- **Drug**—Iroquois *Blood Medicine* Complex compound taken as blood purifier. *Dermatological Aid* Decoction of shoots taken for chancres caused by syphilis. *Pediatric Aid* Infusion of bark given to children who cry all night. *Psychological Aid* Infusion of bark taken for homesickness. *Sedative* Infusion of bark given to children who cry all night. *Venereal Aid* Decoction of shoots taken for chancres caused by syphilis. (87:443) **Menominee Urinary Aid** Bark used for urinary diseases. *Venereal Aid* Compound containing bark used for gonorrhea. (151:27) **Montagnais Diuretic** Infusion of vines taken as a diuretic. (156:315) **Potawatomi Diuretic** Compound infusion of bark used as a diuretic. (154:46)

**Lonicera ciliosa** (Pursh) Poir. ex DC., Orange Honeysuckle

- **Drug**—Chehalis *Contraceptive* Infusion of leaves taken as a contraceptive. *Dermatological Aid* Infusion of crushed leaves used as a hair wash to make it grow. (79:48) **Cowichan Unspecified** Leaves used for medicine. (182:79) **Klallam Dermatological Aid** Poultice of chewed leaves applied to bruises. **Lummi Tuberculosis Remedy** Decoction of leaves taken for tuberculosis. **Skagit Tonic** Decoction of leaves applied to the body as a strengthening tonic. **Squaxin Gynecological Aid** Infusion of leaves taken for womb trouble. **Swinomish Cold Remedy** Infusion of bark or chewed leaf juice taken for colds. *Gynecological Aid* Infusion of leaves used as a steam bath to stimulate lacteal flow. *Throat Aid* Infusion of bark taken for colds and sore throats. (79:48) **Thompson Anticonvulsive** Infusion of woody part of vine taken in small amounts or used as a bath for epilepsy. Infusion of woody part of vine taken in small amounts or used as a bath for children with epilepsy. Flowers sucked for epilepsy. *Reproductive Aid* Decoction of chopped, cooked vine stems taken by women who could not become pregnant. *Sedative* Vine pieces used under the pillow to induce sound sleep. (187:196) *Tonic* Decoction of peeled stems taken as a tonic. (164:471)
- **Food**—Nitinaht *Candy* Tubes formerly sucked by children for sweet nectar. (186:99) **Okanagan-Colville Forage** Flower nectar sucked by hummingbirds. (188:93) **Saanich Candy** Flower nectar sucked by children. (182:79) **Thompson Candy** Nectar sucked from flowers by children. (187:196) *Forage* Flower nectar eaten by bees and hummingbirds. (164:516)
- **Fiber**—Thompson *Building Material* Vines used with other plants as building materials. The vines were used with willow withes to reinforce suspension bridges across canyons and rivers. The vines were also twisted with coyote willow to lash together the framing poles of underground pit houses and to make a pliable ladder on the outside of the pit house, running from the opening down to the ground. (187:

196) *Cordage* Fiber obtained from stems used as twine. *Sewing Material* Fiber obtained from stems used as thread. (164:499)

- **Dye**—**Thompson Black** Stems used as a black dye for bitter cherry. (187:196)

***Lonicera conjugalis*** Kellogg, Purpleflower Honeysuckle

- **Food**—**Klamath Fruit** Fresh berries used for food. (45:104)

***Lonicera dioica*** L., Limber Honeysuckle

- **Drug**—**Algonquin, Quebec Cathartic** Infusion of bark used as a cathartic. *Gynecological Aid* Infusion of bark used for menstrual difficulties. *Kidney Aid* Infusion of bark used for kidney stones. (18:234) **Chippewa Diuretic** Infusion of stems taken as a diuretic. *Urinary Aid* Infusion of stems taken for dysuria. (as *L. divica* 71:141) **Iroquois Emetic** Decoction of vines taken as an emetic to throw off effects of love medicine. *Love Medicine* Decoction of vines taken as an emetic, love or anti-love medicine. *Venereal Aid* Compound decoction of roots taken for gonorrhea. (87:443) **Meskwaki Anthelmintic** Infusion of berry and root bark taken by pregnant women for worms. (152:207)

***Lonicera dioica* var. *glaucescens*** (Rydb.) Butters, Limber Honeysuckle

- **Drug**—**Cree, Woodlands Diuretic** Infusion of inner bark, either scraped from or attached to the stem, used as a diuretic. Infusion of peeled, internodal stem lengths used for urine retention. *Gynecological Aid* Decoction of stems used for blood clotting after childbirth. *Misc. Disease Remedy* Infusion of peeled, internodal stem lengths used for flu. *Venereal Aid* Decoction of stems used for venereal disease. (109:43) **Iroquois Febrifuge** Decoction of plants given to children for fevers and sickness. *Gynecological Aid* Decoction taken by pregnant women for internal and leg soreness. *Pediatric Aid* Decoction of plants given to children for fevers and sickness. *Tuberculosis Remedy* Compound decoction of roots taken for consumption. (87:444)
- **Other**—**Cree, Woodlands Cooking Tools** Hollow stems used as straws by children. *Smoking Tools* Hollow stem sections used as pipestems for corn cob pipes and toy rose hip pipes. (109:43)

***Lonicera hispidula* var. *californica*** Jepson, Pink Honeysuckle

- **Other**—**Pomo Smoking Tools** Stems used for clay elbow pipes. (66:15)

***Lonicera hispidula* var. *vacillans*** (Benth.) Gray, Pink Honeysuckle

- **Other**—**Pomo, Kashaya Designs** Burned wood ashes made into a paste for tattooing. *Smoking Tools* Hollow stems used for pipestems. (72:56)

***Lonicera interrupta*** Benth., Chaparral Honeysuckle

- **Drug**—**Mendocino Indian Eye Medicine** Infusion of leaves taken and used as a wash for sore eyes. (41:388) **Shoshoni Antirheumatic (External)** Poultice of raw root applied to swellings. **Yuki Dermatological Aid** Leaves used in a wash for sores. (118:44)
- **Food**—**Mendocino Indian Unspecified** Nectar sucked out of long, yellow flowers by children. (41:388)
- **Fiber**—**Mendocino Indian Basketry** Long, flexible stems used for the circular withes of baskets. (41:388)

- **Other**—**Kawaiisu Smoking Tools** Hollowed stem section used as a cigarette-type pipe. (206:38)

***Lonicera involucrata*** Banks ex Spreng., Twinberry Honeysuckle

- **Drug**—**Bella Coola Cough Medicine** Decoction of bark taken for cough. *Dermatological Aid* Poultice of chewed leaves used on itch, boils, and gonorrheal sores and bark used for sores. (150:63) Leaves chewed and used for itchy skin and boils. (184:203) *Venereal Aid* Poultice of chewed leaves or toasted bark applied to gonorrheal sores. (150:63) **Blackfoot Cathartic and Emetic** Infusion of berries used as a cathartic and emetic to cleanse the body. *Gastrointestinal Aid* Infusion of berries used for stomach troubles. *Pulmonary Aid* Infusion of berries used for chest troubles. (86:67) **Carrier Dermatological Aid** Poultice of crushed leaves applied to open sores. *Eye Medicine* Decoction of leaves used to bathe sore eyes. (31:77) **Carrier, Northern Dermatological Aid** Compound decoction of stems taken for body sores. *Orthopedic Aid* and *Stimulant* Compound decoction of stems taken for constitutional weakness or paralysis. **Carrier, Southern Eye Medicine** Decoction of bark used daily as an eyewash. (150:63) **Gitksan Eye Medicine** Fruit juice used for sore eyes. Infusion of inner bark used for sore eyes. (43:229) Fresh juice of berries or infusion of inner bark used in sore eyes. (150:63) **Kwakiutl Analgesic** Compound infusion of bark used as foot bath for painful legs and feet. (20:380) Chewed leaves with yellow cedar rubbed on painful places. (20:382) *Antirheumatic (External)* Plant used in sweat baths for arthritis and rheumatism. (183:266) *Dermatological Aid* Leaves chewed with yellow cedar and rubbed on painful places. (20:380) Chewed leaves rubbed on sores. Poultice of bark, berries, or leaves and grease applied to swellings or sores. *Gynecological Aid* Decoction of bark applied to women's breasts to make milk flow. (183:279) *Herbal Steam* Plant used in sweat baths for arthritis and rheumatism. (183:266) *Orthopedic Aid* Compound decoction of bark used as foot bath for leg and foot pains. (20:380) Compound infusion of bark used as a soak for sore feet and legs. Infusion of leaves or roots applied as poultice to swollen shoulders and feet. (183:279) **Kwakiutl, Southern Analgesic** Poultice of bark and berries or leaves, fresh sea wrack, and alder bark applied for aches and pains. (183:260) **Makah Dermatological Aid** Mashed fruit applied to the scalp for dandruff. *Emetic* Fruit used as an emetic. (67:317) *Gynecological Aid* Leaves chewed by women during confinement. (79:48) *Poison* Fruit considered poisonous. (67:317) **Navajo, Ramah Ceremonial Medicine and Emetic** Leaves used as a ceremonial emetic. (191:45) **Nitinaht Psychological Aid** Buds eaten in spring or bark rubbed on body as a tonic for nervous breakdowns. **Nootka, Manhousat Love Medicine** Decoction of bark or fresh bark eaten by whalers to relieve effects of sexual abstinence. (186:99) **Nuxalkmc Cough Medicine** Leaves or bark used for coughs. *Dermatological Aid* Leaves or bark used for boils and itchy areas. *Venereal Aid* Leaves or bark used for gonorrhea. (43:229) **Okanagan-Colville Gynecological Aid** Branches used to make a medicine for mothers after childbirth. *Poison* Berries considered poisonous. (188:94) **Poliklah Poison** Berries considered poisonous. (117:173) **Quileute Antidote and Emetic** Leaves chewed as an emetic when poisoned. (79:48) **Quinault Dermatological Aid** Leaves chewed or rubbed on sores. (201:276) *Gynecological Aid* Leaves chewed by women during confinement. (79:48) *Oral Aid* Leaves chewed for sore

- mouth. (201:276) **Thompson** *Dermatological Aid* Poultice of boiled leaves applied to swellings. (164:457) Decoction of sticks, leaves and all, used for scabs and sores. *Dietary Aid* Decoction of stems and leaves taken as a tonic "for vitamins." (187:197) *Orthopedic Aid* Decoction of leaves and twigs used as a liniment. (164:457) Decoction of sticks, leaves and all, used for broken bones. (187:197) *Poison* Berries considered poisonous if more than two or three eaten. (164:489) *Throat Aid* Decoction of sticks, leaves and all, taken for sore throat. *Urinary Aid* Decoction of sticks, leaves and all, taken for bladder trouble. (187:197) **Tolowa** *Poison* "Not good to eat, poison." (6:37) **Wet'suwet'en** *Burn Dressing* Bark used for burns. *Dermatological Aid* Bark used for wounds. *Disinfectant* Bark used for infections. (73:152)
- **Food**—**Bella Coola** *Forage* Berries eaten by birds. (184:203) **Hesquiat** *Forage* Berries eaten by crows and other birds. (185:63) **Montana Indian** *Winter Use Food* Fruit dried and stored for winter use. (19:15) **Okanagan-Colville** *Forage* Berries eaten by bears. (188:94) **Okanagan** *Fruit* Fruits occasionally used for food. (125:39) **Oweekeno** *Fruit* Berries used for food. (43:89) **Thompson** *Forage* Berries eaten by grizzly bears. (187:197) *Fruit* Fruits occasionally used for food. (125:39) Berries eaten, but not commonly exploited as a food source. One informant ate the berries, but was told by her mother not to eat them. (187:197)
  - **Dye**—**Hesquiat** *Purple* Mashed berries boiled to make a purple paint. (185:63) **Makah** *Unspecified* Fruit used as a dye for basketry materials. (67:317)
  - **Other**—**Quileute** *Paint* Juice used to paint the faces of dolls. (79:48)

**Lonicera japonica** Thunb., Japanese Honeysuckle

**Fiber**—**Cherokee** *Basketry* Vines used to make baskets. (80:38)

**Lonicera oblongifolia** (Goldie) Hook., Swamp Fly Honeysuckle

- **Drug**—**Iroquois** *Analgesic* Poultice of hot bark applied to abdomen for urinating pain. *Gynecological Aid* Compound decoction of branches taken for falling of the womb. *Psychological Aid* Infusion of bark taken for loneliness. *Sedative* Infusion of bark taken for restlessness. *Urinary Aid* Poultice of hot bark applied to abdomen for urinating pain. (87:443)

**Lonicera sp.**, Honeysuckle

- **Drug**—**Chippewa** *Pulmonary Aid* Compound decoction of root taken for lung trouble. (53:340) **Costanoan** *Cough Medicine* Decoction of dried fruit used as a cough syrup. *Dermatological Aid* and *Disinfectant* Decoction of plant used for infected sores. *Orthopedic Aid* Decoction of plant used as a bath for swollen feet. (21:24) **Iroquois** *Antidiarrheal* and *Pediatric Aid* Compound decoction of twigs given to babies with diarrhea. (87:442)

**Lonicera subspicata var. johnstonii** Keck, Johnston's Honeysuckle

- **Drug**—**Diegueño** *Veterinary Aid* Decoction of plant used to wash sores on horses. (84:24)

**Lonicera utahensis** S. Wats., Utah Honeysuckle

- **Drug**—**Navajo, Ramah** *Hunting Medicine* Chewed leaves blown on weapons for good luck in hunting. (191:45) **Okanagan-Colville** *Blood Medicine* Infusion of branches taken as a tonic to "change the blood" in the spring and fall. *Dermatological Aid* Infusion of branches and leaves used to wash sores and infections. *Laxative* Infusion of

branches taken as a mild laxative. (188:94)

- **Food**—**Okanagan-Colville** *Fruit* Berries used for food. (188:94)

## Lophophora, Cactaceae

**Lophophora williamsii** (Lem. ex Salm-Dyck) Coult., Peyote

- **Drug**—**Comanche** *Ceremonial Medicine* and *Narcotic* Plant used in ceremonies as a narcotic. (29:522) **Delaware** *Panacea* Carried in small beaded bags and worn around the neck to protect against illness. *Tuberculosis Remedy* Used for tuberculosis. (176:39) **Kiowa** *Analgesic* and *Antirheumatic (External)* Poultice of plants applied for rheumatic pains. *Cold Remedy* Decoction of plants taken for colds. *Dermatological Aid* Poultice of plants applied for cuts. *Febrifuge* Decoction of plants taken for fevers. *Gastrointestinal Aid* Decoction of plants taken for intestinal ills. *Misc. Disease Remedy* Decoction of plants taken for grippe and scarlet fever. *Narcotic* Plant used as a narcotic. *Orthopedic Aid* Poultice of plants applied for bruises. *Panacea* Decoction of plants taken as a panacea. *Pulmonary Aid* Decoction of plants taken for pneumonia and scarlet fever. *Tuberculosis Remedy* Decoction of plants taken for tuberculosis. *Venereal Aid* Decoction of plants taken for venereal disease. (192:43) **Omaha** *Ceremonial Medicine* Plant revered and used in important ritual and ceremonial sacraments. (70:104, 110) **Paiute** *Unspecified* Plant used by one shaman for curing. (111:91) **Ponca** *Hallucinogen* Dried flesh "buttons" eaten to cause auditory and visual hallucinations. *Unspecified* Decoction of dried flesh "buttons" taken for illness. (94:48) **Winnebago** *Ceremonial Medicine* Plant revered and used in important ritual and ceremonial sacraments. (70:104, 110)
- **Other**—**Blackfoot** *Ceremonial Items* Plant used in ceremonial rites of the Native American Church. (97:45) **Ponca** *Ceremonial Items* Flesh dried into "buttons" and eaten during religious ceremonies. (94:48)

## Lotus, Fabaceae

**Lotus humistratus** Greene, Foothill Deervetch

- **Drug**—**Karok** *Gynecological Aid* Infusion of plant taken and used as a wash by women in labor. (148:385)

**Lotus mearnsii** (Britt.) Greene, Mearns's Birdsfoot Trefoil

- **Food**—**Havasupai** *Unspecified* Species used for food. (197:226)

**Lotus procumbens** (Greene) Greene, Silky Deerweed

- **Food**—**Kawaiisu** *Spice* Plant added to the dry pine needles spread as a layer in the pit roasting of the yucca. (206:38)
- **Fiber**—**Kawaiisu** *Building Material* Plant used as wall filler in the construction of the winter house. (206:38)

**Lotus scoparius** (Nutt.) Ottley, Common Deerweed

- **Drug**—**Costanoan** *Cough Medicine* Decoction of foliage used for coughs. (21:19)
- **Food**—**Diegueño** *Fodder* Leaves fed to domesticated animals. (88:218) **Tubatulabal** *Unspecified* Leaves used for food. (193:15)
- **Fiber**—**Cahuilla** *Building Material* Plant used as a material in house construction. (15:87) **Costanoan** *Building Material* Foliage used for house thatching. (21:250)
- **Other**—**Diegueño** *Soap* Roots used for soap. (88:218)

**Lotus scoparius** (Nutt.) Ottley **var. scoparius**, Common Deerweed

- **Drug**—Mahuna *Blood Medicine* Infusion of plant taken to build the blood. (as *Hosackia glabra* 140:34)

***Lotus strigosus*** (Nutt.) Greene, Bishop Lotus

- **Food**—Luiseño *Vegetable* Plant used for greens. (155:231)

***Lotus unifoliolatus*** (Hook.) Benth. **var. *unifoliolatus***, Prairie Trefoil

- **Food**—Kawaiisu *Spice* Plant used as a mat for the juniper cake which improves the taste of the cake. (as *L. purshianus* 206:39) **Miwok Cooking Agent** Green leaves pounded with oily acorns, to absorb some of the oil. (as *L. americanus* 12:144)

***Lotus wrightii*** (Gray) Greene, Wright's Deervetch

- **Drug**—Navajo, Ramah *Analgesic* Decoction of leaves used for stomachache. *Cathartic* Decoction of leaves used as a cathartic. *Disinfectant* Decoction of leaves used for "deer infection." *Gastrointestinal Aid* Decoction of leaves used for stomachache. *Panacea* Plant used as "life medicine." (191:32) **Zuni Witchcraft Medicine** Poultice of chewed root applied to swellings caused by being witched by a bull-snake. (27:376)
- **Food**—Isleta *Forage* Considered an excellent grazing plant for sheep. (100:34)
- **Other**—Keres, Western *Unspecified* Plant known and named but no use was specified. (171:52)

## ***Ludwigia***, Onagraceae

***Ludwigia bonariensis*** (M. Micheli) Hara, Carolina Primrosewillow

- **Drug**—Hawaiian *Blood Medicine* Infusion of pounded whole plants and other plants strained and taken to purify the blood. *Dermatological Aid* and *Pediatric Aid* Seeds or root pulp used by children on small cuts or scratches. (as *Jussiaea villosa* 2:48)

***Ludwigia virgata*** Michx., Savannah Primrosewillow

- **Drug**—Seminole *Dermatological Aid* Decoction of root taken and used as a body steam for snake sickness: itchy skin. (169:239)

## ***Luetkea***, Rosaceae

***Luetkea pectinata*** (Pursh) Kuntze, Partridgefoot

- **Drug**—Okanagon *Analgesic* Decoction of plant taken for abdominal pains. *Dermatological Aid* Poultice of crushed plant applied to sores. *Gastrointestinal Aid* Decoction of plant taken for abdominal pains. *Gynecological Aid* Decoction of plant taken by women for profuse or prolonged menstruation. (125:42) **Thompson Analgesic** Decoction of plant taken for abdominal pains. (164:472) *Dermatological Aid* Poultice of crushed plant applied to sores. (125:42) Poultice of crushed, fresh plant applied to sores. (164:472) *Gastrointestinal Aid* Decoction of plant taken for abdominal pains. (125:42) Decoction of plant taken for abdominal pain. (164:472) *Gynecological Aid* Decoction of plant taken by women for profuse or prolonged menstruation. (125:42) Decoction of plant taken for profuse or prolonged menstruation. (164:472)

## ***Lupinus***, Fabaceae

***Lupinus affinis*** J. G. Agardh, Fleshy Lupine

- **Food**—Mendocino Indian *Vegetable* Young leaves formerly roasted and eaten as greens. (as *L. carnosulus* 41:357)

- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus albifrons*** Benth. ex Lindl., Silver Lupine

- **Drug**—Karak *Gastrointestinal Aid* Decoction of plant taken and used as a steam bath for stomach troubles. (148:385)
- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus arboreus*** Sims, Bush Lupine

- **Fiber**—Pomo *Cordage* Root fibers used for string. (66:13) **Pomo, Kashaya Cordage** Root fibers used to make string for fish nets, deer and rabbit nets, gill nets, and carrying nets. (72:65)
- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus arcticus*** S. Wats., Arctic Lupine

- **Drug**—Eskimo, Inupiat *Poison* Seeds considered poisonous. (98:143)

***Lupinus argenteus ssp. ingratus*** (Greene) Harmon, Silvery Lupine

- **Drug**—Navajo, Ramah *Dermatological Aid* Poultice of crushed leaves applied to poison ivy blisters. (as *L. ingratus* 191:32)

***Lupinus brevicaulis*** S. Wats., Shortstem Lupine

- **Drug**—Navajo *Dermatological Aid* Plant rubbed on as a liniment for boils. *Reproductive Aid* Plant used for sterility. (55:56)
- **Other**—Navajo *Ceremonial Items* Used in the female shooters branch of the Lightning Chant. (55:56)

***Lupinus caudatus ssp. argophyllus*** (Gray) L. Phillips, Kellogg's Spurred Lupine

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Leaves used as a ceremonial emetic. *Dermatological Aid* Cold infusion of leaves used as a lotion on poison ivy blisters. *Emetic* Leaves used as a ceremonial emetic. (as *L. aduncus* 191:32)

***Lupinus densiflorus*** Benth., Whitewhorl Lupine

- **Food**—Miwok *Unspecified* Steamed leaves and flowers eaten with acorn soup. (12:159)
- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus kingii*** S. Wats., King's Lupine

- **Drug**—Hopi *Eye Medicine* Plant used as an eye medicine. (200:33, 80) **Navajo, Ramah Dermatological Aid** Poultice of crushed leaves used for poison ivy blisters and other skin irritations. *Panacea* Leaves used as "life medicine." (191:32)

***Lupinus latifolius*** Lindl. ex J. G. Agardh, Broadleaf Lupine

- **Food**—Miwok *Sauce & Relish* Steamed, dried leaves and flowers boiled and used as a relish with manzanita cider. *Winter Use Food* Steamed leaves and flowers dried and stored for winter use. (12:159)
- **Other**—Miwok *Containers* Leaves used to line acorn leaching basket, to prevent meal from running through the interstices. (12:146)

***Lupinus littoralis*** Dougl., Seashore Lupine

- **Drug**—Kwakiutl *Pediatric Aid* and *Sedative* Root ash rubbed into a newborn baby's cradle to make infant sleep well. (183:284)
- **Food**—Haisla & Hanaksiala *Unspecified* Roots peeled and eaten raw. (43:249) Kwakiutl, Southern *Unspecified* Fleshy taproots eaten raw, boiled, or steamed in spring. If eaten raw, these roots caused dizziness. Therefore, they were usually eaten raw only before bedtime in the evening. (183:284)

***Lupinus luteolus*** Kellogg, Pale Yellow Lupine

- **Food**—Mendocino Indian *Forage* Succulent tops eaten sparingly by horses in early summer. *Vegetable* Plant tops eaten as greens. (41:358)
- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus lyallii*** Gray, Dwarf Mountain Lupine

- **Drug**—Navajo *Dermatological Aid* Plant used for boils. (55:97)
- **Dye**—Navajo *Blue* Flowers used to make a blue dye. *Green* Used to make a green dye. (55:57)

***Lupinus nanus* ssp. *latifolius*** (Benth. ex Torr.) D. Dunn, Sky Lupine

- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus nootkatensis*** Donn ex Sims, Nootka Lupine

- **Drug**—Alaska Native *Poison* Roots considered poisonous. (85:157)
- **Food**—Alaska Native *Unspecified* Roots peeled and inner portion eaten raw or boiled. (85:157)

***Lupinus nootkatensis* var. *fruticosus*** Sims, Nootka Lupine

- **Food**—Haisla & Hanaksiala *Unspecified* Roots peeled and eaten raw. (43:249) Kimsquit *Unspecified* Roots formerly roasted and used for food. (184:205)

***Lupinus nootkatensis*** Donn ex Sims var. *nootkatensis*, Nootka Lupine

- **Food**—Haisla & Hanaksiala *Unspecified* Roots peeled and eaten raw. (43:249)

***Lupinus perennis*** L., Sundial Lupine

- **Drug**—Cherokee *Antiemetic* Cold infusion taken and used as wash "to check hemorrhage and vomiting." *Antihemorrhagic* Cold infusion taken and used as wash "to check hemorrhage and vomiting." (80:43, 44) Menominee *Veterinary Aid* Plant used to fatten a horse and make him spirited and full of fire. *Witchcraft Medicine* Plant rubbed on hands or body to give person power to control horses. (151:40)

***Lupinus polyphyllus*** Lindl., Bigleaf Lupine

- **Drug**—Salish *Tonic* Decoction of plants used as a tonic. (178:293) Thompson *Poison* Plant considered poisonous. (187:224) *Unspecified* Plant used medicinally for unspecified purpose. (164:461) *Veterinary Aid* Plant eaten by horses as medicine. (187:224)
- **Food**—Kwakiutl *Unspecified* Roots eaten fresh or steamed. (182:84)
- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths

for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus pusillus*** Pursh, Rusty Lupine

- **Drug**—Hopi *Ear Medicine* Plant used as an ear medicine. *Eye Medicine* Plant used as an eye medicine. (42:333)
- **Other**—Hopi *Ceremonial Items* Juice used as holy water in the Powa-mu ceremony. (42:333)

***Lupinus pusillus* ssp. *intermontanus*** (Heller) D. Dunn, Intermountain Lupine

- **Drug**—Navajo, Kayenta *Disinfectant* Plant used as a fumigant ingredient. *Ear Medicine* Plant used for earaches. *Hemostat* Plant used for nosebleeds. (205:28)

***Lupinus rivularis*** Dougl. ex Lindl., Riverbank Lupine

- **Drug**—Thompson *Unspecified* Plant used medicinally for unspecified purpose. (164:461)

***Lupinus sericeus*** Pursh, Silky Lupine

- **Drug**—Okanagan-Colville *Eye Medicine* Seeds pounded, mixed with water, strained, and resulting liquid used as an eye medicine. (188:105)
- **Food**—Okanagan-Colville *Forage* Plant considered the marmot's favorite food. (188:105)
- **Fiber**—Okanagan-Colville *Mats, Rugs & Bedding* Plants used for bedding and as flooring in the sweat house. (188:105)
- **Other**—Okanagan-Colville *Season Indicator* Blooms indicated that groundhogs were fat enough to eat. (188:105)

***Lupinus sericeus*** Pursh var. *sericeus*, Silky Lupine

- **Drug**—Thompson *Poison* Plant considered poisonous. *Veterinary Aid* Plant eaten by horses as medicine. (187:224)

***Lupinus* sp.**, Lupine

- **Drug**—Blackfoot *Gastrointestinal Aid* Infusion of plant taken for indigestion and gas. (86:67) *Misc. Disease Remedy* Infusion of roots taken and rubbed on mumps. (86:77) *Respiratory Aid* Infusion of plant taken for hiccups. (86:72) *Veterinary Aid* Infusion of leaves applied to wounds caused by small biting flies, especially on the chest and udder. (86:89) Paiute *Diuretic* Plant used for failure to urinate. (167:317) Plant used for "failure in urination." (180:102) *Urinary Aid* Plant used for bladder trouble. (167:317) Shoshoni *Diuretic* Plant used for "failure in urination." (180:102) Thompson *Poison* Plant considered poisonous. *Veterinary Aid* Plant eaten by horses as medicine. (187:224)
- **Food**—Costanoan *Staple* Seeds used for pinole. (21:250) Kitasoo *Unspecified* Roots used for food. (43:337) Luiseño *Unspecified* Leaves used for food. (15:87) *Vegetable* Plant used for greens. (155:231) Paiute *Forage* Plants used for horse and cattle food. (111:86) Thompson *Fodder* Used as a fodder for horses and cattle. (164:514) Yavapai *Vegetable* Boiled leaves used for greens. (65:257) Yuki *Vegetable* Young plants roasted and eaten as greens. (49:88)
- **Other**—Blackfoot *Ceremonial Items* Leaves chewed by ceremonialist, to reinforce his powers, before he undertook any face painting. *Incense & Fragrance* Used as incense in the Ghost Dance. (86:38) Navajo *Ceremonial Items* Used in the Male Shooting Chant. (55:56)

***Lupinus succulentus*** Dougl. ex K. Koch, Hollowleaf Annual Lupine

- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths

for the Flower Dance performed at the Strawberry Festival in May. (72:65)

***Lupinus sulphureus*** Dougl. ex Hook., Sulphur Lupine

- **Drug**—Okanagan-Colville *Eye Medicine* Seeds pounded, mixed with water, strained, and resulting liquid used as an eye medicine. (188:105)
- **Food**—Okanagan-Colville *Forage* Plant considered the marmot's favorite food. (188:105)
- **Fiber**—Okanagan-Colville *Mats, Rugs & Bedding* Plants used for bedding and as flooring in the sweat house. (188:105)
- **Other**—Okanagan-Colville *Season Indicator* Blooms indicated that groundhogs were fat enough to eat. (188:105)

***Lupinus versicolor*** Lindl., Manycolored Lupine

- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in wreaths for the Flower Dance performed at the Strawberry Festival in May. (as *L. variicolor* 72:65)

***Lupinus wyethii*** S. Wats., Wyeth's Lupine

- **Drug**—Okanagan-Colville *Eye Medicine* Seeds pounded, mixed with water, strained, and resulting liquid used as an eye medicine. (188:105)
- **Food**—Okanagan-Colville *Forage* Plant considered the marmot's favorite food. (188:105)
- **Fiber**—Okanagan-Colville *Mats, Rugs & Bedding* Plants used for bedding and as flooring in the sweat house. (188:105)
- **Other**—Okanagan-Colville *Season Indicator* Blooms indicated that groundhogs were fat enough to eat. (188:105)

***Luzula***, Juncaceae

***Luzula multiflora*** (Ehrh.) Lej., Common Woodrush

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Plant used as a ceremonial emetic and for other ceremonial purposes. *Emetic* Plant used as a ceremonial emetic. (191:20)

***Luzula* sp.**, Woodrush

- **Drug**—Iroquois *Other* Decoction used to increase strength to physically punish one of bewitchment. (87:279)

***Lycium***, Solanaceae

***Lycium andersonii*** (Pursh) Nutt., Anderson's Wolfberry

- **Food**—Paiute, Northern *Dried Food* Berries dried in the sand for winter use. (59:50)

***Lycium andersonii*** Gray, Anderson's Wolfberry

- **Food**—Cahuilla *Dried Food* Dried berries boiled into mush or ground into flour and mixed with water. *Fruit* Berries eaten fresh. (15:87) **Kawaiisu** *Beverage* Fruit juice used as a beverage. *Dried Food* Fruit mashed, dried, soaked in warm water for an hour, and eaten. *Fruit* Fruit eaten fresh. (206:39) **Mohave** *Beverage* Berries crushed, strained, and used as a drink. *Dried Food* Berries dried like raisins. (37:205) **Paiute, Northern** *Fruit* Berries eaten fresh and crushed or mixed with water. *Porridge* Berries dried, mashed, and eaten like a mush. (59:50)

***Lycium exsertum*** Gray, Arizona Desertthorn

- **Food**—Yuma *Beverage* Berries gathered, washed, boiled, ground,

mixed with water, and used as a beverage. *Dried Food* Berries sun dried, stored, and eaten without preparation. Berries washed, boiled, dried, and stored. *Porridge* Berries washed, boiled, strained, mashed, and wheat added to make mush. (37:204)

***Lycium fremontii*** Gray, Frémont's Desertthorn

- **Food**—Cahuilla *Dried Food* Dried berries boiled into mush or ground into flour and mixed with water. *Fruit* Berries eaten fresh. (15:87) **Maricopa** *Fruit* Black berries used for food. (95:265) **Papago** *Dried Food* Berries dried and eaten like raisins. (34:19) *Fruit* Berries used for food. (36:62) **Pima** *Beverage* Red berries boiled, mashed, and the liquid used as a beverage. (47:87) *Fruit* Red berries cooked and eaten warm or cold with sugar. (95:262) Red berries boiled and eaten. (146:75) **Yuma** *Beverage* Berries gathered, washed, boiled, ground, mixed with water, and used as a beverage. *Dried Food* Berries sun dried, stored, and eaten without preparation. Berries washed, boiled, dried, and stored. *Porridge* Berries washed, boiled, strained, mashed, and wheat added to make mush. (37:204)
- **Other**—Papago *Hunting & Fishing Item* Used to make bows. (34:70)

***Lycium pallidum*** Miers, Pale Wolfberry

- **Drug**—Hopi *Ceremonial Medicine* Plant used at the annual "Niman-katcina" ceremony. (56:19) **Navajo, Kayenta** *Toothache Remedy* Ground root placed in cavity for toothaches. (205:41) **Navajo, Ramah** *Ceremonial Medicine* and *Emetic* Leaves or root used as ceremonial emetic. *Misc. Disease Remedy* Plant used for chickenpox and poultice of plant used for toothaches. *Panacea* Bark and dried berries used as "life medicine." *Toothache Remedy* Poultice of heated root applied for toothache. (191:42)
- **Food**—Acoma *Sauce & Relish* Berries cooked into a syrup. (32:33) **Havasupai** *Beverage* Dried berries ground and mixed with water to make a drink. *Dried Food* Berries sun dried for future use. (197:239) **Hopi** *Fruit* Berries eaten fresh from the shrub. (56:19) Berries eaten. (138:47) *Porridge* Ground berries mixed with "potato clay" and eaten. (42:332) *Preserves* Berries cooked to make a jam-like food and served with fresh piki bread. (120:19) *Starvation Food* Berries boiled, ground, mixed with "potato clay," and eaten during past famines. (200:89) *Unspecified* Seeds eaten. (190:166) **Isleta** *Fruit* Fresh, summer berries eaten for food. (100:34) **Jemez** *Fruit* Ripe or cooked berries used for food. *Special Food* Unripe berries stewed, sweetened, and eaten as a delicacy. (32:33) **Keres, Western** *Sauce & Relish* Cooked berries made into a syrup. (171:52) **Laguna** *Sauce & Relish* Berries cooked into a syrup. (32:33) **Navajo** *Beverage* Berries mashed in water and used as a beverage. (110:32) *Dried Food* Fruits boiled, dried, stored for winter use, and eaten dry. (55:74) Sun dried berries used for food. (110:32) *Fruit* Fruits eaten fresh. (55:74) Berries used for food. (90:153) Berries eaten fresh off the bush. (110:32) Fresh, mashed berries mixed with powdered clay to counteract astringency and used for food. (165:222) *Soup* Fruits boiled, dried, stored for winter use, and made into a soup. (55:74) Berries used to make soup and stew. (110:32) *Special Food* Fruit sacrificed to the gods. (55:74) *Winter Use Food* Fresh berries soaked, boiled until tender, ground with clay, and stored for winter use. (165:222) **Navajo, Ramah** *Dried Food* Berries dried and boiled with clay, sugar, or wild potatoes. *Fruit* Berries eaten raw or boiled with clay. (191:42) **Zuni** *Fruit* Berries eaten raw when perfectly ripe or boiled and sometimes sweetened. (166:68)

**Other**—Hopi *Ceremonial Items* Whole shrub used in Niman kachina dance. (42:332) **Navajo Sacred Items** Plant considered to be a sacred plant. (56:19) **Navajo, Ramah Ceremonial Items** Thorn ash used for Evilway blackening. Stem used to make Evilway big hoop. (191:42) **Zuni Protection** Ground leaves, twigs, and flowers given to warriors for protection during war. A pinch of the mixture was given to each warrior. The warriors placed it in their mouths, ejected the mass into their hands, and rubbed in on their faces, arms, and bodies so that the enemy's arrows could not harm them. (166:94)

**Lycium sp.**, Wolfberry

**Food**—Pima, Gila River *Fruit* Fruits eaten raw and boiled. (133:7)

**Lycium torreyi** Gray, Squawthorn

**Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Leaves or root used as ceremonial emetic. *Misc. Disease Remedy* Plant used for chickenpox and poultice of plant used for toothaches. *Panacea* Bark and dried berries used as "life medicine." *Toothache Remedy* Poultice of heated root applied for toothache. (191:42)

**Food**—Navajo, Ramah *Dried Food* Berries dried and boiled with clay, sugar, or wild potatoes. *Fruit* Berries eaten raw or boiled with clay. (191:42) **Tubatulabal Fruit** Berries used extensively for food. (193:15)

**Other**—Navajo, Ramah *Ceremonial Items* Stem used to make Evilway big hoop. Thorn ash used for Evilway blackening. (191:42)

**Lycoperdaceae**, see *Bovista*, *Bovistella*, *Calvatia*, *Geastrum*, *Lycoperdon*

**Lycoperdon**, Lycoperdaceae, fungus

**Lycoperdon sp.**, Puffball

**Drug**—Blackfoot *Antihemorrhagic* Spores mixed with water and taken for internal hemorrhage. *Hemostat* Poultice of spores applied to wounds as a styptic. Plant pieces held to the nose for nosebleeds. (86:84) *Veterinary Aid* Plant pieces applied as a styptic on castration wounds and other cuts. (86:89) **Haisla & Hanaksiala Poison** Spores dangerous, especially harmful to the eyes. (43:134) **Pomo, Kashaya Poison** Plant considered poisonous. (72:132)

**Other**—Blackfoot *Ceremonial Items* Puffballs figured into religious life. Puffballs were thought to be stars that had fallen to earth during supernatural events. There was a story about the woman who married Morning Star and had a child by this supernatural being. When she returned to earth with the Natoas bundles and her child, she was directed by the star personage to keep her baby from touching the ground for 14 days. She managed all right until the day she went for wood and left the child in the care of a grandmother. The grandmother was careless and the baby touched the ground. It turned into a large puffball and returned to the heavens as the Fixed Star (North Star), plugging the hole left by the woman when she pulled out the Holy Turnip. Used in the Firelighters bundle of the Horn Society for use as punk to light a fire easily. *Designs* Small, painted circles at the base of the tepee represented puffballs to insure fire to those within. *Incense & Fragrance* Puffballs used as incense to keep ghosts away. (86:38)

**Lycopersicon**, Solanaceae

**Lycopersicon esculentum** P. Mill., Garden Tomato

• **Food**—Haisla & Hanaksiala *Fruit* Fruit used for food. (43:291) **Seminole Unspecified** Plant used for food. (169:508)

**Lycopodiaceae**, see *Huperzia*, *Lycopodium*

**Lycopodium**, Lycopodiaceae, club moss

**Lycopodium annotinum** L., Stiff Clubmoss

• **Fiber**—Shuswap *Building Material* Moss mixed with clay and used between the logs of a log house. (123:49)

• **Other**—Cree, Woodlands *Cooking Tools* Plant used to separate raw fish eggs from the membranes. (109:44) **Shuswap Fertilizer** Moss mixed with house plant dirt as a fertilizer to make the plants healthier. (123:49)

**Lycopodium clavatum** L., Running Clubmoss

• **Drug**—Aleut *Analgesic* and *Gynecological Aid* Infusion of plant taken for postpartum pain. (8:427) **Carrier, Southern Analgesic** Moss inserted into the nose to cause bleeding for headaches. (150:48) **Montagnais Febrifuge** "Brew" from plant used for weakness and fever. *Stimulant* Compound containing plant used for weakness and fever. (156:315) **Potawatomi Hemostat** Spores of fruiting spikes used as a styptic and coagulant. (154:64)

• **Fiber**—Hanaksiala *Clothing* Plant used as a belt for the blankets that were worn. (43:157)

• **Other**—Bella Coola *Decorations* Used to make wreaths. (184:196) **Hesquiat Decorations** Used by children to make Christmas decorations. (185:29) **Oweekeno Jewelry** Plant used to make a decorative necklace worn during festive occasions. (43:59) **Thompson Decorations** Plant used as a Christmas decoration. One informant used it as a Christmas decoration but was told not to use it by her chief as it was considered to bring bad luck. He said, "that's for the devil." (187:87)

**Lycopodium complanatum** L., Groundcedar

• **Drug**—Blackfoot *Dermatological Aid* Spores applied as an antiseptic dust on wounds. *Hemostat* Spores snuffed for nosebleed. *Pulmonary Aid* Decoction of plant used for lung diseases. *Venereal Aid* Decoction of plant used for venereal diseases. (97:16) **Iroquois Reproductive Aid** Compound decoction taken to induce pregnancy. (87:263) **Ojibwa Stimulant** Dried leaves used as a reviver. (153:375)

• **Dye**—Blackfoot *Mordant* Whole plant used as a mordant to set certain dyes. (97:16)

**Lycopodium dendroideum** Michx., Tree Groundpine

• **Drug**—Montagnais *Cathartic* and *Gastrointestinal Aid* Decoction of plant taken as a purgative "in case of biliousness." (156:316) **Penobscot Unspecified** Plant thought to have "some medicinal value." (156:309)

**Lycopodium obscurum** L., Rare Clubmoss

• **Drug**—Chippewa *Antirheumatic (External)* Compound decoction of moss used as herbal steam for rheumatism. (53:362) **Iroquois Blood Medicine** Cold, compound decoction taken for weak blood. *Gynecological Aid* Decoction of root taken for change of life and resulting blindness and deafness. (87:263) **Ojibwa Diuretic** Plant combined with *Diervilla lonicera* and taken as a diuretic. (153:375) **Potawatomi Hemostat** Spores of fruiting spikes used as a styptic and coagulant. (154:64)

- **Other**—Cree, Woodlands *Cooking Tools* Plant used to separate raw fish eggs from the membranes. (109:44)

### *Lycopodium sabinifolium* Willd., Savinleaf Groundpine

- **Drug**—Iroquois *Veneral Aid* Compound decoction with plant taken for gonorrhea. (87:263)

### *Lycopodium* sp., Clubmoss

- **Drug**—Algonquin, Quebec *Gynecological Aid* Used to make a medicinal tea for inducing labor and making childbirth easier. *Pediatric Aid* and *Urinary Aid* Used to make a medicinal tea for children with bladder trouble. (18:120) **Iroquois** *Anticonvulsive* Compound decoction taken by men for epilepsy. *Diuretic* Compound decoction used as a diuretic. *Hemostat* Smoke (spores) from plant sprinkled on nosebleed. (87:262) **Micmac** *Febrifuge* Herb used for fever. (as *Lycopodia* 40:58)

### *Lycopus*, Lamiaceae

#### *Lycopus americanus* Muhl. ex W. Bart., American Waterhorehound

- **Drug**—Meskwaki *Analgesic* and *Gastrointestinal Aid* Compound containing entire plant used for stomach cramps. (152:225)

#### *Lycopus asper* Greene, Rough Bugleweed

- **Drug**—Iroquois *Laxative* and *Pediatric Aid* Decoction of plants given to children as a laxative. *Poison* Plant considered poisonous. (as *L. lucidus* ssp. *americanus* 87:427)
- **Food**—Chippewa *Dried Food* Dried, boiled, and used for food. (53:320)

#### *Lycopus* sp., Waterhorehound

- **Drug**—Blackfoot *Cold Remedy* and *Pediatric Aid* Plant compounded with other plants and used for children's colds. (97:51)

#### *Lycopus uniflorus* Michx., Northern Bugleweed

- **Food**—Okanagon *Staple* Roots used as a principal food. (as *Cycopus uniflorus* 178:238) **Thompson** *Dessert* Cooked tuberous root eaten for dessert. (187:232) *Unspecified* Roots eaten. (164:480) Tuberous root steamed or baked and used for food. (187:232)

#### *Lycopus virginicus* L., Virginia Waterhorehound

- **Drug**—Cherokee *Ceremonial Medicine* Infusion taken at green corn ceremony. *Other* and *Pediatric Aid* Chewed root given to infants to give them "eloquence of speech." *Snakebite Remedy* Root chewed, a portion swallowed, the rest applied to snakebite wound. *Veterinary Aid* Decoction fed to snakebitten dog. (80:39) **Iroquois** *Poison* Roots and leaves considered poisonous. (87:426)

### *Lygodesmia*, Asteraceae

#### *Lygodesmia grandiflora* (Nutt.) Torr. & Gray, Largeflower Skeletonplant

- **Drug**—Gosiute *Veterinary Aid* Plant used as a horse medicine. (39:374) **Hopi** *Gynecological Aid* Leaves chewed to increase mother's milk supply. (200:36, 97) **Navajo, Kayenta** *Dermatological Aid* Plant milk applied to sores caused by sunburn. (205:48)
- **Food**—Hopi *Spice* Boiled with a certain kind of mush for flavor. (190:168) *Unspecified* Leaves boiled with meats and eaten. (56:19) Leaves boiled with meat. (200:97) **Navajo, Kayenta** *Vegetable* Used for greens in foods. (205:48)

#### *Lygodesmia juncea* (Pursh) D. Don ex Hook., Rush Skeletonplant

- **Drug**—Blackfoot *Cough Medicine* Infusion of stems taken for burning coughs. (86:72) *Dermatological Aid* Infusion of stems mixed with grease and applied as a hair tonic. (86:124) *Diuretic* Infusion of powdered galls taken as a diuretic. (86:70) *Gastrointestinal Aid* Decoction of plant taken for heartburn. (97:61) *Gynecological Aid* Decoction of plant taken for symptoms resembling heartburn caused by pregnancy. (86:61) *Kidney Aid* Infusion of plant taken for kidney trouble. (86:70) *Orthopedic Aid* Crushed stems used as foot pads in moccasins. (86:115) *Pediatric Aid* and *Tonic* Infusion of plant used as a general tonic for children. (86:67) *Veterinary Aid* Infusion of plant rubbed on saddle sores and leg wounds. Infusion of plant given to horses with coughs. (86:89) **Cheyenne** *Breast Treatment* Infusion of dried stems taken to increase milk flow. (82:27) *Gynecological Aid* Simple or compound decoction of plant taken to increase maternal milk flow. (75:41) Infusion of plant taken by women after childbirth to increase milk flow. (76:191) Infusion of stems taken by pregnant and nursing mothers to increase milk flow. (83:22) *Misc. Disease Remedy* Infusion of leaves taken for smallpox and measles. (76:191) *Pediatric Aid* Infusion of stems taken by pregnant and nursing mothers for a healthy baby. (83:22) *Psychological Aid* Infusion of dried stems taken to bring feelings of contentment to mothers. (82:27) **Keres, Western** *Antirheumatic (External)* Poultice of crushed plant, warmed with rocks, applied to swellings. (171:53) **Lakota** *Antidiarrheal* and *Pediatric Aid* Infusion of whole plant used for children with diarrhea. (139:38) **Omaha** *Eye Medicine* Infusion of stems used as a wash for sore eyes. *Gynecological Aid* Infusion of stems taken by nursing mothers to increase milk flow. (70:136) **Ponca** *Antidiarrheal* Infusion of plant taken for diarrhea. (94:152) *Eye Medicine* Infusion of stems used as a wash for sore eyes. (70:136) Infusion of plant applied to sore eyes. (94:152) *Gynecological Aid* Infusion of stems taken by nursing mothers to increase milk flow. (70:136) Infusion of plant used to increase milk flow of mothers. (94:152) **Sioux** *Eye Medicine* Infusion of dried stems used for sore eyes. *Gynecological Aid* Infusion of dried stems taken to increase milk flow. (82:27)
- **Food**—Lakota *Unspecified* Plant chewed. (139:38) **Navajo, Ramah** *Candy* Roots left in the sun until gum came out and hardened and used for chewing gum. (191:52) **Sioux** *Unspecified* Hardened juice chewed for the flavor. (82:27)
- **Other**—Blackfoot *Waterproofing Agent* Stems used to waterproof newly tanned buffalo hides. (86:115) **Keres, Western** *Decorations* Plant used for decorations in ceremonial dances. (171:53)

