applied to a swollen face. (as *G. chilense* 66:15)
- **Other—Pomo, Kashaya Hunting & Fishing Item** Cottony flower tops used like stuffing to line deer antler head disguises. (as *G. chilense* 72:43)

**Gnaphalium uliginosum** L., Marsh Cudweed

- **Drug—Iroquois Orthopedic Aid** Plants used for bruises. **Respiratory Aid** Compound infusion of plants used for asthma. (87:465)

**Gnaphalium viscosum** Kunth, Winged Cudweed

- **Drug—Miwok Antirheumatic (External)** Poultice of leaves used for swelling. **Cold Remedy** Decoction of leaves taken for colds. **Gastrointestinal Aid** Decoction of leaves taken for stomach trouble. (as *G. decurrens* var. *californicum* 12:170)

## **Gonolobus**, Asclepiadaceae

**Gonolobus sp.**, Milk Vine

- **Drug—Houma Antiemetic** Infusion of root taken for "sick stomach." (158:63)

**Goodeniaceae**, see *Scaevola*

## **Goodyera**, Orchidaceae

**Goodyera oblongifolia** Raf., Western Rattlesnake Plantain

- **Drug—Cowlitz Tonic** Infusion of plants taken as a tonic. (as *Peramiium decipiens* 79:26) **Okanagan-Colville Dermatological Aid** Poultice of softened leaves applied to cuts and sores. **Reproductive Aid** Leaves

split open and blown on several times by women wishing to become pregnant. (188:52) **Okanagon** *Gynecological Aid* Plant chewed by women before and at the time of childbirth. (as *Peramium decipiens* 125:41) **Saanich** *Antirheumatic (External)* Infusion of leaves used in the bath water of sprinters and canoers as a liniment for stiff muscles. (182:77) **Thompson** *Gynecological Aid* Plant chewed by women before and at the time of childbirth. (as *Peramium decipiens* 125:41) Plant chewed at childbirth to ease confinement. (as *Peramium decipiens* 164:462) Leaves chewed prenatally to determine the sex of a baby and to insure an easy delivery. If the mother could swallow the chewed leaf, the baby was going to be a girl, but if she could not, then it was going to be a boy. (187:136)

**Goodyera pubescens** (Willd.) R. Br. ex Ait. f., Downy Rattlesnake Plantain

- **Drug—Cherokee** *Blood Medicine* Compound decoction taken as a blood tonic. *Burn Dressing* Poultice of wilted leaves applied “to draw out burn.” *Cold Remedy* Cold infusion of leaf taken for colds. *Dietary Aid* Cold infusion of leaf taken with whisky to improve the appetite. Compound decoction taken to build the appetite. *Emetic* Taken with whisky to improve the appetite and as an emetic. *Eye Medicine* Ooze dripped into sore eyes. *Kidney Aid* Cold infusion of leaf taken for kidneys. *Toothache Remedy* Infusion held in mouth for toothache. (80:50) **Delaware** *Antirheumatic (External)* Used as a medicine for rheumatism. *Gynecological Aid* Administered to women following childbirth. *Pulmonary Aid* Used for pleurisy. (as *Epipactis pubescens* 176:37) **Delaware, Oklahoma** *Antirheumatic (Internal)* Root used for rheumatism. *Gynecological Aid* Root given to women after childbirth. *Pulmonary Aid* Root used for pleurisy. (as *Epipactis pubescens* 175:31, 76) *Unspecified* Poultice of leaves used for unspecified purpose. (as *Epipactis pubescens* 175:76) **Mohegan** *Oral Aid* Poultice of mashed leaves used for babies with sore mouths. (as *Epipactis pubescens* 174:265) Mashed leaves used to wipe out infants’ mouths to prevent soreness. (as *Epipactis pubescens* 176:72) *Pediatric Aid* Poultice of mashed leaves used for babies with sore mouths. (as *Epipactis pubescens* 174:265) Mashed leaves used to wipe out infants’ mouths to prevent soreness. (as *Epipactis pubescens* 176:72)

**Goodyera repens** (L.) R. Br. ex Ait. f., Lesser Rattlesnake Plantain

- **Drug—Cherokee** *Blood Medicine* Compound decoction taken as a blood tonic. *Burn Dressing* Poultice of wilted leaves applied “to draw out burn.” *Cold Remedy* Cold infusion of leaf taken for colds. *Dietary Aid* Cold infusion of leaf taken with whisky to improve the appetite. Compound decoction taken to build the appetite. *Emetic* Taken with whisky to improve the appetite and as an emetic. *Eye Medicine* Ooze dripped into sore eyes. *Kidney Aid* Cold infusion of leaf taken for kidneys. *Toothache Remedy* Infusion held in mouth for toothache. (80:50) **Potawatomi** *Gastrointestinal Aid* Root and leaves used for stomach diseases. *Gynecological Aid* Root and leaves used for female disorders. *Snakebite Remedy* Poultice of chewed leaves and swallowed juice used for snakebite, reference from 1796. *Urinary Aid* Root and leaves used for bladder diseases. (as *Epipactis repens* var. *ophioides* 154:67)

**Gossypium**, Malvaceae

**Gossypium herbaceum** L., Levant Cotton

- **Drug—Koasati** *Gynecological Aid* Decoction of roots taken to ease childbirth. (177:42)

**Gossypium hirsutum** L., Upland Cotton

- **Food—Pima, Gila River** *Unspecified* Seeds used for food. (133:5)
- **Fiber—Zuni** *Clothing* Cotton used to make ceremonial garments. (166:77) *Cordage* Fuzz made into cords and used ceremonially. (166:92)
- **Other—Zuni** *Ceremonial Items* Cotton used to make ceremonial garments. (166:77) Fuzz used alone or made into cords and used ceremonially in a number of ways. The cotton cords were tied loosely around the wrists and ankles of the newborn child while supplications were offered that the rainmakers would provide enough rain to insure proliferative crops so that the child would have full nourishment its whole life. Cotton down was used to cover the heads of rain priests after their deaths, symbolizing their duties in this world and also their obligations in the underworld. Crowns and certain masks were also covered with raw cotton to indicate that the gods represented were rainmakers or were specially associated with the rainmakers. (166:92)

**Gossypium sp.**, Cotton

- **Drug—Tewa** *Dermatological Aid* and *Pediatric Aid* Poultice of chewed kernels applied to child’s head for baldness. (138:102, 103)
- **Food—Papago** *Bread & Cake* Seeds made into flour and baked on hot sands as browned cakes. (34:37) Seed flour mixed with saguaro seed flour, baked on sand, and eaten as browned cakes. (34:46) **Pima** *Dried Food* Seeds formerly parched and eaten without grinding. (146:77)
- **Fiber—Isleta** *Clothing* Cotton used to make belts, sashes, and red bands for the hair. (100:30) **Navajo** *Cordage* Used to make string for many different ceremonies. *Sewing Material* Used to make fabrics. (55:62)
- **Other—Havasupai** *Fuel* Used as a strike-a-light. (162:105) *Tools* Cotton twisted into thread, braided into a thick cord, and used in the strike-a-light. (197:231) **Navajo** *Tools* Twisted, soaked in mutton tallow, and used as a lampwick for soldering. (55:62) **Santa Clara** *Ceremonial Items* Formerly used to weave large ceremonial blankets. **Tewa of Hano** *Ceremonial Items* Used to make the strings for prayer feathers. (138:102)

**Gossypium thurberi** Todaro, Thurber’s Cotton

- **Fiber—Papago** *Unspecified* Used as a source of fiber. (as *Thurberia thespesioides* 36:106)

**Grindelia**, Asteraceae

**Grindelia camporum** Greene, Great Valley Gumweed

- **Drug—Costanoan** *Dermatological Aid* Decoction of plant used for dermatitis, poison oak, boils, and wounds. (21:26) **Kawaiisu** *Analgesic* and *Orthopedic Aid* Decoction of leaves and flowers applied to sore parts of the body. (206:33) **Mewuk** *Blood Medicine* Fresh buds used extensively as a medicine for blood disorders. (117:338)

**Grindelia decumbens** Greene, Reclined Gumweed

- **Drug—Keres, Western** *Gastrointestinal Aid* Infusion of plant used for severe stomachache. (171:46)

**Grindelia fastigiata** Greene, Pointed Gumweed

- **Drug**—Keres, Western *Gastrointestinal Aid* Infusion of plant used for severe stomachache. (171:46)

***Grindelia hallii*** Steyermark ex Rothrock, Hall's Gumweed

- **Drug**—Diegueño *Blood Medicine* Decoction of leaves and stems taken as a blood tonic. (84:23)

***Grindelia humilis*** Hook. & Arn., Hairy Gumweed

- **Drug**—Mahuna *Dermatological Aid* Plant used for itching skin eruption caused by poison oak. (140:11)

***Grindelia integrifolia* var. *macrophylla*** (Greene) Cronq., Puget Sound Gumweed

- **Other**—Pomo, Kashaya *Fasteners* Sticky sap used like glue. (as *G. stricta venulosa* 72:55)

***Grindelia nana*** Nutt., Idaho Gumweed

- **Drug**—Paiute *Cough Medicine* Decoction of plant said to be a good cough medicine. *Expectorant* Decoction of plant said to be a good expectorant. *Pulmonary Aid* Hot decoction of young shoots taken for pneumonia. *Urinary Aid* Infusion of plant taken for bladder trouble. (180:81, 82) **Sanpoil** *Tuberculosis Remedy* Decoction of roots used for tuberculosis. (131:218) **Shoshoni** *Analgesic* Decoction of plant taken for stomachaches. *Cough Medicine* Decoction of plant said to be a good cough medicine. *Dermatological Aid* Poultice of boiled plant applied to swellings. *Disinfectant* Decoction of plant used as an antiseptic wash to help heal broken bones. *Emetic* Infusion of plant taken as an emetic. *Expectorant* Decoction of plant said to be a good expectorant. *Gastrointestinal Aid* Decoction of plant taken for stomachaches. *Misc. Disease Remedy* Decoction of plant taken for smallpox and measles. *Orthopedic Aid* Poultice of boiled plant applied to broken leg bones. *Urinary Aid* Infusion of plant taken for bladder trouble. *Venereal Aid* Decoction of plant taken for venereal disease. (180:81, 82)

***Grindelia nuda* var. *aphanactis*** (Rydb.) Nesom, Curlytop Gumweed

- **Drug**—Navajo, Ramah *Dermatological Aid* Plant used to hold cuts together until they heal. *Emetic* Plant used as an emetic. *Gastrointestinal Aid* and *Pediatric Aid* Cold infusion of plant given to children to kill a swallowed ant. *Veterinary Aid* Cold infusion of plant given to lambs to kill a swallowed ant. (as *G. aphanactis* 191:51) **Zuni** *Poultice* Poultice of flower applied to ant bites. (as *G. aphanactis* 27:375) *Snakebite Remedy* Fresh or dried root chewed by medicine man before sucking snakebite and poultice applied to wound. (as *G. aphanactis* 27:374)
- **Other**—Navajo, Ramah *Insecticide* Strong infusion of plant poured on anthill to kill ants. (as *G. aphanactis* 191:51)

***Grindelia robusta*** Nutt., Great Valley Gumweed

- **Drug**—Miwok *Dermatological Aid* Decoction of leaves used to wash running sores. Infusion of pulverized leaves applied to sores. (12:170)
- **Food**—Karok *Vegetable* Leaves eaten raw as greens. (148:389)
- **Other**—Karok *Insecticide* Decoction of roots used as a shampoo to kill hair lice. (148:389)

***Grindelia* sp.**, Gum Plant

- **Drug**—Jemez *Dermatological Aid* Decoction of dried, ground plant used as a wash for cuts. *Veterinary Aid* Decoction of dried, ground

plant used as a wash for cuts on horses. (44:23) **Mendocino Indian** *Blood Medicine* Decoction of plant taken as a blood purifier. *Cold Remedy* Decoction of plant taken for colds. *Gastrointestinal Aid* Decoction of plant taken for colic. *Laxative* Decoction of plant taken to open bowels. (41:394)

- **Food**—Mendocino Indian *Substitution Food* Leaves used as a substitute for tea. (41:394)

***Grindelia squarrosa*** (Pursh) Dunal, Curlycup Gumweed

- **Drug**—Blackfoot *Liver Aid* Infusion taken for the "liver." (82:32) Decoction of roots taken for liver troubles. (97:56) Decoction of root taken for liver trouble. (114:276) **Cheyenne** *Dermatological Aid* Decoction of flowering tops applied to skin diseases, scabs, and sores. *Eye Medicine* Gum rubbed on the outside of eyes for snow-blindness. (83:21) **Cheyenne, Northern** *Disinfectant* Decoction of flowering tops used to wash sores and other skin lesions. *Eye Medicine* Sticky, flower heads used for snow-blindness. (82:32) **Cree** *Abortifacient* Used to prevent childbearing. (16:485) *Gynecological Aid* Infusion of buds and flowers taken to ease and lessen menses. *Kidney Aid* Plant and camomile used for kidney pains. (16:494) *Venereal Aid* Used for gonorrhea. (16:485) **Crow** *Cold Remedy* Taken for colds. *Cough Medicine* Taken for coughs. *Pulmonary Aid* Taken for whooping cough and pneumonia. *Respiratory Aid* Infusion sniffed up the nose for catarrh. Taken for bronchitis and asthma. (82:32) **Dakota** *Gastrointestinal Aid* and *Pediatric Aid* Infusion of plant tops given to children for stomachaches. (69:368) Decoction of plant given to children for colic. (70:133) **Flathead** *Cold Remedy* Taken for colds. *Cough Medicine* Taken for coughs. *Pulmonary Aid* Taken for whooping cough and pneumonia. *Respiratory Aid* Taken for bronchitis and asthma. *Tuberculosis Remedy* Infusion taken for tuberculosis. *Veterinary Aid* Flower heads rubbed on horses' hooves for protection against injury. (82:32) **Gosiute** *Cough Medicine* Roots used as a cough medicine. (39:371) **Lakota** *Antihemorrhagic* Decoction of blossoms and fetid marigold taken for the spitting of blood. (139:37) **Mahuna** *Dermatological Aid* Poultice of plants applied to cuts. *Disinfectant* Infusion used as a disinfectant wash. (140:15) **Montana Indian** *Venereal Aid* Decoction used as an antisyphilitic. (19:12) **Paiute** *Cough Medicine* Decoction of plant said to be a good cough medicine. *Expectorant* Decoction of plant said to be a good expectorant. *Pulmonary Aid* Hot decoction of young shoots taken for pneumonia. *Urinary Aid* Infusion of plant taken for bladder trouble. (180:81, 82) **Pawnee** *Veterinary Aid* Decoction of tops and leaves used as a wash for saddle galls and sores on horses. **Ponca** *Tuberculosis Remedy* Decoction of plant taken for consumption. (70:133) **Shoshoni** *Analgesic* Decoction of plant taken for stomachaches. (180:81, 82) *Cough Medicine* Dried buds used for coughs. (118:37) Decoction of plant said to be a good cough medicine. *Dermatological Aid* Poultice of boiled plant applied to swellings. *Disinfectant* Decoction of plant used as an antiseptic wash to help heal broken bones. *Emetic* Infusion of plant taken as an emetic. *Expectorant* Decoction of plant said to be a good expectorant. *Gastrointestinal Aid* Decoction of plant taken for stomachaches. *Misc. Disease Remedy* Decoction of plant taken for smallpox and measles. *Orthopedic Aid* Poultice of boiled plant applied to broken legs. *Urinary Aid* Infusion of plant taken for bladder trouble. *Venereal Aid* Decoction of plant taken for venereal disease. (180:81, 82) **Sioux** *Gastroin-*

*testinal Aid* Infusion taken for colic. (82:32) *Kidney Aid* Infusion taken for kidney trouble. (19:12) *Ute Cold Remedy* Used as a cough medicine. (38:34)

***Grindelia squarrosa* var. *serrulata*** (Rydb.) Steyermark, Curly-cup Gumweed

- **Drug**—**Blackfoot** *Liver Aid* Infusion of root taken as a liver aid. (as *G. squarrosa serrulata* 118:45) **Shoshoni** *Kidney Aid* Dried upper third of plant and buds taken for dropsy. *Misc. Disease Remedy* Dried upper third of plant and buds taken for smallpox. (as *G. squarrosa serrulata* 118:43)

**Grossulariaceae**, see *Ribes*

***Guajacum***, Zygophyllaceae

***Guajacum coulteri***

- **Drug**—**Seri** *Unspecified* Berries used for medicine. (as *Guaiacum coulteri* 50:136)

***Gutierrezia***, Asteraceae

***Gutierrezia californica*** (DC.) Torr. & Gray, San Joaquin Snake-weed

- **Drug**—**Kawaiisu** *Orthopedic Aid* Poultice of heated plant applied to aching back or limbs. (206:33)
- **Fiber**—**Kawaiisu** *Building Material* Plant used as wall filler in the construction of the winter house. Built on a circular ground plan of vertical and horizontal poles, the house had matchweed packed in so tightly between the poles that one could not see through. However, there was apparently an outer covering usually of tule mats. (206:33)

***Gutierrezia microcephala*** (DC.) Gray, Threadleaf Snakeweed

- **Drug**—**Cahuilla** *Toothache Remedy* Infusion of plant used as a gargle or plant placed inside the mouth for toothaches. (15:75) **Hopi** *Carminative* Used for “gastric disturbances.” (42:323) **Navajo** *Veterinary Aid* Poultice of plant applied to the back and legs of horses. (as *G. lucida* 90:151) **Tewa** *Carminative* Used for “gastric disturbances.” (42:323)
- **Other**—**Hopi** *Cooking Tools* Used in roasting sweet corn. *Decorations* Used as paho (prayer stick) decorations. (42:323) Used as prayer stick decorations. (as *G. lucida* 200:96) **Tewa** *Cooking Tools* Used in roasting sweet corn. *Decorations* Used as paho (prayer stick) decorations. (42:323)

***Gutierrezia sarothrae*** (Pursh) Britt. & Rusby, Broom Snakeweed

- **Drug**—**Blackfoot** *Herbal Steam* Roots used in herbal steam for unspecified ailments. (as *G. diversifolia* 114:276) *Respiratory Aid* Roots placed in boiling water and steam inhaled for respiratory ailments. (97:56) **Comanche** *Pulmonary Aid* Compound containing leaves used for whooping cough. (29:522) **Dakota** *Veterinary Aid* Decoction of flowers given to horses as a laxative. (69:368) **Diegueño** *Antidiarrheal* Decoction of fresh flowers or fresh roots taken for diarrhea. (88:220) **Isleta** *Dermatological Aid* Poultice of moistened leaves used for bruises. *Febrifuge* Infusion of leaves used as a bath for fevers. *Veneral Aid* Infusion of leaves used for venereal diseases. (as *G. furfuracea* 100:31) **Jemez** *Dermatological Aid* Decoction of plant used for sores. *Gynecological Aid* Decoction of plant taken by women after child-

birth following the cedar decoction. (as *G. furfuracea* 44:23) **Keres**, **Western** *Antirheumatic (External)* Strong, black infusion of plant used as a rub for rheumatism. *Cathartic* Infusion of plant used as a cathartic. *Diaphoretic* Plant used as an ingredient in the sweat bath. *Emetic* Infusion of plant used as an emetic. *Eye Medicine* Infusion of plant used as an eyewash. *Snakebite Remedy* Chewed leaf juice taken for and rubbed on rattlesnake bites. *Veterinary Aid* Infusion of leaves used as a wash for horses after castration. (as *G. longifolia* 171:46) **Lakota** *Cold Remedy* Decoction of plant taken for colds. *Cough Medicine* Decoction of plant taken for coughs. *Vertigo Medicine* Decoction of plant taken for dizziness. (139:37) **Navajo** *Analgesic* Plant ashes rubbed on the body for headaches. (55:86) Plant used for headaches. (90:151) *Ceremonial Medicine* Wood made into charcoal used in the medicines applied to the ailing gods. Two kinds of charcoal were used in the medicines which were applied to the ailing gods. (55:86) *Dermatological Aid* Plant used for wounds. (55:97) Poultice of chewed plant applied to ant, bee, and wasp sting swellings. (55:86) *Sedative* Plant used for “nervousness.” (90:151) *Snakebite Remedy* Plant used for snakebites. *Veterinary Aid* Decoction of ground plant applied as poultice to sheep bitten by a snake. (55:86) **Navajo**, **Kayenta** *Antidiarrheal* Plant used for bloody diarrhea. *Ceremonial Medicine* and *Disinfectant* Plant used as a ceremonial fumigant ingredient. *Gastrointestinal Aid* Plant used for gastrointestinal disease. (205:48) **Navajo**, **Ramah** *Analgesic* Decoction of root taken for painful urination and stomachache. *Antidote* Compound decoction of plant used as an antidote for taking too much medicine. *Ceremonial Medicine* Decoction used ceremonially for snake infection or snakebite. *Dermatological Aid* Poultice or infusion of flowers and leaves applied to red ant bite and bee sting. *Disinfectant* Decoction used ceremonially for snake infection. *Febrifuge* Cold infusion of leaves applied to forehead for fever. *Gastrointestinal Aid* Decoction of root taken for stomachache. *Gynecological Aid* Decoction of root taken to hasten delivery of placenta. *Panacea* Root used as a “life medicine.” *Snakebite Remedy* Decoction used ceremonially for snakebite. *Urinary Aid* Decoction of root taken for painful urination. *Veterinary Aid* Cold infusion of leaves used as a lotion on incisions and bites on lambs or colts. (191:51) **Paiute** *Antirheumatic (External)* Poultice of boiled leaves in cloth applied as a heat pack for rheumatism. *Hemostat* Poultice of boiled leaves applied to top of head for nosebleed. *Orthopedic Aid* Poultice of boiled leaves applied for sprains. **Shoshoni** *Cold Remedy* Decoction of plant taken for colds. *Dermatological Aid* and *Disinfectant* Compound decoction of plant used as an antiseptic wash for measles and other rashes. *Misc. Disease Remedy* Compound decoction of plant used as an antiseptic wash for measles. (180:82, 83) **Tewa** *Analgesic* Plant used on hot coals to fumigate patient with painful menstruation. *Disinfectant* Plant used on hot coals to fumigate mother and newborn child. *Ear Medicine* Chopped, fresh plant rubbed around ear for earache. *Gastrointestinal Aid* Decoction of plant used for gastric disturbances, especially “gastric influenza.” *Gynecological Aid* Compound containing plant used as snuff and as a fumigant for painful periods, and for women in labor. *Misc. Disease Remedy* Decoction of plant taken for gastric influenza. *Pediatric Aid*

Plant used on hot coals to fumigate mother and newborn child. (as *G. longifolia* 138:56) **Zuni Antirheumatic (External)** Infusion of whole plant used for muscle aches. (as *G. cf. sarothrae* 27:375) **Diaphoretic** Infusion of blossoms taken as a diaphoretic. **Diuretic** Infusion of blossoms taken as a diuretic for "obstinate cases." **Strengtheners** Infusion of blossoms taken to "make one strong in the limbs and muscles." (as *G. filifolia* 166:53) **Urinary Aid** Infusion of whole plant taken to increase strength for urinary retention. (as *G. cf. sarothrae* 27:375)

- **Food**—Tewa *Forage* Plant eaten by livestock. (as *G. longifolia* 138:56)
- **Fiber**—Comanche *Brushes & Brooms* Stems used to make brooms. (29:522)
- **Dye**—Navajo *Yellow Tops* used to make a yellow dye. (55:86)
- **Other**—Hopi *Ceremonial Items* Sprig attached to the paho (prayer emblem). (as *G. euthamiae* 56:15) Sprigs tied on prayer sticks during the December ceremonies. (as *G. longifolia* 138:56) Tied onto the prayer stick. (as *Solidago sarothrae* 190:168) **Decorations** Used as prayer stick decorations. (200:96) **Isleta Soap** Infusion of leaves used as pleasant and refreshing bath. (as *G. furfuracea* 100:31) **Jemez Insecticide** Plant chewed and juice spit upon bees to kill the insects. Plant placed upon a slow fire and smoke destroyed bees. (as *G. furfuracea* 44:23) **Keres, Western Insecticide** Chewed leaf juice had an intoxicating effect upon bees. (as *G. longifolia* 171:46) **Navajo Ceremonial Items** Leaves, grama grass, sagebrush, and unidentified leaves burned to charcoal for blackening ceremony. Wood ash and pitch used to cover the oak bull-roarer for the Female Shooting Life Chant. **Tools** Stems used for whirls when making fire by friction. (55:86) **Navajo, Kayenta Ceremonial Items** Plant placed on top of most ceremonial prayer sticks and figurines. (205:48) **Navajo, Ramah Ceremonial Items** Plant ash used as Evilway, Holyway, and Hand Tremblingway blackenings. Fresh branches used to make Evilway unravelers. Fresh branches used to make cactus prayer sticks for Chiricahua Windway and Enemyway prayer sticks. (191:51) **Tewa of Hano Ceremonial Items** Sprigs tied on prayer sticks during the December ceremonies. (as *G. longifolia* 138:56)

### *Gutierrezia* sp., Snakeweed

- **Drug**—Hopi *Gastrointestinal Aid* Plant used for disorders of the digestive system. (200:34) **Keresan Ceremonial Medicine and Emetic** Infusion of plant taken as a ceremonial emetic. (198:563)
- **Fiber**—Hualapai *Brushes & Brooms* Used as a utilitarian brush to remove stickers off prickly pear fruits and for sweeping the floor. (195:16)
- **Other**—Apache, Chiricahua & Mescalero *Ceremonial Items* Plant used in ceremonial contexts. (33:24) **Hualapai Ceremonial Items** Used as an important plant in rain ceremonies. (195:16)

### *Guzmania*, Bromeliaceae

#### *Guzmania* sp., Airplant

- **Other**—Seminole *Cooking Tools* Plant used as a water supply for cooking during the dry season. (169:472)

### *Gymnocarpium*, Dryopteridaceae, fern

#### *Gymnocarpium disjunctum* (Rupr.) Ching, Pacific Oakfern

- **Drug**—Abnaki *Other* Used as a demulcent. (as *Dryopteris disjuncta* 144:155)

#### *Gymnocarpium dryopteris* (L.) Newman, Western Oakfern

- **Other**—Okanagan-Colville *Water Indicator* Ferns considered to be a sign of water when traveling through the mountains. (188:18)

### *Gymnocladus*, Fabaceae

#### *Gymnocladus dioica* (L.) K. Koch, Kentucky Coffee Tree

- **Drug**—Dakota *Laxative* Infusion of root used as an enema and infallible remedy for constipation. **Stimulant** Pulverized root bark used as snuff to cause sneezing in comatose patient. (as *G. dioica* 70:89, 90) **Meskwaki Psychological Aid** Wax of pods "fed to a patient to cure him of lunacy." (as *G. dioica* 152:229) **Omaha Dietary Aid** Bark used as an appetizer. (as *G. dioica* 68:335) **Gynecological Aid** Powdered root mixed with water and given to women during protracted labor. **Hemostat** Root bark used for hemorrhages, especially from nose and during childbirth. **Kidney Aid** Root used "when kidneys failed to act." (as *G. canadensis* 58:584) **Laxative** Infusion of root used as an enema and infallible remedy for constipation. **Stimulant** Pulverized root bark used as snuff to cause sneezing in comatose patient. (as *G. dioica* 70:89, 90) **Tonic** Bark used as a tonic. (as *G. dioica* 68:335) **Oto Laxative** Infusion of root used as an enema and infallible remedy for constipation. **Pawnee Analgesic** Pulverized pod sniffed to cause sneezing for headaches. **Stimulant** Pulverized root bark used as snuff to cause sneezing in comatose patient. **Ponca Laxative** Infusion of root used as an enema and infallible remedy for constipation. **Stimulant** Pulverized root bark used as snuff to cause sneezing in comatose patient. **Winnebago Laxative** Infusion of root used as an enema and infallible remedy for constipation. **Stimulant** Pulverized root bark used as snuff to cause sneezing in comatose patient. (as *G. dioica* 70:89, 90)
- **Food**—Meskwaki *Beverage* Roasted, ground seeds boiled to make coffee. *Unspecified* Roasted seeds eaten. (as *G. dioica* 152:260) **Pawnee Unspecified** Roasted seeds eaten like chestnuts. **Winnebago Unspecified** Seeds pounded in a mortar and used for food. (as *G. dioica* 70:89)
- **Dye**—Dakota *Black* Root sometimes used with another component to make a black dye. The root was not very highly esteemed for making a dye and alone was considered useless, but was occasionally used with another component to make a black dye. (as *G. dioica* 70:89)
- **Other**—Winnebago *Toys & Games* Seeds used as counters or tally checks in gambling. (as *G. dioica* 70:89)

### *Habenaria*, Orchidaceae

#### *Habenaria odontopetala* Reichenb. f., Toothpetal False Reinorchid

- **Drug**—Seminole *Strengtheners* Plant used to make a medicine and given to students in medical training to make the body strong. (as *H. strictissima* var. *odontopetala* 169:102)

### *Hackelia*, Boraginaceae

#### *Hackelia diffusa* (Lehm.) I. M. Johnston, Spreading Stickseed

- **Food**—Thompson *Forage* Plant eaten by sheep. The plant was not

used by people as it was considered a noxious weed because the burred fruits stuck to fur and clothing. (187:192)

***Hackelia floribunda*** (Lehm.) I. M. Johnston, Manyflower Stickseed

- **Drug**—Isleta *Poison* Prickles from fruit caused skin irritation and swelling. (as *Lappula floribunda* 100:33) **Navajo, Ramah** *Orthopedic Aid* Root of this or any poisonous plant used for serious injury such as fracture. *Poison* Plant considered poisonous. (191:40, 41)
- **Other**—Navajo, Ramah *Good Luck Charm* Leaves and pollen used various ways for good luck in gambling and trading. (191:40, 41)

***Hackelia hispida*** (Gray) I. M. Johnston **var. hispida**, Showy Stickseed

- **Drug**—Thompson *Unspecified* Plant used medicinally for unspecified purpose. (as *Lappula hispida* 164:474)

***Hackelia virginiana*** (L.) I. M. Johnston, Beggarslice

- **Drug**—Cherokee *Cancer Treatment* Bruised root with bear oil used as ointment for cancer. *Dermatological Aid* Compound decoction of root given for itch. (80:25) Decoction of roots used as a bath and taken for itching genitals. (as *Lappula virginiana* 177:52) *Kidney Aid* Decoction used for kidney trouble. *Love Medicine* Used for love charms. *Psychological Aid* Used for “good memory.” (80:25)
- **Other**—Iroquois *Insecticide* Plants used around potatoes to keep bugs off. (as *Lappula virginiana* 87:420)

**Haemodoraceae**, see *Lachnanthes*

***Halesia***, Styracaceae

***Halesia carolina*** L., Carolina Silverbell

- **Fiber**—Cherokee *Building Material* Wood used for lumber. (80:55)

**Haloragaceae**, see *Myriophyllum*

***Halosaccion***, Palmariaceae, alga

***Halosaccion glandiforme*** (Gmelin) Ruprecht, Bladder Seaweed

- **Drug**—Hesquiat *Unspecified* Seaweed used as a medicine. (185:24) Nitinaht *Reproductive Aid* Sacs chewed by newly wed women wanting their first baby to be a boy. (186:51)

**Hamamelidaceae**, see *Hamamelis*, *Liquidambar*

***Hamamelis***, Hamamelidaceae

***Hamamelis virginiana*** L., American Witchhazel

- **Drug**—Cherokee *Analgesic* Infusion taken for periodic pains. *Cold Remedy* Infusion taken for colds. *Dermatological Aid* Infusion used as wash for sores and skinned places and leaves rubbed on scratches. *Febrifuge* Compound infusion taken for fevers. *Gynecological Aid* Infusion taken for periodic pains. *Throat Aid* Infusion taken for sore throat. *Tuberculosis Remedy* Infusion of bark taken for tuberculosis. (80:62) **Chippewa** *Dermatological Aid* Infusion of inner bark used as lotion for skin troubles. *Emetic* Inner bark used, especially in cases of poisoning, as an emetic. *Eye Medicine* Infusion of inner bark used as a wash for sore eyes. (71:131) **Iroquois** *Antidiarrheal* Infusion of twig bark taken for bloody dysentery. *Antiemetic* Poultice of branches applied to body part affected by colds and heaves. (87:346) *Antirheumatic (Internal)* Compound used for arthritis. (87:348) *Blood Medicine* Compound decoction of tips and sprouts taken as a blood puri-

fier. (87:347) *Cold Remedy* Decoction of young branches taken or poultice applied for colds. *Cough Medicine* Decoction of young branches taken as medicine for coughs and colds. (87:348) *Misc. Disease Remedy* Infusion of twig bark taken for cholera. (87:346) *Orthopedic Aid* Decoction of shoots taken and poultice of bark used for bruises. *Panacea* Compound decoction of roots taken as a panacea. (87:347) *Pulmonary Aid* Decoction of bark taken for lung troubles or for spots and scars on lungs. *Respiratory Aid* Decoction of new growth twigs taken for chest colds and asthma. (87:348) *Toothache Remedy* Plant used as toothache medicine. *Tuberculosis Remedy* Compound decoction of roots or bark taken for consumption. (87:346) *Venereal Aid* Compound decoction of bark taken for venereal disease. (87:347) **Menominee** *Ceremonial Medicine* Seeds used as the sacred bead in the medicine ceremony. *Orthopedic Aid* Decoction rubbed on legs during sports, to keep legs limber. Infusion of twigs used to “cure a lame back.” (151:37) **Other** Dried seeds used in a test to tell whether sick person would recover. (54:120) **Mohegan** *Dermatological Aid* Infusion of twigs and leaves used as a lotion for cuts, bruises, and insect bites. (176:72, 130) **Potawatomi** *Orthopedic Aid* Twigs used to create steam in the sweat bath for sore muscles. (154:59, 60)

- **Food**—Cherokee *Beverage* Leaves and twigs used to make tea. (126:44)

- **Other**—Mohegan *Water Indicator* Crotched sticks used to locate underground water or buried treasure. (176:87)

***Haplopappus***, Asteraceae

***Haplopappus* sp.**

- **Drug**—Paiute *Antidiarrheal* Infusion of plant taken for diarrhea. *Gastrointestinal Aid* Infusion of plant taken for stomach troubles. (167:317)
- **Food**—Paiute *Unspecified* Species used for food. (as *Haplopappus* 167:243)

***Hastingsia***, Liliaceae

***Hastingsia alba*** (Dur.) S. Wats., White Rushlily

- **Other**—Karok *Toys & Games* Leaves put over the teeth to make a snapping sound for amusement. (as *Schoenolirion album* 148:380)

***Hazardia***, Asteraceae

***Hazardia squarrosa*** (Hook. & Arn.) Greene **var. squarrosa**, Sawtooth Goldenbush

- **Drug**—Diegueño *Antirheumatic (External)* Decoction of plant used for bathing the aches and pains of the body. (as *Aplopappus squarrosus* ssp. *grindeloides* 88:220)

***Hedeoma***, Lamiaceae

***Hedeoma drummondii*** Benth., Drummond’s Falsepennyroyal

- **Drug**—Navajo *Analgesic* Plant used for pain. (55:72) Navajo, Ramah *Misc. Disease Remedy* Infusion of plant taken in large quantities for influenza. (191:41)
- **Food**—Lakota *Soup* Leaves used to make soup. (139:49)

***Hedeoma hispida*** Pursh, Rough Falsepennyroyal

- **Drug**—Dakota *Cold Remedy* Infusion of leaves used for colds. *Dietary Aid* Infusion of leaves used as a flavor and tonic appetizer in diet for the sick. (70:112)

***Hedeoma nana*** (Torr.) Briq., Falsepennyroyal

- **Drug**—Navajo *Ceremonial Medicine* Used by assistant during the War Dance. At noon of the third day of the War Dance, the body of the patient was painted black. Medicine was then made of yarrow, red juniper, pine needles, and meadow rue, which were previously pulverized, then thrown into a bowl of water and stirred. This was then dabbed all over the patient who sipped the mixture before bathing his whole body in it. Foxtail grass and mock pennyroyal were then chewed by the assistant and sputtered on the patient. (55:72) Shoshoni *Cathartic* Decoction of plant taken as a physic. *Gastrointestinal Aid* Decoction of plant taken for indigestion. (180:83)
- **Food**—Apache, Chiricahua & Mescalero *Beverage* Leaves and young stems boiled to make a nonintoxicating beverage. (33:53) *Spice* Leaves used as flavoring. (33:47) *Isleta Spice* Leaves chewed for the mint flavor. (100:31) *Unspecified* Leaves chewed for their pleasing flavor. (32:30)
- **Other**—Keres, Western *Soap* Infusion of plant used as a hair wash and body bath. (171:47)

***Hedeoma pulegioides*** (L.) Pers., American Falsepennyroyal

- **Drug**—Catawba *Cold Remedy* Decoction of roots used for colds. (157:188) Decoction of roots taken for colds. (177:53) Cherokee *Abortifacient* Infusion taken for “obstructed menses.” *Analgesic* Poultice of leaves used for headaches. *Antidiarrheal* Infusion taken for “flux” and leaves rubbed on body as insect repellent. *Cold Remedy* Taken for colds. *Cough Medicine* Taken for coughs. *Diaphoretic* Decoction taken as a diaphoretic. *Expectorant* Decoction taken as an expectorant. *Febrifuge* Infusion taken for fever. *Pulmonary Aid* Taken for whooping cough. *Stimulant* Decoction taken as a stimulant. *Toothache Remedy* Beaten leaves held in mouth for toothache. (80:48) Chickasaw *Eye Medicine* Cold infusion of roots applied to forehead for itching eyes. (177:53) Delaware *Gastrointestinal Aid* Infusion of leaves used for stomach pains. (176:35) Delaware, Oklahoma *Analgesic* and *Gastrointestinal Aid* Infusion of leaves taken for stomach pains. (175:29, 76) Iroquois *Analgesic* Infusion of plants taken for headaches. (87:426) Mahuna *Antidiarrheal* Plant used for dysentery. (140:7) Mohegan *Gastrointestinal Aid* Infusion of plant taken to warm the stomach. (174:265) Infusion of leaves said to be “warming and good for stomach.” (176:72) Nanticoke *Diaphoretic* Whole plant used as a sudorific. (175:58, 84) *Kidney Aid* Plant considered an excellent remedy for kidney troubles. *Liver Aid* Plant considered an excellent remedy for liver troubles. (175:58) Ojibwa *Febrifuge* Infusion of plant taken for cold fevers. *Gastrointestinal Aid* Infusion of plant taken for upset stomachs. (5:2274) Rappahannock *Gynecological Aid* Infusion of fresh or dried plants taken for menstruation pains. (161:33) Shinnecock *Analgesic* Infusion of leaves taken for pains. (30:121)

- **Other**—Cherokee *Insecticide* Infusion taken for “flux” and leaves rubbed on body as insect repellent. (80:48) Rappahannock *Insecticide* Leaves dried and used indoors for fleas. (161:33)

***Hedeoma* sp.**, Pennyroyal

- **Drug**—Dakota *Cold Remedy* Infusion of plants taken for colds. *Dietary Aid* and *Tonic* Infusion of plants taken as a tonic appetizer in diet of sick. (69:363)

***Hedophyllum***, Laminariaceae, alga

***Hedophyllum sessile*** (C. Agardh) Setchell

- **Food**—Nitinaht *Unspecified* Plants eaten with herring spawn. (186:51)
- **Other**—Nitinaht *Hunting & Fishing Item* Fronds used to catch herring spawn. (186:51)

***Hedysarum***, Fabaceae

***Hedysarum alpinum*** L., Alpine Sweetvetch

- **Food**—Alaska Native *Unspecified* Roots eaten raw, boiled, or roasted. (85:121) Eskimo, Arctic *Forage* Root tubers eaten by brown and black bears and meadow mice. *Vegetable* Tubers located in mice “caches” by specially trained dogs and eaten. (128:30) Eskimo, Inupiat *Frozen Food* Roots frozen for future use. *Vegetable* Roots, always with some kind of oil, eaten raw or cooked. *Winter Use Food* Roots stored in buried sacks for winter use. Roots stored in seal oil, fish oil, or bear fat for winter use. (98:115) Tanana, Upper *Beverage* Fried roots, with or without grease, used to make tea. *Vegetable* Roots eaten raw, roasted over a fire, fried, or boiled. Roots dipped in or mixed with grease and eaten. *Winter Use Food* Used in the winter during times of food shortage. A large fire was set over an area where the Indians knew the roots to be abundant. By thawing the ground this way, they were able to dig them out. Roots stored, with or without grease, in a birch bark basket in an underground cache. (102:14)

***Hedysarum boreale*** Nutt., Northern Sweetvetch

- **Food**—Eskimo, Arctic *Forage* Roots eaten by the brown bears, meadow mice, and lemmings. *Vegetable* Roots located in mice “caches” by dogs and eaten. (127:1)

***Hedysarum boreale* ssp. *mackenziei*** (Richards.) Welsh, Mackenzie's Sweetvetch

- **Drug**—Alaska Native *Poison* Plant considered poisonous. (as *H. mackenzii* 85:155) Eskimo, Inupiat *Poison* Roots considered poisonous. (as *H. mackenzii* 98:142) Tanana, Upper *Poison* Plant considered poisonous. (as *H. mackenzii* 102:14) Ute *Unspecified* Roots used as medicine. (as *H. mackenzii* 38:35)
- **Food**—Tanana, Upper *Unspecified* Roots used for food. (as *H. mackenzii* 77:28) Roots eaten fresh and boiled. *Winter Use Food* Fresh roots stored underground in brush-lined caches for future use. (as *H. mackenzii* 115:36)

***Hedysarum* sp.**

- **Food**—Eskimo, Alaska *Vegetable* Fleshy roots used the same as potatoes. (4:715)

***Helenium***, Asteraceae

***Helenium amarum*** (Raf.) H. Rock **var. *amarum***, Yellowdicks

- **Drug**—**Koasati** *Dermatological Aid* Decoction of entire plant used as a sweat bath for swellings. *Herbal Steam* Decoction of entire plant used as a sweat bath for dropsy and swellings. *Kidney Aid* Decoction of entire plant used as a sweat bath for dropsy. (as *H. tenuifolium* 177:62)

### ***Helonium autumnale*** L., Common Sneezeweed

- **Drug**—**Cherokee** *Gynecological Aid* Compound infusion of roots given to prevent menstruation after childbirth. *Nose Medicine* Powdered, dry leaves used to induce sneezing. (80:56) **Comanche** *Febri-fuge* Infusion of stems used as a wash for fever. (29:522) **Mahuna** *Respiratory Aid* Plant used for catarrh. (140:24) **Menominee** *Alterative* Compound infusion of flower heads taken “for its alterative effects.” (151:30, 31) *Analgesic* Compound of dried flowers applied to small cuts made on temples for headache. Snuff of compounded flowers used to cause sneezing for headaches. (54:129) *Cold Remedy* Simple or compound snuff of flowers caused sneezing to clear a stuffy head cold. (151:30, 31) **Meskwaki** *Cold Remedy* Disk florets used as snuff for colds or catarrh. *Gastrointestinal Aid* Infusion of florets taken for stomach catarrh. *Poison* Plant known to be poisonous to cattle. *Respiratory Aid* Snuff of dried disk florets inhaled for catarrh or colds. (152:215)

### ***Helonium microcephalum*** DC., Littlehead Tarweed

- **Drug**—**Comanche** *Gynecological Aid* Pulverized flowers inhaled to cause sneezing and expulsion of afterbirth. (29:522) *Heart Medicine* Flowers dried, crushed, and inhaled for “heart flutter.” *Hypotensive* Flowers dried, crushed, and inhaled for low blood pressure. (99:4) *Respiratory Aid* Pulverized flowers inhaled to cause sneezing and clear nasal passages. (29:522) Flowers dried, crushed, and inhaled for sinus congestion. (99:4)

### ***Helonium puberulum*** DC., Rosilla

- **Drug**—**Costanoan** *Cold Remedy* Dried, powdered plant rubbed on the forehead and nose for colds. *Dermatological Aid* Dried, powdered plant applied to wounds. (21:26) **Mendocino Indian** *Veneral Aid* Plant used for venereal diseases. (41:394)
- **Food**—**Mendocino Indian** *Unspecified* Leaves and heads eaten raw. (41:394)
- **Other**—**Costanoan** *Snuff* Dried, powdered plant used as a snuff to induce sneezing. (21:26)

### ***Helianthella***, Asteraceae

#### ***Helianthella californica*** Gray, California Helianthella

- **Food**—**Yana** *Unspecified* Flowers cooked and eaten. (147:251)

#### ***Helianthella parryi*** Gray, Parry’s Dwarfsunflower

- **Drug**—**Navajo, Ramah** *Dermatological Aid* Decoction of root taken and used as a lotion on arrow or bullet wound, a “life medicine.” *Panacea* Decoction of root used as “life medicine,” especially for arrow or bullet wounds. (191:51)

#### ***Helianthella uniflora*** (Nutt.) Torr. & Gray, Oneflower Helianthella

- **Drug**—**Paiute** *Dermatological Aid* Hot poultice of mashed root applied for swellings and sprains. *Orthopedic Aid* Poultice of mashed root applied for swellings and sprains. **Shoshoni** *Analgesic* Infusion of root used as a wash or compress for headaches. *Antirheumatic*

(*External*) Poultice of mashed root applied for rheumatism of the shoulder or knee. (180:83, 84)

### ***Helianthemum***, Cistaceae

#### ***Helianthemum canadense*** (L.) Michx., Longbranch Frostweed

- **Drug**—**Cherokee** *Kidney Aid* Infusion of leaf taken for kidneys. (80:35) **Delaware** *Throat Aid* Poultice of roots applied to sore throats. (176:32) **Delaware, Oklahoma** *Analgesic* Infusion of plant taken and poultice of root applied for sore throat. (175:27, 76) *Tonic* Plant used as a “strengthening” medicine. (175:76)

### ***Helianthus***, Asteraceae

#### ***Helianthus annuus*** L., Common Sunflower

- **Drug**—**Apache, White Mountain** *Snakebite Remedy* Poultice of crushed plants applied to snakebites. (136:158) **Dakota** *Analgesic* Infusion of flowers used for chest pains. (69:369) *Pulmonary Aid* Decoction of flower heads taken for pulmonary troubles. (70:130) **Gros Ventre** *Ceremonial Medicine* Oil from seeds used “to lubricate or paint the face or body.” *Stimulant* Dried, powdered seeds mixed into cakes and taken on war party to combat fatigue. (19:12, 13) **Hopi** *Dermatological Aid* Plant used as a “spider bite medicine.” (200:32, 96) **Jemez** *Dermatological Aid* Juice applied to cuts. (44:23) **Kiowa** *Oral Aid* Coagulated sap chewed, by the elders, to diminish thirst. (192:60) **Mandan** *Ceremonial Medicine* Oil from seeds used “to lubricate or paint the face or body.” *Stimulant* Dried, powdered seeds mixed into cakes and taken on war party to combat fatigue. (19:12, 13) **Navajo** *Ceremonial Medicine* Plant, double bladderpod, sumac, and mistletoe used in the liniment for the War Dance. (55:87) *Dietary Aid* Seeds eaten to give appetite. (90:152) **Navajo, Kayenta** *Ceremonial Medicine* Plant used for sun sand-painting ceremony. *Disinfectant* Plant used for prenatal infection caused by solar eclipse. *Pediatric Aid* Plant used for prenatal infection caused by solar eclipse. (205:48) **Navajo, Ramah** *Dermatological Aid* Moxa of pith used on scratched wart for removal. *Other* Salve of pulverized seed and root used on injury from horse falling on person. (191:51) **Paiute** *Antirheumatic (External)* Decoction of root used as a warm wash for rheumatism. (180:84) **Pawnee** *Gynecological Aid* Dry seed compound eaten by pregnant nursing women to protect suckling child. (70:130) **Pima** *Anthelmintic* Poultice of warm ashes applied to stomach for worms. *Febri-fuge* Decoction of leaves taken for high fevers. *Veterinary Aid* Decoction of leaves used as a wash for horses with sores caused by screw-worms. (47:103) **Ree** *Ceremonial Medicine* Oil from seeds used “to lubricate or paint the face or body.” *Stimulant* Dried, powdered seeds mixed into cakes and taken on war party to combat fatigue. (19:12, 13) **Thompson** *Dermatological Aid* Powdered leaves alone or in ointment used on sores and swellings. (as *H. lenticularis* 164:469) **Zuni** *Snakebite Remedy* Fresh or dried root chewed by medicine man before sucking snakebite and poultice applied to wound. (27:375) Compound poultice of root applied with much ceremony to rattle-snake bite. (166:53, 54)
- **Food**—**Apache, Chiricahua & Mescalero** *Bread & Cake* Seeds ground, sifted, made into dough, and baked on hot stones. *Sauce & Relish* Seeds ground into flour and used to make a thick gravy. (33:48) **Apache, White Mountain** *Staple* Seeds used to make flour. (136:158) **Cahuilla** *Staple* Dried seeds ground and mixed with flour from other

seeds. (15:76) **Costanoan Unspecified** Seeds used for food, usually not in pinole. (21:254) **Gosiute Cooking Agent** Seeds a highly prized source of oil. *Unspecified* Seeds a highly prized source of food. (39:371) **Gros Ventre Staple** Powdered seed meal boiled or made into cakes with grease. *Unspecified* Seeds eaten raw. (19:12) **Havasupai Dried Food** Seeds sun dried and stored for winter use. (197:248) *Preserves* Seeds parched, ground, kneaded into seed butter, and eaten with fruit drinks or spread on bread. *Staple* Seeds ground and eaten as a ground or parched meal. (197:67) **Hopi Fodder** Used as an important food for summer birds. (200:96) **Kawaiisu Staple** Roasted seeds pounded, ground into a meal, and eaten dry. (206:34) **Kiowa Unspecified** Seeds ground into a paste-like consistency and eaten. (192:60) **Luiseño Unspecified** Seeds used for food. (155:228) **Mandan Staple** Powdered seed meal boiled or made into cakes with grease. *Unspecified* Seeds eaten raw. (19:12) **Mohave Staple** Seeds winnowed, parched, ground, and eaten as pinole. *Winter Use Food* Seeds stored in gourds or ollas. (37:187) **Montana Indian Bread & Cake** Seeds dried, powdered, and grease added to make cakes. *Porridge* Seeds dried, powdered, and boiled to make gruel. (82:30) **Navajo Bread & Cake** Seeds mixed with corn, ground into a meal, and made into cakes. (55:87) Seeds ground and made into bread and dumplings. *Porridge* Seeds ground and made into gruel. (165:223) **Navajo, Ramah Fodder** Used for livestock feed. *Unspecified* Roasted, ground seeds made into cakes. (191:51) **Paiute Porridge** Roasted, ground seeds made into flour and used to make mush. (111:117) *Staple* Seeds parched, ground, and eaten as meal. (104:98) *Winter Use Food* Roasted, ground seeds made into flour and stored for winter use. (111:117) **Paiute, Northern Staple** Seeds ground into a meal and eaten. (59:47) **Pima Candy** Inner pulp of stalks used as chewing gum. Petals used by children as chewing gum. *Staple* Seeds ground into meal and used as food. *Unspecified* Seeds eaten raw or roasted. (47:103) **Pueblo Unspecified** Seeds used for food. (32:30) **Ree Staple** Powdered seed meal boiled or made into cakes with grease. *Unspecified* Seeds eaten raw. (19:12) **Sanpoil & Nespelem Dried Food** Dried roots stored for winter use. (131:100) *Unspecified* Stems eaten raw. (131:103) Seeds parched until brown, pulverized, and eaten. *Winter Use Food* Seeds parched until brown, pulverized, and stored in salmon skins. (131:104)

- **Fiber—Jemez Building Material** Sunflower mixed with clay, to hold the particles together, and used for plaster. (44:23)
- **Dye—Navajo Red** Outer seed coatings boiled and used as a dull, dark red dye. (55:87)
- **Other—Hopi Decorations** Petals dried, ground, mixed with yellow cornmeal, and used as a face powder in women's basket dance. (200:96) **Isleta Ceremonial Items** Pith used to light the ceremonial cigarettes. (100:31) **Jemez Decorations** Flowers used by the Koshares as a decoration for dances. *Soap* Seeds boiled and water used to wash in. (44:23) **Navajo Ceremonial Items** Hollow stalk used in the illusion of swallowing the arrow during the Mountain Chant. Stalk made into flute used in an ancient custom of timing the grinding of the corn at the War Dance. *Hunting & Fishing Item* Stalks used to make bird snares. Bird snares were made of stalks in which were drilled two small holes. In one of these holes was inserted a twig of greasewood and at the end of this was fastened a sliding loop of horsehair. The greasewood twig was then bent in a bow and the loop passed through the upper hole, across which was laid a small piece of reed. The small

stick below the loop was placed so that one end rested on the rim of the stalk and the other end on the reed. When a bird alighted on this, the small piece of reed was disturbed and the greasewood twig straightened, drawing the horsehair loop with the bird's foot in it into the stalk. (55:87) **Navajo, Ramah Ceremonial Items** Stem used to make Holyway Prayer stick. (191:51) **Pima Lighting** Inner pulp of dried stalks strung and used to make quick-burning candles. (47:103) **Tewa Smoking Tools** Dried stalks made into fire sticks and used to light cigarettes. (138:56) **Zuni Ceremonial Items** Blossoms used ceremonially for anthropic worship. (166:93)

***Helianthus anomalus*** Blake, Western Sunflower

- **Drug—Hopi Dermatological Aid** Plant used as a "spider medicine." (200:32, 96)
- **Food—Hopi Fodder** Used as an important food for summer birds. (200:96)
- **Other—Hopi Decorations** Petals dried, ground, mixed with yellow cornmeal, and used as a face powder in women's basket dance. (200:96)

***Helianthus bolanderi*** Gray, Serpentine Sunflower

- **Food—Paiute Unspecified** Species used for food. (167:243)

***Helianthus cusickii*** Gray, Cusick's Sunflower

- **Drug—Paiute Heart Medicine** Infusion of roots taken for heart troubles. *Tuberculosis Remedy* Infusion of roots taken for tuberculosis. (111:116) **Shasta Analgesic** Pounded roots used in a steam bath for internal pain. *Carminative* Decoction of smashed roots taken for gas. *Dermatological Aid* Poultice of roots applied to swellings. *Disinfectant* Root burned in the house after a death. *Febrifuge* Poultice of roots applied for chills and fever. Root burned in the house for long, slow sickness with chills and fever. *Herbal Steam* Pounded roots used in a steam bath for internal pain. *Preventive Medicine* Roots burned to keep away disease. (93:340)
- **Food—Paiute, Northern Unspecified** Roots peeled and eaten raw. (59:43)

***Helianthus decapetalus*** L., Thinleaf Sunflower

- **Drug—Meskwaki Dermatological Aid** Poultice of macerated root applied to sores of long standing. (152:215)

***Helianthus giganteus*** L., Giant Sunflower

- **Drug—Cherokee Nose Medicine** Dry powder sprinkled to induce sneezing. (80:58)

***Helianthus grosseserratus*** Martens, Sawtooth Sunflower

- **Drug—Meskwaki Burn Dressing** Poultice of blossoms used for burns. (152:215)

***Helianthus maximiliani*** Schrad., Maximilian Sunflower

- **Food—Sioux Unspecified** Tubers were dug and eaten. (19:13)

***Helianthus niveus* ssp. *canescens*** (Gray) Heiser, Showy Sunflower

- **Drug—Keres, Western Hemostat** Stem juice applied to open bleeding wounds. (as *H. canus* 171:47)

***Helianthus nuttallii*** Torr. & Gray, Nuttall's Sunflower

- **Drug—Navajo Gastrointestinal Aid** Infusion of dried, crushed leaves taken for stomach troubles. (55:87)

***Helianthus occidentalis*** Riddell, Fewleaf Sunflower

- **Drug**—Ojibwa, South *Dermatological Aid* Poultice of crushed root applied to “bruises and contusions.” (91:199)

***Helianthus petiolaris*** Nutt., Prairie Sunflower

- **Drug**—Hopi *Dermatological Aid* Plant used as a “spider medicine.” (200:32, 96) *Other* Used as a spider medicine. (42:324) **Navajo, Ramah Hunting Medicine** Cold infusion of flowers sprinkled on clothing for good luck in hunting. **Panacea** Cold infusion of whole plant used as “life medicine.” (191:52) **Thompson Dermatological Aid** Powdered leaves alone or in ointment used on sores and swellings. (164:469)
- **Food**—Havasupai *Dried Food* Seeds sun dried and stored for winter use. (197:248) *Preserves* Seeds parched, ground, kneaded into seed butter, and eaten with fruit drinks or spread on bread. *Staple* Seeds ground and eaten as a ground or parched meal. (197:67) **Hopi Fodder** Used as an important food for summer birds. (200:96)
- **Other**—Hopi *Ceremonial Items* Dried petals ground and mixed with cornmeal to make yellow face powder for women’s basket dance. *Decorations* Whole plant used in the decoration of flute priests in the Flute ceremony. (42:324) Petals dried, ground, mixed with yellow cornmeal, and used as a face powder in women’s basket dance. (200:96) *Season Indicator* Amount of flowers present used as a sign that there will be copious rains and abundant harvest. (42:324)

***Helianthus* sp.**, Sunflower

- **Drug**—Cheyenne *Ceremonial Medicine* Flower heads used in the Massaum ceremony. (83:21)
- **Food**—Apache, Western *Bread & Cake* Seeds ground, mixed with cornmeal, put into hot water and eaten as a pasty bread. *Candy* Seeds parched and ground with mescal to taste like candy. *Porridge* Seeds made into meal, mixed with cornmeal, and boiled with salt into a cereal. *Special Food* Seeds ground and used by army scouts as rations. (26:184) **Havasupai Bread & Cake** Seeds ground, made into small cakes, and baked for a short time. (197:65) **Hopi Dried Food** Seeds dried, cracked, and eaten like nuts after dyes were obtained from them. (200:97) **Hualapai Unspecified** Seeds used for food. *Winter Use Food* Seeds stored for winter use. (195:2) **Thompson Unspecified** Seeds eaten in quantities, especially by children. (164:492)
- **Dye**—Hopi *Black* Seeds used to make a black textile and basketry dye. *Purple* Seeds used to make a purple dye for basketry and textiles. (200:97) **Hualapai Black** Seeds used to make a black dye. *Purple* Seeds used to make a purple dye. (195:2)
- **Other**—Hopi *Ceremonial Items* Seeds used to make a ceremonial body paint. (200:97)

***Helianthus strumosus*** L., Paleleaf Woodland Sunflower

- **Drug**—Iroquois *Anthelmintic* Decoction of roots given to children and adults with worms. *Pediatric Aid* Decoction of roots given to children with worms. (87:469) **Meskwaki Pulmonary Aid** Infusion of root taken for lung troubles. (152:215)

***Helianthus tuberosus*** L., Jerusalem Artichoke

- **Food**—Cherokee *Vegetable* Root used as a vegetable food. (126:34) **Cheyenne Unspecified** Species used for food. (83:45) **Chippewa Unspecified** Roots eaten raw like a radish. (53:319) **Dakota Unspecified** Tubers boiled and sometimes fried after boiling for food. Overuse of these tubers was said to cause flatulence. (69:369) **Hopi Unspecified**

Tubers eaten in the spring. (200:97) **Huron Starvation Food** Roots used with acorns during famine. (3:63) **Iroquois Unspecified** Roots used raw, boiled, or fried. (196:120) **Lakota Starvation Food** Dried and eaten during famines. *Unspecified* Eaten fresh. (106:47) Stalks and tubers used for food. (139:38) **Malecite Unspecified** Species used for food. (160:6) **Micmac Unspecified** Tubers eaten. (159:258) **Omaha Fruit** Fruits eaten raw. (58:341) *Unspecified* Tubers used as a common food article. (68:325) Noncultivated tubers eaten raw, boiled, or roasted. **Pawnee Unspecified** Noncultivated, raw tubers used for food. **Ponca Unspecified** Noncultivated tubers eaten raw, boiled, or roasted. (70:131) **Potawatomi Unspecified** Roots gathered for food-stuffs. (154:98) **Winnebago Unspecified** Noncultivated tubers eaten raw, boiled, or roasted. (70:131)

***Heliomeris***, Asteraceae***Heliomeris longifolia* var. *annua*** (M. E. Jones) Yates, Longleaf Falsegoldeneye

- **Drug**—Navajo, Ramah *Panacea* Plant used as “life medicine.” (as *Viguiera annua* 191:54)
- **Food**—Navajo, Ramah *Fodder* Used for sheep and goat feed. (as *Viguiera annua* 191:54)

***Heliomeris longifolia*** (Robins. & Greenm.) Cockerell var. ***longifolia***, Longleaf Falsegoldeneye

- **Drug**—Navajo, Ramah *Panacea* Plant used as “life medicine.” (as *Viguiera longifolia* 191:54)
- **Food**—Navajo, Ramah *Fodder* Used for sheep feed. (as *Viguiera longifolia* 191:54)

***Heliomeris multiflora*** Nutt., Showy Goldeneye

- **Food**—Gosiute *Unspecified* Seeds formerly used for food. (as *Gymnolomia multiflora* 39:371)

***Heliomeris multiflora*** Nutt. var. ***multiflora***, Showy Goldeneye

- **Drug**—Navajo, Ramah *Witchcraft Medicine* Plant designated as a witchcraft plant. (as *Viguiera multiflora* 191:54)
- **Food**—Navajo, Ramah *Fodder* Used for sheep and deer feed. (as *Viguiera multiflora* 191:54)

***Heliopsis***, Asteraceae***Heliopsis helianthoides* var. *scabra*** (Dunal) Fern., Smooth Oxeye

- **Drug**—Chippewa *Stimulant* Decoction of dried root or chewed fresh root spit on limbs as stimulant. (as *H. scabra* 53:364) **Meskwaki Pulmonary Aid** Root used for lung troubles. (as *H. scabra* 152:215)

***Heliotropium***, Boraginaceae***Heliotropium convolvulaceum*** (Nutt.) Gray, Phlox Heliotrope

- **Food**—Navajo, Kayenta *Porridge* Seeds made into mush and used for food. (205:40)

***Heliotropium curassavicum*** L., Salt Heliotrope

- **Drug**—Paiute *Antidiarrheal* Plant used as a diarrhea medicine. (167:317) *Diuretic* Decoction of plant or roots taken in cases of “retention of urine.” *Emetic* Decoction of root taken as an emetic. *Throat Aid* Decoction of root gargled for sore throat. (180:84, 85) **Pima Dermatological Aid** Poultice of dried, pulverized root applied to sores and

wounds. (146:79) **Shoshoni Diuretic** Decoction of plant or roots taken in cases of "retention of urine." **Emetic** Decoction of root taken as an emetic. **Misc. Disease Remedy** Decoction of plant tops taken to aid in "bringing out" measles. **Throat Aid** Decoction of root gargled for sore throat. **Venereal Aid** Decoction of plant taken for venereal disease. (180:84, 85) **Tubatulabal Antidiarrheal** Decoction of entire plant taken for bloody flux. (193:59)

- **Food**—**Tubatulabal Unspecified** Seeds used extensively for food. (193:15)

**Helvellaceae**, see *Morchella*

## **Hemizonia**, Asteraceae

**Hemizonia clevelandii** Greene, Cleveland's Tarweed

- **Food**—**Pomo Staple** Seeds used to make pinoles. (11:86)

**Hemizonia corymbosa** (DC.) Torr. & Gray, Coastal Tarweed

- **Food**—**Costanoan Staple** Seeds eaten as a pinole. (21:254)
- **Other**—**Costanoan Hunting & Fishing Item** Foliage burned to drive ground squirrels from burrows. (21:254)

**Hemizonia fasciculata** (DC.) Torr. & Gray, Clustered Tarweed

- **Food**—**Cahuilla Starvation Food** Whole plant, including the seeds, used as a famine plant. (15:77)

**Hemizonia fitchii** Gray, Fitch's Tarweed

- **Food**—**Miwok Unspecified** Seeds used to make mush. (as *Centromadia fitchii* 12:153)

**Hemizonia luzulifolia** DC., Hayfield Tarweed

- **Food**—**Mendocino Indian Staple** Seeds used as an important source of pinole. (41:394) **Pomo Staple** Seeds used to make pinoles. (11:86)

**Hemizonia sp.**, Tarweed

- **Food**—**Wintoon Staple** Seeds used to make pinole. (117:274)

## **Hepatica**, Ranunculaceae

**Hepatica nobilis var. acuta** (Pursh) Steyermark, Sharplobe Hepatica

- **Drug**—**Cherokee Analgesic** Infusion of plant taken as an emetic for abdominal pains. (as *H. acutiloba* 177:22) **Breast Treatment** Compound used for swollen breasts. (as *H. acutiloba* 80:38) **Emetic** Infusion of plant taken as an emetic for abdominal pains. (as *H. acutiloba* 177:22) **Gastrointestinal Aid** Compound decoction used for poor digestion. (as *H. acutiloba* 80:38) Infusion of plant taken as an emetic for abdominal pains. (as *H. acutiloba* 177:22) **Laxative** Infusion used as a laxative. **Liver Aid** Infusion used for the liver. (as *H. acutiloba* 80:38) **Iroquois Analgesic** Decoction of plants taken by pregnant women with side or labor pains. **Blood Medicine** Plant used as a blood purifier. **Contraceptive** Infusion of plants taken to prevent conception. **Gynecological Aid** Compound used for labor pains in parturition. Decoction of plants taken by middle-aged women to induce childbirth, and by pregnant women for sore abdomen or side pains. **Orthopedic Aid** Compound decoction of plants taken for stiff muscles. **Other** Compound decoction of roots given to children with "summer complaint." Roots used to tell fortune. **Pediatric Aid** Compound decoction of roots given to children with "summer complaint." (87:328) **Pulmonary Aid** Infusion of whole plant and another

plant taken by forest runners with shortness of breath. (as *H. acutiloba* 141:42) **Witchcraft Medicine** "Chewed by women to bewitch men and make them crazy by affecting their hearts." (87:328) **Menominee Gynecological Aid** Compound containing root used for female maladies, especially leukorrhea. (as *H. acutiloba* 151:48, 49) **Meskwaki Eye Medicine** and **Other** Infusion of root taken and used as a wash for twisted mouth or crossed eyes. (as *H. acutiloba* 152:239)

**Hepatica nobilis var. obtusa** (Pursh) Steyermark, Roundlobed Hepatica

- **Drug**—**Chippewa Abortifacient** Decoction of roots taken for amenorrhea. (as *H. triloba* 71:129) **Anticonvulsive** Decoction of root taken, especially by children, for convulsions. (as *H. americana* 53:336) **Dermatological Aid** Poultice of plants applied to inflammations and bruises. (as *H. triloba* 71:129) **Hunting Medicine** Roots used as charms on traps for fur-bearing animals. (as *H. triloba* 53:376) **Liver Aid** Plant used for liver ailments. (as *H. triloba* 71:129) **Pediatric Aid** Decoction of root taken for convulsions, "used chiefly for children." (as *H. americana* 53:336) **Menominee Antidiarrheal** Compound decoction of root used for dysentery. (as *H. triloba* 54:131) **Nanticoke Febrifuge** Petals chewed "to prevent fever in summer." (as *H. americana* 175:56, 84) **Potawatomi Other** Infusion of root and leaves taken for vertigo. (as *H. triloba* 154:74)
- **Dye**—**Potawatomi Unspecified** Roots used to make a dye for mats and baskets. (as *H. triloba* 154:123)

## **Heracleum**, Apiaceae

**Heracleum maximum** Bartr., Common Cow Parsnip

- **Drug**—**Aleut Cold Remedy** Leaves used to make a tonic for colds. (as *H. lanatum* 8:427) **Dermatological Aid** Poultice of heated leaves applied to minor cuts. **Orthopedic Aid** Poultice of heated leaves applied to sore muscles. (as *H. lanatum* 8:425) **Throat Aid** Leaves used to make a soothing drink for sore throats. (as *H. lanatum* 8:427) **Bella Coola Analgesic** Poultice of compound containing roots used for lung or hip pains. **Antirheumatic (External)** Compound infusion of root used as poultice for pains like rheumatism. **Dermatological Aid** Poultice of crushed, boiled root, baked root, or raw root applied to boils. (as *H. lanatum* 150:61) Poultice of crushed and cooked roots applied to boils. (as *H. lanatum* 184:201) **Orthopedic Aid** Poultice of compound containing roots used for hip pains. **Pulmonary Aid** Poultice of compound containing roots used for lung pains. (as *H. lanatum* 150:61) **Blackfoot Antidiarrheal** Infusion of fresh, young stems taken for diarrhea. (as *H. lanatum* 86:67) **Dermatological Aid** Infusion of young stems applied in the removal of warts. (as *H. lanatum* 86:76) Poultice of roots applied to bruises and chronic swellings. (as *H. lanatum* 97:48) **California Indian Antirheumatic (Internal)** Strong decoction of root used for rheumatism. (as *H. lanatum* 19:13) **Carrier Antirheumatic (External)** Poultice of ground roots applied for rheumatism. (as *H. lanatum* 31:82) **Carrier, Northern Dermatological Aid** Poultice of root applied to swellings and bruises. (as *H. lanatum* 150:61) **Chippewa Dermatological Aid** Poultice of boiled or dried root and flowers applied to boils. (as *H. lanatum* 53:350) **Throat Aid** Decoction of root gargled or dried root chewed for ulcerated sore throat. (as *H. lanatum* 53:342) **Cree Dermatological Aid** Powdered roots and lard used as an ointment or poultice of root paste applied

to boils and swellings. (as *H. lanatum* 16:492) **Poison Plant** considered poisonous. *Toothache Remedy* Root held on the sore tooth for toothaches. (as *H. lanatum* 16:491) **Venereal Aid** Powdered roots and lard used as ointment or root paste poultice applied to venereal disease chancres. (as *H. lanatum* 16:494) **Cree, Woodlands Analgesic** Poultice of ground root, calamus, and yellow pond lily applied to the head for severe headaches. Decoction of root, calamus, and yellow pond lily used as a wash for severe headaches. **Antirheumatic (External)** Poultice of ground root, calamus, and yellow pond lily applied to painful limbs. Decoction of root, calamus, and yellow pond lily used as a wash for painful limbs. **Dermatological Aid** Poultice of root, calamus, root and yellow pond lily root applied to mancos, worms in the flesh. (as *H. lanatum* 109:40) **Gitksan Antirheumatic (External)** Poultice of fresh roots used for rheumatism. (as *H. lanatum* 74:25) Poultice of mashed root applied to rheumatic or other swellings. **Dermatological Aid** Poultice of mashed root applied to boils and other swellings. (as *H. lanatum* 150:61) **Witchcraft Medicine** Roots, red elder bark, and juniper boughs used as a smudge for evil witchcraft victims. (as *H. lanatum* 74:25) **Haisla Dermatological Aid** Poultice of roots, Indian hellebore, and Sitka spruce pitch applied to wounds. (as *H. lanatum* 43:214) **Iroquois Analgesic** Compound infusion of plant used as steam bath for headaches. **Antirheumatic (External)** Compound infusion of plant used as steam bath for rheumatism. **Dermatological Aid** Compound decoction used as wash or poultice applied to chancres or lumps on penis. **Diaphoretic** Infusion of plant used as steam bath to sweat out rheumatism and headaches. **Gastrointestinal Aid** Compound decoction of roots taken for bruises on the back of the stomach. **Hunting Medicine** Decoction of roots used as wash for rifles, a "hunting medicine." (as *H. lanatum* 87:400) **Misc. Disease Remedy** Plant used for influenza. (as *H. lanatum* 141:56) **Karok Poison** Roots poisonous to cattle. (as *H. lanatum* 148:387) **Klamath Unspecified** Roots used medicinally for unspecified purpose. (as *H. lanatum* 45:102) **Kwakiutl Dermatological Aid** Dried, pounded roots and oil used as a hair ointment. **Gynecological Aid** and **Pediatric Aid** Dried, pounded roots and oil rubbed on face and waist of girl at puberty. (as *H. lanatum* 183:276) **Makah Eye Medicine** Heated poultice of leaves applied for eye problems. **Tonic** Used as a spring tonic. **Unspecified** Central stalk considered strong medicine. (as *H. lanatum* 67:293) **Malecite Misc. Disease Remedy** Infusion of root shoots used for smallpox. Infusion used for cholera. (as *H. lanatum* 116:256) **Menominee Hunting Medicine** Herb used in the hunting bundle and smudged for 4 days to remove the charm. (as *H. lanatum* 151:81) **Witchcraft Medicine** An evil medicine used by sorcerers. (as *H. lanatum* 151:55) **Meskwaki Analgesic** Seeds used for severe headache and root used for stomach cramps. **Dermatological Aid** Poultice of stems applied to wounds. **Gastrointestinal Aid** Root used for colic or any kind of stomach cramps. **Misc. Disease Remedy** Infusion of root used for erysipelas. (as *H. lanatum* 152:249) **Mewuk Antirheumatic (External)** Poultice of mashed roots applied to swellings. **Misc. Disease Remedy** Used for mumps. (as *H. lanatum* 117:366) **Micmac Misc. Disease Remedy** Root used for smallpox and cholera. (as *H. lanatum* 40:57) **Ojibwa Dermatological Aid** Poultice of pounded, fresh root applied to sores. (as *H. lanatum* 153:390) **Hunting Medicine** Root or seeds used to smudge a fire and drive away a bad spirit from the camp of the hunter. There is a bad spirit who is always pre-

sent trying to steal away one's luck in hunting game. He must be driven away from the camp of the hunter by smudging a fire with the roots or seeds. This gets into the spirit's eyes and he cannot see the hunter leave the camp, so naturally does not follow and bother him. (as *H. lanatum* 153:432) **Okanagan-Colville Dermatological Aid** Decoction of roots, red willow, and chokecherry branches used as a cleansing medicine for the scalp. Decoction of branches used as a hair tonic to prevent gray hair and dandruff. **Orthopedic Aid** Heated poultice of sliced, pounded roots applied to sore backs. (as *H. lanatum* 188:62) **Okanagon Cathartic** Decoction of roots taken as a purgative. **Tonic** Decoction of roots taken as a tonic. (as *H. lanatum* 125:40) **Omaha Analgesic** Decoction of root taken for intestinal pains. **Cathartic** Decoction of root taken as a physic. **Gastrointestinal Aid** Decoction of root taken for intestinal pains. (as *H. lanatum* 70:107) **Paiute Antirheumatic (External)** Poultice of mashed root applied for rheumatism. (as *H. lanatum* 180:85, 86) **Cold Remedy** Decoction of roots taken for colds. (as *H. lanatum* 104:197) **Dermatological Aid** Roots used as a salve for sores. (as *H. lanatum* 104:196) Salve made from root applied to wounds. (as *H. lanatum* 180:85, 86) **Paiute, Northern Antirheumatic (External)** Poultice of roasted, split plants applied to aching joints for rheumatism. (as *H. lanatum* 59:130) **Pawnee Dermatological Aid** Poultice of scraped, boiled root applied to boils. (as *H. lanatum* 70:107) **Pomo Antirheumatic (External)** Decoction of plant used as a wash for rheumatism. Poultice of pounded, raw, or heated roots applied to rheumatism. **Dermatological Aid** Decoction of plant used as a wash for swellings. Poultice of pounded, raw, or heated roots applied to swellings. (as *H. lanatum* 66:14) **Pomo, Kashaya Antirheumatic (External)** Poultice of baked, pounded root used for rheumatism, arthritis, and other muscular pains. (as *H. lanatum* 72:87) **Quinault Analgesic** Poultice of warmed leaves applied to sore limbs. **Orthopedic Aid** Poultice of warmed leaves applied to sore limbs. (as *H. lanatum* 79:42) **Salish, Coast Dermatological Aid** Roots pounded, roasted, mixed with dogfish oil and used as a hair lotion to make hair grow long. (as *H. lanatum* 182:89) **Sanpoil Analgesic** Poultice of roots applied overnight to "painful parts, sore eyes, etc." **Dermatological Aid** Pounded root mixed with water and used as a hair wash for dandruff. **Eye Medicine** Poultice of roots applied overnight to "painful parts, sore eyes, etc." (as *H. lanatum* 131:220) **Shoshoni Cold Remedy** Decoction of root in whisky taken and smoke of root compound inhaled for colds. **Cough Medicine** Decoction of root in whisky taken for colds and coughs. **Throat Aid** Infusion of mashed root gargled and poultice applied for sore throat. **Toothache Remedy** Raw root placed in cavities for toothaches. **Tuberculosis Remedy** Decoction of root taken for tuberculosis. (as *H. lanatum* 180:85, 86) **Shuswap Dermatological Aid** Infusion of roots taken for sores. **Internal Medicine** Infusion of roots taken to kill all the internal germs. **Urinary Aid** Infusion of roots taken for the bladder. (as *Meraclium lanatum* 123:56) **Sikani Analgesic** Poultice of mashed roots applied to swellings of neuralgia or rheumatism. **Antirheumatic (External)** Poultice of mashed roots applied to swellings of rheumatism. **Dermatological Aid** Poultice of mashed roots applied to swellings of neuralgia. (as *H. lanatum* 150:61) **Tanaina Unspecified** Root used as a medicine. (as *H. lanatum* 149:329) **Thompson Cathartic** Decoction of roots taken as a purgative. (as *H. lanatum* 125:40) Decoction of root used as a purgative and tonic. (as *H. lanatum*

164:457) Decoction of roots taken by warriors and hunters as a purgative. (as *H. lanatum* 164:504) *Ceremonial Medicine* and *Disinfectant* Decoction of root used ceremonially as a wash for purification. (as *H. lanatum* 164:457) Decoction of roots taken by warriors and hunters as a purifier. (as *H. lanatum* 164:504) *Tonic* Decoction of roots taken as a tonic. (as *H. lanatum* 125:40) Decoction of root used as a tonic and purgative. (as *H. lanatum* 164:457) *Unspecified* Plant used medicinally. (as *H. lanatum* 187:152) *Venereal Aid* Strong decoction of root used for syphilis. (as *H. lanatum* 164:457) **Washo** *Antidiarrheal* Decoction of root taken for diarrhea. *Toothache Remedy* Raw root placed in cavities for toothaches. (as *H. lanatum* 180:85, 86) **Winnebago** *Anticonvulsive* Plant tops used in smoke treatment for convulsions. *Stimulant* Plant tops used in smoke treatment for fainting. (as *H. lanatum* 70:107)

- **Food—Alaska Native** *Unspecified* Inner stem pulp eaten raw and often dipped in seal oil. (as *H. lanatum* 85:133) **Anticosti** *Forage* Whole plant eaten by cows. (as *H. lanatum* 143:67) **Bella Coola** *Unspecified* Young stems peeled and eaten with grease. (as *H. lanatum* 184:201) **Blackfoot** *Soup* Stem pieces dipped in blood, stored, and used to make soup and broths. (as *H. lanatum* 86:103) *Unspecified* Stalks roasted over hot coals and eaten. (as *H. lanatum* 114:277) *Vegetable* Young plant stems peeled and eaten like celery. (as *H. lanatum* 86:103) **California Indian** *Vegetable* Young, raw shoots eaten like celery. (as *H. lanatum* 19:13) **Carrier** *Unspecified* Young growth used for food. (as *H. lanatum* 31:82) **Coeur d'Alene** *Unspecified* Growing stalks used for food. (as *H. lanatum* 178:91) **Costanoan** *Unspecified* Boiled roots and foliage used for food. (as *H. spondylium* ssp. *montanum* 21:251) **Cree, Woodlands** *Unspecified* Leaf petiole peeled and eaten fresh. Pith scraped out of the roasted, main stem and eaten. (as *H. lanatum* 109:40) **Gitksan** *Unspecified* Stems used for food in spring. (as *H. lanatum* 73:154) Stalks eaten in spring. (as *H. lanatum* 74:25) **Haisla** *Unspecified* Stems used for food in spring. (as *H. lanatum* 73:154) **Haisla & Hanaksiala** *Unspecified* Petioles considered "the main food in spring." (as *H. lanatum* 43:214) **Hesquiat** *Forage* Young shoots eaten by cattle. *Unspecified* Raw stalks of young leaves and flower buds eaten with sugar or honey. (as *H. lanatum* 185:60) **Hoh** *Vegetable* Young shoots eaten raw as greens. (as *H. lanatum* 137:66) **Karok** *Unspecified* Fresh shoot used for food. (as *H. lanatum* 148:387) **Kitasoo** *Vegetable* Young stems and petioles eaten as a spring vegetable. (as *H. lanatum* 43:326) **Klamath** *Unspecified* Young shoots used for food. (as *H. lanatum* 45:102) **Kwakiutl, Southern** *Unspecified* Young stems and petioles peeled and eaten raw like celery. (as *H. lanatum* 183:276) **Makah** *Unspecified* Fresh petioles peeled, mixed with oil, and used for food. Stems considered a favored food. Plant eaten after peeling. (as *H. lanatum* 67:293) Young tops eaten raw in the spring. Stems used for food. (as *H. lanatum* 79:42) **Mendocino Indian** *Vegetable* Tender leaf and flower stalks eaten as green food in spring and early summer. (as *H. lanatum* 41:373) **Meskwaki** *Vegetable* Potatoes cooked like the rutabaga. (as *H. lanatum* 152:265) **Mewuk** *Unspecified* Young stems peeled and eaten raw. (as *H. lanatum* 117:366) **Montana Indian** *Vegetable* Young, raw shoots eaten like celery. (as *H. lanatum* 19:13) **Nitinaht** *Unspecified* Hollow and solid leafstalks peeled and used for food. (as *H. lanatum* 186:91) **Ojibwa** *Vegetable* Leaves used as greens. (as *H. lanatum* 135:237) **Okanagan-Colville** *Vegetable* Flower stalks and leaf stems peeled

and eaten fresh. (as *H. lanatum* 188:62) **Okanagon** *Staple* Growing stalks used as a principal food. (as *H. lanatum* 178:239) *Unspecified* Young flower stalks peeled and eaten raw. (as *H. lanatum* 125:38) **Oweekeno** *Unspecified* Stems and petioles peeled and used for food. (as *H. lanatum* 43:84) **Pomo, Kashaya** *Unspecified* New shoots peeled and eaten raw. (as *H. lanatum* 72:87) **Quileute** *Unspecified* Stems dipped in seal oil and eaten. (as *H. lanatum* 79:42) *Vegetable* Young shoots eaten raw as greens. (as *H. lanatum* 137:66) **Quinault** *Unspecified* Stems dipped in seal oil and eaten. (as *H. lanatum* 79:42) **Salish, Coast** *Unspecified* Young stems and leaf stalks eaten raw or boiled. (as *H. lanatum* 182:89) **Shuswap** *Unspecified* Young stems eaten raw. (as *Meracleum lanatum* 123:56) **Spokan** *Unspecified* Stalks used for food. (as *H. lanatum* 178:344) **Thompson** *Dried Food* Plant formerly dried for storage. (as *H. lanatum* 187:152) *Forage* Stalks used as a common food for cattle. (as *H. lanatum* 164:482) *Frozen Food* Plant frozen for future use. (as *H. lanatum* 187:152) *Unspecified* Young flower stalks peeled and eaten raw. (as *H. lanatum* 125:38) Young stalks peeled and eaten raw. (as *H. lanatum* 164:482) *Vegetable* Peeled shoots eaten as vegetables with meat or fish. Peeled, raw, or cooked leaf stalks and flower stalks used for food. The stalks were ready to use around May and June, but after a while, they became tough, dry, or sticky and were no longer good to eat. The raw stalks would cause a burning like pepper if eaten in too great a quantity; it was better to eat cooked stalks. *Winter Use Food* Plant canned for future use. (as *H. lanatum* 187:152) **Tolowa** *Unspecified* Stem inner layers eaten raw. (as *H. lanatum* 6:32) **Wet'suwet'en** *Unspecified* Stems used for food in spring. (as *H. lanatum* 73:154) **Yuki** *Unspecified* Tender, young stems peeled and eaten raw. (as *H. lanatum* 49:87) **Yurok** *Unspecified* Stem inner layers eaten raw. (as *H. lanatum* 6:32)

- **Fiber—Makah** *Basketry* Large blossom stems twined with seaweed, made into baskets, and used by girls for playing. **Quileute** *Basketry* Large blossom stems twined with seaweed, made into baskets, and used by girls for playing. (as *H. lanatum* 79:42)
- **Dye—Karok** *Yellow* Roots used as a yellow dye for porcupine quills. (as *H. lanatum* 148:387)
- **Other—Blackfoot** *Ceremonial Items* Stalks placed on the altar of the Sun Dance ceremonial. (as *H. lanatum* 114:277) Stalk placed on altar of Sun Dance ceremonial. (as *H. lanatum* 118:50) *Cooking Tools* Hollow stems used by infirm people to suck soup and stew without raising up. *Musical Instrument* Hollow stems used to make children's flutes. *Toys & Games* Hollow stems used to make children's toy blowguns. (as *H. lanatum* 86:113) **Carrier, Southern** *Insecticide* Infusion of blossoms rubbed on body to keep off flies and mosquitoes. (as *H. lanatum* 150:61) **Cheyenne** *Musical Instrument* Hollow stems made into whistles and used for romantic purposes at night. (as *H. lanatum* 83:40) **Haisla & Hanaksiala** *Toys & Games* Stems used to make whistles. Plant used to play a game by throwing the plant into a pot. (as *H. lanatum* 43:214) **Menominee** *Protection* Plant smudged to drive away the evil spirit, whose special mission was to steal one's hunting luck. (as *H. lanatum* 151:81) **Nitinaht** *Toys & Games* Swollen leaf sheaths and small, unexpanded leaves used in children's games. (as *H. lanatum* 186:91) **Ojibwa** *Hunting & Fishing Item* Roots boiled and sprinkled on the fishing nets to lure fish. (as *H. lanatum* 153:432) **Omaha** *Ceremonial Items* Pounded, dried roots mixed with beaver dung and planted in the same hole as the sacred pole. (as *H. lana-*

tum 70:107) **Pomo, Kashaya** *Containers* Hollow stems used to carry water. *Toys & Games* Dried, hollow stems used as toy blowguns to shoot berries or small pebbles. (as *H. lanatum* 72:87) **Shuswap** *Containers* Leaves used to cover a basket of berries. (as *Meracleum lanatum* 123:56) **Tsimshian** *Hunting & Fishing Item* Petioles rubbed on fishing gear to insure success in fishing. (as *H. lanatum* 43:326)

### **Heracleum** sp.

- **Food**—Aleut *Unspecified* Species used for food. (7:29)

### **Heracleum sphondylium** L., Eltrot

- **Drug**—Micmac *Gynecological Aid* Green and light-color plant used as medicine for women. (194:30) *Unspecified* Part of plant considered “good medicine.” (40:57) *Urinary Aid* Dark and ripe plant used as medicine for men. (194:30)

### **Hericium**, Hydnaceae, fungus

#### **Hericium coralloides**, Coral Mushroom

- **Food**—Pomo, Kashaya *Vegetable* Baked on hot stones, in the oven, or fried. (72:129)

### **Hesperocallis**, Liliaceae

#### **Hesperocallis undulata** Gray, Desert Lily

- **Food**—Cahuilla *Unspecified* Bulbs eaten raw or oven pit baked. (15:77) Yuma *Unspecified* Bulbs eaten raw, baked, or boiled. (37:207)

### **Heteranthera**, Pontederiaceae

#### **Heteranthera reniformis** Ruiz & Pavón, Kidneyleaf Mudplantain

- **Drug**—Cherokee *Dermatological Aid* Hot poultice of root applied to inflamed wounds and sores. (80:45)

### **Heteromeles**, Rosaceae

#### **Heteromeles arbutifolia** (Lindl.) M. Roemer, Toyon

- **Drug**—Costanoan (Olhonean) *Abortifacient* Infusion of leaves taken “for suppression of menses or irregular menses of girls.” (117:373) **Diegueño** *Dermatological Aid* Infusion of bark and leaves used as wash for infected wounds. (88:217) **Mendocino Indian** *Analgesic* Decoction of leaves taken for various aches and pains. *Gastrointestinal Aid* Decoction of leaves taken for stomachaches. (41:355)
- **Food**—Cahuilla *Fruit* Berries eaten cooked and raw. (15:77) **Costanoan** *Fruit* Fruits eaten toasted or dried. (21:249) **Diegueño** *Fruit* Fruit used for food. (88:217) **Karok** *Fruit* Berries roasted over an open fire and eaten. (6:32) **Luiseno** *Dried Food* Parched berries used for food. (155:194) **Mahuna** *Fruit* Berries eaten mainly to quench the thirst. (140:70) **Mendocino Indian** *Fruit* Fruits eaten fresh. Fruits boiled or roasted and used for food. (41:355) **Pomo, Kashaya** *Fruit* Berries wilted in hot ashes and winnowed in a basket plate. (72:115) **Yurok** *Fruit* Berries roasted over an open fire and eaten by children. (6:32)

#### **Heteromeles arbutifolia** M. Roem. **var. arbutifolia**, Toyon

- **Food**—**Karok** *Fruit* Berries put on a basket plate in front of the fire, turned until wilted and eaten. (as *Photinia arbutifolia* 148:385) **Neeshenam** *Fruit* Bright, red berries used for food. (as *Photinea arbutifolia* 129:375) **Pomo** *Fruit* Wilted, winnowed berries used for food. (as *Photinia arbutifolia* 66:13)
- **Other**—**Karok** *Toys & Games* Leaves thrown into the fire by children to hear them crack like firecrackers. (as *Photinia arbutifolia* 148:385)

### **Heterotheca**, Asteraceae

#### **Heterotheca grandiflora** Nutt., Telegraphweed

- **Other**—Luiseno *Hunting & Fishing Item* Tall stems sometimes used to make arrow main shafts. (155:228) Stems used to make small arrows. (155:206)