#### *Lygodesmia* sp., Desert Gum

- **Food**—Washo *Candy* Plant gum used for chewing gum. (118:56)

### *Lyonia*, Ericaceae

#### *Lyonia fruticosa* (Michx.) G. S. Torr., Coastalplain Staggerbush

- **Other**—Seminole *Smoking Tools* Plant used to make pipe bowls. (as *Xolisma fruticosa* 169:466)

#### *Lyonia mariana* (L.) D. Don, Piedmont Staggerbush

- **Drug**—Cherokee *Dermatological Aid* Infusion used for toe itch, "ground-itch," and ulcers. (80:57)

### *Lysichiton*, Araceae

***ysichiton americanus*** Hultén & St. John, American Skunk-cabbage

**Drug**—**Bella Coola** *Gastrointestinal Aid* Decoction of root taken for stomach trouble. (as *L. kamtschatscense* 150:52, 53) **Clallam** *Dermatological Aid* Poultice of roots used for sores. (57:196) **Cowlitz** *Antirheumatic (External)* Poultice of heated blossoms applied to the body for rheumatism. (79:22) **Gitksan** *Antihemorrhagic* Compound containing root used as plaster on the chest for lung hemorrhages. *Antirheumatic (External)* Compound containing root used for rheumatism. Poultice applied or leaves sat on or lain on in sweat bath for rheumatism. *Antirheumatic (Internal)* Smoke of root inhaled for influenza, rheumatism, and bad dreams. *Dermatological Aid* Simple or compound poultice of mashed root applied for blood poisoning and boils. *Misc. Disease Remedy* Smoke from burning roots inhaled for influenza and bad dreams. *Poison* Roots considered poisonous. *Pulmonary Aid* Compound containing root used as plaster on the chest for lung hemorrhages. *Sedative* Smoke of root inhaled for bad dreams, influenza, and rheumatism. (as *L. kamtschatscense* 150:52, 53) **Haisla & Hanaksiala** *Burn Dressing* Poultice of pounded root paste applied to burns. *Urinary Aid* Roots used experimentally for bloody urine. (43:189) **Hesquiat** *Burn Dressing* Poultice of cold and fresh leaves applied for burns. (186:78) *Dermatological Aid* Poultice of cool leaves used for bad burns. *Unspecified* Roots used as a medicine. (185:48) **Klallam** *Dermatological Aid* Poultice of baked roots applied to carbuncles. *Tuberculosis Remedy* Poultice of leaves applied to parts of the body sore with scrofula. (79:22) **Kwakiutl** *Dermatological Aid* Poultice of leaf, oil, down, and Douglas fir bark applied to carbuncles. (183:270) Heated leaves used to draw out thorns and splinters. Poultice of steamed, mashed roots applied to swellings. Poultice of washed, heated leaves applied to boils, carbuncles, and sores. Pulverized root rubbed into a child's head to make his hair grow. *Herbal Steam* Leaves used in a sweat bath for general weakness or undefined sickness. *Other* Leaves used in a sweat bath for undefined sickness. *Pediatric Aid* Pulverized root rubbed into a child's head to make his hair grow. *Stimulant* Leaves used in a sweat bath for general weakness. (183:271) **Makah** *Abortifacient* Raw root chewed by women to effect an abortion. (79:22) Roots chewed to induce an abortion. (186:78) *Analgesic* Poultice of warmed leaves applied for chest pain. (79:22) Warmed leaves applied to chest for pain. (186:78) *Antirheumatic (External)* Roots used for arthritis. (67:336) *Blood Medicine* Decoction of roots taken as a blood purifier. *Gastrointestinal Aid* Root chewed to soothe the stomach after taking an emetic. *Pulmonary Aid* Poultice of warmed leaves applied for chest pain. (79:22) *Unspecified* Roots used medicinally for unspecified purpose. (67:336) **Nitinaht** *Burn Dressing* Poultice of one leaf applied for severe burns. (186:78) **Quileute** *Analgesic* Leaves used for headaches. *Dermatological Aid* Poultice of leaves applied to cuts and swellings. *Febrifuge* Leaves used for fevers. *Gynecological Aid* Decoction of pounded root taken to bring about easy delivery. **Quinault** *Panacea* Poultice of leaves applied for many ailments. *Urinary Aid* Decoction of roots taken to clean out the bladder. **Samish** *Other* Infusion of roots used as a wash for invalids. (79:22) **Shuswap** *Analgesic* Poultice of leaves applied for pain, particularly pains in the knees. *Dermatological Aid* Poultice of leaves applied to sores. *Orthopedic Aid* Poultice of leaves applied for pain, particularly pains in the knees. *Pana-*

*cea* Cold infusion of roots taken for any sickness. (123:53) **Skokomish** *Analgesic* Leaves used for headaches. *Cathartic* Infusion of roots taken as a physic. *Dermatological Aid* Poultice of leaves applied to cuts and swellings. *Febrifuge* Leaves used for fevers. **Swinomish** *Other* Infusion of roots used as a wash for invalids. (79:22) **Thompson** *Dermatological Aid* Powdered, charred rhizome mixed with bear grease, used as an ointment for animal bites and infections. Charcoal used for wounds. The charcoal was applied four times, the fourth time being mixed with bear grease. *Psychological Aid* Leaves placed under pillows during sleep or the head washed with charcoal to induce "power dreams." (187:113) **Tolowa** *Antirheumatic (External)* Roots used in a steam for arthritis and lumbago. *Other* Roots used in a steam for stroke. **Yurok** *Antirheumatic (External)* Roots used in a steam for arthritis and lumbago. *Misc. Disease Remedy* Roots used in a steam for stroke. (6:38)

- **Food**—**Cowlitz** *Unspecified* Blossoms cooked overnight and eaten no more than two or three at a time, otherwise one became sick. (79:22) **Haisla & Hanaksiala** *Forage* Roots eaten by black and grizzly bears after hibernation, to cleanse and strengthen their stomachs. (43:189) **Hesquiat** *Forage* Roots eaten by deer and bear. (185:48) **Hoh** *Forage* Plants eaten by bears in spring. *Spice* Leaves placed over roasting camas, wild onion, or garlic for flavoring. (as *L. kamtschatscense* 137:59) **Okanagan-Colville** *Forage* Flower stalks sucked by grizzly and black bears. (188:35) **Oweekeno** *Forage* Roots eaten by bears after emerging from hibernation. (43:76) **Quileute** *Forage* Plants eaten by bears in spring. *Spice* Leaves placed over roasting camas, wild onion, or garlic for flavoring. (as *L. kamtschatscense* 137:59) *Unspecified* Root cooked and eaten. **Skokomish** *Unspecified* Young leaves steamed and eaten. (79:22) **Tolowa** *Unspecified* Root centers eaten after boiling eight times. **Yurok** *Unspecified* Root centers eaten after boiling eight times. (6:38)
- **Other**—**Bella Coola** *Containers* Large leaves folded and used as berry containers. *Cooking Tools* Large leaves folded and used as drinking cups, as covering for drying cakes, and to line pits. (184:198) **Haisla & Hanaksiala** *Cooking Tools* Leaves used to wrap western hemlock cambium, bear meat, and porcupine meat while cooking. Leaves used as a mat when drying berries. (43:189) **Hesquiat** *Containers* Leaves used as sheets to dry berries. (185:48) **Hoh** *Containers* Leaves wrapped around cooked fruits and buried in swampy regions for preservation. *Cooking Tools* Leaves used to wrap red elderberries during baking. (as *L. kamtschatscense* 137:59) **Kitasoo** *Toys & Games* Spadices on sticks thrown by children in distance contests. (183:271) *Cooking Tools* Leaves used for drying salal berry cakes. (183:282) Leaves used with green grass leaves to line steaming boxes for cooking lupine roots. Leaves used to wrap wild clover roots for baking, boiling, and steaming. (183:285) Leaves used for steam cooking salmon. (183:271) **Makah** *Containers* Leaves used for drying salal berries and to line berry baskets. (79:22) *Cooking Tools* Leaves used to cover sprouts while cooking. (67:336) **Nitinaht** *Containers* Large, waxy leaves used as berry containers and for wrapping leftover food. (186:78) *Cooking Tools* Leaves used to make rectangular drying frames for drying mashed salal berries. (186:105) Large, waxy leaves used as plates, drinking cups, berry drying racks, and steam

pit covers. (186:78) **Okanagan-Colville Containers** Leaves placed over and under the food in steaming pit cooking. (188:35) **Oweekeno Containers** Leaves used to line berry baskets to prevent the berries from falling through holes in the baskets. *Cooking Tools* Leaves folded into makeshift cups. (43:76) **Quileute Containers** Leaves used to wrap salal berries and elderberries while drying. (79:22) Leaves wrapped around cooked fruits and buried in swampy regions for preservation. *Cooking Tools* Leaves used to wrap red elderberries during baking. (as *L. camtschaticense* 137:59) **Good Luck Charm** Leaves placed under canoe bow pieces to make seals easier to catch. (79:22) **Salish, Coast Cooking Tools** Leaves used to make water dippers on camping trips. (182:73) **Samish Containers** Large leaves doubled or rolled and used as cups for drinking or picking berries. **Swinomish Containers** Large leaves doubled or rolled and used as cups for drinking or picking berries. (79:22) **Thompson Protection** Charcoal used as protection against "witchcraft." (187:113) **Tolowa Containers** Leaves used as a vessel to drive water from streams. *Cooking Tools* Leaves used to wrap sturgeon eggs baked in ashes. (6:38) **Tsimshian Containers** Leaves used to line cooking pits. Leaves used to cover and wrap foods during collection, transit, storage, or cooking. *Cooking Tools* Leaves used as an underlay for drying berries. (43:320) **Yurok Containers** Leaves used as a vessel to drive water from streams. *Cooking Tools* Leaves used to wrap sturgeon eggs baked in ashes. (6:38)

#### *Lysichiton* sp., Skunkcabbage

- **Other**—Poliklah *Containers* Leaves used as a temporary lining for openwork baskets when used to hold berries. (117:173)

### *Lysimachia*, Primulaceae

#### *Lysimachia quadrifolia* L., Whorled Yellow Loosestrife

- **Drug**—Cherokee *Gastrointestinal Aid* Decoction of root taken for "bowel trouble" and "kidney problems." *Gynecological Aid* Infusion taken for "female trouble." *Kidney Aid* Taken "for kidney problems." (80:43) *Urinary Aid* Infusion of roots taken for urinary troubles. (177:50) **Iroquois Emetic** Infusion of roots taken as an emetic. (87:411)

#### *Lysimachia thyrsoiflora* L., Tufted Loosestrife

- **Drug**—Iroquois *Gynecological Aid* Compound decoction used as wash and applied as poultice to stop milk flow. (87:411)

### Lythraceae, see *Ammannia*, *Lythrum*

### *Lythrum*, Lythraceae

#### *Lythrum alatum* var. *lanceolatum* (Ell.) Torr. & Gray ex Rothrock, Winged Lythrum

- **Drug**—Cherokee *Kidney Aid* Infusion taken "for kidneys." (as *L. lanceolatum* 80:43)

#### *Lythrum californicum* Torr. & Gray, California Loosestrife

- **Drug**—Kawaiisu *Dermatological Aid* Plant used for washing hair. *Unspecified* Plant used medicinally. (206:40)

#### *Lythrum salicaria* L., Purple Loosestrife

- **Drug**—Iroquois *Febrifuge* and *Witchcraft Medicine* Compound decoction of plants taken for fever and sickness caused by the dead. (87:389)

### *Machaeranthera*, Asteraceae

#### *Machaeranthera alta* A. Nels., Purple Aster

- **Drug**—Navajo *Dermatological Aid* Plant used as a rub on pimples. (55:88)

#### *Machaeranthera canescens* (Pursh) Gray ssp. *canescens* var. *canescens*, Cutleaf Goldenweed

- **Drug**—Navajo *Nose Medicine* Dried and pulverized plant used as a snuff for nose troubles. *Throat Aid* Dried and pulverized plant used as a snuff for throat troubles. (as *Aster canescens* 55:82) **Okanagan-Colville Witchcraft Medicine** Used for witchcraft. (as *Aster canescens* 188:79) **Zuni Emetic** Infusion of whole plant taken and rubbed on abdomen as an emetic. (as *M. glabella* 166:56)

#### *Machaeranthera canescens* ssp. *canescens* var. *leucanthemifolia* (Greene) Welsh, Whiteflower Machaeranthera

- **Drug**—Paiute *Throat Aid* Poultice of mashed leaves applied to swollen jaw or neck glands. **Shoshoni Analgesic** Decoction of fresh or dried leaves taken for headaches. *Blood Medicine* Decoction of whole plant taken as a blood tonic. *Cathartic* Warm infusion of plant tops taken as a physic. *Eye Medicine* Infusion of scraped roots used as an eyewash. *Tonic* Decoction of whole plant taken as a blood tonic. (as *Aster leucanthemifolius* 180:49)

#### *Machaeranthera canescens* ssp. *glabra* var. *aristata*

(Eastw.) B. L. Turner, Hoary Tansyaster

- **Drug**—Hopi *Gynecological Aid* Decoction of plant taken by parturient women for any disorder. (as *Aster cichoriaceus* 200:36, 94) *Stimulant* Decoction of plant taken as a strong stimulant. (as *Aster cichoriaceus* 200:31, 94)

#### *Machaeranthera gracilis* (Nutt.) Shinnery, Slender Goldenweed

- **Drug**—Navajo, Ramah *Dermatological Aid* Cold infusion used as lotion for pimples, boils, and sores. *Eye Medicine* Cold, compound infusion of plant used as an eyewash. *Internal Medicine* Decoction of plant taken for internal injury. *Respiratory Aid* Plant used as snuff to cause sneezing, clearing congested nose. (as *Aplopappus gracilis* 191:47)
- **Food**—Navajo, Ramah *Dried Food* Dried seeds used for food. (as *Aplopappus gracilis* 191:47)

#### *Machaeranthera grindelioides* (Nutt.) Shinnery

var. *grindelioides*, Rayless Aster

- **Drug**—Hopi *Cough Medicine* Decoction of root taken for cough. (as *Aplopappus nuttallii* 200:35, 94)

#### *Machaeranthera parviflora* Gray, Smallflower Tansyaster

- **Drug**—Navajo *Cathartic* Plant used as a purgative. (as *Aster parviflorus* 90:148)

#### *Machaeranthera pinnatifida* (Hook.) Shinnery

ssp. *pinnatifida*, Lacy Tansyaster

- **Drug**—Navajo *Analgesic* Plant or some part of it used for headaches. (as *Haplopappus spinulosus* ssp. *typicus* 90:151)

#### *Machaeranthera tanacetifolia* (Kunth) Nees, Tanseyleaf Aster

- **Drug**—Hopi *Gynecological Aid* Decoction of plant taken by parturi-

ent women for any disorder. (as *Aster tanacetifolius* 200:36, 94) *Stimulant* Decoction of plant taken as a strong stimulant. (as *Aster tanacetifolius* 200:31, 94) **Navajo, Ramah** *Gastrointestinal Aid* Decoction of whole plant taken for stomachache. *Respiratory Aid* Dried root used as snuff to cause sneezing to relieve congested nose. (as *Aster tanacetifolius* 191:49) **Zuni** *Unspecified* Infusion of flowers taken with other flowers for unspecified illnesses. (27:375)

## **Machaerocereus**, Cactaceae

***Machaerocereus eruca*** (T. Brandeg.) Britt. & Rose

- **Food**—**Papago & Pima** *Fruit* Fruit used for food. (35:42)

***Machaerocereus gummosus*** (Engelm.) Britt. & Rose, Pitahaya Agria

- **Food**—**Papago & Pima** Fruit used for food. (35:40)

## **Maclura**, Moraceae

***Maclura pomifera*** (Raf.) Schneid., Osage Orange

- **Drug**—**Comanche** *Eye Medicine* Decoction of root used as a wash for sore eyes. (29:522)
- **Dye**—**Kiowa** *Yellow* Outer portion of the roots yielded a yellow dye. (192:23) **Pima** *Unspecified* Inner wood and large roots formerly used as dyes. (47:83)
- **Other**—**Comanche** *Hunting & Fishing Item* Branches used to make bows. (29:522) **Kiowa** *Ceremonial Items* Wood used as the favorite material for the staff held by singer in the peyote ceremony. *Hunting & Fishing Item* Wood used for making bows. (192:23) **Omaha** *Hunting & Fishing Item* Wood used to make bows. **Pawnee** *Hunting & Fishing Item* Wood used to make bows. (as *Toxylon pomiferum* 70:76) **Pima** *Hunting & Fishing Item* Used to make bows. (47:83) **Ponca** *Hunting & Fishing Item* Wood used to make bows whenever obtainable. (as *Toxylon pomiferum* 70:76) **Seminole** *Hunting & Fishing Item* Plant used to make bows. (169:467) **Tewa** *Hunting & Fishing Item* Wood used to make bows. This plant grew outside Tewa country. It was considered to be better for making bows than any native wood. It was brought from the east by the Tewa, or obtained from the Comanche or other eastern tribes. (as *M. aurantiaca* 138:68)

## **Macranthera**, Scrophulariaceae

***Macranthera* sp.**

- **Drug**—**Jemez** *Veterinary Aid* Decoction of plant given to horses with blood poisoning. (44:25)

## **Macrocystis**, Lessoniaceae, alga

***Macrocystis integrifolia*** Bory, Giant Kelp

- **Food**—**Haisla & Hanaksiala** *Unspecified* Plant used to collect herring roe, dried and eaten with the roe. (43:127) **Kitasoo** *Unspecified* Plant eaten with herring roe. (43:303) **Oweekeno** *Dried Food* Plant and herring eggs dried for future use. *Unspecified* Plant eaten with herring roe. *Winter Use Food* Plant and herring eggs preserved in brine for future use. (43:45)
- **Other**—**Heiltzuk** *Cash Crop* Plant traded for oolichan (candlefish) grease and smoked oolichans. (43:127) **Hesquiat** *Toys & Games* Children threw dried, little floats from blade base onto fire to make them explode; firecrackers. (185:24) **Kitkatla** *Cash Crop* Plant traded for oolichan (candlefish) grease and smoked oolichans. (43:127) **Kwaki-**

**utl, Southern** *Hunting & Fishing Item* Blades weighted, placed underwater at river mouths, and used to catch herring spawn. (183:261)

***Macrocystis luetkeana***, Giant Kelp

- **Food**—**Pomo** *Unspecified* Plant chewed raw. (as *M. luetkeana* 11:94)

## **Macromeria**, Boraginaceae

***Macromeria viridiflora*** DC., Gianttrumpets

- **Drug**—**Hopi** *Anticonvulsive* Dried plant and mullein smoked for “fits,” craziness, and witchcraft. (as *Onosmodium thurberi* 200:33, 88) *Psychological Aid* Compound of plant smoked by persons not in their “right mind.” *Witchcraft Medicine* Compound of plant smoked as a cure for persons with “power to charm.” (as *Onosmodium thurberi* 200:88)

## **Madia**, Asteraceae

***Madia capitata*** Nutt., Coast Tarweed

- **Food**—**Pomo** *Staple* Seeds used to make pinoles. (11:87)

***Madia elegans*** D. Don ex Lindl., Common Madia

- **Food**—**Hupa** *Staple* Seeds parched and pounded into a flour. (148:390) **Mewuk** *Staple* Seeds roasted with hot coals, pounded or rolled into flour, and eaten dry. (117:338) **Miwok** *Staple* Pulverized seeds eaten as a dry meal. (12:154) **Neeshenam** *Bread & Cake* Seeds parched, ground into flour, and used to make bread. *Porridge* Seeds parched, ground into flour, and used to make mush. *Staple* Seeds parched, ground into flour, and used for food. (as *Madaria*, tarry smelling weed 129:377) **Pomo** *Staple* Seeds used to make pinoles. (11:87) **Pomo, Kashaya** *Staple* Seeds used to make pinole. (72:112) **Shoshoni** *Unspecified* Seeds roasted and eaten alone or mixed with manzanita berries, acorns, and pine nuts. (117:440)

***Madia elegans* ssp. *densifolia*** (Greene) Keck, Showy Tarweed

- **Food**—**Pomo** *Staple* Seeds used to make pinoles. (as *M. densifolia* 11:87)

***Madia glomerata*** Hook., Mountain Tarweed

- **Drug**—**Cheyenne** *Ceremonial Medicine* Dried plant used in special ceremony for perverted, oversexed people. *Herbal Steam* Infusion of stems and leaves taken and used as a steam bath for venereal disease. *Love Medicine* Dried plant aroma used as a love medicine to attract a woman. *Psychological Aid* Dried plant used for perverted, oversexed people. *Venereal Aid* Infusion of stems and leaves taken and used as a steam bath for venereal disease. (83:22) **Crow** *Ceremonial Medicine* Dried herbs burned as incense in some ceremonies. (19:15)
- **Food**—**Crow** *Unspecified* Seeds used for food. (19:15) **Klamath** *Unspecified* Seeds used for food. (45:106)

***Madia gracilis*** (Sm.) Keck & J. Clausen ex Applegate **ssp. *gracilis***, Grassy Tarweed

- **Food**—**Mendocino Indian** *Staple* Seeds used to make pinole. (as *M. dissitiflora* 41:395) **Miwok** *Staple* Parched, pulverized seeds made into oily meal and readily picked up in lumps. (as *M. dissitiflora* 12:154) **Pomo** *Staple* Seeds used to make pinoles. (as *M. dissitiflora* 11:87)

***Madia sativa*** Molina, Coast Tarweed

- **Food**—**Mendocino Indian** *Cooking Agent* Oil from seeds used for

cooking. (41:395) **Miwok** *Unspecified* Seeds used for food. (12:154) **Pomo** *Porridge* Parched, pulverized seeds eaten as pinole and meal moistened to keep people from choking on dry meal. (66:15) *Staple* Seeds used to make pinoles. (11:87) *Winter Use Food* Raw seeds stored for later use, parched, and pounded when used for food. (66:15) **Pomo, Kashaya** *Staple* Seeds used to make pinole. (72:111)

### *Madia* sp., Tarweed

- **Food**—**Wintoon** *Staple* Seeds used to make pinole. (117:274)

### Magnoliaceae, see *Liriodendron*, *Magnolia*

### *Magnolia*, Magnoliaceae

#### *Magnolia acuminata* (L.) L., Cucumber Tree

- **Drug**—**Cherokee** *Analgesic* Infusion of bark taken for stomachache or cramps. *Antidiarrheal* Compound medicine containing bark taken for “bloody flux.” *Gastrointestinal Aid* Infusion of bark used for toothache. Used in steam bath for “indigestion or biliousness with swelling abdomen.” *Respiratory Aid* Hot infusion of bark snuffed for sinus and used for toothache. *Toothache Remedy* Warm compound decoction of bark held in mouth for toothache. (80:44) **Iroquois** *Anthelmintic* Compound decoction taken by men for worms caused by venereal disease. *Toothache Remedy* Infusion of inner bark “chewed” for toothaches. *Venereal Aid* Compound decoction taken by men for worms caused by venereal disease. (87:330)
- **Fiber**—**Cherokee** *Building Material* Wood used for lumber. *Furniture* Wood used to make furniture. (80:44)
- **Other**—**Cherokee** *Paper* Wood used for pulpwood. (80:44)

#### *Magnolia grandiflora* L., Southern Magnolia

- **Drug**—**Choctaw** *Dermatological Aid* Decoction of bark used as wash for prickly heat itching. (25:23) Decoction of plant used as a bath for prickly heat. *Kidney Aid* Infusion of mashed bark used as a steam bath for dropsy. **Koasati** *Dermatological Aid* Decoction of bark used as a wash for sores. (177:23)

#### *Magnolia macrophylla* Michx., Bigleaf Magnolia

- **Drug**—**Cherokee** *Analgesic* Infusion of bark taken for stomachache or cramps. *Antidiarrheal* Compound medicine containing bark taken for “bloody flux.” *Gastrointestinal Aid* Infusion of bark taken for stomachache or cramps. Used in steam bath for “indigestion or biliousness with swelling abdomen.” *Respiratory Aid* Hot infusion of bark snuffed for sinus and used for toothache. *Toothache Remedy* Warm compound decoction of bark held in mouth for toothache. (80:44)
- **Fiber**—**Cherokee** *Building Material* Wood used for lumber. *Furniture* Wood used to make furniture. (80:44)
- **Other**—**Cherokee** *Paper* Wood used for pulpwood. (80:44)

#### *Magnolia virginiana* L., Sweet Bay

- **Drug**—**Houma** *Blood Medicine* Decoction of leaves and twigs taken to warm the blood. *Cold Remedy* Decoction of leaves and twigs taken for colds. *Febrifuge* Decoction of leaves and twigs taken for chills. (158:56) **Rappahannock** *Hallucinogen* Leaves or bark placed in cupped hands over nose and inhaled as “mild dope.” (as *M. glauca*, laurel 161:28)

### *Mahonia*, Berberidaceae

#### *Mahonia aquifolium* (Pursh) Nutt., Hollyleaved Barberry

- **Drug**—**Blackfoot** *Antihemorrhagic* Decoction of root used for hemorrhages. *Gastrointestinal Aid* Decoction of root used for stomach trouble. (as *Berberis aquifolium* 114:275) **Karok** *Misc. Disease Remedy* Leaves and roots used as a steam bath for “yellow fever.” (as *Berberis aquifolium* 148:383) *Other* Fruits, if eaten, caused diarrhea. (6:38) **Panacea** Decoction of roots taken as a good medicine for all kinds of sickness. *Poison* Plant considered poisonous. (as *Berberis aquifolium* 148:383) **Keres, Western** *Other* Plant chewed for sickness that occurred during hunting when approached by a dying deer. *Preventive Medicine* Infusion of leaves used to prevent sickness that occurred while hunting and approached by dying deer (as *Berberis aquifolium* 171:32) **Nitinaht** *Laxative* Used as a laxative. (186:98) *Tuberculosis Remedy* Used with hemlock and alder as drink for tuberculosis. *Unspecified* Bark used medicinally. (as *Berberis aquifolium* 67:254) **Okanagan-Colville** *Blood Medicine* Decoction of branches and chokecherry branches taken for the “changing of the blood.” Infusion of branches taken as a blood tonic. *Eye Medicine* Infusion of plant used to wash out blurry or bloodshot eyes. *Kidney Aid* Roots used to make a tonic for the kidneys. Decoction of roots and chokecherry or kinnikinnick branches taken for bad kidneys. (as *Berberis aquifolium* 188:85) **Samish** *Tonic* Infusion of roots taken as a general tonic. (as *Berberis aquifolium* 79:30) **Sanpoil** *Antiemetic* Decoction of stem tips taken for vomiting. *Eye Medicine* Infusion of root parts used as a wash for the eyes. *Gastrointestinal Aid* Decoction of stem tips taken “to relieve a disturbed stomach.” *Tuberculosis Remedy* Decoction of roots used for tuberculosis. (as *Berberis aquifolium* 131:219) **Squaxin** *Blood Medicine* Infusion of roots taken to purify the blood. *Throat Aid* Infusion of roots used as a gargle for sore throats. **Swinomish** *Tonic* Infusion of roots taken as a general tonic. (as *Berberis aquifolium* 79:30) **Thompson** *Antirheumatic (External)* Decoction of peeled, chopped root bark used as a wash for arthritis. *Antirheumatic (Internal)* Decoction of peeled, chopped root bark taken for arthritis. *Blood Medicine* Decoction of peeled, chopped root bark taken as a blood tonic. *Eye Medicine* Infusion of stems and bark used to make an eyewash for red, itchy eyes.<sup>46</sup> *Laxative* Fruit considered an “excellent laxative.” *Tonic* Fruit eaten as a “tonic.” *Venereal Aid* Decoction of peeled, chopped roots taken for syphilis. (187:187)
- **Food**—**Klallam** *Fruit* Berries used for food. (as *Berberis aquifolium* 78:197) **Kwakiutl, Southern** *Fruit* Sour berries occasionally used for food. (as *Berberis aquifolium* 183:279) **Makah** *Preserves* Fruit used to make preserves. (as *Berberis aquifolium* 67:254) **Okanagan-Colville** *Fruit* Berries eaten raw. (as *Berberis aquifolium* 188:85) **Salish, Coast** *Preserves* Berries used to make jelly. (as *Berberis aquifolium* 182:78) **Samish** *Fruit* Berries eaten fresh. (as *Berberis aquifolium* 79:30) **Sanpoil** *Fruit* Berries eaten fresh. *Preserves* Berries boiled into a jam. (as *Berberis aquifolium* 188:85) **Sanpoil & Nespelem** *Fruit* Berries eaten fresh. (as *Berberis aquifolium* 131:102) **Skagit, Upper** *Dried Food* Berries pulped, dried, and stored in cakes for winter use. (as *Berberis aquifolium* 179:37) *Fruit* Fruit eaten raw or mashed. (as *Berberis aquifolium* 179:38) **Snomish** *Fruit* Berries eaten fresh. **Squaxin** *Fruit* Berries eaten. **Swinomish** *Fruit* Berries eaten fresh. (as *Berberis aquifolium* 79:30) **Thompson** *Dried Food* Fruit dried in the absence of any other fruit. *Fruit* Fruit eaten fresh, a few at a time. *Preserves* Fruit used to make jelly. (187:187)

- **Dye—Chehalis** *Yellow Roots* used to make a yellow dye. (as *Berberis aquifolium* 79:30) **Makah** *Yellow Roots* or possibly the leaves used for yellow dye. (as *Berberis aquifolium* 67:254) **Nitinaht** *Yellow Bark* scrapings steeped and used as a yellow dye. (186:98) **Okanagan-Colville** *Yellow Stem* and root inner bark used as bright yellow dye for basket materials, wool, and porcupine quills. (as *Berberis aquifolium* 188:85) **Salish, Coast** *Yellow Root* bark shredded, boiled, and used as a yellow dye for basketry. (as *Berberis aquifolium* 182:78) **Skagit** *Yellow Roots* used to make a yellow dye. **Snohomish** *Yellow Roots* used to make a yellow dye. (as *Berberis aquifolium* 79:30) **Thompson** *Yellow* Outer bark boiled to make a bright yellow dye used for basket materials. (187:187) **Yurok** *Yellow Root* used to dye porcupine quills yellow. (6:38)
  - **Other—Karak** *Paint* Fruit mixed with salmon glue and pounded larkspur flowers and used to paint arrows and bows. (as *Berberis aquifolium* 148:383)
- Mahonia dictyota** (Jepson) Fedde, Shining Netvein Barberry
- **Drug—Kawaiisu** *Venereal Aid* Decoction of roots taken for gonorrhea. (as *Berberis dictyota* 206:15)
- Mahonia fremontii** (Torr.) Fedde, Frémont's Mahonia
- **Drug—Apache, White Mountain** *Ceremonial Medicine* Plant used for ceremonial purposes. (as *Berberis fremontii* 136:155) **Hopi** *Oral Aid* Plant used for gums. (as *Odostemon fremontii* 200:33, 76) **Hualapai** *Gastrointestinal Aid* Roots used as a bitter tonic to promote digestion. *Laxative* Roots made into a bitter tonic and used as a laxative. *Liver Aid* Roots used as a bitter tonic for the liver. (as *Berberis fremontii* 195:5)
  - **Food—Hualapai** *Beverage* Berries used to make a beverage. *Fruit* Berries used for food. (as *Berberis fremontii* 195:5) **Yavapai** *Fruit* Raw berries used for food. (65:257)
  - **Dye—Havasupai** *Yellow Roots* used as a yellow buckskin dye. (as *Berberis fremontii* 197:219) **Hualapai** *Yellow Roots* used to make a brilliant yellow dye. (as *Berberis fremontii* 195:5) **Navajo** *Yellow Roots* and bark used as a yellow dye for buckskin. (as *Berberis fremontii* 55:48) **Walapai** *Yellow Roots* used as a yellow basket dye. (as *Berberis fremontii* 197:219)
  - **Other—Hopi** *Tools* Wood used to make various tools. (as *Odostemon fremontii* 200:76) **Zuni** *Ceremonial Items* and *Paint* Crushed berries used as purple coloring for the skin and for objects employed in ceremonies. (as *Berberis fremontii* 166:88)
- Mahonia haematocarpa** (Woot.) Fedde, Red Barberry
- **Drug—Apache, Mescalero** *Eye Medicine* Inner wood shavings soaked in water and used as an eyewash. (as *Berberis haematocarpa* 14:49)
  - **Food—Apache** *Fruit* Berries eaten fresh. (as *Berberis haematocarpa* 32:19) **Apache, Chiricahua & Mescalero** *Preserves* Fruit cooked with a sweet substance, strained, and eaten as jelly. (as *Berberis haematocarpa* 33:46) **Apache, Mescalero** *Fruit* Berries eaten fresh. (as *Berberis haematocarpa* 14:49) **Pueblo** *Preserves* Berries used to make jelly. **Spanish American** *Preserves* Berries used to make jelly. (as *Berberis haematocarpa* 32:19)
  - **Dye—Apache, Mescalero** *Yellow Root* shavings used to make a yellow dye for hides. (as *Berberis haematocarpa* 14:49)
- Mahonia nervosa** (Pursh) Nutt., Cascade Oregongrape
- **Drug—Nitinaht** *Laxative* Used as a laxative. (186:98) **Thompson** *Antirheumatic (External)* Decoction of peeled, chopped root bark used as wash for arthritis. *Antirheumatic (Internal)* Decoction of peeled, chopped root bark taken for arthritis. *Blood Medicine* Decoction of peeled, chopped root bark taken as a blood tonic. *Eye Medicine* Infusion of woody stems and bark used as an eyewash for red, itchy eyes.<sup>46</sup> *Laxative* Fruit considered an "excellent laxative." *Psychological Aid* Plant induced dreams of someone sleeping when brought into the house. *Venereal Aid* Decoction of peeled, chopped roots taken for syphilis. (187:187)
  - **Food—Thompson** *Preserves* Berries used to make jelly. (187:187)
  - **Dye—Nitinaht** *Yellow Bark* scrapings steeped and used as a yellow dye. (186:98) **Thompson** *Yellow* Root bark boiled to make a bright yellow dye used for basket materials. (187:187)
- Mahonia nervosa** (Pursh) Nutt. **var. nervosa**, Cascade Oregongrape
- **Drug—Hoh** *Blood Medicine* Infusion of roots used as a blood remedy. (as *Berberis nervosa* 137:61) **Nitinaht** *Tuberculosis Remedy* Used with hemlock and alder as drink for tuberculosis. *Unspecified* Bark used medicinally. (as *Berberis nervosa* 67:254) **Paiute** *Blood Medicine* Infusion of roots and leaves taken as a general tonic "to make the blood good." *Hemostat* Infusion of roots and leaves taken as a general tonic for nosebleeds. (as *Berberis nervosa* 111:72) **Quileute** *Blood Medicine* Infusion of roots used as a blood remedy. (as *Berberis nervosa* 137:61) **Skagit** *Venereal Aid* Decoction of roots taken for venereal disease. (as *Berberis nervosa* 79:30)
  - **Food—Clallam** *Fruit* Sour berries used for food. (as *Berberis nervosa* 57:197) **Hoh** *Preserves* Berries used to make jelly. (as *Berberis nervosa* 137:61) **Klallam** *Fruit* Berries used for food. (as *Berberis nervosa* 78:197) **Kwakiutl, Southern** *Fruit* Sour berries occasionally used for food. (as *Berberis nervosa* 183:279) **Makah** *Preserves* Fruit used to make preserves. (as *Berberis nervosa* 67:254) **Quileute** *Preserves* Berries used to make jelly. (as *Berberis nervosa* 137:61) **Salish, Coast** *Preserves* Berries used to make jelly. (as *Berberis nervosa* 182:78) **Skagit** *Fruit* Ripe berries formerly used for food. *Preserves* Ripe berries used to make jam. (197:232) **Hopi** *Staple* Seeds parched, ground into a fine, sweet meal, and eaten in pinches. (56:20) *Unspecified* Mashed seeds rolled into sticks and eaten. (190:164) **Kawaiisu** *Preserves* Seeds parched and ground into a “peanut butter”-like substance. *Winter Use Food* Seeds stored for future use. (206:41) **Klamath** *Unspecified* Seeds used for food. (45:100) **Montana Indian** *Unspecified* Seeds used for food. (19:15) **Paiute** *Sauce & Relish* Fried seeds and water used for gravy. (118:27) *Staple* Seeds parched, ground, and eaten as meal. (104:98) **Paiute, Northern** *Dried Food* Seeds dried and stored for winter use. *Porridge* Seeds dried, roasted, ground into a flour, and used to make mush. (59:46) **Tubatulabal** *Unspecified* Used extensively for food. (193:15)
- **Other—Hopi** *Smoke Plant* Plant used as substitute for tobacco. (42:335)

#### *Mentzelia albicaulis* var. *veatchiana* (Kellogg) Urban & Gilg, Whitestem Blazingstar

- **Drug**—Kawaiisu *Burn Dressing* Pounded seeds made into a salve and rubbed on burned skin. (as *M. veatchiana* 206:41)
- **Food**—Cahuilla *Porridge* Parched seeds ground into flour and used to make mush. (as *M. veatchiana* 15:88) **Kawaiisu Preserves** Seeds parched and ground into a “peanut butter”-like substance. *Winter Use Food* Seeds stored for future use. (206:41)

***Mentzelia congesta*** Nutt. ex Torr. & Gray, United Blazingstar

- **Food**—Kawaiisu *Preserves* Seeds parched and ground into a “peanut butter”-like substance. *Winter Use Food* Seeds stored for future use. (206:41)

***Mentzelia dispersa*** S. Wats., Bushy Blazingstar

- **Food**—Kawaiisu *Preserves* Seeds parched and ground into a “peanut butter”-like substance. *Winter Use Food* Seeds stored for future use. (206:41)

***Mentzelia gracilentia*** (Nutt.) Torr. & Gray, Grass Blazingstar

- **Food**—Tubatulabal *Unspecified* Used extensively for food. (193:15)

***Mentzelia involucrata*** S. Wats., Whitebract Blazingstar

- **Food**—Cahuilla *Porridge* Parched seeds ground into flour and used to make mush. (15:88)
- **Other**—Kawaiisu *Toys & Games* Leaves thrown by children at one another because they stick and were hard to remove. (206:41)

***Mentzelia laciniata*** (Rydb.) J. Darl., Cutleaf Blazingstar

- **Drug**—Navajo, Ramah *Eye Medicine* Infusion of flowers used as an eyewash. (191:36)

***Mentzelia laevicaulis*** (Dougl. ex Hook.) Torr. & Gray, Smoothstem Blazingstar

- **Drug**—Cheyenne *Antirheumatic (Internal)* Roots used for rheumatism and arthritis. *Dietary Aid* Roots chewed for thirst prevention. *Ear Medicine* Roots used for earaches. *Febrifuge* Roots used for fevers. *Misc. Disease Remedy* Infusion of roots taken for mumps, measles, and smallpox. *Unspecified* Plant used as an ingredient in medicinal preparations. Roots used for complicated illnesses. (83:30) **Gosiute Dermatological Aid** Infusion of roots used for bruise swellings. (39:349) **Mendocino Indian Dermatological Aid** Decoction of leaves used as a wash for skin diseases. *Gastrointestinal Aid* Decoction of leaves taken for stomachaches. (41:369) **Montana Indian Dermatological Aid** Decoction of leaves applied as a lotion for certain skin diseases. *Gastrointestinal Aid* Decoction of leaves taken for stomach trouble. (19:16) **Thompson Unspecified** Plant used medicinally for unspecified purpose. (164:474)
- **Food**—Paiute *Sauce & Relish* Fried seeds and water used for gravy. (118:27)

***Mentzelia multiflora*** (Nutt.) Gray, Manyflowered Mentzelia

- **Drug**—Keres, Western *Diuretic* Infusion of plant used as a diuretic. *Psychological Aid* Plants used to make infants good horseback riders. Plants used to whip 3- or 4-month-old infants, or ground leaves rubbed on their thighs so that they will become good horseback riders when they grow up. *Tuberculosis Remedy* Leaves and roots used as the strongest tuberculosis medicine by the strongest patients. (171:54) **Navajo Emetic** Plant used as an emetic. (90:161)
- **Food**—Navajo *Unspecified* Seeds used for food. (55:63)

- **Other**—Navajo *Ceremonial Items* Leaves chewed and sprayed with the mouth on offerings before and after making prayer sticks. (55:63)

***Mentzelia multiflora*** (Nutt.) Gray **var. *multiflora***, Adonis Blazingstar

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used as fumigant for collared lizard ceremony. *Dermatological Aid* Plant used to keep smallpox sores from pitting. *Disinfectant* Plant used as fumigant for collared lizard ceremony. *Gastrointestinal Aid* Plant used for abdominal swellings. (as *M. pumila* var. *multiflora* 205:32) **Navajo, Ramah Eye Medicine** Infusion of flowers used as an eyewash. (as *M. pumila* var. *multiflora* 191:37)
- **Food**—Navajo, Ramah *Staple* Seeds parched with hot coals in an old basket, ground lightly with a special rock. (as *M. pumila* var. *multiflora* 191:37)
- **Other**—Navajo, Ramah *Ceremonial Items* Used to make Big Snake's prayer stick in Beautyway. (as *M. pumila* var. *multiflora* 191:37)

***Mentzelia nuda*** (Pursh) Torr. & Gray **var. *nuda***, Bractless Blazingstar

- **Drug**—Dakota *Febrifuge* Boiled, strained sap applied externally for fever. (as *Nuttallia nuda* 70:103)

***Mentzelia puberula*** J. Darl., Roughstem Blazingstar

- **Food**—Cahuilla *Porridge* Parched seeds ground into flour and used to make mush. (15:88)

***Mentzelia pumila*** Nutt. ex Torr. & Gray, Dwarf Mentzelia

- **Drug**—Apache, White Mountain *Laxative* Powdered roots used for constipation. (136:158) **Hopi Toothache Remedy** Plant used as “a toothache medicine.” (200:85) **Zuni Laxative** Powdered root inserted into rectum as a suppository for constipation. (166:57) *Pediatric Aid* and *Strengtheners* Plant used to whip children to make them strong so they could hold on to a horse without falling. (166:84)
- **Other**—Hopi *Smoke Plant* Plant used as a substitute for tobacco. (200:85)

***Mentzelia* sp.**, Buena Mujer

- **Drug**—Miwok *Poultice* Pulverized seeds mixed with water, fox grease, or wildcat grease and applied as a poultice. (12:171)
- **Food**—Hualapai *Dried Food* Mature seeds parched and stored for winter use. *Porridge* Green seeds pounded into a gruel and cooked. *Staple* Seeds considered an important staple. (195:52) **Miwok Unspecified** Pulverized seeds made into pinole. (12:155)

**Menyanthaceae**, see *Menyanthes*, *Nymphoides*

***Menyanthes***, Menyanthaceae

***Menyanthes* sp.**

- **Drug**—Aleut *Unspecified* Used medicinally. (7:29)

***Menyanthes trifoliata*** L., Common Buckbean

- **Drug**—Aleut *Analgesic* Infusion of roots taken for gas pains, constipation, and rheumatism. *Antirheumatic (Internal)* Compound containing roots taken as a tonic for gas pains and rheumatism. *Carminative* Compound containing roots taken as a tonic for gas pains. *Laxative* Compound containing roots taken as a tonic for constipation. *Tonic* Roots used as a powerful ingredient in a tonic. (8:427) **Kwakiutl Antiemetic** Decoction of roots or leaves taken when sick to

the stomach. (183:287) *Antihemorrhagic* Decoction of root and stem used for “spitting of blood and other internal diseases.” (20:380) Decoction of ground stem and roots taken for blood-spitting. *Dietary Aid* Decoction of roots or leaves taken to put on weight. *Gastrointestinal Aid* Decoction of roots or leaves taken when sick to the stomach. *Misc. Disease Remedy* Decoction of roots or leaves taken to put on weight during the flu. (183:287) **Menominee** *Unspecified* Plant used in medicines. (151:36) **Micmac** *Unspecified* Strong decoction of root taken for unspecified purpose. (as *Mergantnes trifolia* 156:317) **Tlingit** *Unspecified* Plant used for the medicinal value. (149:330)

- **Food**—Alaska Native *Bread & Cake* Rootstocks dried, ground, leached, dried, ground into flour, and used to make bread. *Dried Food* Rootstocks dried, ground, leached, dried, and used for food. *Starvation Food* Rootstocks used in the past as an emergency food. (85:145) **Hesquiat** *Forage* Deer put their heads under the surface of the water to get at the long, green rhizomes. (185:69)

## *Menziesia*, Ericaceae

### *Menziesia ferruginea* Sm., Rusty Menziesia

- **Drug**—Hesquiat *Oral Aid* Nectar sucked from flowers to sweeten the mouth. (185:65) **Kwakiutl** *Analgesic* Leaves chewed for heart pain. *Dermatological Aid* Poultice of heated leaves applied to sores and swellings. *Gastrointestinal Aid* Leaves chewed for stomach troubles. *Heart Medicine* Leaves chewed for heart pain. ### *Mertensia ciliata* (James ex Torr.) G. Don, Mountain Bluebells

- **Drug**—Cheyenne *Breast Treatment* Infusion of plant used to increase milk flow of mothers. (as *Mestensia ciliata* 83:16) *Dermatological Aid* Infusion of powdered roots taken for itching from smallpox. (76:184) *Gynecological Aid* Infusion of plant taken by women after childbirth to increase milk flow. *Misc. Disease Remedy* Infusion of leaves taken for smallpox and measles. (76:184) Infusion of leaves used for measles and smallpox. (as *Mestensia ciliata* 83:16)

### *Mertensia maritima* (L.) S. F. Gray, Oysterleaf

- **Food**—Eskimo, Alaska *Unspecified* Long, leafy stems boiled, cooked

briefly, and eaten with seal oil. (1:38) Rootstock used for food. (4:715)

## *Mertensia virginica* (L.) Pers. ex Link, Virginia Bluebells

- **Drug**—Cherokee *Pulmonary Aid* Taken for whooping cough. *Tuberculosis Remedy* Taken for consumption. (80:26) **Iroquois** *Antidote* Compound infusion of roots taken as an antidote for poisons. *Veneral Aid* Decoction of roots taken for venereal disease. (87:421)

## *Metrosideros*, Myrtaceae

### *Metrosideros polymorpha* Gaud. var. *polymorpha*, ‘Ohi’a

- **Drug**—Hawaiian *Analgesic* Flowers and other plants rubbed, squeezed, and the resulting liquid taken for severe childbirth pain. (as *Metrosideros collins polym* 2:31)

## *Microlepia*, Dennstaedtiaceae, fern

### *Microlepia setosa* (Sm.) Alston, Pa-la-pa-la-i

- **Drug**—Hawaiian *Psychological Aid* Plant used for insanity. (as *M. strigosa* 2:73)

## *Microseris*, Asteraceae

### *Microseris laciniata* (Hook.) Schultz-Bip., Cutleaf Silverpuffs

- **Food**—Mendocino Indian *Substitution Food* Milky juice exposed to the sun and used by school children as a substitute for gum. *Unspecified* Roots formerly used for food. (as *Scorzonella maxima* 41:391)

### *Microseris nutans* (Hook.) Schultz-Bip., Nodding Microseris

- **Food**—Montana Indian *Unspecified* Bitter, milky root juice eaten raw. (19:16)

## *Mikania*, Asteraceae

### *Mikania batatifolia* DC., Southern Hempvine

- **Drug**—Seminole *Dermatological Aid* Plant used for snake sickness: itchy skin. (169:166) Decoction of plant taken and used as a body steam for snake sickness: itchy skin. (169:239)

## *Mimulus*, Scrophulariaceae

### *Mimulus cardinalis* Dougl. ex Benth., Crimson Monkeyflower

- **Drug**—Karak *Pediatric Aid* Infusion of plant used as a wash for newborn baby. (148:389)
- **Food**—Kawaiisu *Unspecified* Tender stalks eaten raw. (206:41)

### *Mimulus eastwoodiae* Rydb., Eastwood’s Monkeyflower

- **Drug**—Navajo, Kayenta *Anticonvulsive* Plant used for hiccups. (205:42)
- **Food**—Navajo, Kayenta *Fruit* Berries eaten raw. Berries stewed and used for food. (205:42)

### *Mimulus glabratus* var. *jamesii* (Torr. & Gray ex Benth.) Gray, James’s Monkeyflower

- **Drug**—Potawatomi *Unspecified* Leaves used as treatment for unspecified ailments. (154:83)
- **Food**—Isleta *Vegetable* Tender shoots slit and eaten as a salad. (as *M. geyeri* 32:34) Salted, tender, young leaves used for salad. (as *M. geyeri* 100:35)
- **Other**—Keres, Western *Water Indicator* Plant used as an indication of surface water. (as *M. geyeri* 171:54)

***Mimulus guttatus*** DC., Seep Monkeyflower

- **Drug**—Kawaiisu *Analgesic, Herbal Steam*, and *Orthopedic Aid* Decoction of stems and leaves used as steam bath for chest and back soreness. (206:41) **Shoshoni** *Dermatological Aid* Poultice of crushed leaves applied to wounds or rope burns. (180:105) **Yavapai** *Gastrointestinal Aid* Decoction taken as tea for stomachache. (as *M. nasutus* 65:261)
- **Food**—Mendocino Indian *Substitution Food* Plants used as a substitute for lettuce. (41:387) **Miwok** *Vegetable* Boiled leaves used for food. (12:160)

***Mimulus moschatus*** Dougl. ex Lindl., Musk Monkeyflower

- **Food**—Miwok *Vegetable* Boiled, young plant used for food. (12:160)

***Mimulus ringens*** L., Ringen Monkeyflower

- **Drug**—Iroquois *Anticonvulsive* Compound decoction of roots taken by women for epilepsy. *Antidote* Compound decoction of plants used as wash to counteract poison. (87:435)

***Mimulus* sp.**, Monkeyflower

- **Drug**—Miwok *Antidiarrheal* Infusion of root used for diarrhea. (12:171)

***Mimulus tilingii* var. *caespitosus*** (Greene) A. L. Grant, Subalpine Monkeyflower

- **Food**—Neeshenam *Vegetable* Leaves eaten as greens. (as *M. luteus* 129:377)

***Mirabilis***, Nyctaginaceae***Mirabilis alipes*** (S. Wats.) Pilz, Winged Four o'Clock

- **Drug**—Paiute *Analgesic* Decoction of root taken and used as a wash for headaches. Decoction of root used as a wash for neuralgia. Poultice of crushed, fresh leaves applied for headaches. *Antiemetic* Decoction of root taken or used as a wash for fainting spells and nausea. *Burn Dressing* Dried root powder moistened and used as a salve for burns. *Cathartic* Decoction of root taken as a physic. *Dermatological Aid* Dried root powder sprinkled on sores or made into a wash for impetigo. Poultice of mashed leaves applied to swellings. *Psychological Aid* Decoction of root used as a wash for "delirium," neuralgia, and dizziness. *Stimulant* Decoction of root taken or used as a wash for fainting spells and dizziness. (as *Hermidium alipes* 180:86, 87) **Paiute, Northern** *Dermatological Aid* Poultice of dried, powdered roots applied and decoction of powdered roots used as a wash for sores. (as *Hermidium alipes* 59:125)

***Mirabilis bigelovii* var. *retrorsa*** (Heller) Munz, Bigelow's Four o'Clock

- **Drug**—Paiute *Dermatological Aid* Powdered root used as shampoo and infusion of root taken simultaneously. (as *Hesperonia retrorsa* 118:46) Powdered root used as shampoo and infusion taken simultaneously. (as *Hesperonia retrorsa* 118:57)

***Mirabilis californica*** Gray, California Four o'Clock

- **Drug**—Luiseño *Cathartic* Decoction of leaves taken as a purgative. (155:232) **Mahuna** *Febrifuge* Plant used for eruptive fevers. (140:10)

(71:141) **Delaware** *Abortifacient* Infusion used for suppressed menstruations to strengthen the female generative organs. *Antirheumatic (External)* Hot infusion of roots or twigs used as a steam treatment for muscular swellings and stiff joints. (176:36) **Delaware, Oklahoma** *Abortifacient* Infusion of plant taken for "suppressed menses." *Antirheumatic (External)* Strong infusion of roots or twigs used as herbal steam for rheumatism. (175:30, 76) *Gynecological Aid* Infusion of plant taken to strengthen the "female generative organs." *Herbal Steam* Infusion of roots or twigs used as herbal steam for rheumatism. (175:30) **Iroquois** *Analgesic* Compound decoction of roots taken for urinating pain. Decoction of plants taken by pregnant women with side or labor pains. (87:441) Compound infusion of roots and bark taken for back pain. (87:442) Berries used to prevent severe labor pains. (124:96) *Anticonvulsive* Compound infusion given to children with convulsions. (87:440) *Antiemetic* Compound infusion of roots and bark taken for vomiting. (87:442) *Blood Medicine* Compound decoction of plants taken as blood purifier. Decoction of plants taken to "remove chill from the blood." (87:441) *Carminative* Decoction of plant taken for stomach gas. (87:442) *Cathartic* Decoction of roots given to newborn babies as a physic for stomachaches. *Dermatological Aid* Decoction of plants given to babies with rashes. Poultice of smashed plant applied to bleeding cuts. (87:441) *Febri-fuge* Compound infusion given to children with inward fever. Compound infusion of plants taken for typhoid-like fever or inward fever. (87:440) Poultice of hot plant applied to chest for fevers. (87:442) *Gastrointestinal Aid* Compound infusion taken for inward fever from stomach trouble. (87:440) Decoction of roots given to newborn babies as a physic for stomachaches. Poultice applied or decoction of vines given to babies with swollen abdomens. *Gynecological Aid* Compound decoction of leaves and roots taken for leukorrhea (sick womb). Compound decoction of plants taken by pregnant women with side pains. (87:441) Compound of plants taken for labor pain in parturition. (87:442) Berries used to prevent severe labor pains and to facilitate delivery. (124:96) *Hemostat* Poultice of smashed plant applied to bleeding cuts. (87:441) *Kidney Aid* Infusion or decoction of roots and bark taken for kidney troubles. (87:442) *Love Medicine* Compound of plant used as love medicine. (87:441) *Misc. Disease Remedy* Decoction of plant taken by pregnant mother to prevent rickets in baby. *Orthopedic Aid* Compound infusion of roots and bark taken for back pain. (87:442) *Pediatric Aid* Compound infusion given to children with inward fever and convulsions. Decoction of vines given to babies when they will not suckle. (87:440) Decoction of plants given to babies with rashes. Decoction of roots given to newborn babies as a physic for stomachaches. Poultice applied or decoction of vines given to babies with swollen abdomens. (87:441) Decoction of plant taken by pregnant mother to prevent rickets in baby. (87:442) *Psychological Aid* Compound infusion of plants taken for typhoid-like fever or craziness. (87:440) *Urinary Aid* Compound decoction of plants taken for swollen testicles or ruptures. Compound decoction of roots taken for urinating pain. Decoction of plants taken for bladder stricture. *Venereal Aid* Compound decoction of plants taken for venereal disease. (87:441) **Menominee** *Gynecological Aid* Decoction of leaves used for "diseases of women."

(54:133) *Sedative* Infusion of leaves taken “to cure insomnia.” (151:51) **Montagnais** *Febrifuge* Berries cooked into a jelly and used for fevers. (156:313) **Ojibwa** *Ceremonial Medicine* Leaves smoked during ceremonies. (135:239) **Penobscot** *Unspecified* Infusion of leaves used as a medicine for unspecified purpose. (156:309) **Seminole** *Kidney Aid* Plant used for kidney disorders. (169:274)

- **Food—Cherokee** *Fruit* Fruit used for food. (80:47) **Iroquois** *Bread & Cake* Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. (196:128) *Fruit* Berries eaten by women. (124:96) Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) **Micmac** *Beverage* Used to make a beverage. (159:258)

## *Mitella*, Saxifragaceae

*Mitella diphylla* L., Twoleaf Miterwort

- **Drug—Iroquois** *Emetic* Decoction of whole plants taken to vomit and counteract bad luck. *Eye Medicine* Infusion of plant used as drops for sore eyes. (87:345)
- **Other—Iroquois** *Good Luck Charm* Decoction of whole plants used as body and rifle wash to counteract bad luck. (87:345) **Menominee** *Sacred Items* Seed used as the sacred bead and swallowed in the medicine dance, during the reinstatement ceremony. (151:81)

*Mitella nuda* L., Naked Miterwort

- **Drug—Cree, Woodlands** *Ear Medicine* Crushed leaf wrapped in a cloth and inserted in the ear for earaches. (109:45)

### *Mitella* sp.

- **Drug—Gosiute** *Cathartic* Infusion of root juice taken to hasten elimination and purging. (39:348) Plant used as a purgative for babies and adults with intestinal disorders. *Gastrointestinal Aid* Plant used as a purgative for babies and adults with intestinal disorders. (39:350) *Laxative* Infusion of root juice taken to hasten elimination and purging. (39:348) *Pediatric Aid* Plant used as a purgative for babies and adults with intestinal disorders. (39:350)

*Mitella trifida* Graham, Threeparted Miterwort

- **Drug—Gosiute** *Gastrointestinal Aid* and *Pediatric Aid* Infusion of roots used for babies with colic. (39:375)

**Mniaceae**, see *Mnium*, *Plagiomnium*, *Rhizomnium*

## *Mnium*, Mniaceae, moss

### *Mnium affine*

- **Drug—Carrier, Southern** *Antirheumatic (External)* Decoction of plant used to bathe a swollen face. (43:53)

### *Mnium punctatum* L.

- **Drug—Makah** *Antirheumatic (External)* Leaves used for swellings. (43:53)

## *Modiola*, Malvaceae

*Modiola caroliniana* (L.) G. Don, Carolina Bristlemallow

- **Drug—Houma** *Misc. Disease Remedy* Compound infusion gargled and decoction taken for sore throat or diphtheria. *Throat Aid* Compound infusion gargled and decoction taken for tonsillitis or sore throat. (158:64)

## *Monarda*, Lamiaceae

*Monarda citriodora* Cerv. ex Lag., Lemon Beebalm

- **Food—Hopi** *Unspecified* Plant boiled and eaten only with hares. (56:19)

*Monarda didyma* L., Scarlet Beebalm

- **Drug—Cherokee** *Abortifacient* Used for female obstructions. *Analgesic* Poultice of leaves used for headache. *Carminative* Used carminative for colic and flatulence. *Cold Remedy* Poultice of leaves used for colds. *Diaphoretic* Used as a diaphoretic. *Diuretic* Used as a diuretic. *Febrifuge* Hot infusion of leaf used to “bring out measles” and infusion used as febrifuge. *Gastrointestinal Aid* Infusion of leaf and plant top taken for weak bowels and stomach. *Heart Medicine* Infusion used for heart trouble. *Hemostat* Infusion of leaf or root taken orally and wiped on head for nosebleed. *Misc. Disease Remedy* Infusion of leaf used to “bring out measles” and infusion used to “sweat off flu.” *Sedative* Used for hysterics and restful sleep. (80:39)
- **Food—Cherokee** *Unspecified* Species used for food. (80:39)

*Monarda fistulosa* L., Wildbergamot Beebalm

- **Drug—Blackfoot** *Cough Medicine* Infusion of plant taken for coughs. (86:72) *Dermatological Aid* Poultice of a flower head applied to a burst boil and removed after the wound healed. (86:77) Poultice of plant pieces applied to cuts. (86:84) *Emetic* Infusion of plant and another plant taken and used as a steam to serve as an emetic. (86:65) *Eye Medicine* Used to make a solution for sore eyes. (82:70) *Kidney Aid* Infusion of plant taken for aching kidneys. (86:67) *Throat Aid* Root chewed for swollen neck glands. (86:77) **Cherokee** *Abortifacient* Used for female obstructions. *Analgesic* Poultice of leaves used for headache. *Carminative* Used as a carminative for colic and flatulence. *Cold Remedy* Poultice of leaves used for colds. *Diaphoretic* Used as a diuretic, diaphoretic, and especially for “sweating off flu.” *Diuretic* Used as a carminative for colic, diuretic, and diaphoretic. *Febrifuge* Hot infusion of leaf used to “bring out measles” and infusion used as febrifuge. *Gastrointestinal Aid* Infusion of leaf and plant top taken for weak bowels and stomach. *Heart Medicine* Infusion used for heart trouble. *Hemostat* Infusion of leaf or root taken orally and wiped on head for nosebleed. *Misc. Disease Remedy* Infusion of leaf used to “bring out measles” and infusion used to “sweat off flu.” *Sedative* Used for hysterics and restful sleep. (80:39) **Chippewa** *Analgesic* Chewed leaves placed in nostrils for headaches. *Cold Remedy* Plant tops used for colds. (71:140) **Choctaw** *Analgesic* Plant rubbed on child’s chest for pain. *Cathartic* Infusion of leaves taken as a cathartic. *Pediatric Aid* Plant rubbed on child’s chest for pain. (177:54) **Crow** *Respiratory Aid* Infusion taken for respiratory problems. (82:70) **Dakota** *Analgesic* Infusion of flowers and leaves taken for abdominal pains. (69:363) Decoction of flowers and leaves taken for abdominal pains. (70:111) *Gastrointestinal Aid* Infusion of flowers and leaves taken for abdominal pains. (69:363) Decoction of leaves and flowers taken for abdominal pains. (70:111) **Flathead** *Cold Remedy* Infusion taken for colds. Plants hung on walls for colds. *Cough Medicine* Used for coughs. *Eye Medicine* Used to make a solution for sore eyes. *Febrifuge* Infusion taken for fevers. *Misc. Disease Remedy* Infusion taken for flu and chills. *Pulmonary Aid* Infusion taken for pneumonia. *Toothache Remedy* Used for toothache. (82:70) **Koasati** *Febrifuge* Decoction of leaves used as a bath for chills. (177:54) **Kutenai** *Kidney Aid* Infu-

- sion used for kidney problems. (82:70) **Lakota Cough Medicine** Infusion of leaves used as a cough remedy. *Eye Medicine* Infusion of leaves used on a cloth placed on sore eyes overnight. *Hemostat* Poultice of chewed leaves applied to stop the flow of blood. *Pulmonary Aid* Infusion of leaves used for whooping cough. *Stimulant* Infusion of leaves used for fainting. (139:50) **Menominee Pediatric Aid** Decoction of stem and leaves used as strengthening bath for infants. (54:133) *Respiratory Aid* Simple or compound infusion of leaves and flowers used as a universal remedy for catarrh. (151:39) **Meskwaki Cold Remedy** Compound used for colds. (152:225) **Montana Indian Gynecological Aid** Infusion taken for expulsion of the afterbirth. (82:70) **Navajo Analgesic** Cold infusion of plant used as a wash for headaches. (55:73) **Ojibwa Anticonvulsive** Infusion of plant taken or used as a bath for infant convulsions. *Febrifuge* Infusion of flowers taken for fevers. *Pediatric Aid* Infusion of plant taken or used as a bath for infant convulsions. (5:2274) *Respiratory Aid* Plant boiled and steam inhaled "to cure catarrh and bronchial affections." (153:372) **Ojibwa, South Analgesic and Gastrointestinal Aid** Decoction of root taken for "pain in the stomach and intestines." (91:201) **Sioux Gastrointestinal Aid** Infusion taken for stomach pains. (82:70) **Sioux, Teton Cold Remedy** Infusion of blossoms used for "hard cold." *Febrifuge* Infusion of blossoms used for fever. (52:270) **Winnebago Dermatological Aid** Decoction of leaves used on pimples and other skin eruptions on the face. (70:111)
- **Food—Cherokee Unspecified** Species used for food. (80:39) **Flathead Preservative** Leaves pulverized and sprinkled on meats as a preservative. (82:70) **Iroquois Beverage** Used to make a beverage. (196:149) **Lakota Special Food** Leaves chewed while people were singing and dancing. (139:50)
  - **Other—Blackfoot Cooking Tools** Dried flowerheads used by invalids for sucking broth and soup. *Tools* Dried flowerheads used to apply water to a green hide to make it easier to scrape the hide. (86:115) **Cheyenne Incense & Fragrance** Leaves chewed and used as horse perfume. **Crow Incense & Fragrance** Plants mixed with other plants and beaver castor oil and used as a hair, body, or clothing perfume. (82:70) **Dakota Incense & Fragrance** Bunches of plants carried in bachelors' coats for the pleasant fragrance. Plant used for perfume. ***Monarda punctata*** L., Spotted Beebalm

- **Drug—Delaware Dermatological Aid** Infusion of plant used to bathe patients' faces. *Febrifuge* Infusion of plant used for fever. (176:35)

Delaware, Oklahoma *Febrifuge* Infusion of whole plant taken and used as a face wash for fever. (175:29, 76) **Meskwaki Analgesic** Compound containing leaves snuffed up nostrils for sick headache. Compound containing leaves used for stomach cramps. *Cold Remedy* Compound used as a snuff for head colds and catarrh. *Gastrointestinal Aid* Compound containing leaves used for stomach cramps. *Respiratory Aid* Compound used as a snuff for catarrh and used for head cold. *Stimulant* Compound applied at nostrils of patient to rally him when at point of death. (152:225, 226) **Mohegan Febrifuge** Infusion of leaves used for fevers. (176:73, 130) **Nanticoke Cold Remedy** Infusion of whole plant taken as a cold remedy. (175:55, 84) **Navajo, Ramah Analgesic** Cold infusion taken and used as poultice for headache. *Cough Medicine* Cold infusion taken and used as poultice for cough. *Febrifuge* Cold infusion taken and used as poultice for fever. (191:42) **Ojibwa Gastrointestinal Aid** Decoction of plants taken for stomach or bowel troubles. *Laxative* Decoction of plants taken for sick stomach, bowels, or for constipation. (135:231) *Unspecified* Plant used as a rubbing medicine. (135:240)

- **Other—Navajo Incense & Fragrance** Plant hung in the hogan for the pleasing odor. (55:73)

### *Monarda* sp., Mint

- **Drug—Bannock Cold Remedy** Infusion of seed heads taken for colds. (118:38) **Blackfoot Veterinary Aid** Infusion of plant pieces and *Allium* applied to saddle sores. (86:87) **Creek Antirheumatic (External)** Compound decoction of plant used as a wash for rheumatism. *Antirheumatic (Internal)* Compound decoction of plant taken for rheumatism. *Dermatological Aid* Compound decoction of plant taken and used as a wash for swollen legs. *Diaphoretic* Infusion of entire plant taken to induce perspiration. (172:657) Decoction of entire plant used to promote perspiration. (177:54) **Ear Medicine** Compound decoction of plant taken and used as wash to prevent deafness from ghosts. *Kidney Aid* Compound decoction of plant taken and used as a wash for dropsy. (172:657) Infusion of plant used as a bath and taken for dropsy. (177:54) *Psychological Aid* Compound decoction of plant administered to delirious person. (172:657) Decoction of plant used for delirium. *Sedative* Decoction of plant used for delirium. (177:54) **Witchcraft Medicine** Compound decoction of plant taken and used as a wash to protect from ghosts. (172:657) **Iroquois Analgesic** Infusion of roots given to children for headaches. (87:426) *Emetic* Infusion of plants taken to “soften the brain” or as an emetic. (87:425) *Febrifuge* Compound decoction of leaves and roots taken for recurring chills from fevers. Decoction of roots taken for fevers and sickness caused by dead people. *Laxative* Infusion of roots given to children for constipation. *Other* Compound decoction of roots given to children with “summer complaint.” Plant used in “Little Water Medicine.” *Pediatric Aid* Compound decoction of roots given to children with “summer complaint.” Infusion of roots given to children for headaches and constipation. *Stimulant* Infusion of plants taken for general lassitude. (87:426)
- **Food—Bannock Appetizer** Infusion of seed heads used as an appetizer. (118:38)

## *Monardella*, Lamiaceae

*Monardella candicans* Benth., Sierran Mountainbalm

- **Food—Tubatulabal Beverage** Fresh or dried plants boiled, sugar added, and tea used as a beverage. (193:19) *Unspecified* Leaves and stalks used for food. (193:15)

### *Monardella lanceolata* Gray, Mustang Mountainbalm

- **Drug—Diegueño Unspecified** Infusion of plant used as a medicinal tea and beverage. (84:25) **Luißeño Unspecified** Infusion of plant used for medicinal purposes. (155:229) **Miwok Analgesic** Decoction of leaves, upper stems, and flowers taken for headaches. *Cold Remedy* Decoction of leaves, upper stems, and flowers taken for colds. (12:171)
- **Food—Diegueño Beverage** Infusion of plant used as a medicinal tea and beverage. (84:25) **Luißeño Beverage** Plant used to make a tea. (155:211)

### *Monardella linoides* Gray, Narrowleaf Monardella

- **Food—Kawaiisu Beverage** Leaves and flowers used to make a non-medicinal tea. (206:42)

### *Monardella odoratissima* Benth., Pacific Monardella

- **Drug—Karak Diaphoretic** Plant used as a sweat medicine. *Love Medicine* Plant used as a love medicine by women. (148:389) **Miwok Cold Remedy** Decoction of stems and flower heads taken for colds. *Febrifuge* Decoction of stems and flower heads taken for fevers. (12:171) **Okanagan-Colville Cold Remedy** and *Pediatric Aid* Infusion of leaves and stems given to children and adults for the common cold. (188:109) **Paiute Analgesic** Decoction of plant taken for gas pains. *Cold Remedy* Decoction of plant taken for colds. *Eye Medicine* Decoction of branches used as an eyewash for soreness or inflammation. *Gastrointestinal Aid* Decoction of plant taken for indigestion, gas pain, or minor digestive upset. (180:105, 106) **Sanpoil Cold Remedy** and *Pediatric Aid* Decoction of stems and leaves taken by adults and children for severe colds. (as *M. odoratissima* 131:218) **Shoshoni Analgesic** Decoction of plant taken for gas pains. *Blood Medicine* Decoction of branches taken as a blood tonic. *Cathartic* Decoction of branches taken as a physic. *Cold Remedy* Decoction of plant taken for colds. *Gastrointestinal Aid* Decoction of plant taken for indigestion, gas pain, or minor digestive upset. *Tonic* Decoction of branches taken as a general tonic. **Washo Analgesic** Decoction of plant taken for gas pains. *Cold Remedy* Decoction of plant taken for colds. *Gastrointestinal Aid* Decoction of plant taken for indigestion, gas pain, or minor digestive upset. (180:105, 106)
- **Food—Kawaiisu Beverage** Leaves and flowers used to make a non-medicinal tea. (206:42) **Miwok Beverage** Decoction of stems and flower heads used as a beverage. (12:171) **Okanagan-Colville Beverage** Leaves and stems used to make a hot or cold tea. (188:109) **Sanpoil & Nespelem Beverage** Leaves and stems boiled, liquid strained and used as a hot or cold beverage. (131:105)
- **Other—Karak Incense & Fragrance** Plant put inside the hat for the nice smell when going on a journey. (148:389) **Okanagan-Colville Hunting & Fishing Item** Plant used to wipe fishing hooks and lines, spears, harpoons, animal snares, and arrows to remove scent. (188:109)

### *Monardella* sp., Aromatic Mint

- **Drug—Karak Unspecified** Used for medicine. (117:209)

### *Monardella villosa* Benth., Coyote Mint

- **Drug**—**Cahuilla** *Gastrointestinal Aid* Infusion of leaves taken for stomachaches. (15:89) **Costanoan** *Blood Medicine* and *Pulmonary Aid* Poultice of plant applied to back cuts to draw out “bad blood” for pneumonia. *Respiratory Aid* Decoction of plant and plant salve used for respiratory conditions. (21:16) **Mahuna** *Gastrointestinal Aid* Plant used for stomachaches. (140:8)

***Monardella villosa* ssp. *sheltonii*** (Torr.) Epling, Shelton's Mountainbalm

- **Drug**—**Mendocino Indian** *Blood Medicine* Infusion of dried leaves taken to purify the blood. *Gastrointestinal Aid* Infusion of dried leaves taken for colic. (as *M. sheltonii* 41:384)
- **Food**—**Mendocino Indian** *Substitution Food* Aromatic, sweet-scented leaves used dried or fresh as a substitute for tea. (as *M. sheltonii* 41:384)

***Monardella viridis*** Jepson, Green Mountainbalm

- **Food**—**Kawaiisu** *Beverage* Leaves and flowers used to make a non-medicinal tea. (206:42)

## ***Moneses***, Ericaceae

***Moneses uniflora*** (L.) Gray, Single Delight

- **Drug**—**Cowichan** *Dermatological Aid* Poultice of leaves applied to draw out the pus from boils or abscesses. (182:83) **Eskimo, Alaska** *Cold Remedy* Infusion of dried plants used for colds. *Cough Medicine* Infusion of dried plants used for coughs. (149:331) **Haisla & Hanaksiala** *Throat Aid* Plant chewed for sore throats. (43:261) **Kwakiutl** *Analgesic* Poultice of chewed or pounded plant applied to pains. (183:283) *Dermatological Aid* Poultice of chewed plant applied to swellings to draw blisters. (20:382) Plant used to draw blisters. Poultice of chewed or pounded plant applied to swellings. (183:283) **Kwakwaka'wakw** *Dermatological Aid* Poultice of chewed plant applied to swellings and blisters. (43:261) **Montagnais** *Orthopedic Aid* Infusion of plant used as a medicine for paralysis. (as *Monensis uniflora* 156:314) **Salish, Coast** *Dermatological Aid* Poultice of leaves applied to draw out the pus from boils or abscesses. (182:83)
- **Food**—**Montana Indian** *Fruit* Fruit used for food. (19:16)

***Moneses uniflora* ssp. *reticulata*** (Nutt.) Calder & Taylor, Single Delight

- **Drug**—**Haisla & Hanaksiala** *Throat Aid* Plant chewed for sore throats. **Kwakwaka'wakw** *Dermatological Aid* Poultice of chewed plant applied to swellings and blisters. (43:261)

## ***Monolepis***, Chenopodiaceae

***Monolepis nuttalliana*** (J. A. Schultes) Greene, Nuttall's Poverty-weed

- **Drug**—**Navajo, Ramah** *Ceremonial Medicine* Plant used as ceremonial emetic. *Dermatological Aid* Poultice of moist leaves applied to skin abrasions. *Emetic* Plant used as ceremonial emetic. *Hunting Medicine* Pinch of dried plant eaten by hunters to prevent “buck fever.” (191:25)
- **Food**—**Hopi** *Porridge* Ground seeds used to make mush. Ground seeds used to make mush. (190:161) **Navajo, Ramah** *Fodder* Used for sheep feed. (191:25) **Papago** *Dried Food* Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (34:24) *Unspecified* Roots used for food.

(36:60) **Pima** *Staple* Seeds boiled, partially dried, parched, ground, and eaten as pinole. *Unspecified* Roots boiled, cooled, mixed with fat or lard and salt, cooked, and eaten with tortillas. (as *M. chenopoides* 146:70) *Vegetable* Leaves boiled until tender, salted, fried in lard or fat, and eaten as greens. (47:70) **Pima, Gila River** *Vegetable* Leaves boiled or boiled, strained, refried, and eaten as greens. (133:5)

## ***Monotropa***, Ericaceae

***Monotropa hypopithys*** L., Pinesap

- **Drug**—**Kwakiutl** *Love Medicine* Plant used in a love potion. (as *Hypopites monotropa* 183:283)

***Monotropa uniflora*** L., Indian Pipe

- **Drug**—**Cherokee** *Anticonvulsive* Pulverized root given to children for fits, epilepsy, and convulsions. *Dermatological Aid* Crushed plant rubbed on bunions or warts. *Eye Medicine* Juice and water used to wash sore eyes. *Pediatric Aid* Pulverized root given to children for fits, epilepsy, and convulsions. (80:40) **Cree, Woodlands** *Toothache Remedy* Flower chewed for toothaches. (109:46) **Mohegan** *Analgesic* and *Cold Remedy* Infusion of root or leaves taken for pain due to colds. (176:73, 130) *Febrifuge* Leaves used for colds and fever. (176:130) **Potawatomi** *Gynecological Aid* Infusion of root taken for female troubles. (154:57) **Thompson** *Dermatological Aid* Poultice of plant used for sores that would not heal. Dried powdered stems applied to sores or burned stalk rubbed on sores. (187:215)
- **Other**—**Thompson** *Plant Indicator* Abundance of plant in woods indicated many mushrooms in the coming season. (187:215)

## ***Monroa***, Poaceae

***Monroa squarrosa*** (Nutt.) Torr., False Buffalograss

- **Other**—**Navajo, Kayenta** *Decorations* Pollen mixed with corn pollen and mineral pigments and painted on masks of the God Impersonators. (205:16)

**Moraceae**, see *Artocarpus*, *Broussonetia*, *Ficus*, *Maclura*, *Morus*

## ***Morchella***, Helvellaceae, fungus

***Morchella* sp.**, Morelle

- **Other**—**Crow** *Soap* Used as a substitute for soap. (19:16)

## ***Moricandia***, Brassicaceae

***Moricandia arvensis*** (L.) DC., Purple Mistress

- **Drug**—**Hoh** *Unspecified* Plants used for medicine. **Quileute** *Unspecified* Plants used for medicine. (as *Brassica arvensis* 137:61)
- **Food**—**Hoh** *Spice* Used for flavoring. *Vegetable* Plants eaten as greens. **Quileute** *Spice* Used for flavoring. *Vegetable* Plants eaten as greens. (as *Brassica arvensis* 137:61)
- **Other**—**Keres, Western** *Unspecified* Plant known and named but no use was specified. (as *Brassica arvensis* 171:33)

## ***Morinda***, Rubiaceae

***Morinda citrifolia*** L., Indian Mulberry

- **Drug**—**Hawaiian** *Dermatological Aid* Young fruit thoroughly pounded with salt or fruit juice and used for broken bones and deep cuts. *Orthopedic Aid* Young fruit thoroughly pounded with salt or fruit juice used for broken bones and deep cuts. *Unspecified* Leaves used to make medicine. (2:73)

**Mortonia**, Celastraceae**Mortonia sempervirens** ssp. *scabrella* (Gray) Prigge, Rio

Grande Saddlebush

- **Other**—Havasupai *Hunting & Fishing Item* Wood used to make the foreshaft on the reed arrow. (as *M. scabrella* 197:230)

**Morus**, Moraceae**Morus alba** L., White Mulberry

- **Drug**—Cherokee *Anthelmintic* Infusion of bark taken for worms. *Antidiarrheal* Infusion of bark taken to “check dysentery.” *Cathartic* Infusion of bark used as a purgative. *Laxative* Infusion of bark taken as a laxative. (80:45)
- **Food**—Cherokee *Fruit* Fruit used for food. (80:45)

**Morus microphylla** Buckl., Texas Mulberry

- **Food**—Apache, Chiricahua & Mescalero *Bread & Cake* Fruit pressed into pulpy cakes, dried, and stored. *Fruit* Fruits eaten fresh. *Winter Use Food* Fruit pressed into pulpy cakes, dried, and stored for winter use. (33:44) Apache, Mescalero *Fruit* Berries eaten fresh. *Sauce & Relish* Berries dried and used as a spread on mescl. (14:47) Yavapai *Fruit* Raw berries used for food. (65:257)
- **Fiber**—Papago *Basketry* Twigs split in half lengthwise and used to make serviceable baskets. (34:57)
- **Other**—Apache, Mescalero *Weapon* Wood used to make the best war bows. (14:47) Papago *Hunting & Fishing Item* Long shoots peeled of bark, laid in hot ashes, dried, and used as bows. (34:70)

**Morus nigra** L., Black Mulberry

- **Drug**—Delaware, Oklahoma *Cathartic* Decoction of bark taken as a cathartic. *Emetic* Decoction of bark taken as an emetic. *Gastrointestinal Aid* and *Liver Aid* Decoction of bark taken “to remove bile from the intestines.” (175:25, 76)

**Morus rubra** L., Red Mulberry

- **Drug**—Alabama *Urinary Aid* Decoction of roots taken for passing yellow urine. (177:19) Cherokee *Anthelmintic* Infusion of bark taken for worms. *Antidiarrheal* Infusion of bark taken to “check dysentery.” *Cathartic* Infusion of bark used as a purgative. *Laxative* Infusion of bark taken as a laxative. (80:45) Creek *Emetic* Roots used as an emetic. *Stimulant* Infusion of root taken for weakness. *Urinary Aid* Infusion of root taken for urinary problems. (172:659) Meskwaki *Panacea* Root bark used as a medicine for any sickness. (152:251) Rappahannock *Dermatological Aid* Tree sap rubbed on skin for ringworm. (161:30)
- **Food**—Cherokee *Beverage* Berries used to make juice. *Bread & Cake* Berries and pokeberries crushed, strained, mixed with sugar and cornmeal, and made into dumplings. (126:48) *Fruit* Fruit used for food. (as *M. rubra* 80:21) Fresh berries used for food. *Preserves* Berries used to make jam. *Winter Use Food* Berries canned for future use. (126:48) Comanche *Fruit* Fruits eaten for food. (29:523) Iroquois *Bread & Cake* Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) Omaha *Dried Food* Fruit dried for winter use. *Fruit* Fruit eaten fresh. (68:326) Seminole *Unspecified* Plant used for food. (169:475)

- **Other**—Seminole *Hunting & Fishing Item* Plant used to make bows. (169:475)

**Morus** sp., Wild Mulberry

- **Food**—Hualapai *Fruit* Berries used for food. (195:50) Lakota *Fruit* Fruits eaten for food. (139:51)
- **Fiber**—Hualapai *Basketry* Used to make the frame for coil weaving. (195:50)
- **Other**—Hualapai *Hunting & Fishing Item* Used to make bows. *Walking Sticks* Used to make canes. (195:50)

**Mucuna**, Fabaceae**Mucuna gigantea** (Willd.) DC., Seabean

- **Drug**—Hawaiian *Laxative* Fruit meat and other plants chewed, mixed with salt water, and injected with an enema as a laxative. (2:45)

**Muhlenbergia**, Poaceae**Muhlenbergia andina** (Nutt.) A. S. Hitchc., Foxtail Muhly

- **Fiber**—Navajo, Ramah *Brushes & Brooms* Stems used to make hairbrushes. (191:16)

**Muhlenbergia cuspidata** (Torr. ex Hook.) Rydb., Plains Muhly

- **Fiber**—Navajo *Brushes & Brooms* Stems used to make hairbrushes and brooms for sweeping out the hogan. (55:25)

**Muhlenbergia dubia** Fourn. ex Hemsl., Pine Muhly

- **Drug**—Navajo *Veterinary Aid* Compound poultice with roots applied to make sheep's blood cake. (90:153)

**Muhlenbergia filiformis** (Thurb. ex S. Wats.) Rydb., Pullup Muhly

- **Food**—Navajo, Ramah *Fodder* Used for sheep, horse, and cow feed. (191:16)

**Muhlenbergia mexicana** (L.) Trin. var. *mexicana*, Mexican Muhly

- **Food**—Navajo, Ramah *Fodder* Used for sheep and horse feed. (as *M. foliosa* 191:16)
- **Fiber**—Navajo, Ramah *Brushes & Brooms* Stems used to make hairbrushes. (as *M. foliosa* 191:16)

**Muhlenbergia pauciflora** Buckl., New Mexico Muhly

- **Other**—Apache, Chiricahua & Mescalero *Containers* Moist grass laid onto hot stones to prevent steam from escaping. (as *M. neomexicana* 33:36)

**Muhlenbergia pungens** Thurb., Sandhill Muhly

- **Fiber**—Hopi *Brushes & Brooms* Used to make a hairbrush and broom. (56:16) Used to make brooms. (190:158) Culms stripped of leaves and bound together to form a broom and hairbrush. (200:65) Navajo *Brushes & Brooms* Stems, pulled out of their sheaths when dry, tied with string and used as brooms and brushes. (55:26)

**Muhlenbergia richardsonis** (Trin.) Rydb., Mat Muhly

- **Drug**—Blackfoot *Veterinary Aid* Roots used as a horse medicine. (97:22)
- **Food**—Blackfoot *Forage* Plant eaten by horses. (97:22)

**Muhlenbergia rigens** (Benth.) A. S. Hitchc., Deer Grass

- **Food**—Apache, Western *Porridge* Seeds ground, mixed with cornmeal and water, and made into a mush. (as *Epicompes rigens* 26:189)

**Apache, White Mountain Bread & Cake** Seeds ground and used to make bread and pones. (as *Epicampes rigens* 136:149) **Fodder Plant** used for hay. (as *Epicampes rigens* 136:157) **Porridge** Seeds ground, mixed with meal and water, and eaten as mush. (as *Epicampes rigens* 136:149) **Unspecified** Seeds used for food. (as *Epicampes rigens* 136:157) **Hopi Bread & Cake** Ground seed meal used to make bread. Ground seed meal used to make bread. (190:158)

- **Fiber—Cahuilla Basketry** Stalks used as the horizontal or foundation around which the coils were wrapped in basket making. (15:89) **Diegueño Basketry** Seed stems used as the foundation material for coiled baskets. (84:25) **Kawaiisu Basketry** Stems used as the multiple rod foundation material in coiled basketry. (206:42) **Luiseno Basketry** Long grass used to make coiled baskets. **Clothing** Long grass made into coiled, conical baskets and used as hats. (as *Epicampes rigens californica* 155:204) **Shoshoni Sewing Material** Grass used as thread, very white, long, and fine. (as *Epicampes rigens* 118:8)
- **Other—Apache, White Mountain Cash Crop** Plant gathered and sold. (as *Epicampes rigens* 136:149) **Kawaiisu Tools** Stems used in pierced ears to keep the hole from growing together. (206:42) **Luiseno Containers** Long grass made into large, coiled baskets and used for storing food. **Cooking Tools** Long grass made into coiled, conical baskets and used as eating and drinking vessels. Long grass made into nearly flat, coiled baskets and used for winnowing and cleaning seeds. (as *Epicampes rigens californica* 155:204) **Zuni Ceremonial Items** Grass attached to sticks of plume offerings to anthropic gods. This grass was used only by Galaxy and Shu'maakwe fraternities. The sticks designated the god to whom the offerings were made and the plumes of the eagle and of other birds conveyed the breath prayers to the gods. (as *Epicampes rigens* 166:91)

### *Muhlenbergia* sp.

- **Food—Apache, Chiricahua & Mescalero Bread & Cake** Seeds threshed, winnowed, ground, and the flour used to make bread. (33:48)
- **Fiber—Navajo Brushes & Brooms** Used in the making of brushes and brooms. (55:25)

***Muhlenbergia wrightii*** Vasey ex Coult., Spike Muhly

- **Other—Apache, Chiricahua & Mescalero Containers** Moist grass laid onto hot stones to prevent steam from escaping. (33:36)

### *Murdannia*, Commelinaceae

***Murdannia nudiflora*** (L.) Brenan, Nakedstem Dewflower

- **Drug—Hawaiian Blood Medicine** Infusion of pounded leaves and other plants strained and taken to purify the blood. (as *Commelina nudiflora* 2:70)
- **Other—Hawaiian Containers** Leaves used as a covering for underground ovens. (as *Commelina nudiflora* 2:70)

**Musaceae**, see *Musa*

### *Musa*, Musaceae

***Musa* × *paradisiaca*** L., Paradise Banana

- **Drug—Hawaiian Strengthener** Bud or young flower juice rubbed on tongue and mouth interior for body weakness from stomach disorder. (as *M. sapientum* 2:65)

***Musa* sp.**, Banana

- **Food—Seminole Unspecified** Plant used for food. (169:509)

### *Musineon*, Apiaceae

***Musineon divaricatum*** (Pursh) Raf. **var. *divaricatum***, Leafy Wildparsley

- **Food—Blackfoot Unspecified** Roots eaten raw. (114:278)

***Musineon divaricatum* var. *hookeri*** (Torr. & Gray) Mathias, Hooker's Wildparsley

- **Food—Crow Unspecified** Fleshy root used for food. (as *Musineon hookeri* 19:16)

### *Myosotis*, Boraginaceae

***Myosotis laxa*** Lehm., Bay Forget Me Not

- **Drug—Makah Dermatological Aid** Plant rubbed on the hair to act like a hair spray. (67:312)

***Myosotis* sp.**, Forget Me Not

- **Drug—Iroquois Veterinary Aid** Compound decoction of plants mixed with feed to aid cows with birthing. (87:421)

### *Myosurus*, Ranunculaceae

***Myosurus aristatus*** Benth., Bristle Mousetail

- **Drug—Navajo, Ramah Panacea** Plant used as "life medicine." **Witchcraft Medicine** Cold infusion of plant taken to protect from witches. (191:27)

***Myosurus cupulatus*** S. Wats., Arizona Mousetail

- **Drug—Navajo, Ramah Dermatological Aid** Cold infusion used internally or externally for ant bites. **Gastrointestinal Aid** Cold infusion of plant taken and used as a lotion for effects of swallowing an ant. (191:27)

***Myosurus minimus*** L., Tiny Mousetail

- **Drug—Navajo, Ramah Dermatological Aid** Cold infusion taken or poultice of chewed plant applied to ant bite. (191:27)

### *Myrcianthes*, Myrtaceae

***Myrcianthes fragrans*** (Sw.) McVaugh, Twinberry

- **Other—Seminole Cooking Tools** Plant used to make food paddles. **Hunting & Fishing Item** Plant used to make blowgun darts. **Tools** Plant used to make pestles and ax handles. (as *Eugenia simpsoni* 169:468)

**Myricaceae**, see *Comptonia*, *Myrica*

### *Myrica*, Myricaceae

***Myrica cerifera*** L., Southern Bayberry

- **Drug—Choctaw Febrifuge** Decoction of leaves and stems taken "during attacks of fever." (25:23) Decoction of leaves and stems taken for fevers. **Throat Aid** Decoction of roots used as a gargle for inflamed tonsils. (177:13) **Houma Anthelmintic** Decoction of leaves taken as a vermifuge. (158:56) **Koasati Gastrointestinal Aid** and **Pediatric Aid** Decoction of roots given to children with stomachaches. (177:13) **Micmac Analgesic** Roots used for headaches. (40:58) **Antirheumatic (External)** Hot poultice of pounded, water-soaked roots applied to inflammations. (194:30) **Dermatological Aid** Roots used for inflam-

mations. *Stimulant* Berries, bark, and leaves used as an exhilarant and beverage. (40:58) *Seminole Analgesic* Decoction of leaves taken for headaches. *Febrifuge* Decoction of leaves taken for fevers. *Gastrointestinal Aid* Decoction of leaves taken for stomachaches. (169:282) *Love Medicine* Decoction of wood ashes placed on the tongue to cleanse the body and strengthen the marriage. (169:250)

- **Other—Houma** *Lighting* Berries boiled and wax used to make candles. (158:56) *Seminole Cleaning Agent* Plant used to make lye. *Smoke Plant* Plant used as a tobacco substitute. (169:480)

### *Myrica gale* L., Sweet Gale

- **Drug—Bella Coola** *Diuretic* Decoction of pounded branches taken as a diuretic and for gonorrhea. *Veneral Aid* Decoction of pounded branches taken for gonorrhea and as a diuretic. (150:55) Infusion of pounded branches and fruits taken as a diuretic for gonorrhea. (184:206)
- **Food—Potawatomi** *Preservative* Plant used to line the blueberry pail to keep the berries from spoiling. (154:121)
- **Dye—Ojibwa** *Brown* In the fall, the branch tips grow into an abortive scale and boiled to yield a brown dye stuff. (153:425) *Yellow* Seeds boiled to obtain a yellow dye. (96:114)
- **Other—Cree, Woodlands** *Hunting & Fishing Item* Pistillate catkins used as an ingredient in lures. (109:46) **Potawatomi** *Insecticide* Plant thrown onto the fire to make a smudge and keep away mosquitoes. (154:121)

### *Myrica heterophylla* Raf., Evergreen Bayberry

- **Other—Houma** *Lighting* Berries boiled and wax used to make candles. (as *M. caroliniensis* 158:56)

### *Myrica* sp., Sweet Bay

- **Drug—Creek** *Emetic* Compound decoction of leaves taken after a burial as an emetic before eating. (172:664) **Delaware** *Blood Medicine* Bark used as a blood purifier. *Kidney Aid* Bark used for kidney troubles. (176:35) **Delaware, Oklahoma** *Blood Medicine* Bark used as a blood purifier. *Gynecological Aid* Compound containing root taken for "female generative organs." *Kidney Aid* Bark used for "kidney trouble." (175:29, 76) **Mohegan** *Kidney Aid* Infusion of bark taken for kidney disorders. (176:74, 130)

## *Myriophyllum*, Haloragaceae

### *Myriophyllum sibiricum* Komarov, Shortspike Watermilfoil

- **Drug—Iroquois** *Blood Medicine* Infusion of whole plant and two other plants taken by adolescents for poor blood circulation. (as *M. exalbescens* 141:51) *Emetic* Infusion of plant taken as a strong emetic. (as *M. exalbescens* 141:51). *Pediatric Aid* Infusion of whole plant and two other plants taken by adolescents for poor blood circulation. (as *M. exalbescens* 141:51)

### *Myriophyllum spicatum* L., Spike Watermilfoil

- **Drug—Menominee** *Unspecified* Some plants of this class used in medicines. (151:37)
- **Food—Tanana, Upper** *Frozen Food* Rhizomes frozen for future use. *Unspecified* Rhizomes eaten raw, fried in grease, or roasted. Rhizomes were sweet and crunchy and a much relished food. They were said to have been an important food during periods of low food supply as they were usually able to obtain them when needed. People

give accounts of how they saved people's lives during such times. (102:14)

### *Myriophyllum verticillatum* L., Whorlleaf Watermilfoil

- **Drug—Iroquois** *Other* Compound infusion of plants used as a "snowsnake medicine." *Pediatric Aid* and *Stimulant* Decoction of plant given to children when they lie very quiet and never move. (87:391)

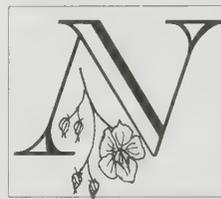

## Myrsinaceae, see *Ardisia*

## Myrtaceae, see *Eucalyptus*, *Eugenia*, *Metrosideros*, *Myrcianthes*, *Psidium*, *Syzygium*

## *Myrtillocactus*, Cactaceae

### *Myrtillocactus cochal* (Orcutt) Britt. & Rose, Cochal

- **Food—Papago & Pima** *Fruit* Fruit used for food. (35:42)

## *Nama*, Hydrophyllaceae

### *Nama demissum* Gray var. *demissum*, Purplemat

- **Food—Kawaiisu** *Porridge* Seeds pounded in a bedrock mortar and boiled into a mush. (206:43)

### *Nama hispidum* Gray, Bristly Nama

- **Drug—Kayenta** *Dermatological Aid* Plant used as a lotion for spider or tarantula bites. (205:39)

## *Napaea*, Malvaceae

### *Napaea dioica* L., Glade Mallow

- **Drug—Meskwaki** *Dermatological Aid* Poultice of root applied to keep old sores soft and boiled root used for swellings. *Gynecological Aid* Root used to ease childbirth and for female troubles. *Hemorrhoid Remedy* Roots used as a special remedy for piles. *Hunting Medicine* Root used as a hunting charm and for female troubles. (152:232)

## *Navarretia*, Polemoniaceae

### *Navarretia atractyloides* (Benth.) Hook. & Arn., Hollyleaf Pincushionplant

- **Drug—Costanoan** *Burn Dressing* Toasted, powdered plant or plant ash applied to burns. (21:13)

### *Navarretia cotulifolia* (Benth.) Hook. & Arn., Cotulaleaf Pincushionplant

- **Drug—Miwok** *Antirheumatic (External)* Decoction applied to swelling. (12:171)