#### **Heterotheca villosa** var. **hispida** (Hook.) Harms, Bristly Hairy Goldaster

- **Drug**—Isleta *Poison* Plant, when touched, caused a skin irritation similar to ant bites. (as *Chrysopsis hirsutissima* 100:25) **Navajo, Ramah** *Dermatological Aid* Poultice of leaves applied to ant bites. *Nose Medicine* Poultice of leaves applied to sore nose. *Toothache Remedy* Poultice of root applied for toothache. (as *Chrysopsis hispida* 191:49)

#### **Heterotheca villosa** (Pursh) Shinners **var. villosa**, Hairy Goldenaster

- **Drug**—Cheyenne *Disinfectant* Plant burned as incense to remove evil spirits from the house. (as *Chrysopsis villosa* 83:20) *Sedative* Infusion of tops and stems taken for feeling poorly and made one sleepy. (as *Chrysopsis foliosa* 76:187) **Hopi** *Analgesic* Infusion of leaves and flowers used for chest pain. (as *Chrysopsis villosa* 200:95) **Navajo, Kayenta** *Ceremonial Medicine* Plant used in the corral dance. (as *Chrysopsis villosa* 205:46) **Navajo, Ramah** *Ceremonial Medicine* Plant used as a ceremonial emetic and chant lotion. *Emetic* Plant used alone as a sweat house emetic. Plant used as a ceremonial and sweat house emetic for various ailments. *Gastrointestinal Aid* Cold infusion of leaves used to kill a swallowed red ant. Plant used as a sweat house emetic for indigestion. *Heart Medicine* Plant used as an “aorta medicine.” *Panacea* Root used as a “life medicine.” *Toothache Remedy* Poultice of heated root applied for toothache. *Venereal Aid* Plant used as a sweat house emetic for sexual infection. (as *Chrysopsis villosa* 191:49)
- **Food**—**Navajo, Ramah** *Fodder* Used for sheep feed. (as *Chrysopsis villosa* 191:49)
- **Other**—**Navajo, Ramah** *Insecticide* Infusion thrown on anthill to kill red ants. (as *Chrysopsis foliosa* 191:49)

### **Heuchera**, Saxifragaceae

#### **Heuchera americana** L., American Alumroot

- **Drug**—Cherokee *Antidiarrheal* Taken for dysentery. *Dermatological Aid* Powdered root used on malignant ulcers and infusion sprinkled on bad sores. Infusion of astringent root taken for bowel complaints. *Gastrointestinal Aid* Infusion of root taken for bowel complaints. *Gynecological Aid* Used for “immoderate flow of menses.” *Hemorrhoid Remedy* Infusion of root taken for piles. *Oral Aid* Infusion used for “thrash” and sore mouth and root chewed to take coat off tongue. (80:23) **Chickasaw** *Dermatological Aid* Root used as a powerful astringent. *Tonic* Root used as a tonic. **Choctaw** *Dermatological Aid* Root used as a powerful astringent. *Tonic* Root used as a tonic. **Creek** *Dermatological Aid* Root used as a powerful astringent. *Tonic* Root used as a tonic. (28:286, 287) **Menominee** *Analgesic* Compound decoction of root used for stomach pain. *Gastrointestinal Aid* Raw root eaten for “disordered stomach.” (54:130) **Meskwaki** *Dermatological Aid* Foliage used as an astringent for sores. *Panacea* Compound containing root used as a “healer.” (152:246)

***Heuchera americana* var. *hispida*** (Pursh) E. Wells, Hairy Alumroot

- **Drug**—Chippewa *Analgesic* Dried root chewed and juice swallowed for stomach pain. (as *H. hispida* 53:344) *Eye Medicine* Decoction of root used as a wash for sore eyes. (as *H. hispida* 53:360) *Gastrointestinal Aid* Dried root chewed and juice swallowed for stomach pain. (as *H. hispida* 53:344) **Menominee** *Antidiarrheal* Infusion of root used for diarrhea. (as *H. hispida* 151:53) **Sioux, Teton** *Antidiarrheal* Root, very powerful and small dose for children, used for chronic diarrhea. (as *H. hispida* 52:269)

***Heuchera bracteata*** (Torr.) Ser., Bracted Alumroot

- **Drug**—Navajo *Gastrointestinal Aid* Plant chewed for indigestion. *Oral Aid* Plant chewed for sore gums. *Toothache Remedy* Compound poultice of crushed leaves applied to toothaches. (55:52)
- **Dye**—Navajo *Red-Brown Stems* used to make a pinkish tan dye. (55:52)

***Heuchera cylindrica*** Dougl. ex Hook., Roundleaf Alumroot

- **Drug**—Blackfoot *Antidiarrheal* Decoction of roots used for diarrhea. *Dermatological Aid* Decoction of roots used as an astringent. (97:36) **Flathead** *Antidiarrheal* Roots infused or chewed for diarrhea. *Gastrointestinal Aid* Roots infused or chewed for stomach cramps. **Kutenai** *Antirheumatic (External)* Decoction of roots used for “aching bones.” *Tuberculosis Remedy* Decoction of roots taken for tuberculosis. (82:31) **Okanagan-Colville** *Blood Medicine* Decoction of roots and Oregon grape roots used as a tonic for the “changing of the blood.” *Dermatological Aid* Poultice of mashed, peeled roots applied to sores and cuts. Infusion of roots used to wash sores and cuts. Roots mixed with puffball spores and used as a salve for diaper rash. *Pediatric Aid* Decoction of roots used, especially for children and babies, to rinse out the mouth for sore throats. Roots mixed with puffball spores and used as a salve for diaper rash. *Throat Aid* Fresh root held in the mouth and sucked for sore throats. Decoction of roots used, especially for children and babies, to rinse out the mouth for sore throats. (188:138) **Shuswap** *Antidiarrheal* Decoction of leaves and roots taken for diarrhea. *Dermatological Aid* Decoction of leaves and roots used as a wash for sores. (123:68) **Thompson** *Dermatological Aid* Chewed leaves and roots spat on sores or wounds. Poultice of root with Douglas fir pitch used for wounds. *Liver Aid* Infusion of root taken for liver trouble. *Oral Aid* Small, peeled, cleaned root piece chewed for mouth sores and gum boils. *Throat Aid* Infusion of root taken for sore throats. *Unspecified* Root used for medicine. (187:282)

***Heuchera cylindrica* var. *alpina*** Sw., Alpine Alumroot

- **Drug**—Cheyenne *Antirheumatic (External)* Powdered roots rubbed on the skin for rheumatism or sore muscles. *Antirheumatic (Internal)* Infusion of powdered plant tops taken for rheumatism or sore muscles. (as *H. ovalifolia* 76:176) *Dermatological Aid* Poultice of powdered roots applied for poison ivy and other skin rashes. (as *H. ovalifolia* 83:38) *Orthopedic Aid* Infusion of roots taken or powdered roots rubbed on skin for sore muscles. (as *H. ovalifolia* 76:176)

***Heuchera cylindrica* var. *glabella*** (Torr. & Gray) Wheelock, Beautiful Alumroot

- **Drug**—Arapaho *Unspecified* Roots used medicinally for unspecified purpose. **Blackfoot** *Dermatological Aid* Pounded roots used for

sores. (as *H. glabella* 121:47) *Eye Medicine* Infusion of root used as an eyewash. (as *H. glabella* 118:39) *Snakebite Remedy* Poultice of mashed, raw root applied to snakebites. *Veterinary Aid* Poultice of mashed, raw root applied to horses for snakebites. (*H. glabella* 118:49)

- **Dye**—Blackfoot *Mordant* Root added to dye baths to set the color in native dress. (as *H. glabella* 121:47)

***Heuchera flabellifolia*** Rydb., Bridger Mountain Alumroot

- **Drug**—Blackfoot *Gastrointestinal Aid* Decoction of roots taken for stomach troubles and cramps. (97:36)

***Heuchera glabra*** Willd. ex Roemer & J. A. Schultes, Alpine Heuchera

- **Drug**—Tlingit *Venereal Aid* Plant used for inflammation of testicles from syphilis. (as *H. devaricata* 107:284)

***Heuchera micrantha*** Dougl. ex Lindl., Crevice Alumroot

- **Drug**—Skagit *Dermatological Aid* Pounded plants rubbed on hair to make it grow or applied to cuts. (79:31) **Thompson** *Dermatological Aid* Poultice of mashed root with Douglas fir pitch used for wounds. The poultice was covered with a cloth and when it was taken off, all the poison was extracted from the open wound. Chewed leaves and roots spat on sores or wounds. *Liver Aid* Infusion of roots taken for liver trouble. *Oral Aid* Small, peeled, cleaned root piece chewed for mouth sores and gum boils. *Throat Aid* Infusion of root taken for sore throat. *Unspecified* Root used as medicine. (187:282)
- **Food**—Miwok *Dried Food* Steamed leaves dried and stored. *Vegetable* Boiled or steamed leaves eaten in spring. (12:159)

***Heuchera novomexicana*** Wheelock, New Mexico Alumroot

- **Drug**—Navajo, Ramah *Analgesic* Decoction of root taken as needed for internal pain. *Dermatological Aid* Poultice of split root applied to infected sores and swellings. *Disinfectant* Poultice of split root applied to infected sores. *Orthopedic Aid* Poultice of split root applied to infected sores, swellings, and fractures. *Panacea* Plant used as “life medicine.” (191:29)

***Heuchera parviflora*** Bartl., Littleflower Alumroot

- **Drug**—Blackfoot *Dermatological Aid* Poultice of pounded root applied to sores and swellings. (114:274)

***Heuchera parvifolia*** Nutt. ex Torr. & Gray, Littleleaf Alumroot

- **Drug**—Blackfoot *Antirheumatic (External)* Pounded, wetted root used for rheumatism. *Dermatological Aid* Pounded, wetted roots used for sores. (118:43) *Eye Medicine* Infusion of root used as an eyewash. (118:39) *Hemostat* Poultice of chewed roots applied to wounds and sores as a styptic. (86:76) Poultice of chewed roots applied to wounds as a styptic. (86:84) *Oral Aid* and *Pediatric Aid* Poultice of chewed roots applied to cold sores and children's mouth cankers. (86:76) *Veterinary Aid* Infusion of roots given to horses for respiratory troubles. (86:88) **Navajo, Kayenta** *Dermatological Aid* Plant used for rat bites. (205:25) **Navajo, Ramah** *Analgesic* Decoction of root taken for stomachache. *Gastrointestinal Aid* Decoction of root taken for stomachache. *Gynecological Aid* Decoction of split root taken to ease delivery of placenta. *Panacea* Root used as a “life medicine.” *Venereal Aid* Infusion of root used as a lotion for venereal disease. (191:29, 30)

***Heuchera richardsonii*** R. Br., Richardson's Alumroot

- **Drug**—Blackfoot *Antidiarrheal* Rootstocks chewed for diarrhea. (97:37) Cree, Woodlands *Antidiarrheal* Decoction of root or root chewed for diarrhea. *Eye Medicine* Infusion of root used to wash sore eyes. (109:40) Lakota *Antidiarrheal* Infusion of roots taken for diarrhea. *Dermatological Aid* Poultice of powdered roots applied to sores. (139:58)

***Heuchera rubescens*** Torr., Pink Alumroot

- **Drug**—Gosiute *Dermatological Aid* Decoction of roots used as an astringent. *Gastrointestinal Aid* and *Pediatric Aid* Decoction of roots used for babies and children with colic. (39:371) Paiute *Eye Medicine* Infusion of root used as an eyewash. *Venereal Aid* Decoction of root taken for venereal disease. Shoshoni *Antidiarrheal* Infusion of root taken for diarrhea. *Febrifuge* Decoction of root taken for high fever. *Heart Medicine* Decoction of root taken for heart trouble. *Liver Aid* Infusion of roots taken for liver trouble or biliousness. *Tonic* Decoction of root taken as a tonic for general debility. *Venereal Aid* Decoction of root taken for venereal disease. *Veterinary Aid* Mashed, boiled leaves used as a wash for horses' saddle sores. Soaked roots given to horses and cows for cramps. (180:87, 88)

***Heuchera* sp.**, Alumroot

- **Drug**—Blackfoot *Veterinary Aid* Plant used for saddle sores on horses. (97:36) Chippewa *Antidiarrheal* Compound decoction of root taken for dysentery. (53:344) *Gastrointestinal Aid* Compound decoction of root taken for indigestion. *Oral Aid* and *Pediatric Aid* Compound decoction of root used as mouthwash for teething children. (53:342) Gosiute *Cathartic*, *Gastrointestinal Aid*, and *Pediatric Aid* Plant used as a purgative for babies and adults with intestinal disorders. (39:350)

***Hexastylis***, Aristolochiaceae***Hexastylis arifolia*** (Michx.) Small, Littlebrownjug

- **Drug**—Catawba *Analgesic* and *Gastrointestinal Aid* Infusion of leaves taken for stomach pains. *Heart Medicine* Infusion of leaves taken for heart troubles. (as *Asarum apiifolia* 157:190)

***Hexastylis arifolia*** (Michx.) Small **var. arifolia**, Littlebrownjug

- **Drug**—Catawba *Analgesic* Leaves used for severe pain in the heart from heart disease. (as *Asarum arifolia* 157:188) Infusion of leaves taken for stomach pains or backaches. (as *Asarum arifolium* 177:20) *Gastrointestinal Aid* Leaves used for stomach trouble. (as *Asarum arifolia* 157:188) Infusion of leaves taken for stomach pains. (as *Asarum arifolium* 177:20) *Heart Medicine* Leaves used for severe pain in the heart from heart disease. (as *Asarum arifolia* 157:188) Infusion of leaves taken for heart troubles. *Orthopedic Aid* Plant used for backache. (as *Asarum arifolium* 177:20) Rappahannock *Febrifuge* Infusion of leaves taken for fever. *Pulmonary Aid* Infusion of leaves taken for whooping cough. *Respiratory Aid* Decoction of leaves with alcohol taken for asthma. (as *Asarum arifolium* 161:25)

***Hexastylis virginica*** (L.) Small, Virginia Heartleaf

- **Drug**—Cherokee *Gastrointestinal Aid* Infusion taken "to stop blood from passing." (80:37)

***Hibiscus***, Malvaceae***Hibiscus moscheutos*** L. **ssp. moscheutos**, Crimoneyed Rose-mallow

- **Drug**—Shinnecock *Urinary Aid* Infusion of dried stalks applied for inflammation of the bladder. (as *H. palustris* 30:120)

***Hibiscus* sp.**, Kokio

- **Drug**—Hawaiian *Blood Medicine* Infusion of pounded roots and other plants strained and taken to purify the blood. (2:54) *Laxative* Flower bases chewed by the mother and given to infants as a laxative. (2:40) Buds chewed by mothers and given to children as a laxative. Leaves chewed and swallowed as a laxative. (2:54) *Pediatric Aid* Flower bases chewed by the mother and given to infants as a laxative. Seeds chewed and swallowed by children with general weakness of the body. (2:40) Buds chewed by mothers and given to children as a laxative, and for general debility and run-down conditions. ## **Hippuris**, Hippuridaceae

**Hippuris tetraphylla** L. f., Fourleaf Maretail

- **Food**—**Eskimo, Alaska Vegetable** Small, young leaves eaten as greens. (4:715)

**Hippuris vulgaris** L., Common Maretail

- **Food**—**Alaska Native Soup** Whole plant used to make soup. **Winter Use Food** Leaves piled on high ground and stored for winter use. (85:135) **Eskimo, Alaska Soup** Plant added to seal blood soup and tom cod-liver soup. (1:37) **Eskimo, Inuktitut Ice Cream** Used to make “Eskimo ice cream.” **Soup** Used as a condiment for soups. **Unspecified** Eaten raw or with seal oil and salmon eggs. (202:191)

## **Hirschfeldia**, Brassicaceae

**Hirschfeldia incana** (L.) Lagreze-Fossat, Shortpod Mustard

- **Food**—**Cahuilla Porridge** Seeds ground into a mush. **Vegetable** Leaves eaten fresh or boiled. **Winter Use Food** Leaves and seeds used as an important winter food. (as *Brassica geniculata* 15:47)

## **Hoffmannseggia**, Fabaceae

**Hoffmannseggia glauca** (Ortega) Eifert, Indian Rushpea

- **Food**—**Apache Unspecified** Potatoes roasted and eaten much more commonly in the past than currently. (as *H. densiflora* 32:52) **Apache, Chiricahua & Mescalero Unspecified** Roots eaten either raw or cooked. (as *H. densiflora* 33:42) **Cocopa Unspecified** Tuberous roots utilized as food. (as *H. densiflora* 37:207) **Pima Unspecified** Bulbs eaten raw or boiled. (as *H. stricta* 95:262) **Vegetable** Tubers boiled and eaten like potatoes. (as *H. densiflora* 47:92) **Pima, Gila River Unspecified** Roots boiled or roasted and eaten. (as *H. densiflora* 133:7) Tubers eaten. (133:5) **Pueblo Unspecified** Potatoes roasted and eaten much more commonly in the past than currently. (as *H. densiflora* 32:52)

## **Hoita**, Fabaceae

**Hoita macrostachya** (DC.) Rydb., Large Leatherroot

- **Drug**—**Luiseno Dermatological Aid** Plant used for ulcers and sores. (as *Psoralea macrostachya* 155:231)
- **Fiber**—**California Indian Cordage** Root fiber used to make rope. **Sewing Material** Inner bark used for thread. (as *Psoralea macrostachya* 118:59) **Concow Sewing Material** Fine, strong inner bark formerly used for thread. **Mendocino Indian Cordage** Root fibers used to make rope. **Yokia Sewing Material** Fine, strong inner bark formerly used for thread. (as *Psoralea macrostachya* 41:358)
- **Dye**—**Cahuilla Yellow** Roots boiled with basket weeds as a yellow dye. (as *Psoralea macrostachya* 15:121) **Luiseno Yellow** Roots boiled to make a yellow dye. (as *Psoralea macrostachya* 155:209)
- **Other**—**California Indian Containers** Root fibers used to make bags. (as *Psoralea macrostachya* 118:59) **Mendocino Indian Hunting & Fishing Item** Root fibers used to make hunting bags. (as *Psoralea macrostachya* 41:358)

**Hoita orbicularis** (Lindl.) Rydb., Roundleaf Leatherroot

- **Drug**—**Costanoan Blood Medicine** Decoction of plant used for the blood. **Febrifuge** Decoction of plant used for fevers. (as *Psoralea orbicularis* 21:19)
- **Food**—**Luiseno Vegetable** Plant used for greens. (as *Psoralea orbicularis* 155:231)

## **Holocarpha**, Asteraceae

**Holocarpha virgata** (Gray) Keck, Yellowflower Tarweed

- **Drug**—**Miwok Febrifuge** Decoction of plant used as a bath for fevers. **Misc. Disease Remedy** Decoction of plant used as a bath for measles. (as *Hemizonia virgata* 12:170, 171)

## **Holodiscus**, Rosaceae

**Holodiscus discolor** (Pursh) Maxim., Ocean Spray

- **Drug**—**Chehalis Misc. Disease Remedy** Infusion of seeds taken for smallpox, black measles, and chickenpox. **Lummi Antidiarrheal**

Blossoms used for diarrhea. *Eye Medicine* Infusion of inner bark used as an eyewash. *Oral Aid* Poultice of leaves applied to sore lips. *Orthopedic Aid* Poultice of leaves applied to sore feet. **Makah Tonic** Decoction of bark taken as a tonic by convalescents and athletes. (79:33) *Unspecified* Used to make medicine. (67:263) **Navajo, Ramah Misc. Disease Remedy** Decoction of leaves taken for influenza. (191:31) **Okanagan-Colville Burn Dressing** Bark dried, powdered, mixed with Vaseline, and used on burns. (188:126) **Sanpoil Dermatological Aid** Powder of dried leaves used for sores. (131:221) **Squaxin Blood Medicine** Seeds used as a blood purifier. (79:33)

- **Fiber—Nitinaht Sewing Material** Wood used to make knitting needles and long needles for mat making. (186:117) **Okanagan-Colville Furniture** Wood used to make baby cradle covers. (188:126) **Pomo, Kashaya Furniture** Long branches used to make baby baskets and arrows. (72:40) **Salish, Cowichan Sewing Material** Wood used to make knitting needles. (186:117) **Squaxin Canoe Material** Wood used to make canoe paddles. (79:33)
- **Other—Chehalis Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make shafts and spear prongs. (79:33) **Hesquiat Tools** Plant used to make needles for sewing tule and basket sedge. (185:72) **Karok Toys & Games** Shoots used to make "Indian cards." A set of little sticks was prepared by scraping 10-inch lengths of shoot clean of bark. All the sticks were straight and one was marked with a black mark. The dealer took the set of sticks in his hands, shuffled the sticks, sang, and held his hands behind his back. He tried to prevent his opponents from guessing where the black-marked stick was. If the dealer kept the other side from guessing where the ace was for 10 times, he won. This was a gambling game. (148:384) **Klallam Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make the prongs of duck spears. (79:33) **Kwakiutl, Southern Hunting & Fishing Item** Wood used to make arrows. *Tools* Wood used to make digging sticks. (183:288) **Lummi Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make the prongs of duck spears. **Makah Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make the prongs of duck spears. (79:33) **Nitinaht Cooking Tools** Branches used for holding fish while barbecuing because they do not burn. (67:263) Wood used to make barbecue sticks. *Hunting & Fishing Item* Wood used with a yew wood barb tied on the end as an octopus spear. (186:117) *Tools* Wood used to make knitting needles. *Toys & Games* Wood used to make practice bows and arrows for children. (67:263) Wood used to make practice bows for children. (186:117) **Nootka Tools** Plant used to make needles and harpoons. (185:72) **Okanagan-Colville Fasteners** Wood used to make tepee pins. *Hunting & Fishing Item* Wood used to make arrows, fishing spear heads, and bows. *Musical Instrument* Wood used to make drum hoops. *Tools* Wood used to make digging sticks. *Toys & Games* Wood used to make gambling game sticks. (188:126) **Poliklah Hunting & Fishing Item** Used to make arrows. (as *H. ariaefolius* 117:173) **Pomo Hunting & Fishing Item** Used for arrows. (66:13) **Pomo, Kashaya Hunting & Fishing Item** Long branches used to make baby baskets and arrows. (72:40) **Saanich Cooking Tools** Wood used to make salmon barbecuing sticks. *Hunting & Fishing Item* Wood used to make bows, arrows, harpoon shafts, and halibut hooks. *Tools* Wood used to make camas bulb digging sticks and cambium scrapers, and knitting

needles and cattail mat needles. (182:86) **Salish Hunting & Fishing Item** Wood used to make arrows. *Tools* Wood used to make digging sticks. (183:288) **Salish, Coast Cooking Tools** Wood used to make salmon barbecuing sticks. *Hunting & Fishing Item* Wood used to make bows, arrows, harpoon shafts, and halibut hooks. *Tools* Wood used to make camas bulb digging sticks, and cambium scrapers. Wood used to make knitting needles and cattail mat needles. (182:86) **Salish, Cowichan Cooking Tools** Wood used to make skewers for roasting and drying clams. (186:117) **Skagit Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make the prongs of duck spears. **Snohomish Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make the prongs of duck spears. **Squaxin Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make the prongs of duck spears. **Swinomish Cooking Tools** Wood used to make roasting tongs. *Hunting & Fishing Item* Wood used to make flounder spears and the prongs of duck spears. (79:33) **Thompson Hunting & Fishing Item** Wood used to make arrows. (as *Sericotheca discolor* 164:497) *Protection* Extremely hard wood used to make cuirasses and other types of armor. (187:261) *Weapon* Wood used for cuirasses and armor in general. (as *Sericotheca discolor* 164:497)

### *Holodiscus dumosus* (Nutt. ex Hook.) Heller, Rockspirea

- **Drug—Paiute Antidiarrheal** Decoction of root taken for diarrhea. *Cold Remedy* Decoction of stems taken for colds. *Gastrointestinal Aid* Decoction of root taken for stomach disorders. **Shoshoni Disinfectant** Decoction of leaves, flowers, and stems used as an antiseptic wash. *Emetic* Decoction of leaves taken as an emetic. *Gastrointestinal Aid* Decoction of leaves and stems taken for stomachaches. *Unspecified* Decoction of leaf, flower, and stem taken for illnesses of "undefined cause." *Venereal Aid* Decoction of leaves or stems taken for venereal disease. (as *H. discolor* var. *dumosus* 180:88, 89)
- **Food—Isleta Beverage** Leaves steeped to make a beverage. (100:32)

## *Honckenya*, Caryophyllaceae

### *Honckenya peploides* (L.) Ehrh., Seaside Sandplant

- **Food—Eskimo, Inupiat Vegetable** Sour leaves and shoots eaten with seal oil and sugar. *Winter Use Food* Leaves and shoots boiled many times and stored in a large wooden barrel for winter use. (98:42)

### *Honckenya peploides* ssp. *major* (Hook.) Hultén, Seaside Sandplant

- **Food—Eskimo, Alaska Unspecified** Leaves and stems boiled and eaten with seal oil. (1:35) Leaves used for food. (as *Ammodenia peploides major* 4:715)

### *Honckenya peploides* (L.) Ehrh. ssp. *peploides*, Seaside Sandplant

- **Food—Alaska Native Dietary Aid** Fresh and raw leaves eaten as a good source of vitamins A and C. *Ice Cream* Leaves chopped, cooked in water, soured, and mixed with reindeer fat and berries into Eskimo ice cream. *Unspecified* Leaves eaten with dried fish. *Vegetable* Leaves eaten raw or mixed with other greens. Leaves mixed with other greens and made into a kraut. (as *Arenaria peploides* 85:15) **Eskimo, Arctic Vegetable** Young stems and leaves pickled as "sauerkraut" or eaten as a potherb. (as *Arenaria peploides* 128:29)

**Hordeum**, Poaceae**Hordeum jubatum** L., Foxtail Barley

- **Drug**—Chippewa *Eye Medicine* Dry root wrapped, moistened, and used as a compress for sties or inflammation of lid. (53:360) Navajo, Ramah *Poison* Plant considered poisonous and children taught to avoid it. (191:16) Potawatomi *Unspecified* Root used for unspecified ailments. (154:59)
- **Food**—Kawaiisu *Unspecified* Seeds pounded and eaten dry. (206:34)
- **Other**—Iroquois *Toys & Games* Used by children to place in the sleeves of playmates as a joke. (142:106) Kawaiisu *Tools* Used to rub the skin off yucca stalks. (206:34)

**Hordeum marinum ssp. gussonianum** (Parl.) Thellung, Mediterranean Barley

- **Food**—Mendocino Indian *Fodder* Green grass used for fodder. (41:313)

**Hordeum murinum** L., Mouse Barley

- **Food**—Mendocino Indian *Staple* Seeds used for pinole. (41:313)

**Hordeum murinum ssp. glaucum** (Steud.) Tzvelev, Smooth Barley

- **Drug**—Costanoan *Urinary Aid* Decoction of plant used for bladder ailments. (as *H. glaucum* 21:30)
- **Food**—Cahuilla *Unspecified* Seeds eaten, when other foods were scarce. (as *H. stebbinsi* 15:78) Costanoan *Staple* Seeds used for pinole. (as *H. glaucum* 21:255)

**Hordeum sp.**, Foxtail Grass

- **Food**—Pomo, Kashaya *Unspecified* Seeds used in pinole. (72:53)

**Hordeum vulgare** L., Common Barley

- **Food**—Cahuilla *Unspecified* Cultivated and used for food. (15:78) Papago *Unspecified* Species used for food. Pima *Unspecified* Species used for food. (36:117) Yuki *Bread & Cake* Seeds ground into flour and used to make bread. *Substitution Food* Seeds parched and used as a substitute for coffee. (41:313)

**Horkelia**, Rosaceae**Horkelia californica** Cham. & Schlecht., California Honeydew

- **Drug**—Pomo, Kashaya *Blood Medicine* Decoction of root used as a blood purifier. (72:57)

**Hosta**, Liliaceae**Hosta lancifolia** Engl., Narrowleaf Plantainlily

- **Drug**—Cherokee *Antihemorrhagic* Warm infusion of root taken for spitting blood. *Cough Medicine* Warm infusion of root taken for coughing. *Dermatological Aid* Leaf rubbed on swollen legs and feet after scratching insect bites. (as *H. japonica* 80:50)

**Houstonia**, Rubiaceae**Houstonia caerulea** L., Azure Bluet

- **Drug**—Cherokee *Urinary Aid* Infusion given for bed-wetting. (80:26)

**Houstonia rubra** Cav., Red Bluet

- **Drug**—Keres, Western *Eye Medicine* Infusion of plant used for sore eyes. *Gastrointestinal Aid* Infusion of plant used for the stomach.

(171:48) Navajo, Kayenta *Gynecological Aid* Decoction of plant used for menstrual troubles. (205:43)

**Houstonia wrightii** Gray, Pygmy Bluet

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Plant used as a ceremonial fumigant for “deer infection.” *Dermatological Aid* Cold, compound infusion of plant taken and used as lotion for poison ivy rash. Dried, pulverized root used as dusting powder for sores on humans or livestock. *Disinfectant* Plant used as a ceremonial fumigant for “deer infection.” *Panacea* Root used as a “life medicine.” (191:45)

**Hudsonia**, Cistaceae**Hudsonia tomentosa** Nutt., Woolly Beachheather

- **Drug**—Montagnais *Blood Medicine* Decoction of plant taken by women to “purge the blood.” (156:313)

**Humulus**, Cannabaceae**Humulus lupulus** L., Common Hop

- **Drug**—Cherokee *Analgesic* “Alleviates pain and produces sleep.” *Antirheumatic (Internal)* Taken for rheumatism. *Breast Treatment* Used for breast and womb problems. *Gynecological Aid* Used for “breast & female complaints where womb is debilitated.” *Kidney Aid* Taken for inflamed kidneys. *Sedative* “Alleviates pain and produces sleep.” *Urinary Aid* Taken for “gravel” and the bladder. (80:39) Dakota *Analgesic* Decoction of fruits taken for intestinal pains. *Febrifuge* Decoction of fruits taken for fevers. *Gastrointestinal Aid* Decoction of fruits taken for intestinal pains. (69:362) Delaware *Ear Medicine* Poultice of heated plants in small bags applied for earache. *Sedative* Blossoms used for nervousness. *Stimulant* Infusion of plants used as a tonic stimulant. *Toothache Remedy* Poultice of heated plants in small bags applied for toothache. (176:31) Delaware, Oklahoma *Ear Medicine* Poultice of heated herb in bag applied for earache. *Sedative* Blossoms used in medicine for “nervousness.” *Stimulant* Infusion of plant taken as a tonic and stimulant. (175:26, 76) *Tonic* Infusion of plant taken as a “tonic-stimulant.” (175:26) *Toothache Remedy* Poultice of heated herb in bag applied for toothache. (175:26, 76) Meskwaki *Sedative* Root used for insomnia. (152:250) Mohegan *Analgesic* Blossoms used for pain. (176:130) *Ear Medicine* Dried blossoms applied to earache. (174:266) *Sedative* Used in making “nerve medicine.” (30:120) Infusion of blossoms used for nerves. (174:266) Infusion of blossoms taken for nervous tension. (176:72, 130) *Toothache Remedy* Dried blossoms applied to toothache. (174:266) Ojibwa *Diuretic* Infusion of herb taken as a diuretic and to reduce acidity of urine. (153:391) Omaha *Dermatological Aid* Root used for wounds. (58:584) Round Valley Indian *Dermatological Aid* Poultice of soaked hops applied to swellings and bruises. (41:344) Shinnecock *Pulmonary Aid* Poultice of dried hops heated in a cloth bag applied for pneumonia. *Sedative* Used in making “nerve medicine” and used as a poultice for pneumonia. (30:120)
- **Food**—Algonquin, Quebec *Bread & Cake* Hops used to make bread. (18:83) Lakota *Cooking Agent* Used to make bread swell. (139:51) Ojibwa *Cooking Agent* Hop fruit often used as a substitute for baking soda. (153:411)

**Humulus lupulus var. lupuloides** E. Small, Common Hop

- **Drug**—Dakota *Analgesic* Infusion of fruit taken for intestinal pains.

*Dermatological Aid* Simple or compound poultice of chewed root applied to wounds. *Febrifuge* Infusion of fruit taken for fevers. *Gastrointestinal Aid* Infusion of fruits taken "to allay fevers and intestinal pains." (as *H. americana* 70:77) **Navajo, Ramah Cough Medicine** Plant used for bad cough. *Hunting Medicine* Plant used as a "big medicine" for "good luck" in hunting. *Misc. Disease Remedy* Plant used for influenza. *Witchcraft Medicine* Plant used for protection against witches. (as *H. americanus* 191:22)

***Humulus lupulus* var. *neomexicanus*** A. Nels. & Cockerell, Common Hop

- **Food**—Apache, Chiricahua & Mescalero *Spice* Hops boiled and used to flavor wheat flour and potatoes. (33:47) Flower used to flavor drinks and make them stronger. (33:51) **Navajo Unspecified** Hops used for cooking. (55:41)

### ***Huperzia*, Lycopodiaceae, club moss**

***Huperzia lucidula*** (Michx.) Trevisan, Shining Clubmoss

- **Drug**—Iroquois *Blood Medicine* Compound used when "blood is bad." *Cold Remedy* Decoction used when woman catches cold due to suppressed menses. *Dermatological Aid* Compound used for neck sores. (as *Lycopodium lucidulum* 87:263)

***Huperzia selago*** (L.) Bernh. ex Mart. & Schrank var. *selago*, Fir Clubmoss

- **Drug**—Nitinaht *Cathartic* Plant used as a purgative. *Emetic* Plant used as a fast acting emetic. *Gastrointestinal Aid* Branches used to "clean . . . out" the insides. (as *Lycopodium selago* 186:60) **Tanana, Upper Analgesic** Poultice of the whole plant applied to the head for headaches. (as *Lycopodium selago* 102:18)

### ***Hybanthus*, Violaceae**

***Hybanthus concolor*** (T. F. Forst.) Spreng., Eastern Greenviolet

- **Drug**—Iroquois *Veterinary Aid* Infusion of roots and stems mixed with feed for mare with injured fetus. (87:386)

**Hydnaceae**, see *Dentinum*, *Hericium*

**Hydrangeaceae**, see *Broussaisia*, *Fendlera*, *Hydrangea*, *Jamesia*, *Philadelphus*

### ***Hydrangea*, Hydrangeaceae**

***Hydrangea arborescens*** L., Wild Hydrangea

- **Drug**—Cherokee *Abortifacient* Compound infusion taken for menstrual period. *Antiemetic* Used as an antiemetic and cold infusion of bark used as antiemetic for children. *Burn Dressing* Poultice of scraped bark used for burns. *Cancer Treatment* Used for tumors. *Cathartic* Used as a purgative. *Dermatological Aid* Used for ulcers and poultice of scraped bark used for "risings." *Disinfectant* Used as an antiseptic. *Emetic* Infusion of bark given to induce vomiting to "throw off disordered bile." *Gastrointestinal Aid* Bark chewed for stomach trouble. *Hypotensive* Bark chewed for high blood pressure. *Liver Aid* Infusion of bark given to induce vomiting to "throw off disordered bile." *Orthopedic Aid* Used for sprains and as poultice for sore or swollen muscles. *Pediatric Aid* Used as an antiemetic and cold infusion of bark used as antiemetic for children. *Stimulant* Inner bark and leaves used as a stimulant. (80:54) **Delaware Kidney Aid**

Roots and blue flag roots used for gallstones. (176:36) **Delaware, Oklahoma Liver Aid** Root combined with root of *Iris versicolor* and used for gallstones. (as *Hydrangea aborescens* 175:30, 76)

- **Food**—Cherokee *Beverage* Peeled branches and twigs boiled to make tea. (126:54) *Unspecified* New growth of young twigs peeled, boiled thoroughly, fried, and eaten. (204:253) *Vegetable* Peeled branches and twigs cooked in grease like green beans. (126:54)

***Hydrangea cinerea*** Small, Ashy Hydrangea

- **Drug**—Cherokee *Antiemetic* Infusion of bark scrapings taken for vomiting bile. *Cathartic* Infusion of roots taken as a cathartic by women during menses. *Emetic* Infusion of roots taken as an emetic by women during menses. *Gynecological Aid* Infusion of roots taken as an emetic and cathartic by women during menses. *Liver Aid* Infusion of bark scrapings taken for vomiting bile. (177:25)

### ***Hydrastis*, Ranunculaceae**

***Hydrastis canadensis*** L., Golden Seal

- **Drug**—Cherokee *Cancer Treatment* Used for cancer. *Dermatological Aid* Used as a tonic and wash for local inflammations. *Dietary Aid* Used to improve the appetite. *Gastrointestinal Aid* Used for "general debility" and "dyspepsy." *Stimulant* Used for cancer, general debility, dyspepsia, and to improve appetite. *Tonic* Used as a tonic and wash for local inflammations. (80:36) **Iroquois Antidiarrheal** Decoction of roots taken for whooping cough and diarrhea. *Carminative* Infusion of powdered root taken for gas. *Ear Medicine* Compound infusion with roots used as drops for earaches. *Emetic* Infusion of roots taken as an emetic for biliousness. *Eye Medicine* Compound decoction of plants taken for scrofula and used as drops for sore eyes. *Febrifuge* Infusion or decoction of roots taken for fevers. *Gastrointestinal Aid* Infusion of powdered root taken for sour stomach. *Heart Medicine* Infusion of roots with whisky taken for heart trouble. *Liver Aid* Infusion of powdered root taken for liver trouble, gall, sour stomach, and gas. *Pulmonary Aid* Infusion or decoction of roots taken for pneumonia. *Stimulant* Infusion of roots with whisky taken for run-down system. *Tuberculosis Remedy* Infusion or decoction of plants taken for tuberculosis, especially scrofula. (87:324) **Micmac Dermatological Aid** Root used for chapped or cut lips. (40:57)
- **Dye**—Cherokee *Unspecified* Used to make a dye. (80:36)

**Hydrocharitaceae**, see *Elodea*

### ***Hydrocotyle*, Apiaceae**

***Hydrocotyle poltata***, Po-he-po-he

- **Drug**—Hawaiian *Pulmonary Aid* Plant used for lung troubles. *Strengtheners* Plant used for general body weakness. *Venereal Aid* Plant used for diseases of the sexual organs. (2:74)

***Hydrocotyle* sp.**, Marsh Pennywort

- **Food**—Cahuilla *Vegetable* Plant used for greens. (15:79)

***Hydrocotyle umbellata*** L., Manyflower Marshpennywort

- **Drug**—Seminole *Cough Medicine*, *Respiratory Aid*, and *Sedative* Roots, or whole plant, used for turtle sickness: trembling, short breath and cough. (169:237)

**Hydrophyllaceae**, see *Eriodictyon*, *Hydrophyllum*, *Nama*, *Nemophila*, *Phacelia*, *Pholistoma*, *Turricula*

**Hydrophyllum**, Hydrophyllaceae**Hydrophyllum canadense** L., Bluntleaf Waterleaf

- **Drug**—Iroquois *Antidote* Compound infusion of roots taken as antidote for poisons. (87:420)

**Hydrophyllum fendleri** var. **albifrons** (Heller) J. F. Macbr., White Waterleaf

- **Food**—Okanagon *Forage* Thick roots eaten by cattle. *Unspecified* Thick roots cooked and eaten. **Thompson** *Forage* Thick roots eaten by cattle. *Unspecified* Thick roots cooked and eaten. (as *H. albifrons* 125:37)

**Hydrophyllum occidentale** (S. Wats.) Gray, Western Waterleaf

- **Food**—Okanagon *Staple* Roots used as a principal food. (178:238) **Thompson** *Forage* Roots eaten by cattle. *Unspecified* Root cooked and eaten. (164:480)

**Hydrophyllum tenuipes** Heller, Pacific Waterleaf

- **Food**—Cowlitz *Unspecified* Roots broken and eaten. (79:45)

**Hydrophyllum virginianum** L., Shawnee Salad

- **Drug**—Iroquois *Oral Aid* Decoction or chewed roots used as wash for cracked lips and mouth sores. (87:420) **Menominee** *Analgesic* Compound decoction of root used for chest pain. (54:130) *Antidiarrheal* Astringent root used for flux. (151:37) **Ojibwa** *Antidiarrheal* and *Pediatric Aid* Root used by men, women, or children to “keep flux in check.” (153:371)
- **Food**—Iroquois *Vegetable* Young plants or leaves cooked and seasoned with salt, pepper, or butter. (196:117) **Menominee** *Vegetable* Leaves wilted in maple sap vinegar, simmered, and boiled in fresh water with pork and fine meal. (151:68) **Ojibwa** *Fodder* Roots fed to ponies to make them fatten rapidly. (153:405) Root chopped and put into pony feed to make them grow fat and have glossy hair. (153:419)

**Hylocomiaceae**, see *Hylocomium***Hylocomium**, Hylocomiaceae, moss**Hylocomium splendens** (Hedw.) B.S.G.

- **Fiber**—Bella Coola *Mats, Rugs & Bedding* Used for padding and bedding. (184:196)

**Hymenoclea**, Asteraceae**Hymenoclea monogyra** Torr. & Gray, Singlewhorl Burrobush

- **Food**—Seri *Unspecified* Seeds used for food. (50:136)

**Hymenoclea** sp., Burrobush

- **Fiber**—Hualapai *Brushes & Brooms* Used to make brushes and brooms. (195:47)
- **Other**—Hualapai *Fuel* Used as kindling to ignite sparks from the friction of fire sticks. *Hunting & Fishing Item* Used to make arrow shafts. (195:47)

**Hymenopappus**, Asteraceae**Hymenopappus filifolius** Hook., Fineleaf Hymenopappus

- **Drug**—Zuni *Dermatological Aid* Poultice of chewed root with lard applied to swellings. *Emetic* Warm decoction of root taken as an emetic. (166:54, 55)
- **Food**—Hopi *Bread & Cake* Leaves boiled, rubbed with cornmeal, and

baked into bread. (32:29) **Zuni** *Candy* Root used as chewing gum. (166:68)**Hymenopappus filifolius** var. **cinereus** (Rydb.) I. M. Johnston, Fineleaf Hymenopappus

- **Drug**—Navajo, Ramah *Cough Medicine* Decoction of plant taken for cough. *Panacea* Cold infusion of root used as “life medicine.” (191:52)
- **Other**—Keres, Western *Unspecified* Plant known and named but no use was specified. (as *H. arenosus* 171:48)

**Hymenopappus filifolius** var. **lugens** (Greene) Jepson, Idaho Hymenopappus

- **Drug**—Hopi *Ceremonial Medicine* and *Emetic* Compound containing plant used as a ceremonial emetic. (as *H. lugens* 200:97) *Toothache Remedy* Root chewed for decaying teeth. (as *H. lugens* 200:33, 97) **Navajo** *Blood Medicine* Decoction of whole plant taken for blood poisoning. (as *H. nudatus* 55:88) **Navajo, Kayenta** *Dermatological Aid* Poultice of plant applied to sores caused by bird infections. *Other* Plant used for illness caused by lunar eclipse. (as *H. lugens* 205:48) **Navajo, Ramah** *Dermatological Aid* Infusion or decoction of plant taken and used as a lotion for arrow or bullet wound. (as *H. lugens* 191:52)

**Hymenopappus filifolius** var. **pauciflorus** (I. M. Johnston) B. L. Turner, Fineleaf Hymenopappus

- **Food**—Hopi *Beverage* Used to make tea and coffee. (as *H. pauciflorus* 42:326)
- **Dye**—Hopi *Unspecified* Used for dye. (as *H. pauciflorus* 42:326)

**Hymenopappus newberryi** (Gray) I. M. Johnston, Newberry's Hymenopappus

- **Drug**—Isleta *Gastrointestinal Aid* Infusion of plant taken for stomachache. Dried, ground plants made into a powder and used on the stomach for stomachaches. *Pediatric Aid* Dried, ground plants made into a powder and used on children's stomachs for stomachaches. (as *Leucampyx newberri* 100:34)

**Hymenopappus** sp.

- **Food**—Isleta *Beverage* Leaves and stems used to make a beverage. Plant kept well in storage and used to make a beverage in all seasons. (100:32) **Jemez** *Beverage* Little bundles of plant steeped into tea. (44:24)

**Hymenopappus tenuifolius** Pursh, Chalk Hill Hymenopappus

- **Drug**—Lakota *Veterinary Aid* Plant made into a tea and salve used for horses' hooves. (139:38)

**Hymenoxys**, Asteraceae**Hymenoxys bigelovii** (Gray) Parker, Bigelow's Rubberweed

- **Drug**—Hopi *Antirheumatic (External)* Used for severe pains in hips and back. *Cathartic* Used as a purge. *Gynecological Aid* Used for severe pains in hips and back, especially in pregnant state. *Stimulant* Used as a stimulant. *Unspecified* Infusion of plant used for medicinal tea. (42:328)

**Hymenoxys cooperi** (Gray) Cockerell, Cooper's Hymenoxys

- **Food**—Hopi *Beverage* Used to make tea. (42:329)
- **Dye**—Hopi *Unspecified* Used for a dye. (42:329)

- **Other**—Hopi *Ceremonial Items* Used for peach tree pahos (prayer sticks). (42:329)