### *Navarretia* sp., Skunk Weed

- **Food—Miwok** *Unspecified* Dried, stored, parched, pulverized seeds used for food. (12:155)

## Nelumbonaceae, see *Nelumbo*

## *Nelumbo*, Nelumbonaceae

### *Nelumbo lutea* Willd., American Lotus

- **Food—Comanche Unspecified** Boiled roots used for food. (29:523) **Dakota Soup** Hard, nut-like seeds cracked, freed from the shells, and used with meat to make soup. *Unspecified* Peeled tubers cooked with meat or hominy and used for food. (70:79) **Huron Starvation Food** Roots used with acorns during famine. Roots used with acorns during famine. (as *Nelumbium luteum* 3:63) **Meskwaki Unspecified** Seeds cooked with corn. *Winter Use Food* Terminal shoots cut crosswise, strung on string, and dried for winter use. (152:262) **Ojibwa Unspecified** Hard chestnut-like seeds roasted and made into a sweet meal. Shoots cooked with venison, corn, or beans. The terminal shoots are cut off at either end of the underground creeping rootstock and the remainder is their potato. These shoots are similar in shape and size to a banana, and form the starchy storage reservoirs for future growth. They have pores inside, but have more substance to them than the stems. They are cut crosswise and strung upon basswood strings, to hang from the rafters for winter use. (153:407) **Omaha Soup** Hard, nut-like seeds cracked, freed from the shells, and used with meat to make soup. *Unspecified* Peeled tubers cooked with meat or hominy and used for food. (70:79) **Vegetable** Roots boiled and eaten as vegetables. (as *Nelumbium luteum* 58:341) **Pawnee Soup** Hard, nut-like seeds cracked, freed from the shells, and used with meat to make soup. *Unspecified* Peeled tubers cooked with meat or hominy and used for food. (70:79) **Potawatomi Unspecified** Seeds gathered and roasted like chestnuts. *Winter Use Food* Roots gathered, cut, and strung for winter use. (154:105) **Winnebago Soup** Hard, nut-like seeds cracked, freed from the shells, and used with meat to make soup. *Unspecified* Peeled tubers cooked with meat or hominy and used for food. (70:79)
- **Other—Dakota Ceremonial Items** Plant characterized as having mystic powers. **Omaha Ceremonial Items** Plant characterized as having mystic powers. **Pawnee Ceremonial Items** Plant characterized as having mystic powers. **Ponca Ceremonial Items** Plant characterized as having mystic powers. **Winnebago Ceremonial Items** Plant characterized as having mystic powers. (70:79)

## *Nemopanthus*, Aquifoliaceae

### *Nemopanthus mucronatus* (L.) Loes., Catberry

- **Drug—Malecite Cough Medicine** Used with blackberry roots, staghorn sumac, lily roots, and mountain raspberry roots for coughs. *Febrifuge* Used with blackberry roots, staghorn sumac, lily roots, and mountain raspberry roots for fevers. (116:251) *Kidney Aid* Infusion of root scrapings used for gravel. (116:257) *Tuberculosis Remedy* Used with blackberry roots, staghorn sumac, lily roots, and mountain raspberry roots for consumption. (116:251) **Ojibwa Unspecified** Berries used medicinally for unspecified purpose. (153:355) **Potawatomi Panacea** Compound decoction boiled down to syrup and used for many kinds of diseases. *Tonic* Decoction of small branches reduced to syrup and taken as a tonic. (154:39)
- **Food—Potawatomi Sour** Berries edible, but quite bitter and kept for a food. (154:95)

## *Nemophila*, Hydrophyllaceae

### *Nemophila menziesii* Hook. & Arn., Menzies's Baby Blue Eyes

- **Food—Kawaiisu Forage** Plant eaten by the cows. (206:43)

## *Neomammillaria*, Cactaceae

### *Neomammillaria* sp., Fishhook Cactus

- **Food—Navajo Unspecified** Spines removed and used for food. (55:64)

## *Nepeta*, Lamiaceae

### *Nepeta cataria* L., Catnip

- **Drug—Cherokee Abortifacient** Infusion used for female obstructions. *Anthelmintic* Infusion used for worms. *Anticonvulsive* Infusion used for spasms. *Cold Remedy* "Syrup" and honey used for colds and infusion used for babies' colds. *Cough Medicine* "Syrup" and honey used for coughs. *Dermatological Aid* Infusion taken for hives and poultice of leaf used for boils and swellings. *Febrifuge* Infusion taken for fevers and poultice of leaf used for boils. *Gastrointestinal Aid* Infusion used for colic and infusion of leaves used for stomach. *Pediatric Aid* Infusion used for babies' colds. *Sedative* Infusion used for hysterics. *Stimulant* Infusion of leaf used as a stimulant. *Tonic* Infusion of leaf used as a tonic. (80:28) **Chippewa Febrifuge** Simple or compound decoction of leaves taken for fever. (53:354) **Delaware Pediatric Aid** Leaves used with peach seeds to make a beneficial syrup for children. (176:37) **Delaware, Oklahoma Pediatric Aid** Leaves used with peach pits to make a tonic for children. (175:31, 82) *Tonic* Leaves prepared with peach pit and given as a pediatric tonic. (175:31, 76) **Delaware, Ontario Pediatric Aid** and *Sedative* Infusion of leaves given to soothe infants. (175:67) **Hoh Pediatric Aid** Infusion used as medicine for infants. (137:68) **Iroquois Analgesic** Cold infusion of plants taken for headaches. Decoction of plant tips given to children with headaches. (87:423) *Antidiarrheal* Compound decoction of stems given to children with diarrhea. (87:422) Plant used as a laxative and astringent for diarrhea. *Antiemetic* Infusion of plants taken for vomiting from fever or unknown cause. *Cold Remedy* Infusion of stems taken for colds. *Cough Medicine* Infusion of stems taken for coughs. *Febrifuge* Cold infusion of plants taken or applied to forehead for fevers and chills. *Gastrointestinal Aid* Infusion of plant given to children for stomachaches due to colds. Infusion of plants taken for trouble caused by eating rich foods. *Laxative* Plant used as a laxative and astringent for diarrhea. (87:423) *Oral Aid* Flowers and roots used for excess saliva. (141:58) *Other* Cold infusion of plants taken for fever and "summer complaint." (87:423) *Pediatric Aid* Compound decoction of stems given to children with diarrhea. (87:422) Decoction of plant tips given to children when peevish or with headaches. Infusion of plant given to children for stomachaches due to colds. Infusion of plant tips given to babies who are restless and cannot sleep. Plant used for babies with fevers. *Sedative* Decoction of plant tips given to children when peevish. *Throat Aid* Infusion of stems taken for sore throats and chills. (87:423) **Keres, Western Stimulant** Infusion of plant used as a bath for tiredness. (171:55) **Menominee Diaphoretic** Decoction of whole plant, except root, taken to produce perspiration. (54:132) *Pulmonary Aid* Compound infusion taken and poultice applied to chest for pneumonia. (151:39) *Sedative* Decoction of whole plant, except root, taken to produce restful sleep. (54:132) **Mohegan Gastrointestinal Aid** Infusion of plant given to babies for colic. (174:266) Infusion of leaves taken for the stomach and given to infants for colic. (176:74, 130) *Pediatric Aid* Infusion given to babies

for colic. (174:266) Infusion of leaves given to infants for colic. (176:74, 13) **Ojibwa Blood Medicine** Infusion of leaves taken as a blood purifier. *Other* Infusion of leaves used to bathe a patient to raise the body temperature. (153:372) **Okanagan-Colville Cold Remedy** Infusion of plant tops taken for colds. (188:110) **Quileute Pediatric Aid** Infusion used as medicine for infants. (137:68) **Rappahannock Analgesic** Infusion of leaves given to babies for pains. *Antirheumatic (Internal)* Infusion of leaves given to babies for rheumatism. *Pediatric Aid* Infusion of leaves given to babies for pains, rheumatism, and measles. Weak infusion of plant given to children as a tonic. *Tonic* Weak infusion of plant given to children as a tonic. (161:25) **Shinnecock Antirheumatic (Internal)** Dried leaves smoked in a pipe for rheumatism. (30:119)

- **Food**—**Ojibwa Beverage** Leaves used to make a beverage tea. (153:405) **Okanagan-Colville Forage** Plant eaten by skunks. (188:110)

## *Nephroma*, Peltigeraceae, lichen

*Nephroma arcticum* (L.) Tross., Arctic Kidney Lichen

- **Drug**—**Eskimo, Inuktitut Strengtheners** Infusion of plant used for “weakness.” (202:187)
- **Food**—**Eskimo, Inuktitut Unspecified** Plant boiled and eaten with fish eggs. (202:187)

## *Nereocystis*, Lessoniaceae, alga

*Nereocystis luetkeana* (Mertens) Postels & Ruprecht

- **Drug**—**Kwakiutl, Southern Burn Dressing** Leaves used for burns. *Dermatological Aid* Leaves used for scabs and nonpigmented spots. Leaves dried, pulverized, and rubbed into children’s heads to make hair grow long. *Orthopedic Aid* Leaves used for swollen feet. *Pediatric Aid* Leaves dried, pulverized, and rubbed into children’s heads to make hair grow long. (common kelp 183:261) **Nitinaht Dermatological Aid** Bulbs dried, melted, hardened, and used as skin cream for protection from sun, wind, and cold. (common kelp 186:52) **Pomo, Kashaya Expectorant** Dried, salty stalk strips sucked for colds with sore throats and to clear mucus. *Throat Aid* Dried, salty stalk strips sucked for colds with sore throats. (as *N. luetkeana*, bull kelp 72:124)
- **Food**—**Oweekeno Unspecified** Plant eaten with herring roe. *Winter Use Food* Plant and herring eggs salted for storage. (bull kelp 43:46) **Pomo, Kashaya Unspecified** Thick part of the stalk cooked in an oven or in hot ashes. *Winter Use Food* Stalks cut into lengthwise strips and dried for winter use. (bull kelp 72:124)
- **Fiber**—**Hesquiat Cordage** Long stipes used to make fishing lines and anchor ropes. Long stipes were dried, then soaked in dogfish or whale oil so they would not lose their flexibility. Kelp ropes were very strong and could be plaited or spliced together to make them longer. (common kelp 185:25) **Makah Cordage** Solid stipes used for tying. (bull kelp 67:206) **Nitinaht Cordage** Lower stipes used for ropes and fishing lines. (bull kelp 67:206) **Pomo, Kashaya Cordage** Dried, shredded stems used as cordage or fish line. (bull kelp 72:124)
- **Other**—**Alaska Native Hunting & Fishing Item** Long, hollow stalks used to make fishing lines for deep-sea fishing. (giant kelp 85:139) **Bella Coola Containers** Used to store eulachon (candlefish) grease. (bull kelp 184:195) **Haisla & Hanaksiala Designs** Plant heads used as the design for the horizontal timber ends of the Killer Whale house. (bull kelp 43:128) **Kitasoo Hunting & Fishing Item** Stipes used to

make fishing lines. (bull kelp 43:303) **Hesquiat Containers** Hollow floats and upper stipes used to store oil and other liquids. Hollow floats and upper stipes used as molds for cottonwood resin and deer fat skin “cream.” This ointment was poured in hot and melted. After it had solidified, the kelp mold was cut open and the ball of ointment removed. (common kelp 185:25) **Kwakiutl, Southern Ceremonial Items** Tubes used in special pre-war rituals. *Containers* Long, hollow stipes used to store eulachon (candlefish) grease and other oils. *Cooking Tools* Tubes put into steaming pits so that water could be poured directly on hot rocks at the bottom. *Hunting & Fishing Item* Blades weighted, placed underwater at river mouths, and used to catch herring spawn. (common kelp 183:261) **Makah Containers** Bottle ends used to carry fish oil and molasses. *Hunting & Fishing Item* Kelp used as fishing culture for fish line. (kelp 79:50) Solid stipes used for fish lines. (bull kelp 67:206) *Toys & Games* Plants and stems used by children as beach games. (kelp 79:50) Used by children to make “kelp cars” to tow around on the beach. (bull kelp 67:206) **Nitinaht Containers** Enlarged upper portion of the stipes used as molds for cosmetics. Enlarged upper portion of stipes dried and rinsed with fresh water and used for oil storage bottles. Blades used to cover fish in the boat, while at sea, to prevent the fish from drying out. (bull kelp 67:206) Hollow stipes used as containers for storing oil. Leafy fronds used to cover fish to prevent spoiling or drying out. (common kelp 186:52) *Cooking Tools* Enlarged upper portion of stipes used as funnels for pouring water onto hot rocks in pit cooking. *Hunting & Fishing Item* Lower stipes used for ropes and fishing lines. (bull kelp 67:206) Stipes partially dried, rubbed with oil until saturated, and used as fishing line. (common kelp 186:52) *Tools* Enlarged upper portion of the stipes used as steam boxes for making halibut hooks. (bull kelp 67:206) Bulbs used for curving and molding halibut hooks. (common kelp 186:52) **Oweekeno Hunting & Fishing Item** Stipes used to make fishing lines. (bull kelp 43:46) **Pomo, Kashaya Hunting & Fishing Item** Dried, shredded stems used as cordage or fish line. (bull kelp 72:124) **Quileute Containers** Bottle ends used to carry fish oil and molasses. *Hunting & Fishing Item* Kelp used as fishing culture for fish line. **Quinault Containers** Bottle ends used to carry fish oil and molasses. *Hunting & Fishing Item* Kelp used as fishing culture for fish line. (kelp 79:50) **Tsimshian Hunting & Fishing Item** Stipes used to make fishing lines. (bull kelp 43:303)

## *Nicotiana*, Solanaceae

*Nicotiana attenuata* Torr. ex S. Wats., Coyote Tobacco

- **Drug**—**Apache, White Mountain Ceremonial Medicine** Plant smoked in the medicine ceremonies. (136:158) **Hopi Ceremonial Medicine** Plant smoked for all ceremonial occasions. (56:19) **Navajo, Kayenta Hemostat** Plant used for nosebleed. *Narcotic* Plant used as a narcotic. (205:41) **Navajo, Ramah Analgesic** Leaves smoked in corn husks for headache. *Ceremonial Medicine* Plant smoked in corn husks for ceremonial purposes. *Cough Medicine* Leaves smoked in corn husks for cough. *Veterinary Aid* Plant used to heal castration cuts on a young racehorse. (191:43) **Paiute Anthelmintic** Decoction of leaves taken sparingly to expel worms. (180:106, 107) *Antirheumatic (External)* Infusion of stems and leaves used as a wash for aches and pains. (111:108) Crushed seeds used as a liniment for rheumatic swellings. Poultice of crushed leaves applied to swellings, especially from rheu-

matism. *Cathartic* Weak decoction of leaves taken as a physic. (180:106, 107) *Cold Remedy* Leaves smoked during sweat house bathing and prayer, connected with spiritual power. (111:108) Dried leaves smoked alone or in a compound for colds and asthma. *Dermatological Aid* Decoction of leaves used as a healing wash for hives or other skin irritations. Poultice of chewed leaves applied to cuts. Poultice of crushed leaf applied or crushed seed used as a liniment for swellings. Poultice of crushed leaves applied to eczema or other skin infections. Pulverized dust of plant sprinkled on sores. (180:106, 107) *Emetic* Infusion of stems and leaves taken as an emetic. (111:108) Weak decoction of leaves taken as an emetic. *Kidney Aid* Decoction of leaves used as a wash for “dropsical conditions.” (180:106, 107) *Misc. Disease Remedy* Infusion of plant taken for measles. *Respiratory Aid* Infusion of stems and leaves taken for respiratory diseases. (111:108) Compound containing dried leaves smoked for asthma. *Snakebite Remedy* Poultice of chewed leaves bound on snakebite after removing poison. (180:106, 107) *Tuberculosis Remedy* Infusion of stems and leaves taken for tuberculosis. (111:108) Compound containing dried leaves smoked for tuberculosis. (180:106, 107) **Salish** *Dermatological Aid* Plant used as a head wash for dandruff. (178:294) **Shoshoni** *Anthelmintic* Decoction of leaves taken sparingly to expel worms. *Antirheumatic (External)* Poultice of crushed leaves applied to swellings, especially from rheumatism. *Cathartic* Weak decoction of leaves taken as a physic. *Dermatological Aid* Decoction of leaves used as a healing wash for hives or other skin irritations. Poultice of chewed leaves applied to cuts. Poultice of crushed leaf applied to reduce swellings. *Emetic* Weak decoction of leaves taken as an emetic. *Toothache Remedy* Poultice of crushed leaves applied to gum for toothache. *Tuberculosis Remedy* Compound of dried leaves smoked for tuberculosis. (180:106, 107) **Shuswap** *Urinary Aid* Plant used for the bladder. (123:69) **Tewa** *Ceremonial Medicine* Dried leaves and other plant parts smoked ceremonially. (138:103, 104) *Cough Medicine* Poultice of leaves mixed with oil and soot applied to neck and chest for cough. *Gynecological Aid* Snuff containing leaves used by women in labor. (138:106) *Nose Medicine* Snuff of leaves used for “a discharge from the nose.” (138:103, 104) *Toothache Remedy* Leaves placed on or in a tooth for toothache. (138:106) **Thompson** *Dermatological Aid* Decoction of plant used as a wash to remove dandruff and prevent falling hair. (164:467, 468) **Zuni** *Snakebite Remedy* Smoke blown over body for throbbing from rattlesnake bite. (166:54)

- **Other—Blackfoot** *Smoke Plant* Leaves used for smoking. (97:52) **Coahuilla** *Smoke Plant* Leaves pounded, mixed with water, chewed, and used as a smoking material. (13:74) **Gosiute** *Smoke Plant* Leaves dried and smoked. (39:375) **Havasupai** *Smoke Plant* Leaves smoked for pleasure. (197:240) **Hopi** *Ceremonial Items* Plant smoked in pipes for ceremonial purposes only. (200:90) *Smoke Plant* Used for smoking. (36:109) Used very much. (190:166) **Kawaiisu** *Protection* Leaves and lime placed in the camp fire to prevent supernatural beings from bothering you. *Smoke Plant* Leaves dried, pulverized, powdered, mixed with liquid, formed into cakes, and smoked in hollow stems. (206:43) **Klamath** *Smoke Plant* Leaves used for smoking. (45:104) **Mewuk** *Smoke Plant* Leaves dried, pounded, and used for smoking. (117:356) **Midoo** *Smoke Plant* Leaves dried, pounded, and used for smoking. (117:319) **Navajo** *Ceremonial Items* Smoked after the feast following the completion of the masks for the Night Chant. Used for

filling ceremonial prayer sticks in the Night Chant. (55:75) **Navajo**, **Ramah** *Smoke Plant* Plant used as substitute for commercial tobacco. (191:43) **Okanagan-Colville** *Smoke Plant* Leaves used for smoking. (188:140) **Okanagan** *Smoke Plant* Leaves dried, greased, mixed with leaves of other plants, and smoked. (125:39) **Paiute** *Smoke Plant* Roasted, dried leaves and small twigs used for smoking. (111:108) Leaves dried, ground, moistened, and made into balls for preservation. (167:319) **Papago** *Smoke Plant* Used for smoking. **Pima** *Smoke Plant* Used for smoking. (36:109) **Shoshoni** *Cash Crop* Leaves pulverized and made into large cakes and sold. (117:446) **Shuswap** *Smoke Plant* Mixed with kinnikinnick and red willow and smoked at ceremonies. (123:69) **Tewa** *Smoke Plant* Dried leaves and other plant parts smoked in pipes and cigarettes. (138:103, 104) **Thompson** *Smoke Plant* Leaves dried, greased, mixed with leaves of other plants, and smoked. (125:39) Dried, toasted leaves considered the most important source of tobacco. (164:495) **Yavapai** *Smoke Plant* Dried stems and leaves used for smoking. (65:263) **Zuni** *Ceremonial Items* and *Smoke Plant* Leaves smoked ceremonially. (166:95)

#### *Nicotiana clevelandii* Gray, Cleveland's Tobacco

- **Drug—Cahuilla** *Dermatological Aid* Poultice of leaves applied to cuts, bruises, swellings, and other wounds. *Ear Medicine* Leaf smoke blown into the ear and covered with a warm pad for earaches. *Emetic* Infusion of leaves used as an emetic. *Hunting Medicine* Leaves smoked as part of a hunting ritual. (15:90)
- **Food—Cahuilla** *Beverage* Leaves chewed, smoked, or used in a drinkable decoction. (15:90)
- **Other—Cahuilla** *Ceremonial Items* Used as an integral part of every ritual.<sup>47</sup> Used by shamans to control rain, increase crop production, divining, and improve health of community. Used by shamans, at community gatherings, to drive away malevolent powers. *Protection* Leaves smoked by travelers to clear away all danger and ensure blessing from spiritual guides. *Smoke Plant* Leaves chewed, smoked, or used in a drinkable decoction. (15:90)

#### *Nicotiana glauca* Graham, Tree Tobacco

- **Drug—Cahuilla** *Dermatological Aid* Poultice of leaves applied to cuts, bruises, swellings, and other wounds. *Ear Medicine* Leaf smoke blown into the ear and covered with a warm pad for earaches. *Emetic* Infusion of leaves used as an emetic. *Hunting Medicine* Leaves smoked as part of a hunting ritual. (15:90) **Hawaiian** *Dermatological Aid* Plant used for removing the pus from scrofulous sores or boils. Plant used for sores and the smoke used for cuts. *Tuberculosis Remedy* Plant used for removing the pus from scrofulous sores. (2:73) **Ma-huna** *Antirheumatic (External)* Infusion of leaves used as a steam bath for rheumatism. *Throat Aid* Poultice of leaves applied to inflamed throat glands. *Tuberculosis Remedy* Poultice of leaves applied for scrofula. (140:60)
- **Food—Cahuilla** *Beverage* Leaves chewed, smoked, or used in a drinkable decoction. (15:90)
- **Other—Cahuilla** *Ceremonial Items* Used as an integral part of every ritual.<sup>47</sup> Used by shamans to control rain, increase crop production, divining, and improve health of community. Used by shamans, at community gatherings, to drive away malevolent powers. *Protection* Leaves smoked by travelers to clear away all danger and ensure blessing from spiritual guides. *Smoke Plant* Leaves chewed, smoked,

or used in a drinkable decoction. (15:90) **Diegueño Smoke Plant** Leaves used for smoking. (84:27)

***Nicotiana plumbaginifolia*** Viviani, Tex-mex Tobacco

- **Other**—Neeshenam *Smoke Plant* Leaves sun dried, finely cut, and smoked. (129:378)

***Nicotiana quadrivalvis*** Pursh, Indian Tobacco

- **Other**—Blackfoot *Ceremonial Items* Plants planted, harvested ceremonially, and smoked as an important part of every ritual. Leaves mixed with kinnikinnick, dried cambium, or red osier dogwood and used in all religious bundles. *Smoke Plant* Leaves used for ritual smoking. Ritual smoking was begun by an orderly, who filled the pipe and passed it, unlit, to the man sitting next to the officiating ceremonialist. This man had the favored position because of his wealth in bundle ownership. He drew on the unlit pipe four times and then passed it back to the orderly, who lit the pipe and gave it to the man next to the distinguished bundle owner. This man drew on the pipe four times (not inhaling) and blew the smoke upward. Then the pipe was passed sunwise (clockwise) to each participant until it reached the door of the tepee, whence it was returned to the orderly. The pipe was not passed across the door to the other side of the lodge, where women and children were seated. If the pipe went out during the smoke, it was given to the orderly, who cleaned and re-filled it. The manner in which the participant received the pipe varied according to bundle ownership. Thus, a Medicine Pipe bundle owner would grasp the pipe roughly with both hands half clenched, imitating the actions of a bear. A ceremony in which smoking had special significance was the Big Smoke, or All Smoking, ceremony. This ceremony was confined to ceremonialists, diviners, and bundle owners. They gathered for the single purpose of recounting their prestigious and wealthy positions in the tribe. The Big Smoke commenced at sundown and continued until daybreak, and there was continuous use of many pipes. Four songs were allowed to be sung for each bundle owned; participants would often qualify for 16 songs or more. (as *N. multivalvis* 86:14) **Dakota Smoke Plant** Plant cultivated and used for smoking. (70:113, 114) **Montana Indian Smoke Plant** Used in compound for smoking and the delicate tobacco from flower was never chewed. (19:16) **Omaha Smoke Plant** Plant preferred for smoking because of the mild quality. (68:331) Plant cultivated and used for smoking. **Pawnee Smoke Plant** Plant cultivated and used for smoking. **Ponca Smoke Plant** Plant cultivated and used for smoking. (70:113, 114) **Tsimshian Smoke Plant** Leaves used for smoking. (43:350) **Winnebago Smoke Plant** Plant cultivated and used for smoking. (70:113, 114)

***Nicotiana quadrivalvis* var. *bigelovii*** (Torr.) DeWolf, Bigelow's Tobacco

- **Drug**—Costanoan *Cathartic* Leaves smoked as a general purgative in social and ritual contexts. *Ceremonial Medicine* Leaves smoked as a general purgative in social and ritual contexts. *Ear Medicine* Plant smoke blown into the ear for earaches. *Emetic* Fresh leaves chewed as an emetic. (as *N. bigelovii* 21:14) **Karok Unspecified** Used for medicine. (as *N. bigelovi* 117:209) **Kawaiisu Analgesic** Chewed plant put in the nostril for headaches. Poultice of plant applied to the chest for internal pains. *Dermatological Aid* Poultice of plant applied to itchy bites. Poultice of plant applied to bleeding cuts. *Ear Medicine*

Chewed plant put in the ear for earaches. *Emetic* Plant eaten to cause vomiting. Plant induced vomiting. *Gastrointestinal Aid* Plant eaten to clean out the stomach. *Gynecological Aid* Poultice of plant applied to woman's stomach during parturition. *Hallucinogen* Plant eaten to cause dreams. *Hemostat* Poultice of plant applied to bleeding cuts. *Other* Plant used for infanticide and suicide. *Poison* Plant considered poisonous. *Psychological Aid* Plant blown in the air to prevent bad dreams. *Respiratory Aid* Plant used as snuff for stuffy noses. *Sedative* Plant used as a soporific. *Stimulant* Plant used for fatigue. *Toothache Remedy* Plant held between the teeth for toothaches. (as *N. bigelovii* 206:43)

- **Other**—Karok *Smoke Plant* Leaves dried, powdered, and smoked. (as *N. bigelovii* var. *exaltata* 148:389) **Kawaiisu Protection** Leaves and lime placed in the camp fire to prevent supernatural beings from bothering you. *Smoke Plant* Leaves dried, pulverized, powdered, mixed with liquid, formed into cakes, and smoked in hollow stems. (as *N. bigelovii* 206:43) **Mendocino Indian Smoke Plant** Light green leaves used for smoking. (as *N. bigelovii* 41:386) **Mewuk Smoke Plant** Leaves dried, pounded, and used for smoking. (as *N. bigelovi* 117:356) **Midoo Smoke Plant** Leaves dried, pounded, and used for smoking. (as *N. bigelovi* 117:319) **Pomo, Kashaya Smoke Plant** Dried leaves used as tobacco. (as *N. bigelovii* 72:115) **Tolowa Smoke Plant** Leaves smoked for leisure. (as *N. bigelovii* 6:41)

***Nicotiana rustica*** L., Aztec Tobacco

- **Drug**—Cherokee *Analgesic* Used for cramps and sharp pains. (80:59) Chewed plant used for headaches. (177:56) *Anthelmintic* Used as an anthelmintic. *Anticonvulsive* Used as an antispasmodic. *Cathartic* Used as a cathartic. *Ceremonial Medicine* Used extensively in rituals. *Dermatological Aid* Poultice of beaten plant used for boils and applied to insect bites. *Diaphoretic* Used as a sudorific. *Diuretic* Used as a diuretic. *Emetic* Used as an emetic. *Expectorant* Used as an expectorant. *Gastrointestinal Aid* Taken for colic. *Kidney Aid* Taken for dropsy. *Misc. Disease Remedy* Decoction of leaf used for ague, "locked-jaw," and "black-yellow disease." *Other* Compound used for apoplexy, dizziness, and fainting. (80:59) Decoction of leaves rubbed in scratches made on the patient for apoplexy. (177:56) *Snakebite Remedy* Juice applied to snakebite. *Toothache Remedy* Smoke blown on toothache. *Vertigo Medicine* Used for dizziness and fainting. (80:59) **Iroquois Antidote** Compound decoction of plants used as wash to counteract poison. *Dermatological Aid* Poultice of chewed plant applied to all insect bites. *Psychological Aid* Decoction of plants taken for insanity caused by masturbation. *Tuberculosis Remedy* Plant used for consumption. (87:430)
- **Other**—Apalachee *Cash Crop* Plant cultivated and sold. *Smoke Plant* Plant smoked in the pre-ballgame rituals. (81:97) **Cherokee Smoke Plant** Leaves used for smoking. (80:59) **Iroquois Ceremonial Items** Leaves used for ceremonial purposes. (196:4) *Smoke Plant* Smashed roots used for smoking. (141:57) Leaves used to smoke and if the smoke blew in a streak to one side, it would rain in 24 hours. (196:30) Leaves used for smoking purposes. (196:4) **Pima Smoke Plant** Used for smoking. (36:111)

***Nicotiana* sp.**, Tobacco

- **Drug**—Cheyenne *Dermatological Aid* Poultice of wet leaves applied to sores. (as *Nicotina* 83:39) **Eskimo, Inuktitut Veterinary Aid** Used

medicinally for dogs. (202:184) **Eskimo, Kuskokwagmiut** *Veterinary Aid* Leaves considered to be “a good cure for a dog in a weakened condition.” (122:32) **Kwakiutl** *Dermatological Aid* Poultice of chewed leaves applied or compound rubbed on sores and swellings. (183:266) Poultice of leaves applied to sores, lumps, and cuts. *Herbal Steam* Leaves used in steam baths. (183:292) **Kwakiutl, Southern** *Analgesic* Poultice of dried plant and fresh sea wrack, alder, and black twinberry applied for aches and pains. (183:260) **Navajo** *Ceremonial Medicine* Infusion of leaves given to the patient in a painted turtle shell during the Raven Chant. *Dermatological Aid* Plant used for sores caused by the handling or burning a raven's nest. (55:74)

- **Other—Eskimo, Inuktitut** *Smoke Plant* Plant chewed rather than smoked. (202:184) **Luiseño** *Smoke Plant* Plant formerly used as tobacco. (155:229) **Yuki** *Smoke Plant* Leaves crushed, stuffed into pipes, and smoked. (49:91)

### *Nicotiana tabacum* L., Cultivated Tobacco

- **Drug—Cherokee** *Analgesic* Used for cramps and sharp pains. *Anthelmintic* Used as an anthelmintic. *Anticonvulsive* Used as an antispasmodic. *Cathartic* Used as a cathartic. *Ceremonial Medicine* Used extensively in rituals. *Dermatological Aid* Poultice of beaten plant used for boils and applied to insect bites. *Diaphoretic* Used as a sudorific. *Diuretic* Used as a diuretic. *Emetic* Used as an emetic. *Expectorant* Used as an expectorant. *Gastrointestinal Aid* Taken for colic. *Kidney Aid* Taken for dropsy. *Misc. ### *Nicotiana trigonophylla* var. *palmeri* (Gray) M. E. Jones, Palmer's Tobacco

- **Other—Navajo** *Ceremonial Items* Used for filling ceremonial prayer sticks. (as *N. palmeri* 55:75)

### *Nolina*, Agavaceae

#### *Nolina bigelovii* (Torr.) S. Wats., Bigelow's Nolina

- **Food—Cahuilla** *Unspecified* Stalk baked in a rock-lined roasting pit and eaten. (15:94)
- **Fiber—Papago** *Basketry* Bleached or green grass used for basketry. (118:9)

#### *Nolina bigelovii* var. *parryi* (S. Wats.) L. Benson, Parry's Nolina

- **Food—Hualapai** *Fruit* Fruit used for food. (as *N. parryi* 195:26) **Tubatulabal** *Unspecified* Stalks used for food. (as *N. parryi* 193:15)
- **Fiber—Hualapai** *Basketry* Used to make coil baskets. (as *N. parryi* 195:26)

#### *Nolina erumpens* (Torr.) S. Wats., Foothill Beargrass

- **Fiber—Papago** *Basketry* Leaves sun dried, split into strands, and used as foundation in coiled basketry. (34:57) Used as the warp element of baskets. (34:59)

#### *Nolina microcarpa* S. Wats., Sacahuista

- **Drug—Isleta** *Antirheumatic (Internal)* Decoction of root taken for rheumatism. *Pulmonary Aid* Decoction of root taken for pneumonia and lung hemorrhages. (100:35)
- **Food—Apache, Chiricahua & Mescalero** *Unspecified* Stalks roasted, boiled, or eaten raw. *Vegetable* Stalks boiled, dried, and stored to be used as vegetables. (33:38) **Apache, Western** *Unspecified* Young stalks

placed in fire, peeled, and eaten. (26:183) **Isleta Bread & Cake** Seeds made into a meal and used to make bread. (32:22) **Fruit** Fruit eaten fresh. (100:35) **Porridge** Seeds made into a meal and used to make mush. (32:22) **Preserves** Fruit eaten preserved. **Staple** Seeds used to make flour. (100:35)

- **Fiber**—**Apache, Mescalero Mats, Rugs & Bedding** Grass used as tepee ground covering. (14:51) **Apache, Western Building Material** Grass used as a thatching material for wickiup or ramada. (26:183) **Havasupai Building Material** Leaves used for thatch. **Mats, Rugs & Bedding** Leaves woven into a coarse mat and used for drying mescal. (197:212) **Isleta Basketry** Leaf fibers formerly used in basketry. **Brushes & Brooms** Leaf fibers used to make brushes. **Cordage** Leaf fibers used to make cords, ropes, and whips. (100:35) **Jemez Basketry** Leaves used to make baskets for storage and washing of grains. (17:34) Leaves woven together into baskets. (44:25) **Keres, Western Basketry** Plant used to make baskets. **Mats, Rugs & Bedding** Plant used to make mats. (171:55) **Keresan Basketry** Used to make baskets. (198:559) **Papago Basketry** Grass used as the foundation in coiled basketry. (17:34) Leaves dried, split, and made into baskets. **Pima Basketry** Leaves used to fashion coils for storage baskets. (17:62) **Southwest Indians Basketry** Beargrass used to make basketry. Made into baskets and used for storage containers. Leaves used as foundation element in coiled basketry. **Cordage** Leaves used as tying material. **Mats, Rugs & Bedding** Used to make matting to cover the dead. (17:61) **Yavapai Building Material** Leaves used to thatch dwellings. (17:62)
- **Dye**—**Navajo Unspecified** Plant used to make a dye for blankets. (100:35)
- **Other**—**Apache, Chiricahua & Mescalero Containers** Moist grass laid onto hot stones to prevent steam from escaping. (33:36) **Apache, Mescalero Cooking Tools** Grass woven into trays and used for processing datil and mescal. (14:51) **Apache, Western Cooking Tools** Dried leaves fashioned into spoons. **Protection** Grass used as wrapping material for foods to be transported or stored. (26:183) **Soap** Roots used as soap. (26:182) **Havasupai Cooking Tools** Lower stalks split open to form an alternative base for drying mescal. (197:212) **Isleta Ceremonial Items** Seeds used in dried gourd shells to make ceremonial rattles. **Stable Gear** Leaf fibers used to make brushes, cords, ropes, and whips. (100:35)

### *Nolina* sp., Beargrass

- **Fiber**—**Hualapai Building Material** Used for tying and thatching houses. (195:51) **Southwest Indians Basketry** Leaves used for making coarse forms of basketry. (17:60) **Mats, Rugs & Bedding** Grass made into mats and used in cradles. (17:48)
- **Other**—**Apache, Western Soap** Crowns and bases of leaves pounded together and mixed with water to make soap. (26:183) **Hualapai Hunting & Fishing Item** Used to make snares. (195:51)

### *Nothochelone*, Scrophulariaceae

*Nothochelone nemorosa* (Dougl. ex Lindl.) Straw, Woodland Beardtongue

- **Drug**—**Paiute Dermatological Aid** Green, mashed plant juice applied to sores “like iodine.” (as *Penstemon nemorosus* 111:109)

### *Nuphar*, Nymphaeaceae

*Nuphar lutea* (L.) Sm., Yellow Pondlily

- **Food**—**Lakota Unspecified** Roots boiled and eaten. (as *N. luteum* 139:52)

*Nuphar lutea* ssp. *advena* (Ait.) Kartesz & Gandhi, Yellow Pondlily

- **Drug**—**Iroquois Analgesic** Compound decoction taken for pain between shoulder blades. **Anticonvulsive** Compound decoction with plant taken by men with epilepsy. **Blood Medicine** Compound infusion of dried roots taken for blood disease. **Febrifuge** Compound decoction with roots taken for recurring chills followed by fever. (as *N. luteum* ssp. *macrophyllum* 87:319) **Gastrointestinal Aid** Poultice of roots or decoction taken and used as wash for swollen abdomen. (as *N. luteum* ssp. *macrophyllum* 87:318) **Heart Medicine** Infusion of dried, grated plant taken for heart trouble. (as *N. luteum* ssp. *macrophyllum* 87:319) **Misc. Disease Remedy** Infusion of roots taken to dry up smallpox. (as *N. luteum* ssp. *macrophyllum* 87:318) **Other** Cold infusion of roots used as a “ghost medicine.” **Pulmonary Aid** Compound decoction taken for swollen lungs. **Witchcraft Medicine** “Hung up inside to keep witches away” as an anti-witch remedy. Compound used to “detect bewitchment.” Poultice of roots applied to sore areas caused by witchcraft diseases. (as *N. luteum* ssp. *macrophyllum* 87:319) **Menominee Dermatological Aid** Poultice of dried, powdered root applied to cuts and swellings. (as *Nymphaea advena* 151:42, 43) **Micmac Dermatological Aid** Poultice of bruised root with flour or meal applied to swellings and bruises. (as *Nuphar advena* 156:317) **Orthopedic Aid** Leaves used for limb swellings. (as *Nymphaea advena* 40:58) **Ojibwa Dermatological Aid** Poultice of grated root applied to sores and powdered root used for cuts and swellings. (as *Nymphaea advena* 153:376) **Penobscot Dermatological Aid** Poultice of mashed leaves applied to swollen limbs. (as *Nymphaea advena* 156:310) **Potawatomi Dermatological Aid** Poultice of pounded root applied for “many inflammatory diseases.” (as *Nymphaea advena* 154:65) **Rappahannock Dermatological Aid** Poultice of parched and bruised leaf used to remove fever and inflammation from sores. Warmed leaves applied to boils. **Febrifuge** Poultice of parched and bruised leaf used to remove fever and inflammation from sores. (as *Nymphaea advena* 161:32) **Sioux Hemostat** Dry, porous rhizomes ground fine and applied to wounds as a styptic. (as *Nuphar advena* 19:17) **Thompson Analgesic** Cold decoction of stems or roots taken for internal pains. **Dermatological Aid** Poultice of fresh or dried leaves applied to wounds, cuts, or sores. (as *Nymphaea advena* 164:460)
- **Food**—**Comanche Unspecified** Boiled roots used for food. (as *Nymphaea advena* 29:523) **Menominee Vegetable** Rhizomes cooked in the same manner as rutabagas. (as *Nymphaea advena* 151:69) **Montana Indian Snack Food** Parched seeds eaten like popcorn. **Soup** Seeds ground into meal used for thickening soups. **Unspecified** Thick, fleshy rhizomes boiled with fowl or other meat. Mucilaginous seed-pods were well flavored and nutritious. (as *Nuphar advena* 19:17) **Pawnee Unspecified** Cooked seeds used for food. (as *Nymphaea advena* 70:79)

*Nuphar lutea* ssp. *polysepala* (Engelm.) E. O. Beal, Rocky Mountain Pondlily

- **Drug**—**Bella Coola Analgesic** Decoction of root taken for pain in any part of the body. **Antirheumatic (Internal)** Decoction of root taken for rheumatic pain. **Blood Medicine** Decoction of root considered “good for the blood.” **Heart Medicine** Decoction of root taken for

heart disease pain. *Tuberculosis Remedy* Decoction of root taken for consumption pain. (as *Nymphaea polysepala* 150:56) Rhizomes used for tuberculosis. (as *Nuphar polysepalum* 184:206) *Venereal Aid* Decoction of root taken for gonorrheal pain. **Gitksan** *Antihemorrhagic* Infusion of toasted root scrapings taken for lung hemorrhages. *Gynecological Aid* Infusion of toasted root or decoction of root heart used as a contraceptive. *Pulmonary Aid* Decoction of root taken for lung hemorrhage. (as *Nymphaea polysepala* 150:56) **Haisla & Hanaksiala** *Tuberculosis Remedy* Decoction of rhizomes taken for tuberculosis. *Unspecified* Decoction of rhizomes taken as medicine. (43:256) **Hesquiut** *Unspecified* Pond lily was a good medicine. (as *Nuphar polysepalum* 185:70) **Kitasoo** *Gynecological Aid* Decoction of plant and devil's club used for unspecified woman's illness. (43:339) **Kwakiutl** *Analgesic* Poultice of heated leaves applied or rhizome extract taken for chest pains. *Orthopedic Aid* Rhizomes used as a medicine for internal swellings or sickness in the bones. *Respiratory Aid* Rhizome extract taken for asthma and chest pains. (as *N. polysepalum* 183:287) **Nitinaht** *Other* Large rhizomes placed in hot water and liquid taken to prevent sickness during epidemics. (as *N. polysepalum* 186:114) *Unspecified* Decoction of rhizomes used as a medicinal drink. (as *N. polysepalum* 67:251) Rhizomes used as a medicine. (as *N. polysepalum* 185:70) **Okanagan-Colville** *Poison* Roots considered poisonous. *Toothache Remedy* Stems placed directly on the tooth for toothaches. (as *N. polysepalum* 188:110) **Quinault** *Analgesic* Poultice of heated roots applied for pain. *Antirheumatic (External)* Poultice of heated roots applied for rheumatism. (as *Nymphozanthus polysepalus* 79:29) **Shuswap** *Analgesic* Infusion of mashed roots applied for sore back pain. *Antirheumatic (External)* Infusion of mashed roots applied for rheumatism. *Dermatological Aid* Infusion of mashed roots taken for sores. *Orthopedic Aid* Infusion of mashed roots applied for sore back pain. (as *Nuphar polysepalum* 123:64) **Tanana, Upper** *Analgesic* Poultice of sliced, warmed rhizomes applied for pain. (as *N. polysepalum* 102:17) **Thompson** *Antirheumatic (External)* Powdered, dried leaves mixed with bear grease and used as an ointment for swellings. *Dermatological Aid* Powdered, dried leaves mixed with bear grease and used as an ointment for bites and infections. *Gastrointestinal Aid* Large rhizomes chewed for ulcers. (187:235)

- **Food—Alaska Native** *Vegetable* Rootstocks boiled or roasted and eaten as a vegetable. (as *Nuphar polysepalum* 85:145) **Cheyenne** *Unspecified* Roots eaten raw or boiled. (as *Nymphaea polysepala* 76:173) Species used for food. (as *Nuphar polysepala* 83:45) **Klamath Bread & Cake** Ground seeds used for bread. *Dried Food* Seeds stored for later use. *Porridge* Ground seeds used for porridge. (as *Nymphaea polysepala* 45:96) *Special Food* Used as a delicacy. *Staple* Used as a staple food in primitive times. (as *Nymphaea polysepala* 46:728) Dried, roasted seeds used as cereal. (as *Nuphar polysepalum* 118:29) *Unspecified* Roasted seeds, tasted like popcorn, used for food. (as *Nymphaea polysepala* 45:96) **Mendocino Indian** *Forage* Fleshy roots eaten as a favorite food by deer. *Unspecified* Seeds used for food. (as *Nymphaea polysepala* 41:347) **Thompson** *Dried Food* Rhizomes sliced and dried like apples. (187:235) **Tolowa** *Unspecified* Seeds used for food. (as *Nuphar polysepalum* 6:41)

***Nuphar lutea* ssp. *variegata*** (Dur.) E. O. Beal, Variegated Yellow Pondlily

- **Drug—Algonquin, Quebec** *Dermatological Aid* Poultice of mashed rhizomes applied to swellings. *Disinfectant* Poultice of mashed rhizomes applied to infections. (as *N. variegatum* 18:163) **Cree, Woodlands** *Analgesic* Poultice of grated rhizome, calamus, water or grease, and sometimes cow parsnip applied for headaches. *Antirheumatic (External)* Poultice of grated rhizomes and other ingredients applied to sore joints, swellings, and painful limbs. Poultice consisted of grated rhizomes, grated calamus rootstocks, and occasionally cow parsnip with the addition of water or grease. *Dermatological Aid* Poultice of roots with calamus and cow parsnip roots applied to mancos, worms in the flesh. Poultice of fresh or rehydrated, dried rhizome slice applied to infected skin lesions. Poultice of sliced, dried roots soaked in water and applied to infected wounds. *Panacea* Powdered rhizomes added to a many herb remedy for various ailments. (as *N. variegatum* 109:46) **Flathead** *Antirheumatic (External)* Decoction of rootstocks added to bath water for rheumatism. *Dermatological Aid* Poultice of baked rootstocks used for sores. *Venereal Aid* Infusion of rootstocks taken for venereal disease. *Veterinary Aid* Poultice of rootstocks used for horses with cuts and bruises. (as *N. variegatum* 82:33) **Iroquois** *Blood Medicine* and *Pediatric Aid* Infusion of rhizomes and two other plants taken by adolescents for poor blood circulation. *Veterinary Aid* Infusion of plant, other plant fragments, and milk given to pigs that drool and have sudden movements. (as *N. variegatum* 141:43) **Kutenai** *Dermatological Aid* Poultice of baked rootstocks used for sores. **Sioux** *Hemostat* Rootstocks powdered and used as a styptic for wounds. (as *N. variegatum* 82:33)
- **Food—Algonquin, Tête-de-Boule** *Beverage* Petiole sucked to relieve thirst. *Unspecified* Grains used for food. (as *N. variegatum* 132:129) **Cree, Woodlands** *Dried Food* Sliced roots dried for food and eaten dried or cooked. (as *N. variegatum* 109:46) **Montana Indian** *Cooking Agent* Thin slices of rootstocks dried, ground, or pulverized into meal or gruel, and used to thicken soups. *Porridge* Seeds parched, ground into meal, and used for mush or gruel. *Unspecified* Root stocks eaten raw or boiled with meat. (as *N. variegatum* 82:33)

***Nuphar* sp.**, Yellow Pondlily

- **Drug—Abnaki** *Love Medicine* Used as an aphrodisiac. (144:154) *Psychological Aid* Infusion of roots taken by men to inhibit sexual drives for 2 months. (144:167) **Iroquois** *Analgesic* Compound roots used for "pains in the chest which make you hold your breath." (87:320)

**Nyctaginaceae**, see *Abronia*, *Allionia*, *Boerhavia*, *Mirabilis*, *Tripterocalyx*

**Nymphaeaceae**, see *Nuphar*, *Nymphaea*

***Nymphaea***, Nymphaeaceae

***Nymphaea odorata*** Ait., American White Waterlily

- **Drug—Chippewa** *Oral Aid* Dried, pulverized root put in the mouth for sores. (as *Castalia odorata* 53:342) **Micmac** *Cold Remedy* Leaves used for colds. (40:58) *Cough Medicine* Juice of root taken for coughs. *Dermatological Aid* Poultice of boiled root applied to swellings. (156:317) *Gland Medicine* Roots used for suppurating glands and leaves used for colds. *Misc. Disease Remedy* Leaves used for grippe. *Orthopedic Aid* Leaves used for limb swellings and colds. (40:58) **Ojibwa** *Cough Medicine* Root used as a cough medicine for tuberculosis.