***Hymenoxys richardsonii*** (Hook.) Cockerell, Pingue *Hymenoxys*

- **Drug**—Zuni *Dermatological Aid* Poultice of chewed root applied to sores and rashes. *Gastrointestinal Aid* Infusion of root taken for stomachache. (as *H. richardsonii* 27:375)
- **Food**—Navajo *Candy* Plant used as a chewing gum. (as *Actinella richardsonii* 55:80)

Disease Remedy* Infusion of dried roots taken for all kinds of diseases. *Other* Compound infusion taken or injured parts washed, a “Little Water Medicine.” *Tuberculosis Remedy* Decoction of roots taken for initial stages of tuberculosis. *Witchcraft Medicine* Plant had magical potency. (87:419)
- **Food**—**Cherokee Unspecified** Roots used for food. (80:51) **Vegetable** Potatoes used for food. (as *Ipomoea pandurata* 80:21)
- **Other**—**Cherokee Insecticide** Infusion of vine used for soaking sweet potatoes to keep away bugs and moles. (80:51)

### *Ipomoea pes-caprae* (L.) R. Br., Bayhops

- **Drug**—**Hawaiian Reproductive Aid** Plant used by expectant mothers. (as *Ipomoea pes-caprae* 2:73)

### *Ipomoea sagittata* Poir., Saltmarsh Morningglory

- **Drug**—**Houma Blood Medicine** Decoction of root taken to remove poison from the blood or heart. *Dermatological Aid* Poultice of boiled leaves applied to swellings. *Heart Medicine* Hot decoction of roots taken to “take poison out of the blood or heart.” *Snakebite Remedy* Leaf chewed and juice swallowed or poultice of chewed leaves used on snakebite. (158:62, 63)

### *Ipomoea* sp., Uwala

- **Drug**—**Hawaiian Emetic** Infusion of tubers and other plants strained and taken to vomit stomach contents that caused vomiting. *Gynecol-*

ogical *Aid* Tubers and other plants pounded, resulting liquid strained, heated, and taken for womb troubles. *Laxative* Tubers and other plants pounded, resulting liquid strained and taken for constipation. Tubers cooked with taro leaves and nuts and used as a laxative for children and adults. *Pediatric Aid* Tubers used to strengthen children. Tubers cooked with taro leaves and nuts and used as a laxative for children and adults. *Respiratory Aid* Tubers and other plants pounded, resulting liquid heated and taken for asthma. *Sedative* Tubers and other plants pounded, resulting liquid strained and taken for lack of sleep. *Strengtheners* Tubers used to strengthen children. (2:35)

- **Food**—Hawaiian *Vegetable* Tubers eaten. (2:35)

***Ipomoea tiliacea*** (Willd.) Choisy, Darkeye Morningglory

- **Drug**—Hawaiian *Laxative* Plant used to make a laxative. (as *Argyreia tiliaefolia* 2:73)

### ***Ipomopsis*, Polemoniaceae**

***Ipomopsis aggregata*** (Pursh) V. Grant, Skyrocket *Gilia*

- **Drug**—Great Basin Indian *Blood Medicine* Infusion of whole plant used for blood disease. (as *Gilia aggregata* 121:49)

***Ipomopsis aggregata*** (Pursh) V. Grant **ssp. *aggregata***, Skyrocket *Gilia*

- **Drug**—Hopi *Gynecological Aid* Plant used after birth when the mother lied in bed for 15 or 20 days. (as *Gilia aggregata* 42:321) Navajo, Kayenta *Cathartic* Plant used as a cathartic. *Dermatological Aid* Plant used for spider bites. *Emetic* Plant used as an emetic. *Gastrointestinal Aid* Plant used for stomach disease. (as *Gilia aggregata* 205:37) Navajo, Ramah *Hunting Medicine* Cold infusion taken and applied to body of hunter and weapons for good luck. (as *Gilia aggregata* 191:39) Okanagan-Colville *Febrifuge* Infusion of roots taken for high fevers. *Laxative* Infusion of leaves and stalks taken for constipation and to “clean out your system.” Infusion of roots taken as a laxative. (as *Gilia aggregata* 188:111) Paiute *Cathartic* Simple or compound decoction of plant or root taken as a physic. *Cold Remedy* Decoction of root taken as a cold remedy. *Emetic* Simple or compound decoction of plant or root taken as an emetic. (as *Gilia aggregata* 180:76, 77) Salish *Dermatological Aid* Decoction of plants used as a face and hair wash by adolescent girls. *Eye Medicine* Decoction of plants used as an eyewash. *Pediatric Aid* Decoction of plants used as a face and hair wash by adolescent girls. (as *Gilia aggregata* 178:294) Shoshoni *Analgesic* Poultice of crushed, whole plant applied for rheumatic aches. *Antirheumatic (External)* Poultice of crushed plant applied for rheumatic aches. *Blood Medicine* Decoction of plant taken as a blood tonic. *Cathartic* Decoction of plant or root taken as a physic. *Dermatological Aid* Decoction of whole plant used as a disinfecting wash for the itch. *Disinfectant* Decoction of whole plant used as a disinfectant wash for the itch. *Emetic* Compound decoction of roots used to induce vomiting. Decoction of plant or root taken as an emetic. *Tonic* Simple or compound decoction of whole plant taken as a blood tonic. *Venereal Aid* Simple or compound decoction of plant taken and used as a wash for gonorrhea and syphilis. (as *Gilia aggregata* 180:76, 77)
- **Food**—Hopi *Beverage* Boiled for a drink. (as *Gilia aggregata* 42:321) Klamath *Snack Food* Nectar sucked from flowers by children. (as *Gilia aggregata* 45:103)

- **Dye**—Hopi *Unspecified* Plant used for dye. (as *Gilia aggregata* 42:321)
- **Other**—Hopi *Decorations* Plant used for decoration. (as *Gilia aggregata* 42:321) Ute *Fasteners* Whole plant boiled for glue. (as *Gilia aggregata* 118:56)

***Ipomopsis aggregata* ssp. *attenuata*** (Gray) V. & A. Grant, Scarlet Skyrocket

- **Drug**—Navajo *Gastrointestinal Aid* Infusion of crushed, dried leaves taken for stomach troubles. (as *Gilia attenuata* 55:70)
- **Food**—Navajo *Forage* Used as a browse plant. (as *Gilia attenuata* 90:160)
- **Other**—Navajo *Decorations* Cultivated as an ornamental flower. (as *Gilia attenuata* 90:160)

***Ipomopsis aggregata* ssp. *candida*** (Rydb.) V. & A. Grant, Scarlet Skyrocket

- **Other**—Keres, Western *Unspecified* Plant known and named but no use was specified. (as *Gilia greeneana* 171:45)

***Ipomopsis congesta*** (Hook.) V. Grant **ssp. *congesta***, Ballhead *Gilia*

- **Drug**—Great Basin Indian *Analgesic* Poultice of dried, powdered blossoms applied for pain. (as *Gilia congesta* 121:49) Paiute *Antidiarrheal* Decoction of plant taken for diarrhea. *Cathartic* Decoction of plant taken as a physic. *Cold Remedy* Decoction of plant taken for colds. *Emetic* Decoction of plant taken as an emetic. *Gastrointestinal Aid* Decoction of plant taken for indigestion and stomach trouble. *Venereal Aid* Plant used in many ways for venereal diseases. Shoshoni *Antidiarrheal* Decoction of plant taken for diarrhea. *Cathartic* Decoction of plant taken as a physic. *Cold Remedy* Decoction of plant taken for colds. *Dermatological Aid* Decoction of plant used as an antiseptic wash for wounds, cuts, sores, and bruises. *Disinfectant* Decoction of plant used as an antiseptic wash for skin problems. *Emetic* Decoction of plant taken as an emetic. *Eye Medicine* Decoction or infusion of plant used as an eyewash. *Gastrointestinal Aid* Decoction of plant taken for indigestion and stomach trouble. *Kidney Aid* Decoction of plant taken for “kidney complaint.” *Liver Aid* Decoction of plant taken for liver trouble. *Misc. Disease Remedy* Decoction of plant taken for influenza. Poultice of boiled, drained, and mashed plant applied for erysipelas. *Venereal Aid* Plant used in many ways for venereal diseases. *Veterinary Aid* Poultice of crushed, raw plants applied to back sores on horses. Washo *Antidiarrheal* Decoction of plant taken for diarrhea. *Cathartic* Decoction of plant taken as a physic. *Cold Remedy* Decoction of plant taken for colds. *Emetic* Decoction of plant taken as an emetic. *Gastrointestinal Aid* Decoction of plant taken for indigestion and stomach trouble. *Kidney Aid* Infusion of crushed plant taken and poultice applied for dropsy. (as *Gilia congesta* 180:77–80)

***Ipomopsis gunnisonii*** (Torr. & Gray) V. Grant, Sanddune Skyrocket

- **Drug**—Navajo, Kayenta *Blood Medicine* Plant used as a blood purifier. *Dermatological Aid* Poultice of plant applied to sores. (as *Gilia gunnisonii* 205:37)

***Ipomopsis laxiflora*** (Coult.) V. Grant, Iron Skyrocket

- **Drug**—Keres, Western *Emetic* Infusion of roots used as an emetic to

eliminate the ozone in cases of lightning shock. (as *Gilia laxiflora* 171:45)

***Ipomopsis longiflora*** (Torr.) V. Grant **ssp. longiflora**, Flax-flowered Gilia

- **Drug**—Hopi *Analgesic* Decoction of leaves used for stomachache. (as *Gilia longiflora* 200:87) *Gastrointestinal Aid* Decoction of leaves taken for stomachache. (as *Gilia longiflora* 200:33, 87) **Keres, Western Emetic** Infusion of roots used as an emetic to eliminate the ozone in cases of lightning shock. (as *Gilia longiflora* 171:45) **Navajo Ceremonial Medicine** Plant used as medicine in the Wind and Female Shooting Chants. *Emetic* Decoction of pounded plant taken to vomit. *Gastrointestinal Aid* Decoction of pounded plant taken for the bowels. *Veterinary Aid* Infusion of flowers mixed with feed and given to sheep for stomach troubles. (as *Gilia longiflora* 55:70) **Navajo, Kayenta Blood Medicine** and *Gynecological Aid* Plant used for postpartum septicemia. (as *Gilia longiflora* 205:38) **Navajo, Ramah Analgesic** Plant used for stomachache and arthritis. *Antirheumatic (Internal)* Plant used for arthritis. *Ceremonial Medicine* Plant used as ceremonial eyewash and chant lotion. *Dermatological Aid* Infusion of plant used as hair tonic to lengthen hair and prevent baldness. *Disinfectant* Plant used for “deer infection” and “snake infection.” *Eye Medicine* Plant used as ceremonial eyewash and chant lotion. *Gastrointestinal Aid* Plant chewed with salt for heartburn. Plant used for stomachache. *Gynecological Aid* Plant used to facilitate delivery of placenta. *Panacea* Plant used as “life medicine.” *Veterinary Aid* Cold infusion of plant applied daily to heal incision in castrated colt. (as *Gilia longiflora* 191:40) **Tewa Analgesic** Infusion of pulverized flowers and leaves used for headache. *Dermatological Aid* Infusion of pulverized flowers and leaves used on sores. (as *Gilia longiflora* 138:55) **Zuni Dermatological Aid** and *Pediatric Aid* Poultice of dried, powdered flowers and water applied to remove hair on newborns and children. (as *Gilia longiflora* 27:378)
- **Other**—Navajo *Ceremonial Items* Used to make prebreakfast drink and taken to make the person “bark” or sing loudly for Squaw Dance. (as *Gilia longiflora* 55:70)

***Ipomopsis multiflora*** (Nutt.) V. Grant, Manyflowered Gilia

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Decoction of plant used as a ceremonial medicine. (as *Gilia multiflora* 191:40) **Zuni Analgesic** Powdered, whole plant applied to face for headache. *Dermatological Aid* Powdered plant applied to wounds. *Pulmonary Aid* Crushed blossoms smoked in corn husks to “relieve strangulation.” (as *Gilia multiflora* 166:52)

***Ipomopsis polycladon*** (Torr.) V. Grant, Manybranched Gilia

- **Drug**—Navajo, Kayenta *Sedative* Plant used as a soporific. *Tonic* Plant used as a tonic. (as *Gilia polycladon* 205:38)

***Ipomopsis pumila*** (Nutt.) V. Grant, Dwarf Gilia

- **Other**—Keres, Western *Unspecified* Plant known and named but no use was specified. (as *Gilia pulmila* 171:45)

**Iresine**, Amaranthaceae

***Iresine diffusa*** Humb. & Bonpl. ex Willd., Juba's Bush

- **Drug**—Houma *Pulmonary Aid* Syrup of leaves and stems taken for whooping cough. (as *I. paniculata* 158:66)

**Iridaceae**, see *Iris*, *Sisyrinchium*

***Iris***, Iridaceae

***Iris cristata*** Ait., Dwarf Crested Iris

- **Drug**—Cherokee *Dermatological Aid* Compound decoction of pulverized root used as salve for ulcers. *Liver Aid* Infusion taken for liver. *Urinary Aid* Compound decoction of root used for “yellowish urine.” (80:41)

***Iris douglasiana*** Herbert, Douglas Iris

- **Drug**—Yokia *Oral Aid* and *Pediatric Aid* Leaves used to wrap babies during berry gathering trips to retard perspiration and prevent thirst. (41:330)
- **Other**—Mendocino Indian *Hunting & Fishing Item* Leaf edges made into nets and ropes used to make snares for catching deer. (41:330)
- **Pomo, Kashaya Ceremonial Items** Flowers used in dance wreaths at the Strawberry Festival. (72:62)

***Iris innominata*** Henderson, Del Norte County Iris

- **Fiber**—Tolowa *Cordage* Roots and leaves used to make cordage. (6:33)

***Iris macrosiphon*** Torr., Bowltube Iris

- **Drug**—Pomo *Gynecological Aid* Roots used to hasten the birth of a baby. (117:284)
- **Fiber**—Karak *Cordage* Leaves dried, scraped, and used to make string or cord. Used to make rope. (148:381)
- **Other**—Karak *Hunting & Fishing Item* Leaves dried, scraped, and used to make fish nets, camping bags, deer snares, traps, and woodpecker nets. (148:381) **Pomo Hunting & Fishing Item** Used to make the strongest deer snares. (117:284)

***Iris missouriensis*** Nutt., Rocky Mountain Iris

- **Drug**—Great Basin Indian *Toothache Remedy* Root put in a hollow tooth for toothaches. (121:47) **Klamath Emetic** Dried rootstocks used by medicine men as smoking material to cause nausea. Dried rootstocks sometimes used by medicine men as a smoking material, mixed with poison camas and a little tobacco, to give a person a severe nausea, in order to secure a heavy fee for making him well again. (45:93) **Montana Indian Emetic** Decoction of rootstocks used by medicine men to induce vomiting. (19:13) **Navajo, Ramah Ceremonial Medicine** and *Emetic* Decoction of plant used as a ceremonial emetic. (191:21) **Nevada Indian Kidney Aid** Infusion of roots taken for kidney troubles. *Urinary Aid* Infusion of roots taken for bladder troubles. (121:47) **Paiute Analgesic** Decoction of root taken for stomachaches. *Dermatological Aid* Paste of ripe seeds applied to sores. *Ear Medicine* Warm decoction of root dropped into ear for earache. *Gastrointestinal Aid* Decoction of root taken for stomachaches. *Toothache Remedy* Raw root placed in cavity or against gum for toothache. *Urinary Aid* Decoction of root taken for bladder troubles. *Veneral Aid* Decoction of root used for gonorrhoea. **Shoshoni Analgesic** Decoction of root taken for stomachaches. Poultice of mashed roots applied for rheumatic pains. *Antirheumatic (External)* Poultice of mashed roots applied to rheumatic pains. *Burn Dressing* Paste of ripe seeds applied to burns. *Dermatological Aid* Pulped root applied as a salve for venereal sores. *Ear Medicine* Warm decoction of root dropped into ear for earache. *Gastrointestinal Aid* Decoction of root

taken for stomachaches. *Toothache Remedy* Raw root placed in cavity or against gum for toothache. *Venereal Aid* Decoction of root taken for gonorrhea and root salve used for venereal sores. (180:89, 90) **Yavapai Cathartic** Decoction of root taken as a purgative. (65:261) **Zuni Pediatric Aid** Poultice of chewed root applied to increase strength of newborns and infants. *Strengtheners* Poultice of chewed root used for newborns and infants to increase strength. (27:373)

- **Other—Jemez Decorations** Flower used as a decoration for dances. (44:24)

### *Iris setosa* Pallas ex Link, Beachhead Iris

- **Drug—Aleut Laxative** Decoction of root taken as a laxative. (8:428) **Eskimo, Inupiat Poison** Whole plant considered poisonous. (98:140)
- **Food—Eskimo, Alaska Beverage** Roasted, ground seeds used for coffee. (4:715)
- **Dye—Eskimo, Alaska Unspecified** Petals made into a dye and used for staining strands of grass for weaving colored patterns on baskets. (1:34)

### *Iris* sp., Iris

- **Drug—Seminole Dermatological Aid** Plant used for alligator bites. (169:298) **Yana Cough Medicine** Raw roots chewed for coughs. (147:253)
- **Fiber—Wintoon Cordage** Used to make cord for fish nets. (117:264)
- **Dye—Navajo Green** Used to make a green dye. (55:37)

### *Iris tenax* ssp. *klamathensis* Lenz, Klamath Iris

- **Fiber—Tolowa Cordage** Used to make cordage. (6:33)

### *Iris tenuissima* Dykes, Longtube Iris

- **Drug—Pomo Gynecological Aid** Roots used to hasten the birth of a baby. (117:284)
- **Other—Pomo Hunting & Fishing Item** Used to make the strongest deer snares. (117:284)

### *Iris verna* L., Dwarf Violet Iris

- **Drug—Cherokee Dermatological Aid** Compound decoction of pulverized root used as salve for ulcers. *Liver Aid* Infusion taken for liver. *Urinary Aid* Compound decoction of root used for “yellowish urine.” (80:41) **Creek Cathartic** Plant used as a powerful cathartic. (172:669, 670)

### *Iris versicolor* L., Harlequin Blueflag

- **Drug—Abnaki Poison** Plant considered poisonous. (144:155) Plant considered poisonous. (144:175) **Algonquin, Tête-de-Boule Burn Dressing** Poultice of smashed roots applied to burns. *Dermatological Aid* Poultice of smashed roots applied to wounds. (132:129) **Chippewa Dermatological Aid** Poultice of root, very strong, applied to swellings. (53:366) Poultice of roots applied to scrofulous sores. *Tuberculosis Remedy* Poultice of roots applied to scrofulous sores. (71:126) **Cree, Hudson Bay Cathartic** Plant used as a purgative. *Liver Aid* Plant used to increase the flow of bile. (92:303) **Creek Cathartic** Plant used as a powerful cathartic. (172:669, 670) Plant used as a cathartic. (177:10) **Delaware Antirheumatic (External)** Roots used for rheumatism. *Kidney Aid* Roots used for kidney disorders. *Liver Aid* Roots used for liver disorders. *Venereal Aid* Roots used for scrofula. (176:36) **Delaware, Oklahoma Antirheumatic (Internal)** Root taken for rheumatism. (175:30, 76) *Kidney Aid* Root used for disorders of the kidneys.

*Liver Aid* Root used for disorders of the liver. (175:30) Root combined with root of *Hydrangea arborescens* and used for gallstones. *Tuberculosis Remedy* Root taken for “scrofula.” (175:30, 76) **Iroquois Blood Medicine** Poultice of crushed rhizomes applied for blood poisoning caused by contusions. (141:67) *Cathartic* Infusion of plant taken as a physic. *Gynecological Aid* Infusion of smashed roots taken at menses to induce pregnancy. *Orthopedic Aid* Infusion of smashed roots taken to induce paralysis. *Respiratory Aid* Compound decoction with roots taken for hay fever. (87:287) **Malecite Throat Aid** Infusion of plants and bulrush used as a gargle for sore throats. (116:248) **Meskwaki Burn Dressing** Poultice of freshly macerated root applied to burns. *Cold Remedy* Root used for colds. *Dermatological Aid* Poultice of freshly macerated root applied to sores. *Pulmonary Aid* Root used for lung trouble. (152:224) **Micmac Dermatological Aid** Root used for wounds and herb used for sore throat. *Misc. Disease Remedy* Root used for cholera and the prevention of disease. *Panacea* Root used as a “basic medical cure” and for cholera. *Throat Aid* Herbs used for sore throat and root used for wounds. (40:57) **Mohegan Analgesic** Poultice of pulverized root mixed with flour applied to pain. (176:72, 130) **Montagnais Analgesic** Poultice of crushed plant mixed with flour applied to any pain. (156:315) Compound poultice of plant and flour applied to pain. (174:268) **Ojibwa Cathartic** Decoction of root taken as a “quick physic.” *Emetic* Decoction of root taken as an emetic. (153:371) **Omaha Dermatological Aid** Paste of pulverized rootstock applied to sores and bruises. *Ear Medicine* Pulverized rootstock mixed with water or saliva and dropped in ear for earache. *Eye Medicine* Rootstock used to medicate “eye-water.” (70:72) **Penobscot Herbal Steam** Plant steamed throughout the house to keep away “disease in general.” (156:311) *Misc. Disease Remedy* Infusion of root taken for cholera. (156:308, 309) *Preventive Medicine* Root chewed to keep disease away; the plant is thought to “kill” sickness. (156:311) **Ponca Dermatological Aid** Paste of pulverized rootstock applied to sores and bruises. *Ear Medicine* Pulverized rootstock mixed with water or saliva and dropped in ear for earache. *Eye Medicine* Rootstock used to medicate “eye-water.” (70:72) **Potawatomi Dermatological Aid** Poultice of root used to allay inflammation. (154:60) **Rappahannock Panacea** Infusion of dried roots taken for “every complaint.” (161:28)
- **Fiber—Potawatomi Basketry** Leaves used to weave baskets. *Mats, Rugs & Bedding* Leaves used to weave mats. (154:120)
- **Other—Ojibwa Protection** Used as a charm against snakes. When blueberry picking, everyone carries a piece of this plant in his clothes and will handle it every little while to perpetuate the scent. They believe that snakes will shun them while so protected. They say that the Arizona Indians use it when they hold their snake dances and are never struck as long as their clothes are fumigated with it. They also chew it to get the odor into their mouths, preparatory to taking rattlesnakes into their teeth. The rattlesnake never offers to bite them so long as the scent of the blue flag persists. (153:430)

### *Iris virginica* L., Virginia Iris

- **Drug—Cherokee Dermatological Aid** Compound decoction of pulverized root used as salve for ulcers. *Liver Aid* Infusion taken for liver. *Urinary Aid* Compound decoction of root used for “yellowish urine.” (80:41)

**Isocoma**, Asteraceae

**Isocoma acradenia** (Greene) Greene **var. acradenia**, Alkali Goldenbush

- **Drug**—Cahuilla *Dermatological Aid* Poultice of boiled leaves applied to sores. *Throat Aid* Leaves soaked in a pan of boiling water and steam inhaled for sore throats. (as *Haplopappus acradenius* 15:75)
- **Fiber**—Cahuilla *Building Material* Plant used to build fences as a protection from cold winds. (as *Haplopappus acradenius* 15:75)

**Isocoma pluriflora** (Torr. & Gray) Greene, Southern Jimmyweed

- **Drug**—Navajo, Kayenta *Dermatological Aid* and *Pediatric Aid* Plant used as a lotion to heal infant's navel. (as *Aplopappus heterophyllus* 205:44) Pima *Analgesic* Poultice of plant applied for muscular pain. *Cough Medicine* Leaves chewed for coughs. *Orthopedic Aid* Poultice of plant applied for muscular pain. (as *Aplopappus heterophyllus* 47:101)
- **Other**—Pima *Fuel* Dried plants used for kindling. (as *Aplopappus heterophyllus* 47:101)

**Iva**, Asteraceae

**Iva axillaris** Pursh, Poverty Weed

- **Drug**—Mahuna *Abortifacient* Plant used to cause abortions. *Contraceptive* Plant used to prevent conception. (140:67) Paiute *Dermatological Aid* Leaves used as a plaster or infusion used as a wash for sores or skin irritations. Shoshoni *Analgesic* Infusion or decoction of plant taken, especially by children, for stomachaches or cramps. *Antidiarrheal* Decoction of plant taken for diarrhea. *Cold Remedy* Infusion or decoction of plant used by children for colds. (180:90, 91) *Gastrointestinal Aid* Root soaked in cold water for tea and taken for bowel disorders. (118:42) Infusion or decoction of plant taken, especially by children, for stomachaches or cramps. Raw, roasted, or boiled root eaten for indigestion. *Pediatric Aid* Infusion or decoction of plant taken, especially by children, for stomachaches or cramps. Infusion or decoction of plant used by children for colds. (180:90, 91) Ute *Unspecified* Used as medicine. (38:35)

**Iva xanthifolia** Nutt., Giant Sumpweed

- **Drug**—Navajo, Kayenta *Dermatological Aid* Poultice of plant applied to boils. *Veterinary Aid* Plant used to heal castration incision in sheep. (205:48) Navajo, Ramah *Cough Medicine* Infusion or decoction taken and used as lotion for cough. *Misc. Disease Remedy* Infusion or decoction taken and used as lotion for influenza. *Witchcraft Medicine* Infusion or decoction taken and used as lotion for protection from witches. (191:52)

**Ivesia**, Rosaceae

**Ivesia gordonii** (Hook.) Torr. & Gray, Gordon's Ivesia

- **Drug**—Arapaho *Tonic* Infusion of root used as a tonic. (as *Horkelia gordonii* 118:40) Infusion of resinous roots used as a general tonic. (121:48)

**Jacquemontia**, Convolvulaceae

**Jacquemontia ovalifolia ssp. sandwicensis** (Gray) Robertson, Ovalleaf Clustervine

- **Drug**—Hawaiian *Dermatological Aid* Plant mixed with taro leaves and salt and used for cuts. *Pediatric Aid* and *Strengtheners* Plant used for babies with general body weakness. (as *J. sandwicensis* 2:73)
- **Food**—Hawaiian *Beverage* Dried leaves and stems used to make tea. *Unspecified* Dried leaves and stems eaten with coconut. (as *J. sandwicensis* 2:73)

**Jacquinia**, Theophrastaceae

**Jacquinia pungens**

- **Food**—Seri *Unspecified* Nuts used for food. (50:136)
- **Other**—Seri *Ceremonial Items* Dried nuts used as favorite rattle beads. (50:136)

**Jamesia**, Hydrangeaceae

**Jamesia americana** Torr. & Gray, Cliffbush

- **Food**—Apache, Chiricahua & Mescalero *Unspecified* Seeds occasionally eaten fresh. (33:45)

**Jatropha**, Euphorbiaceae

**Jatropha cardiophylla** (Torr.) Muell.-Arg., Sangre de Cristo

- **Fiber**—Papago *Basketry* Thick, rubbery stems used to make bulky baskets. (as *Tatropolia cardiophylla*, bloodroot bush 34:57) Seri *Basketry* Coil for the warp of very light, shallow baskets made of a "whisp of splints" of several sorts of torote. (50:138)

**Jatropha spatulata**, Torote Amarillo

- **Fiber**—Seri *Basketry* Coil for the warp of very light, shallow baskets made of a "whisp of splints" of several sorts of torote. (50:138)

**Jeffersonia**, Berberidaceae

**Jeffersonia diphylla** (L.) Pers., Twinleaf

- **Drug**—Cherokee *Dermatological Aid* Poultice used for sores, ulcers, and inflamed parts. *Kidney Aid* Infusion taken for dropsy. *Urinary Aid* Infusion taken for gravel and urinary problems. (80:59) Iroquois *Antidiarrheal* Decoction of whole plant taken by adults and children with diarrhea. *Liver Aid* Decoction of whole plant taken for gall. *Pediatric Aid* Decoction of whole plant taken by adults and children with diarrhea. (87:332)

**Juglandaceae**, see *Carya*, *Juglans*

**Juglans**, Juglandaceae

**Juglans californica** S. Wats., California Walnut

- **Drug**—Costanoan *Blood Medicine* Infusion of leaves taken for thin blood. (21:20)
- **Food**—Costanoan *Unspecified* Nuts used for food. (21:248)

**Juglans cinerea** L., Butternut

- **Drug**—Cherokee *Antidiarrheal* Infusion of bark taken to check bowels. *Cathartic* Pills from inner bark used as a cathartic and compound infusion used for toothache. (80:61) Pills prepared from inner bark and used as a cathartic. (203:75) *Toothache Remedy* Pills from

inner bark taken as a cathartic and compound infusion used for toothache. (80:61) **Chippewa** *Cathartic* Decoction of plant sap taken as a cathartic. (71:127) **Iroquois** *Analgesic* Compound decoction of plants taken for urinating pain. *Anthelmintic* Compound decoction with bark taken to kill worms in adults. *Blood Medicine* Compound decoction taken as a blood purifier and for venereal disease. (87:295) *Cathartic* Decoction of bark taken as a physic and cathartic. (87:296) *Dermatological Aid* Compound decoction taken when skin becomes thin. Infusion or chewed bark applied to bleeding wounds. (87:295) Nutmeat oil formerly used for the hair, either alone or mixed with bear grease. (196:123) *Emetic* Infusion of plant and other plant wood and bark used as an emetic to remove yellow from the stomach. (141:39) *Gynecological Aid* Compound decoction with bark taken to induce pregnancy. (87:294) *Hemostat* Infusion or chewed bark applied to bleeding wounds. *Laxative* Compound decoction of bark or shoots taken as a laxative. *Liver Aid* Compound decoction taken for yellow skin and too much gall. *Oral Aid* Compound infusion of buds used as mouthwash for mouth ulcers. *Psychological Aid* Compound decoction with plant taken for "loss of senses during menses." *Toothache Remedy* Juice used for toothache. *Tuberculosis Remedy* Compound decoction used as poultice for infected and swollen tubercular glands. *Urinary Aid* Compound decoction of plants taken for urinating pain. *Venereal Aid* Decoction of shoots taken as a laxative and for venereal disease. (87:295) **Malecite** *Cathartic* Infusion of bark used as a purgative. (116:254) **Menominee** *Cathartic* Syrup from sap used as a standard "physic." (151:38, 39) **Meskwaki** *Cathartic* Decoction of twig bark or decoction of wood and bark taken as a cathartic. (152:224) **Micmac** *Cathartic* Bark used as a purgative. (40:57) **Potawatomi** *Cathartic* Bark used as a physic and infusion of inner bark taken as a tonic. *Tonic* Infusion of inner bark taken as a tonic and bark used as a physic. (154:60, 61)

- **Food**—**Algonquin, Quebec** *Unspecified* Nuts used for food. (18:78) **Cherokee** *Unspecified* Nuts used for food. (80:61) Raw nut used for food. (126:42) **Iroquois** *Baby Food* Fresh nutmeats crushed, boiled, and oil used as a baby food. *Beverage* Fresh nutmeats crushed, boiled, and liquid used as a drink. *Bread & Cake* Fresh nutmeats crushed and mixed with bread. (124:99) Nuts crushed, mixed with cornmeal and beans or berries, and made into bread. (196:123) *Pie & Pudding* Fresh nutmeats crushed and mixed with corn pudding. (124:99) *Sauce & Relish* Nuts pounded, boiled, resulting oil seasoned with salt and used as gravy. *Soup* Nutmeats crushed and added to corn soup. (196:123) *Special Food* Fresh nutmeats crushed, boiled, and oil used as a delicacy in corn bread and pudding. (124:99) Nutmeat oil added to the mush used by the False Face Societies. *Staple* Nutmeats crushed and added to hominy. *Unspecified* Nutmeats, after skimming off the oil, seasoned and mixed with mashed potatoes. (196:123) **Menominee** *Unspecified* Used in the same way that the white man did. (151:68) **Meskwaki** *Winter Use Food* Nuts stored for winter use. (152:259) **Ojibwa** *Unspecified* Nuts used for food. (153:405) **Potawatomi** *Winter Use Food* Butternuts gathered for their edible quality and furnished a winter supply of food. (154:103)
- **Fiber**—**Cherokee** *Building Material* Wood used for lumber. (80:61)
- **Dye**—**Cherokee** *Black* Young roots used to make a black dye. *Brown* Bark used to make a brown dye. (80:61) **Chippewa** *Black* Boiled with hazel to make a black dye. Inner bark and a little of the root boiled

with black earth and ocher to make a black dye. Used with black earth to make a black dye. (53:372) *Brown* Root bark used to make a brown dye which did not need a mordant. (71:127) **Menominee** *Black* Bark boiled with blue clay to obtain a deep black color. *Brown* Juice of nut husk used as a brown dye for deerskin shirts. (151:78) **Ojibwa** *Brown* Nut hulls used as best brown dye, because it was attained from the tree at any time of the year. Butternut was usually used in other combinations for brown and black colors. (153:425)

- **Other**—**Iroquois** *Insecticide* Nutmeat oil mixed with bear grease and used as a preventive for mosquitoes. (196:123)

### *Juglans hindsii* (Jepson) Jepson ex R. E. Sm., Hinds's Black Walnut

- **Food**—**Pomo, Kashaya** *Dried Food* Sweet nutmeat dried and stored for later use. *Unspecified* Sweet nutmeat eaten fresh. (72:117)
- **Dye**—**Pomo, Kashaya** *Black* Nut husk used in dyeing bulrush root a black color for making basket design. (72:117)

### *Juglans major* (Torr.) Heller, Arizona Walnut

- **Food**—**Apache, Chiricahua & Mescalero** *Unspecified* Nutmeats eaten raw. *Winter Use Food* Nutmeats mixed with mesquite gravy or ground with roasted mescal and stored. (33:42) **Apache, Mescalero** *Unspecified* Nutmeats mixed with mescal, datil, sotol, or mesquite and used for food. (14:46) **Hualapai** *Unspecified* Nuts used for food. (195:13) **Navajo** *Unspecified* Nuts gathered and eaten on a fairly large scale. (55:39) **Yavapai** *Beverage* Decoction of pulverized nut juice dipped up and sucked. (63:209) Meat pulverized in mescal syrup and used as a beverage. *Unspecified* Nutmeat used for food. *Winter Use Food* Nuts stored for later use. (65:256)
- **Fiber**—**Apache, Mescalero** *Building Material* Trees used to construct dome-shaped lodges when away from home. (14:46)
- **Dye**—**Hualapai** *Unspecified* Nutshells boiled and used as a dye. (195:13) **Navajo** *Brown* Nut hulls used as a golden brown dye. Young twigs used as a light brown dye. (55:39)
- **Other**—**Apache, Mescalero** *Paint* Outer shell coverings soaked in water to make a black paint. (14:46)

### *Juglans nigra* L., Black Walnut

- **Drug**—**Cherokee** *Dermatological Aid* Infusion used as a wash for sores. *Misc. Disease Remedy* Infusion of inner bark taken for smallpox and infusion of leaves used for goiter. *Poison* "Bark used cautiously in medicine because it is poisonous." *Toothache Remedy* Bark chewed for toothache. (80:61) **Comanche** *Dermatological Aid* Pulverized leaves rubbed on affected part for ringworm. (29:522) **Delaware** *Anthelmintic* Juice from green hulls of fruits rubbed over areas infected by ringworm. *Dermatological Aid* Sap used in applications for inflammations. *Gastrointestinal Aid* Three bundles of bark boiled to make a strong tea and used for 2 days to remove intestinal bile. (176:29) **Delaware, Oklahoma** *Cathartic* Strong decoction of bark taken as a cathartic. *Dermatological Aid* Juice from green hull of fruit rubbed on skin for ringworm. Sap applied to any inflammation. *Emetic* Strong decoction of bark taken as an emetic. (175:24, 76) *Gastrointestinal Aid* and *Liver Aid* Decoction of bark taken "to remove bile from the intestines." (175:24) **Houma** *Dermatological Aid* Infusion of nutshells used as a wash for "the itch." *Hypotensive* Decoction of mashed leaves taken for relief from "blood pressure." (158:66) **Iroquois** *Analgesic* Poultice of bark applied for headache. *Blood Medicine* Compound decoction with brandy taken as a blood purifier.

- (87:296) *Dermatological Aid* Nutmeat oil formerly used for the hair, either alone or mixed with bear grease. (196:123) *Laxative Compound* decoction of bark taken as a laxative. *Psychological Aid* Poul-tice of bark applied for "craziness." *Witchcraft Medicine* Infusion of bark used as a medicine for rain. (87:296) **Kiowa** *Anthelmintic* De-coction of root bark taken to kill "worms." (192:21) **Meskwaki** *Cathar-tic* Inner bark used as a very strong physic. *Snakebite Remedy* Coiled and charred twig bark and old bark applied in water for snakebite. (152:224, 225) **Rappahannock** *Antidiarrheal* Infusion of root bark taken to prevent dysentery. (161:32) *Febrifuge* Compound with north side bark used as a poultice for chills. (161:31) *Gastrointestinal Aid* Infusion of root bark taken to "roughen the intestines." (161:32)
- **Food—Cherokee** *Dried Food* Nuts dried in the rafters for future use. *Porridge* Nuts mixed with skinned hominy corn, water, and pinto beans. (126:43) *Unspecified* Nuts used for food. (80:61) **Comanche** *Unspecified* Nuts used for food. (29:522) *Winter Use Food* Nuts stored for winter use. (29:531) **Dakota** *Soup* Nuts used to make soup. *Un-specified* Nuts eaten plain or with honey. (70:74) **Iroquois** *Beverage* Fresh nutmeats crushed, boiled, and liquid used as a drink. *Bread & Cake* Fresh nutmeats crushed and mixed with bread. (124:99) Nuts crushed, mixed with cornmeal and beans or berries, and made into bread. (196:123) *Pie & Pudding* Fresh nutmeats crushed and mixed with corn pudding. (124:99) *Sauce & Relish* Nuts pounded, boiled, resulting oil seasoned with salt and used as gravy. *Soup* Nutmeats crushed and added to corn soup. (196:123) *Special Food* Fresh nut-meats crushed, boiled, and oil used as a delicacy in corn bread and pudding. (124:99) Nutmeat oil added to the mush used by the False Face Societies. *Staple* Nutmeats crushed and added to hominy. *Un-specified* Nutmeats, after skimming off the oil, seasoned and mixed with mashed potatoes. (196:123) **Kiowa** *Unspecified* Nuts used for food. (192:20) **Lakota** *Unspecified* Nuts used for food. (139:49) **Meskwaki** *Unspecified* Nuts were relished. (152:259) **Omaha** *Soup* Nuts used to make soup. (70:74) *Unspecified* Nuts eaten plain or mixed with honey. (68:326) Nuts eaten plain or with honey. **Pawnee** *Soup* Nuts used to make soup. *Unspecified* Nuts eaten plain or with honey. **Ponca** *Soup* Nuts used to make soup. *Unspecified* Nuts eaten plain or with honey. **Winnebago** *Soup* Nuts used to make soup. *Unspecified* Nuts eaten plain or with honey. (70:74)
  - **Fiber—Cherokee** *Furniture* Wood used to make furniture. (80:61)
  - **Dye—Cherokee** *Brown Bark*, roots, and husks used to make a brown dye. *Green Leaves* used to make a green dye. (80:61) **Chippewa** *Black Bark* used to make a black dye. *Brown Bark* used to make a dark brown dye. (71:127) **Dakota** *Black* Roots used to make a black dye. (69:367) Nuts used to make a black dye. (70:74) **Kiowa** *Blue-Black* Roots boiled to make a bluish, black dye for buffalo hides. (192:20) **Meskwaki** *Black* Wood and bark charred to make the best black dye. (152:271) **Omaha** *Black* Nuts used to make a black dye. **Pawnee** *Black* Nuts used to make a black dye. **Ponca** *Black* Nuts used to make a black dye. **Winnebago** *Black* Nuts used to make a black dye. (70:74)
  - **Other—Cherokee** *Decorations* Wood used to carve. *Hunting & Fish-ing Item* Wood used to make gunstocks. (80:61) **Delaware** *Insecticide* Leaves scattered about the house to dispel fleas. (176:29) **Delaware, Oklahoma** *Insecticide* Leaves scattered about house to "dispel fleas." (175:24) **Iroquois** *Insecticide* Nutmeat oil mixed with bear grease and used as a preventive for mosquitoes. (196:123)

### *Juglans regia* L., English Walnut

- **Dye—Navajo** *Brown* Nut hulls used as a golden brown dye. (55:39)

### *Juglans* sp., Walnut

- **Drug—Apache, Western** *Dermatological Aid* Juice used to clear mag-gots from wounds. *Veterinary Aid* Juice given to dogs for worms. (26:187)
- **Food—Apache, Western** *Sauce & Relish* Walnuts pulverized, mixed with mescal juice, and used as dip for corn bread. *Unspecified* Nuts parched with corn, ground, and eaten by the pinch. (26:187)

### Juncaceae, see *Juncus*, *Luzula*

### Juncaginaceae, see *Triglochin*

### *Juncus*, Juncaceae

#### *Juncus acutus* var. *sphaerocarpus* Engelm., Leopold's Rush

- **Fiber—Cahuilla** *Basketry* Rushes made into baskets used for collect-ing foods, leaching acorn meal, and finely woven baskets. (15:80)

#### *Juncus balticus* Willd., Baltic Rush

- **Food—Paiute** *Candy* Sugar, formed along tops of plants, gathered and eaten as candy. *Unspecified* Seeds used for food. (167:246) Spe-cies used for food. (167:243) **Paiute, Northern** *Beverage* Stems used to make a fermented drink. (59:53)
- **Fiber—Cheyenne** *Basketry* Stems used to weave baskets. (76:171) Stems formerly used in basket weaving. (83:12) *Other* Used in weav-ing. (83:46) **Kawaiisu** *Basketry* Split stems used in weaving coiled baskets. (206:35) **Klamath** *Basketry* Stems used in the weaving of baskets. *Mats, Rugs & Bedding* Stems used in the weaving of mats. (45:92) **Montana Indian** *Basketry* Used for weaving light baskets. *Mats, Rugs & Bedding* Used for weaving mats. (19:13) **Pomo** *Basketry* Used by girls to simulate basket making. (66:12)
- **Other—Cheyenne** *Decorations* Rootlets used to sew patterns for or-namentations on robes or other leather. (76:171) **Hopi** *Ceremonial Items* Ceremonially associated with water. (200:70) **Panamint** *Deco-rations* Basal portions of stems used as light yellow-brown deco-rations for baskets. (105:78) **Pomo** *Tools* Used to hold drilled clamshell beads in place when rolled on a stone slab to smooth them. (66:12) **Pomo, Kashaya** *Jewelry* Blades used to string clamshell beads to hold them together when being smoothed. *Toys & Games* Blades used by children to make play baskets. (72:100)

#### *Juncus bufonius* L., Toad Rush

- **Drug—Iroquois** *Emetic* Infusion of plant taken as an emetic by run-ners. The runner drank about 2 quarts the first time, vomited, drank the same quantity, and vomited again. The face and body were also washed with the liquid. This was done about three times during the week before the race. (196:89)

#### *Juncus bufonius* L. var. *bufonius*, Toad Rush

- **Drug—Iroquois** *Dermatological Aid* Compound decoction used as wash for the entire body. *Emetic* Compound decoction taken as an emetic. *Strengtheners* Compound decoction taken to "give strength to runners and other athletes." (87:279)

#### *Juncus dudleyi* Wieg., Dudley's Rush

- **Fiber—Ojibwa** *Mats, Rugs & Bedding* Tiny rush used in the finest mat work and for small pieces. (153:419)

***Juncus effusus*** L., Common Rush

- **Drug**—Cherokee *Emetic* Decoction of plant taken as an emetic. (177:7) *Oral Aid* Decoction used “to dislodge spoiled saliva.” *Orthopedic Aid* Infusion given to babies to prevent lameness. *Pediatric Aid* Infusion used as a wash to strengthen babies and given to babies to prevent lameness. *Strengtheners* Infusion used as a wash to strengthen babies. (80:53) **Karok** *Unspecified* Stems and leaves placed in the fire and the medicine man prayed over it. (6:33)
- **Food**—Mendocino Indian *Forage* Plants eaten by cows and horses in early spring. (41:318) **Okanagan-Colville** *Fodder* Plant used to feed horses. (188:38) **Snuqualmie** *Unspecified* Early sprouts eaten raw. (79:23)
- **Fiber**—Cherokee *Cordage* Used to make string to bind up dough in oak leaves for cooking bread. (80:53) **Chippewa** *Mats, Rugs & Bedding* Rushes used for weaving small table mats and other larger mats. (71:125) **Hesquiat** *Cordage* Tough, round stems dried, twisted or braided, and used for tying and binding. (185:54) **Karok** *Basketry* Stems used by young females to practice making baskets. (6:33) **Mendocino Indian** *Basketry* Wiry stalks used to make temporary baskets. *Cordage* Wiry stalks used for tying. **Pomo** *Sporting Equipment* Formerly used to make a device for trapping and catching salmon and trout as a sport. (41:318) **Snuqualmie** *Cordage* Stalks used for tying things. (79:23) **Tolowa** *Basketry* Stems used by young females to practice making baskets. **Yurok** *Basketry* Stems used by young females to practice making baskets. (6:33)
- **Other**—Chippewa *Containers* Rushes used for weaving little bags and pouches. (71:125)

***Juncus effusus* var. *pacificus*** Fern. & Wieg., Pacific Rush

- **Fiber**—Cahuilla *Basketry* Rushes made into baskets used for collecting foods, leaching acorn meal, and finely woven baskets. (15:80)

***Juncus ensifolius*** Wikstr., Swordleaf Rush

- **Drug**—Hoh *Unspecified* Used as a medicine. **Quileute** *Unspecified* Used as a medicine. (137:59)
- **Food**—Paiute *Fodder* Rushes used as food for livestock. (111:53) **Swinomish** *Unspecified* Bulbs used for food. (as *J. xiphoides* var. *triandrus* 79:23)
- **Fiber**—Karok *Basketry* Used in teaching little girls to make baskets. (148:380)

***Juncus lesueurii*** Boland., Salt Rush

- **Fiber**—Cahuilla *Basketry* Rushes made into baskets used for collecting foods, leaching acorn meal, and finely woven baskets. (15:80)

***Juncus mertensianus*** Bong., Mertens's Rush

- **Drug**—Okanagan-Colville *Witchcraft Medicine* Plant used for “witchcraft” or “plhax.” (188:38)
- **Fiber**—Luiseño *Basketry* Rushes used to make woven and twined baskets. (155:204)
- **Other**—Luiseño *Containers* Rushes made into woven or twined baskets and used as gathering containers for acorns and cacti. *Cooking Tools* Rushes made into woven and twined baskets and used as sifters or to leach acorn meal. (155:204)

***Juncus mexicanus*** Willd. ex J. A. & J. H. Schultes, Mexican Rush

- **Dye**—Shoshoni *Green* Roots used as green dye in basketry. (118:8)

***Juncus* sp.**, Rush

- **Fiber**—Costanoan *Basketry* Leaves used in basketry. *Clothing* Stems and leaves used as raw textile material. *Cordage* Stems and leaves used as cordage. *Mats, Rugs & Bedding* Stems and leaves used as stuffing. (21:255) **Isleta** *Building Material* Plant used for thatch in building houses. (100:32) **Neeshenam** *Clothing* Used to make breech cloths. (129:378)
- **Other**—Navajo *Tools* Used as a sandpaper for smoothing bows. (55:31)

***Juncus stygius*** L., Moor Rush

- **Fiber**—Ojibwa *Mats, Rugs & Bedding* Used to weave mats. (135:245)

***Juncus tenuis*** Willd., Poverty Rush

- **Drug**—Cherokee *Oral Aid* Decoction used “to dislodge spoiled saliva.” *Orthopedic Aid* Infusion given to babies to prevent lameness. *Pediatric Aid* Infusion used as a wash to strengthen babies and given to babies to prevent lameness. *Strengtheners* Infusion used as a wash to strengthen babies. (80:53) **Iroquois** *Emetic* Decoction or infusion of plant taken by lacrosse players and runners to vomit. *Sports Medicine* Infusion of plant taken to vomit and used as a wash by lacrosse players. *Veterinary Aid* Infusion of plant given to “colt that has had too much feed.” (87:279)
- **Fiber**—Cherokee *Cordage* Used to make string to bind up dough in oak leaves for cooking bread. (80:53)

***Juncus textilis*** Buch., Basket Rush

- **Fiber**—Cahuilla *Basketry* Rushes made into baskets used for collecting foods, leaching acorn meal, and finely woven baskets. (15:80) **Diegueño** *Basketry* Split stems used in basket making. Allowed to dry, the stems were split three or four ways into splints and used as wrapping material for coiled baskets, or sometimes as a foundation material in openwork, coiled leaching baskets. Only the lower 2 feet of the plant, which grows up to 8 feet tall, was gathered and used. The plant was collected at any time during the year, but if the centers of the stems were brown, it was not as good for basket making as when the centers were white. Basket designs were formed with the various natural shades of green, tan, and brown found in the plant or it was sometimes dyed black. (84:23)

***Juncus torreyi*** Coville, Torrey's Rush

- **Other**—Hopi *Ceremonial Items* Ceremonially associated with water. (200:70)

**Jungermanniaceae**, see *Bazzania****Juniperus***, Cupressaceae, conifer***Juniperus californica*** Carr., California Juniper

- **Drug**—Apache, White Mountain *Anticonvulsive* Scorched twigs rubbed on body for fits. *Cold Remedy* Infusion of leaves taken for colds. *Cough Medicine* Infusion of leaves taken for coughs. *Gynecological Aid* Infusion of leaves taken by women previous to childbirth to relax muscles. (136:158) **Costanoan** *Analgesic* Decoction of leaves taken for pain. *Diaphoretic* Decoction of leaves taken to cause sweating. (21:6) **Diegueño** *Analgesic* Infusion of leaves and bark taken for hangovers. *Hypotensive* Infusion of leaves and bark taken for high blood pressures. (88:216) **Gosiute** *Cold Remedy* Infusion of leaves

- used for colds. *Cough Medicine* Infusion of leaves used for coughs. (39:372) **Mahuna** *Febrifuge* and *Misc. Disease Remedy* Infusion of berries taken or berries chewed for gripe fevers. (140:9)
- **Food—Cahuilla** *Dried Food* Berries sun dried and preserved for future use. *Fruit* Berries eaten fresh. *Porridge* Dried berries ground into a flour and used to make mush or bread. (15:81) **Costanoan** *Fruit* Berries used for food. (21:248) **Diegueño** *Fruit* Fruit eaten, informally only. *Starvation Food* Fruit eaten in times of starvation. (88:216) **Kawaiisu** *Bread & Cake* Berries seeded, pounded into a meal, moistened, molded into cakes, and dried. *Dried Food* Unseeded berries dried and stored. *Fruit* Berries boiled fresh and eaten cold. *Staple* Berries seeded, pounded into a meal, and eaten. (206:35) **Mendocino Indian** *Dried Food* Dried fruits boiled and eaten. (41:306)
  - **Fiber—Kawaiisu** *Building Material* Bark used as a house covering. (206:35)
  - **Other—Kawaiisu** *Cooking Tools* Wood used to make acorn mush stirrers and ladles. *Hunting & Fishing Item* Wood used as the primary material for making bows, either self-bows or sinew-backed. (206:35)

### *Juniperus communis* L., Common Juniper

- **Drug—Algonquin** *Other* Used for “cold” conditions, since plant was regarded as “hot.” (22:142) **Bella Coola** *Analgesic* Decoction of roots, leaves, branches, and bark taken for stomach pain. *Cough Medicine* Decoction of root, leaves, branches, and bark taken for “cough from the lungs.” *Gastrointestinal Aid* Decoction of roots, leaves, branches, and bark taken for stomach pain. (150:49) Infusion of roots, leaves, branches, and bark taken for stomach pains, for ulcers, and for heartburn. *Pulmonary Aid* Infusion of roots, leaves, branches, and bark taken for lung cough. (184:197) **Blackfoot** *Pulmonary Aid* Used for lung diseases. (82:37) Decoction of berries used for lung diseases. (97:17) *Venereal Aid* Used for venereal diseases. (82:37) Decoction of berries used for venereal diseases. (97:17) **Carrier** *Tuberculosis Remedy* Decoction of berries and kinnikinnick leaves or balsam strained and taken for tuberculosis. (31:71) **Carrier, Northern** *Cathartic* Decoction of tips taken as a purgative and for coughs. *Cough Medicine* Decoction of tips taken for coughs and as a purgative. **Carrier, Southern** *Analgesic* Steam from boiling branches inhaled for headache and chest pain. (150:49) **Cheyenne** *Ceremonial Medicine* Leaves burned as incense in ceremonies, especially to remove fear of thunder. *Cold Remedy* Cones chewed, infusion of boughs or cones taken or used as steam bath for colds. *Cough Medicine* Infusion of boughs or fleshy cones taken for coughing. *Febrifuge* Infusion of boughs or fleshy cones taken for high fevers. *Gynecological Aid* Leaves burned at childbirth to promote delivery. *Herbal Steam* Cones chewed, infusion of boughs or cones taken or used as steam bath for colds. *Love Medicine* Wood flutes used to “charm a girl whom a man loved to make her love him.” *Sedative* Infusion of boughs or fleshy cones taken as a sedative. *Throat Aid* Infusion of boughs or cones taken for tickles in the throat or tonsillitis. (83:4) **Chippewa** *Respiratory Aid* Decoction of twigs and leaves taken for asthma. (71:124) **Cree, Hudson Bay** *Dermatological Aid* Poultice of bark applied to wounds. *Disinfectant* Plant used for the antiseptic qualities on wounds. (92:302) **Cree, Woodlands** *Antidiarrheal* Decoction of barked procumbent stem or branch used for diarrhea. *Cough Medicine* Decoction of branch or wood and other herbs used for coughs. *Febrifuge* Decoc-

tion of branch or wood and other herbs used for fevers. *Gynecological Aid* Decoction of branch or wood and other herbs used for “woman’s troubles,” and for sickness after giving birth. *Kidney Aid* Decoction of green berries taken for sore backs from kidney troubles. *Pediatric Aid* Decoction of branch or wood and other herbs used for teething sickness. *Pulmonary Aid* Decoction of barked procumbent stem or branch used for sore chest from lung infections. *Respiratory Aid* Blue berries smoked in a pipe for asthma. *Toothache Remedy* Decoction of branch or wood and other herbs used for teething sickness. (109:41) **Delaware, Ontario** *Gynecological Aid* Compound infusion of bark taken for women’s diseases. (176:110) *Tonic* Compound infusion of bark taken as a tonic. (175:68, 82) **Eskimo, Inupiat** *Cold Remedy* Infusion of berries taken or one berry a day eaten to prevent colds, and for colds. *Cough Medicine* Decoction of berries, needles, and twigs taken one cup a day for coughing. *Misc. Disease Remedy* Infusion of berries taken or one berry a day eaten to prevent flu, and for the flu. *Respiratory Aid* Decoction of berries, needles, and twigs taken one cup a day for respiratory ailments. (98:110) **Gitksan** *Unspecified* Plant used for many medicinal applications. (43:314) **Hanaksiala** *Dermatological Aid* Heated poultice of branch and “berry” paste applied to wounds and cuts. (43:160) **Iroquois** *Cold Remedy* Decoction taken for colds caused by overheating and chills. *Cough Medicine* Decoction taken for coughs caused by overheating and chills. (87:271) *Kidney Aid* Infusion of boughs used for kidney pain. *Tonic* Infusion of boughs used as a tonic. (142:83) **Kwakiutl** *Antidiarrheal* Compound decoction of berries taken for diarrhea. *Blood Medicine* Decoction of wood and bark taken to purify the blood. *Respiratory Aid* Decoction of wood and bark taken for short breath. (183:266) **Malecite** *Dermatological Aid* Infusion of boughs used as a hair wash. (116:250) *Tonic* Infusion of boughs used as a tonic. *Tuberculosis Remedy* Infusion of roots and prince’s pine used for consumption. (116:252) **Micmac** *Antirheumatic (Internal)* Part of plant used for rheumatism and bark used for tuberculosis. *Dermatological Aid* Stems used in hair wash, gum used for wounds, and cones used for ulcers. *Orthopedic Aid* Gum used for sprains and bark used for tuberculosis. *Tonic* Stems used in a tonic and bark used for tuberculosis. *Tuberculosis Remedy* Root or bark used for consumption and stems used as a tonic. (40:57) **Navajo, Ramah** *Emetic* Used as an emetic for all ceremonials. (191:11) **Okanagan-Colville** *Cold Remedy* Infusion of bark and needles taken for colds. *Tonic* Infusion of bark and needles taken as a tonic before entering the sweat house. *Tuberculosis Remedy* Infusion of bark and needles taken for consumption. (188:18) **Okanagan** *Eye Medicine* Infusion of twigs used as a wash for sore eyes. *Kidney Aid* Berries eaten for kidney disorders. *Tonic* Decoction of small branches used as a tonic. (125:42) **Potawatomi** *Urinary Aid* Compound containing berries used for urinary tract diseases. (154:69) **Shuswap** *Diaphoretic* Used in the sweat house. *Panacea* Decoction of stems and needles taken for any sickness. (123:50) **Tanana, Upper** *Antirheumatic (External)* Decoction of branches and fruit used as a wash for body aches and pains. *Cold Remedy* Decoction of branches and fruit taken for colds. Raw fruit eaten for colds. Decoction of branches taken for colds. Decoction of berries taken for colds. *Cough Medicine* Decoction of branches and fruit taken for coughs. Raw fruit eaten for coughs. *Kidney Aid* Decoction of branches and fruit taken for kidney problems. Raw fruit eaten

for kidney problems. *Panacea* Branches burned on top of the wood stove to keep sickness away. *Throat Aid* Decoction of branches taken for sore throats. *Tuberculosis Remedy* Decoction of branches taken for tuberculosis. (102:4) **Thompson** *Antirheumatic (Internal)* Infusion of branches taken for aching muscles. *Cathartic* Decoction of branches taken as a physic. *Cold Remedy* Decoction of branches used for colds. (187:92) *Eye Medicine* Infusion of twigs used as a wash for sore eyes. (125:42) Infusion or decoction of twigs used as a wash for sore eyes. *Gastrointestinal Aid* Decoction of twigs taken as a tonic for the stomach. (164:474) Infusion of three 10-cm-long branches taken to "make your insides nice." *Heart Medicine* Infusion of boughs taken for "leakage of the heart." *Hypotensive* Infusion of branches taken for high blood pressure. The branches were steeped in boiling water until the water cooled. The cool infusion was taken for 2 weeks after which the blood pressure returned to normal. (187:92) *Kidney Aid* Berries eaten for kidney disorders. (125:42) Decoction of branches used for kidney ailments. (187:92) *Tonic* Decoction of small branches used as a tonic. (125:42) Decoction of twigs taken as a tonic for the stomach. (164:474) Decoction of branches taken as a tonic. *Tuberculosis Remedy* Branches used for tuberculosis. It was said that for the medicine to be really effective, the boughs should be taken from a plant growing all by itself. (187:92)

- **Food**—**Anticosti** *Beverage* Fruits, branches, potatoes, yeast, and water boiled into a drink. (143:64) **Thompson** *Beverage* Small pieces of branches used to make a tea-like beverage. (187:92)
- **Other**—**Gitksan** *Ceremonial Items* Plant used for rituals. (43:314) **Haisla** *Ceremonial Items* Wood used to make rattles worn on belts by shamans. (43:160) **Heiltzuk** *Ceremonial Items* Plant used as a part of a process of preparation undergone by shamanistic initiates. (43:62) **Kitasoo** *Good Luck Charm* Plant rubbed on the back for good luck. (43:314) **Navajo, Ramah** *Good Luck Charm* Used as a "good luck" smoke for hunters. (191:11) **Okanagan-Colville** *Ceremonial Items* Used in the sweat house during the winter. *Protection* Decoction of branches used as a wash for the body to protect a person from evil influences. (188:18) **Owekeno** *Ceremonial Items* Plant used for ritualistic purposes. (43:62) **Tanana, Upper** *Incense & Fragrance* Branches used on rocks in the steam bath for the aromatic properties. (102:4) **Thompson** *Soap* Stems and leaf whorls boiled and used as a body wash by hunters, warriors, and widowers. (164:505)

#### *Juniperus communis* var. *montana* Ait., Common Juniper

- **Drug**—**Arapaho** *Disinfectant* Needles burned as a disinfectant. *Gastrointestinal Aid* Infusion of needles taken for bowel troubles. (as *J. sibirica* 121:46) *Misc. Disease Remedy* Ground needles scent used to drive smallpox away. (as *J. sibirica* 118:50) **Cheyenne** *Cough Medicine* Infusion of leaves used for coughs. One or two berries chewed and the juice swallowed for bad coughs. *Throat Aid* Infusion of leaves used for a tickling in the throat. (as *J. sibirica* 76:169) **Gitksan** *Witchcraft Medicine* Boughs, red elder bark, and cow parsnip roots used for evil witchcraft victims. (74:25) **Navajo, Ramah** *Ceremonial Medicine* Decoction of plant used as a ceremonial emetic. *Cough Medicine* Decoction taken and used as lotion for fever or "big cough." *Emetic* Decoction of plant used as a ceremonial emetic. *Febrifuge* Decoction of plant used internally and externally for fever. (as *J. sibirica* 191:12) **Paiute** *Blood Medicine* Seeds from dried fruit eaten

as a blood tonic. *Orthopedic Aid* Seeds from dried fruit eaten for lumbago. *Tonic* Seeds from dried fruit eaten as a blood tonic. *Veneral Aid* Cold decoction of twigs taken for venereal disease. **Shoshoni** *Blood Medicine* and *Tonic* Decoction of branches taken as a blood tonic. (180:91, 92)

- **Food**—**Jemez** *Beverage* Leaves boiled into a beverage similar to coffee. (as *J. sibirica* 44:24)
- **Fiber**—**Ojibwa** *Building Material* Bark used to build houses, wigwams, and wickiups. Split strips or stakes used to make a pen to enclose graves. *Furniture* Wood used to make cradleboards. *Mats, Rugs & Bedding* Inner bark crushed and used to pad cradleboards. Bark used to make mats. (135:245)
- **Other**—**Arapaho** *Incense & Fragrance* Needles ground and used for their scent. (as *J. sibirica* 121:46) **Gitksan** *Ceremonial Items* Boughs burned as a fumigant to purify dwellings. (74:25) **Navajo, Ramah** *Smoke Plant* Dried fruits added to flavor tobacco. (as *J. sibirica* 191:12) **Ojibwa** *Cash Crop* Pulp wood and wood posts sold to make paper and fencing. *Ceremonial Items* Split strips thatched and placed on graves. (135:245) **Tolowa** *Decorations* Dried berries used to decorate dresses. *Jewelry* Dried berries used for beads to make necklaces. **Yurok** *Decorations* Dried berries used to decorate dresses. (6:34)

#### *Juniperus deppeana* Steud., Alligator Juniper

- **Food**—**Apache** *Fruit* Berries boiled for food. (as *J. pachyphloea* 32:32) **Apache, Chiricahua & Mescalero** *Fruit* Raw fruit eaten fresh. *Preserves* Berries boiled and made into jelly or preserves. (as *J. pachyphloea* 33:45) **Isleta** *Fruit* Berries boiled for food. (as *J. pachyphloea* 32:32) Large fruit boiled and eaten as food. (as *J. pachyphloea* 100:33) **Navajo, Ramah** *Fruit* Fruit eaten raw or boiled and ground. *Winter Use Food* Fruit stored for winter use. (as *J. pachyphloea* 191:12) **San Felipe** *Fruit* Berries boiled for food. (as *J. pachyphloea* 32:32) **Yavapai** *Beverage* Pulverized berries soaked in water, put in mouth, and juice sucked, the solid matter spat out. (as *J. pachyphloea* 63:212) Ground berries made into a meal, water added and used as a beverage. *Bread & Cake* Ground berries made into a meal, stored in baskets, and later made into a cake by dampening. *Staple* Ground berries made into a meal, water added and used as a beverage. (as *J. pachyphloea* 65:257)
- **Other**—**Yavapai** *Fuel* Dead wood used for fuel. (as *J. pachyphloea* 65:259)

#### *Juniperus horizontalis* Moench, Creeping Juniper

- **Drug**—**Blackfoot** *Kidney Aid* Used for kidney problems. (82:37) *Veterinary Aid* Roots soaked in water and used as a bath on horses for shiny hair. (86:89) **Cheyenne** *Ceremonial Medicine* Leaves burned as incense in ceremonies, especially to remove fear of thunder. *Cold Remedy* Cones chewed, infusion of boughs or cones taken or used as steam bath for colds. *Cough Medicine* Infusion of boughs or fleshy cones taken for coughing. *Febrifuge* Infusion of boughs or fleshy cones taken for high fevers. *Gynecological Aid* Leaves burned at childbirth to promote delivery. *Herbal Steam* Cones chewed, infusion of boughs or cones taken or used as steam bath for colds. *Love Medicine* Wood flutes used to "charm a girl whom a man loved to make her love him." *Sedative* Infusion of boughs or fleshy cones taken as a sedative. *Throat Aid* Infusion of boughs or cones taken for tickles in the throat or tonsillitis. (83:4) **Crow** *Ceremonial Medicine*

Young twigs and leaves burned as incense during incantations. **Montana Indian** *Kidney Aid* Infusion of seeds taken for kidney trouble. (as *J. sabina procumbens* 19:13)

- **Food—Ojibwa** *Beverage* Leaves used to make tea. (as *J. prostrata* 96:17)
- **Fiber—Blackfoot** *Mats, Rugs & Bedding* Branches used to form a carpet for the Holy Lodge dancer of the Sun Dance. (86:33) **Ojibwa** *Building Material* Bark used to build houses, wigwams, and wicki-ups. Split strips or stakes used to make a pen to enclose graves. *Furniture* Wood used to make cradleboards. *Mats, Rugs & Bedding* Inner bark crushed and used to pad cradleboards. Bark used to make mats. (as *J. sabina* var. *procumbens* 135:245)
- **Other—Blackfoot** *Ceremonial Items* Branch held in the right hand and the wing of an owl in the other by the Okan dancer. *Decorations* Seven berries, representing the Bunched Stars, used to make headpieces worn by some dancers. Sprigs used symbolically to decorate the altar of the Marten designed tepee. (86:33) **Ojibwa** *Cash Crop* Pulp wood and wood posts sold to make paper and fencing. *Ceremonial Items* Split strips thatched and placed on graves. (as *J. sabina* var. *procumbens* 135:245)

***Juniperus monosperma*** (Engelm.) Sarg., Oneseed Juniper

- **Drug—Apache, White Mountain** *Anticonvulsive* Scorched twigs rubbed on body for fits. *Cold Remedy* Infusion of leaves taken for colds. *Cough Medicine* Infusion of leaves taken for coughs. *Gynecological Aid* Infusion of leaves taken by women previous to childbirth to relax muscles. (136:158) **Hopi** *Antirheumatic (External)* Poultice of heated twigs bound over a bruise or sprain for swelling. *Gastrointestinal Aid* Decoction of plant and sagebrush taken for indigestion. *Gynecological Aid* Infusion of leaves taken and used for many purposes.<sup>41</sup> *Laxative* Decoction of leaves taken as a laxative. *Pediatric Aid* Plant ashes rubbed on newborn baby.<sup>42</sup> *Reproductive Aid* Decoction of leaves taken by women who desire a female child. (42:330) **Isleta** *Antirheumatic (External)* Infusion of cedar bark used for bathing and washing sore feet. *Emetic* Strong infusion of leaves given in large quantities as an emetic. *Gynecological Aid* Infusion of leaves given to mothers after childbirth. (100:32) **Jemez** *Gastrointestinal Aid* Decoction of leaves taken for stomach or bowel disorders. *Gynecological Aid* Decoction of leaves taken by women after the birth of an infant. (44:24) **Keres, Western** *Antidiarrheal* Infusion of staminate cones used for diarrhea. *Dermatological Aid* Chewed bark taken for or applied to spider bites. *Diaphoretic* Plant used as an ingredient in the sweat bath. *Ear Medicine* Ground leaves mixed with salt and used in ears to eliminate bugs. *Emetic* Infusion of twigs or chewed twigs used as an emetic before breakfast. *Gastrointestinal Aid* Infusion of staminate cones used as a stomach tonic. *Laxative* Infusion of staminate cones used as a laxative. Bark chewed as a laxative. (171:48) **Navajo, Ramah** *Analgesic* Decoction used for postpartum or menstrual pain and cold infusion used for stomachache. *Ceremonial Medicine* Decoction used in “bath for purification of burial party.” *Cough Medicine* Compound decoction, sometimes salted, taken for cough. (191:11, 12) *Dermatological Aid* Bark highly prized as a medicine for burns. (191:11) *Diaphoretic* Compound used as sweat bath medicine. *Emetic* Infusion of inner bark given to newborns “to clean out impurities.” *Febrifuge* Cold infusion of plant used for fever. *Gas-*

*trointestinal Aid* Cold infusion of plant used for stomachache. *Gynecological Aid* Decoction or smoke of various plant parts used for childbirth difficulties. *Pediatric Aid* Infusion of inner bark used as an emetic for newborn “to clean out all impurities.” Plant used as bed and coverlet for baby, “to make him strong and healthy.” *Stimulant* Wet twigs or pulverized needles used as stimulant in postpartum fainting. *Veterinary Aid* Decoction given to sheep for bloating from eating “chamiso.” (191:11, 12) **Paiute** *Cold Remedy* Decoction of twigs taken and fumes from burning branches inhaled for colds. *Dermatological Aid* and *Misc. Disease Remedy* Heated twigs rubbed on measles eruptions to relieve the discomfort. **Shoshoni** *Cold Remedy* Decoction of twigs taken and fumes from burning branches inhaled for colds. *Dermatological Aid* and *Misc. Disease Remedy* Heated twigs rubbed on measles eruptions to relieve the discomfort. (180:92) **Tewa** *Analgesic* Poultice of toasted leafy twigs applied to bruise or sprain pains. (138:39, 40) *Antirheumatic (External)* Poultice of heated twigs bound over a bruise or sprain for swelling. (42:330) *Dermatological Aid* Poultice of leafy twigs used for the pain and swellings of bruises or sprains. *Disinfectant* Leaves placed on hot coals as an herbal steam to “fumigate” new mother. *Diuretic* Berries used as an “active diuretic.” (138:39, 40) *Gastrointestinal Aid* Decoction of plant and sagebrush taken for indigestion. *Gynecological Aid* Infusion of leaves taken and used for many purposes.<sup>41</sup> (42:330) Decoction of leaves taken and used as a postpartum wash. *Herbal Steam* Leaves placed on hot coals as an herbal steam to “fumigate” new mother. *Internal Medicine* Berries eaten or decoction of berries used “for every kind of internal chill.” (138:39, 40) *Laxative* Decoction of leaves taken as a laxative. (42:330) *Orthopedic Aid* Poultice of toasted leafy twigs applied to bruise or sprain pains. (138:39, 40) *Pediatric Aid* Plant ashes rubbed on newborn baby.<sup>42</sup> *Reproductive Aid* Decoction of leaves taken by women who desire a female child. (42:330) *Toothache Remedy* Gum used as a filling for decayed teeth. (138:39, 40) **Zuni** *Antirheumatic (External)* Infusion of leaves used for muscle aches. *Contraceptive* Infusion of leaves taken to prevent conception. *Gynecological Aid* Infusion of leaves taken postpartum to prevent uterine cramps and stop vaginal bleeding. (27:373) Simple or compound infusion of twigs used to promote muscular relaxation at birth, and after childbirth to stop blood flow. *Hemostat* Simple or compound infusion of twigs taken after childbirth to stop blood flow. (166:55)

- **Food—Acoma** *Fruit* Fruits mixed with chopped meat, put into a clean deer stomach, and roasted. *Spice* Fruits used to season meats. *Starvation Food* Fruits eaten when other foods became scarce. (32:31) **Apache, Chiricahua & Mescalero** *Sauce & Relish* Fruit roasted, water added, and the mixture made into a gravy. (33:45) **Apache, White Mountain** *Fruit* Berries boiled and eaten. (136:158) **Cochiti** *Fruit* Fresh or cooked berries used for food. (32:31) **Hopi** *Fruit* Berries eaten with piki or cooked with stew. (42:330) **Jemez** *Fruit* Fresh or cooked berries used for food. (32:31) **Keres, Western** *Spice* Berries used to season meat.<sup>40</sup> *Starvation Food* Berries eaten in the fall or when food was scarce. (171:48) **Keresan** *Fruit* Berries used for food. (198:561) **Laguna** *Fruit* Fruits mixed with chopped meat, put into a clean deer stomach, and roasted. *Spice* Fruits used to season meats. *Starvation Food* Fruits eaten when other foods became scarce. (32:31) **Navajo** *Fodder* Branches cut off and given to the sheep to eat when

the snow was deep. *Fruit* Berries eaten ripe. (55:19) *Starvation Food* Inner bark chewed in times of food shortage to obtain the juice. (32:31) Inner bark chewed in times of food shortage. (55:19) **Navajo, Ramah** *Unspecified* Berry-like cones eaten roasted or boiled. Pinyon nuts used for food. (191:11) **San Ildefonso** *Fruit* Berries eaten. (138:40) **Tewa** *Fruit* Fruits eaten fresh or heated. (32:31) Berries eaten with piki. (42:330) Berries eaten by children and young people. **Tewa of Hano** *Special Food* Gum chewed as a delicacy. (138:40)

- **Fiber**—**Hopi** *Building Material* Used for construction. (42:330) **Jemez** *Building Material* Trunks used as uprights, beams, and fence posts. Limbs and boughs placed across corrals or enclosures as shelters for livestock. (44:24) **Keres, Western** *Basketry* Larger twigs used for basket frames.<sup>39</sup> *Building Material* Tree used to make posts and lumber. *Clothing* Bark rubbed fine and used to make baby clothes. (171:48) **Navajo** *Building Material* Wood used to make fence posts and hogan roofs. Wood used to make a canopy to protect a newborn child from the sparks of the fire. (55:19) **Navajo, Ramah** *Building Material* Wood used for fence posts and hogan poles. Boughs used for the sides and roofs of shade houses or special hogans for the Enemyway ceremonial. Bark used as lining in sweat houses. *Clothing* Bark used in the winter as a lining for moccasins to absorb moisture. *Furniture* Sticks used as frame for baby cradles. (191:11) **Tewa** *Building Material* Used for construction. (42:330) **Tewa of Hano** *Building Material* Bark used to chink the walls and roofs of log houses built after the Navajo fashion. (138:39)
- **Dye**—**Great Basin Indian** *Mordant* Whole plant ash added to various dye baths as a mordant. *Yellow* Whole plant used to make a yellow dye. (121:46) **Keres, Western** *Green* Green twigs rubbed on moccasins as a green dye. (171:48) **Navajo** *Green* Bark and berries used as a green dye for wool. (55:19) **Navajo, Ramah** *Unspecified* Needle ashes burned on rocks or in a pan and used as an ingredient for buckskin dye. (191:11)
- **Other**—**Hopi** *Ceremonial Items* Charcoal of plant, chewed melon seeds, and water used to make a ceremonial body paint. Branches used in the kachina dances. *Cleaning Agent* Boiled branch used as wash by men returning from burying a corpse. *Cooking Tools* Twigs used to separate corn dumplings while boiling. *Decorations* Seeds strung for beads. *Fuel* Wood used for firewood and tinder. *Malicious Charm* Plant used to do away with evil spirits after a death. *Tools* Used as a rake for clearing brush from the fields. *Toys & Games* Berries used in rattles. (42:330) **Isleta** *Fuel* Wood used in open ovens to produce very hot fires. (100:32) **Jemez** *Ceremonial Items* Ornamental branches and twigs used as decorations in nearly all of the dances. (44:24) **Keres, Western** *Ceremonial Items* Branches used in ceremonial dances. Infusion of plant taken by all household members for 4 days after a death. Infusion of cedar twigs taken with wafer bread by mothers of infants who died during birth. Cedar wood fire smoke used to fumigate property of the deceased. Cedar purge kept one from getting tired, but did not preclude sleepiness. *Fuel* Considered an important source of firewood for steady, even fires. *Hunting & Fishing Item* Larger trees used to make bows backed with sinew. *Preservative* Twigs mixed with commercial dyes to prevent them from fading. *Unspecified* Plant known and named but no use was specified. (171:48) **Navajo** *Ceremonial Items* Wood used to make prayer sticks. *Decorations* Used to make bows for the canopy of the baby's

cradle. *Fuel* Wood used for firewood. Wood made into charcoal and used for smelting silver. *Good Luck Charm* Leaves chewed and spat out for better luck. *Weapon* Wood used to make bows, formerly carried in war. (55:19) **Navajo, Ramah** *Containers* Bark used as platform for sun drying roasted corn. Bark used as lining in corn storage pits. *Fuel* Wood used as one of the main sources of fuel. Bark used as tinder for making ceremonial fire with fire drill. *Hunting & Fishing Item* Wood used to make hunting bows. *Lighting* Bark used as a torch in the "Fire Dance." (191:11) **Tewa** *Ceremonial Items* Charcoal of plant, chewed melon seeds, and water used to make a ceremonial body paint. Branches used in the kachina dances. (42:330) Branches used in a few ceremonies and dances. (138:40) *Cleaning Agent* Boiled branch used as wash by men returning from burying a corpse. *Cooking Tools* Twigs used to separate corn dumplings while boiling. *Decorations* Seeds strung for beads. *Fuel* Wood used for firewood and tinder. (42:330) Used largely for firewood. *Hunting & Fishing Item* Wood used to make bows. *Lighting* Bark formerly shredded, bound into bundles, and used as torches to give light in houses. (138:39) *Malicious Charm* Plant used to do away with evil spirits after a death. *Tools* Used as a rake for clearing brush from the fields. *Toys & Games* Berries used in rattles. (42:330) **Tewa of Hano** *Fuel* Used largely for firewood. (138:39) **Zuni** *Fuel* Wood used as a favorite firewood, but more importantly in ceremonies. *Tools* Shredded, fibrous bark used as tinder to ignite the fire sticks used for the New Year fire. The bark was also used to make firebrands carried by personators of certain gods. (166:93)

### *Juniperus occidentalis* Hook., Western Juniper

- **Drug**—**Apache, White Mountain** *Anticonvulsive* Scorched twigs rubbed on body for fits. *Cold Remedy* Infusion of leaves taken for colds. *Cough Medicine* Infusion of leaves taken for coughs. *Gynecological Aid* Infusion of leaves taken by women previous to childbirth to relax muscles. (136:158) **Paiute** *Analgesic* Decoction of berries taken for menstrual cramps. Decoction of young twigs taken for stomachaches. Fumes from burning twigs or leaves inhaled for headaches. *Antihemorrhagic* Decoction of young twigs taken for hemorrhages. *Antirheumatic (External)* Branches used in the sweat bath for rheumatism. Decoction of berries taken or poultice of decoction applied for rheumatism. Poultice of boiled twigs applied and cooled decoction used as a wash for rheumatism. *Blood Medicine* Decoction of berries or young twigs taken as a blood tonic. (180:92–96) *Cold Remedy* Infusion of leaves taken as a cold medicine. (111:47) Branches used in the sweat bath for "heavy colds." Fumes from burning twigs or leaves inhaled for colds. Simple or compound decoction of twigs or berries taken for colds. *Cough Medicine* Decoction of twigs or berries taken for coughs. *Dermatological Aid* Compound poultice of twigs used as a drawing agent for boils or slivers. Poultice of mashed twigs applied for swellings or rheumatism. Strong decoction used as an antiseptic wash for sores. *Disinfectant* Branches burned as a fumigant after illness. Decoction of twigs used as an antiseptic wash for sores. *Diuretic* Decoction of berries taken to induce urination. *Febrifuge* Simple or compound decoction of young twigs taken for fevers. *Gastrointestinal Aid* Decoction of young twigs taken for stomachaches. *Gynecological Aid* Decoction of berries taken for menstrual cramps. *Kidney Aid* Decoction of berries taken for kidney

ailments. Simple or compound decoction of young twigs taken for kidney trouble. (180:92–96) *Misc. Disease Remedy* Bed of hot coals and branches used for malaria and other diseases. (111:47) Compound decoction of young twigs taken for smallpox. Decoction of young twigs taken for influenza. (180:92–96) *Pulmonary Aid* Bed of hot coals and branches used for pneumonia. (111:47) Compound decoction of twigs taken for fever, pneumonia, and influenza. *Tonic* Decoction of berries taken as a blood tonic. Decoction of young twigs taken as a blood tonic. *Venereal Aid* Decoction of shaved root taken for venereal disease. Decoction of twig or compound decoction of berry taken for venereal disease. (180:92–96) *Veterinary Aid* Boughs placed in a pan of coals and fumes inhaled by horses that have eaten poison camas. (111:47) *Shoshoni Anthelmintic* Strained cold water infusion of pulverized terminal twigs taken for worms. *Burn Dressing* Poultice of mashed twigs applied to burns. *Cold Remedy* Simple or compound decoction of twigs or berries taken for colds. *Cough Medicine* Decoction of twigs taken for coughs. *Dermatological Aid* Poultice of mashed twigs applied to swellings. Strong decoction used as an antiseptic wash for measles and smallpox. *Disinfectant* Branches burned as a fumigant after illness. Decoction of twigs used as an antiseptic wash for measles and smallpox. *Diuretic* Decoction of berries taken to induce urination. *Heart Medicine* Decoction of berries taken for heart trouble. *Kidney Aid* Simple or compound decoction of twigs or decoction of berry used for kidney trouble. *Misc. Disease Remedy* Compound decoction of young twigs taken for influenza or smallpox. Decoction of twigs used as an antiseptic wash for measles and smallpox. *Oral Aid* Poultice of pounded, moistened leaves applied to jaw for swollen and sore gums. *Throat Aid* Poultice of twigs applied to neck for sore throat. *Tonic* Decoction of young twigs taken as a general tonic. *Toothache Remedy* Poultice of leaves applied to jaw for toothache. *Venereal Aid* Decoction of twigs taken for venereal disease. **Washo Analgesic** Fumes from burning twigs inhaled for headaches. *Cold Remedy* Fumes from burning twigs inhaled for colds. *Disinfectant* Branches burned as a fumigant after illness. (180:92–96)

- **Food—Apache, White Mountain Fruit** Berries boiled and eaten. (136:158) *Atsugewi Dried Food* Berries dried, pounded into flour, and stored for later use. *Fruit* Fresh berries used for food. (61:139) **Miwok Unspecified** Ripe nuts used for food. (12:151) **Paiute Fruit** Berries and roasted, mashed deer liver combination used for food. *Winter Use Food* Berries stored without drying in a grass-lined hole in the ground for winter use. (111:47) **Paiute, Northern Fruit** Berries roasted, mixed with warm water, crushed, and eaten. (59:50)
- **Fiber—Paiute Building Material** Used as a material for housing. *Clothing* Bark rubbed between hands until soft and fibers woven into clothing. Bark rolled into rope, coiled, and sewn with sinew to form sandal soles. (111:47) **Pomo Basketry** Root fiber used to make twined baskets. (9:139)
- **Dye—Navajo Red** Wood ash, mountain mahogany, and black alder used as a red dye for buckskin. (55:19)
- **Other—Klamath Hunting & Fishing Item** Used for bows. (45:88) **Navajo Ceremonial Items** Wood used to make the wand for the War Dance. Branchlets, with needles, used to make prayer sticks of the west. (55:19) **Paiute Fuel** Wood was one of the principal sources of fuel and material. Bark mixed with dirt to use as tinder. *Hunting &*

*Fishing Item* Wood and sinew strips used to make laminated bows. *Lighting* Bark wound around a stick and used as a torch to provide light and carry a fire to a new campsite. *Musical Instrument* Wood strips used for drum frames. *Tools* Wood hearth board used as a base for a fire drill. *Toys & Games* Leaves stuffed into buckskin and used as a ball in a game like lacrosse or hockey. (111:47)

### *Juniperus osteosperma* (Torr.) Little, Utah Juniper

- **Drug—Havasupai Cold Remedy** Green branches used singly or together with other plants for colds. (197:206) **Hopi Gynecological Aid** Decoction of branches used especially by women during confinement. (as *J. utahensis* 190:157) *Other* Misbehaving youngsters held in a blanket over a smoldering fire of plant. (as *J. utahensis* 200:37) **Navajo Analgesic** Seeds eaten for headaches. *Dermatological Aid* Used to wash the hair. (90:152) **Paiute Analgesic** Decoction of berries taken for menstrual cramps. Decoction of young twigs taken for stomachaches. Fumes from burning twigs inhaled for headaches and colds. *Antihemorrhagic* Decoction of young twigs taken for hemorrhages. *Antirheumatic (External)* Branches used in the sweat bath for rheumatism. Decoction of berries taken or poultice of decoction applied for rheumatism. Poultice of boiled twigs applied and cooled decoction used as a wash for rheumatism. *Blood Medicine* Decoction of berries or young twigs taken as a blood tonic. *Cold Remedy* Branches used in the sweat bath for heavy colds. Fumes from burning twigs or leaves inhaled for headaches and colds. Simple or compound decoction of twigs or berries taken for colds. *Cough Medicine* Decoction of twigs or berries taken for coughs. *Dermatological Aid* Compound poultice of twigs used as a drawing agent for boils or slivers. Poultice of mashed twigs applied for swellings or rheumatism. Strong decoction used as an antiseptic wash for sores. *Disinfectant* Branches burned as a fumigant after illness. Strong decoction of twigs used as an antiseptic wash for sores. *Diuretic* Decoction of berries taken to induce urination. *Febrifuge* Simple or compound decoction of young twigs taken for fevers. *Gastrointestinal Aid* Decoction of young twigs taken for stomachaches. *Gynecological Aid* Decoction of berries taken for menstrual cramps. *Kidney Aid* Decoction of berries taken for kidney ailments. Simple or compound decoction of young twigs taken for kidney trouble. *Misc. Disease Remedy* Compound decoction of twigs taken for smallpox. Decoction of young twigs taken for influenza. *Pulmonary Aid* Compound decoction of twigs taken for fevers, pneumonia, and influenza. *Tonic* Decoction of young twigs or berries taken as a blood tonic. *Venereal Aid* Decoction of shaved root taken for venereal disease. Decoction of twig or compound decoction of berry taken for venereal disease. (as *J. utahensis* 180:93–96) **Paiute, Northern Analgesic** Roasted berry steam used for pains. *Antirheumatic (External)* Roasted berry steam used for rheumatism. *Cold Remedy* Infusion of leaves taken and burning leaf scent inhaled for colds. (59:130) **Shoshoni Anthelmintic** Strained cold water infusion of pulverized terminal twigs taken for worms. *Burn Dressing* Poultice of mashed twigs applied to burns. *Cold Remedy* Simple or compound decoction of twigs or berries taken for colds. *Cough Medicine* Decoction of twigs taken for coughs. *Dermatological Aid* Poultice of mashed twigs applied to swellings. Strong decoction used as an antiseptic wash for measles and smallpox. *Disinfectant* Branches burned as a fumigant after illness. Strong

decoction of twigs used as an antiseptic wash for measles and smallpox. *Diuretic* Decoction of berries taken to induce urination. *Heart Medicine* Decoction of berries taken for heart trouble. *Kidney Aid* Compound decoction of twigs or decoction of berry taken for kidney ailments. Simple or compound decoction of young twigs taken for kidney trouble. *Misc. Disease Remedy* Compound decoction of twigs taken for influenza and smallpox. Strong decoction of twigs used as an antiseptic wash for measles and smallpox. *Oral Aid* Poultice of pounded leaves held to the jaw for swollen and sore gums. *Throat Aid* Poultice of twigs applied to neck for sore throat. *Tonic* Decoction of young twigs taken as a general tonic. *Toothache Remedy* Poultice of leaves applied to jaw for toothache. *Venereal Aid* Decoction of twigs taken for venereal disease. **Washo** *Analgesic* Fumes from burning twigs inhaled for headaches. *Cold Remedy* Fumes from burning twigs inhaled for colds. *Disinfectant* Branches burned as a fumigant after illness. (as *J. utahensis* 180:93–96)

- **Food—Acoma** *Soup* Berries cooked in a stew. (as *J. utahensis* 200:63) **Apache, White Mountain** *Fruit* Berries boiled and eaten. (as *J. californica* var. *utahensis* (*J. utahensis*) 136:158) **Gosiute** *Fruit* Berries eaten in the fall and winter after proper boiling. (as *J. californica* var. *utahensis* 39:372) **Havasupai** *Beverage* Dried berries used to make a drink. *Dried Food* Berries sun dried and stored for winter use. (197:206) **Hopi** *Fruit* Berries eaten with piki bread. (as *J. utahensis* 120:18) Berries used for food. (as *J. utahensis* 200:63) **Tubatulabal** *Fruit* Berries used extensively for food. Berries used extensively for food. (as *J. utahensis* 193:15) **Yavapai** *Beverage* Ground berries made into a meal, water added, and used as a beverage. *Bread & Cake* Ground berries made into a meal, stored in baskets, and later made into a cake by dampening. *Staple* Ground berries made into a meal, water added, and used as a beverage. (as *J. utahensis* 65:257)
- **Fiber—Gosiute** *Building Material* Wood used in the construction of winter lodges. Bark used for thatching and as a floor covering. Small branches used as a floor covering. (as *J. californica* var. *utahensis* 39:372) **Havasupai** *Building Material* Logs and brush, covered with dirt, used to make winter houses. Bark used on top of the brush covering of the winter houses to keep the dirt from falling through. (197:206) **Navajo** *Building Material* Green timber used to make corrals. (as *J. utahensis* 200:62)
- **Other—Gosiute** *Containers* Bark used to line and cover the fruit storing pits. (as *J. californica* var. *utahensis* 39:372) **Havasupai** *Fuel* Wood used for firewood. Crushed bark used for tinder. Crushed bark used as a “slow match.” The crushed bark was twisted into a rope, tied at intervals with yucca, and wrapped into a coil. The free end was set on fire and kept smoldering by blowing on it at intervals. Fire could be carried in this fashion from early dawn until noon. *Toys & Games* Wood used to make the pole of the hoop and pole game. (197:206) **Hopi** *Fuel* Used for firewood. (as *J. utahensis* 200:62) *Jewelry* Seeds pierced and strung for beads in ancient times. (as *J. utahensis* 200:63) **Yavapai** *Fuel* Dead wood used for fuel. *Lighting* Bark used as a torch. (as *J. utahensis* 65:259)

### *Juniperus pinchotii* Sudworth, Pinchot’s Juniper

- **Drug—Comanche** *Analgesic* Dried leaves sprinkled on live coals and smoke inhaled for headache. *Ceremonial Medicine* Dried leaves sprinkled on live coals and smoke inhaled for ghost sickness. *Gyne-*

*ological Aid* Decoction of dried and pulverized roots taken for menstrual complaints. *Other* Dried leaves sprinkled on live coals and smoke inhaled for vertigo. (99:3)

### *Juniperus scopulorum* Sarg., Rocky Mountain Juniper

- **Drug—Blackfoot** *Antiemetic* Infusion of berries taken for vomiting. (97:17) Infusion of berries taken for vomiting. (114:276) *Antirheumatic (External)* Leaves boiled, turpentine added, mixture cooled and used for arthritis and rheumatism. (82:36) Decoction of leaves and turpentine rubbed on parts affected by arthritis and rheumatism. (97:17) **Cheyenne** *Ceremonial Medicine* Leaves burned as incense in ceremonies, especially to remove fear of thunder. (83:4) *Cold Remedy* Infusion of boughs, branches, and cones used for colds. Fleshy cones chewed for colds. (82:36) Cones chewed, infusion of boughs or cones taken or used as steam bath for colds. (83:4) *Cough Medicine* Infusion of leaves taken for constant coughing. (76:170) Infusion taken for coughs. (82:36) Infusion of boughs or fleshy cones taken for coughing. (83:4) *Febrifuge* Infusion of boughs, branches, and cones used for fevers. (82:36) Infusion of boughs or fleshy cones taken for high fevers. *Gynecological Aid* Leaves burned at childbirth to promote delivery. *Herbal Steam* Cones chewed, infusion of boughs or cones taken or used as steam bath for colds. *Love Medicine* Wood flutes used to “charm a girl whom a man loved to make her love him.” (83:4) *Pulmonary Aid* Infusion of boughs, branches, and cones used for pneumonia. *Sedative* Infusion used for sedating hyperactive persons. (82:36) Infusion of boughs or fleshy cones taken as a sedative. (83:4) *Throat Aid* Infusion of leaves taken for a tickling in the throat. (76:170) Infusion taken for “tickling of the throat.” (82:36) Infusion of boughs or cones taken for tickles in the throat or tonsillitis. (83:4) **Crow** *Antidiarrheal* Infusion taken for diarrhea. *Antihemorrhagic* Infusion taken for lung or nose hemorrhages. *Dietary Aid* Fleshy cones chewed to increase the appetite. *Gastrointestinal Aid* Fleshy cones chewed for upset stomach. *Gynecological Aid* Infusion taken after birth for cleansing and healing. **Flathead** *Ceremonial Medicine* Plant burned and smoke used to purify the air and ward off illness. *Cold Remedy* Infusion of boughs, branches, and cones used for colds. *Febrifuge* Infusion of boughs, branches, and cones used for fevers. *Pulmonary Aid* Infusion of boughs, branches, and cones used for pneumonia. *Veterinary Aid* Leaves placed on hot coals and smoke used for sick horses. **Kutenai** *Cold Remedy* Infusion of boughs, branches, and cones used for colds. Plant burned and smoke used for colds. *Febrifuge* Infusion of boughs, branches, and cones used for fevers. *Misc. Disease Remedy* Infusion taken for sugar diabetes. *Pulmonary Aid* Infusion of boughs, branches, and cones used for pneumonia. **Montana Indian** *Antirheumatic (External)* Concoction used for arthritis and rheumatic pain. (82:36) *Ceremonial Medicine* Aromatic twigs burned as incense. (19:14) **Navajo** *Ceremonial Medicine* Plant taken as a “War Dance medicine.” *Dermatological Aid* Plant rubbed on the hair for dandruff. *Unspecified* Pounded mixture of herbs given to patient during the blackening ceremony of the War Dance. (55:20) **Navajo, Kayenta** *Analgesic* Plant used for pain. (205:15) **Navajo, Ramah** *Analgesic* Decoction of needles taken and used as lotion for headache and stomachache. *Ceremonial Medicine* Cold infusion used as a ceremonial medicine to protect from enemies and witches. *Cold Remedy* Decoction of needles taken and used as lotion for colds.