*Tuberculosis Remedy* Root used as a cough medicine for tuberculosis. (as *Castalia odorata* 153:376) **Okanagan-Colville** *Poison* Roots considered poisonous. *Toothache Remedy* Stems placed directly on the tooth for toothaches. (188:110) **Penobscot** *Dermatological Aid* Compound poultice of mashed leaves applied to limb swellings. (as *Castalia odorata* 156:310) **Potawatomi** *Unspecified* Poultice of pounded root used for unspecified ailments. (as *Castalia odorata* 154:65)

- **Food**—**Ojibwa** *Unspecified* Buds eaten before opening. (as *Castalia odorata* 153:407)

### *Nymphaea* sp., Waterlily

- **Drug**—**Abnaki** *Psychological Aid* Infusion of roots taken by men to inhibit sexual drives for 2 months. (144:167) **Seminole** *Cough Medicine*, *Respiratory Aid*, and *Sedative* Plant used for turtle sickness: trembling, short breath, and cough. (as *Castalia*, Pond Lily 169:237)
- **Food**—**Kiowa** *Vegetable* Tubers stewed or prepared like potatoes. (192:27) **Klamath** *Unspecified* Seeds used for food. (117:224) **Lakota** *Unspecified* Roots boiled and eaten. (139:52)

### *Nymphoides*, Menyanthaceae

#### *Nymphoides cordata* (Ell.) Fern., Little Floatingheart

- **Drug**—**Seminole** *Cough Medicine* Plant used for turtle sickness: trembling, short breath, and cough. (as *N. lacunosum* 169:237) *Other* Complex infusion of roots taken for chronic conditions. (as *N. lacunosum* 169:272) *Respiratory Aid* and *Sedative* Plant used for turtle sickness: trembling, short breath, and cough. (as *N. lacunosum* 169:237)

### *Nyssa*, Cornaceae

#### *Nyssa aquatica* L., Water Tupelo

- **Dye**—**Choctaw** *Red* Burned bark and red oak ash added to water and used as a red dye. (25:14)

#### *Nyssa* sp., Black Gum

- **Drug**—**Creek** *Tuberculosis Remedy* Decoction of bark and chips taken and used as a wash for tuberculosis. (172:659)

#### *Nyssa sylvatica* Marsh., Black Gum

- **Drug**—**Cherokee** *Anthelmintic* Compound given for worms. (80:26) Infusion of bark used as a bath and given to children with worms. (177:47) *Antidiarrheal* Compound decoction given for diarrhea. *Emetic* Inner bark used as part of “drink to vomit bile.” (80:26) Decoction of inner bark taken to cause vomiting when unable to retain food. (177:47) *Eye Medicine* Strong ooze from root dripped into eyes. (80:26) *Gastrointestinal Aid* Decoction of inner bark taken to cause vomiting when unable to retain food. (177:47) *Gynecological Aid* Infusion given for childbirth and infusion of bark given for “flooding.” *Other* Compound infusion of bark used for “bad disease.” (80:26) *Pediatric Aid* Infusion of bark used as a bath and given to children with worms. (177:47) *Urinary Aid* Used as ingredient in drink for “milky urine.” (80:26) **Creek** *Tuberculosis Remedy* Decoction of bark used as a bath and taken for pulmonary tuberculosis. (177:47) **Houma** *Anthelmintic* Decoction of root or bark taken for worms. (158:55) **Koasati** *Dermatological Aid* Decoction of bark taken and applied to gun wounds. (177:47)
- **Other**—**Chippewa** *Tools* Wood used to make awl handles, mauls, and war clubs because it would not split or check. (71:138)

### *Obolaria*, Gentianaceae

#### *Obolaria virginica* L., Virginia Pennywort

- **Drug**—**Cherokee** *Cold Remedy* Taken for colds. *Cough Medicine* Taken for coughs. *Diaphoretic* Taken as a diaphoretic. *Gastrointestinal Aid* Taken for colic. (80:48) **Choctaw** *Dermatological Aid* Simple or compound decoction of root used as a wash or dressing for cuts and bruises. (25:23) Decoction of root used as bath or poultice of root applied to cuts and bruises. (177:51)

### *Ochrosia*, Apocynaceae

#### *Ochrosia compta* K. Schum., Ho-le-i

- **Drug**—**Hawaiian** *Herbal Steam* Infusion of bark and leaves used for steam in the sweat bath. *Pediatric Aid* and *Strengtheners* Nuts and other plants chewed and fed to infants for general debility. (as *Ochorosia sandwicensis* 2:44)
- **Food**—**Hawaiian** *Unspecified* Nuts used for food. (as *Ochorosia sandwicensis* 2:44)

### *Ocotea*, Lauraceae

#### *Ocotea coriacea* (Sw.) Britt., Lance Wood

- **Other**—**Seminole** *Hunting & Fishing Item* Plant used to make bows. (169:469)

### *Octoblephorum*, Leucobryaceae, moss

#### *Octoblephorum albidum* Hedw., Moss

- **Drug**—**Seminole** *Antirheumatic (External)* and *Febrifuge* Plant used for fire sickness: fever and body aches. (169:203)

### *Odontoglossum*, Orchidaceae

#### *Odontoglossum chinensis*, Pa-la-a

- **Drug**—**Hawaiian** *Laxative* Infusion of plant used for softening the bowels and constipation. (as *Odontoglossum chineusis* 2:73)

### *Oemleria*, Rosaceae

#### *Oemleria cerasiformis* (Torr. & Gray ex Hook. & Arn.) Landon, Indian Plum

- **Drug**—**Kwakiutl** *Analgesic* and *Dermatological Aid* Poultice of chewed, burned plant and oil applied to sore places. (as *Osmaronia cerasiformis* 183:289) **Makah** *Laxative* Bark used as a mild laxative. *Tuberculosis Remedy* Decoction of bark taken for tuberculosis. *Unspecified* Bark used as a healing agent. (67:264)
- **Food**—**Cowlitz** *Dried Food* Berries dried and eaten in the winter. *Fruit* Berries eaten fresh. (as *Osmaronia cerasiformis* 79:37) **Karok** *Forage* Berries eaten by ground squirrels. (as *Osmaronia cerasiformis* 148:384) **Kitasoo** *Fruit* Fruit used for food. (43:343) **Kwakiutl**, **Southern** *Fruit* Fruits eaten fresh with oil at family meals or large feasts. *Special Food* Fruits eaten fresh with oil at large feasts. (as *Osmaronia cerasiformis* 183:289) **Lummi** *Fruit* Berries eaten fresh. (as *Osmaronia cerasiformis* 79:37) **Nitinaht** *Fruit* Fruits formerly cooked and used for food. (as *Osmaronia cerasiformis* 186:118) **Quinault** *Fruit* Berries eaten fresh. (as *Osmaronia cerasiformis* 79:37) **Saanich** *Fruit* Berries eaten ripe. (as *Osmaronia cerasiformis* 182:86) **Samish** *Fruit* Berries eaten fresh. (as *Osmaronia cerasiformis* 79:37) **Shasta** *Fruit*

Berries eaten raw with wild currants. (as *Osmaronia cerasiformis* 93:308) **Skagit Fruit** Berries eaten fresh. (as *Osmaronia cerasiformis* 79:37) **Skagit, Upper Fruit** Fruit eaten fresh. (as *Osmaronia cerasiformis* 179:38) **Snohomish Fruit** Berries eaten fresh. **Squaxin Fruit** Berries eaten. **Swinomish Fruit** Berries eaten fresh. (as *Osmaronia cerasiformis* 79:37) **Thompson Bread & Cake** Smashed fruit made into bread. **Fruit** Fruit eaten fresh. It was cautioned that if too much fruit was eaten, one would get “bleeding lungs.” (187:262) **Tolowa Fruit** Fruit used for food. This was called the “wood that lies” because it was the first to bloom in the spring and the last to set fruit. (6:41)

- **Other—Makah Fasteners** Inner bark strips used to bind harpoons. (67:264)

## *Oenanthe*, Apiaceae

***Oenanthe sarmentosa*** K. Presl ex DC., Water Parsley

- **Drug—Haisla & Hanaksiala Poison** Plant considered highly toxic. (43:216) **Kitasoo Cathartic** Roots used as a purgative. **Emetic** Roots used as an emetic. (43:326) **Kwakiutl Emetic** Seeds and roots used as an emetic. (183:277) **Kwakwaka'wakw Emetic** Plant used as an emetic. (43:216) Roots used as an emetic. (43:326) **Makah Laxative** Pounded roots used as a laxative. (79:42) **Nitinaht Gynecological Aid** Roots squashed and swallowed to facilitate and speed up delivery. (186:93) **Nuxalkmc Emetic** Plant used as an emetic. (43:216) **Tsimshian Ceremonial Medicine** Roots eaten as an emetic to seek supernatural powers and purify. (43:326)
- **Food—Costanoan Unspecified** Raw or cooked stems used for food. (21:251) **Cowlitz Unspecified** Young, tender stems used for food. (79:42) **Hesquiat Unspecified** Stems formerly eaten. (185:61) **Skokomish Unspecified** Young, tender stems used for food. **Snuqualmie Unspecified** Young, tender stems used for food. (79:42)
- **Other—Makah Toys & Games** Stalks cut and used as whistles by children. **Quileute Toys & Games** Stalks cut and used as whistles by children. (79:42)

***Oenanthe* sp.**, Twiggy Water Dropwort

- **Food—Miwok Unspecified** Raw stems used for food. (12:160)

## *Oenothera*, Onagraceae

***Oenothera albicaulis*** Pursh, Whitest Eveningprimrose

- **Drug—Hopi Ceremonial Medicine** Used to ward out the cold through prayer. (42:336) **Keres, Western Antirheumatic (External)** Poultice of plant used for swellings. (as *Anogra albicaulis* 171:27) **Navajo, Ramah Ceremonial Medicine** Dried flowers used as ceremonial medicine. (as *O. ctenophylla* 191:37, 38) **Orthopedic Aid** Decoction of root taken and used as a lotion for strain from carrying heavy load. **Panacea** Decoction of root taken and used as a lotion for muscle strain, a “life medicine.” (191:37) Root used as a “life medicine.” (as *O. ctenophylla* 191:37, 38) **Throat Aid** Compound poultice of plant applied for “throat trouble.” (191:37)
- **Food—Apache Fruit** Fruits eaten for food. (as *Anogra albicaulis* 32:17) **Apache, Chiricahua & Mescalero Sauce & Relish** Seeds ground and made into a gravy. **Soup** Seeds boiled in soups. **Special Food** Fruit chewed as a delicacy without preparation. (as *Anogra albicaulis* 33:45)
- **Other—Hopi Ceremonial Items** Flower used ceremonially as the “white flower.” (42:336) **Decorations** Flowers used by marriageable

maids in their hair on holidays. (as *O. pinnatifida* 56:16) **Smoke Plant** Plant used for tobacco. (42:336) **Zuni Ceremonial Items** Chewed blossoms rubbed on the bodies of young girls so that they could dance well and ensure rain. The blossoms were given by the High Priest and the Sun Priest of the Corn Maidens. The girls chewed the blossoms, ejected the mass into their hands, and rubbed it on the neck, breast, arms, and hands, ensuring that they would dance well so that it would rain and the corn would grow. (as *Anogra albicaulis* 166:87)

***Oenothera biennis*** L., Common Eveningprimrose

- **Drug—Cherokee Dietary Aid** Infusion taken for “overfatness.” **Hemorrhoid Remedy** Hot root poultice used for piles. (80:33) **Iroquois Dermatological Aid** Compound used for boils. **Hemorrhoid Remedy** Compound decoction of roots taken and used as a wash for piles. **Stimulant** Compound used for laziness. **Strengtheners** Chewed roots rubbed on arms and muscles to provide athletes great strength. (87:390) **Ojibwa Dermatological Aid** Poultice of soaked, whole plant applied to bruises. (153:376) **Potawatomi Unspecified** Tiny seeds used as a valuable medicine for unspecified ailment. (154:66, 67)
- **Food—Cherokee Vegetable** Leaves cooked and eaten as greens. (80:33) Roots boiled like potatoes. (126:49) **Gosiute Unspecified** Seeds used for food. (39:375)
- **Other—Lakota Incense & Fragrance** Seeds aromatic. (139:52)

***Oenothera brachycarpa*** Gray, Shortfruit Eveningprimrose

- **Drug—Navajo, Kayenta Dermatological Aid** Plant used as a lotion for sores. (205:33)

***Oenothera cespitosa*** Nutt., Tufted Eveningprimrose

- **Drug—Blackfoot Dermatological Aid** Wet poultice of crushed roots applied to sores and swellings. (97:48) **Gosiute Unspecified** Root used as medicine. (39:375) **Isleta Dermatological Aid** Poultice of dried, ground leaves used on sores for rapid healing. (as *Pachylophus hirsutus* 100:36) **Navajo, Kayenta Ceremonial Medicine** Plant used in various ceremonies. **Dermatological Aid** Plant used as dusting powder for chafing. **Gynecological Aid** Poultice of ground plant applied for prolapse of the uterus. (205:33)
- **Other—Navajo, Kayenta Decorations** Mixed with cornmeal and placed on Nightway sand painting figures. (205:33)

***Oenothera cespitosa* Nutt. ssp. *cespitosa***, Tufted Evening-primrose

- **Drug—Blackfoot Dermatological Aid** Poultice of pounded root applied to inflamed sores and swellings. (as *Pachylobus caespitosus* 114:274) Poultice of pounded, wetted root applied to inflamed sores. (as *Pachylophus caespitosus* 118:44)

***Oenothera cespitosa* ssp. *marginata*** (Nutt. ex Hook. & Arn.) Munz, Tufted Eveningprimrose

- **Drug—Hopi Eye Medicine** Plant used with Kachina ears for sore eyes. **Toothache Remedy** Plant used as toothache medicine. (42:337) **Navajo, Ramah Panacea** Poultice of plant or root used only for large swellings, a “life medicine.” (191:37)
- **Other—Hopi Ceremonial Items** Flowers used ceremonially as “white flower.” **Smoke Plant** Plant used as substitute for tobacco. (42:337)

***Oenothera coronopifolia*** Torr. & Gray, Crownleaf Evening-primrose

- **Drug**—Navajo, Ramah *Adjuvant* Dried leaves added to improve the flavor of wild tobacco. *Analgesic* and *Gastrointestinal Aid* Cold infusion of leaves taken for stomachache. *Panacea* Poultice of plant or root used only for large swellings, a “life medicine.” (191:37) **Zuni Antirheumatic (External)** Poultice of powdered flower and saliva applied at night to swellings. (27:377)

***Oenothera elata* ssp. *hookeri*** (Torr. & Gray) W. Dietr. & W. L. Wagner, Hooker's Eveningprimrose

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used as a Plume-way emetic. *Cold Remedy* Plant used for colds. *Dermatological Aid* Poultice of plant applied to sores. *Emetic* Plant used as a Plumeway emetic. *Misc. Disease Remedy* Hot poultice of plant applied for mumps. (as *O. hookeri* 205:33) **Navajo, Ramah Panacea** Poultice of root used only for large swellings, a “life medicine.” (as *O. hookeri* var. *hirsutissima* 191:37) **Zuni Antirheumatic (External)** Poultice of powdered flower and saliva applied at night to swellings. (as *O. hookeri* 27:377)
- **Food**—Paiute *Unspecified* Species used for food. (as *O. hookeri* 167:243)
- **Dye**—Pomo, Kashaya *Yellow* Flowers chewed with gum to make gum yellow. (as *O. hookeri* 72:95)
- **Other**—Jemez *Good Luck Charm* Root carried by deer hunters as a charm. (as *O. hookeri* 44:25) **Paiute Hunting & Fishing Item** Root rubbed on hunter's moccasins and body to attract deer. *Protection* Root rubbed on hunter's moccasins and body to repel snakes. (as *O. hookeri* 118:50)

***Oenothera flava*** (A. Nels.) Garrett, Yellow Eveningprimrose

- **Drug**—Navajo, Ramah *Burn Dressing* Seedpod ashes applied to burns. *Panacea* Poultice of plant or root used only for large swellings, a “life medicine.” Poultice of root used for swellings and internal injuries, a “life medicine.” *Throat Aid* Poultice of compound containing whole plant used for “throat trouble.” (191:38)

***Oenothera fruticosa*** L., Narrowleaf Eveningprimrose

- **Food**—Cherokee *Vegetable* Leaves parboiled, rinsed, and cooked in hot grease as a potherb. (126:49)

***Oenothera pallida*** Lindl., Pale Eveningprimrose

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used as a Beadway emetic. *Dermatological Aid* Plant used as dusting powder for venereal disease sores. Poultice of plant applied to spider bites. *Emetic* Plant used as a Beadway emetic. *Kidney Aid* Infusion of plant used for kidney disease. *Venereal Aid* Plant used as dusting powder for venereal disease sores. *Veterinary Aid* Plant used for livestock with colic. (205:34)

***Oenothera pallida* Lindl. ssp. *pallida***, Pale Eveningprimrose

- **Other**—Hopi *Ceremonial Items* Used ceremonially as the White Flower associated with the northeast direction. (as *Anogra pallida* 200:86)

***Oenothera pallida* ssp. *runcinata*** (Engelm.) Munz & W. Klein, Pale Eveningprimrose

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. *Snakebite Remedy* Decoction of root and leaves used as a lotion for snakebites. *Throat Aid* Soaked plant rubbed

on throat and infusion taken for sore throat. (as *O. runcinata* 191:38)

- **Other**—Hopi *Ceremonial Items* Used ceremonially as the White Flower associated with the northeast direction. (as *Anogra runcinata* 200:86)

***Oenothera perennis*** L., Small Eveningprimrose

- **Drug**—Iroquois *Orthopedic Aid* Decoction of plants taken for paralysis. (87:390)

***Oenothera primiveris*** Gray, Desert Eveningprimrose

- **Drug**—Navajo, Ramah *Ceremonial Medicine* Fresh or dried flowers used as ceremonial lotion and medicine. *Dermatological Aid* Poultice of plant applied to swellings. (191:38)

***Oenothera rhombipetala*** Nutt. ex Torr. & Gray, Fourpoint Eveningprimrose

- **Other**—Kiowa *Decorations* Yellow flowers picked and brought into the house. (as *Raimannia rhombipetala* 192:45)

***Oenothera* sp.**, Eveningprimrose

- **Drug**—Navajo *Dermatological Aid* Compound infusion of plants used as a wash for sore skin. (55:66)
- **Food**—Cherokee *Unspecified* Leaves boiled, fried, and often eaten with greens. (204:253)

***Oenothera triloba*** Nutt., Stemless Eveningprimrose

- **Drug**—Zuni *Antirheumatic (External)* Ingredient of “schumaakwe cakes” and used externally for rheumatism. *Dermatological Aid* Ingredient of “schumaakwe cakes” and used externally for swelling. (as *Lavauxia triloba* 166:55)
- **Food**—Zuni *Unspecified* Roots ground and used for food. (as *Lavauxia triloba* 136:158)

***Oenothera villosa* ssp. *strigosa*** (Rydb.) W. Dietr. & Raven, Hairy Eveningprimrose

- **Drug**—Navajo, Ramah *Disinfectant* Cold infusion of dried root taken for “deer infection.” *Hunting Medicine* Dried leaves and tobacco smoked for good luck in hunting. (as *O. procera* 191:38)

**Olacaceae**, see *Ximения*

***Olneya***, Fabaceae

***Olneya tesota*** Gray, Desert Ironwood

- **Food**—Cahuilla *Staple* Roasted pods and seeds ground into flour. (15:94) **Cocopa Porridge** Seeds roasted, ground, and made into mush. **Mohave Bread & Cake** Seeds parched, ground lightly, roasted, and the meal made into thin loaves and baked. *Dried Food* Seeds parched, ground lightly, roasted, and eaten. (37:187) **Papago Dried Food** Seeds basket winnowed, parched, sun dried, cooked, stored and used for food. (34:24) **Beans flailed, winnowed, parched, and used for food.** (34:25) *Staple* Beans parched, sun dried, stored, ground into flour, and used as a staple food. (34:45) *Unspecified* Ground, leached seeds used for food. (36:60) **Pima Dried Food** Beans formerly pit roasted, parched, and eaten whole. (47:93) **Seeds formerly dried, roasted, ground coarsely, and used for food.** (95:263) **Nuts parched and eaten.** (146:70) *Staple* Beans formerly pit roasted, ground, mixed with water, and eaten as pinole. (47:93) **Pima, Gila River Unspecified** Seeds leached, roasted, and eaten. (133:5) **Seeds parched and eaten.** (133:7)

**Seri Porridge** Beans ground into a meal, mixed with water or sea lion oil, and eaten. (50:136) **Yavapai Bread & Cake**, and *Staple* Dried, mashed, parched seeds ground into a meal and used to make greasy cakes. (63:211) **Yuma Bread & Cake** Seeds parched, ground lightly, roasted, and the meal made into thin loaves and baked. *Dried Food* Seeds parched, ground lightly, roasted, and eaten. (37:187)

- **Fiber—Papago Building Material** Posts of wood, forked at the top, used for the core of the house frame. (34:66)
- **Other—Cahuilla Fuel** Wood used for firewood. *Tools* Wood used to make implements requiring extreme hardness: throwing sticks and clubs. (15:94) **Papago Musical Instrument** Concave sticks with far-spaced, deep notches used as loud rattles for scraping stick songs. (34:68) *Tools* Four-foot sticks with sharp points used as digging sticks. (34:31) Wooden stakes driven into the ground and used for weaving cotton. (34:60) **Pima Fuel** Wood used for firewood. *Tools* Wood used to make tool handles. Formerly used to make shovels. (47:93)

**Onagraceae**, see *Boisduvalia*, *Calylophus*, *Camissonia*, *Circaea*, *Clarkia*, *Epilobium*, *Gaura*, *Gayophytum*, *Ludwigia*, *Oenothera*

## **Onoclea**, Dryopteridaceae, fern

**Onoclea sensibilis** L., Sensitive Fern

- **Drug—Iroquois Antirheumatic (Internal)** Used for arthritis and infection. (87:256) *Blood Medicine* Fermented compound decoction taken before meals and bed to “make blood.” (87:254) Compound decoction of roots taken for “cold in blood.” Decoction used as a hair wash and taken for the blood which caused the hair to fall out. (87:255) Infusion of rhizomes given to children when “the blood doesn’t have a determined path.” (141:34) *Dermatological Aid* Poultice of plant top used for deep cuts. (87:256) *Gastrointestinal Aid* Used “for trouble with the intestines, when you catch cold and get inflated and sore.” (87:255) *Gynecological Aid* Infusion of root taken for pain after childbirth. Infusion of whole plant or roots applied to full, nonflowing breasts. (87:255) *Pediatric Aid* Infusion of rhizomes given to children when “the blood doesn’t have a determined path.” (141:34) *Tuberculosis Remedy* Compound decoction of roots taken during the early stages of consumption. (87:256) *Venereal Aid* Compound decoction used for venereal disease. (87:254) Cold, compound infusion of plant washed on sores and taken for gonorrhea. (87:255) Infusion of plant and female fern rhizomes used by men for venereal diseases. (141:34) **Ojibwa Gynecological Aid** Decoction of powdered, dried root used by patients with caked breast for milk flow. (153:382)
- **Food—Iroquois Vegetable** Cooked and seasoned with salt, pepper, or butter. (196:118)

## **Onoclea sp.**

- **Fiber—Iroquois Mats, Rugs & Bedding** Made into pillows and used by children under their lower backs to prevent bed-wetting. (142:82)

## **Onopordum**, Asteraceae

**Onopordum acanthium** L., Scotch Cottonthistle

- **Drug—Iroquois Emetic** Decoction used as an emetic to counter witchcraft. *Poison* Decoction used for witchcraft poison. *Witchcraft*

*Medicine* Decoction used for witchcraft poison and as an emetic to counter witchcraft. (87:476)

## **Onosmodium**, Boraginaceae

**Onosmodium molle** Michx., Smooth Onosmodium

- **Drug—Lakota Antirheumatic (External)** Infusion of roots and seeds used by men for swellings. *Veterinary Aid* Infusion of roots and seeds given to horses or used as a rubbing solution. (139:41)

**Onosmodium molle ssp. hispidissimum** (Mackenzie) Boivin, Softhair Marbleseed

- **Other—Chippewa Good Luck Charm** Seeds used as a love charm and to attract money and worldly goods. (as *O. hispidissimum* 53:376)

**Onosmodium molle ssp. occidentale** (Mackenzie) Cochrane, Western Onosmodium

- **Drug—Cheyenne Antirheumatic (External)** Pulverized leaves and stems mixed with grease and used as a rub for lumbago. (as *O. occidentale* 76:185) *Dermatological Aid* Pulverized leaves and stems mixed with grease and rubbed on numb skin. *Orthopedic Aid* Smashed leaves and stems rubbed on back for lumbago. (as *O. occidentale* 76:185)

## **Ophioglossaceae**, see *Botrychium*

## **Oplopanax**, Araliaceae

**Oplopanax horridus** (Sm.) Torr. & Gray ex Miq., Devil’s Club

- **Drug—Bella Coola Antirheumatic (Internal)** Decoction of root bark and stems taken for rheumatism. *Cathartic* Root bark chewed as purgative and decoction of root bark and stems taken. (as *Fatsia horrida* 150:62) *Emetic* Inner bark chewed as an emetic. (as *O. horridum* 184:201) **Carrier Analgesic** Poultice of bark scrapings applied or bark pills taken for pain. (as *O. horridum* 31:82) **Carrier, Northern Analgesic** Inner bark taken for stomach and bowel cramps. *Cathartic* Inner bark acts as a purgative, especially if taken with hot water. *Gastrointestinal Aid* Inside layer of inner bark taken for stomach and bowel cramps. **Carrier, Southern Cathartic** and *Gynecological Aid* Decoction of bark taken as a purgative before and after childbirth. (as *Fatsia horrida* 150:62) **Cheyenne Analgesic** Root mixed with tobacco and smoked for headache. (as *Fatsia horrida* 19:12) **Cowlitz Antirheumatic (External)** Infusion of bark used as wash for rheumatism. *Cold Remedy* Infusion of bark taken for colds. *Poison* Plant considered poisonous. (as *O. horridum* 79:41) **Crow Analgesic** Root mixed with tobacco and smoked for headache. (as *Fatsia horrida* 19:12) **Gitksan Analgesic** Fresh or dried inner bark used for stomach ulcers and pain. Infusion of dried bark used for stomach pain and ulcers. (as *O. horridum* 74:16) *Antihemorrhagic* Poultice of compound containing bark used as a chest plaster for lung hemorrhage. (as *Fatsia horrida* 150:62) *Antirheumatic (External)* Bark and other plants used for arthritis. (73:152) Poultice of compound containing bark used for rheumatism. (as *Fatsia horrida* 150:62) *Cancer Treatment* Bark and other plants used for cancer. (73:152) *Cathartic* Compound decoction taken as a diuretic and purgative for “strangury.” (as *Fatsia horrida* 150:62) *Cold Remedy* Decoction of inner bark used for colds. *Cough Medicine* Decoction of inner bark used for coughs. *Dermatological Aid* Poultice of inner bark applied to wounds. Bark

and other plants used as a skin wash. (73:152) Poultice of compound containing bark applied to boils and ulcers. *Diuretic Compound* Decoction taken as a diuretic and purgative for "strangury." (as *Fatsia horrida* 150:62) *Gastrointestinal Aid* Bark used as a "cleanser." *Misc. Disease Remedy* Bark and other plants used for diabetes. Decoction of inner bark used for flu. (73:152) *Orthopedic Aid* Decoction taken to aid the knitting of broken bones. *Other* Compound decoction taken continuously for rupture. *Pulmonary Aid* Poultice of compound containing bark used as a chest plaster for lung hemorrhage. (as *Fatsia horrida* 150:62) *Respiratory Aid* Bark and other plants used for bronchitis. *Tonic* Decoction of inner bark used as a tonic. *Tuberculosis Remedy* Bark and other plants used for tuberculosis. (73:152) *Veneral Aid* Decoction taken as a purgative for gonorrhea. (as *Fatsia horrida* 150:62) **Green River Group** *Cold Remedy* Infusion of roots taken for colds. *Dermatological Aid* Dried bark used as a deodorant. (as *O. horridum* 79:41) **Haisla** *Antirheumatic (External)* Bark and other plants used for arthritis. *Cancer Treatment* Bark and other plants used for cancer. *Cold Remedy* Decoction of inner bark used for colds. *Cough Medicine* Decoction of inner bark used for coughs. *Dermatological Aid* Poultice of inner bark applied to wounds. Bark and other plants used as a skin wash. *Gastrointestinal Aid* Bark used as a "cleanser." *Misc. Disease Remedy* Bark and other plants used for diabetes. Decoction of inner bark used for flu. *Respiratory Aid* Bark and other plants used for bronchitis. *Tonic* Decoction of inner bark used as a tonic. *Tuberculosis Remedy* Bark and other plants used for tuberculosis. (73:152) **Haisla & Hanaksiala** *Antirheumatic (External)* Infusion of pounded leaves applied to arthritic joints. *Dermatological Aid* Inner bark placed in wounds followed by an application of Sitka spruce pitch. Juice used for sores. *Emetic* Decoction or infusion of plant and sea water taken as an emetic. *Eye Medicine* Decoction of stem bark, stems, or winter roots used as an eyewash for cataracts. Decoction of plant used as an eyewash for cataracts. *Gastrointestinal Aid* Juice taken for stomach sickness. *Laxative* Decoction or infusion taken as a laxative. **Hanaksiala** *Cold Remedy* Infusion or decoction of plant taken for winter colds. (43:217) **Hoh** *Unspecified* Used as medicine. (as *Echinopanax horridum* 137:65) **Kwakiutl** *Analgesic* Bark used in a steam bath for body pains. Root held in the mouth and juice swallowed for stomach pains. *Dermatological Aid* Rotten stem ash and oil rubbed on swellings. *Gastrointestinal Aid* Root held in the mouth and juice swallowed for stomach pains. *Herbal Steam* Bark used in a steam bath for body pains. *Laxative* Root held in the mouth and juice swallowed for constipation. *Poison* Spines considered poisonous. *Tuberculosis Remedy* Bark extract taken for tuberculosis. *Witchcraft Medicine* Plant used for the magical powers. (as *O. horridum* 183:278) **Lummi** *Gynecological Aid* Poultice of bark applied to woman's breast to stop an excessive flow of milk. (as *O. horridum* 79:41) **Makah** *Antirheumatic (External)* Poultice of cooked or boiled plant applied to sore spots. Plant used for arthritis. *Unspecified* Bark and roots used medicinally. (as *O. horridum* 67:289) **Montana Indian** *Ceremonial Medicine* Used by medicine men in their incantations. (as *Fatsia horrida* 19:12) **Nitinaht** *Antirheumatic (Internal)* Infusion of bark taken for arthritis and rheumatism. (as *O. horridum* 67:289) Infusion of stem pieces taken for arthritis. (186:95) *Orthopedic Aid* Infusion of bark taken for bone ailments. *Unspecified* Used for medicine. (as *O. horridum* 67:289) **Okanagan-Colville** *Cough Medicine* In-

fusion of roots and stems taken for dry coughs. *Tuberculosis Remedy* Infusion of roots and stems taken for consumption. (as *O. horridum* 188:73) **Okanagon** *Blood Medicine* Infusion of crushed stems taken as a blood purifier. *Dermatological Aid* Burned stems and grease salve rubbed on swollen parts. *Gastrointestinal Aid* Infusion of crushed stems taken for stomach troubles and indigestion. *Tonic* Infusion of crushed stems taken as a tonic. (as *Fatsia horrida* 125:40) **Oweekeno** *Analgesic* Decoction of inner bark from young spring growth taken for general aches and pains. *Antirheumatic (External)* Roots used in a bath for rheumatism. *Cold Remedy* Decoction of inner bark from young spring growth taken for colds. Plant boiled and vapor inhaled for colds. *Dermatological Aid* Berries mashed into a foam and rubbed into the scalp for head lice. *Panacea* Decoction of inner bark from young spring growth taken for any kind of sickness. *Poison* Berries considered poisonous. *Tonic* Decoction of inner bark from young spring growth used as a tonic. (43:85) **Quileute** *Unspecified* Used as medicine. (as *Echinopanax horridum* 137:65) **Salish, Coast** *Analgesic* Poultice of pounded, boiled roots used for rheumatism and other aches and pains. *Antirheumatic (External)* Poultice of pounded, boiled roots used for rheumatism. Prickly stems beaten against the skin as a counterirritant for sore limbs. (as *O. horridum* 182:78) **Sanpoil** *Cold Remedy* Infusion of inner pith of stalk taken for colds. (as *Echinopanax horridum* 131:220) **Skagit** *Gynecological Aid* Decoction of bark taken by women to start menstrual flow after childbirth. *Tuberculosis Remedy* Decoction of bark taken for tuberculosis. (as *O. horridum* 79:41) **Thompson** *Blood Medicine* Infusion of crushed stems taken as a blood purifier. (as *Fatsia horrida* 125:40) Decoction of stems taken as a blood purifier. (as *Echinopanax horridum* 164:459) *Dermatological Aid* Burned stems and grease salve rubbed on swollen parts. (as *Fatsia horrida* 125:40) Stem ash with grease used as an ointment for swellings. (as *Echinopanax horridum* 164:459) *Dietary Aid* Infusion of sticks, with the spines and outer bark removed, taken to cease weight loss. The infusion was taken in doses of about ½ cup before meals, to replace milk and other beverages. It was noted that if the infusion was taken for too great a period of time, one could gain too much weight. Infusion of whole plant taken to give one a good appetite. (187:164) *Gastrointestinal Aid* Infusion of crushed stems taken for stomach troubles and indigestion. (as *Fatsia horrida* 125:40) Infusion of crushed stems taken for indigestion and stomach troubles. (as *Echinopanax horridum* 164:459) Infusion of whole plant taken for ulcers. (187:164) *Laxative* Decoction of stems taken as a laxative. (as *Echinopanax horridum* 164:459) *Misc. Disease Remedy* Infusion of sticks, with the spines and outer bark removed, taken for influenza and other illnesses.<sup>48</sup> Infusion of roots taken for diabetes. *Panacea* Infusion of sticks, with the spines and outer bark removed, taken for everything.<sup>48</sup> (187:164) *Tonic* Infusion of crushed stems taken as a tonic. (as *Fatsia horrida* 125:40) Decoction of stems taken as a tonic. (as *Echinopanax horridum* 164:459) **Tlingit** *Dermatological Aid* Compound containing plant ash used for sores. (as *Panax horridum* 107:284) **Wet'suwet'en** *Antirheumatic (External)* Bark and other plants used for arthritis. *Cancer Treatment* Bark and other plants used for cancer. *Cold Remedy* Decoction of inner bark used for colds. *Cough Medicine* Decoction of inner bark used for coughs. *Dermatological Aid* Poultice of inner bark applied to wounds. Bark and other plants used as a skin wash.

*Gastrointestinal Aid* Bark used as a "cleanser." *Misc. Disease Remedy* Bark and other plants used for diabetes. Decoction of inner bark used for flu. *Respiratory Aid* Bark and other plants used for bronchitis. *Tonic* Decoction of inner bark used as a tonic. *Tuberculosis Remedy* Bark and other plants used for tuberculosis. (73:152)

- **Food—Oweekeno** *Unspecified* Young, spring buds boiled and eaten. (43:85)
- **Dye—Hesquiat** *Unspecified* Bark shavings and berries made into paint and used to color basket materials and other objects. (as *O. horridum* 185:61)
- **Other—Bella Coola** *Protection* Spiny stems used as protective charms against supernatural powers. (as *O. horridum* 184:201) **Clallam** *Hunting & Fishing Item* Sticks peeled, cut into pieces, fastened to bass fishing line, and used to attract fish. Wood made into fishing lures. (as *O. horridum* 57:197) **Gitksan** *Ceremonial Items* Inner bark chewed during pre-hunting purification rituals. **Haisla** *Ceremonial Items* Inner bark chewed during pre-hunting purification rituals. (73:152) *Paint* Plant made into black face paint and used by warriors. **Haisla & Hanaksiala** *Ceremonial Items* Bark used for ritual purification. *Good Luck Charm* Bark used for the acquisition of luck by hunters, fishers, and shamanistic initiates. Plant used by bathing black bear and brought observer good luck. Plant used to bring good luck. *Paint* Bark charred, mixed with pounded salmon eggs, and used as black face paint for dancing. *Protection* Bark made into face paint and used by shamans to repel enemy spirits from the shaman's patient. (as *O. horridum* 185:61) **Kitasoo** *Hunting & Fishing Item* Plant used by hunters in a bath to remove the human smell. (43:327) **Klallam** *Hunting & Fishing Item* Sticks peeled, cut, fastened to bass lines, and used as fish lures. (as *O. horridum* 79:41) **Kwakiutl** *Protection* Stem used as a protective charm. (as *O. horridum* 183:278) **Lummi** *Paint* Sticks burned, mixed with grease or Vaseline, and used as a reddish brown face paint. (as *O. horridum* 79:41) **Lummi, Washington** *Paint* Stems charred, mixed with grease or Vaseline, and used as a black face paint. (as *O. horridum* 182:78) **Makah** *Hunting & Fishing Item* Wood used to make lures and hooks for bass fishing. **Nitinaht** *Ceremonial Items* Plant burned to make charcoal used as a protective face paint for ceremonial dancers. A person wearing this kind of paint would have so much power you could not look them in the eye. *Hunting & Fishing Item* Wood used to make lures for cod fishing. (as *O. horridum* 67:289) Wood used to make codfish and sea or black bass lures. *Paint* Wood charcoal used as a special ceremonial paint for dancers. (186:95) **Tsimshian** *Ceremonial Items* Plant used by shamans, novices, and warriors for power seeking. (43:327) **Wet'suwet'en** *Ceremonial Items* Inner bark chewed during pre-hunting purification rituals. (73:152)

## *Opuntia*, Cactaceae

***Opuntia acanthocarpa*** Engelm. & Bigelow, Buckhorn Cholla

- **Drug—Cahuilla** *Burn Dressing* Stem ash applied to burns. *Dermatological Aid* Stem ash applied to cuts. (15:95) **Pima** *Gastrointestinal*

*Aid* Plant used for stomach troubles. (47:58)

- **Food—Cahuilla** *Dried Food* Fruit gathered in the spring and dried for storage. *Fruit* Fruit gathered in the spring and eaten fresh. (15:95) *Staple* Berries and stems were an important and dependable food source. (15:49) **Pima, Gila River** *Dried Food* Calyxes pit roasted with inkweed and dried for future use. (133:4) *Staple* Flowers pit roasted and eaten as a staple. (133:7) *Unspecified* Calyxes pit roasted with inkweed and eaten fresh. (133:4)

***Opuntia acanthocarpa* var. *ramosa*** Peebles, Cholla

- **Food—Maricopa** *Unspecified* Flower buds pit baked and used for food. (37:201)
- **Other—Pima** *Cash Crop* Dry, woody joints made into canes, napkin rings, and other tourist souvenirs. (47:58)

***Opuntia arbuscula*** Engelm., Arizona Pencil Cholla

- **Food—Pima** *Fruit* Green fruits boiled with saltbush and used for food. (47:59) **Pima, Gila River** *Dried Food* Calyxes pit roasted with inkweed and dried for future use. *Unspecified* Calyxes pit roasted with inkweed and eaten fresh. (133:4) Flowers pit roasted and eaten. (133:7)

***Opuntia basilaris*** Engelm. & Bigelow, Beavertail Pricklypear

- **Food—Cahuilla** *Dried Food* Buds cooked and dried for indefinite storage. *Porridge* Seeds ground into mush. *Unspecified* Buds cooked and eaten. *Vegetable* Joints boiled and mixed with other foods or eaten as greens. (15:95) **Diegueño** *Dried Food* Fruit cleaned of thorns, dried, and eaten. (84:27) **Kawaiisu** *Unspecified* Buds cooked and eaten. (206:46) **Tubatulabal** *Unspecified* Species used for food. (as *O. basilans* 193:16)
- **Other—Diegueño** *Cash Crop* Fruit dried and sold by children in small sacks for 10 cents. (84:27)

***Opuntia basilaris* var. *aurea*** (E. M. Baxter) W. T. Marsh., Golden Pricklypear

- **Drug—Shoshoni** *Analgesic* Poultice of inner pulp applied to cuts and wounds and for the pain. *Dermatological Aid* Fuzz-like spines rubbed into warts or moles to remove them. Poultice of inner pulp applied to cuts and wounds and for the pain. (180:107, 108)

***Opuntia bigelovii*** Engelm., Teddybear Cholla

- **Food—Cahuilla** *Dried Food* Buds cooked and dried for indefinite storage. (15:96) *Staple* Berries and stems were an important and dependable food source. (15:49) *Unspecified* Buds cooked and eaten. (15:96)

***Opuntia caseyi* var. *magenta*** Pursh

- **Food—Tubatulabal** *Unspecified* Species used for food. (193:16)

***Opuntia chlorotica*** Engelm. & Bigelow, Dollarjoint Pricklypear

- **Food—Yavapai** *Fruit* Raw fruit used for food. (65:257)

***Opuntia clavata*** Engelm., Club Cholla

- **Drug—Keres, Western** *Dermatological Aid* Dried joints ground or burned into a powder and used on open sores or bad wounds. *Veterinary Aid* Dried joints ground or burned into a powder and used on open sores or bad wounds on horses. (171:56)
- **Food—Acoma** *Starvation Food* Stems and fruits roasted and eaten in times of food shortage. Joints roasted and eaten during famines. (32:

35) **Keres, Western Starvation Food** Roasted joints used for food in times of famine. (171:56) **Laguna Starvation Food** Stems and fruits roasted and eaten in times of food shortage. Joints roasted and eaten during famines. (32:35)

**Opuntia echinocarpa** Engelm. & Bigelow, Staghorn Cholla

- **Food—Cocopa Fruit** Fruits rolled on ground to remove spines and eaten raw. **Maricopa Fruit** Fruits rolled on ground to remove spines and eaten raw. **Mohave Fruit** Fruits rolled on ground to remove spines and eaten raw. (37:204) **Papago Staple** Buds and joints used as a staple crop. (34:15) Pit baked buds, fruits, and joints considered a staple food. (36:59) **Vegetable** Buds eaten as greens in May. (34:14) **Yavapai Fruit** Fruit boiled and eaten without mashing. (65:257)

**Opuntia engelmannii** Salm-Dyck, Cactus Apple

- **Drug—Pima Gynecological Aid** Poultice of heated plant applied to breasts to encourage the flow of milk. (47:60)
- **Food—Acoma Fruit** Ripe tunas eaten fresh. **Porridge** Tunas split, dried, ground, and the meal mixed with cornmeal to make a mush for winter use. (32:35) **Cocopa Fruit** Fruits rolled on ground to remove spines and eaten raw. (37:204) **Keres, Western Cooking Agent** Tunas used as a red dye for corn mush. **Fruit** Fresh tunas used for food. **Winter Use Food** Ground, dried tunas mixed in equal proportions with cornmeal and made into a mush for winter food. (171:56) **Laguna Fruit** Ripe tunas eaten fresh. **Porridge** Tunas split, dried, ground, and the meal mixed with cornmeal to make a mush for winter use. (32:35) **Maricopa Fruit** Fruits rolled on ground to remove spines and eaten raw. **Mohave Fruit** Fruits rolled on ground to remove spines and eaten raw. - **Drug—Paiute** *Cold Remedy* Decoction of plant taken for colds. *Pulmonary Aid* Decoction of plant taken for pneumonia or pulmonary trouble. (180:108)

***Orobanche cooperi*** (Gray) Heller, Desert Broomrape

- **Food—Pima, Gila River** *Unspecified* Stalk, below the ground, eaten cooked or raw. (133:5) Roots eaten raw or roasted. (133:7)

***Orobanche cooperi*** (Gray) Heller **ssp. *cooperi***, Cooper's Broomrape

- **Food—Cahuilla** *Unspecified* Root peeled and eaten. (as *O. ludoviciana* var. *cooperi* 15:97)

***Orobanche fasciculata*** Nutt., Clustered Broomrape

- **Drug—Blackfoot** *Dermatological Aid* Chewed root blown onto wounds by medicine men. (as *Thalesia fasciculata* 114:276) **Keres, Western** *Pulmonary Aid* Roots eaten as a lung medicine. (as *Thalesia fasciculata* 171:72) **Montana Indian** *Cancer Treatment* Parasite (cancer root) on sweet sage roots used for cancer. *Poison* Plant poisonous to stock. (as *Aphyllon fasciculatum* 19:6) **Navajo** *Dermatological Aid* Infusion of leaves used as wash for sores. (55:77) Poultice of plant applied to wounds and open sores. (90:153) **Navajo, Ramah** *Panacea* Plant used as "life medicine." *Pediatric Aid* Plant used for birth injuries. (191:45) **Zuni** *Hemorrhoid Remedy* Powdered plant inserted

into rectum as a specific for hemorrhoids. (as *Thalesia fasciculata* 166:61)

- **Food**—Gosiute *Unspecified* Entire plant sometimes eaten. (as *Aphyllon fasciculatum* 39:361) **Navajo, Ramah** *Unspecified* Roasted in ashes, the skin peeled off and eaten like a baked potato. (191:45) **Paiute, Northern** *Unspecified* Stems eaten raw or boiled. (59:49)

**Orobanche ludoviciana** Nutt., Louisiana Broomrape

- **Drug**—Blackfoot *Dermatological Aid* Plant chewed by medicine men and blown upon wounds. (97:53) **Pima** *Dermatological Aid* Poultice of stems applied to ulcerated sores. (47:49)
- **Food**—Pima *Unspecified* Young sprouts covered with hot ashes, baked and the lower parts eaten. (47:49)

**Orobanche ludoviciana** Nutt. **ssp. ludoviciana**, Sand Broomrape

- **Drug**—Navajo, Kayenta *Dermatological Aid* Powdered plant applied to gunshot wounds. (as *O. multiflora* var. *arenosa* 205:43)

**Orobanche ludoviciana ssp. multiflora** (Nutt.) Collins,

Manyflowered Broomrape

- **Food**—Pima *Unspecified* Plants cooked and used for food. (as *Orobancha multiflora* 95:264)

**Orobanche sp.**, Broomrape

- **Drug**—Navajo *Other* Plant used for infections. (90:153)

**Orthilia**, Ericaceae

**Orthilia secunda** (L.) House, Sidebells Wintergreen

- **Drug**—Carrier, Southern *Eye Medicine* Strong decoction of root used as an eyewash. (as *Pyrola secunda* 150:62)

**Orthocarpus**, Scrophulariaceae

**Orthocarpus attenuatus** Gray, Attenuate Indian Paintbrush

- **Food**—Miwok *Unspecified* Dried, parched, pulverized seeds used for food. (12:155)

**Orthocarpus densiflorus** Benth., Denseflower Indian Paintbrush

- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in dance wreaths at the Strawberry Festival in May. (72:35)

**Orthocarpus faucibarbatius** Gray, Triphysaria

- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in dance wreaths at the Strawberry Festival in May. (72:35)

**Orthocarpus lithospermoides** Benth., Indian Paintbrush

- **Food**—Mendocino Indian *Forage* Plants eaten sparingly by horses. (41:387)

**Orthocarpus luteus** Nutt., Yellow Owlclover

- **Dye**—Blackfoot *Red* Leaves crushed and pressed firmly into skins, horsehair, and feathers as a red dye. (97:53) Plant pounded and pressed firmly into the gopher skin as a red dye. (114:276) *Red-Brown* Whole, blooming plant pressed firmly into skins, horsehair, and feathers as a reddish tan dye. (97:53) **Great Basin Indian** *Yellow* Whole plant used to make a yellow dye. (121:50)

**Orthocarpus purpurascens** Benth., Exserted Indian Paintbrush

- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in dance wreaths at the Strawberry Festival in May. (72:35)

**Orthocarpus purpureoalbus** Gray ex S. Wats., Purplewhite Owl-clover

- **Drug**—Navajo, Ramah *Cathartic* Decoction of whole plant taken as a cathartic. *Ceremonial Medicine* Compound decoction used as ceremonial medicine. *Gastrointestinal Aid* Cold infusion of plant taken for heartburn. (191:44)

**Orthocarpus sp.**

- **Drug**—Costanoan *Cough Medicine* Decoction of foliage used for coughs. (21:15)