*Febrifuge* Decoction of needles taken and used as lotion for fever. *Gastrointestinal Aid* Decoction of needles taken and used as lotion for stomachache. *Kidney Aid* Decoction of needles taken and used as lotion for kidney trouble. *Witchcraft Medicine* Cold infusion taken and used as lotion in ceremony for protection from witches. (191:12) **Nez Perce** *Cold Remedy* Infusion of boughs, branches, and cones used for colds. *Febrifuge* Infusion of boughs, branches, and cones used for fevers. *Pulmonary Aid* Infusion of boughs, branches, and cones used for pneumonia. (82:36) **Okanagan-Colville** *Antihemorrhagic* Decoction of branch tips and needles taken for internal hemorrhaging. *Antirheumatic (External)* Poultice of mashed and dampened branches applied to arthritic joints. *Dermatological Aid* Poultice of mashed and dampened branches applied to skin sores. *Misc. Disease Remedy* Decoction of sap used for the flu and colds. Five strips of bark each about 5 cm by 10 cm were boiled in about 2 liters of water in order to obtain the sap. Only bark from the bottom part of the tree could be used. *Other* Decoction of branch tips and needles considered a good emergency medicine. *Poison* Berries believed to be poisonous. (188:19) **Okanagon** *Urinary Aid* Fruit eaten for bladder troubles. (125:41) **Saanich** *Misc. Disease Remedy* Scented branches hung around the house during disease epidemics to “drive the germs away.” (182:70) **Sanpoil** *Dermatological Aid* Decoction of leaves, stems, and berries used as a wash for sores. *Tuberculosis Remedy* Berries eaten or decoction taken for tuberculosis. *Unspecified* Berries eaten or decoction taken for general illnesses. (131:221) **Shoshoni** *Venereal Aid* Decoction of twigs taken over a long period of time for venereal disease. (180:92) **Shuswap** *Diaphoretic* Used in the sweat house. *Misc. Disease Remedy* Decoction of plant used as a steam bath for the flu. *Panacea* Decoction of stems and needles taken for any sickness. (123:50) **Sioux** *Cold Remedy* Infusion of boughs, branches, and cones used for colds. Plant burned and smoke used for colds. *Febrifuge* Infusion of boughs, branches, and cones used for fevers. *Misc. Disease Remedy* Infusion of leaves formerly used for cholera. *Pulmonary Aid* Infusion of boughs, branches, and cones used for pneumonia. **Stony Indian** *Antihemorrhagic* Infusion taken for hemorrhages. (82:36) **Swinomish** *Antirheumatic (External)* Infusion of roots used as a foot soak for rheumatism. *Disinfectant* Decoction of leaves used to disinfect the house. *Panacea* Infusion of leaves used as a wash for all ailments. *Tonic* Infusion of leaves taken as a general tonic. (79:21) **Thompson** *Antirheumatic (External)* Decoction of berries used externally for rheumatism. *Cold Remedy* Decoction of branches and berries taken for colds. *Dermatological Aid* Decoction of berries used as a wash for all types of bites and stings. Decoction of boughs taken or used as a wash for hives or sores. The informant said that she used a decoction of mashed boughs and Douglas fir to bathe her children when they had the “seven year itch” and that it worked, but not as well as modern medicine. *Disinfectant* Decoction or infusion of plant used to disinfect the house after an illness or death. The decoction was used to scrub the floors, walls, and furniture after an illness or death in the house. It was also used to wash the deceased person’s bedding and clothing as well as serving as a protective wash for other members of the household. The steam from the infusion was also said to have a disinfecting effect. If they knew that an illness was going to arrive, they broke the branches and burned them in the house for the strong smoke which they

said would keep the air fresh so that the sickness would not affect them. They also burned the branches after a death in the house to freshen the air. (187:92) *Diuretic* Fresh berries eaten as a diuretic. (164:465) Fresh or dried berries eaten as a diuretic. *Gastrointestinal Aid* Decoction of berries used externally for stomach ailments. *Gynecological Aid* Decoction of branches and berries taken every morning just before childbirth. The decoction was taken every morning just before childbirth to promote muscular relaxation. *Heart Medicine* Decoction of branches and berries taken for heart trouble. *Kidney Aid* Infusion of plant taken for kidney trouble. *Misc. Disease Remedy* Decoction of boughs used for “black measles” or chickenpox. *Other* Plant considered effective in combating evil “spirits” associated with illness and death. *Tuberculosis Remedy* Decoction of branches and berries taken for tuberculosis. (187:92) *Urinary Aid* Fruit eaten for bladder troubles. (125:41) Fresh berries eaten as a medicine for the bladder. (164:465) Fresh or dried berries eaten for bladder trouble. (187:92) *Veterinary Aid* Strong decoction of berries used to kill ticks on horses. (164:512)

- **Food—Apache, Chiricahua & Mescalero** *Fruit* Berries mixed with mescal and eaten. (33:37) **Jemez** *Fruit* Berries eaten raw or stewed. (44:24) **Keresan** *Fruit* Berries eaten raw by hunters while out in the mountains, but better when cooked. (198:561) **Okanagan-Colville** *Beverage* Berries made into a drink and taken in the sweat house. This drink could only be taken with great caution, because the berries were believed to be poisonous. (188:19) **Tewa** *Fruit* Fruits eaten fresh or heated. (32:32)
- **Fiber—Montana Indian** *Building Material* Wood used for fence posts. (19:14)
- **Other—Blackfoot** *Ceremonial Items* Plant used in the Sun Dance ceremony, the summer festival of the Blackfoot. (97:17) Used on the altar of the sacred woman at the Sun Dance. (114:276) **Cheyenne** *Cooking Tools* Knots used to make bowls. (83:13) *Hunting & Fishing Item* Used to make bows. (83:46) Wood used as the best material for bows. (83:5) *Incense & Fragrance* Burned as an incense when making medicine. (83:13) *Musical Instrument* Wood used to make courting flutes. (83:5) *Protection* Plant burned and smoke used for protection from thunder and lightning. (82:36) **Hoh** *Ceremonial Items* Twigs and berries used in ceremonies. (137:57) **Montana Indian** *Hunting & Fishing Item* Wood used to make lance shafts and bows. Wood used to make bows. (82:36) **Okanagan-Colville** *Hunting & Fishing Item* Tough wood used to make bows. Pounded branches, berries, and water used to soak arrowheads and render them poisonous. Arrowheads, soaked overnight in a solution of pounded juniper branches (with berries) and water, were said to cause a deer’s blood to coagulate when it was wounded so that it could not run far. This “poison” worked effectively, even if the deer were only nicked with the arrowhead. It was said not to affect the edibility of the meat. *Protection* Boughs considered an extremely powerful medicine for combating evil spirits associated with death. When a person died, his family used the boughs to fumigate the house. All the doors and windows were closed and the boughs were burned and the smoke allowed to fill all the rooms. This treatment was made even more effective by adding rose branches to the juniper. After the smoke treatment, rose and juniper branches were boiled together and the water used to wash the entire house—lights, windows, floors, walls, and ceilings.

This wash water was then taken outside and splashed all around the house and along the trails leading to the outbuildings to prevent the spirit of the dead person from coming back to the house. *Stable Gear* Tough wood used to make double yokes for horses. *Toys & Games* Tough wood made into a spoked wheel and used in a throwing game. The wheel was rolled along a trough and contestants threw spear-like sticks at it, trying to stop it by having their stick enter the center of the wheel, thus making it fall over. Lesser points were made by getting the stick part way through the spokes, each of which gave a different value according to its color. The winner had to get 20 points. This game was played by men and was often accompanied by betting. *Weapon* Pounded branches, berries, and water used as a poison to kill people quickly in warfare. Pounded branches, berries, and water used as a poison on bullets. (188:19) **Quileute** *Ceremonial Items* Twigs and berries used in ceremonies. (137:57) **Shuswap** *Hunting & Fishing Item* Used to make bows. *Insecticide* Plant used to keep earwigs and bedbugs out of the house. (123:50) **Thompson** *Good Luck Charm* Tree used to bring good luck. (187:92) *Hunting & Fishing Item* Wood used to make bows and clubs. (164:498) Wood used to make the two outer prongs of a leister, the center from "ironwood" or saskatoon wood. Hunters rubbed the boughs on themselves as protection against grizzlies. (187:92) *Insecticide* Strong decoction of berries used to kill ticks on horses. (164:512) *Musical Instrument* Wood used to make drums. (164:498) *Protection* Boughs used as protection against illnesses and death. One informant said that, formerly, when a person died the branches were broken and laid in the coffin to keep the germs away and to keep the spirit or "ghost" of the deceased person from harming or scaring the living. The informant also said that the branches could be placed on the stove in a little dish and the scent allowed to permeate the room. The branches could also be placed around the edges of the family's bedrooms as a disinfectant. They were left there until they lost their strong, pungent odor. Hunters rubbed the boughs on themselves as protection against grizzlies. (187:92)

### *Juniperus* sp., Juniper

- **Drug**—**Apache, Western** *Pulmonary Aid* Poultice of heated, wrapped branches applied to pneumonia patients' backs. (26:187) **Blackfoot** *Antirheumatic (External)* Infusion of roots and poplar leaves applied like a liniment to stiff backs or backaches. (86:78) *Dermatological Aid* Infusion of plant used to soothe the face after whiskers were plucked. *Orthopedic Aid* Infusion of plant used as a foot wash. (86:124) *Tonic* Infusion of roots used as a general tonic. (86:83) **Creek** *Analgesic and Antirheumatic (External)* Poultice of warm sprigs and leaves applied to rheumatic aches and pains. *Blood Medicine and Tonic* Plant used as a spring tonic, to thin the blood. (172:657) **Gitksan** *Antihemorrhagic* Plant used for mouth hemorrhages. (43:314) Strong decoction of whole plant taken for hemorrhage and kidney trouble. (150:49) *Cathartic* Plant used as a purgative. (43:314) Strong decoction of whole plant taken as a purgative and diuretic. (150:49) *Dermatological Aid* Plant used for cuts. *Diuretic* Plant used as a diuretic. (43:314) Strong decoction of whole plant taken as a diuretic and purgative. (150:49) *Kidney Aid* Plant used for kidney troubles. (43:314) Strong decoction of whole plant used for kidney trouble and hemorrhage. (150:49) *Strengtheners* Plant used as a strengthener. (43:314) **Hopi**

- Dermatological Aid* Poultice of heated twigs applied to bruise or sprain for swelling. *Disinfectant* Decoction of branch used as wash to disinfect persons after corpse burial. (200:62, 63) *Gastrointestinal Aid* Compound decoction of plant taken for indigestion. (200:33, 62) *Gynecological Aid* Plant used several ways to ease pregnancy and childbirth. (200:35, 36, 62) *Orthopedic Aid* Poultice of heated twigs bound on bruise or sprain for swelling. (200:32, 62) *Pediatric Aid* Plant ashes rubbed on newborn baby. Plant smoke used to make child behave by holding the child over the fire. (200:62, 63) **Hualapai** *Dermatological Aid* Poultice of leaf ash applied to sores. *Panacea* Decoction of leaves taken for various disorders. (195:32) **Navajo** *Misc. Disease Remedy* Decoction of berries taken for influenza. (55:17) **Shoshoni** *Contraceptive* Infusion of berries taken on three successive days for birth control. (118:46)
- **Food**—**Apache, Mescalero** *Fruit* Berries boiled, ground, or mashed and used with other foods. (14:43) **Apache, Western** *Beverage* Berries soaked, pounded with yucca fruit, mixed with water, and drained to make a drink. *Dried Food* Unseasoned berries dried and boiled. *Sauce & Relish* Berries pounded with yucca fruit to make a gravy. *Spice* Ashes mixed with corn mush for color and flavor. (26:187) **Hualapai** *Starvation Food* Berries considered a starvation food because of their abundance. (195:32) **Navajo** *Forage* Plant eaten by sheep during droughts. (55:17)
- **Fiber**—**Apache, Mescalero** *Building Material* Used for tepee poles. (14:43) **Navajo** *Building Material* Boughs used to build the corral for public exhibitions at the close of a ceremony. Boughs used to make the summer shelters where the women weave. Bark used in the construction of hogans. *Clothing* Bark woven into garments and used to make sandals. Dry bark mixed with mud and worn as clothing during hard times. *Mats, Rugs & Bedding* Bark used to make blankets and passageway curtains. (55:17)
- **Dye**—**Navajo** *Unspecified* Bark, berries, and twigs used for dye purposes. (55:17)
- **Other**—**Apache, Chiricahua & Mescalero** *Fuel* Wood used to heat cooking stones. (33:36) **Apache, Mescalero** *Fuel* Bark used as tinder for fire drills. *Hunting & Fishing Item* Used to make bows. *Tools* Used to make handles for scrapers. (14:43) **Apache, Western** *Lighting* Dried bark made into a torch. (26:187) **Blackfoot** *Hide Preparation* Greased leaves used to smoke hides yellow. *Jewelry* Dried, smoked berries used to make necklaces, wristlets, or clothing decorations. (86:114) **Micmac** *Fuel* Wood used for kindling and fuel. (159:258) **Navajo** *Ceremonial Items* Wood, struck by lightning, used as the two parts of the fire drill for the Night Chant. Branches made into a fagot and used by the personator of the Black God, owner of all fire. Shredded bark carried by the dancers in the Fire Dance during the last night of the Mountain Chant. Wood burned into charcoal, ground, and used for black in sand paintings. Branches made into wands and used in certain ceremonies. Wood used to make prayer sticks. *Containers* Concave bark used to make improvised trays for the sand painting powders. *Fuel* Light bark used as tinder to catch the spark from the fire drill. Wood burned into charcoal and used as a fuel. *Jewelry* Seeds used to make necklaces, bracelets, anklets, and wristlets. *Toys & Games* Wood used to make dice. (55:17)

*Juniperus virginiana* L., Eastern Red Cedar

- **Drug—Cherokee Abortifacient** Used for “female obstructions.” *Anthelmintic* Decoction of berries given for worms. *Antirheumatic (Internal)* Used for rheumatism and “female obstructions.” *Cold Remedy* Infusion taken for colds. *Dermatological Aid* Used as an ointment for itch, skin diseases, and “white swelling.” *Diaphoretic* Used as a diaphoretic. *Misc. Disease Remedy* Used as a diaphoretic and for measles. (80:28) **Chippewa** *Antirheumatic (External)* Compound decoction of twigs used as herbal steam for rheumatism. *Antirheumatic (Internal)* Compound decoction of twigs taken for rheumatism. *Herbal Steam* Compound decoction of twigs taken or used as herbal steam for rheumatism. (53:362) **Comanche** *Disinfectant* Smoke from leaves inhaled for purifying effect. (29:522) **Cree, Hudson Bay** *Diuretic* Leaves used as a diuretic. (92:303) **Dakota** *Cold Remedy* Smoke from burned twigs inhaled as a cold remedy. *Cough Medicine* Decoction of fruits and leaves taken for coughs. *Misc. Disease Remedy* Decoction of leaves taken and used as a wash for cholera. *Veterinary Aid* Decoction of fruits and leaves given to horses for coughs. (70:63, 64) **Delaware, Oklahoma** *Antirheumatic (External)* Infusion of twigs used as herbal steam for rheumatism. (175:30, 76) *Herbal Steam* Infusion of roots or twigs used as herbal steam for rheumatism. (175:30) **Iroquois** *Antirheumatic (Internal)* Compound decoction taken for rheumatism. *Cold Remedy* Compound decoction taken for colds. *Cough Medicine* Compound decoction taken for coughs. *Diuretic* Compound decoction taken as a diuretic. (87:271) **Kiowa** *Oral Aid* Berries chewed for canker sores in the mouth. (192:13) **Lakota** *Cold Remedy* Leaves burned and smoke inhaled for head colds. (106:30) **Meskwaki** *Adjuvant* Wood prepared in warm water and used as a seasoner for other medicines. *Other* Decoction of leaves taken by convalescent patients. *Stimulant* Decoction of leaves taken for weakness and as a convalescent medicine. (152:234) **Ojibwa, South** *Analgesic* Bruised leaves and berries used internally for headache. (91:198) **Omaha** *Ceremonial Medicine* Plant used in the sun dance ceremony and various rituals. Plant used in the vapor bath of the purificatory rites. (68:320) *Cold Remedy* Smoke from burned twigs inhaled as a cold remedy. *Cough Medicine* Decoction of fruits and leaves taken for coughs. (70:63, 64) *Diaphoretic* Plant used in the vapor bath of the purificatory rites. (68:320) *Herbal Steam* Twigs used on hot stones in vapor bath, especially in purification rites. *Veterinary Aid* Decoction of fruits and leaves given to horses for coughs. **Pawnee** *Cold Remedy* Smoke from burned twigs inhaled as a cold remedy. *Cough Medicine* Decoction of fruits and leaves taken for coughs. *Sedative* Smoke from burning twigs used for nervousness and bad dreams. *Veterinary Aid* Decoction of fruits and leaves given to horses for coughs. **Ponca** *Cold Remedy* Smoke from burned twigs inhaled as a cold remedy. *Cough Medicine* Decoction of fruits and leaves taken for coughs. *Herbal Steam* Twigs used on hot stones in vapor bath, especially in purification rites. *Veterinary Aid* Decoction of fruits and leaves given to horses for coughs. (70:63, 64) **Rappahannock** *Other* Infusion of bark taken for summer complaint (summer cholera). *Pulmonary Aid* Compound infusion with berries taken for shortness of breath. (161:30) *Respiratory Aid* Compound infusion with berries taken for asthma. (161:33) **Salish** *Disinfectant* Plant used for fumigation. (178:294)
  - **Food—Comanche** *Fruit* Fruits eaten for food. (29:522) **Lakota** *Beverage* Berries eaten to relieve thirst. *Spice* Berries crushed and used to flavor soups, meats, and stews. (106:30)
  - **Fiber—Cherokee** *Building Material* Wood used to make fence posts. *Furniture* Wood used to make furniture. (80:28) **Chippewa** *Mats, Rugs & Bedding* Used for mats. (53:377) **Ojibwa** *Building Material* Bark used to build houses, wigwams, and wickiups. Split strips or stakes used to make a pen to enclose graves. *Furniture* Wood used to make cradleboards. *Mats, Rugs & Bedding* Inner bark crushed and used to pad cradleboards. Bark used to make mats. (135:245)
  - **Dye—Chippewa** *Red-Brown* Bark used to make a mahogany-colored dye for coloring cedar strips in mats. (53:371)
  - **Other—Cherokee** *Decorations* Wood used to carve. *Insecticide* Used for mothproofing. (80:28) **Dakota** *Protection* Boughs put on tepee poles to ward off lightning. (70:63) **Kiowa** *Incense & Fragrance* Needles thrown into the fire and used as incense during prayers in the peyote meeting. *Musical Instrument* Red, aromatic heartwood used to make “love flutes.” (192:13) **Lakota** *Incense & Fragrance* Leaves and twigs burned as incense in funerals. (106:30) **Navajo** *Ceremonial Items* Wood used to make the wand carried in the War Dance Ceremony. (55:20) **Ojibwa** *Cash Crop* Pulp wood and wood posts sold to make paper and fencing. *Ceremonial Items* Split strips thatched and placed on graves. (135:245) **Omaha** *Incense & Fragrance* Twigs used as incense. (68:320) *Protection* Boughs put on tepee poles to ward off lightning. **Pawnee** *Protection* Boughs put on tepee poles to ward off lightning. **Ponca** *Protection* Boughs put on tepee poles to ward off lightning. (70:63) **Thompson** *Fuel* Used as a fuel to make a heavy smoke for smoking skins. **Thompson, Upper (Nicola Band)** *Fuel* Used in combination with sagebrush as a fuel to make a heavy smoke when desiring very dark skins. (164:500)
- Juniperus virginiana* var. *silicicola*** (Small) J. Silba, Southern Red Cedar
- **Drug—Seminole** *Analgesic* Infusion of leaves taken as an emetic for rainbow sickness: fever, stiff neck, and backache. (as *J. silicicola* 169:210) Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *J. silicicola* 169:213) Leaves used for scalping sickness: severe headache, backache, and low fever. (as *J. silicicola* 169:262) *Antidiarrheal* Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *J. silicicola* 169:213) *Antirheumatic (External)* Decoction of leaves used as a body rub and steam for joint swellings. (as *J. silicicola* 169:193) *Cold Remedy* Infusion of leaves and bark taken and steam inhaled for runny nose, stuffy head, and sore throat. *Cough Medicine* Infusion of leaves and bark taken and steam inhaled for coughs. (as *J. silicicola* 169:279) *Emetic* Infusion of leaves taken as an emetic for rainbow sickness: fever, stiff neck, and backache. (as *J. silicicola* 169:210) Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *J. silicicola* 169:213) Plant used as an emetic during religious ceremonies. (as *J. silicicola* 169:409) *Eye Medicine* Infusion of leaves taken and used as a bath for mist sickness: eye disease, fever, and chills. *Febrifuge* Infusion of leaves taken and used as a bath for mist sickness: eye disease, fever, and chills. (as *J. silicicola* 169:209) Infusion of leaves taken as an emetic for rainbow sickness: fever, stiff neck, and backache. (as *J. silicicola* 169:210) Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *J. silicicola*

169:213) Leaves used for scalping sickness: severe headache, backache, and low fever. *Orthopedic Aid* Leaves used for scalping sickness: severe headache, backache, and low fever. (as *J. silicicola* 169:262) Leaves used to smoke the body for eagle sickness: stiff neck or back. Leaves used to smoke the body for fawn sickness: swollen legs and face. (as *J. silicicola* 169:305) *Other* Leaves burned for ghost sickness: dizziness and staggering. (as *J. silicicola* 169:260) *Pediatric Aid* Plant and other plants used as a baby's charm for fear from dreams about raccoons or opossums. (as *J. silicicola* 169:221) *Psychological Aid* Plant burned to smoke the body for insanity. (as *J. silicicola* 169:293) *Sedative* Plant and other plants used as a baby's charm for fear from dreams about raccoons or opossums. (as *J. silicicola* 169:221) *Stimulant* Decoction of leaves used as a bath for hog sickness: unconsciousness. (as *J. silicicola* 169:229) *Unspecified* Plant used for medicinal purposes. (as *J. silicicola* 169:161) Leaves used as medicine. (as *J. silicicola* 169:156) Plant used as medicine. (as *J. silicicola* 169:158) Plant used medicinally. (as *J. silicicola* 169:164) *Vertigo Medicine* Infusion of leaves taken as an emetic for thunder sickness: fever, dizziness, headache, and diarrhea. (as *J. silicicola* 169:213) *Witchcraft Medicine* Leaves used to make a witchcraft medicine. (as *J. bilicicola* 169:394)

- **Other—Seminole Protection** Leaves kept with eagle tail feathers to prevent the feathers from causing sickness. (as *J. silicicola* 169:404)

***Juniperus virginiana* L. var. *virginiana***, Eastern Red Cedar

- **Other—Kiowa Incense & Fragrance** Needles thrown into the fire and used as incense during prayers in the peyote meeting. *Musical Instrument* Red, aromatic heartwood used to make "love flutes." (as *Sabina virginiana* 192:13)

## ***Justicia*, Acanthaceae**

***Justicia californica*** (Benth.) D. Gibson, Beloperone

- **Food—Diegueño Sweetener** Flower sucked for the nectar. (as *Beloperone californica* 15:47)

***Justicia crassifolia*** (Chapman) Chapman ex Small, Thickleaf Waterwillow

- **Drug—Seminole Reproductive Aid** Plant used to restore virility. (169:319)

## ***Kallstroemia*, Zygophyllaceae**

***Kallstroemia californica*** (S. Wats.)

Vail, California Caltrop

- **Drug—Tewa Antidiarrheal** Root used for diarrhea. *Dermatological Aid* Poultice of chewed leaves applied to sores or swellings. (as *K. brachystylis* 138:56, 57)

## ***Kalmia*, Ericaceae**

***Kalmia angustifolia*** L., Sheep Laurel

- **Drug—Abnaki Cold Remedy** Used for head colds. (144:154) *Nose Medicine* Powdered leaves mixed with bark from another plant and used as snuff for nasal inflammation. (144:170) **Algonquin, Quebec**

*Cold Remedy* Singed, crushed leaves used like snuff for colds. *Poison* Plant considered poisonous. (18:215) **Algonquin, Tête-de-Boule Analgesic** Leaves boiled and used for headaches. *Poison* Infusion of leaves taken in great quantities caused death. (132:129) **Cree, Hudson Bay Gastrointestinal Aid** Decoction of twigs with leaves and flowers taken for bowel complaints. *Tonic* Decoction of twigs with leaves and flowers taken as a tonic. (92:303) **Malecite Dermatological Aid** Salve of pounded, fresh plant used for swellings. *Orthopedic Aid* Salve of pounded, fresh plant used for sprains. (116:244) **Micmac Analgesic** Herb used for pain, swellings, and sprains. (40:57) Poultice of crushed leaves bound to head for headache. (156:316) *Dermatological Aid* and *Orthopedic Aid* Herb used for swellings, pain, and sprains. (40:57) **Panacea** Infusion of leaves considered valuable as a "non-specific remedy." *Poison* Plant considered very poisonous. (156:316) **Montagnais Analgesic** Infusion of leaves taken sparingly for backache. *Cold Remedy* Infusion of leaves taken sparingly for colds. (156:314) *Gastrointestinal Aid* Infusion of leaves taken, poisonous if too strong, for stomach complaints. (156:317) *Poison* Leaves considered poisonous. (156:314) **Penobscot Analgesic** Compound poultice of plant used on cuts made in painful area to treat pain. *Panacea* Compound poultice of plant applied "for all kinds of trouble." (156:311)

***Kalmia latifolia*** L., Mountain Laurel

- **Drug—Cherokee Analgesic** Infusion of leaves put on scratches made over location of the pain. (177:48) *Antirheumatic (External)* "Bristly edges of ten to twelve leaves" rubbed over skin for rheumatism. *Dermatological Aid* Crushed leaves used to "rub brier scratches." *Disinfectant* Infusion used as a wash "to get rid of pests" and as a liniment. *Orthopedic Aid* "Leaf ooze rubbed into scratched skin of ball players to prevent cramps." Compound used as liniment. *Panacea* Leaf salve used "for healing." (80:42) **Cree, Hudson Bay Antidiarrheal** Decoction of leaves taken for diarrhea. *Poison* Plant considered poisonous. (92:303) **Mahuna Dermatological Aid** Plant used as a body deodorizer. *Poison* Plant considered poisonous. (140:52)
- **Food—Mahuna Forage** Plants eaten by deer. (140:52)
- **Other—Cherokee Decorations** Wood used to carve. (80:42)

***Kalmia microphylla*** (Hook.) Heller, Alpine Laurel

- **Drug—Kwakwaka'wakw Antiemetic and Antihemorrhagic** Decoction of leaves used for vomiting and spitting blood. (43:241)
- **Food—Hanaksiala Beverage** Leaves used to make tea. Leaves used to make tea. (43:241)

***Kalmia polifolia*** Wangenh., Bog Laurel

- **Drug—Gosiute Unspecified** Leaves used as medicine. (as *K. glauca* 39:373) **Hesquiut Poison** Leaves could be poisonous and should never be used to make tea. (185:65) **Kwakiutl Antihemorrhagic** Decoction of leaves taken for "spitting of blood." (as *K. glauca* 20:380) Decoction of leaves taken for blood-spitting. (183:283) *Dermatological Aid* Decoction of leaves used as a wash for open sores and wounds that do not heal. (as *K. glauca* 20:380, 382) Decoction of leaves used as a wash for open sores and wounds. (183:283) **Thompson Unspecified** Decoction of plant used medicinally. (164:465) **Tlingit Dermatological Aid** Infusion of whole plant used for skin ailments. (as *K. glauca* 107:284)

**Keckiella**, Scrophulariaceae

**Keckiella breviflora** (Lindl.) Straw **ssp. breviflora**, Bush Beard-tongue

- **Drug**—Miwok *Cold Remedy* Infusion taken for colds. (as *Pentstemon breviflorus* 12:171) **Paiute** *Dermatological Aid* Ground, dry leaves used for running sores. (as *Pentstemon breviflorus* 118:44)

**Keckiella cordifolia** (Benth.) Straw, Heartleaf Penstemon

- **Drug**—Mahuna *Dermatological Aid* Infusion used as a wash or poultice of plant applied for fistulas and ulcers. (as *Pentstemon cordifolius* 140:12)

**Kochia**, Chenopodiaceae

**Kochia americana** S. Wats., Greenmolly

- **Drug**—Navajo, Kayenta *Veneral Aid* Plant used for venereal disease. (205:21)

**Kochia scoparia** (L.) Schrad., Common Kochia

- **Drug**—Navajo *Ceremonial Medicine* Used by the medicine man for painting a patient during a healing ceremony. *Dermatological Aid* Plant used for sores. (as *K. trichophylla* 90:152)
- **Food**—Navajo *Forage* Plant used as sheep forage, especially in the winter. (as *K. trichophylla* 90:152)

**Koeleria**, Poaceae

**Koeleria macrantha** (Ledeb.) J. A. Schultes, Prairie Junegrass

- **Drug**—Cheyenne *Ceremonial Medicine* Plant used in the Sun Dance ceremony. *Dermatological Aid* Plant used for cuts. *Stimulant* Plant tied to Sun Dancers head to prevent him from getting tired. (as *K. cristata* 83:10)
- **Food**—Havasupai *Bread & Cake* Seeds used to make bread. (as *K. cristata* 197:66) *Forage* Plant grazed by livestock. *Unspecified* Seeds used for food. *Winter Use Food* Seeds stored in blankets or bags of skin in caves. (as *K. cristata* 197:209) **Isleta** *Bread & Cake* Seeds made into a meal and used to make bread. *Porridge* Seeds made into a meal and used to make mush. (as *K. cristata* 32:22) *Staple* Considered a very important source of food before the introduction of wheat. Seeds used to make flour for bread and mush. (as *K. cristata* 100:33) **Okanagan-Colville** *Fodder* Used as a good feed for cattle and horses. (as *K. cristata* 188:55)
- **Fiber**—Cheyenne *Brushes & Brooms* Plants used as paintbrushes to paint ceremonial participants. (as *K. cristata* 83:10) **Jemez** *Brushes & Brooms* Blades tied together and used as a broom. (as *K. cristata* 44:25) **Navajo, Ramah** *Scouring Material* Bunch about a foot long, tied with string or yucca fiber, used as a brush for cleaning metates. (as *K. cristata* 191:16)
- **Other**—**Isleta** *Fasteners* Straw mixed with adobe to give strength and adhesion. (as *K. cristata* 100:33)

**Krameriaceae**, see *Krameria*

**Krameria**, Krameriaceae

**Krameria erecta** Willd. ex J. A. Schultes, Littleleaf Ratany

- **Drug**—Pima *Dermatological Aid* Poultice of powdered root applied to sores. (as *K. parvifolia* 146:80)
- **Dye**—Papago *Red* Roots used as a red dye for garments. (as *K. glandulosa* 34:48)

Used to dye cotton red. (as *K. glandulosa* 34:60) Roots peeled, cut, split, boiled, and used as a red dye for buckskins. (as *K. glandulosa* 34:69)

**Krameria grayi** Rose & Painter, White Ratany

- **Drug**—Paiute *Dermatological Aid* Infusion of root used as a wash for gonorrheal sores. Root powder or decoction of root applied to sores. *Disinfectant* and *Eye Medicine* Infusion of root used as a wash for gonorrheal eye infections. *Veneral Aid* Decoction of root taken and used as a wash for gonorrheal eye infections and sores. (180:96) **Pima** *Analgesic* Infusion of roots taken for pain. *Cough Medicine* Infusion of roots taken for coughs. *Dermatological Aid* Poultice of powdered roots applied to prevent infection on newborn's navel. Decoction of roots applied as poultice to sores caused by "bad disease." *Disinfectant* Poultice of powdered roots applied to prevent infection on newborn's navel. *Eye Medicine* Infusion of twigs used for sore eyes. *Febrifuge* Infusion of roots taken for fevers. *Pediatric Aid* Poultice of powdered roots applied to prevent infection on newborn's navel. *Throat Aid* Root chewed for sore throats. (47:91) **Shoshoni** *Dermatological Aid* Infusion of pulverized root used as a wash for swellings. (180:96)
- **Dye**—Pima *Brown* Dry roots ground, boiled in water, and used as a brown dye for basket making. (47:91)

**Krascheninnikovia**, Chenopodiaceae

**Krascheninnikovia lanata** (Pursh) Guldenstaedt, Winter Fat

- **Drug**—Gosiute *Febrifuge* Plant used for intermittent fevers. (as *Eurotia lanata* 39:369) **Hopi** *Burn Dressing* Powdered root used for burns. *Febrifuge* Decoction of leaves used for fever. (as *Eurotia lanata* 42:317) Compound containing plant used for fever. (as *Eurotia lanata* 200:32, 74) *Orthopedic Aid* Plant used for sore muscles. (as *Eurotia lanata* 200:32) **Navajo** *Antihemorrhagic* Decoction of leaves taken for blood-spitting. (as *Eurotia lanata* 55:44) *Dermatological Aid* Plant used for sores and boils. *Misc. Disease Remedy* Plant used for smallpox. (as *Eurotia lanata* 90:151) **Navajo, Ramah** *Antidote* Cold infusion of plant taken as needed for *Datura* poisoning. *Dermatological Aid* Poultice of chewed leaves applied to poison ivy rash. *Panacea* Cold infusion of plant used as "life medicine." (as *Eurotia lanata* 191:25) **Paiute** *Dermatological Aid* Decoction of plant used as a head and scalp tonic and prevents graying. (as *Eurotia lanata* 180:74, 75) *Eye Medicine* Decoction of leaves alone or with stems used as a wash or compress for sore eyes. (as *Eurotia lanata* 180:74, 75) **Shoshoni** *Dermatological Aid* Decoction of plant used as a head and scalp tonic. *Eye Medicine* Decoction of leaves alone or with stems used as a wash or compress for sore eyes. (as *Eurotia lanata* 180:74, 75) **Tewa** *Burn Dressing* Powdered root used for burns. *Febrifuge* Decoction of leaves used for fever. (as *Eurotia lanata* 42:317) **Zuni** *Burn Dressing* Poultice of ground root applied to burns and bound with cotton cloth. (as *Eurotia lanata* 166:51)
- **Food**—Havasupai *Fodder* Plant used for horse feed. (as *Ceratoides lanata* 197:218) **Keres, Western** *Forage* Considered a good forage plant. (as *Eurotia lanata* 171:44) **Navajo** *Forage* Plant used as winter forage for the sheep. (as *Eurotia lanata* 55:44)
- **Other**—**Hopi** *Ceremonial Items* Used in ceremonials to produce steam. (as *Eurotia lanata* 42:317) **Navajo** *Ceremonial Items* Armful of stems with leaves used on heated stones in the sweat house for the

Mountain Chant. (as *Eurotia lanata* 55:44) **Tewa Ceremonial Items** Used in ceremonials to produce steam. (as *Eurotia lanata* 42:317)

## *Krigia*, Asteraceae

*Krigia biflora* (Walt.) Blake, Twoflower Dwarf dandelion

- **Other—Menominee Hunting & Fishing Item** Stem used by hunters to make a wail that simulated a fawn in distress and lured the doe to the hunter. (as *Krigia amplexicaulis* 151:80)

## *Lachnanthes*, Haemodoraceae

*Lachnanthes caroliniana* (Lam.) Dandy, Carolina Redroot

- **Drug—Catawba Veterinary Aid** Infusion of dried, powdered root given to horses as a tonic. (as *Gyrotheca capitata* 157:188) **Cherokee Antihemorrhagic** Taken for "spitting blood." **Cancer Treatment** Strong decoction

used as a wash for cancer. **Dermatological Aid** Strong decoction of astringent root used as a wash for cancer. **Gastrointestinal Aid** Taken for bowel complaints. **Gynecological Aid** Taken for "flooding." **Hemorrhoid Remedy** Used for bloody piles. **Oral Aid** Used for sore mouth. **Throat Aid** Used for sore throat. **Venereal Aid** Compound decoction taken for venereal disease. (80:52)

## *Lactuca*, Asteraceae

*Lactuca biennis* (Moench) Fern., Tall Blue Lettuce

- **Drug—Bella Coola Analgesic** Decoction of root taken for body pain, but not pain in the limbs. **Antidiarrheal** Decoction of root taken for diarrhea. **Antiemetic** Decoction of root taken for vomiting. **Antihemorrhagic** Decoction of root taken for hemorrhage, body pain, and heart trouble. **Heart Medicine** Decoction of root taken for heart trouble, hemorrhage, and pain. (as *L. spicata* 150:65) **Ojibwa Gynecological Aid** Infusion of plant used for caked breast and to ease lactation. (as *L. spicata* 153:364, 365) **Potawatomi Unspecified** Plant used as a medicine for unspecified illnesses. (as *L. spicata* 154:52)
- **Other—Ojibwa Hunting & Fishing Item** Plant used in the same manner as the Canada hawkweed to attract a doe to them for a close shot. (as *L. spicata* 153:429)

*Lactuca canadensis* L., Canada Lettuce

- **Drug—Cherokee Analgesic** Used for pain and infusion given "for calming nerves." **Ceremonial Medicine** Used as an ingredient in a green corn medicine. **Sedative** Infusion given "for calming nerves" and "produces sleep." **Stimulant** Infusion used as a stimulant. **Veterinary Aid** Infusion given for "milksick." (80:42) **Chippewa Dermatological Aid** Milky sap from fresh plant rubbed on warts. (53:350) **Iroquois Analgesic** Compound infusion of roots and bark taken for back pain. **Eye Medicine** Compound infusion of roots and bark taken for dark circles and puffy eyes. **Hemostat** Poultice of smashed roots applied to severe bleeding from a cut. **Kidney Aid** Compound infusion of roots and bark taken for kidney trouble. **Orthopedic Aid** Compound infusion of roots and bark taken for back pain. (87:478) **Menominee Dermatological Aid** Milky juice of plant rubbed on poison ivy eruptions. (151:31)

- **Food—Cherokee Vegetable** Leaves cooked and eaten as greens. (80:42)

*Lactuca ludoviciana* (Nutt.) Riddell, Biannual Lettuce

- **Food—Gosiute Unspecified** Leaves used for food. (39:373)

*Lactuca sativa* L., Garden Lettuce

- **Drug—Isleta Gastrointestinal Aid** Fresh leaves eaten for stomach-aches. (as *L. integrata* 100:33) **Meskwaki Gynecological Aid** Infusion of leaves taken after childbirth to hasten the flow of milk. (as *L. scariola* var. *integrata* 152:215)
- **Food—Acoma Vegetable** Young, tender plants eaten as greens. (as *L. integrata* 32:32) **Keres, Western Vegetable** Young, tender plants used as lettuce. (as *L. integrata* 171:51) **Laguna Vegetable** Young, tender plants eaten as greens. (as *L. integrata* 32:32)

*Lactuca serriola* L., Prickly Lettuce

- **Drug—Navajo, Ramah Ceremonial Medicine** and **Emetic Compound** decoction of plant used as a ceremonial emetic. (191:52)

*Lactuca tatarica* var. *pulchella* (Pursh) Breitung, Blue Lettuce

- **Drug—Iroquois Hemorrhoid Remedy** Poultice of plants applied to piles. (as *L. pulchella* 87:478) **Okanagan-Colville Antidiarrheal** and **Pediatric Aid** Infusion of roots and stems given to children for diarrhea. (as *L. pulchella* 188:84)
- **Food—Apache, White Mountain Candy** Gummy substance from the root used for chewing gum. **Navajo Candy** Gummy substance from the root used for chewing gum. **Zuni Candy** Gummy substance from the root used for chewing gum. (as *L. pulchella* 136:158) Dried root gum used as chewing gum. (as *L. pulchella* 166:68)

*Lactuca virosa* L., Bitter Lettuce

- **Drug—Navajo Antidiarrheal, Antiemetic, and Gastrointestinal Aid** Plant used for gastroenteritis (nausea, vomiting, and diarrhea). (90:152)