**Oryza**, Poaceae

**Oryza sativa** L., Rice

- **Food**—Haisla & Hanaksiala *Staple* Grains used for food. (43:207) **Kitasoo** *Unspecified* Grains used for food. (43:324) **Oweekeno** *Unspecified* Grains used for food. (43:81) **Seminole** *Unspecified* Seeds used for food. (169:470)

**Oryzopsis**, Poaceae

**Oryzopsis hymenoides** (Roemer & J. A. Schultes) Ricker ex Piper, Indian Ricegrass

- **Food**—Apache, Western *Porridge* Seeds ground, mixed with cornmeal and water, and made into a mush. (as *Eriocoma cuspidata* 26:189) **Apache, White Mountain** *Bread & Cake* Seeds ground and used to make bread and pones. (as *Eriocoma cuspidata* 136:149) *Fodder* Plant used for hay. (as *Eriocoma cuspidata* 136:157) *Porridge* Seeds ground, mixed with meal and water, and eaten as mush. (as *Eriocoma cuspidata* 136:149) *Unspecified* Seeds used for food. (as *Eriocoma cuspidata* 136:157) **Gosiute** *Unspecified* Seeds formerly used for food. (as *O. cuspidata* 39:375) **Havasupai** *Bread & Cake* Seeds parched, ground fine, boiled, thickened, made into balls, and eaten as dumpings. (197:66) *Soup* Seeds and Indian millet seeds ground and used to make soup or mush. (197:73) *Staple* Seeds ground and eaten as a ground or parched meal. (197:67) **Hopi** *Bread & Cake* Seeds ground with corn into fine meal and used to make tortilla bread. (120:20) *Staple* Ground seeds used to make meal. (as *Stipa hymenoides* 190:158) *Starvation Food* Seeds eaten, especially in time of famine. (42:338) Plants formerly used for food during famines. (as *O. membranacea* 101:43) Seeds used during famines. (200:65) **Kawaiisu** *Staple* Seeds pounded into a meal and eaten dry. (206:46) **Montana Indian** *Unspecified* Seeds used for food. (as *Eriocoma cuspidata* 19:11) **Navajo** *Bread & Cake* Ground seeds made into cakes. (55:26) Seeds ground and made into bread and dumplings. (165:223) *Fodder* Plant used as a fodder for both wild and domesticated animals. *Forage* Plant used as a forage for both wild and domesticated animals. (90:154) *Porridge* Seeds ground and made into gruel. (165:223) *Staple* Ground seeds used for food. (90:154) *Unspecified* Seeds used for food. (as *Eriocoma cuspidata* 32:27) **Navajo, Ramah** *Fodder* Young plants used as horse feed. *Porridge* Seeds finely ground and cooked into a mush with milk or water. (191:16) **Paiute** *Porridge* Seeds ground into a meal for mush. (118:26–27) *Sauce & Relish* Ground seeds used for sauce. *Staple* Ground seeds used for flour. (118:32) Roasted and ground into flour. (167:244) **Paiute, Northern** *Porridge* Seeds dried, winnowed, ground into a flour, and used to make mush. *Soup* Seeds dried, winnowed, ground into a flour, and used to make soup. *Special Food* Seeds considered a good food to eat when suffering from stomachaches, colic,

or aching bones. When a person was suffering from any of these sicknesses, Indian ricegrass seeds should have been the only food eaten. *Staple* Seeds used as a staple food. *Winter Use Food* Seeds stored for winter use. (59:46) **Zuni Staple** Ground seeds used as a staple before the availability of corn. After the introduction of corn, the ground seeds were mixed with cornmeal and made into steamed balls or pats. (as *Eriocoma cuspidata* 166:67) *Unspecified* Used especially in earlier times as an important source of food. (as *Eriocoma cuspidata* 32:27)

- **Other**—Apache, White Mountain *Cash Crop* Plant gathered and sold. (as *Eriocoma cuspidata* 136:149)

## *Osmorhiza*, Apiaceae

### *Osmorhiza berteroi* DC., Sweetcicely

- **Drug**—Bella Coola *Cathartic* Infusion of ground root pieces taken as a purgative. *Emetic* Infusion of ground root pieces taken as an emetic. (as *O. chilensis* 184:201) **Blackfoot Cold Remedy** Hot drink containing root taken for colds. *Throat Aid* Hot drink containing root taken for tickling in throat. (as *Washingtonia divaricata* 114:276) *Veterinary Aid* Whole plant fed to mares in the winter to put them into condition for foaling. **Osmunda sp.**

- **Fiber—Iroquois Mats, Rugs & Bedding** Made into pillows and used by children under their lower backs to prevent bed-wetting. (142:82)

**Osteomeles**, Rosaceae

**Osteomeles anthyllidifolia** (Sm.) Lindl., Hawaii Hawthorn

- **Drug—Hawaiian Dermatological Aid** Leaves, root bark and salt pounded and the resulting liquid used on deep cuts. **Laxative** Seeds and buds chewed and given to children as a laxative for general debility of the body. (2:38)

**Ostrya**, Betulaceae

**Ostrya virginiana** (P. Mill.) K. Koch, Eastern Hop Hornbeam

- **Drug—Cherokee Blood Medicine** Infusion of bark taken to build up blood. **Orthopedic Aid** Decoction of bark used to bathe sore muscles. **Toothache Remedy** Infusion of bark held in mouth for toothache. (80:39) **Chippewa Antihemorrhagic** Compound infusion of heartwood taken for lung hemorrhages. (53:340) **Antirheumatic (External)** Compound decoction of heartwood used as herbal steam for rheumatism. (53:362) **Cough Medicine** Compound liquid made from wood taken as a cough syrup. (53:340) **Kidney Aid** Decoction of wood taken for kidney trouble. (53:346) **Pulmonary Aid** Compound infusion of inner wood taken for lung hemorrhage. (53:340) **Delaware, Ontario Gynecological Aid** Compound containing root used for “female weakness.” **Tonic** Compound containing root used as a tonic. (175:82) **Iroquois Cancer Treatment** Decoction of bark used for rectum cancer. (87:299) **Cough Medicine** Decoction of heart chips taken for catarrh coughs. (87:298) **Dermatological Aid** Infusion used for swellings. (87:299) **Tu-**

**berculosis Remedy** Compound decoction of bark taken for consumption. (87:298) **Potawatomi Antidiarrheal** Infusion of bark used for flux. **Antihemorrhagic** Compound decoction of heartwood chips taken for hemorrhages. (154:44)

- **Fiber—Chippewa Building Material** Used as frames for dwellings. (53:377)
- **Other—Lakota Hunting & Fishing Item** Wood used to make bows. **Paint Blossoms** used for painting the face. (139:40) **Malecite Hunting & Fishing Item** Used to make bows. **Tools** Used to make utensil handles. (160:6)

**Oxalidaceae**, see *Oxalis*

**Oxalis**, Oxalidaceae

**Oxalis corniculata** L., Creeping Woodsorrel

- **Drug—Cherokee Anthelmintic** Infusion taken and used as a wash for children with hookworms. **Antiemetic** Cold infusion of leaf taken to stop vomiting. **Blood Medicine** Infusion taken for blood. **Cancer Treatment** Used for cancer “when it is first started.” **Dermatological Aid** Salve of infusion of leaf mixed with sheep grease used for sores. **Oral Aid** Leaves chewed for “disordered saliva” and sore mouth. **Pediatric Aid** Infusion taken and used as a wash for children with hookworms. **Throat Aid** Chewed for sore throat. (80:56)
- **Food—Cherokee Unspecified** Species used for food. (80:56) **Iroquois Vegetable** Eaten raw, sometimes with salt. (196:118)
- **Dye—Menominee Yellow** Boiled whole plant used as a yellow dye. (151:78)

**Oxalis drummondii** Gray, Drummond’s Woodsorrel

- **Drug—Navajo, Ramah Analgesic** Decoction of bulb used for pain. **Dermatological Aid** Poultice of bulbs, alone or in compound, applied to sores. (as *O. amplifolia* 191:34)

**Oxalis montana** Raf., Mountain Woodsorrel

- **Food—Potawatomi Dessert** Plant gathered, cooked, and sugar added to make a dessert. (as *O. acetosella* 154:106)
- **Dye—Menominee Yellow** Boiled whole plant used as a yellow dye. (as *O. acetosella* 151:78)

**Oxalis oregana** Nutt., Oregon Oxalis

- **Drug—Cowlitz Eye Medicine** Fresh juice from plant applied to sore eyes. (79:39) **Karok Dietary Aid** Plant used by anyone who does not feel like eating. (148:385) **Makah Other** Decoction of plants taken for “summer complaint.” (79:39) **Pomo Antirheumatic (External)** Decoction of whole plant used as a wash for rheumatism. (66:13) **Pomo, Kashaya Antirheumatic (External)** Decoction of whole plant used to wash parts of the body afflicted with rheumatism. (72:108) **Quileute Dermatological Aid** Poultice of wilted leaves applied to boils. **Quinault Eye Medicine** Chewed root juice applied to sore eyes. (79:39) **Tolowa Antirheumatic (External)** Poultice of plant applied to swollen areas on the skin. **Dermatological Aid** Poultice of plant applied to sores. **Disinfectant** Poultice of plant applied to draw out infections. (6:42)
- **Food—Cowlitz Unspecified** Leaves eaten fresh or cooked. (79:39) **Makah Unspecified** Leaves eaten fresh. (67:284) **Pomo, Kashaya Sour** Flowering plant leaves and stem chewed for the sour taste. (72:108) **Quileute Unspecified** Leaves eaten by hunters or by those traveling

in the woods. **Quinault** *Unspecified* Leaves cooked with grease and used for food. (79:39) **Tolowa** *Unspecified* Plant eaten with dried fish. **Yurok** *Unspecified* Plant eaten with dried fish. (6:42)

- **Other**—**Pomo, Kashaya** *Toys & Games* Children ate as many leaves as they could without making an awful face; a children's game. (72:108)

#### *Oxalis* sp., Sorrel

- **Drug**—**Iroquois** *Alterative* Sprouts used as an alternative. (124:93)
- **Food**—**Iroquois** *Unspecified* Sprouts eaten raw. (124:93)

#### *Oxalis stricta* L., Common Yellow Oxalis

- **Drug**—**Iroquois** *Blood Medicine* Compound decoction of roots taken as a blood medicine. (as *O. europaea* 87:366) *Febrifuge* Infusion of plant taken for fever. *Gastrointestinal Aid* Infusion of plant taken for cramps and nausea. (as *O. europaea* 87:365) *Oral Aid* Infusion of plant used as wash to refresh the mouth. (as *O. europaea* 87:366) *Other* Infusion of plant taken for "summer complaint." *Witchcraft Medicine* Compound used as an anti-witch medicine. (as *O. europaea* 87:365) **Kiowa** *Oral Aid* Leaves chewed on long walks to relieve thirst. The Kiowa name means "salt weed." This name may indicate that there was an early realization that the loss of salt through perspiration may be counteracted by chewing the leaves of this plant. (192:35) **Omaha** *Dermatological Aid* Poultice of plants applied for swellings. (68:335)
- **Food**—**Cherokee** *Vegetable* Leaves used for food. (126:49) **Meskwaki** *Sour* Eaten for its acidity. (152:271) **Omaha** *Fodder* Pounded bulbs fed to horses to make them fleet. *Unspecified* Leaves, flowers, scapes, and bulbs used for food by children. **Pawnee** *Fodder* Pounded bulbs fed to horses to make them fleet. *Forage* Plant much esteemed by buffalo. *Unspecified* Leaves, flowers, scapes, and bulbs used for food by children. Plant considered to have a salty and sour taste. **Ponca** *Fodder* Pounded bulbs fed to horses to make them fleet. *Unspecified* Leaves, flowers, scapes, and bulbs used for food by children. (as *Xanthoxalis stricta* 70:98)
- **Dye**—**Menominee** *Yellow* Boiled whole plant used as a yellow dye. (151:78) **Meskwaki** *Orange* Whole plant boiled to obtain an orange dye. (152:271)

#### *Oxalis violacea* L., Violet Woodsorrel

- **Drug**—**Cherokee** *Anthelmintic* Infusion taken and used as a wash for children with hookworms. *Antiemetic* Cold infusion of leaf taken to stop vomiting. *Blood Medicine* Infusion taken for blood. *Cancer Treatment* Used for cancer "when it is first started." *Dermatological Aid* Salve of infusion of leaf mixed with sheep grease used for sores. *Oral Aid* Leaves chewed for "disordered saliva" and sore mouth. *Pediatric Aid* Infusion taken and used as a wash for children with hookworms. *Throat Aid* Chewed for sore throat. (80:56) **Pawnee** *Veterinary Aid* Pounded bulbs fed to horses to make them run faster. (as *Ionoxalis violacea* 70:98)
- **Food**—**Apache, Chiricahua & Mescalero** *Unspecified* Mixed with other leaves and cooked or eaten raw. Bulbs eaten raw or boiled. (33:47) **Cherokee** *Unspecified* Species used for food. (80:56) **Omaha** *Fodder* Pounded bulbs fed to horses to make them fleet. *Unspecified* Leaves, flowers, scapes, and bulbs used for food by children. **Pawnee** *Fodder* Pounded bulbs fed to horses to make them fleet. *Unspecified* Plant considered to have a salty and sour taste. Leaves, flowers, scapes, and bulbs used for food by children. **Ponca** *Fodder* Pounded

bulbs fed to horses to make them fleet. *Unspecified* Leaves, flowers, scapes, and bulbs used for food by children. (as *Ionoxalis violacea* 70:98)

### *Oxydendrum*, Ericaceae

#### *Oxydendrum arboreum* (L.) DC., Sourwood

- **Drug**—**Catawba** *Gynecological Aid* Cold infusion of plant taken by women to check excessive flow of blood. Cold infusion of plant taken by women when very sick from the change of life. (157:188) Cold infusion of plant taken to regulate flow of blood during menopause. (177:49) **Cherokee** *Antidiarrheal* Compound infusion taken for diarrhea. *Dermatological Aid* Bark ooze used for itch. *Gastrointestinal Aid* Taken as a tonic for "dyspepsy." *Oral Aid* Bark chewed for mouth ulcers. *Pulmonary Aid* Taken as a tonic for lung diseases. *Respiratory Aid* Taken as a tonic for phthisic and asthma. *Sedative* Infusion taken for nerves. (80:56)
- **Food**—**Cherokee** *Sauce & Relish* Used to make honey. (80:56)
- **Fiber**—**Cherokee** *Snow Gear* Wood used to make sled runners. (80:56)
- **Other**—**Cherokee** *Cooking Tools* Wood used to make butter paddles. *Decorations* Wood used to carve. *Fuel* Wood used for firewood. *Hunting & Fishing Item* Wood used to make arrow shafts. *Smoking Tools* Wood used to make pipestems. (80:56)

### *Oxypolis*, Apiaceae

#### *Oxypolis rigidior* (L.) Raf., Stiff Cowbane

- **Food**—**Cherokee** *Unspecified* Roots baked and eaten. (80:51)

### *Oxyria*, Polygonaceae

#### *Oxyria digyna* (L.) Hill, Alpine Mountainsorrel

- **Food**—**Alaska Native** *Dietary Aid* Leaves used as a good source of vitamin C. *Unspecified* Leaves eaten fresh and raw. (85:39) **Eskimo, Alaska** *Unspecified* Leaves and stems eaten raw or cooked with seal oil. (1:35) Leaves eaten fresh, soured, boiled or in oil, and root also utilized. (4:715) Fresh leaves mixed with seal blubber and eaten. **Eskimo, Arctic** *Unspecified* Leaves and young stems eaten raw and cooked. **Eskimo, Greenland** *Unspecified* Juice sweetened, thickened with a small amount of rice or potato flour and eaten. Fresh leaves mixed with seal blubber and eaten. (128:24) **Eskimo, Inuktitut** *Unspecified* Leaves eaten with seal oil. (202:190) **Eskimo, Inupiat** *Vegetable* Leaves eaten raw, with seal oil, cooked, or fermented. (98:65) **Montana Indian** *Vegetable* Acid-tasting leaves used as a salad. (19:17)

### *Oxytropis*, Fabaceae

#### *Oxytropis campestris* (L.) DC., Cold Mountain Crazyweed

- **Drug**—**Thompson** *Disinfectant* Decoction of roots taken and poured on head in sweat house for purification. (164:504)
- **Food**—**Thompson** *Forage* Used as a common forage plant. (164:516)

#### *Oxytropis lagopus* Nutt., Haresfoot Pointloco

- **Drug**—**Blackfoot** *Dermatological Aid* Plant chewed to allay swelling. *Throat Aid* Plant chewed for sore throat. (as *Aragallus lagopus* 114:274) Plant chewed for sore throat and swelling. (as *Aragallus lagopus* 118:38)

#### *Oxytropis lambertii* Pursh, Lambert's Crazyweed

- **Drug**—**Hopi** *Poison* Plant poisonous to cattle. (200:80) **Lakota** *Poison*

Plant, in quantities, poisonous to livestock and horses. (139:47)

**Navajo, Kayenta** *Laxative* Plant used for constipation. (205:28)

- **Food**—**Lakota** *Forage* Whole plant and roots eaten by horses. (139:47) **Navajo, Kayenta** *Porridge* Used to make a mush or parched and used for food. (205:28)
- **Other**—**Navajo** *Ceremonial Items* Plant offered to the bighorn at the Night Chant. (55:57)

**Oxytropis maydelliana** Trautv., Maydell's Oxytrope

- **Food**—**Eskimo, Inupiat** *Frozen Food* Roots frozen for future use. *Veg-etable* Roots, always with some kind of oil, eaten raw or cooked. *Winter Use Food* Roots stored in buried sacks for winter use. Roots stored in seal oil, fish oil, or bear fat for winter use. (98:122)

**Oxytropis monticola** Gray, Yellowflower Locoweed

- **Drug**—**Thompson** *Dermatological Aid* Decoction of whole plant used as a wash for the head, hair, and whole body. (164:473, 474)

**Oxytropis nigrescens** (Pallas) Fisch. ex DC., Blackish Oxytrope

- **Food**—**Alaska Native** *Unspecified* Roots used for food. (85:159)

**Oxytropis sericea** Nutt., Silvery Oxytrope

- **Drug**—**Blackfoot** *Dermatological Aid* Infusion of leaves applied to sores. (86:77) *Ear Medicine* Infusion of leaves used for ear troubles. (86:81)
- **Other**—**Blackfoot** *Jewelry* Stems used by children to make headdresses. The headdresses were worn during a single-file dance to different spots while singing a song. The seeds would rattle in their pods. Then the leader would suddenly stop and look behind him while the others dropped to the ground. The leader struck whoever remained standing with a smoking stick which he carried. Then he took some of the seeds of the plant, chewed them, and applied the mixture to the burn. Shortly, the irritation stopped and the game continued with changing leaders. (86:115)

**Oxytropis sp.**, Locoweed

- **Drug**—**Alaska Native** *Poison* Plant considered poisonous. (85:159) **Blackfoot** *Poison* Plant poisonous to horses. *Throat Aid* Leaves chewed and liquid swallowed for sore throats. (97:40) **Cheyenne** *Gynecological Aid* Powdered root used to increase flow of milk. *Pediatric Aid* Powdered roots taken by women when milk does not agree with the child. (76:179) **Navajo** *Misc. Disease Remedy* Plant used for rabies. *Respiratory Aid* Infusion of crushed leaves taken for bronchial and esophagus troubles. (55:57) **Thompson** *Analgesic* and *Antirheumatic (External)* Plant used in the sweat bath for rheumatism, stiff and aching muscles and joints. *Dermatological Aid* Plant used in steam bath for swellings and rheumatism. (164:468) Decoction of whole plant used as a wash for the head, hair, and whole body. (164:473, 474) *Diaphoretic* Plant used in the sweat bath for rheumatism and various aches. *Herbal Steam* Plants steamed in the sweat bath for rheumatism and other joint and muscle aches. *Orthopedic Aid* Plant used in the sweat bath for sprains, stiff and aching muscles and joints. (164:468) **Tlingit** *Gastrointestinal Aid* Root extract used for colic. (107:283)
- **Food**—**Navajo** *Forage* Plant used by sheep, in the spring, for forage. (55:57)

## **Pachycereus**, Cactaceae

**Pachycereus pringlei** (S. Wats.) Britt. & Rose

- **Food**—**Papago & Pima** *Cooking Agent* Pulp made into a flavoring substance and used for jellies. (cardon 35:37) **Seri** *Fruit* Fruits eaten for food. *Porridge* Seeds ground to a powder and made into a meal or paste. (giant cactus 50:134)
- **Fiber**—**Papago & Pima** *Building Material* Ribs used for building and fence materials. *Furniture* Ribs used as frames and springs for beds and couches. (cardon 35:37) **Seri** *Caulking Material* Dried plant skeletons and sea lion oil used as a caulking compound. (giant cactus 50:136)
- **Other**—**Papago & Pima** *Hunting & Fishing Item* Ribs used as shafts for fish spears. (cardon 35:37) **Seri** *Tools* Dried plant skeletons used as a straight, slender pole for knocking off ripe fruit. (giant cactus 50:136)

**Paeoniaceae**, see *Paeonia*

## **Paeonia**, Paeoniaceae

**Paeonia brownii** Dougl. ex Hook., Brown's Peony

- **Drug**—**Costanoan** *Gastrointestinal Aid* Decoction of roots or plants used for stomachaches and indigestion. *Laxative* Decoction of plants taken for constipation. *Pulmonary Aid* Decoction of roots used for pneumonia. (21:7) **Mahuna** *Febrifuge* and *Pulmonary Aid* Infusion of roots taken for complicated lung fevers. (140:9) **Paiute** *Cough Medicine* Seeds used to make cough medicine. (15:98) Cold infusion of seeds used as a cough medicine. (104:197) Decoction of root taken as a cough remedy. *Dermatological Aid* Decoction of root used as a liniment for swellings. (180:110, 111) *Dietary Aid* Decoction of sun dried roots taken to make people grow fat. (111:71) *Eye Medicine* Infusion of root used as a wash for sore eyes. (180:110, 111) *Heart Medicine* Fresh roots chewed and the juice swallowed for heart trouble. (111:71) *Kidney Aid* Decoction of root taken for kidney trouble. *Tuberculosis Remedy* Decoction of root taken for tuberculosis. (180:110, 111) *Veterinary Aid* Decoction of sun dried roots given to make horses grow fat. (111:71) **Shoshoni** *Antidiarrheal* Decoction of root taken for diarrhea. *Burn Dressing* Powder of pulverized, dried roots applied to burns. *Cough Medicine* Decoction of root taken as a cough remedy. *Dermatological Aid* Powdered, dried roots used on cuts, wounds, sores, and burns. Poultice of mashed root applied to boils and deep cuts or wounds. *Eye Medicine* Infusion or decoction of root used as a wash for sore eyes. *Kidney Aid* Decoction of root taken for kidney trouble. *Throat Aid* Decoction of root gargled for sore throat. *Tuberculosis Remedy* Decoction of root taken for tuberculosis. *Venereal Aid* Decoction of root taken for venereal disease. **Washo** *Analgesic* Decoction of root used as a lotion for headaches. *Tuberculosis Remedy* Decoction of root taken for tuberculosis. (180:110, 111)
- **Other**—**Paiute** *Jewelry* Seeds strung by children and worn as beads. (111:71)

**Paeonia californica** Nutt., California Peony

- **Drug**—**Diegueño** *Gastrointestinal Aid* Infusion of sliced, oven baked roots taken for indigestion. (84:28)
- **Food**—**Diegueño** *Vegetable* Leaves cooked as greens. Young leaves were picked before the blossoms appeared in the spring. They were

prepared by boiling, placing the boiled leaves in a cloth sack and weighting the sack down in the river with a stone, allowing the water to flow through the greens overnight to remove the bitterness in them. Alternatively, the boiled leaves could be soaked in a pan and the water changed until the bitterness was removed. The leaves were then cooked as greens, with onions, and eaten as a vegetable with acorn mush. The greens could also be prepared by boiling them twice, rather than letting them wash in the river. Buds cooked as vegetables. (84:28)

### ***Palafoxia*, Asteraceae**

***Palafoxia arida*** B. L. Turner & Morris, Desert Palafox

- **Dye**—Cahuilla *Yellow* Used as a yellow dye. (as *P. linearis* 15:98)

**Palmariaceae**, see *Halosaccion*

### ***Panax*, Araliaceae**

***Panax quinquefolius*** L., American Ginseng

- **Drug**—Cherokee *Analgesic* Used for headache. *Anticonvulsive* Root used for convulsions and palsy. *Expectorant* Root used as an expectorant. *Gastrointestinal Aid* Root chewed for colic. *Gynecological Aid* Used for “weakness of the womb and nervous affections.” *Oral Aid* Infusion used for “thrush.” *Other* Root used as a tonic and expectorant and for palsy and vertigo. *Tonic* Root used as a tonic. (80:36) **Creek** *Dermatological Aid* Poultice of plant applied to bleeding cuts. *Diaphoretic* and *Febrifuge* Decoction of plant taken to produce sweating for fevers. *Hemostat* Poultice of plant applied to bleeding cuts. *Pulmonary Aid* Decoction of roots taken for short-windedness. (177:44) **Delaware** *Tonic* Roots and other plant parts used as a general tonic. *Unspecified* Plants used to effect cures where all others have failed. (176:32) **Delaware, Oklahoma** *Panacea* Infusion of root used in any severe illness as a cure when others have failed. *Tonic* Infusion of root and other plant parts taken as a general tonic. (175:27, 76) **Houma** *Antiemetic* Decoction of root taken for vomiting. *Antirheumatic (Internal)* Decoction of root with whisky taken for rheumatism. (158:61) **Iroquois** *Anthelmintic* Compound infusion of roots taken for tapeworms. *Antiemetic* Decoction of roots taken for vomiting from cholera morbus. Infusion of roots taken for vomiting gall. *Blood Medicine* Compound infusion of roots taken as a blood remedy. *Dermatological Aid* Infusion of roots taken for sores on body and boils. *Dietary Aid* Infusion of roots taken for a bad appetite. *Ear Medicine* Compound infusion of roots used as drops for earaches. *Eye Medicine* Infusion of roots used as a wash for 2-year-old children with sore eyes. (87:395) *Febrifuge* Infusion of roots used for night fevers. (141:55) *Gastrointestinal Aid* Decoction of roots taken for upset stomach and vomiting gall. *Gynecological Aid* Compound infusion of seedpods taken by women having difficulty with labor. *Liver Aid* Decoction or infusion of roots taken to stop vomiting gall. *Misc. Disease Remedy* Decoction of roots taken for vomiting from cholera morbus. *Panacea* Compound decoction of roots taken or dried roots smoked as a panacea. (87:395) Dried roots smoked for every ailment or fainting spells. (87:396) *Pediatric Aid* Infusion of roots used as a wash for 2-year-old children with sore eyes. *Respiratory Aid* Smashed root smoked for asthma. (87:395) *Stimulant* Plant used for laziness and as a stimulant. *Tonic* Plant used as a tonic. (87:396) *Tuberculosis Remedy* Compound infusion of roots taken for tuberculosis. (87:395)

*Venereal Aid* Plant used for gonorrhea. (87:396) **Menominee** *Hunting Medicine* Root used in some war bundles and hunting bundles. (151:80) *Psychological Aid* and *Tonic* Plant acted as a tonic and “strengthener of mental powers.” (151:24) **Meskwaki** *Adjuvant* Used chiefly as a seasoner to render other remedies powerful. *Love Medicine* Compound called a “bagger” and used by a woman to get a husband. *Panacea* and *Pediatric Aid* Used as a “universal remedy for children and adults.” (152:204) **Micmac** *Blood Medicine* Roots used as a “detergent for the blood.” (40:58) **Mohegan** *Panacea* Herb highly valued as a cure-all. (176:74, 130) *Tonic* Complex compound infusion including ginseng root taken as spring tonic. (174:266) Root used alone or in combination to make a tonic. (176:74, 130) **Pawnee** *Love Medicine* Compound containing root used by men as a love charm. (70:106) **Penobscot** *Reproductive Aid* Infusion of root taken by women to increase fertility. (156:310) **Potawatomi** *Adjuvant* Root used as a seasoner in many powdered medicines. *Ear Medicine* Poultice of pounded root applied to earache. *Eye Medicine* Infusion of pounded root used as wash for sore eyes. (154:41) **Seminole** *Antirheumatic (External)* Decoction of roots used as a body rub and steam for joint swellings. (169:193) *Dermatological Aid* Poultice of roots applied to burst and drain boils and carbuncles. (169:243) Plant used for gunshot wounds. (169:302) Plant used in medicine bundles for bullet wounds. (169:422) *Love Medicine* Plant rubbed on the body and clothes to get back a divorced wife. (169:401) *Pediatric Aid* Plant and other plants used as a baby’s charm for fear from dreams about raccoons or opossums. (169:221) *Respiratory Aid* Infusion of roots taken for shortness of breath. Four bits of root were floated on water in a container. If none sank, the water was drunk and the patient would recover immediately. If one or two sank, the recovery would be slower, and if all four sank the patient was certain to die. (169:278) *Sedative* Plant and other plants used as a baby’s charm for fear from dreams about raccoons or opossums. (169:221) *Tonic* Plant used as a general tonic. (169:318) *Unspecified* Plant used for medicinal purposes. (169:161) Plant used as medicine. (169:158) Plant used medicinally. (169:164) *Witchcraft Medicine* Plant used to make a witchcraft medicine. (169:394)

- **Other**—Cherokee *Cash Crop* Roots sold in large quantities to traders in the late nineteenth century for 50 cents a pound. (80:36) **Chippewa** *Cash Crop* Root became a money commodity because of the white traders’ demand for it. *Good Luck Charm* Root considered a good luck charm if carried in the pocket. (71:137) **Menominee** *Hunting & Fishing Item* Root chewed by hunters to impart a lure to the breath and to attract deer. *Protection* Root used in some war bundles and hunting bundles. (151:80)

***Panax* sp.**, Ginseng

- **Drug**—Creek *Adjuvant* Healthful root added to many compounds. *Ceremonial Medicine* Plant used to keep ghosts away and for religious occasions. *Diaphoretic* and *Febrifuge* Compound decoction of root taken to induce sweating, reducing fever. *Hemostat* Infusion of root applied to bleeding cuts or wounds. *Pediatric Aid* and *Pulmonary Aid* Decoction of root taken for shortness of breath and by children for croup. (172:656)

***Panax trifolius*** L., Dwarf Ginseng

- **Drug**—Cherokee *Analgesic* An “ingredient to relieve sharp pains in

the breast." (80:36) Chewed plant used for headaches. Infusion of plant taken for breast pains and chewed plant used for headaches. (177:44) *Antirheumatic (Internal)* Used for rheumatism. (80:36) *Breast Treatment* Infusion of plant taken for breast pains. (177:44) *Dermatological Aid* Compound infusion given to children for "bold hives." *Gastrointestinal Aid* Root chewed for short breath and colic and infusion taken for colic. Used for "nervous debility," "dyspepsia," and apoplexy. *Kidney Aid* Root used for "dropsy" and gout. *Liver Aid* Used for the liver. *Misc. Disease Remedy* Used for "diseases induced by mercury" and pox. *Other* Taken for "nervous debility, dyspepsia and apoplexy." (80:36) Decoction of roots rubbed into scratches made for apoplexy. (177:44) *Pediatric Aid* Compound infusion given to children for "bold hives." *Pulmonary Aid* Root chewed for short breath and colic and infusion used for colic. *Stimulant* Cold, compound infusion of beaten roots given for fainting. *Tuberculosis Remedy* Infusion used for tuberculosis and "scrofulous sores." *Veneral Aid* Root used for stubborn venereal disease. (80:36) *Iroquois Analgesic* Compound used for chest pains. *Hunting Medicine* Infusion of roots used as a wash for fishing equipment, a "fishing medicine." *Pulmonary Aid* Compound used for chest pains. *Sports Medicine* Decoction of plant rubbed on the arms and legs of lacrosse players. (87:396) *Ojibwa, South Hemostat* Poultice of chewed root applied to cuts as a coagulant. (as *Aralia trifolia* 91:201)

**Pandanaceae**, see *Freycinetia*, *Pandanus*

## **Pandanus**, Pandanaceae

- Pandanus tectorius*** Parkinson ex Zucc., Tahitian Screwpine
- **Drug**—**Hawaiian Analgesic** Roots and other plants pounded, squeezed, resulting liquid heated and taken for chest pains. *Laxative* and *Pediatric Aid* Flowers chewed by the mothers and given to infants with constipation. *Strengtheners* Roots and other plants pounded, resulting liquid heated and taken for weakness from too many births. (as *P. odoratissimus* 2:41)
  - **Fiber**—**Hawaiian Clothing** Leaves used to make hats. *Mats, Rugs & Bedding* Leaves used to make mats. (as *P. odoratissimus* 2:41)

## **Panicum**, Poaceae

- Panicum bulbosum*** Kunth, Bulb Panicgrass
- **Food**—**Apache, Chiricahua & Mescalero Bread & Cake** Seeds threshed, winnowed, ground, and the flour used to make bread. *Sauce & Relish* Seeds ground, made into gravy, and mixed with meat. (33:48)
- Panicum capillare*** L., Witch Grass
- **Drug**—**Keres, Western Emetic** Infusion of leaves used as an emetic before breakfast. (171:57) **Mahuna Dietary Aid** Infusion of plant taken as a reducing aid. (140:66)
  - **Food**—**Hopi Bread & Cake** Ground seed meal used to make bread. (190:159) *Staple* Seeds ground and mixed with cornmeal. (56:17) **Navajo Unspecified** Seeds used for food. (55:26) **Navajo, Ramah Fodder** Used for sheep and horse feed. (191:17)
  - **Fiber**—**Tewa Brushes & Brooms** Grass made into brooms and used to clean metates and metate boxes. (as *P. barbipulvinatum* 138:64)
  - **Other**—**Keres, Western Unspecified** Plant known and named but no use was specified. (171:57)

## ***Panicum hirticaule*** J. Presl, Mexican Panicgrass

- **Food**—**Cocopa Bread & Cake** Seeds ground into a meal and used to make bread. *Sauce & Relish* Seeds ground into a meal and used to make gravy. *Winter Use Food* Seeds stored in ollas for future use. (37:175) **Yuma Staple** Seeds parched, winnowed, and ground into flour. (37:190)

## ***Panicum obtusum*** Kunth, Obtuse Panicgrass

- **Drug**—**Isleta Dermatological Aid** Grass characterized as making the hair grow rapidly. (100:36)
- **Food**—**Apache, Chiricahua & Mescalero Sauce & Relish** Seeds ground, made into gravy, and mixed with meat. (33:48) **Navajo, Ramah Fodder** Cut for hay. *Forage* Good forage. (191:17)
- **Other**—**Isleta Soap** Ground stolons mixed with soapweed and used in washing hair. (100:36)

## ***Panicum sonorum*** Beal, Sauwi

- **Food**—**Cocopa Bread & Cake** Seeds ground, mixed with water, and dried to make cakes. *Winter Use Food* Seeds harvested, winnowed, and stored for winter use. **Warhio Beverage** Seeds ground into flour and mixed with milk to make a nourishing drink. *Staple* Seeds ground into flour and seasoned with salt and sugar. (37:170)

## ***Panicum* sp.**, Panicgrass

- **Drug**—**Creek Misc. Disease Remedy** Warm infusion of leaves taken for fevers, especially malaria. **Natchez Febrifuge** Warm infusion of leaves taken for fevers, especially malaria. (172:667) *Misc. Disease Remedy* Infusion of plant taken for malaria. (177:6) **Seminole Antirheumatic (External)** Plant used for rabbit sickness: muscular cramps. (169:166) *Cough Medicine, Pulmonary Aid, and Throat Aid* Infusion of plant taken and used as bath for gopher-tortoise sickness: cough, dry throat, noisy chest. (169:236)
- **Fiber**—**Cherokee Clothing** Stems used for padding inside of moccasins. (80:47)

## ***Panicum urvilleanum*** Kunth, Desert Panicgrass

- **Food**—**Cahuilla Porridge** Singed seeds boiled and made into a gruel. (15:98)

**Papaveraceae**, see *Argemone*, *Chelidonium*, *Corydalis*, *Dendromecon*, *Dicentra*, *Eschscholzia*, *Papaver*, *Platystemon*, *Romneya*, *Sanguinaria*

## **Papaver**, Papaveraceae

### ***Papaver somniferum*** L., Opium Poppy

- **Drug**—**Cherokee Analgesic** Large dose used to produce sleep, for pain and cramps. *Anticonvulsive* Large dose given as antispasmodic, to produce sleep and for pain. *Sedative* Large dose used for pain, to produce sleep and soothe and tranquilize the system. *Stimulant* Small doses given as a stimulant and larger dose produced sleep and used for pain. (80:50, 51)

## **Parkinsonia**, Fabaceae

### ***Parkinsonia aculeata*** L., Jerusalem Thorn

- **Food**—**Papago Dried Food** Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (34:24) **Beans** flailed, winnowed, parched, and used for food. (34:25) *Unspecified* Seeds used for food. (36:60)

***Parkinsonia florida*** (Benth. ex Gray) S. Wats., Blue Paloverde

- **Food**—Cahuilla *Porridge* Dried beans ground into flour and used to make mush or cakes. (as *Cercidium floridum* 15:52) **Cocopa Porridge** Seeds roasted, ground, and made into mush. **Mohave Starvation Food** Seeds parched until almost burned and eaten as a famine food. (as *Cercidium floridum* 37:187) **Pima Unspecified** Green pods eaten raw in summer. (as *Cercidium floridum* 47:90) Beans formerly eaten fresh. (as *P. torreyana* 146:75) **Yuma Starvation Food** Seeds parched until almost burned and eaten as a famine food. (as *Cercidium floridum* 7:187)
- **Other**—Cahuilla *Protection* Trees large enough to shelter campers. (as *Cercidium floridum* 15:52) **Pima Cooking Tools** Trunk and larger branches used to make ladles. (as *Cercidium floridum* 47:90)

***Parkinsonia microphylla*** Torr., Yellow Paloverde

- **Food**—Cocopa *Porridge* Seeds roasted, ground, and made into mush. **Mohave Starvation Food** Seeds parched until almost burned and eaten as a famine food. (as *Cercidium microphyllum* 37:187) **Papago Dried Food** Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (34:24) Beans flailed, winnowed, parched, and used for food. (34:25) **Staple** Beans parched, sun dried, stored, ground into flour, and used as a staple food. (34:45) **Unspecified** Seeds used for food. (as *Cercidium microphyllum* 36:60) **Pima Unspecified** Beans formerly eaten fresh. (146:75) **Pima, Gila River Unspecified** Peas eaten raw or cooked. (as *Cercidium microphyllum* 133:5) Seeds eaten raw and boiled. (as *Cercidium microphyllum* 133:7) **Yuma Starvation Food** Seeds parched until almost burned and eaten as a famine food. (as *Cercidium microphyllum* 37:187)

**Parmeliaceae**, see *Candelaria*, *Cetraria*, *Parmelia*

***Parmelia***, Parmeliaceae, lichen

***Parmelia physodes*** (L.) Ach., Lichen

- **Food**—Potawatomi *Soup* and *Vegetable* Cooked into a soup, material swelled and afforded a pleasant flavor. (154:107)

***Parmelia saxatilis*** (L.) Ack., Flat Lichen

- **Fiber**—Eskimo, Inuktitut *Canoe Material* Used to stuff caribou skins for rafts. (202:190)

***Parnassia***, Saxifragaceae

***Parnassia fimbriata*** Koenig, Rocky Mountain Parnassia

- **Drug**—Cheyenne *Gastrointestinal Aid* Infusion of powdered leaves given to small babies for dullness or sick to the stomach. *Pediatric Aid* Infusion of powdered leaves given to small babies for dullness or sick to the stomach. *Stimulant* Infusion of powdered leaves given to babies when dull. (76:176) **Gosiute Venereal Aid** Poultice of plant applied or plant used as wash for venereal diseases. (39:351)

***Paronychia***, Caryophyllaceae

***Paronychia jamesii*** Torr. & Gray, James's Nailwort

- **Food**—Kiowa *Beverage* Used as a "tea" plant. (192:27)

***Parrya***, Brassicaceae

***Parrya nudicaulis*** (L.) Boiss., Nakedstem Wallflower

- **Food**—Alaska Native *Soup* Roots cooked and added to fish and meat stews. *Unspecified* Roots cooked and used for food. New, young

leaves used for food. *Winter Use Food* Leaves stored raw in seal oil for winter use. (85:123)

***Parryella***, Fabaceae

***Parryella filifolia*** Torr. & Gray ex Gray, Common Dunebroom

- **Drug**—Hopi *Toothache Remedy* Beans used for toothaches. (42:339) Beans used for toothaches. (200:33, 80) **Navajo, Ramah Ceremonial Medicine** and *Emetic* Leaves used as a ceremonial emetic. (191:33) **Tewa Toothache Remedy** Beans used for toothaches. (42:339)
- **Fiber**—Hopi *Basketry* Plant used as basketry material. (42:339) Used as an important basketry material. (200:80) **Navajo, Ramah Basketry** Stems used as material for small baskets. (191:33) **Tewa Basketry** Plant used as basketry material. (42:339) **Zuni Basketry** Pleasantly fragrant plant used for weaving baskets. (166:81)
- **Other**—Hopi *Ceremonial Items* Plant used to weave kachina masks. *Stable Gear* Roots made into hooks and used to secure packs on burros during salt expeditions. **Tewa Ceremonial Items** Plant used to weave kachina masks. *Stable Gear* Roots made into hooks and used to secure packs on burros during salt expeditions. (42:339)

***Parthenium***, Asteraceae

***Parthenium hysterophorus*** L., Santa Maria Feverfew

- **Drug**—Koasati *Antidiarrheal* Decoction of roots taken for dysentery. (177:63)

***Parthenium incanum*** Kunth, Mariola

- **Food**—Apache, Chiricahua & Mescalero *Beverage* Fresh leaves boiled and used similarly to coffee. (33:53)

***Parthenium integrifolium*** L., Wild Quinine

- **Drug**—Catawba *Burn Dressing* Poultice of fresh leaves applied to burns. *Veterinary Aid* Leaf ash rubbed on horse's sore back. (157:191)

***Parthenocissus***, Vitaceae

***Parthenocissus quinquefolia*** (L.) Planch., Virginia Creeper

- **Drug**—Cherokee *Liver Aid* Infusion taken for yellow jaundice. (80:60) **Iroquois Antidote** Compound decoction of twigs taken and used as wash to counteract poison sumac. *Orthopedic Aid* Poultice of vines applied to bunches (swellings) on wrists. *Other* Compound decoction of bark taken for stricture caused by menstruating woman. *Poison* Plant considered poisonous. *Urinary Aid* Compound decoction of plants taken for difficult urination. (87:382)
- **Food**—Chippewa *Unspecified* Stalks cut, boiled, peeled, and the sweetish substance between the bark and the wood used for food. (53:320)
- **Dye**—Kiowa *Pink* Fruits used as pink paint for skin and feathers worn in war dance. (192:41)

***Parthenocissus quinquefolia*** (L.) Planch. **var. *quinquefolia***, Virginia Creeper

- **Drug**—Houma *Dermatological Aid* Hot decoction of stems and leaves applied to reduce swellings. Poultice of crushed leaves and vinegar applied to wounds. *Misc. Disease Remedy* Poultice of crushed leaves and vinegar applied for lockjaw. (as *Psedera quinquefolia* 158:63) **Meskwaki Antidiarrheal** Decoction of root taken for diarrhea. ### *Paspalidium*, Poaceae

#### *Paspalidium geminatum* var. *paludivagum* (A. S. Hitchc. & Chase) Gould, Egyptian Panicum

- **Drug**—Seminole *Dermatological Aid* Plant used for snake sickness: itchy skin. (as *Panicum paludivagum* 169:166) Decoction of whole plant taken and used as a body steam for snake sickness: itchy skin. (as *Panicum paludivagum* 169:239)

### *Paspalum*, Poaceae

#### *Paspalum setaceum* Michx., Thin Paspalum

- **Food**—Kiowa *Fodder* Used as a valuable fodder plant. *Forage* Used as a valuable pasture plant. (as *P. stramineum* 192:16)

### Passifloraceae, see *Passiflora*

### *Passiflora*, Passifloraceae

#### *Passiflora incarnata* L., Purple Passionflower

- **Drug**—Cherokee *Dermatological Aid* Compound infusion of root used for boils. Pounded root applied to “draw out inflammation” of brier or locust wounds. *Dietary Aid* Infusion of root given to babies to aid in weaning. *Ear Medicine* Warm infusion of beaten root dropped into ear for earache. *Liver Aid* Infusion taken for liver and

compound infusion of root used for boils. *Pediatric Aid* Infusion of root given to babies to aid in weaning. (80:47) **Houma Blood Medicine** Infusion of roots taken as a blood tonic. (158:63)

- **Food**—Cherokee *Beverage* Used to make a social drink. (80:47) Crushed fruit strained into a juice, mixed with flour or cornmeal to thicken, and used as a beverage. (126:50) *Fruit* Fruit used for food. (80:47) Fruit eaten raw. (126:50) *Unspecified* Young shoots and leaves boiled, fried, and often eaten with other greens. (204:253) *Vegetable* Leaves parboiled, rinsed, and cooked in hot grease with salt as a potherb. (126:50)

### *Pastinaca*, Apiaceae

#### *Pastinaca sativa* L., Wild Parsnip

- **Drug**—Cherokee *Analgesic* Taken for “sharp pains.” (80:47) **Iroquois Dermatological Aid** Compound decoction used as wash or poultice applied to chancres or lumps on penis. (87:399) **Ojibwa Gynecological Aid** Compound infusion of minute quantity of root taken for female troubles. *Poison* Root powerful in small amounts and poisonous in large amounts. (153:391) **Paiute Tuberculosis Remedy** Root medicine taken “for their all over inside—when they have this awful, maybe TB.” (111:93) **Potawatomi Dermatological Aid** Poultice of root applied to inflammation and sores. *Poison* Root considered poisonous when taken internally. (154:86)

### *Paxistima*, Celastraceae

#### *Paxistima myrsinites* (Pursh) Raf., Boxleaf Myrtle

- **Drug**—Bella Coola *Unspecified* Formerly used for medicine. (184:203) **Navajo, Ramah Ceremonial Medicine** and *Emetic* Plant used as an emetic in various ceremonies. (191:36) **Okanagan-Colville Cold Remedy** Decoction of branches taken for colds. *Kidney Aid* Decoction of branches taken for kidney troubles. *Tuberculosis Remedy* Decoction of branches taken for tuberculosis. (188:95) **Thompson Analgesic** Poultice of leaves used for pain in any part of the body. *Dermatological Aid* Poultice of boiled leaves applied to swellings and body pains. (164:468) *Internal Medicine* Decoction or infusion of plant used for internal ailments. *Orthopedic Aid* Decoction or infusion of plant used for broken bones. *Tuberculosis Remedy* Decoction or infusion of branches taken for tuberculosis. (187:202)
- **Food**—Karok *Fruit* Berries used for food. (148:385) **Okanagan-Colville Forage** Plant used by deer as a good winter food. (188:95) **Thompson Forage** Long, narrow leaves eaten by cattle when other foods scarce. (164:515)
- **Other**—Paiute *Decorations* Plant used for grave decorations. (111:88) **Saanich Cash Crop** Branches sold to local florist shops. (182:80)