## *Lagenaria*, Cucurbitaceae

*Lagenaria siceraria* (Molina) Standl., Bottle Gourd

- **Drug—Cherokee Dermatological Aid** Poultice of soaked seeds used for boils. (as *L. vulgaris* 80:37) **Houma Analgesic** Poultice of crushed leaves applied to the forehead for headaches. (158:62) **Seminole Analgesic** Seeds used for adult's sickness caused by adultery: headache, body pains, and crossed fingers. (169:256) **Psychological Aid** Seeds burned to smoke the body for insanity. (169:293)
- **Food—Cherokee Unspecified** Species used for food. (as *L. vulgaris* 80:37) **Ojibwa Vegetable** Gourds eaten young, before the rind had hardened. (as *L. vulgaris* 153:400)
- **Other—Cherokee Ceremonial Items** Fruit used to make ceremonial rattles. **Cooking Tools** Fruit used to make dippers. (as *L. vulgaris* 80:37) **Cocopa Musical Instrument** Fruit made into a rattle and used to provide rhythm for singing and dancing. (37:115) **Dakota Ceremonial Items** Gourds made into rattles and used for ritualistic music.<sup>43</sup> (as *Cucurbita lagenaria* 70:117) **Havasupai Containers** Rinds made into containers used for carrying water on foot or on horseback trips away from home. **Musical Instrument** Rinds used to make rattles. (as *L. vulgaris* 197:244) **Hopi Ceremonial Items** Used as prayer sticks. Covered with a cord net to be used as water containers in ceremonies

and buried with the dead. *Containers* Used as containers for sacred honey, cups, seed bottles, and medicine holders. *Cooking Tools* Used as dippers, canteens, and spoons. *Decorations* Used to make noses, horns, and flowers for masks. *Hunting & Fishing Item* Used in hunting to imitate the sound of a deer. *Musical Instrument* Used as trumpets or megaphones to represent the bellowing of the plumed serpent in ceremonies. Used as rattles. *Tools* Used as pottery scrapers. (as *L. vulgaris* 200:93) **Houma** *Cooking Tools* Used for water dippers, cups, and bowls. *Musical Instrument* Used for drums and rattles. (158:62) **Iroquois** *Ceremonial Items* Fruit made into rattles used by the Medicine Societies. (as *L. vulgaris* 196:113) **Keres, Western** *Cooking Tools* Gourds made into dippers. *Toys & Games* Gourds made into rattles. (as *L. vulgaris* 171:51) **Keresan** *Cooking Tools* Used to make dippers. *Toys & Games* Used to make rattles. (198:561) **Mohave** *Musical Instrument* Fruit made into a rattle and used to provide rhythm for singing and dancing. (37:115) **Navajo** *Ceremonial Items* Used to make rattles for various ceremonies. *Containers* Used to make cups for preparing medicines. *Cooking Tools* Used to make dippers. (as *L. vulgaris* 55:79) **Navajo, Ramah** *Ceremonial Items* Used to make chant rattles. *Containers* Used to make water dippers. *Tools* Used to make pottery scrapers. (191:47) **Ojibwa** *Ceremonial Items* Gourds used to make rattles for the medicine lodge. *Cooking Tools* Gourds used to make drinking and dipping cups. (as *L. vulgaris* 153:400) **Omaha** *Ceremonial Items* Gourds made into rattles and used for ritualistic music.<sup>43</sup> (as *Cucurbita lagenaria* 70:117) **Papago** *Cooking Tools* Used for a drinking and eating vessel. (as *L. vulgaris* 34:17) *Musical Instrument* Fruits dried, freed of seeds and pulp, and used as rattles. (as *L. vulgaris* 34:68) **Pima** *Ceremonial Items* Gourds dried, filled with gravel, and used in ceremonial songs. (as *L. vulgaris* 47:72) **Ponca** *Ceremonial Items* Gourds made into rattles and used for ritualistic music.<sup>43</sup> (as *Cucurbita lagenaria* 70:117) **Seminole** *Cooking Tools* Plant used to make dippers, dishes, and water bottles. (169:484) **Yuma** *Containers* Fruit contents removed, shells cleaned and dried, and used as water and food containers. *Musical Instrument* Fruit made into a rattle and used to provide rhythm for singing and dancing. (37:115)

## Lamarckia, Poaceae

**Lamarckia aurea** (L.) Moench, Goldentop

- **Drug**—Diegueño *Analgesic* Decoction of grass with “small tassels” taken for headaches. (84:23)

**Lamiaceae**, see *Agastache*, *Blephilia*, *Collinsonia*, *Cunila*, *Dracopcephalum*, *Galeopsis*, *Glechoma*, *Hedeoma*, *Hyptis*, *Hyssopus*, *Leonurus*, *Lepechinia*, *Lycopus*, *Marrubium*, *Melissa*, *Mentha*, *Monarda*, *Monardella*, *Nepeta*, *Perilla*, *Physostegia*, *Piloblephis*, *Pogogyne*, *Polioimntha*, *Prunella*, *Pycnanthemum*, *Salvia*, *Satureja*, *Scutellaria*, *Stachys*, *Thymus*, *Trichostema*

**Laminariaceae**, see *Costaria*, *Hedophyllum*, *Laminaria*

## Laminaria, Laminariaceae, alga

**Laminaria groenlandica** Rosenvinge

- **Food**—Nitinah *Unspecified* Plants eaten with herring spawn. (186:51)
- **Other**—Nitinah *Hunting & Fishing Item* Fronds used to catch herring spawn. (186:51)

## Laportea, Urticaceae

**Laportea canadensis** (L.) Weddell, Canadian Woodnettle

- **Drug**—Houma *Febrifuge* Decoction of plant taken for fever. (158:60) **Iroquois** *Antidote* Decoction taken to counteract poison made from menstrual blood and fruit. *Emetic* Decoction of roots taken to vomit to neutralize a love medicine. (87:307) *Gynecological Aid* Infusion of smashed roots taken to facilitate childbirth. (87:306) *Psychological Aid* Decoction taken to counteract loneliness because your woman has left. *Tuberculosis Remedy* Compound infusion of smashed roots taken for tuberculosis. *Witchcraft Medicine* Decoction taken “when your woman goes off and won’t come back.” (87:307) **Meskwaki** *Diuretic* and *Urinary Aid* Root used as a “diurient” and for urine incontinence. (152:250, 251) **Ojibwa** *Diuretic* Infusion of root taken as a diuretic. *Urinary Aid* Infusion of root used for various urinary ailments. (153:391, 392)
- **Fiber**—Abnaki *Basketry* Used to make baskets. (144:156) **Chippewa** *Cordage* Used for twine. (as *Urticastrum divaricatum* 53:378) **Menominee** *Basketry* Plant made into hemp twine and used to make fiber bags. (151:77) **Meskwaki** *Cordage* Inner bark braided to make cords. (152:270) **Ojibwa** *Sewing Material* Rind of this nettle used by the old people as a sewing fiber. (153:423)

## Lappula, Boraginaceae

**Lappula occidentalis** (S. Wats.) Greene, Flatspine Stickseed

- **Other**—Keres, Western *Unspecified* Plant known and named but no use was specified. (171:51)

**Lappula occidentalis var. cupulata** (Gray) Higgins, Flatspine Stickseed

- **Drug**—Navajo *Gynecological Aid* Parts of the plant used at confinement. *Hemostat* Parts of the plant used for nosebleeds. (as *L. texana* 90:153) **Navajo, Kayenta** *Dermatological Aid* Plant used as a lotion for itching. (as *L. texana* 205:40)

**Lappula occidentalis** (S. Wats.) Greene **var. occidentalis**, Desert Stickseed

- **Drug**—Navajo, Kayenta *Dermatological Aid* Poultice of plant applied to sores caused by insects. (as *L. redowskii* 205:40) **Navajo, Ramah** *Dermatological Aid* Cold infusion used as lotion for sores or swellings. (as *L. redowskii* 191:41)
- **Food**—Navajo, Ramah *Fodder* Used for sheep feed. (as *L. redowskii* 191:41)

**Lappula squarrosa** (Retz.) Dumort., European Stickseed

- **Drug**—Ojibwa, South *Analgesic* Roots on hot stones use as an inhalant or snuff of raw root used for headache. (as *Echinosperrum lappula* 91:201)

## Larix, Pinaceae, conifer

**Larix americana**

- **Drug**—Micmac *Dermatological Aid* Poultice of boiled inner bark applied to sores and swellings. *Diuretic* Decoction of boughs taken as a diuretic. (as *Pinus microcarpa* 156:317)

**Larix laricina** (Du Roi) K. Koch, Tamarack

- **Drug**—Abnaki *Cough Medicine* Used for coughs. (144:154) Decoction of plant and bark from another plant used for coughs. Infusion

of bark and roots from other plants taken for persistent coughs. (144:163) **Algonquin, Quebec** *Cough Medicine* Needles and inner bark used for cough medicine. *Disinfectant* Poultice of needles and inner bark applied to infections. *Unspecified* Used with ground pine as a medicinal tea. (18:127) **Algonquin, Tête-de-Boule** *Laxative* Infusion of young branches used as a laxative. (132:129) **Anticosti** *Kidney Aid* Decoction of bark and bark from another plant taken for kidney troubles. (143:63) **Chippewa** *Blood Medicine* Infusion of bark taken for anemic conditions. (71:123) *Burn Dressing* Poultice of chopped inner bark applied to burns. (53:352) **Cree, Woodlands** *Antiemetic* Used with eight different trees for vomiting. *Dermatological Aid* Decoction used as a wash and poultice of boiled inner bark and wood applied to frostbite or deep cuts. Poultice of warm, boiled inner bark applied to wounds to draw out infection. (109:41) **Iroquois** *Analgesic* Fermented compound decoction taken for soreness. *Antirheumatic (Internal)* Compound decoction taken for rheumatism. *Blood Medicine* Fermented compound decoction taken when "blood gets bad and cold." *Cold Remedy* Compound decoction taken for colds. *Cough Medicine* Compound decoction taken for coughs. *Febrifuge* Fermented compound decoction taken for fever. *Stimulant* Fermented compound decoction taken when one is tired from complaint. *Venereal Aid* Compound decoction taken for gonorrhea. Compound powder poultice "put in bag, place penis in bag and tie around waist." (87:268) **Malecite** *Cold Remedy* Infusion of bark used for colds. *Strengthener* Infusion of bark used for general debility. *Tuberculosis Remedy* Infusion of bark used for consumption. (116:249) *Unspecified* Bark used as medicine. (160:6) *Venereal Aid* Infusion of bark, spruce bark, and balsam bark used for gonorrhea. (116:257) **Menominee** *Dermatological Aid* Poultice of bark used for unspecified ailments. *Other* Infusion of bark "drives out inflammation and generates heat." *Veterinary Aid* Infusion of bark given to horses "to better their condition from distemper." (151:45) **Micmac** *Cold Remedy* Bark used for colds. *Dermatological Aid* Bark used for "suppurating wounds" and colds. *Stimulant* Bark used for physical weakness. *Tuberculosis Remedy* Bark used for consumption. *Venereal Aid* Bark used for gonorrhea. (40:58) **Montagnais** *Expectorant* Infusion of buds and bark taken as an expectorant. (24:14) **Ojibwa** *Disinfectant* Dried leaves used as an inhalant and fumigator. (153:378, 379) *Unspecified* Infusion of roots and bark used as a general medicine. (as *L. americana* 135:244) **Ojibwa, South** *Analgesic* Boiled, crushed leaves, and bark used as herbal steam for headache and backache. Poultice of crushed leaves and bark applied for headache. *Herbal Steam* Boiled, crushed leaves and bark used as herbal steam for headache and backache. (as *L. americana* 91:198) **Potawatomi** *Dermatological Aid* Poultice of fresh inner bark applied to wounds and inflammations. *Other* Infusion of bark taken to drive out inflammation and to warm body. *Veterinary Aid* Shredded inner bark mixed with feed to make horse's hide loose. (154:69, 70)

- **Food**—**Anticosti** *Beverage* Branches and needles used to make tea. (143:63) **Potawatomi** *Fodder* Shredded inner bark mixed with oats and fed to horses to make the hide of the animal loose. (154:122)
- **Fiber**—**Cree, Woodlands** *Snow Gear* Wood used to make toboggans. (109:41) **Ojibwa** *Basketry* Root fibers used to make durable bags. (153:421) *Canoe Material* Roots used to sew canoes and used as the strong upper wrappings over the canoe edges. (as *L. americana* 135:

244) Roots used to sew canoes. *Sewing Material* Roots used as a sewing material. (153:421)

- **Other**—**Chippewa** *Containers* Roots used to weave bags. (53:377) **Cree, Woodlands** *Hide Preparation* Rotten wood used to smoke tan and yellow tint hides. (109:41) **Malecite** *Hunting & Fishing Item* Used to make arrow shafts. (160:6) **Micmac** *Fuel* Wood used for kindling and fuel. (159:258)

### *Larix occidentalis* Nutt., Western Larch

- **Drug**—**Kutenai** *Dermatological Aid* Gum used for cuts and bruises. *Tuberculosis Remedy* Infusion of bark used for tuberculosis. **Nez Perce** *Cold Remedy* Infusion of bark used for colds. *Cough Medicine* Infusion of bark used for coughs. *Throat Aid* Sap chewed for sore throat. (82:22) **Okanagan-Colville** *Antirheumatic (External)* Decoction of plant tops used to soak arthritic limbs. *Antirheumatic (Internal)* Decoction of plant taken for severe arthritis. *Blood Medicine* Decoction of plant tops taken to help "changing of the blood." Decoction of plant tops and Oregon grapes used as a blood purifier. *Cancer Treatment* Decoction of plant taken for cancer. *Dermatological Aid* Decoction of plant tops used as an antiseptic wash for cuts and sores, and to soak severe skin sores. (188:25) **Thompson** *Burn Dressing* Poultice of pitch mixed with fat or Vaseline and used for sores, cuts, and burns. *Cancer Treatment* Decoction of small pieces of branches and tops used for cancer. A decoction of plant tops was used to wash the areas affected by cancer. A second decoction of branch pieces was taken internally. It made the emaciated patient get better and gain weight. This treatment was used after a "western" doctor diagnosed the breast cancer patient as being terminal. *Cough Medicine* Branches used for dry coughs. *Dermatological Aid* Decoction of bark used as a wash for wounds, such as bullet wounds. Poultice of pitch used for sores, cuts, and burns. The pitch was mixed with tallow and used as a poultice for sores or it was mixed with fat or Vaseline and used for cuts and burns. *Dietary Aid* Decoction of small pieces of branches and bark used to stimulate the appetite. *Gastrointestinal Aid* Decoction of small pieces of branches and bark used for ulcers. *Gynecological Aid* Decoction of small pieces of branches and bark taken as a form of birth control after childbirth. *Orthopedic Aid* Pitch considered a valuable bone setter for broken bones that would not heal. Branches used for broken bones. *Panacea* Branches used as a medicine for any type of illness. (187:99) *Pediatric Aid* Decoction of leaves used as a healthful, strengthening wash for infants. Decoction of plant used as a wash to make babies strong and healthy. (164:475) Decoction of bark used as a wash or bath for babies, to make them strong and healthy. *Respiratory Aid* Poultice of pitch used or infusion of pitch taken for respiratory diseases. *Strengthener* Decoction of bark used as a wash or bath for babies, to make them strong and healthy. *Tuberculosis Remedy* Poultice of pitch used or infusion of pitch taken for tuberculosis. (187:99)
- **Food**—**Flathead** *Candy* Solidified pitch chewed as gum. *Sauce & Relish* Sap used to make a sweet syrup. *Unspecified* Cambium layer eaten in spring. **Kutenai** *Sauce & Relish* Sap used to make a sweet syrup. (82:22) **Okanagan-Colville** *Candy* Sap hardened and eaten like candy. *Forage* Buds eaten by blue grouse. (188:25) **Paiute** *Candy* Syrup or "dark sugar" gathered as a confection. (111:43) **Sanpoil & Nespelem** *Unspecified* Gum collected on stump of a burned or fallen larch and

used for food. (131:105) **Thompson Candy Gum** from trunk and branches chewed for pleasure. (187:99) **Unspecified Gum** chewed for pleasure. (164:493)

• **Other—Kutenai Ceremonial Items** Used for the center pole of the religious Sundance. **Hide Preparation** Rotten wood used for smoking buckskins. **Nez Perce Hunting & Fishing Item** Wood used to make bows. (82:22) **Okanagan-Colville Paint** Pitch heated, rubbed into a fine powder, mixed with grease, and used as a red paint for girls' faces. **Season Indicator** Leaf color changes used to indicate fall and pregnant bears going into their dens for the winter. (188:25) **Thompson Paint** Pitch burned until dry to make a reddish pigment and used as a face paint for women and men. (187:99)

## *Larrea*, Zygophyllaceae

***Larrea tridentata*** (Sessé & Moc. ex DC.) Coville, Creosote Bush

• **Drug—Coahuilla Gastrointestinal Aid** Infusion of leaves taken for bowel complaints and consumption. **Tuberculosis Remedy** Infusion of leaves taken for consumption and bowel complaints. (as *L. mexicana* 13:78) **Veterinary Aid** Plant given to horses for colds, distemper, or runny nose. (as *L. mexicana* 13:79) **Diegueño Antirheumatic (External)** Decoction of leaves used as a bath for rheumatism and painful arthritis. **Orthopedic Aid** Decoction of leaves used as a bath for aching bones and sprains. (84:23) **Hualapai Cold Remedy** Infusion of leaves taken or leaves steamed for colds. **Disinfectant** Infusion of leaves used as a disinfecting skin cleanser. **Respiratory Aid** Infusion of leaves taken or leaves steamed for congestion and asthma. (195:28) **Kawaiisu Analgesic** Decoction of leaves used as a wash for sore and aching parts of the body. **Disinfectant** Plant used for the antiseptic properties. **Orthopedic Aid** Decoction of leaves used as a wash for sore and aching parts of the body. **Poultice** of heated leaves applied to aching limbs. **Unspecified** Plant used for medicinal purposes. **Veterinary Aid** Decoction of leaves used for collar sores on draft animals. (206:36) **Mahuna Dermatological Aid** Infusion of plant used for dandruff. **Disinfectant** Infusion of plant used as a disinfectant and deodorizer. (as *L. mexicana* 140:37) **Gastrointestinal Aid** Plant used for stomach cramps from delayed menstruation. (as *L. mexicana* 140:14) **Paiute Cold Remedy** Infusion of leaves taken as a cold medicine. (118:37) **Pima Analgesic** Decoction of twigs taken for gas pains or headaches caused by upset stomachs. Infusion of leaves taken for pain or used as bath and rub for rheumatic pains. **Poultice** of heated branches and leaves applied for pain. **Antidiarrheal** Plant gum chewed and swallowed as an antidysenteric and intestinal antispasmodic. **Antirheumatic (External)** Infusion of leaves used as bath and rub or poultice applied to rheumatic pains. **Antirheumatic (Internal)** Infusion of plant taken for rheumatism. **Carminative** Decoction of branches taken for gas caused by upset stomach or gas pains. **Cold Remedy** Decoction of gum taken for colds. **Dermatological Aid** Infusion of plant used as wash for impetigo sores or dandruff. **Poultice** of leaves applied to prevent feet from perspiring or as a deodorant. **Poultice** of leaves applied to scratches, wounds, sores, and bruises. **Emetic** Decoction of leaves taken as an emetic for high fevers. (47:61) Decoction of leaves taken as an emetic. (as *L. mexicana* 146:79) **Febrifuge** Decoction of leaves taken as an emetic for high fevers. **Gastrointestinal Aid** Decoction of plant taken for stomachaches and cramps. Plant gum chewed and swallowed as an intestinal antispas-

modic. **Oral Aid** Decoction of gum used as a gargle. **Panacea** Plant used to cure everything. **Strengtheners** Smoke from plant used for weakness and laziness. **Toothache Remedy** Infusion of plant held in the mouth for toothaches. **Tuberculosis Remedy** Decoction of gum taken for tuberculosis. (47:61) **Unspecified** Poultice of boiled leaves used for unspecified purpose. (as *L. mexicana* 146:79) **Urinary Aid** Infusion of leaves taken for dysuria (difficulty in passing urine). (47:61) **Yavapai Antirheumatic (External)** Decoction of leaves and stems used as wash for rheumatism. **Dermatological Aid** Decoction of leaves and stems used as a wash for cuts and sores. Dried, pulverized leaves used for sores. **Throat Aid** Decoction of leaves and stems taken for sore throat. **Veneral Aid** Decoction of leaves and stems used as a wash for gonorrhea. Whole leaves used on penis for gonorrhea. (as *L. mexicana* 65:261)

• **Other—Kawaiisu Tools** Wood used to make a pointed digging stick. Gum-like substance gathered into a ball, softened in fire, and shaped into awl and knife handles. (206:36)

***Larrea tridentata*** (Sessé & Moc. ex DC.) Coville **var. *tridentata***, Creosote Bush

• **Drug—Cahuilla Antirheumatic (External)** Plant made into liniment used by elderly people for swollen limbs caused by poor blood circulation. **Cancer Treatment** Infusion of stems and leaves used for cancer. **Cold Remedy** Infusion of stems and leaves used for colds. **Dermatological Aid** Decoction or poultice of leaves used on open wounds. Crushed leaf powder applied to sores and wounds. **Disinfectant** Decoction or poultice of leaves used to draw out poisons and for infections. **Emetic** Infusion of stems and leaves used, in heavy doses, to induce vomiting. **Gastrointestinal Aid** Infusion of stems and leaves used for bowel complaints. **Gynecological Aid** Infusion of stems and leaves used for stomach cramps from delayed menstruation. **Pulmonary Aid** Infusion of stems and leaves used for chest infections, and as a decongestant for clearing lungs. **Respiratory Aid** Leaves boiled or heated and the steam inhaled for congestion. **Tonic** Infusion of stems and leaves mixed with honey and used as a general health tonic before breakfast. (as *L. divaricata* 15:83) **Isleta Antirheumatic (External)** Decoction of leaves used as a body bath for rheumatism. **Dermatological Aid** Leaves used in shoes to absorb moisture. **Disinfectant** Decoction of leaves used as a disinfectant. (as *Covillea glutinosa* 100:26) **Paiute Analgesic** Decoction of leaves taken for bowel cramps. **Antirheumatic (External)** Infusion of leaves used as a wash for rheumatism. **Burn Dressing** Compound decoction of leaves with badger oil used as a salve for burns. **Cold Remedy** Decoction of leaves taken for colds. **Dermatological Aid** Dried, powdered leaves sprinkled on sores. **Gastrointestinal Aid** Decoction of leaves taken for bowel cramps. **Misc. Disease Remedy** Infusion of leaves used as a wash for chickenpox. **Panacea** Plant used for many different illnesses and considered a "cure-all." **Veneral Aid** Compound decoction of leaves taken for gonorrhea. (as *L. divaricata* 180:96, 97) **Papago Analgesic** Branches used as bed for women with menstrual cramps or after childbirth. **Antirheumatic (External)** Poultice of heated branches applied for rheumatism. **Poultice** of heated branches applied to joints. **Dermatological Aid** Plant used for poisonous bites and sores. Dried, powdered leaf rubbed on infant's navel to promote healing. **Poultice** of chewed leaves placed on insect bites, snakebites, and

sores. Poultice of chewed plant applied to spider or scorpion bites. Poultice of dried, powdered leaves applied to infant's navel. *Emetic* Decoction of leaves taken as an emetic. *Gynecological Aid* Branches used as bed for women with menstrual cramps or after childbirth. Infusion of leaves rubbed on breasts to start milk flow. Infusion of leaves used as wash on breasts to start milk flow. Poultice of heated branches applied to facilitate childbirth. *Orthopedic Aid* Plant used for stiff limbs. Green branches laid on ashes, aching feet, and stiff limbs held in smoke. Smoke from smoldering green branches used for sore feet. *Pediatric Aid* Dried, powdered leaf rubbed on infant's navel to promote healing. Poultice of dried, powdered leaves applied to infant's navel. *Snakebite Remedy* Poultice of chewed leaves placed on snakebites, insect bites, and sores. Poultice of chewed plant applied to snakebites. (as *Covillea glutinosa* 34:64, 65) *Shoshoni Cold Remedy* Decoction of leaves taken for colds. *Diuretic* Decoction of leaves taken to "stimulate urination." *Venereal Aid* Decoction of leaves taken for venereal disease. (as *L. divaricata* 180:96, 97)

- **Fiber**—**Papago** *Brushes & Brooms* Branches used to brush off the spines of prickly pears. (as *Covillea glutinosa* 34:23) *Building Material* Piled on top of saguaro ribs to strengthen house roofs. Tops tied together and used to thatch menstruation huts. (as *Covillea glutinosa* 34:67)
- **Other**—**Panamint** *Tools* Lac used to make awl handles. (as *L. divaricata* 105:84) **Papago** *Decorations* Charcoal used in tattooing as a permanent greenish blue color. (as *Covillea glutinosa* 34:51) *Hunting & Fishing Item* Wood used to make arrows for hunting small animals. (as *Covillea glutinosa* 34:42) Twigs cut, peeled, straightened, dried, split and used as the foreshafts of hunting arrows. (as *Covillea glutinosa* 34:71) *Musical Instrument* Wood thrust through gourd rattles and used as the handles. (as *Covillea glutinosa* 34:68) *Protection* Branches stuck in the ground to shade tobacco plants. (as *Covillea glutinosa* 34:37) *Tools* Short transverse sticks affixed to poles and used to dislodge saguaro fruits from the shafts. (as *Covillea glutinosa* 34:20) Wood used to make handles for basketry awls. (as *Covillea glutinosa* 34:59) Smooth sticks used as the shuttles in weaving cotton. (as *Covillea glutinosa* 34:60) Wood used as the smaller of the two pieces of twisters used to make rope. (as *Covillea glutinosa* 34:62) Stakes used to stake out sheep hides so they can be made more pliable. (as *Covillea glutinosa* 34:69) *Weapon* Twigs cut green, peeled, straightened, dried, split, and used as the foreshafts of war arrows. (as *Covillea glutinosa* 34:71)

## *Lasthenia*, Asteraceae

*Lasthenia californica* DC. ex Lindl., California Goldfields

- **Food**—**Cahuilla** *Porridge* Parched seeds ground into flour and used to make mush. (as *Baeria chrysostoma* 15:46)

*Lasthenia glabrata* Lindl., Yellowray Goldfields

- **Food**—**Cahuilla** *Dried Food* Parched seeds eaten dry. *Porridge* Parched seeds ground into flour and used to make mush. (15:84)

## *Lathyrus*, Fabaceae

*Lathyrus brachycalyx* Rydb. **ssp. brachycalyx**, Bonneville Peavine

- **Food**—**Omaha** *Unspecified* Roasted pods eaten by children in sport, but not considered of any importance. **Ponca** *Unspecified* Roasted

seedpods eaten by children in sport, but not considered of any importance. (as *L. ornatus* 70:98)

*Lathyrus eucosmus* Butters & St. John, Bush Vetchling

- **Drug**—**Navajo, Kayenta** *Gynecological Aid* Plant used to remove placenta. (205:28) **Navajo, Ramah** *Disinfectant* Cold infusion taken and used as a lotion for "deer infection." *Veterinary Aid* Cold infusion used as lotion on horses for swellings or injuries. (191:32)

*Lathyrus graminifolius* (S. Wats.) White, Grassleaf Peavine

- **Food**—**Karok** *Vegetable* Tender plant eaten as greens in the spring. (148:385)

*Lathyrus japonicus* var. *maritimus* (L.) Kartesz & Gandhi, Sea Peavine

- **Drug**—**Eskimo, Inupiat** *Poison* Peas considered poisonous. (as *L. maritimus* 98:141) **Iroquois** *Antirheumatic (External)* Stalks cooked as greens and used for rheumatism. (as *L. maritimus* 124:93)
- **Food**—**Eskimo, Alaska** *Beverage* Roasted seeds used to make coffee. (as *L. maritimus* 4:715) **Iroquois** *Vegetable* Stalks eaten as greens in spring. (as *L. maritimus* 124:93) **Makah** *Vegetable* Immature seeds eaten as peas. (67:281)

*Lathyrus jepsonii* ssp. *californicus* (S. Wats.) C. L. Hitchc., California Peavine

- **Drug**—**Mendocino Indian** *Orthopedic Aid* Poultice of boiled plants applied to swollen joints. (as *L. watsoni* 41:357)
- **Food**—**Mendocino Indian** *Fodder* Cut for hay and used as fodder for horses and cattle. **Yokia** *Vegetable* Cooked and eaten as greens when 3 inches high. (as *L. watsoni* 41:357)

*Lathyrus lanszwertii* var. *leucanthus* (Rydb.) Dorn, Aspen Peavine

- **Food**—**Apache, Chiricahua & Mescalero** *Dried Food* Ripe pods dried, stored, and soaked and boiled when needed. *Unspecified* Ripe pods cooked and eaten. (as *L. leucanthus* 33:49)

*Lathyrus nevadensis* ssp. *lanceolatus* var. *nuttallii* (S. Wats.) C. L. Hitchc., Nuttall's Peavine

- **Food**—**Thompson** *Forage* Used as a general forage for animals. (as *L. nuttallii* 164:516)

*Lathyrus ochroleucus* Hook., Cream Peavine

- **Drug**—**Ojibwa** *Gastrointestinal Aid* Plant used for stomach trouble. *Veterinary Aid* Foliage fed to a pony to make him lively for a race. (153:372, 373)
- **Food**—**Ojibwa** *Fodder* Leaves and roots used to put spirit into a pony just before they expected to race him. (153:419) *Vegetable* Peas used for food. (135:235) Roots used as a sort of Indian potato and stored in deep garden pits, like regular potatoes. (153:406)

*Lathyrus palustris* L., Slenderstem Peavine

- **Drug**—**Ojibwa** *Veterinary Aid* Plant fed to a sick pony to make him fat. (153:373)
- **Food**—**Chippewa** *Unspecified* Full grown peas shelled and cooked for food. (71:133) **Ojibwa** *Fodder* Foliage was specially fed to a pony to make it grow fat. (153:419) *Vegetable* Peas used for food. (135:235)
- **Other**—**Meskwaki** *Hunting & Fishing Item* Root used as a lure to trap beaver and other game. (152:273)

***Lathyrus polymorphus* Nutt. ssp. *polymorphus*****var. *polymorphus***, Manystem Peavine

- **Food**—**Acoma Unspecified** Whole pods used for food. **Cochiti Unspecified** Whole pods used for food. (as *L. decaphyllus* 32:32) **Keres, Western Vegetable** Peas used for food. (as *L. decaphyllus* 171:51) **Laguna Unspecified** Whole pods used for food. (as *L. decaphyllus* 32:32)
- **Other**—**Keres, Western Decorations** Flowers used for bouquets. (as *L. decaphyllus* 171:51)

***Lathyrus* sp.**, Wild Pea

- **Drug**—**Weyot Antidiarrheal** Plant used as a diarrhea medicine. (117:180)
- **Food**—**Carrier Forage** Plant eaten by cows and horses. (31:81)
- **Fiber**—**Aleut Other** Used for weaving. (7:29)

***Lathyrus venosus* Muhl. ex Willd.**, Veiny Peavine

- **Drug**—**Chippewa Anticonvulsive** Simple or compound decoction of root taken or applied to chest for convulsions. (53:336) **Emetic** Decoction of root taken as an emetic for internal blood accumulation. **Hemostat** Poultice of boiled root applied to bleeding wounds. (53:356) **Stimulant** Decoction of root taken as a stimulant. **Tonic** Decoction of root taken as a tonic. (53:364)
- **Other**—**Chippewa Protection** Roots carried as a charm to insure successful outcomes of difficulties. (53:376)

***Lathyrus vestitus* Nutt.**, Pacific Peavine

- **Drug**—**Costanoan Emetic** Decoction of roots used as an emetic for internal injuries. **Panacea** Decoction of roots used as a general remedy. (21:19)
- **Food**—**Miwok Unspecified** Raw seeds used for food. **Vegetable Greens** used for food. (12:159)

**Lauraceae**, see *Cassya*, *Lindera*, *Ocotea*, *Persea*, *Sassafras*, *Umbellularia****Layia***, Asteraceae***Layia glandulosa* (Hook.) Hook. & Arn.**, Whitedaisy Tidytip

- **Food**—**Cahuilla Porridge** Seeds ground into flour and used with other ground seeds in a mush. (15:84) **Luiseño Unspecified** Seeds used for food. (155:228)

***Layia platyglossa* (Fisch. & C. A. Mey.) Gray**, Coastal Tidytip

- **Food**—**Cahuilla Porridge** Seeds ground into flour and used with other ground seeds in a mush. (15:85) **Costanoan Staple** Seeds eaten in pinole. (21:254) **Mendocino Indian Staple** Seeds used to make a pinole. (as *Blepharipappus platyglossus* 41:393)

**Leathesiaceae**, see *Leathesia****Leathesia***, Leathesiaceae, alga***Leathesia difformis* (L.) Areschoug**, Bubble Seaweed

- **Drug**—**Hesquiatic Unspecified** Used for some kind of medicine. (185:24)

**Lecanoraceae**, see *Candelariella****Lechea***, Cistaceae***Lechea minor* L.**, Thymeleaf Pinweed

- **Drug**—**Seminole Analgesic** Decoction of leaves taken for headaches.

(169:282) **Antidiarrheal** Plant used as an astringent for diarrhea. (169:168) Decoction of plant taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (169:234) Plant used as a diarrhea medicine. (169:275) **Antiemetic** and **Dietary Aid** Decoction of plant taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (169:234) **Febrifuge** Decoction of leaves taken for fevers. **Gastrointestinal Aid** Decoction of leaves taken for stomachaches. (169:282) **Pediatric Aid** Decoction of plant taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (169:234)

***Lechea* sp.**, Pinweed

- **Drug**—**Catawba Dermatological Aid** Infusion of beaten roots applied to sores. (177:43)

***Ledum***, Ericaceae***Ledum × columbianum* Piper**, Coast Labradortea

- **Food**—**Pomo, Kashaya Beverage** Leaves used to make a beverage tea. (as *L. glandulosum* ssp. *columbianum* 72:113)

***Ledum glandulosum* Nutt.**, Western Labradortea

- **Food**—**Tolowa Beverage** Leaves simmered to make tea. **Yurok Beverage** Leaves simmered to make a most prized tea. (6:34)

***Ledum groenlandicum* Oeder**, Bog Labradortea

- **Drug**—**Abnaki Cold Remedy** Used for head colds. (144:154) **Nose Medicine** Powdered leaves mixed with bark from another plant and used as snuff for nasal inflammation. (144:170) **Algonquin, Quebec Analgesic** Infusion of plant used for headaches. **Ceremonial Medicine** Infusion of plant taken for colds. **Tonic** Infusion of plant used as a tonic. (18:214) **Unspecified** Leaves used to make tea and medicinal tea. (18:116) **Anticosti Unspecified** Infusion of plant used medicinally. (143:68) **Bella Coola Analgesic** and **Gastrointestinal Aid** Decoction of leaves taken for stomach pain. (150:63) **Chippewa Burn Dressing** Powder containing powdered root applied to burns. **Dermatological Aid** Powder containing powdered root applied to ulcers. (53:354) **Cree Burn Dressing** Poultice of powdered leaf ointment applied to burns and scalds. (16:492) **Diuretic** Infusion of leaves used as a diuretic. (16:493) **Emetic** Used as an emetic. (16:484) **Cree, Hudson Bay Analgesic** Infusion of flowering tops used for insect sting pain. **Anti-rheumatic (External)** Infusion of flowering tops used for rheumatism. **Dermatological Aid** Boiled, powdered wood applied to chafed skin. Poultice of fresh, chewed leaves applied to wounds. **Orthopedic Aid** Infusion of flowering tops used for tender feet. (as *L. latifolium* 92:303) **Cree, Woodlands Breast Treatment** Poultice of leaves applied to cracked nipples. **Burn Dressing** Poultice of leaves and grease applied to burns. Decoction of plant used to wash burns before application of burn ointment. **Dermatological Aid** Decoction of plant used as a wash for itchy skin, hand sores, and chapped skin. Poultice of leaves and fish oil applied to the umbilical scab. Powdered leaves applied directly to a baby's skin for rashes in the skin folds. **Diuretic** Plant used as a diuretic. **Pediatric Aid** Poultice of leaves and fish oil applied to the umbilical scab. Powdered leaves applied directly to a baby's skin for rashes in the skin folds. **Pulmonary Aid** Decoction of plant used for pneumonia. Decoction of plant and calamus used for whooping cough. (109:42) **Gitksan Diuretic** Decoction of leaves used

as a diuretic and beverage. (150:63) **Haisla & Hanaksiala** *Cold Remedy* Infusion of leaves taken for colds. *Dietary Aid* Decoction of leaves and small branches taken to increase the appetite. *Tuberculosis Remedy* Infusion of leaves taken for tuberculosis. (43:241) **Kitasoo** *Cold Remedy* and *Respiratory Aid* Decoction of dried leaves used for colds and other respiratory ailments. (43:333) **Kwakiutl** *Narcotic* Leaves considered narcotic. (183:283) **Makah** *Blood Medicine* Infusion of leaves taken as a blood purifier. (79:43) *Gynecological Aid* Infusion of leaves and sugar given to mothers after childbirth to gain their strength. *Kidney Aid* Infusion of leaves used as a kidney medicine. (67:301) *Unspecified* Infusion of fresh or dried plant used as a medicine. (186:106) **Malecite** *Kidney Aid* Infusion of plant used for kidney trouble. (116:257) **Micmac** *Cold Remedy* Leaves used for the common cold. (as *L. latifolium* 40:58) *Diuretic* Decoction of leaves taken as a diuretic. (as *L. latifolium* 156:317) *Kidney Aid* Leaves used for kidney trouble and to make a beverage. *Misc. Disease Remedy* Leaves used for scurvy and as a beverage. *Respiratory Aid* Leaves used for asthma. (as *L. latifolium* 40:58) *Tonic* Infusion of leaves taken for a "beneficial effect on the system." (156:316) **Montagnais** *Blood Medicine* Infusion of leaves and twigs taken to purify the blood. (156:313) *Febrifuge* Poultice of plant applied or infusion taken for fever. (24:14) Infusion of leaves and twigs "taken in case of chill." (156:313) *Liver Aid* and *Pediatric Aid* Poultice of plant applied or infusion given to children for jaundice. (24:14) **Nitinaht** *Dietary Aid* Infusion of leaves used as an appetite stimulant. (67:301) Infusion of fresh or dried plant taken as a tonic for increased appetite. *Strengtheners* Infusion of fresh or dried plant taken as a tonic when "run down." **Nootka** *Unspecified* Infusion of fresh or dried plant used as a medicine. (186:106) **Okanagan-Colville** *Kidney Aid* Infusion of leaves and twigs taken for the kidneys. (188:102) **Oweekeno** *Cold Remedy* Infusion of leaves taken as a cold medicine. *Throat Aid* Infusion of leaves taken for sore throat. (43:96) **Potawatomi** *Unspecified* Compound containing leaves used to correct unspecified ailment. (154:57) **Quinault** *Antirheumatic (Internal)* Infusion of leaves taken for rheumatism. (79:43) **Salish** *Tonic* Decoction of plants taken as a tonic. (178:294) **Shuswap** *Dermatological Aid* Infusion or decoction of leaves taken for poison ivy. (123:56) *Eye Medicine* Decoction of plants used for blindness, sore eyes, and poison ivy. (123:62)

- **Food—Alaska Native** *Beverage* Strongly, aromatic leaves used to make tea. (as *L. palustre* ssp. *groenlandicum* 85:35) **Algonquin, Quebec** *Beverage* Leaves used to make tea and medicinal tea. (18:116) **Anticosti** *Beverage* Used to make tea. (16:484) **Cree, Woodlands** *Beverage* Plant, with flower tops removed, used to make a tea. (109:42) **Eskimo, Arctic** *Beverage* Leaves dried and used as a substitute for tea. (128:31) **Haisla & Hanaksiala** *Beverage* Leaves used to make tea. (43:241) **Hesquiut** *Beverage* Toasted, dried leaves brewed or steeped to make tea. (185:65) **Kitasoo** *Beverage* Leaves used to make a beverage. (43:333) **Kwakiutl, Southern** *Beverage* Leaves used to make a hot, refreshing drink. (183:293) Leaves used to make tea. (183:283) **Makah** *Beverage* Leaves used to make a beverage tea. (67:301) Leaves steeped and drunk as a beverage tea. (79:43) **Malecite** *Beverage* Used to make tea. (160:6) **Micmac** *Beverage* Used to make a beverage. (159:258) **Nitinaht** *Beverage* Fresh

or dried plant used to make a hot tea beverage. (186:106) **Ojibwa** *Beverage* Leaves used to make tea. (96:17) Tender leaves used for beverage tea, a well-known tea, and sometimes eaten with the tea. (153:401) **Okanagan-Colville** *Beverage* Leaves and twigs used to make tea. (188:102) **Oweekeno** *Beverage* Leaves used to make tea. (43:96) **Potawatomi** *Beverage* Leaves used to make a beverage and also used as a brown dye material. (154:120) Leaves used to make a beverage. (154:99) **Saanich** *Beverage* Fresh or dried leaves made into tea. **Salish, Coast** *Beverage* Fresh or dried leaves made into tea. (182:83) **Shuswap** *Beverage* Dried leaves mixed with tea or mint. (123:62) **Thompson** *Beverage* Leaves made into a tea-like beverage. Leaves and twigs made into a tea-like beverage and used in place of coffee. (187:214)

- **Dye—Iroquois** *Brown* Plant used as a dark brown dye for wool. (142:96) **Potawatomi** *Brown* Leaves used to make a beverage and also used as a brown dye material. (154:120)

### *Ledum palustre* L., Marsh Labradortea

- **Drug—Eskimo, Inupiat** *Poison* Plant contains ledol, a poisonous substance known to cause cramps, diarrhea, and paralysis. *Unspecified* Infusion of young, dried, stored leaves used as a medicinal tea. (98:60) **Tanana, Upper** *Antirheumatic (External)* Decoction of leaves and stems used for arthritis. *Antirheumatic (Internal)* Fresh or dried leaves chewed for body aches. *Blood Medicine* Decoction of leaves and stems used for weak blood. *Cold Remedy* Decoction of stems and leaves taken for colds. *Cough Medicine* Decoction of stems and leaves taken for coughs. *Dermatological Aid* Decoction of stems and leaves used as a wash for rashes and dandruff. Dried leaves ground into a powder or leaf ash used on sores. *Disinfectant* Decoction of stems and leaves used as a wash for infections. Fresh or dried leaves chewed for infections. *Gastrointestinal Aid* Decoction of leaves and stems used for heartburn. *Misc. Disease Remedy* Decoction of leaves and stems used for flu. *Panacea* Decoction of stems and leaves, blackberry leaves, and spruce inner bark taken for sickness in general. *Respiratory Aid* Fresh or dried leaves chewed for congestion. *Throat Aid* Decoction of stems and leaves taken for sore throats. *Vertigo Medicine* Decoction of leaves and stems used for dizziness. (102:16) **Tlingit** *Veneral Aid* Compound infusion of sprouts and bark taken for syphilis. (107:283)
- **Food—Eskimo, Inupiat** *Beverage* Young, dried, stored leaves used to make tea. (98:60) **Tanana, Upper** *Beverage* Leaves and stems used to make tea. *Spice* Leaves used as a spice for strong tasting meat. (102:16)
- **Other—Tanana, Upper** *Tools* Used as a switch in the sweat house. (102:16)

### *Ledum palustre* ssp. *decumbens* (Ait.) Hultén, Marsh Labradortea

- **Drug—Eskimo, Alaska** *Antihemorrhagic* Infusion of plant used for spitting up blood. *Gastrointestinal Aid* Infusion of plant used for upset stomach. (1:37) *Unspecified* Infusion of leaves used for medicinal purposes. (as *L. decumbens* 4:715) **Eskimo, Inupiat** *Poison* Plant contains ledol, a poisonous substance known to cause cramps, diarrhea, and paralysis. *Unspecified* Infusion of young, dried, stored leaves used as a medicinal tea. (as *L. decumbens* 98:60) **Eskimo, Kuskokwagmiut** *Pediatric Aid* Burning dried stalk shaken around head and shoulders of sick child. (as *L. decumbens* 122:32) **Eskimo, Nunivak**

*Unspecified* Infusion of stems and leaves used for the medicinal value. (as *L. decumbens* 149:325) **Eskimo, Western Analgesic** and **Gastrointestinal Aid** Compound decoction of stem and leaf used for stomachache and intestinal discomfort. (as *L. decumbens* 108:5)

- **Food**—**Eskimo, Alaska Beverage** Leaves used for tea. (as *L. decumbens* 4:715) **Spice** Sprigs added to tea to give it flavor. (1:37) **Eskimo, Arctic Beverage** Leaves dried and used as a substitute for tea. (as *L. decumbens* 128:31) **Eskimo, Inupiat Beverage** Young, dried, stored leaves used to make tea. (as *L. decumbens* 98:60)
- **Other**—**Eskimo, Inuktitut Fuel** Wood used for firewood. (as *L. decumbens* 202:190)

## **Leiophyllum**, Ericaceae

**Leiophyllum buxifolium** (Berg.) Ell., Sand Myrtle

- **Drug**—**Nanticoke Tonic** Berries used to make spring tonic. (175:58, 84)

**Lemnaceae**, see *Lemna*

## **Lemna**, Lemnaceae

**Lemna trisulca** L., Star Duckweed

- **Drug**—**Iroquois Antirheumatic (External)** Poultice of wetted plant and another plant applied to swellings. (141:71)

**Lennoaceae**, see *Pholisma*

## **Lens**, Fabaceae

**Lens culinaris** Medik., Lentil

- **Food**—**Papago Dried Food** Threshed, dried on the ground or roofs, stored, and used for food. (as *L. esculenta* 34:33) *Unspecified* Species used for food. **Pima Unspecified** Species used for food. (as *L. esculenta* 36:120)

**Lentibulariaceae**, see *Pinguicula*

## **Leonurus**, Lamiaceae

**Leonurus cardiaca** L., Common Motherwort

- **Drug**—**Cherokee Gastrointestinal Aid** Taken for “disease of the stomach.” **Sedative** Given for “nervous and hysterical affections” and taken as a stimulant. **Stimulant** Taken as a stimulant for fainting. (80:45) **Delaware Gynecological Aid** Infusion of leaves used for female diseases. (176:38) **Delaware, Oklahoma Gynecological Aid** Infusion of leaves taken for “female diseases.” (175:32, 76) **Iroquois Gastrointestinal Aid** Infusion of dried plant taken to facilitate digestion. **Sedative** Infusion of dried plant taken as a tonic for nerves. **Tonic** Infusion of dried plant taken as a tonic. (142:98) **Micmac Gynecological Aid** Part of plant used for obstetric cases. (40:58) **Mohegan Gynecological Aid** Infusion taken for “female ills.” (30:121) Infusion of plant taken for peculiar ills of women. (174:265) Infusion of leaf, highly regarded herb, taken for diseases peculiar to women. (176:72, 130) **Tonic** Complex compound infusion including motherwort taken as spring tonic. (174:266) **Shinnecock Gynecological Aid** Infusion taken for “female ills.” (30:121)

## **Lepechinia**, Lamiaceae

**Lepechinia calycina** (Benth.) Epling ex Munz, Woodbalm

- **Drug**—**Miwok Analgesic** Decoction of leaves taken for headaches.

*Febrifuge* Decoction of leaves taken for fever. *Misc. Disease Remedy* Decoction of leaves taken for ague. (as *Sphacele calycina* 12:173)

## **Lepidium**, Brassicaceae

**Lepidium campestre** (L.) Ait. f., Field Pepperweed

- **Food**—**Cherokee Unspecified** Young plants boiled, fried, and eaten. (204:252)

**Lepidium densiflorum** Schrad., Common Pepperweed

- **Drug**—**Isleta Analgesic** Leaves chewed for headaches. (as *L. apetalum* 100:34) **Lakota Kidney Aid** Infusion of plant used for the kidneys. (139:41) **Mahuna Dietary Aid** Infusion of plant taken as a reducing aid. (as *L. epetalum* 140:66) **Navajo, Kayenta Gastrointestinal Aid** Plant used for effects of swallowing an ant. **Pediatric Aid** and **Sedative** Plant rubbed on baby's face to put infant to sleep. (205:24)
- **Other**—**Keres, Western Unspecified** Plant known and named but no use was specified. Crushed plant applied to sunburns that dancers got during the harvest, mask, and other dances. (as *L. epitalum* 171:51)

**Lepidium fremontii** S. Wats., Desert Pepperweed

- **Food**—**Kawaiisu Beverage** Seeds pounded, mixed with water, and used as a beverage. (206:36)

**Lepidium lasiocarpum** Nutt., Shaggyfruit Pepperweed

- **Drug**—**Navajo Disinfectant** Plant used as a “disinfectant.” (90:153)
- **Food**—**Havasupai Bread & Cake** Seeds used to make bread. (197:66) **Preserves** Seeds parched, ground, kneaded into seed butter, and eaten with fruit drinks or spread on bread. **Staple** Seeds ground and eaten as a ground or parched meal. (197:67) *Unspecified* Seeds used in a variety of ways. (197:220)

**Lepidium montanum** Nutt., Mountain Pepperweed

- **Drug**—**Navajo, Kayenta Gastrointestinal Aid** Plant used for biliousness and gastrointestinal disorders. **Other** Plant used for palpitations and dizziness. (205:24)
- **Food**—**Havasupai Unspecified** Seeds used in a variety of ways. (197:220) **Navajo, Ramah Fodder** Used for sheep and horse feed. (191:29)

**Lepidium nitidum** Nutt., Shining Pepperweed

- **Drug**—**Cahuilla Dermatological Aid** Decoction of leaves used to wash hair, kept the scalp clean and prevented baldness. (15:85) **Diegueño Gastrointestinal Aid** Tablespoon of seeds in water used, followed the next day by a physic, for indigestion. (84:23)
- **Food**—**Diegueño Vegetable** Plant tops and flowers boiled and eaten as greens. (84:23) **Luiseno Unspecified** Seeds used for food. **Vegetable** Leaves used for greens. (155:232)

**Lepidium sp.**, Pepper Grass

- **Food**—**Cherokee Vegetable** Tender plant and roots eaten as potherbs. (126:37)

**Lepidium thurberi** Woot., Thurber's Pepperweed

- **Food**—**Papago Dried Food** Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (34:24)

**Lepidium virginicum** L., Virginia Pepperweed

- **Drug**—**Cherokee Dermatological Aid** Poultice of bruised root applied to “draw blister quickly.” **Pulmonary Aid** Used as a poultice for

croup. *Veterinary Aid* Infusion given to sick chickens and mixed with feed to make chickens lay. (80:48) **Houma** *Tuberculosis Remedy* Compound decoction of plant with whisky taken for tuberculosis. (158:64) **Menominee** *Dermatological Aid* Infusion of plant used as a wash or bruised plant used for poison ivy. (151:33)

- **Food**—**Cherokee** *Unspecified* Species used for food. (80:48) Young plants boiled, fried, and eaten. (204:252)

***Lepidium virginicum* var. *menziesii*** (DC.) C. L. Hitchc., Menzies's Pepperweed

- **Food**—**Hoh** *Unspecified* Eaten raw. *Vegetable* Leaves eaten as greens. **Quileute** *Unspecified* Eaten raw. *Vegetable* Leaves eaten as greens. (as *L. menziesii* 137:62)

### ***Leptarrhena*, Saxifragaceae**

***Leptarrhena pyrolifolia*** (D. Don) R. Br. ex Ser., Fireleaf *Leptarrhena*

- **Drug**—**Aleut** *Misc. Disease Remedy* Infusion of leaves taken for "sicknesses such as influenza." (8:427) **Thompson** *Dermatological Aid* Poultice of chewed, fresh leaves applied to wounds and sores. (as *Leptarrhena amplexifolia* 164:465)

### ***Leptodactylon*, Polemoniaceae**

***Leptodactylon pungens*** (Torr.) Torr. ex Nutt., Granite Pricklygilia

- **Drug**—**Navajo, Kayenta** *Dermatological Aid* Plant used for scorpion stings. *Kidney Aid* Plant used for kidney disease. (as *Gilia pungens* 205:38) **Navajo, Ramah** *Disinfectant* Decoction of plant used for "snake infection." *Gynecological Aid* Decoction of plant taken during pregnancy keeps baby small, for easy labor. (as *Gilia pungens* 191:40) **Shoshoni** *Eye Medicine* Decoction or infusion of plant used as a wash for sore or swollen eyes. (as *Gilia pungens* 180:81)

### ***Lespedeza*, Fabaceae**

***Lespedeza capitata*** Michx., Roundhead *Lespedeza*

- **Drug**—**Meskwaki** *Antidote* Root used as antidote for poison. (152:229) **Omaha** *Analgesic* Moxa of stems used in cases of neuralgia. *Antirheumatic (External)* Moxa of stems used in cases of rheumatism. **Ponca** *Analgesic* Moxa of stems used in cases of neuralgia. *Antirheumatic (External)* Moxa of stems used in cases of rheumatism. (70:97, 98)
- **Food**—**Comanche** *Beverage* Leaves boiled for tea. (29:522)

***Lespedeza* sp.**

- **Drug**—**Iroquois** *Other* Compound decoction of plant taken for stricture caused by bad blood. (87:364)

### ***Lesquerella*, Brassicaceae**

***Lesquerella douglasii*** S. Wats., Douglas's Bladderpod

- **Drug**—**Okanagan-Colville** *Antidiarrheal* Roots chewed, juice swallowed, and pulp spat out for diarrhea. *Gastrointestinal Aid* Roots chewed, juice swallowed, and pulp spat out for "heartburn." (188:92) **Shuswap** *Dermatological Aid* Poultice of mashed plants applied to sores. *Diaphoretic* Plant used to produce sweating. (123:61)

***Lesquerella fendleri*** (Gray) S. Wats., Fendler's Bladderpod

- **Drug**—**Keres, Western** *Antirheumatic (External)* Bruised plant mixed with salt and used as a rub for swellings. *Emetic* Infusion of plant

used as an emetic. (171:52) **Navajo** *Dermatological Aid* Infusion of plants taken to counteract the effects of spider bites. (55:49)

- **Other**—**Navajo, Ramah** *Ceremonial Items* Tied to ceremonial rattle string and wetted with infusion of the plant. (191:29)

***Lesquerella intermedia*** (S. Wats.) Heller, Mid Bladderpod

- **Drug**—**Hopi** *Ceremonial Medicine* and *Emetic* Infusion of root taken as a ceremonial emetic. (200:77) *Gynecological Aid* Root rubbed on abdomen when uterus failed to contract after childbirth. (200:36, 77) *Snakebite Remedy* Root eaten and poultice of chewed root used for snakebite. (200:32, 77) **Navajo, Kayenta** *Ceremonial Medicine* Plant used as a Nightway medicine. *Eye Medicine* Poultice of roots applied to sore eyes. (205:24)

***Lesquerella rectipes*** Woot. & Standl., Straight Bladderpod

- **Drug**—**Navajo, Ramah** *Ceremonial Medicine* Cold infusion used as a ceremonial eyewash and pulverized plant used as a ceremonial snuff. *Eye Medicine* Cold infusion of plant used as a ceremonial eyewash. *Respiratory Aid* Finely ground leaves used ceremonially as snuff to clear nasal passages. *Toothache Remedy* Poultice of crushed or chewed leaves applied for toothache. (191:29)

### ***Lessingia*, Asteraceae**

***Lessingia glandulifera*** Gray var. ***glandulifera***, Valley Vinegarweed

- **Drug**—**Kawaiisu** *Analgesic* Moxa of dried stem bark used for pain. (as *L. germanorum* var. *vallicola* 206:36)

**Lessoniaceae**, see *Lessoniopsis*, *Macrocystis*, *Nereocystis*, *Postelsia*

### ***Lessoniopsis*, Lessoniaceae, alga**

***Lessoniopsis littoralis*** (Farlow & Setchell) Reinke, Short Kelp

- **Drug**—**Nitinaht** *Strengtheners* Burned stipes made into a salve and used to strengthen young boys. (186:51)
- **Food**—**Hesquiat** *Dried Food* Stipes and fronds with attached herring eggs dried for later use.<sup>6</sup> (185:24)
- **Fiber**—**Hesquiat** *Sporting Equipment* Dried stipes use as "pucks" and hitting sticks.<sup>5</sup> (185:24)
- **Other**—**Nitinaht** *Toys & Games* Flattish, hardened stipes used for "beach hockey." (186:51)

### ***Letharia*, Usneaceae, lichen**

***Letharia vulpina***

- **Dye**—**Cheyenne** *Yellow* Boiled in water and used as a yellow dye for porcupine quills. (as *L. vulpina* 83:3) **Karok** *Unspecified* Used as a dye for porcupine quills. **Oweekeno** *Yellow* Thalli used to make a yellow dye. (as *L. vulpina*, wolf lichen 43:49) **Yurok** *Unspecified* Used as a dye for porcupine quills. (as *L. vulpina* 6:34)

### ***Leucanthemum*, Asteraceae**

***Leucanthemum vulgare*** Lam., Ox Eye Daisy

- **Drug**—**Iroquois** *Eye Medicine* Infusion of flowers and roots with other plants used as an eyewash. (as *Chrysanthemum leucanthemum* var. *pinnatifidum* 141:64) **Menominee** *Febrifuge* Plant used as a fever medicine. (as *Chrysanthemum leucanthemum* 151:29) **Mohegan** *Tonic* Dandelion and white daisy used to make wines and taken as tonics. (as *Chrysanthemum leucanthemum* 30:121) Compound de-

coction or infusion of plants taken as a spring tonic. (as *Chrysanthemum leucanthemum* 174:266) Flowers used to make a tonic. (as *Chrysanthemum leucanthemum* 176:72, 128) **Quileute** *Dermatological Aid* Decoction of dried flowers and stems used as a wash for chapped hands. (as *Chrysanthemum leucanthemum* 79:49) **Shinnecock Tonic** Dandelion and white daisy used to make wines and taken as tonics. (as *Chrysanthemum leucanthemum* 30:121)

**Leucobryaceae**, see *Octoblephorum*

## **Leucocrinum**, Liliaceae

**Leucocrinum montanum** Nutt. ex Gray, Common Starlily

- **Drug**—**Paiute** *Dermatological Aid* Poultice of pulverized roots applied to sores or swellings. **Shoshoni** *Dermatological Aid* Poultice of pulverized roots applied to sores or swellings. (180:100)
- **Food**—**Crow** *Unspecified* Roots used for food. (19:14)

**Leucodontaceae**, see *Antitrichia*

## **Leucothoe**, Ericaceae

**Leucothoe axillaris** (Lam.) D. Don, Coastal Doghobble

- **Drug**—**Cherokee** *Analgesic* Infusion used for “shifting pains.” *Antirheumatic (External)* Infusion rubbed on for rheumatism. *Antirheumatic (Internal)* Compound decoction of leaf used for rheumatism. *Dermatological Aid* Infusion of leaf and stem used to bathe itch. (80:32) *Other* Decoction of leaves rubbed into scratches made on legs as preliminary treatment. (as *L. catesbaei* 177:49) *Stimulant* Infusion rubbed on for “languor.” *Veterinary Aid* Root ooze applied to mangy dog. (80:32)

## **Lewisia**, Portulacaceae

**Lewisia columbiana** (T. J. Howell ex Gray) B. L. Robins., Columbian Bitterroot

- **Food**—**Okanagan** *Winter Use Food* Steamed or boiled and used as a winter food. (125:36) **Thompson** *Unspecified* Fleshy roots eaten. (164:480) *Winter Use Food* Steamed or boiled and used as a winter food. (125:36) **Thompson, Upper (Nicola Band)** *Unspecified* Fleshy roots eaten. (164:480)
- **Other**—**Okanagan** *Cash Crop* Traded with other tribes for dried salmon and other items. **Thompson** *Cash Crop* Traded with other tribes for dried salmon and other items. (125:36)

**Lewisia pygmaea** (Gray) B. L. Robins., Pigmy Bitterroot

- **Drug**—**Thompson** *Psychological Aid* Some believed that eating the roots caused insanity. (164:479)
- **Food**—**Blackfoot** *Dried Food* Roots dried for future use. (97:34) **Thompson** *Unspecified* Roots used for food. (164:479)
- **Other**—**Thompson** *Good Luck Charm* Plant used as a charm for good luck in gambling. (164:507)

**Lewisia rediviva** Pursh, Oregon Bitterroot

- **Drug**—**Blackfoot** *Throat Aid* Pounded, dry root chewed for sore throat. (118:38) **Flathead** *Breast Treatment* Roots eaten for increased milk flow after childbirth. *Gynecological Aid* Infusion of roots taken for increased milk flow after childbirth. *Heart Medicine* Infusion of roots taken for heart pain. *Pulmonary Aid* Infusion of roots taken for pleurisy pain. **Nez Perce** *Blood Medicine* Plant used for impure blood.

*Gynecological Aid* Roots eaten for increased milk flow after childbirth. Infusion of roots taken for increased milk flow after childbirth. (82:46) **Okanagan-Colville** *Dermatological Aid* Poultice of raw roots applied to sores. Raw roots eaten for poison ivy rashes. *Misc. Disease Remedy* Dried or fresh roots eaten for diabetes. *Witchcraft Medicine* “Hearts” used in some type of witchcraft. (188:114)

- **Food**—**Blackfoot** *Unspecified* Plant boiled and eaten. (114:278) **Coeur d’Alene** *Vegetable* Roots used as a principal vegetable food. (178:88) **Kutenai** *Cooking Agent* Roots steamed and used to thicken gravy. *Dessert* Roots steamed, added to camas bulbs, and eaten as a “sweet treat.” *Dried Food* Roots dried, stored, and used for food. *Unspecified* Roots used for food as the most important root crop. (82:46) **Montana Indian** *Unspecified* Small pieces of bitterroot steeped, boiled in water, and eaten. (19:14) Roots boiled or steamed and eaten plain, mixed with berries, or added to meat or bone marrow. (82:46) **Okanagan-Colville** *Dried Food* Roots peeled and dried for future use. *Unspecified* Fresh or dried roots steamed or boiled and eaten. (188:114) **Okanagan** *Staple* Roots used as a principal food. (178:238) *Unspecified* Roots used as an important food. (178:237) *Winter Use Food* Steamed or boiled and used as a winter food. (125:36) **Oregon Indian, Warm Springs** *Unspecified* Roots used for food. **Paiute** *Dried Food* Roots dried and used for food. *Unspecified* Roots boiled “like macaroni.” (104:102) *Winter Use Food* Roots peeled and dried for winter use and boiled and eaten with salmon. (111:70) **Paiute, Northern** *Unspecified* Roots peeled, boiled, or roasted and eaten without grinding. *Vegetable* Leaves boiled like spinach and eaten. (59:43) **Sanpoil & Nespelem** *Porridge* Roots mixed with serviceberries, grease or fat added, and boiled into a congealed mass. (131:100) **Shuswap** *Unspecified* Roots cooked with serviceberries. (123:65) **Spokane** *Unspecified* Roots used for food. (178:343) **Thompson Bread & Cake** Roots used as an ingredient in fruit cake. *Dried Food* Peeled roots dried loose or large roots stored on strings for future use. The roots were dried on strings in order to determine the market value or trade worth. The dried roots were eaten with saskatoon berries and salmon eggs. *Pie & Pudding* Roots cooked with black tree lichen, dough, and fresh salmon and made into a pudding. Sometimes the roots were cooked with black tree lichen, fermented salmon eggs, yellow avalanche lily corms, saskatoon berries, and deer fat to make a similar kind of pudding. *Special Food* Dried roots cooked in soups such as fish head soup, but only served on special occasions. Because the roots were so valuable, they were only served on special occasions. (187:243) *Unspecified* Used as an important food. (164:478) Fleshy taproot eaten. (164:479) Roots used as an important food. (178:237) Fresh roots pit cooked or boiled in watertight baskets using red-hot stones. (187:243) *Winter Use Food* Steamed or boiled and used as a winter food. (125:36)
- **Other**—**Okanagan-Colville** *Cash Crop* Roots formerly an important article of trade. (188:114) **Okanagan** *Cash Crop* Traded with other tribes for dried salmon and other items. (125:36) Roots traded to the Lower Thompson for dried salmon. (164:479) **Thompson** *Cash Crop* Traded with other tribes for dried salmon and other items. (125:36) Strung, dried roots used as a trade item. *Plant Indicator* Presence of plant indicated the growth of another plant type. (187:243) **Thompson, Upper (Lytton Band)** *Cash Crop* Fleshy taproot traded to the Lower Thompson band. (164:479)

**Leymus**, Poaceae**Leymus cinereus** (Scribn. & Merr.) Á. Löve, Basin Wildrye

- **Drug**—Okanagan-Colville *Antihemorrhagic* Decoction of roots taken for internal hemorrhaging. *Dermatological Aid* Decoction of roots used as a wash to stimulate hair growth. *Venereal Aid* Infusion of mashed roots taken for gonorrhea. (as *Elymus cinereus* 188:55) **Thompson** *Veterinary Aid* Hollow straw used to clear the blocked nipple of a cow. The udder was splashed with warm water, massaged, and the straw poked into it to clear the blockage. (as *Elymus cinereus* 187:140)
- **Food**—Blackfoot *Forage* Used for grazing during the winter. (as *Elymus cinereus* 97:20) **Okanagan-Colville** *Fodder* Leaves used as bedding and horse feed. (as *Elymus cinereus* 188:55)
- **Fiber**—Blackfoot *Mats, Rugs & Bedding* Grass used for beds in lodges made from sticks when on war parties. (as *Elymus cinereus* 97:20) **Okanagan-Colville** *Mats, Rugs & Bedding* Leaves used as bedding and horse feed. Leaves used to cover the floor of sweat house. (as *Elymus cinereus* 188:55) **Thompson** *Basketry* Culms used for basket imbrication as a substitute for another plant or other swamp grasses. (as *Elymus cinereus* 187:140)
- **Dye**—Cheyenne *Black* Plants tied in bunches, burned, ash mixed in blood, and used as a permanent black dye. (as *Elymus cinereus* 83:8) *Unspecified* Used to make a dye. (as *Elymus cinereus* 83:46)
- **Other**—Cheyenne *Ceremonial Items* Plants used to make bedding for various ceremonies. (as *Elymus cinereus* 83:8) **Okanagan-Colville** *Containers* Leaves used over and under the food in the cooking pits. *Hunting & Fishing Item* Stems straightened, notched, fixed with wooden tips into arrows, and used for hunting. *Toys & Games* Stems straightened, notched, fixed with wooden tips into arrows, and used in games. (as *Elymus cinereus* 188:55) **Thompson** *Ceremonial Items* Grass used to line old-style graves. *Cooking Tools* Stout culms broken into lengths and poked into edges of cut fish to hold it flat while drying. (as *Elymus cinereus* 187:140)

**Leymus condensatus** (J. Presl) Á. Löve, Giant Wildrye

- **Drug**—Paiute *Eye Medicine* Dried leaves used to scrape pimples from the under side of the eyelid. (as *Elymus condensatus* 111:51) Decoction or infusion of leaves used as a wash for sore eyes. Sharp edges of leaf blades used to scrape granulated eyelids. **Shoshoni** *Eye Medicine* Decoction or infusion of leaves used as a wash for sore eyes. Sharp edges of leaf blades used to scrape granulated eyelids. (as *Elymus condensatus* 180:67)
- **Food**—Klamath *Unspecified* Grains used for food. (as *Elymus condensatus* 45:91) **Montana Indian** *Unspecified* Seeds used for food. (as *Elymus condensatus* 19:11) **Paiute** *Unspecified* Species used for food. (as *Elymus condensatus* 167:244) **Paiute**, **Southern** *Unspecified* Species used for food. (as *Elymus condensatus* 15:69) **Shoshoni** *Starvation Food* Seeds stored for times of famine. (as *Elymus condensatus* 118:17)
- **Fiber**—Cahuilla *Building Material* Stalks used for roof thatching. (as *Elymus condensatus* 15:69) **Paiute** *Brushes & Brooms* Roots tied together and used as hair combs. (as *Elymus condensatus* 111:51)
- **Other**—Cahuilla *Ceremonial Items* Stems made into painted arrows and used in ceremonial dances. *Hunting & Fishing Item* Fire hardened stems used as the main shaft in arrow making. **Luiseño** *Hunt-*

*ing & Fishing Item* Fire hardened stems used as the main shaft in arrow making. (as *Elymus condensatus* 15:69) Plant used to make arrow main shafts. (as *Elymus condensatus* 155:205)

**Leymus mollis** (Trin.) Hara **ssp. mollis**, American Dunegrass

- **Drug**—Makah *Unspecified* Bundles of roots used to rub the body after bathing. (as *Elymus mollis* 79:21) **Nitinaht** *Strengtheners* Root-stocks twisted together and rubbed on bodies of young men while bathing for strength. (as *Elymus mollis* var. *mollis* 186:88) **Quileute** *Unspecified* Roots braided, tied into bundles, and used to rub the body after bathing. (as *Elymus mollis* 79:21)
- **Fiber**—Eskimo, Alaska *Basketry* Dried, brown leaves woven into mats, baskets, and tote sacks. *Cordage* Dried, brown leaves woven into ropes for hanging herring and other fish. *Mats, Rugs & Bedding* Dried, brown leaves woven into mats, baskets, and tote sacks. (as *Elymus arenarius* ssp. *mollis* 1:34) **Hesquiat** *Basketry* Tough, coarse leaves used to make handles for bags, but not the bags themselves. (as *Elymus mollis* 185:58) **Kwakiutl**, **Southern** *Basketry* Fibrous leaves used to make baskets. *Clothing* Fibrous leaves used to make hats. (as *Elymus mollis* 183:275) **Nitinaht** *Sewing Material* Tough, sharply pointed leaves used as “needle-and-thread” for sewing and tying material. (as *Elymus mollis* var. *mollis* 186:88)
- **Other**—Eskimo, Alaska *Cash Crop* Dried, brown leaves woven into mats and other marketable products and sold for cash. The sale of baskets, mats, tote sacks, and ropes provided a significant supplementary cash income. *Cooking Tools* Dried, brown leaves woven into mats, baskets, tote sacks, and ropes for hanging herring and other fish. (as *Elymus arenarius* ssp. *mollis* 1:34) **Eskimo**, **Inuktitut** *Hunting & Fishing Item* Plant used as an indicator of marmot burrows. (as *Elymus arenarius* ssp. *mollis* 202:185) **Haisla & Hanaksiala** *Containers* Blades used to line oolichan (candlefish) ripening pits. *Fasteners* Blades used to tie Pacific silverweed roots together before steaming. (as *Elymus mollis* var. *mollis* 43:205) **Kwakiutl**, **Southern** *Cooking Tools* Leaves used with skunk cabbage leaves to line steaming boxes for cooking lupine roots. (as *Elymus mollis* 183:285) **Nitinaht** *Fasteners* Tough, sharply pointed leaves used as “needle-and-thread” for sewing and tying material. (as *Elymus mollis* var. *mollis* 186:88) **Quinault** *Containers* Leaves placed under drying salal berries. (as *Elymus mollis* 79:21)

**Leymus triticoides** (Buckl.) Pilger, Beardless Wildrye

- **Food**—Kawaiisu *Forage* Plant eaten by cows. *Porridge* Seeds pounded in a bedrock mortar hole, cooked into a thick mush and eaten. (as *Elymus triticoides* 206:27) **Mendocino Indian** *Fodder* Foliage used as fodder in late summer. *Staple* Seeds used for pinole. (as *Elymus triticoides* 41:312)
- **Fiber**—Thompson *Basketry* Culms used as a substitute in making basketry. (as *Elymus triticoides* 164:499)

**Liatris**, Asteraceae**Liatris acidota** Engelm. & Gray, Sharp Gayfeather

- **Drug**—Koasati *Antirheumatic (Internal)* Decoction of roots taken for rheumatism. (177:62)

**Liatris laxa** Small, Rattlesnake Master

- **Drug**—Seminole *Analgesic* Decoction of roots used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. *Antidiarrheal*

Decoction of roots used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. (169:191) Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. *Antiemetic* Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (169:234) *Antirheumatic (External)* Decoction of plant used as a body rub and steam for joint swellings. (169:193) *Dietary Aid* Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (169:234) *Gastrointestinal Aid* Decoction of roots used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. (169:191) *Pediatric Aid* Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (169:234)

*Liatris punctata* Hook., Dotted Gayfeather

- **Drug—Blackfoot** *Dermatological Aid* Poultice of boiled roots applied to swellings. *Gastrointestinal Aid* Infusion of roots taken for stomachaches. (97:59) **Comanche** *Urinary Aid* Root chewed and juice swallowed for swollen testes. (29:522) **Meskwaki** *Dermatological Aid* Infusion of root applied locally for itch. *Urinary Aid* Infusion of root used for bloody urine and by women for bladder trouble. *Venerial Aid* Infusion of root used for gonorrhea. *Veterinary Aid* Infusion of root used for ponies to make them spirited for hunting in hot weather. (152:216)
- **Food—Blackfoot** *Unspecified* Roots used for food. (97:59) **Kiowa** *Unspecified* Springtime, sweet roots baked over a fire and eaten. (192:61) **Lakota** *Dietary Aid* Roots pulverized and eaten to improve the appetite. (139:38)

*Liatris punctata* Hook. **var. punctata**, Dotted Gayfeather

- **Drug—Blackfoot** *Analgesic* Infusion of root taken for stomachache. *Dermatological Aid* Boiled root applied to swellings. *Gastrointestinal Aid* Infusion of root taken for stomachache. (as *Lacinaria punctata* 114:274)
- **Food—Blackfoot** *Unspecified* Plant eaten raw. (as *Lacinaria punctata* 114:274) **Kiowa** *Unspecified* Springtime, sweet roots baked over a fire and eaten. (as *Lacinaria punctata* 192:61) **Tewa** *Unspecified* Roots eaten as food. (as *Lacinaria punctata* 138:57)

*Liatris scariosa* (L.) Willd., Devil's Bite

- **Drug—Meskwaki** *Kidney Aid* Used for kidney troubles. *Urinary Aid* Used for bladder troubles. (152:216)

*Liatris scariosa* (L.) Willd. **var. scariosa**, Devil's Bite

- **Drug—Chippewa** *Veterinary Aid* Decoction of root used as a horse stimulant before a race. (as *Lacinaria scariosa* 53:366) **Omaha** *Dermatological Aid* Poultice of powdered plants applied to external inflammation. *Dietary Aid* Roots used as an appetizer. *Gastrointestinal Aid* Plant taken for abdominal troubles. *Tonic* Roots used as a tonic. (as *Lacinaria scariosa* 68:335) *Veterinary Aid* Chewed corm blown into nostrils of horses to strengthen them and help them. **Pawnee** *Antidiarrheal* and *Pediatric Aid* Decoction of leaves and corms given to children for diarrhea. (as *Lacinaria scariosa* 70:133, 134)

*Liatris* sp., Deer's Potato

- **Drug—Creek** *Antirheumatic (External)* Simple or compound infusion of root rubbed on affected rheumatic part. *Antirheumatic (Internal)* Simple or compound infusion of root taken for affected rheumatic part. (as *Lacinaria* 172:660)

*Liatris spicata* (L.) Willd., Dense Gayfeather

- **Drug—Cherokee** *Analgesic* Used as an anodyne and decoction or tincture used for backache and limb pains. *Carminative* Used as a carminative. *Diaphoretic* Root used as a sudorific. *Diuretic* Root used as a diuretic. *Expectorant* Root used as an expectorant. *Gastrointestinal Aid* Decoction or tincture taken for colic. *Kidney Aid* Root used for dropsy. *Stimulant* Root used as a stimulant. (80:27) **Menominee** *Heart Medicine* Compound decoction of root used for a "weak heart." (as *Lacinaria spicata* 54:129)

*Libocedrus*, Cupressaceae, conifer

*Libocedrus* sp.

- **Fiber—Mewuk** *Building Material* Boughs placed on top of the acorn caches. (117:362)
- **Other—Mewuk** *Cooking Tools* Boughs used to line the leach. (117:362)

*Licania*, Chrysobalanaceae

*Licania michauxii* Prance, Gopher Apple

- **Drug—Seminole** *Analgesic* Plant used for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. Roots and leaves used for labor pains and hasten the birth. (as *Chrysobalanus oblongifolius* 169:165, 227, 323) *Antidiarrheal* Plant used for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (as *Chrysobalanus oblongifolius* 169:165, 227) *Antiemetic* Plant used for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (as *Chrysobalanus oblongifolius* 169:165, 227) *Gastrointestinal Aid* Plant used for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (as *Chrysobalanus oblongifolius* 169:165, 227) *Other* Complex infusion of leaves and roots taken for chronic conditions. (as *Chrysobalanus oblongifolia* 169:272) *Psychological Aid* Infusion of plant used to steam and bathe the body for insanity. (as *Chrysobalanus oblongifolia* 169:292) *Reproductive Aid* Roots and leaves used for labor pains and hasten the birth. (as *Chrysobalanus oblongifolius* 169:323) *Unspecified* Plant used for medicinal purposes. (as *Chrysobalanus oblongifolius* 169:162) *Urinary Aid* Plant used for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (as *Chrysobalanus oblongifolius* 169:165, 227)
- **Food—Seminole** *Forage* Berries eaten by gophers. (as *Chrysobalanus oblongifolius* 169:434)

*Ligusticum*, Apiaceae

*Ligusticum apiifolium* (Nutt. ex Torr. & Gray) Gray, Celeryleaf Licoriceroot

- **Drug—Karak** *Dietary Aid* Infusion of roots taken by person who lacks an appetite. (as *L. apiodorum* 148:387) **Pomo** *Antihemorrhagic* and *Pulmonary Aid* Decoction of roots taken for lung hemorrhages.

(as *L. apiodorum* 66:14) **Pomo, Kashaya Blood Medicine** Decoction of root taken for anemia. **Pulmonary Aid** Decoction of root taken for lung hemorrhage. **Tuberculosis Remedy** Decoction of root taken for the beginning of tuberculosis. (72:64)

***Ligusticum californicum*** Coult. & Rose, California Licoriceroot

- **Food**—Tolowa *Unspecified* Roots used for food. (6:34)

***Ligusticum canadense*** (L.) Britt., Canadian Licoriceroot

- **Drug**—Cherokee *Gastrointestinal Aid* Roots chewed or smoked for all stomach disorders. **Creek Gastrointestinal Aid** Roots chewed or smoked for all stomach disorders. (as *Ligusticum canadense* 169:276)
- **Food**—Cherokee *Dried Food* Fresh greens gathered into a bundle, dried, and hung until needed. (126:58) *Unspecified* Young growth boiled, fried with ramps (*Allium tricoccum?*) and eaten. (204:252) *Vegetable* Leaves cooked and eaten as greens. (80:61) Leaves and stalks boiled, rinsed, and fried with grease and salt until soft as a potherb. **Winter Use Food** Leaves and stalks blanched, boiled in a can, and stored for future use. (126:58)

***Ligusticum canbyi*** Coult. & Rose, Canby's Licoriceroot

- **Drug**—Cree *Heart Medicine* Used for heart troubles. **Crow Cold Remedy** Roots chewed for colds. *Cough Medicine* Roots chewed for coughs. *Ear Medicine* Infusion of roots used for earache. *Respiratory Aid* Root shavings added to boiling water and steam inhaled for sinus infection and congestion. **Flathead Anticonvulsive** Roots chewed, rubbed on the body, or smoked for seizures. *Unspecified* Plants used as herbal medicine. **Kutenai Unspecified** Plants used as herbal medicine. ***Lilium***, Liliaceae

***Lilium canadense*** L., Canadian Lily

- **Drug**—Algonquin, Quebec *Gastrointestinal Aid* Root used for stomach disorders. (18:138) **Cherokee Antidiarrheal** Infusion of root given for "flux." *Antirheumatic (Internal)* Infusion of root used in various ways for rheumatism. *Dietary Aid* and *Pediatric Aid* Decoction of boiled tubers given "to make child fleshy and fat." (80:43) **Chippewa Snakebite Remedy** Decoction of root applied to snakebites. (53:352)

**Malecite** *Abortifacient* Infusion of plant and sweet viburnum roots used for irregular menstruation. (116:258) **Micmac** *Abortifacient* Parts of plant used for irregular menstruation. (40:58)

- **Food—Cherokee** *Starvation Food* Roots made into flour and used to make bread for famine times. (80:43) **Huron** *Starvation Food* Roots used with acorns during famine. (3:63)

**Lilium columbianum** hort. ex Baker, Columbian Lily

- **Drug—Okanagan-Colville** *Witchcraft Medicine* Bulbs dried, mashed with “stink bugs,” powdered, and used against “plhax,” that is, witchcraft. (188:46)
- **Food—Clallam** *Unspecified* Bulbs steamed in pits and used for food. (57:196) **Klallam** *Unspecified* Corms steamed and eaten. **Lummi** *Unspecified* Corms steamed and eaten. (79:25) **Nitinaht** *Unspecified* Bulbs formerly steamed and eaten cold with oil. (186:85) **Okanagan-Colville** *Bread & Cake* Bulbs dried into cakes and stored for winter use. *Spice* Bulbs dried into cakes and used as seasoning in meat soups. *Unspecified* Bulbs eaten raw or boiled alone or with saskatoon berries. (188:46) **Okanagon** *Staple* Roots used as a principal food. (178:238) *Unspecified* Roots used as an important food. (178:237) Roots used extensively for food. (178:89) **Quileute** *Unspecified* Corms steamed and eaten. **Quinault** *Unspecified* Corms steamed and eaten. **Samish** *Unspecified* Corms steamed and eaten. (79:25) **Shuswap** *Unspecified* Roasted roots used for food. (123:54) Roots used extensively for food. (178:89) **Skagit** *Unspecified* Corms steamed and eaten. (79:25) **Skagit, Upper** *Unspecified* Bulbs baked or steamed in an earth oven and eaten. (179:40) **Skokomish** *Unspecified* Corms steamed and eaten. **Swinomish** *Unspecified* Corms steamed and eaten. (79:25) **Thompson** *Dried Food* Pit cooked bulbs dried for future use and usually cooked with meat. *Soup* Bulbs used to make a soup like clam chowder. A vegetable soup was made with salmon heads, bitterroot, tiger lily bulbs, water horehound roots, chocolate lily bulbs, the “dry” variety of saskatoon berries, dried powdered bracken fern rhizome, and chopped wild onions. *Spice* Thick, scaly bulbs eaten mainly as a condiment or cooked with food to add a pepper-like flavoring. (187:126) *Unspecified* Bulbs mixed with salmon roe and panther lily, boiled, and eaten as a favorite dish. Thick, scaly bulbs mixed with salmon roe, boiled, and eaten as a favorite dish. (as *L. parviflorum* 164:482) Roots used as an important food. (178:237) Roots used extensively for food. (178:89)

**Lilium occidentale** Purdy, Eureka Lily

- **Food—Karak** *Unspecified* Bulbs baked in the earth oven and eaten. (148:381)

**Lilium pardalinum** Kellogg, Leopard Lily

- **Food—Atsugewi** *Unspecified* Bulbs cooked in earth oven and used for food. (61:138) **Karak** *Unspecified* Bulbs baked in the earth oven and eaten. (148:381) **Yana** *Unspecified* Roots steamed and eaten. (147:251)

**Lilium parvum** Kellogg, Sierran Tiger Lily

- **Food—Paiute** *Unspecified* Roots used for food. (167:244)

**Lilium philadelphicum** L., Wood Lily

- **Drug—Algonquin, Quebec** *Gastrointestinal Aid* Root used for stomach disorders. (18:138) **Chippewa** *Dermatological Aid* Poultice of

boiled bulbs applied to wounds, contusions, and dog bites. *Witchcraft Medicine* Poultice of bulbs applied to dog bites and caused dog's fangs to drop out. (71:125) **Iroquois** *Gynecological Aid* Decoction of whole plant taken “to bring away placenta after childbirth.” *Love Medicine* “Dry plants in sun, if twists together, wife is unfaithful; determines love.” Decoction of roots taken by wife as emetic and used as a wash “if husband is unfaithful.” (87:282) **Malecite** *Adjuvant* Roots used to strengthen other medicines. (116:245) *Cough Medicine* Roots used with roots of blackberry and mountain raspberry, staghorn sumac for coughs. (116:251) *Dermatological Aid* Poultice of ground roots used for swellings and bruises. (116:245) *Febrifuge* Roots used with roots of blackberry and mountain raspberry, staghorn sumac for fevers. *Tuberculosis Remedy* Roots used with roots of blackberry and mountain raspberry, staghorn sumac for consumption. (116:251) **Menominee** *Dermatological Aid* Poultice of boiled, mashed root applied to sores. (54:132) **Micmac** *Cough Medicine* Roots used for coughs. *Dermatological Aid* Roots used for swellings and bruises. *Febrifuge* Roots used for fever. *Tuberculosis Remedy* Roots used for consumption and fever. (40:58)

- **Food—Blackfoot** *Soup* Bulbs eaten with soup. *Unspecified* Bulbs eaten fresh. (86:103) **Meskwaki** *Vegetable* Straight roots gathered for potatoes. (152:262)

**Lilium philadelphicum var. andinum** (Nutt.) Ker-Gawl., Wood Lily

- **Drug—Dakota** *Dermatological Aid* Pulverized or chewed flowers applied as antidote for spider bites. (as *L. umbellatum* 70:71)
- **Food—Cree, Woodlands** *Snack Food* Bulb segments eaten dried as a nibble. *Unspecified* Bulb segments eaten fresh. Seeds and underground bulbs used for food. (109:43)

**Lilium rubescens** S. Wats., Redwood Lily

- **Other—Karak** *Decorations* Used for bouquets. (6:34)

## Limonium, Plumbaginaceae

**Limonium californicum** (Boiss.) Heller, California Sealavender

- **Drug—Costanoan** *Blood Medicine* Decoction of plant used to clean the blood. *Respiratory Aid* Powdered plant placed in nostrils to cause sneezing for congestion. *Urinary Aid* Decoction of plant used for internal injuries or urinary problems. *Venereal Aid* Decoction of plant used for venereal disease. (21:11)

**Limonium carolinianum** (Walt.) Britt., Carolina Sealavender

- **Drug—Micmac** *Tuberculosis Remedy* Roots pounded, ground, added to boiling water, and used for consumption with hemorrhage. (116:259)

**Limonium vulgare** P. Mill., Mediterranean Sealavender

- **Drug—Micmac** Roots used for consumption with hemorrhage. (as *Statice limonium* 40:62)

## Limosella, Scrophulariaceae

**Limosella aquatica** L., Water Mudwort

- **Drug—Navajo, Ramah** *Ceremonial Medicine* Leaves ceremonially rubbed on body for protection in hunting and from witches. *Dermatological Aid* Roll of washed leaves used to plug a bullet or arrow wound. *Hunting Medicine* Leaves ceremonially rubbed on body for

protection while hunting. *Witchcraft Medicine* Leaves rubbed on body ceremonially for protection against witches. (191:44)

**Linaceae**, see *Linum*

### *Linanthus*, Polemoniaceae

*Linanthus ciliatus* (Benth.) Greene, Whiskerbrush

- **Drug**—Pomo, Calpella *Blood Medicine* Cold decoction of plant taken to purify the blood. *Cold Remedy* Infusion of plant given to children for colds. *Cough Medicine* Infusion of plant given to children for coughs. *Pediatric Aid* Infusion of plant given to children for coughs and colds. (41:381)
- **Food**—Yuki *Substitution Food* Flowering heads used in the summer as a substitute for coffee. (41:381)

*Linanthus nuttallii* (Gray) Greene ex Milliken **ssp. nuttallii**, Nuttall's Desert Trumpets

- **Drug**—Navajo, Ramah *Panacea* Plant used as "life medicine." (191:40)

### *Linaria*, Scrophulariaceae

*Linaria vulgaris* P. Mill., Butter and Eggs

- **Drug**—Iroquois *Antidiarrheal* Cold infusion of leaves taken for diarrhea. *Emetic* Infusion of plants taken to vomit as an anti-love medicine and remove bewitching. *Love Medicine* Compound infusion of smashed plants taken to vomit as an anti-love medicine. *Pediatric Aid* and *Sedative* Compound infusion of plants and flowers given to babies that cry too much. *Witchcraft Medicine* Compound infusion of smashed plants taken to vomit and remove bewitching. (87:433) **Ojibwa** *Herbal Steam* Compound containing plant used as a bronchial inhalant in the sweat lodge. *Respiratory Aid* Compound containing dried plant used as a bronchial inhalant in the sweat lodge. (153:389)

### *Lindera*, Lauraceae

*Lindera benzoin* (L.) Blume, Northern Spicebush

- **Drug**—Cherokee *Abortifacient* Taken for female obstructions. *Blood Medicine* Taken for the blood and female obstructions. *Cold Remedy* Taken for colds. *Cough Medicine* Taken for coughs. *Dermatological Aid* Infusion of bark taken for "bold hives." *Diaphoretic* Compound decoction of bark taken as a diaphoretic, any part is a diaphoretic. *Misc. Disease Remedy* Infusion of bark taken to break out measles. *Pulmonary Aid* Taken for croup. *Respiratory Aid* Taken for phthisic. *Tonic* Used for "white swellings" and infusion taken as a spring tonic. (80:56) **Creek** *Analgesic* and *Diaphoretic* Infusion of branches taken and steam bath used to cause perspiring for aches. *Emetic* Plant used as an emetic. (177:24) **Iroquois** *Cold Remedy* Decoction or infusion of stripped leaves and twigs taken for colds. *Febrifuge* Compound decoction of plants used as a steam bath for cold sweats. *Misc. Disease Remedy* Decoction of stripped leaves and twigs taken for colds and measles. *Panacea* Compound decoction of roots taken as a panacea. (87:335) *Veneral Aid* Compound decoction of roots taken for gonorrhea and syphilis. Compound poultice of bark applied to lumps that remain after having syphilis. (87:334)
- **Food**—Cherokee *Beverage* Used to make a beverage. (80:56) Stems used to make tea. (126:44) *Spice* Used to flavor opossum or ground hog. (80:56)

*Lindera benzoin* (L.) Blume **var. benzoin**, Northern Spicebush

- **Drug**—Chippewa *Unspecified* Leaves used medicinally. (as *Benzoin aestivale* 71:131) **Creek** *Antirheumatic (Internal)* Infusion of branches taken or used as herbal steam to cause sweating for pains. *Blood Medicine* Compound containing plant taken to cause vomiting which purifies the blood. *Diaphoretic* Infusion of branches taken or used as herbal steam to cause sweating for pains. *Emetic* Compound containing plant taken to cause vomiting which purifies the blood. *Herbal Steam* Infusion of branches used as herbal steam for aches and pains.