### *Pectis*, Asteraceae

#### *Pectis angustifolia* Torr., Narrowleaf Pectis

- **Drug**—Keres, Western *Gastrointestinal Aid* Blossoms and salt eaten for stomach trouble. *Psychological Aid* Infusion of plant used as an emetic before breakfast to relieve sadness and worry. (171:58) **Navajo Carminative** Plant used as a carminative. *Ceremonial Medicine* Plant used in the liniment for the Chiricahua Apache Wind Chant. *Gastrointestinal Aid* Crushed leaves used for stomachaches. (55:88)
- **Food**—Acoma *Spice* Used as seasoning to counteract the taste of tainted meat. (32:38) **Havasupai Sauce & Relish** Plant used as a con-

diment. (197:74) **Hopi Dried Food** Plants dried and eaten with fresh roasted corn, dried parched corn, or corn dumplings. (120:20) Dried, stored, and used for food. *Spice* Used as a flavoring. *Unspecified* Eagerly eaten raw. (200:97) **Keres, Western Spice** Plant used as a seasoning for meat, to kill the tainted taste. (171:58) **Laguna Spice** Used as seasoning to counteract the taste of tainted meat. **Pueblo Spice** Used as seasoning. (32:38)

- **Dye—Hopi Unspecified** Used to make an inferior dye. (200:97)

***Pectis papposa*** Harvey & Gray, Cinchweed Fetidmarigold

- **Drug—Pima Laxative** Decoction of plant or dried plant taken as a laxative. (47:104) **Zuni Carminative** Infusion of whole plant taken as a carminative. *Eye Medicine* Infusion of blossoms used as eye drops for snow-blindness. (166:57)
- **Food—Havasupai Porridge** Seeds parched, ground, and used to make mush. (197:67) *Sauce & Relish* Fresh plant dipped in salted water and eaten with mush or cornmeal as a condiment. (197:249) *Soup* Seeds parched, ground, and used to make soup. (197:67) **Pueblo Spice** Used as seasoning. (32:38)
- **Other—Zuni Ceremonial Items, and Incense & Fragrance** Chewed blossoms used as perfume before a dance in ceremonies of the secret fraternities.<sup>53</sup> (166:83)

**Pedaliaceae**, see *Martynia*, *Proboscidea*, *Sesamum*

***Pedicularis***, Scrophulariaceae

***Pedicularis attollens*** Gray, Atoll Lousewort

- **Drug—Washo Dermatological Aid** Poultice of plant applied to cuts, sores, and swellings. *Tonic* Decoction of leaves taken as a tonic. (180:112)

***Pedicularis bracteosa*** Benth., Bracted Lousewort

- **Drug—Thompson Unspecified** Plant used medicinally for unspecified purpose. (164:467)
- **Other—Thompson Designs** Leaves used as designs on baskets. (164:500)

***Pedicularis canadensis*** L., Canadian Lousewort

- **Drug—Catawba Analgesic** Infusion of roots used for stomach pains. *Gastrointestinal Aid* Infusion of roots used for stomach pains and disorders. (157:190) **Cherokee Antidiarrheal** Taken "for bloody discharge from bowels" and used to rid sheep of lice. *Cough Medicine* Used as an ingredient in cough medicine. *Dermatological Aid* Infusion of root rubbed on sores. *Gastrointestinal Aid* Decoction of root taken for stomachache and infusion taken for "flux." *Veterinary Aid* Put in dog bed to delouse pups and used to rid sheep of lice. (80:43) **Chippewa Blood Medicine** Infusion of dried roots used for anemic conditions. (71:140) **Iroquois Emetic and Gastrointestinal Aid** Decoction taken to vomit for stomachaches caused by menstruating women. *Heart Medicine* Infusion of smashed roots taken for heart troubles. *Orthopedic Aid* Compound decoction of plants used as steam bath for sore legs or knees. *Tuberculosis Remedy* Compound infusion of whole plants taken for consumption with bad hemorrhage. (87:436) **Menominee Love Medicine** Root carried on the person who is contemplating making love advances. (151:81) *Veterinary Aid* Chopped root added to feed to make pony fat and vicious to all but its owner. (151:53) **Meskwaki Cancer Treatment** Poultice of root ap-

plied to tumors. *Dermatological Aid* Poultice of root applied to external swellings. *Internal Medicine* Decoction of plant taken for internal swelling and poultice applied for external swelling. (152:247) **Love Medicine** Root used in food to make estranged married people congenial and a love medicine used to return love (152:273) **Mohegan Abortifacient** Infusion of leaves taken to induce abortion. (176:74, 130) **Ojibwa Gastrointestinal Aid** Infusion of roots taken for stomach ulcers. (5:2304) **Love Medicine** Finely cut root secretly added to another's food as an aphrodisiac. (153:389, 390) Chopped root added to food as a love charm. The root was added to some dish of food that was cooking, without the knowledge of the people who were going to eat it, and if they had been quarrelsome, then they became lovers again. However, the informant said that it was too often put to bad uses. (153:432) *Throat Aid* Infusion of fresh or dried leaves taken for sore throats. (5:2304) **Potawatomi Cathartic** Root used as a physic. *Internal Medicine* Root used by Prairie Potawatomi for both internal and external swellings. (154:83)

- **Food—Cherokee Vegetable** Cooked leaves and stems used for food. (126:54) **Iroquois Vegetable** Cooked and seasoned with salt, pepper, or butter. (196:118) **Potawatomi Fodder** Roots mixed with oats to fatten the ponies. (154:123)

***Pedicularis centranthera*** Gray, Dwarf Lousewort

- **Drug—Shoshoni Gastrointestinal Aid and Pediatric Aid** Decoction of root given to children for stomachaches. (180:112)

***Pedicularis densiflora*** Benth. ex Hook., Indian Warrior

- **Food—Mendocino Indian Forage** Flower nectar used by yellow-hammer birds. *Unspecified* Honey sucked out of the flowers by children. (41:388)

***Pedicularis groenlandica*** Retz., Elephanthead Lousewort

- **Drug—Cheyenne Cough Medicine** Infusion of powdered leaves and stems taken to stop or loosen a long-lasting cough. (76:187) Infusion of smashed leaves and stems taken for coughs. (83:39)

***Pedicularis lanata*** Cham. & Schlecht., Woolly Lousewort

- **Food—Alaska Native Unspecified** Flowers with water added allowed to ferment. Roots boiled or roasted. (85:125) **Eskimo, Arctic Unspecified** Roots eaten either raw or cooked. Flowers sucked by children for the sweet nectar. *Vegetable* Flowering stems boiled and eaten as a potherb. (128:23) **Eskimo, Inupiat Dessert** Fermented, frozen greens mashed, creamed, and mixed with sugar and oil for a dessert. *Unspecified* Raw shoots and roots used for food. *Vegetable* Fermented young flower tops eaten with oil and sugar, like sauerkraut. (98:56)

***Pedicularis lanata*** Cham. & Schlecht. **ssp. lanata**, Woolly Lousewort

- **Food—Eskimo, Alaska Unspecified** Raw roots eaten with seal oil. (as *P. kanei* 1:38)

***Pedicularis lanceolata*** Michx., Swamp Lousewort

- **Food—Iroquois Vegetable** Cooked and seasoned with salt, pepper, or butter. (196:118)

***Pedicularis procera*** Gray, Giant Lousewort

- **Other—Navajo, Ramah Ceremonial Items** Used in Mountaintopway. (as *P. grayi* 191:44)

***Pedicularis racemosa*** Dougl. ex Benth., Sickle-top Lousewort

- **Drug**—Thompson *Unspecified* Plant used medicinally for unspecified purpose. (164:467)

***Pedicularis* sp.**, Bumblebee Plant

- **Food**—Eskimo, Alaska *Sour* Soured leaves used for food. (4:716) *Unspecified* Nectar rich flowers eaten by children. (1:38) Root used for food. (4:716)

***Pediomelum***, Fabaceae

***Pediomelum argophyllum*** (Pursh) J. Grimes, Silverleaf Scurfpea

- **Drug**—Cheyenne *Febrifuge* Decoction of plant taken for fever and salve of plant used for high fever. (as *Psoralea argophylla* 75:40) Infusion of ground leaves and stems taken for fevers. (as *Psoralea argophylla* 76:178) Ground leaf and stem powder mixed with grease and rubbed over the body for high fevers. (as *Psoralea argophylla* 76:178) **Chippewa** *Veterinary Aid* Compound infusion of root applied to chest and legs of horse as a stimulant. (as *Psoralea argophylla* 53:366) **Lakota** *Unspecified* Plant used as a medicine. *Veterinary Aid* Roots fed to tired horses. (as *Psoralea argophylla* 139:47) **Meskwaki** *Laxative* Infusion of root used for chronic constipation. (as *Psoralea argophylla* 152:230) **Montana Indian** *Dermatological Aid* Decoction of plant used as a wash for wounds. (as *Psoralea argophylla* 19:20)
- **Fiber**—Lakota *Basketry* Tough, green stems made into a basket to carry meat home. (as *Psoralea argophylla* 139:47)

***Pediomelum canescens*** (Michx.) Rydb., Buckroot

- **Drug**—Seminole *Analgesic* Poultice of warmed roots applied externally as an analgesic. (as *Psoralea canescens* 169:167) Poultice of wet, warm tuberous roots applied for pains. *Antirheumatic (External)* Poultice of wet, warm tuberous roots applied for rheumatism. (as *Psoralea canescens* 169:285) *Cold Remedy* Infusion of tuberous roots taken and steam inhaled for runny nose, stuffy head, and sore throat. *Cough Medicine* Infusion of tuberous roots taken and steam inhaled for coughs. (as *Psoralea canescens* 169:279) *Unspecified* Plant used as medicine. (as *Psoralea canescens* 169:158)

***Pediomelum cuspidatum*** (Pursh) Rydb., Largebract Indian Breadroot

- **Drug**—Lakota *Unspecified* Used as a medicine. (as *Psoralea cuspidata* 139:47)

***Pediomelum esculentum*** (Pursh) Rydb., Breadroot Scurfpea

- **Drug**—Blackfoot *Antirheumatic (External)* Poultice of chewed roots applied to sprains. (as *Psoralea esculenta* 86:80) *Ear Medicine* Chewed root spittle used for earaches. *Eye Medicine* Chewed root spittle applied to the eye to remove matter. (as *Psoralea esculenta* 86:82) *Gastrointestinal Aid* Infusion of dried roots taken for gastroenteritis. Chewed roots blown into a baby's rectum for colic. (as *Psoralea esculenta* 86:68) Roots chewed by children for bowel complaints. (as *Psoralea esculenta* 97:41) *Orthopedic Aid* Poultice of chewed roots applied to fractures. (as *Psoralea esculenta* 86:80) *Pediatric Aid* Chewed roots blown into a baby's rectum for colic. (as *Psoralea esculenta* 86:68) *Pulmonary Aid* Infusion of roots taken for chest troubles. (as *Psoralea esculenta* 86:73) *Throat Aid* Infusion of dried roots taken for sore throats. (as *Psoralea esculenta* 86:68) Roots chewed for sore throat. (as *Psoralea esculenta* 86:73) *Toothache Remedy* Roots chewed

by teething children. (as *Psoralea esculenta* 97:41) *Unspecified* Root pieces dried and attached to clothing and robes as ornamentation and medicine. (as *Psoralea esculenta* 86:119) **Cheyenne** *Antidiarrheal* Plant used as a diarrhea medicine. *Burn Dressing* Plant used as a burn medicine. *Unspecified* Plant used as an ingredient for medicinal mixtures. (as *Psoralea esculenta* 83:29)

- **Food**—Blackfoot *Dried Food* Peeled roots dried and added to winter supplies. *Unspecified* Peeled roots eaten fresh. (as *Psoralea esculenta* 86:104) **Cheyenne** *Cooking Agent* Dried plant pieces powdered and used as a thickening for soups, gravy, and dry meat. (as *Psoralea esculenta* 83:29) *Dried Food* Roots dried and eaten as a winter food. (as *Psoralea esculenta* 83:30) Roots formerly cut into thin, lengthwise slices and dried for winter use. *Pie & Pudding* Dried plant slices boiled, a sweetener added, and eaten as a sweet pudding. (as *Psoralea esculenta* 83:29) *Unspecified* Roots eaten fresh. (as *Psoralea esculenta* 83:30) Species used for food. (as *Psoralea esculenta* 83:45) Roots formerly eaten raw or cooked as one of the most important foods. (as *Psoralea esculenta* 83:29) **Dakota** *Dried Food* Roots dried for winter use. The roots were peeled and braided into festoons by their tapering roots or were split into halves or quarters and after drying were stored in any convenient container. (as *Psoralea esculenta* 69:365) Peeled roots braided and dried for winter use. (as *Psoralea esculenta* 70:92) *Unspecified* Roots eaten fresh. (as *Psoralea esculenta* 69:365) Peeled roots eaten fresh and uncooked or cooked. (as *Psoralea esculenta* 70:92) **Lakota** *Dried Food* Roots peeled, dried, and used as a winter food. *Soup* Roots cooked in soups and stews. *Unspecified* Roots peeled and eaten raw. (as *Psoralea esculenta* 106:41) **Montana Indian** *Bread & Cake* Roots dried, mashed, and used to make cakes or breads. *Cooking Agent* Roots dried, mashed, and used to thicken soups. *Dried Food* Roots shredded, dried, and stored for future use. *Porridge* Roots dried, mashed, and used to make mush and gruel. *Unspecified* Inner root core eaten raw, roasted, or boiled. (as *Psoralea esculenta* 82:61) *Vegetable* Roots, similar to yams, roasted in ashes. *Winter Use Food* Peeled, sliced roots dried for winter use. (as *Psoralea esculenta* 19:20) **Omaha** *Dried Food* Thickened root eaten dried. (as *Psoralea esculenta* 68:325) Peeled roots braided and dried for winter use. (as *Psoralea esculenta* 70:92) *Soup* Thickened root cooked with soup. *Unspecified* Thickened root eaten fresh and raw. (as *Psoralea esculenta* 68:325) Peeled roots eaten fresh and uncooked or cooked. **Pawnee** *Dried Food* Peeled roots braided and dried for winter use. *Unspecified* Peeled roots eaten fresh and uncooked or cooked. **Ponca** *Dried Food* Peeled roots braided and dried for winter use. *Unspecified* Peeled roots eaten fresh and uncooked or cooked. (as *Psoralea esculenta* 70:92) **Sioux** *Soup* Boiled or roasted roots eaten or dried and ground into meal and used in soups. *Winter Use Food* Plant gathered and hung up for winter use. (as *Psoralea esculenta* 118:13) **Winnebago** *Dried Food* Peeled roots braided and dried for winter use. *Unspecified* Peeled roots eaten fresh and uncooked or cooked. (as *Psoralea esculenta* 70:92)
- **Other**—Blackfoot *Decorations* Root pieces dried and attached to clothing and robes as ornamentation and medicine. (as *Psoralea esculenta* 86:119)

***Pediomelum hypogaeum*** (Nutt. ex Torr. & Gray) Rydb.  
**var. *hypogaeum***, Scurfpea

- **Food**—**Cheyenne** *Dried Food* Roots dried and eaten as a winter food. (as *Psoralea hypogaea* 83:30) *Unspecified* Root eaten fresh. (as *Psoralea hypogaea* 76:178) Roots eaten fresh. (as *Psoralea hypogaea* 83:30) Species used for food. (as *Psoralea hypogaea* 83:46) *Winter Use Food* Root dried for winter use. (as *Psoralea hypogaea* 76:178) **Comanche** *Unspecified* Raw roots used for food. (as *Psoralea hypogaea* 29:523)

## *Pelea*, Rutaceae

*Pelea* sp., Alani-kuahiwi

- **Drug**—**Hawaiian** *Blood Medicine* Infusion of pounded bark and other ingredients taken to purify the blood. *Ceremonial Medicine* Leaves placed on the bed as a beauty remedy for king, queens, and their sons and daughters. The alani was the Hawaiian beauty remedy and was dedicated to the exclusive use of the kings and queens and their sons and daughters. The leaves, in sufficient quantity, were taken and laid on the bed, covering the space, from the neck to the feet. A sheeting of tapa, tightly drawn, was laid over the leaves. In the meantime, 20 leaves were allowed to remain in the water overnight and placed in the sun during the day. This was for bathing. Towards evening, the royal child, or the one chosen for beauty, was given a bath of this water. In it were put the alani flowers. After the bath the child was fed a fattening ration. After feeding, and when the child became sleepy, it was placed in the bed covered with the alani leaves. This was repeated for five consecutive days. The bedding was then changed, the old alani leaves were removed and new ones took their place, and the process continued from that point on for 5 days more. Not only did this treatment improve the appearance, but it made the skin immune to certain diseases, especially skin diseases. *Dermatological Aid* Leaves placed in beds of kings, queens, their sons, and daughters to make the skin immune to diseases. *Pediatric Aid* and *Strengtheners* Young shoots or buds used for children with general debility. (2:15)

## *Pellaea*, Pteridaceae, fern

*Pellaea atropurpurea* (L.) Link, Purple Cliffbrake

- **Drug**—**Mahona** *Blood Medicine* Infusion of plants taken to tone and thin the blood. *Kidney Aid* Infusion of plants taken to flush the kidneys. *Preventive Medicine* Infusion of plants taken as a preventative against sunstroke. (140:22)

*Pellaea mucronata* (D. C. Eat.) D. C. Eat., Birdfoot Cliffbrake

- **Drug**—**Costanoan** *Antihemorrhagic* and *Blood Medicine* Decoction of plant used for internal injuries to cough up “bad blood.” *Dermatological Aid* Infusion of leaves used as a wash for facial sores. *Emetic* Decoction of plant used for internal injuries to cough up “bad blood.” *Febrifuge* Infusion of sprouts taken for fevers. (21:5) **Yavapai** *Dermatological Aid* Dried, pulverized leaves dusted on sores. *Gynecological Aid* Decoction taken as tea by women after childbirth. (65:261)
- **Food**—**Diegueño** *Beverage* Used to make tea. (88:215) **Kawaiisu** *Beverage* Ferns brewed to make a nonmedicinal tea. (206:47) **Luiseño** *Beverage* Fronds used to make a beverage. (155:234)

*Pellaea mucronata* ssp. *californica* (Lemmon) Windham, California Cliffbrake

- **Food**—**Tubatulabal** *Unspecified* Leaves and stalks used for food. (as *P. compacta* 193:15)

*Pellaea mucronata* (D. C. Eat.) D. C. Eat. ssp. *mucronata*, Birdfoot Cliffbrake

- **Drug**—**Diegueño** *Antihemorrhagic* Decoction of rhizomes taken for hemorrhage. (as *P. mucronata* var. *mucronata* 84:28) **Luiseño** *Unspecified* Decoction of fronds used for medicinal purposes. (as *P. ornithopus* 155:234) **Miwok** *Antihemorrhagic* Infusion taken for nose-bleed. *Blood Medicine* Infusion taken as a blood purifier. *Other* Infusion taken as a spring medicine. (as *P. ornithopus* 12:171)
- **Food**—**Luiseño** *Beverage* Plant used to make a tea. (as *P. ornithopus* 155:211)
- **Other**—**Diegueño** *Good Luck Charm* Rhizome pieces scattered about the home to keep animals and enemies away and encourage friends to visit. (as *P. mucronata* var. *mucronata* 84:28)

## *Peltandra*, Araceae

*Peltandra virginica* (L.) Schott, Green Arrow Arum

- **Drug**—**Nanticoke** *Pediatric Aid* and *Unspecified* Grated root in milk given to babies for unspecified purpose. (175:58)
- **Food**—**Seminole** *Unspecified* Plant used for food. (169:494)

*Peltigeraceae*, see *Nephroma*, *Peltigera*

## *Peltigera*, Peltigeraceae, lichen

*Peltigera aphthosa* (L.) Willd.

- **Drug**—**Nitinaht** *Tuberculosis Remedy* Plants chewed and eaten for tuberculosis. *Urinary Aid* Formerly used to facilitate urination. (186:55)
- **Fiber**—**Eskimo, Inuktitut** *Canoe Material* Used to stuff caribou skins for rafts. (as *P. aphthosa*, flat lichen 202:130)

*Peltigera canina* Willd., Dogtooth Lichen

- **Drug**—**Nitinaht** *Urinary Aid* Formerly used to facilitate urination. (186:55)

*Peltigera* sp., Veined Lichen

- **Drug**—**Oweekeno** *Dermatological Aid* Poultice of whole, pounded plants and spruce pitch applied to wounds. *Veterinary Aid* Poultice of chewed, whole plants and pitch applied by black and grizzly bears to wounds. (43:50)

## *Peniocereus*, Cactaceae

*Peniocereus greggii* (Engelm.) Britt. & Rose var. *greggii*, Night-blooming Cereus

- **Drug**—**Nevada Indian** *Heart Medicine* Infusion of root taken as a cardiac stimulant. (as *Cereus greggii* 118:40) **Papago** *Dermatological Aid* Seedpod and deer grease salve rubbed on sores. Seedpod mixed with deer grease as salve for sores. (as *Cereus greggii* 34:65) **Pima** *Misc. Disease Remedy* Decoction of roots taken for diabetes. (as *Cereus greggii* 47:55)
- **Food**—**Apache, San Carlos** *Unspecified* Red, doughnut-like fruits and flowers used for food. (as *Cereus greggii* 95:257) **Papago** *Beverage* Roots chewed for thirst. *Unspecified* Roots baked whole in ashes, peeled, and eaten. (as *Cereus greggii* 34:18) *Vegetable* Stalks eaten as greens. (as *Cereus greggii* 34:14) Shoots eaten as greens. (as *Cereus greggii* 34:16)

*Peniocereus striatus* (Brandeg.) Buxbaum, Gearstem Cactus

- **Food**—Papago & Pima *Fruit* Fruit used for food. (as *Wilcoxia striata* 35:42)

## *Pennellia*, Brassicaceae

***Pennellia micrantha*** (Gray) Nieuwl., Mountain Mock Thelypody

- **Drug**—Navajo, Ramah *Gynecological Aid* Decoction of root taken to expedite delivery. *Toothache Remedy* Poultice of crushed, heated roots applied for toothache. (191:29)

## *Pennisetum*, Poaceae

***Pennisetum glaucum*** (L.) R. Br., Pearl Millet

- **Drug**—Navajo, Ramah *Dermatological Aid* Fruits rubbed on open facial pimples. (as *Setaria lutescens* 191:17)

## *Penstemon*, Scrophulariaceae

***Penstemon acuminatus*** Dougl. ex Lindl., Sharpleaf Penstemon

- **Drug**—Blackfoot *Analgesic* Decoction of plant taken for stomach pain. (as *Penstemon acuminatus* 114:276) *Antiemetic* Infusion of leaves taken for vomiting. (97:53) Decoction of plant taken for vomiting. *Gastrointestinal Aid* Decoction of plant taken for cramps and stomach pain. (as *Penstemon acuminatus* 114:276)

***Penstemon ambiguus*** Torr., Gilia Beardtongue

- **Drug**—Keres, Western *Emetic* Infusion of plant used as an emetic. (as *Penstemon ambiguus* 171:58) Navajo, Kayenta *Dermatological Aid* Plant used for solpugid (wind scorpion) bites or poultice of plant applied to eagle bites. *Disinfectant* and *Veterinary Aid* Plant used as a fumigant for livestock with snakebites. (205:42)
- **Other**—Hopi *Ceremonial Items* Plant, associated with east direction, used in the Po-wa-mu ceremony. *Season Indicator* Flowers used to indicate when watermelon planting was over. Tewa *Ceremonial Items* Plant, associated with east direction, used in the Po-wa-mu ceremony. *Season Indicator* Flowers used to indicate when watermelon planting was over. (42:340)

***Penstemon angustifolius*** Nutt. ex Pursh, Broadbeard Beardtongue

- **Other**—Lakota *Paint* Blossoms used to make blue paint for moc-casins. (139:59)

***Penstemon barbatus*** (Cav.) Roth, Beardlip Penstemon

- **Drug**—Navajo, Ramah *Analgesic* Decoction of root taken for menstrual pain and stomachache. *Burn Dressing* Cold infusion or powdered plant applied to burns. *Cough Medicine* Decoction of plant taken for cough. *Dermatological Aid* Poultice of root applied to swellings, gun wounds, and arrow wounds, a “life medicine.” *Gastrointestinal Aid* Simple or compound decoction of root taken for stomachache. *Gynecological Aid* Honey sucked from flower by pregnant woman to keep baby small for easy labor. Simple or compound decoction of root taken for menstrual pain. *Panacea* Decoction of plant taken for internal injuries, a “life medicine.” Poultice of root applied to gun wounds, arrow wounds, and swellings, a “life medicine.” *Veterinary Aid* Poultice of plant applied to sheep for fractured legs. (191:44)

***Penstemon barbatus ssp. torreyi*** (Benth.) Keck, Torrey’s Penstemon

- **Drug**—Apache, White Mountain *Witchcraft Medicine* Plant used as a magic medicine. (as *Penstemon torreyi* 136:159) Navajo *Diuretic* Infusion of plants taken as a diuretic. (as *Penstemon torreyi* 55:77) Tewa *Dermatological Aid* Plant used as a dressing for sores. (as *Penstemon torreyi* 138:58) Zuni *Hunting Medicine* Chewed root rubbed over the rabbit stick to insure success in the hunt.<sup>54</sup> (as *Penstemon torreyi* 166:95)

- **Other**—Keres, Western *Decorations* Flowers used for bouquets and decorations in dances. (as *Penstemon torreyi* 171:58) Zuni *Ceremonial Items* Chewed root rubbed over the rabbit stick to insure success in the hunt.<sup>54</sup> (as *Penstemon torreyi* 166:95)

***Penstemon centranthifolius*** Benth., Scarlet Bugler

- **Drug**—Costanoan *Dermatological Aid* and *Disinfectant* Poultice of plant applied to deep, infected sores. (as *Penstemon centranthifolius* 21:15)
- **Food**—Diegueño *Unspecified* Flowers sucked for the good taste. (88:219)
- **Other**—Cahuilla *Decorations* Used as decorations at funerals or church affairs. (15:99)

***Penstemon confertus*** Dougl. ex Lindl., Yellow Penstemon

- **Drug**—Thompson *Cathartic* Decoction of root taken as a purgative. (as *Penstemon confertus* 164:467) Decoction used as a beverage, but if too strong acted as a purgative. (as *Penstemon confertus* 164:493) *Dermatological Aid* Toasted, powdered stems and leaves sprinkled on sores, cuts, and wounds. (as *Penstemon confertus* 164:473) *Gastrointestinal Aid* Decoction of outer bark taken for stomach troubles. (as *Penstemon confertus* 164:467)
- **Food**—Thompson *Beverage* Dried stems and leaves boiled for a short time and drunk as a tea. (as *Penstemon confertus* 164:493)
- **Dye**—Okanagan-Colville *Blue* Flowers boiled and rubbed on arrows and other items to give them a blue, indelible coloring. (188:139)

***Penstemon deustus*** Dougl. ex Lindl., Scabland Penstemon

- **Drug**—Paiute *Dermatological Aid* Poultice of smashed leaves applied to sores. (104:196) Poultice of mashed, fresh leaves applied to boils, mosquito bites, tick bites, and open sores. (111:109) Poultice of green leaves or leaf powder applied to various skin problems. Poultice of green or dried plant applied for swellings. *Eye Medicine* Decoction of plant used as an eyewash. *Gastrointestinal Aid* and *Pediatric Aid* Decoction of plant taken for stomachaches, especially children’s. (180:112, 113) Paiute, Northern *Dermatological Aid* Poultice of dried, ground leaves and stalks applied to chapped and cracked skin. (59:129) Shoshoni *Analgesic* Decoction of plants used as a hot bath for sore feet and swollen legs and veins. Decoction of plants taken for colds and rheumatic aches. *Antirheumatic (Internal)* Decoction of whole plant taken for rheumatic aches. *Cold Remedy* Decoction of whole plant taken for colds. (180:112, 113) *Dermatological Aid* Powdered root used for sores. (as *Penstemon deustus* 118:44) Poultice of green leaves or leaf powder applied to various skin problems. *Disinfectant* Decoction of stems and leaves dropped into the ear for ear infections. *Ear Medicine* Strong decoction of stems and leaves dropped into ear for ear infection. *Eye Medicine* Decoction of plant used as an eyewash. *Gastrointestinal Aid* Decoction of plant taken for stomachaches, especially children’s. *Orthopedic Aid* Decoction of plants used as a hot bath for sore feet and swollen legs and

veins. *Pediatric Aid* Decoction of plant taken for stomachaches, especially children's. (180:112, 113) *Venereal Aid* Juice of mashed, raw leaves used as wash for venereal disease. (as *Penstemon deustus* 118:47) Compound infusion of plant used as a wash for gonorrheal sores. Plant used in various ways both internally and externally for venereal disease. (180:112, 113)

***Penstemon eatonii*** Gray, Eaton's Penstemon

- **Drug**—Navajo, Kayenta *Dermatological Aid* Plant used for spider bites. *Disinfectant* Plant used as a fumigant and Lightning infection emetic. *Emetic* Plant used as a Lightning infection emetic. *Gastrointestinal Aid* Plant used for stomach troubles. *Hemostat* Plant used as a hemostatic. *Orthopedic Aid* Plant used for backache. *Snakebite Remedy* Poultice of plant applied to snakebites. *Veterinary Aid* Plant used for livestock with colic. (205:42) **Shoshoni Analgesic** Decoction of whole plant used as a wash for pain and healing of burns. *Burn Dressing* Decoction of whole plant used as a wash for pain and healing of burns. (180:114)
- **Other**—Hopi *Ceremonial Items* Plant, associated with east direction, used in the Po-wa-mu ceremony. *Season Indicator* Flowers used to indicate when watermelon planting was over. (42:341)

***Penstemon fendleri*** Torr. & Gray, Fendler's Penstemon

- **Drug**—Navajo, Ramah *Dermatological Aid* Plant used for arrow or gunshot wounds. (191:44)

***Penstemon fruticosus*** (Pursh) Greene, Bush Penstemon

- **Drug**—Iroquois *Emetic* Compound decoction of plants taken as an emetic to cure a love medicine. *Gynecological Aid* Compound decoction used as wash by women who are bothered by milk flow. *Love Medicine* Compound decoction of plants taken as an emetic to cure a love medicine. (as *P. pubescens* 87:434) **Okanagan-Colville Analgesic** Infusion of plant tops taken for headaches. *Cold Remedy* Infusion of plant tops taken for colds. *Dermatological Aid* Infusion of plant tops used for sore and itchy scalp and to bathe the skin for acne and pimples. *Gastrointestinal Aid* Infusion of plant tops taken for internal disorders. *Misc. Disease Remedy* Infusion of plant tops taken for flu. *Toothache Remedy* Raw roots placed on the tooth for severe toothaches. *Veterinary Aid* Infusion of plant tops used on animals for skin problems. (188:139) **Salish Unspecified** Decoction of plants used as a medicine. (as *Penstemon douglassii* 178:294) **Shu-swab Urinary Aid** Plant used for the bladder. (123:69) **Thompson Antirheumatic (External)** Whole plant used to make bathing water for rheumatism. Decoction of plant used as a wash for arthritis or as a bath for any kind of aches and sores. (187:286) *Eye Medicine* Infusion of fresh plant used as a wash for sore eyes. (as *Penstemon douglassii* 164:468) Infusion of plant used as an eyewash. The informant used the infusion as an eyewash after she had gotten glass splinters in her eye. Decoction of leaves used as an eyewash for sore, red eyes. *Gastrointestinal Aid* Decoction of plant taken for ulcers and "to clean you out." (187:286) *Kidney Aid* Decoction of stems, flowers, and leaves taken for kidney trouble. *Orthopedic Aid* Decoction of stems, flowers, and leaves taken for sore back. (as *Penstemon douglasii* 164:468) Decoction of plant with other "weeds" used as a poultice for broken bones. *Veterinary Aid* Decoction of plant used on horses' legs. The decoction was used to wash a horse's leg, and after just a couple of days the horse was able to walk again. (187:286)

- **Food**—Thompson *Forage* Plant frequented by bees and hummingbirds for the nectar. *Spice* Plant used in pit cooking nodding onions. (187:286)
- **Fiber**—Okanagan-Colville *Clothing* Mashed leaves placed inside moccasins for insoles. (188:139)
- **Dye**—Thompson *Unspecified* Plant used in making a dye for basket designs. (187:286)
- **Other**—Thompson *Decorations* Plant used as a yellow-flowered garden shrub frequented by hummingbirds. (187:286)

***Penstemon fruticosus* var. *scouleri*** (Lindl.) Cronq., Littleleaf Bush Penstemon

- **Drug**—Okanagan *Eye Medicine* Decoction of stems, flowers, and leaves used as a wash for inflamed eyes. *Kidney Aid* Decoction of stems, flowers, and leaves taken for kidney troubles. *Orthopedic Aid* Decoction of stems, flowers, and leaves taken for sore back. **Thompson Eye Medicine** Decoction of stems, flowers, and leaves used as a wash for inflamed eyes. *Kidney Aid* Decoction of stems, flowers, and leaves taken for kidney troubles. *Orthopedic Aid* Decoction of stems, flowers, and leaves taken for sore back. (as *Penstemon scouleri* 125:41)

***Penstemon gracilis*** Nutt., Lilac Penstemon

- **Other**—Lakota *Protection* Roots used against snakebite. (139:59)

***Penstemon grandiflorus*** Nutt., Large Beardtongue

- **Drug**—Dakota *Analgesic* Decoction of roots used for chest pains. (as *Penstemon grandiflorus* 69:363) **Kiowa Gastrointestinal Aid** Decoction of roots taken for stomachaches. (192:51) **Pawnee Febrifuge** Decoction of leaves taken for chills and fever. (as *Penstemon grandiflorus* 70:114)

***Penstemon jamesii*** Benth., James's Beardtongue

- **Drug**—Navajo, Kayenta *Emetic* and *Pediatric Aid* Plant used as an emetic and lotion to purify a newborn infant before nursing. (205:43) **Navajo, Ramah Analgesic** Cold, compound infusion of plant taken for headache caused by hunting. *Ceremonial Medicine* Plant used ceremonially for headache and sore throat. *Throat Aid* Cold infusion taken and used as lotion for sore throat. (191:44)

***Penstemon laetus*** Gray, Mountain Blue Penstemon

- **Drug**—Karak *Psychological Aid* Infusion of plant taken and used as a steam bath by grieving person. (as *Penstemon laetus* 148:389)

***Penstemon laevigatus*** Ait., Eastern Smooth Beardtongue

- **Drug**—Cherokee *Gastrointestinal Aid* Infusion taken for cramps. (80:25)

***Penstemon linarioides* ssp. *coloradoensis*** (A. Nels.) Keck, Colorado Penstemon

- **Drug**—Navajo, Ramah *Gynecological Aid* Decoction of plant taken early in pregnancy to insure birth of female child. Decoction of plant taken to facilitate labor and delivery of placenta. (191:44)

***Penstemon pachyphyllus*** Gray ex Rydb., Thicket Beardtongue

- **Other**—Havasupai *Hunting & Fishing Item* Leaves folded lengthwise and place in the mouth to produce a baby deer sound while hunting. (197:241)

***Penstemon palmeri*** Gray, Palmer's Penstemon

- **Drug**—Navajo, Kayenta *Snakebite Remedy* Poultice of plant applied to snakebite sores. (205:43)

***Penstemon pruinus*** Dougl. ex Lindl., Chilean Beardtongue

- **Dye**—Okanagan-Colville *Blue Flowers* boiled and rubbed on arrows and other items to give them a blue, indelible coloring. (188:139)

***Penstemon richardsonii*** Dougl. ex Lindl., Cutleaf Beardtongue

- **Drug**—Okanagan-Colville *Misc. Disease Remedy* Infusion of stalks with leaves and flowers taken for typhoid fever. (188:139) **Paiute** *Dermatological Aid* Poultice of crushed leaves applied to sores. (111:109)

***Penstemon rostriflorus*** Kellogg, Bridge Penstemon

- **Drug**—Kawaiisu *Orthopedic Aid* Poultice of mashed roots applied to swollen limbs. (as *P. bridgesii* 206:47)

***Penstemon* sp.**, Penstemon

- **Drug**—Creek *Tuberculosis Remedy* Infusion of root taken for colds, coughs, consumption, and whooping cough. **Natchez** *Cold Remedy* Infusion of root taken for colds. *Cough Medicine* Infusion of root taken for coughs. *Pulmonary Aid* Infusion of root taken for consumption and whooping cough. (172:667) **Navajo** *Snakebite Remedy* Infusion taken and poultice of pounded leaves applied to rattlesnake bites. (55:77) **Paiute** *Toothache Remedy* Chewed root inserted into the tooth cavity for pain. (180:114, 115) **Thompson** *Eye Medicine* Infusion of plants used as a wash for sore eyes. *Kidney Aid* Decoction of plants taken for kidney trouble. *Orthopedic Aid* Decoction of plants taken for sore back. (164:465)
- **Food**—Navajo *Beverage* Used to make tea. (55:77) Used to make beverages. *Forage* Plant browsed by animals. (90:162)

***Penstemon utahensis*** Eastw., Utah Penstemon

- **Other**—Hopi *Ceremonial Items* Plant, associated with east direction, used in the Po-wa-mu ceremony. *Decorations* Flowers used for personal decoration. *Season Indicator* Flowers used to indicate when watermelon planting was over. (42:342)

***Penstemon virgatus*** Gray, Upright Blue Beardtongue

- **Drug**—Navajo, Ramah *Panacea* Whole plant or root used as "life medicine." (191:45)

***Pentachaeta***, Asteraceae***Pentachaeta aurea*** Nutt., Golden Chaetopappa

- **Other**—Cahuilla *Decorations* Pollen used as a cosmetic for women. (as *Chaetopappa aurea* 15:52)

***Pentagrama***, Pteridaceae, fern***Pentagrama triangularis*** (Kaulfuss) Yatskievych, Windham & Wollenweber **ssp. *triangularis***, Western Goldfern

- **Drug**—Karak *Analgesic* and *Gynecological Aid* Plant used to mitigate the afterpains of childbirth. (as *Gymnogramme triangularis* 148:377) **Miwok** *Toothache Remedy* Chewed for toothache. (as *Gymnogramma triangularis* 12:170)
- **Other**—Yurok *Designs* Spores used by children to make a design on their hands. (as *Pityrogramma triangularis* 6:45)

***Pentaphylloides***, Rosaceae***Pentaphylloides floribunda*** (Pursh) Á. Löve, Shrubby Cinquefoil

- **Drug**—Cheyenne *Ceremonial Medicine* Dried, powdered leaves rubbed over hands, arms, and body for Contrary dance. (as *Dasiphora fruticosa* 76:176) *Other* Plant used as a medicine against an enemy. *Poison* Plant considered poisonous. (as *Potentilla fruticosa* 83:35) **Tanana, Upper** *Gynecological Aid* Branches placed under the mattress to lessen first menstruation and number of years of menstruation. (as *Potentilla fruticosa* 102:8)
- **Food**—Blackfoot *Spice* Leaves mixed with dried meat as a deodorant and spice. (as *Potentilla fruticosa* 86:104) **Eskimo, Alaska** *Beverage* Dried leaves used to make tea. (as *Potentilla fruticosa* 4:715) **Eskimo, Arctic** *Beverage* Leaves dried and used as a substitute for tea. (as *Potentilla fruticosa* 128:31)
- **Fiber**—Blackfoot *Mats, Rugs & Bedding* Leaves used to fill pillows. (as *Potentilla fruticosa* 86:119)
- **Other**—Blackfoot *Fuel* Dry, flaky bark used as tinder when starting a fire with twirling sticks. (as *Potentilla fruticosa* 97:39) **Cheyenne** *Protection* Powdered leaves or infusion rubbed over body to protect hands from hot soup during Contrary dance. (as *Dasiphora fruticosa* 76:176) **Jemez** *Ceremonial Items* Yellow flowers used for the summer dances. (as *Dasiphora fruticosa* 44:22)

***Penthorum***, Saxifragaceae***Penthorum sedoides*** L., Ditch Stonecrop

- **Drug**—Meskwaki *Cough Medicine* Seeds used to make a cough syrup. (152:219)
- **Food**—Cherokee *Vegetable* Leaves used as a potherb. (126:50)

***Peperomia***, Piperaceae***Peperomia* sp.**, Ala-ala-waionui-pehu

- **Drug**—Hawaiian *Gynecological Aid* Whole plant with other ingredients and coconut milk taken by women with sexual organ afflictions. *Laxative* Buds chewed by the mother and given to the newborn infant as a laxative. *Other* Stems and other ingredients pounded and the resulting liquid taken for wasting away of the body. *Pediatric Aid* Buds chewed by the mother and given to the newborn infant as a laxative. *Pulmonary Aid* Leaves with other ingredients and water taken for pulmonary diseases. (2:13) *Respiratory Aid* Buds and other plants pounded, the resulting liquid heated and taken for asthma. (2:57) *Strengtheners* Stems and other ingredients taken for general debility. Stems and other ingredients pounded and the resulting liquid taken for general weakness. (2:13)

***Perezia***, Asteraceae***Perezia* sp.**

- **Drug**—Yavapai *Dermatological Aid* and *Pediatric Aid* Cotton-like material at root base placed on baby's umbilicus. (65:261)

***Pericome***, Asteraceae***Pericome caudata*** Gray, Mountain Leaf-tail

- **Drug**—Navajo, Ramah *Analgesic* Decoction of root taken for general body pain. Fresh leaves "smelled" for headache. *Ceremonial Medicine* Cold infusion of leaves used as a ceremonial chant lotion and emetic. *Cough Medicine* Decoction of root taken for cough. *Dermatological Aid* Compound containing stems used as shampoo to pre-

vent falling hair. *Diaphoretic* Decoction of root used as a sweat bath medicine. *Emetic* Cold infusion of leaves used as a ceremonial chant lotion and emetic. *Febrifuge* Cold infusion of leaves taken for fever. *Gynecological Aid* Decoction of root taken to facilitate delivery of placenta. *Misc. Disease Remedy* Cold infusion of leaves taken for influenza. *Toothache Remedy* Poultice of heated root applied for toothache. *Witchcraft Medicine* Decoction of root used for protection from witches. (191:52)

## *Perideridia*, Apiaceae

*Perideridia bolanderi* (Gray) A. Nels. & J. F. Macbr., Bolander's Yampah

- **Food**—**Atsugewi** *Bread & Cake* Stored, dried roots pounded and made into bread. *Dried Food* Dried roots stored for winter use. Stored, dried roots pounded and made into bread or dried and stored for later use. *Soup* Stored, dried roots pounded and made into soup. *Unspecified* Fresh, ground roots used for food. (as *Pteridendia bolanderi* 61:138) **Miwok** *Substitution Food* Served as substitution food when acorn supply was reduced. *Unspecified* Eaten raw or cooked in baskets by stone boiling, becoming mealy like potatoes. (as *Eulophus bolanderi* 12:157)

*Perideridia gairdneri* (Hook. & Arn.) Mathias, Gairdner's Yampah

- **Drug**—**Blackfoot** *Antidiarrheal* and *Antiemetic* Infusion of roots taken to counteract cathartic and emetic effects of another infusion. (86:67) *Breast Treatment* Infusion of roots used to massage sore breasts with warm stones. (86:77) *Cough Medicine* Infusion of roots or roots chewed for coughs. Root smudge smoke inhaled for nagging coughs. (86:72) *Dermatological Aid* Infusion of roots applied to sores and wounds. (86:77) *Diuretic* Roots eaten in quantity as a diuretic. (86:67) Infusion of roots taken as a diuretic. (86:70) *Laxative* Roots eaten in quantity as a mild laxative. (86:67) *Panacea* Chewed roots sprayed onto affected part by the diviner. A diviner, like Dog Child, would find the root mysteriously during the rituals. While he sang, often with a drum, he would dig the ground with a special bear claw, coming up with the root every time and anywhere. (86:83) *Respiratory Aid* Infusion of roots used as a nostril wash for catarrh. (86:72) *Strengtheners* Roots chewed by buffalo runners to extend their endurance. (86:116) *Throat Aid* Infusion of roots or roots chewed for sore throats. (86:72) *Veterinary Aid* Infusion of roots given to horses as a diuretic. Roots chewed by lazy horses to enliven them. Infusion of roots used for horses with nasal gleet. (86:89) **Cheyenne** *Unspecified* Roots used as an ingredient in medicines. (83:41)
- **Food**—**Blackfoot** *Snack Food* Roots eaten as snacks by children while playing on the prairie. *Soup* Roots stored for use in soups. *Staple* Root considered a staple. *Unspecified* Roots eaten fresh. (86:103) **Cheyenne** *Dried Food* Roots scraped, dried, and stored for winter use. *Porridge* Roots cooked, dried, pulverized, and eaten as mush. (82:65) *Unspecified* Species used for food. (83:45) **Flathead** *Bread & Cake* Roots smashed, formed into small, round cakes, sun dried, and stored for winter use. **Montana Indian** *Unspecified* Roots eaten raw or boiled. (82:65) **Okanagan-Colville** *Dried Food* Roots eaten raw, boiled, or cooked, sliced, dried, and mixed with dried, powdered deer meat. *Pie & Pudding* Roots mixed with flour or black tree lichen into a pudding. *Unspecified* Roots boiled alone or with saskatoon

berries. *Winter Use Food* Roots stored in pits for future use. (as *P. palmatus* 149:329) **Tlingit** *Dermatological Aid* Compound containing plant used for sores. (as *Nardosmia palmata* 107:284) **Tolowa** *Antirheumatic (External)* Leaves placed in hot water and used for arthritic joints. (as *P. palmatum* 6:42)
- **Food**—**Concow** *Unspecified* Leaves and young stems used for food. (as *P. palmata* 41:395) **Nitinaht** *Forage* Plants eaten by elk. (186:98) **Sanpoil & Nespelem** *Unspecified* Petioles eaten raw after removal of integumental fibers. (as *Pedasites speciosa* 131:103)
  - **Other**—**Quinault** *Cooking Tools* Leaves used to cover berries cooking in pits. (as *Petasites speciosus* 79:49)

**Petasites sagittatus** (Banks ex Pursh) Gray, Arrowleaf Sweet Colts-foot

- **Drug**—**Cree, Woodlands** *Dermatological Aid* Poultice of leaves applied to worms eating the flesh and itchy skin. (109:48)

## **Peteria**, Fabaceae

**Peteria scoparia** Gray, Rush Peteria

- **Drug**—**Navajo, Ramah** *Ceremonial Medicine* Cold infusion of root used by family to protect hogan and livestock. *Dermatological Aid* Plant used as a lotion for injury inflicted by porcupine. *Misc. Disease Remedy* Compound infusion of tops taken for influenza. *Veterinary Aid* Smoke from dried tops inhaled by sheep for cough. *Witchcraft Medicine* Compound infusion of tops taken for protection from witches. (191:33)

## **Petradoria**, Asteraceae

**Petradoria pumila** (Nutt.) Greene, Grassy Rockgoldenrod

- **Dye**—**Navajo** *Yellow* Flowering tops mixed with wild rhubarb and used as a yellow dye. (as *Solidago pumila* 55:89)

**Petradoria pumila** (Nutt.) Greene **ssp. pumila**, Grassy Rockgoldenrod

- **Drug**—**Hopi** *Analgesic* Plant considered a good remedy for breast pain. (as *Solidago petradoria* 200:98) *Breast Treatment* Plant used for breast pain and to dry up flow of milk. (as *Solidago petradoria* 42:361) *Gynecological Aid* Plant used to decrease milk flow and ease breast pain. (as *Solidago petradoria* 200:36, 98) **Navajo, Kayenta** *Dermatological Aid* Plant used for ant bites. (as *Solidago petradoria* 205:50) **Navajo, Ramah** *Cathartic* Strong decoction taken as a cathartic. *Ceremonial Medicine* Plant used as a ceremonial emetic. *Dermatological Aid* Cold infusion used as a lotion for injuries. *Emetic* Plant used as a ceremonial emetic. (as *Solidago petradoria* 191:53)
- **Other**—**Hopi** *Decorations* Used as prayer stick decorations. (as *Solidago petradoria* 200:96)

## **Petrophyton**, Rosaceae

**Petrophyton caespitosum** (Nutt.) Rydb. **var. caespitosum**,

Rocky Mountain Rockspirea

- **Drug**—**Gosiute** *Burn Dressing* Poultice of boiled roots applied to burns. (as *Spiraea caespitosa* 39:349) Boiled roots used as a salve for burns. *Gastrointestinal Aid* Leaves used as a bowel medicine. (as *Spiraea caespitosa* 39:382) **Navajo, Kayenta** *Ceremonial Medicine* Plant used as a charm or prayer in the "Pleiades rite." *Narcotic* Plant used as a narcotic. (as *Spiraea caespitosa* 205:27)

## **Petroselinum**, Apiaceae

**Petroselinum crispum** (P. Mill.) Nyman ex A. W. Hill, Parsley

- **Drug**—**Cherokee** *Abortifacient* Infusion of top and root taken as an abortive for "female obstructions." *Gynecological Aid* Infusion taken by "lying-in women whose discharges are too scant." *Kidney Aid* Infusion of top and root taken for kidneys and "dropsy." *Urinary Aid* Infusion of top and root taken for the bladder. (80:47) **Micmac** *Urinary Aid* Herb used for "cold in the bladder." (as *P. sativum* 40:58)

## **Peucedanum**, Apiaceae

**Peucedanum sandwicense** Hbd., Makou

- **Drug**—**Hawaiian** *Laxative* and *Pediatric Aid* Bark eaten by children and adults as a mild laxative. *Reproductive Aid* Bark taken by expectant mother for the healthy effect on the growing life. (2:71)

**Peucedanum sp.**, Wild Celery

- **Food**—**Coeur d'Alene** *Unspecified* Growing stalks used for food. (178:91) **Okanagon** *Staple* Growing stalks used as a principal food. (178:239) **Thompson** *Unspecified* Roots and stalks eaten. (164:482) **Thompson, Upper (Nicola Band)** *Unspecified* Roots and stems eaten. (164:479)

**Pezizaceae**, see *Peziza*

## **Peziza**, Pezizaceae, fungus

**Peziza aurantia**, Orange Peel Mushroom

- **Food**—**Pomo, Kashaya** *Vegetable* Cooked on hot stones, coals, or eaten fresh. (72:131)

## **Phacelia**, Hydrophyllaceae

**Phacelia californica** Cham., California Scorpionweed

- **Drug**—**Costanoan** *Febrifuge* Decoction of root used for fevers. (21:13) **Kawaiisu** *Cold Remedy* Infusion of roots taken for colds. *Cough Medicine* Infusion of roots taken for coughs. *Gastrointestinal Aid* Infusion of roots taken for stomach problems. *Stimulant* Infusion of roots taken when weak and not feeling good. (206:48) **Pomo, Kashaya** *Dermatological Aid* Fresh, crushed leaf juice rubbed on cold sores and impetigo. (72:48)

**Phacelia crenulata** Torr. ex S. Wats., Cleftleaf Wildheliotrope

- **Drug**—**Hopi** *Veterinary Aid* Plant used for injury in animals, especially horses. (42:344)

**Phacelia crenulata var. corrugata** (A. Nels.) Brand, Cleftleaf Wildheliotrope

- **Drug**—**Hopi** Plant used for injury in animals, especially horses. (as *P. corrugata* 42:343) **Keres, Western** *Antirheumatic (External)* Infusion of root used as a rub for swellings. *Throat Aid* Infusion of plant used for sore throat. (as *P. corrugata* 171:59)

***Phacelia distans*** Benth., Distant Phacelia

- **Food**—Kawaiisu *Vegetable* Leaves steam cooked and eaten as greens. (206:48)

***Phacelia dubia*** (L.) Trel., Smallflower Scorpionweed

- **Food**—Cherokee *Unspecified* Young growth boiled, fried, and eaten. (204:252) *Vegetable* Leaves cooked and eaten as greens. (80:49)

***Phacelia hastata*** Dougl. ex Lehm. **var. *hastata***, Silverleaf Phacelia

- **Drug**—Thompson *Gynecological Aid* Decoction of plant taken for difficult menstruation. (as *P. leucophylla* 164:470)

***Phacelia heterophylla*** Pursh, Varileaf Phacelia

- **Drug**—Miwok *Dermatological Aid* Poultice of pulverized, dried plant put in fresh wounds. (12:171, 172)
- **Food**—Navajo, Kayenta *Vegetable* Used for greens in foods. (205:39)

***Phacelia linearis*** (Pursh) Holz., Threadleaf Phacelia

- **Drug**—Shuswap *Cold Remedy* Infusion of plant taken for a bad cold. (123:64) **Thompson** *Unspecified* Decoction of plant used medicinally. (as *P. menziesii* 164:468)

***Phacelia neomexicana*** Thurb. ex Torr., New Mexico Scorpionweed

- **Drug**—Zuni *Dermatological Aid* Powdered root mixed with water and used for rashes. (27:376)

***Phacelia purshii*** Buckl., Miami Mist

- **Drug**—Cherokee *Antirheumatic (External)* Poultice of plant used for swollen joints. (80:49)

***Phacelia ramosissima*** Dougl. ex Lehm., Branching Phacelia

- **Drug**—Kawaiisu *Emetic* Decoction of roots taken to cause vomiting. *Gastrointestinal Aid* Decoction of roots taken to clear the “bad stomach.” *Venereal Aid* Decoction of roots taken for gonorrhea. (206:48)
- **Food**—Kawaiisu *Vegetable* Leaves steam cooked and eaten as greens. (206:48) Luiseño *Vegetable* Plant used for greens. (155:230)

***Phacelia* sp.**, Wildheliotrope

- **Food**—Pima, Gila River *Unspecified* Leaves boiled and eaten. (133:7) *Vegetable* Leaves boiled or boiled, strained, refried, and eaten as greens.<sup>11</sup> (133:5)

***Phalaris***, Poaceae***Phalaris arundinacea*** L., Reed Canarygrass

- **Other**—Okanagan-Colville *Ceremonial Items* Used to make peaked hats suitable for wearing by Indian doctors. *Cooking Tools* Used to make eating mats and mats for drying roots and berries. *Hunting & Fishing Item* Used to make fishing weirs. (188:57)

***Phalaris caroliniana*** Walt., Carolina Canarygrass

- **Food**—Pima, Gila River *Unspecified* Seeds parched and eaten. (133:7)

***Phalaris minor*** Retz., Littleseed Canarygrass

- **Food**—Pima, Gila River *Unspecified* Seeds parched and eaten. (133:7)

***Phaseolus***, Fabaceae***Phaseolus acutifolius*** Gray, Tepary Bean

- **Drug**—Papago *Toothache Remedy* Plant bitten and held between teeth for toothache. (34:65)

- **Food**—Havasupai *Soup* Beans parched, ground, and added to hot water to make a soup. *Vegetable* Beans cooked with fresh corn, cooked in hot ashes under a fire, or boiled. *Winter Use Food* Beans stored in granaries or in frame houses for later use. (197:227) **Sia** *Vegetable* Cultivated beans used for food. (199:106)
- **Other**—Keresan *Ceremonial Items* Beans made into a flour by the Koshairi and used for ritual purposes. Prayer meal ground from beans was exceedingly unusual; it was almost always made from corn. (198:558)

***Phaseolus acutifolius* var. *latifolius*** Freeman, Tepary Bean

- **Food**—Cocopa *Staple* Parched, ground, boiled beans and unparched maize made into a meal. *Winter Use Food* Beans stored in pots for later use. (64:264) **Kamia** *Unspecified* Species used for food. (62:21) **Papago** *Dried Food* Beans threshed, dried on the ground or roofs, stored, and used for food. *Staple* Used as a staple crop. (34:32)

***Phaseolus angustissimus*** Gray, Slimleaf Bean

- **Drug**—Zuni *Pediatric Aid* and *Strengtheners* Crushed leaves, blossoms, and powdered root rubbed on a child's body as a strengthener.<sup>55</sup> (166:85)

***Phaseolus coccineus*** L., Scarlet Runner

- **Food**—Iroquois *Bread & Cake* Seeds cooked, mixed with corn bread paste, and again cooked in the making of the bread. *Dried Food* Seedpods boiled, dried in evaporating baskets or on flat boards, and stored away in bags or barrels. *Soup* Seedpods cooked and used to make soup. Beans boiled with green sweet corn, meat, and seasoned with salt, pepper, and butter or fat. Dried seedpods soaked, boiled, seasoning and butter added, and eaten as a soup. - **Food**—*Kawaiisu Sweetener* Stems dried and beaten with sticks to remove the sugar crystals. (206:49) **Klamath Unspecified** Seeds used for food. (as *P. phragmites* 45:91) **Montana Indian Unspecified** Seeds used for food. (as *P. communis* 19:17) **Paiute Sweetener** Dried sap made into balls, softened by fire, and eaten like sugar. (as *P. communis* 167:245) **Paiute, Northern Candy Sap** crystallized, gathered, and eaten like candy. (as *P. communis* 59:53) **Thompson Forage** Used as a forage plant only in absence of other foods. (as *P. communis* 164:516) **Yuma Unspecified Honeydew** obtained from grass. (as *P. communis* 37:218)
- **Fiber**—*Havasupai Mats, Rugs & Bedding* Stems used to make mats for drying yucca fruit pulp, baked mescal, peaches, or figs. (as *P. communis* 197:209) **Hopi Building Material** Used for roofing, tubular pipes, pipestems, and weaving rods. (as *P. communis* 200:66) **Klamath Basketry** Stems used for surface finish of baskets. (as *P. phragmites* 45:91) **Montana Indian Basketry** Hard, hollow culms used for pipestems, arrow shafts, and in making baskets. (as *P. communis* 19:17) **Okanagon Basketry** Extensively used for basketry. *Mats, Rugs & Bedding* Extensively used to make mats. (as *P. communis* 125:39) **Pima Mats, Rugs & Bedding** Used to make mats. (as *P. communis* 47:75) **Seri Canoe Material** Canes used to make rafts. (as *P. communis* 50:134) **Thompson Basketry** Extensively used for basketry. (as *P. communis* 125:39) Stems used commonly as basketry material. Reed used for weaving baskets. (as *P. communis* 164:497) Stems used in basket imbrication. (187:142) *Mats, Rugs & Bedding* Extensively used to make mats. (as *P. communis* 125:39) Stems twined together to make food drying mats similar to those of tule stems. (187:142)
- **Other**—*Apache, White Mountain Hunting & Fishing Item* Reeds used as an arrow shaft for hunting small birds with arrows. *Smoke Plant* Reeds filled with tobacco and used as a cigarette. *Smoking Tools* Reeds used to make pipestems. (as *P. communis* 136:159) **Cahuilla Musical Instrument** Used to make a flute, usually played by men. (as *P. communis* var. *berlandieri* 15:101) **Chippewa Cooking Tools** Used to weave frames for drying berries. (as *P. communis* 53:378) **Cocopa Smoking Tools** Tubular internodes used to smoke tobacco. (as *P. communis* 37:122) **Havasupai Hunting & Fishing Item** Stems used for arrow shafts. *Smoking Tools* Stems used to make pipestems. (as *P. communis* 197:209) **Hopi Ceremonial Items** Associated ceremonially with the bow and arrow. (as *P. communis* 200:66) **Hualapai Hunting & Fishing Item** Shoots used to make arrow shafts. *Musical Instrument* Shoots used to make flutes. (as *P. communis* 195:7) **Kawaiisu Hunting & Fishing Item** Straight, rigid, hollow, bamboo-like stems used in the making of arrows. *Musical Instrument* Reed arrows used to play the musical bow. Stems used as a clapper to maintain the rhythm in singing and dancing. *Smoking Tools* Straight, rigid, hollow, bamboo-like stems used in the making of pipes. *Tools* Straight, rigid, hollow, bamboo-like stems used in the making of fire drills. Stem split and the sharp edge used at birth to cut the navel cord. *Toys & Games* Small stem sections used in the dice game and ring and pin game. (206:49) **Keres, Western Unspecified** Plant known and named but no use was specified. (as *P. communis* 171:59) **Klamath Hunting & Fishing Item** Stems used for arrow shafts. (as *P. phragmites* 45:92) **Maricopa Smoking Tools** Tubular internodes used to smoke tobacco. (as *P. communis* 37:122) **Montana Indian Hunting & Fishing Item** Hard, hollow culms used for arrow shafts and in making baskets. *Smoking Tools* Hard, hollow culms used for pipestems. (as *P. communis* 19:17) **Navajo Ceremonial Items** Reeds used to make prayer sticks for the Mountain Chant Ceremony. The reeds were first rubbed with a polishing stone to remove the siliceous surface in order that the paint might adhere well. The reeds were then rubbed

with finely powdered tobacco or sometimes with snakeweed. Afterwards the reed was cut into four pieces (or 10 pieces for the second ceremony). When this was finished, the sticks were colored and yucca inserted to serve as handles. The sections were then filled with some kind of tobacco. These had to be kept in order. The section growing nearest the ground was segment number 1, the next number 2, and so on. It was also important that the side of the reed growing toward the east be indicated, so the painting would be done on the side having that exposure. This made it more potent. Fifty-two prayer sticks were made for the evening of the third day of the Night Chant. Of these, four were made of sections of reed, 12 of mountain mahogany, 12 of Russian olive, 12 of sierra juniper, and 12 of cherry. The first people, according to the Navajo, were supposed to have come up to this earth on a reed. Reeds made into frames, like kite frames, and carried by dancers on last night of Mountain Chant.

*Hunting & Fishing Item* Stems used to make arrow shafts. (as *P. communis* 55:26) **Okanagon** *Decorations* Extensively used to make fringe for dresses. (as *P. communis* 125:39) **Paiute, Northern** *Hunting & Fishing Item* Stalks used to make arrow shafts. (60:75) **Papago** *Smoking Tools* Six-inch stems used as smoking tubes. (as *P. communis* 34:27) **Pima** *Musical Instrument* Used to make flutes. (as *P. communis* 47:75) **Seminole** *Tools* Stems used to make medicine tubes. (as *P. communis* 169:172) Plant used to make medicine blowing tubes. (as *P. communis* 169:495) **Tewa** *Hunting & Fishing Item* Plant used to make arrows. *Toys & Games* Plant used to make game sticks for the canute game. (as *P. phragmites* 138:66) **Thompson** *Cooking Tools* Stems twined together to make food drying mats similar to those of tule stems. (187:142) *Decorations* Extensively used to make fringe for dresses. (as *P. communis* 125:39) Whitish culms valued for the use in decoration of coiled split cedar root baskets. The culms were harvested while still green and soft, warmed over the coals of a fire, and broken at the nodes. They were then split open, flattened, and used together with dyed and undyed bitter cherry bark to create patterns on coiled cedar root baskets. (187:142) *Designs* Used to design ornamenting baskets. (as *P. communis* 164:499) *Jewelry* Reed cut in different lengths, dyed, and used interspersed with seed beads for necklaces. (as *P. communis* 164:497) **Yuma** *Smoking Tools* Tubular stalk internodes used to smoke tobacco. (as *P. communis* 37:122)

## *Phryma*, Verbenaceae

*Phryma leptostachya* L., American Lopseed

- **Drug**—Chippewa *Throat Aid* Decoction of root gargled or root chewed for sore throat. (53:342) **Ojibwa, South** *Antirheumatic (Internal)* Decoction of root taken for rheumatic leg pains. (91:201)

## *Phyla*, Verbenaceae

*Phyla cuneifolia* (Torr.) Greene, Fogfruit

- **Drug**—Navajo, Kayenta *Dermatological Aid* Poultice of plants applied to spider bites. (as *Lippia cuneifolia* 205:40)

*Phyla lanceolata* (Michx.) Greene, Lanceleaf Fogfruit

- **Drug**—Mahuna *Antirheumatic (Internal)* Plant used for rheumatism. (as *Lippia lanceolata* 140:60)

*Phyla nodiflora* (L.) Greene, Turkey Tangle Fogfruit

- **Drug**—Houma *Orthopedic Aid* and *Pediatric Aid* Decoction of plant

used as a wash to make weak, lazy babies walk. (as *Lippia nodiflora* 158:65)

## *Phyllodoce*, Ericaceae

*Phyllodoce empetriformis* (Sm.) D. Don, Pink Mountainheath

- **Drug**—Thompson *Tuberculosis Remedy* Decoction of plant taken over a period of time for tuberculosis and spitting up blood. (187:215)

*Phyllodoce* sp.

- **Drug**—Thompson *Tuberculosis Remedy* Decoction of plant taken over a period of time for tuberculosis and spitting up blood. (187:215)

## *Phyllospadix*, Zosteraceae

*Phyllospadix scouleri* Hook., Scouler's Surfgrass

- **Food**—Hesquiat *Unspecified* Leaves occasionally cooked and eaten when it had herring eggs on it. (185:58) **Makah** *Unspecified* Rhizomes chewed or eaten raw. (67:328) Roots eaten raw in the spring. (79:21)
- **Other**—Quileute *Toys & Games* Grass used by boys as arrow target practice. (79:21)

*Phyllospadix serrulatus* Rupr. ex Aschers., Toothed Surfgrass

- **Food**—Makah *Unspecified* Rhizomes chewed or eaten raw. (67:328)

*Phyllospadix* sp., Seaweed

- **Food**—Makah Species used for food. (67:205)

*Phyllospadix torreyi* S. Wats., Torrey's Surfgrass

- **Drug**—Kwakiutl *Pediatric Aid* and *Strengtheners* Leaves placed in the bottom of child's cradle to make him grow strong. (183:274)
- **Food**—Hesquiat *Dried Food* Leaves, with herring eggs on it, dried for later use. (185:58) **Makah** *Unspecified* Rhizomes chewed or eaten raw. (67:328)
- **Fiber**—Hesquiat *Basketry* Bleached leaves used to make baskets. (185:58) **Makah** *Basketry* White, sun bleached leaves used in basketry. (67:328) **Nitinaht** *Basketry* Leaves dried, split, and used in basketry. (186:89)
- **Other**—Hesquiat *Toys & Games* Dried, curly leaves used by children to make wigs. (185:58) **Nitinaht** *Hunting & Fishing Item* Leaves used to trap herring spawn. (186:89)

## *Physalis*, Solanaceae

*Physalis acutifolia* (Miers) Sandw., Sharpleaf Groundcherry

- **Food**—Pima, Gila River *Baby Food* Fruits eaten raw, primarily by children. (133:7) *Snack Food* Fruit eaten primarily by children as a snack food. (133:5)

*Physalis hederifolia* var. *fendleri* (Gray) Cronq., Fendler's Groundcherry

- **Food**—Apache, White Mountain *Fruit* Fruit eaten raw and cooked. (as *P. fendleri* 136:159) **Mohave** *Fruit* Fruits eaten fresh by children. **Yuma** *Fruit* Fruits eaten fresh by children. (as *P. fendleri* 37:207) **Zuni** *Sauce & Relish* Fruit boiled in small quantities of water, crushed, and used as a condiment. (as *P. fendleri* 166:70)

*Physalis heterophylla* Nees, Clammy Groundcherry

- **Drug**—Iroquois *Burn Dressing* Compound infusion of dried leaves

and roots used as wash for scalds and burns. *Emetic and Gastrointestinal Aid* Compound infusion of leaves and roots taken to vomit for bad stomachaches. *Venereal Aid* Compound infusion of dried leaves and roots used as wash for venereal disease. (87:430) **Lakota Dietary Aid** Three or five berries used for lack of appetite. (139:60) **Meskwaki Unspecified Root** used as a medicine. (152:247)

- **Food—Cherokee Fruit** Fruit used for food. (80:37) **Cheyenne Fruit** Ripe fruits eaten in fall. (83:39) **Dakota Dried Food** Fruits, when in sufficient quantity, dried for winter use. (70:113) *Sauce & Relish* Fruit made into a sauce. (69:362) Fruits made into a sauce for food. (70:113) *Winter Use Food* Fruit dried and stored for winter use. (69:362) **Meskwaki Fruit** Berries eaten raw. (152:264) **Omaha Dried Food** Fruits, when in sufficient quantity, dried for winter use. *Sauce & Relish* Fruits made into a sauce for food. **Pawnee Dried Food** Fruits, when in sufficient quantity, dried for winter use. *Sauce & Relish* Fruits made into a sauce for food. **Ponca Dried Food** Fruits, when in sufficient quantity, dried for winter use. *Sauce & Relish* Fruits made into a sauce for food. (70:113)

### *Physalis lanceolata* Michx., Lanceleaf Groundcherry

- **Drug—Omaha Analgesic** Decoction of root used for headache and stomach trouble. *Dermatological Aid* Root used as a dressing for wounds. *Gastrointestinal Aid* Decoction of root used for stomach trouble and headache. *Unspecified Root* used in smoke treatment for unspecified ailments. **Ponca Analgesic** Decoction of root used for headache and stomach trouble. *Dermatological Aid* Root used as a dressing for wounds. *Gastrointestinal Aid* Decoction of root used for stomach trouble and headache. *Unspecified Root* used in smoke treatment for unspecified ailments. **Winnebago Analgesic** Decoction of root used for headache and stomach trouble. *Dermatological Aid* Root used as a dressing for wounds. *Gastrointestinal Aid* Decoction of root used for stomach trouble and headache. *Unspecified Root* used in smoke treatment for unspecified ailments. (70:113)
- **Food—Dakota Unspecified** Bud clusters used in the spring for food. Firm, young, green seedpods boiled with meat in the spring. (69:363) **Navajo Fruit** Berries used for food. (90:154)
- **Other—Dakota Toys & Games** Large calyx of plant inflated by children in play and popped by striking it on the forehead or hand. (69:362)

### *Physalis longifolia* Nutt., Longleaf Groundcherry

- **Food—Keres, Western Fruit** Berries used for food. (171:59) **Pueblo Fruit** Berries eaten fresh or boiled. **San Felipe Fruit** Berries eaten fresh or boiled. (32:40) **Zuni Fruit** Berries boiled, ground in a mortar with raw onions, chile, and coriander seeds and used for food. (166:70)

### *Physalis philadelphica* Lam., Mexican Groundcherry

- **Drug—Diegueño Eye Medicine** Berries squeezed and the juice used as an eyewash. (84:28)

### *Physalis pubescens* L., Husk Tomato

- **Drug—Navajo, Ramah Panacea** Dried leaves and root used as "life medicine." (191:43)
- **Food—Mohave Fruit** Fruits eaten fresh by children. (37:207) **Navajo Fruit** Sour berries mixed with honey and eaten. *Preserves* Sour berries used to make jam. *Staple* Berries dried, ground into a flour, and

stored for winter use. (110:17) **Navajo, Ramah Fruit** Fruit eaten raw or boiled. (191:43) **Yuma Fruit** Fruits eaten fresh by children. (37:207)

### *Physalis* sp., Groundcherry

- **Food—Cherokee Fruit** Fresh fruit used for food. (126:55) **Hualapai Fruit** Berries eaten fresh from the vine. *Preserves* Berries used to make preserves. *Sauce & Relish* Berries used to make relish. (195:9) **Iroquois Bread & Cake** Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:129) **Isleta Fruit** Fresh berries eaten for food. (100:36)

### *Physalis subulata* var. *neomexicana* (Rydb.) Waterfall ex Kartsz & Gandhi, New Mexican Groundcherry

- **Food—Apache, Chiricahua & Mescalero Special Food** Fresh fruit eaten by children as a delicacy. (as *P. neomexicana* 33:45) **Keres, Western Fruit** Berries used for food. (as *P. neo-mexicana* 171:59) **Navajo Fruit** Raw fruit used for food. (as *P. neomexicana* 165:222) **Pueblo Fruit** Berries eaten fresh or boiled. (as *P. neo-mexicana* 32:39) **Tewa Fruit** Berries used for food. (as *P. neomexicana* 138:59)

### *Physalis virginiana* P. Mill., Virginia Groundcherry

- **Drug—Meskwaki Stimulant** Infusion of whole plant taken for dizziness. (152:247, 248)
- **Food—Meskwaki Fruit** Berries, touched by frost, eaten raw. (152:264)

### *Physalis viscosa* L., Starhair Groundcherry

- **Drug—Omaha Dermatological Aid** Root used to dress wounds. (as *P. viscosa* 58:584)

### *Physaria*, Brassicaceae

#### *Physaria chambersii* Rollins, Chambers's Twinpod

- **Drug—Paiute Eye Medicine** Infusion or decoction of various plant parts used as a wash for sore eyes or sties. **Shoshoni Eye Medicine** Infusion or decoction of various plant parts used as a wash for sore eyes and sties. (180:116)

#### *Physaria didymocarpa* (Hook.) Gray, Common Twinpod

- **Drug—Blackfoot Abortifacient** Infusion of plant taken in small amounts to abort. (86:61) *Analgesic* Plant chewed for cramps and stomach trouble. (114:274) *Antirheumatic (External)* Infusion of roots applied to aching parts of the body. (86:78) Strong infusion of plant used as a liniment on sprains. (86:79) Decoction of plant used for swellings. (97:35) *Dermatological Aid* Weak decoction of plant used for diaper rash. Weak decoction of leaf used on newborn's umbilical. (86:77) Infusion of plant applied to wounds to heal with less irritation. (86:84) Infusion of plant used to allay swelling. (114:274) *Dietary Aid* Decoction of plant taken slowly to gradually expand the stomach until food was eaten without pain. This decoction was used by a person who had not eaten for a long time. (86:104) *Ear Medicine* Infusion of leaves used as drops for ear infections. *Eye Medicine* Infusion of leaves used as drops for bloodshot eyes. (86:81) *Gastrointestinal Aid* Plant chewed for cramps and stomach troubles. (97:35) Plant chewed for cramps, stomach trouble, and sore throat. (114:274) Infusion of leaves taken for stomach trouble. (118:38) *Orthopedic Aid*

Strong infusion of plant used as a liniment on dislocations. (86:79) *Pediatric Aid* Weak decoction of leaf used on newborn's umbilical. (86:77) *Throat Aid* Plant chewed for sore throats. (97:35) Plant chewed for sore throat. (114:274) Infusion of leaves taken for sore throat. (118:38) *Toothache Remedy* Leaf clenched between the teeth for toothache. (86:77) Plant used as toothache medicine. (86:78) *Veterinary Aid* Infusion of plant applied as a liniment to the shoulders of work and wagon horses. (86:89)

***Physaria didymocarpa* var. *lanata*** A. Nels., Common Twinpod

• **Drug**—Blackfoot *Gastrointestinal Aid* Plant chewed for stomach troubles. *Throat Aid* Plant chewed for sore throats. (121:47)

***Physaria newberryi*** Gray, Newberry's Twinpod

• **Drug**—Hopi *Antidote* and *Ceremonial Medicine* Plant taken as an antidote after the snake dance. (56:16) Navajo *Respiratory Aid* Plant used as a snuff for catarrh. (55:49)

## ***Physocarpus*, Rosaceae**

***Physocarpus capitatus*** (Pursh) Kuntze, Pacific Ninebark

- **Drug**—Bella Coola *Emetic* Decoction of 3-foot stick taken alternately with large amounts of water as an emetic. (184:208) Green River Group *Emetic* Young shoots, peeled of bark, used as an emetic. (79:33) Hesquiat *Antidote* Decoction of bark taken as an antidote for poisoning, caused vomiting. *Antirheumatic (External)* Decoction of bark used as a wash or soaking solution for rheumatic pain. *Antirheumatic (Internal)* Decoction of bark taken for rheumatic fever. *Emetic* Decoction of bark taken as an antidote for poisoning, caused vomiting. Bark chewed and juice swallowed to induce vomiting. *Laxative* Decoction of bark taken in small doses as a laxative. (185:73) Kwakiutl *Cathartic* Root extract used as a purgative. *Emetic* Decoction of bark taken to induce vomiting. *Laxative* Decoction of bark taken for constipation. *Venereal Aid* Root extract used for locomotor ataxia. (183:289) Saanich *Laxative* Infusion of macerated roots taken as a quick laxative. (182:86)
- **Food**—Miwok *Fruit* Raw berries used for food. (12:162)
- **Dye**—Hesquiat *Brown* Bark soaked with cedar bark to darken the cedar. (185:73)
- **Other**—Hesquiat *Toys & Games* Wood used for making children's bows. (185:73) Karok *Hunting & Fishing Item* Shoots used to make arrows. (148:384) Tolowa *Toys & Games* Seeds squeezed and popped. (6:43) Wintoon *Hunting & Fishing Item* Straight stems used to make arrows. (117:264)

***Physocarpus malvaceus*** (Greene) Kuntze, Mallow Ninebark

- **Drug**—Okanagan-Colville *Hunting Medicine* Infusion of bark used to wash arrows and other hunting equipment to protect them from spells. (188:126)
- **Food**—Okanagan-Colville *Unspecified* Roots steam cooked and eaten. (188:126)
- **Other**—Okanagan-Colville *Malicious Charm* Plant used to cause other people bad luck. (188:126)

***Physocarpus opulifolius*** (L.) Maxim., Common Ninebark

- **Drug**—Bella Coola *Analgesic* and *Emetic* Decoction of inner bark taken as an emetic by persons "dizzy with pain." *Laxative* Decoction of inner bark taken as a laxative for gonorrhea. *Tuberculosis Remedy*

Decoction of inner bark taken and used as a wash for scrofulous glands in neck. *Venereal Aid* Decoction of inner bark taken and used as wash for gonorrhea. **Carrier, Southern** *Cathartic* and *Emetic* Decoction of bark taken as an emetic, a large dose fatal. (150:59) **Chippewa** *Emetic* Infusion of roots taken as an emetic. (71:132) **Iroquois** *Gynecological Aid* Poultice used when women swell after copulation; caused by bad medicine. (87:349) **Menominee** *Gynecological Aid* Bark used to make a drink for female maladies, to cleanse system and enhance fertility. (151:49)

## ***Physostegia*, Lamiaceae**

***Physostegia parviflora*** Nutt. ex Gray, Western False Dragonhead

- **Drug**—Meskwaki *Cold Remedy* Infusion of leaves taken for bad cold. (152:226)

**Phytolaccaceae**, see *Phytolacca*

## ***Phytolacca*, Phytolaccaceae**

***Phytolacca americana*** L., American Pokeweed

- **Drug**—Cherokee *Antirheumatic (Internal)* Infusion of berry taken for arthritis. Roots and berries or berry wine used for rheumatism. *Blood Medicine* Cooked greens eaten or infusion of root taken to build the blood. *Dermatological Aid* Poultice used for ulcers and swellings and infusion of root used for eczema. Salve used on "ulcerous sores" and dried, crushed roots sprinkled on old sores. *Febrifuge* Poultice used for "nervous fevers, ulcers and swellings." *Kidney Aid* Cold infusion of powdered root taken for kidneys. (80:50) *Laxative* Plant used in a side dish with laxative properties. (204:251) *Other* Compound used for "white swelling." (80:50) *Poison* Roots and berries considered poisonous. *Unspecified* Berries used for medicine. (126:51) **Delaware** *Antirheumatic (External)* Roasted, crushed roots used with sarsaparilla and mountain grape barks for rheumatism. *Blood Medicine* Roasted, crushed roots used with sarsaparilla and mountain grape barks as a blood purifier. *Dermatological Aid* Roots roasted and the salve used for chronic sores. *Gland Medicine* Roots roasted and the salve used for glandular swellings. *Stimulant* Roasted, crushed roots used with sarsaparilla and mountain grape barks as a stimulant. (as *P. decandra* 176:32) **Delaware, Oklahoma** *Antirheumatic (External)* Strong infusion of roots or twigs used as herbal steam for rheumatism. (as *P. decandra* 175:30, 78) *Antirheumatic (Internal)* Compound containing root used for rheumatism. *Blood Medicine* Compound containing root used as a blood purifier. (as *P. decandra* 175:27, 78) *Herbal Steam* Infusion of roots or twigs used as herbal steam for rheumatism. (as *P. decandra* 175:30) *Stimulant* Compound containing root used as a stimulant. (as *P. decandra* 175:27, 78) **Iroquois** *Antirheumatic (External)* Stalks cooked as greens and used for rheumatism. (as *P. decandra* 124:93) *Cathartic* Plant used as a cathartic. (87:316) *Cold Remedy* Decoction of stems taken for chest colds. (87:317) *Dermatological Aid* Compound with undried roots applied as a salve on bunions. Poultice of crushed roots applied to bruises. Raw berries rubbed on skin lumps. *Emetic* Plant used as an emetic. *Expectorant* Plant used as an expectorant. (87:316) *Liver Aid* Compound infusion of whole roots used for liver sickness. (87:317) *Love Medicine* "Tie in a poplar tree, then place among roots," as a love medicine. *Orthopedic Aid* Decoction of roots applied as poultice to sprains, bruises, and swollen joints. *Witchcraft Medi-*

*cine* Plant used for bewitchment. (87:316) **Mahuna Analgesic** Roots used for severe, neuralgic pains. *Dermatological Aid* Leaves used for skin diseases or to remove pimples and blackheads. *Poison* Plant considered poisonous. (as *P. decandra* 140:65) **Micmac Hemostat** Leaves used for bleeding wounds. (as *P. decandra* 40:59) **Mohegan Gynecological Aid** Poultice of mashed berries applied to sore breasts. (as *P. decandra* 176:74, 130) *Poison* Root considered poisonous. (as *P. decandra* 176:74) **Rappahannock Antidiarrheal** Infusion of berries taken for dysentery. *Antirheumatic (Internal)* Fermented infusion of leaves taken for rheumatism. *Dermatological Aid* Compound infusion with roots applied to ivy poison. Poultice of mashed root applied to wart until it bleeds. *Hemorrhoid Remedy* Steam from decoction of roots used for piles. (161:29) **Seminole Analgesic** Berries eaten as an analgesic. (169:167) Berries eaten for pains. *Antirheumatic (Internal)* Berries eaten for rheumatism. (169:285)

- **Food—Cherokee Beverage** Crushed berries and sour grapes strained, mixed with sugar and cornmeal, and used as a beverage. (126:51) *Cooking Agent* Crushed berries used to add color to canned fruit. (80:50) Berries used to color canned fruit. *Dried Food* Leaves gathered into bundle and dried for future use. (126:51) *Unspecified* Young shoots cut, cooked, and eaten. (204:251) *Vegetable* Shoots, leaves, and stems parboiled, rinsed, and cooked alone or mixed with other greens and eggs. Peeled stalks cut lengthwise, parboiled, dipped in egg, rolled in cornmeal, and fried like fish. (126:51) **Iroquois Vegetable** Stalks eaten as greens in spring. (as *P. decandra* 124:93) **Malecite Unspecified** Shoots used for food. (160:6) **Mohegan Unspecified** Cooked and used for food. (as *P. decandra* 176:83)
- **Dye—Mahuna Unspecified** Berries used to make dyes and inks. (as *P. decandra* 140:65)
- **Other—Kiowa Jewelry** Dark, dry fruits used by girls to make necklaces. (192:26) **Pawnee Paint** Fruit made into a red stain used in painting horses and various articles of adornment. (70:78)

## *Picea*, Pinaceae, conifer

*Picea abies* (L.) Karst., Norway Spruce

- **Drug—Mohegan Analgesic** Poultice of sap or gum applied for boil and abscess pains. (176:74) *Dermatological Aid* Sap or gum applied to boil or abscess pains. (176:74, 130)

*Picea engelmannii* Parry ex Engelm., Engelmann's Spruce

- **Drug—Navajo, Ramah Ceremonial Medicine** and *Emetic* Plant used as a ceremonial emetic. (191:12) **Okanagan-Colville Respiratory Aid** Infusion of bark used for respiratory ailments. *Tuberculosis Remedy* Infusion of bark used for tuberculosis. (188:27) **Thompson Cancer Treatment** Decoction of needles and gum taken for cancer. It was said that if this treatment did not work, nothing would work. The decoction was taken with a spoon directly from the bark blisters and in concentrated form. *Cough Medicine* Decoction of needles and gum taken for coughs. (187:100) *Dermatological Aid* Twig ashes mixed with grease and used as an ointment or salve. (164:475) Pitch used for eczema. *Psychological Aid* Tree and red cedar tree caused vivid dreams for anyone who slept under it. (187:100)
- **Food—Okanagan-Colville Beverage** Branches used by mountain travelers to make a tea. (188:27) **Thompson Unspecified** Sap considered edible. (187:100)

- **Fiber—Hoh Building Material** Timber used to make shakes, clapboards, and framing timbers. *Cordage* Limbs and roots shredded, pounded, and used to make cord and rope. (137:59) **Paiute Mats, Rugs & Bedding** Boughs used on the floor of sweat houses and for camping beds. (111:44) **Quileute Building Material** Timber used to make shakes, clapboards, and framing timbers. *Cordage* Limbs and roots shredded, pounded, and used to make cord and rope. (137:59) **Thompson Basketry** Bark used to make baskets. *Building Material* Bark used to thatch the roofs of lodges. *Canoe Material* Bark used to cover canoes. (164:499)
- **Other—Hoh Toys & Games** Timber used to make toys. **Quileute Toys & Games** Timber used to make toys. (137:59) **Thompson Cooking Tools** Bark used to make utensils of all kinds. (164:499) *Good Luck Charm* Tree and red cedar tree provided good luck and wishes for those who asked for it. (187:100) *Soap* Branch tips and needles boiled and used as a wash by hunters, warriors, and boys at puberty. (164:505) See also *P. glauca* × *engelmannii* under *P. glauca*.

*Picea glauca* (Moench) Voss, White Spruce

- **Drug—Abnaki Urinary Aid** Infusion of cones taken for urinary troubles. (144:164) **Algonquin, Quebec Cough Medicine** Inner bark chewed and infusion of inner bark taken for coughs. *Dermatological Aid* Gum used as a salve. *Gynecological Aid* Used in the sudatory, this is taken by women after childbirth and for other complaints. *Internal Medicine* Infusion of branch tips taken to "heal the insides." *Laxative* Gum chewed as a laxative. (18:126) Resin chewed as a laxative. (18:73) *Unspecified* Used in the sudatory, this is taken by women after childbirth and for other complaints. (18:126) **Chippewa Antirheumatic (External)** Compound decoction of twigs used as herbal steam for rheumatism. (as *P. canadensis* 53:362) **Cree, Woodlands Antirheumatic (Internal)** Decoction of inner bark used for arthritis. *Blood Medicine* Poultice of gum and lard applied for blood poisoning. *Dermatological Aid* Pitch and grease used as an ointment for skin rashes, scabies, persistent scabs, and growing boils. Rotten, dried, finely powdered wood used as baby powder and for skin rashes. Poultice of gum and lard applied to infections. Rotten wood used in baby dusting powder. *Pediatric Aid* Rotten, dried, finely powdered wood used as baby powder and for skin rashes. Rotten wood used in baby dusting powder. (109:48) **Eskimo, Alaska Dermatological Aid** Poultice of resin applied to wounds. *Unspecified* Infusion of needles used as medicine for all purposes. (as *P. canadensis* 4:716) **Eskimo, Inuktitut Dermatological Aid** Poultice of gum and grease applied to pustulant wounds. *Respiratory Aid* Decoction of gum or needles taken for respiratory infections. (202:188) **Eskimo, Kuskokwagmiut Cough Medicine** Decoction of green needles taken or raw needles chewed as cough medicine. (122:28, 29) **Eskimo, Nunivak Dermatological Aid** Resin applied to wounds. *Panacea* Infusion of needles used as a medicine for all purposes. (as *P. canadensis* 149:325) **Eskimo, Western Cough Medicine** Decoction of needles taken or raw needles chewed as a cough medicine. (108:24) **Gitksan Cold Remedy** Decoction of bark or inner bark used for colds. *Cough Medicine* Decoction of bark or inner bark used for coughs. *Misc. Disease Remedy* Decoction of bark or inner bark used for flu. *Tonic* Decoction of bark or inner bark used as a tonic. (as *P. glauca* × *engelmannii* 73:152) **Iroquois Gastrointestinal Aid** Gum chewed to facilitate digestion. (142:83) **Koyukon**

*Ceremonial Medicine* Pitch, swan feathers, and slender grass tops burned by shamans when making medicine for a sick person. (119:50) *Dermatological Aid* Infusion of needles used as a rub or bath for dry skin or sores. (119:49) Pitch applied to sores and cuts. (119:50) *Hunting Medicine* Tops put in animal track by girls before stepping over it, to avoid alienating animals from hunters. *Kidney Aid* Infusion of needles taken for kidney problems. *Panacea* Infusion of needles taken to promote general good health. *Unspecified* Tree tops used by the shamans to brush people and remove their sickness. (119:49) **Malecite** *Unspecified* Pitch used in medicines. (160:6) **Menominee** *Dermatological Aid* Poultice of cooked, beaten inner bark applied to wounds, cuts, or swellings. *Internal Medicine* Infusion of inner bark taken for “inward troubles for either man or woman.” (as *P. canadensis* 151:45) **Micmac** *Cough Medicine* Bark used as a cough remedy. *Dermatological Aid* Bark used to prepare a salve for cuts and wounds. Gum used for scabs and sores. *Gastrointestinal Aid* Parts of plant used for stomach trouble. *Misc. Disease Remedy* Bark, leaves, and stems used for scurvy. (as *P. canadensis* 40:59) **Montagnais** *Tonic* Infusion of twigs taken “for generally beneficial effects.” (as *P. canadensis* 156:314) **Ojibwa** *Disinfectant* Dried leaves used as an inhalant and fumigator. (as *P. canadensis* 153:379) **Ojibwa, South** *Antidiarrheal* Compound containing outer bark taken for diarrhea. (as *Abies canadensis* 91:198) **Okanagan-Colville** *Respiratory Aid* Infusion of bark used for respiratory ailments. *Tuberculosis Remedy* Infusion of bark used for tuberculosis. (188:27) **Shuswap** *Dermatological Aid* Poultice of soft pitch applied to sores. *Panacea* Decoction of bark taken for tuberculosis and other sickness. *Toothache Remedy* Hard pitch chewed to clean the teeth. *Tuberculosis Remedy* Decoction of bark taken for tuberculosis. (123:51) **Tanana, Upper** *Antirheumatic (Internal)* Decoction of tree top, young birch tip, and Hudson Bay tea taken for body aches. *Cold Remedy* Decoction of young tips, Hudson Bay tea, and blackberry stems taken for colds. Raw cambium chewed for colds. Decoction of tree top, young birch tip, and Hudson Bay tea taken for colds. Decoction of tree tip, Hudson Bay tea, and blackberry stems used for colds. *Cough Medicine* Raw cambium chewed for coughs. *Dermatological Aid* Poultice of raw or boiled cambium applied to sores and infected areas or used to bandage cuts. Decoction of tree tip used as a wash for rashes and sores. Pitch and moose fat warmed into an ointment and used for sores. Pitch boiled in water and applied to sores. Soft pitch, sometimes mixed with grease, used as an ointment for sores. *Disinfectant* Decoction of tree top and cottonwood taken for infections. Soft pitch, sometimes mixed with grease, used as an ointment for external infections. *Hemorrhoid Remedy* Chewed pitch applied to bleeding cuts. *Oral Aid* Decoction of young tips, Hudson Bay tea, and blackberry stems taken for mouth sores. Decoction of tree tip, Hudson Bay tea, and blackberry stems used for mouth sores. *Pulmonary Aid* Decoction of wood ash taken for chest problems. *Respiratory Aid* Decoction of tree top, young birch tip, and Hudson Bay tea taken for congestion. *Throat Aid* Pitch chewed for sore throats. *Tuberculosis Remedy* Raw cambium chewed for tuberculosis. Decoction of wood ash taken for tuberculosis. (102:2) **Tlingit** *Antidiarrheal* Sap mixed with mountain goat tallow and used for diarrhea. (as *Pinus canadensis* 107:283) **Wet’suwet’en** *Cold Remedy* Decoction of bark or inner bark used for colds. *Cough Medicine* Decoction of bark or inner bark used for coughs. *Misc. Disease*

*Remedy* Decoction of bark or inner bark used for flu. *Tonic* Decoction of bark or inner bark used as a tonic. (as *Picea glauca* × *engelmannii* 73:152)

- **Food**—**Algonquin, Quebec** *Candy* Resin chewed like chewing gum. (18:73) **Cree, Woodlands** *Candy* Gum chewed for pleasure. Gum chewed as a confection. (109:48) **Eskimo, Alaska** *Candy* Resin chewed for pleasure. (as *P. canadensis* 4:716) **Eskimo, Inuktitut** *Unspecified* Cambium eaten in the spring. (202:188) **Gitksan** *Unspecified* Cambium eaten fresh. (as *P. glauca* × *engelmannii* 73:151) **Koyukon** *Candy* Pitch chewed like gum. (119:50) **Micmac** *Beverage* Bark used to make a beverage. (159:258) **Okanagan-Colville** *Beverage* Branches used by mountain travelers to make a tea. (188:27) **Tanana, Upper** *Candy* Hard pitch used for chewing gum. *Fodder* Rotten wood mixed with poque and fed to puppies. *Starvation Food* Cambium used as a food during periods of food shortage. *Unspecified* Fresh sap eaten as food during the summer. (102:2) **Wet’suwet’en** *Unspecified* Cambium eaten fresh. (as *P. glauca* × *engelmannii* 73:151)
- **Fiber**—**Algonquin, Tête-de-Boule** *Basketry* Roots used to sew baskets. *Canoe Material* Roots used to sew canoes. *Snow Gear* Roots used to sew snowshoes. (132:129) **Cree, Woodlands** *Basketry* Wood used for the edging of a birch bark sewing basket base and lid. *Building Material* Bark sheets used for roofing on buildings. *Canoe Material* Wood used to make canoe paddles. Wood used to make ribs and gunwales for birchbark canoes. *Caulking Material* Pitch used as a sealant for birchbark canoes. *Mats, Rugs & Bedding* Bark sheets used for tent flooring. *Sewing Material* Roots used to sew birch bark baskets and canoes. (109:48) **Eskimo, Inuktitut** *Building Material* Wood used to make cabins and caches. *Canoe Material* Split wood used to make fish traps and canoe or kayak stringers. *Cordage* Split, inner root bark or small rootlets used as fishing lines and cord for making and repairing tools. *Mats, Rugs & Bedding* Needles used as flooring in tents. (202:188) **Iroquois** *Brushes & Brooms* Wood used to make scrub brushes. (142:83) **Koyukon** *Building Material* Wood used for the building log houses. Wood split or ripped and used as lumber for house construction, caches, and tent frames. *Canoe Material* Wood split or ripped and used to make boats and canoes. *Caulking Material* Pitch used to caulk boat seams. *Snow Gear* Wood split or ripped and used to make sleds. (119:50) **Malecite** *Building Material* Bark used for hut roofing. *Canoe Material* Bark used for canoes. *Mats, Rugs & Bedding* Needles and branches used for pillows and bedding. *Sewing Material* Roots used for thread. (160:6) **Micmac** *Mats, Rugs & Bedding* Boughs used to make beds. (159:258) **Tanana, Upper** *Basketry* Roots used to sew birch bark baskets.<sup>57</sup> *Brushes & Brooms* Twigs used by young menstruating girls to clean their teeth and to scratch their heads. *Building Material* Bark used as siding and roofing material for steam bath houses and other structures. Wood used for fuel and building logs. *Canoe Material* Roots used for the bow of a canoe.<sup>57</sup> Wood used to make boats, boat paddles, shovels, skin stretchers, and wedges for chopping wood. *Cordage* Split or whole roots used to make line.<sup>57</sup> *Mats, Rugs & Bedding* Boughs used for camp mattresses and dog bedding. Boughs used on the floor of camp buildings to sit on. *Snow Gear* Boughs used as temporary snowshoes by securing with line. (102:2)
- **Dye**—**Cree, Woodlands** *Yellow-Brown* Rotten wood used as a yellow brown dye for white goods. (109:48)

• **Other**—Cree, Woodlands *Cooking Tools* Split log hollowed out to make a dish to feed fish broth to puppies. *Fasteners* Wood pegs used to fasten the tabs on the bottom and top pieces to the basket body during construction. *Hide Preparation* Rotten, dried wood burned in a slow fire to smoke tan hides. *Hunting & Fishing Item* Wood used to make floats for fishing nets. *Tools* Dead, standing trees used to make a moose hide stretcher. (109:48) **Eskimo, Inuktitut** *Ceremonial Items* Roots used to make headgear and masks. *Containers* Roots used to make trays and buckets. *Cooking Tools* Roots used to make spoons, dippers, and bowls. *Fuel* Wood used for fires. *Hunting & Fishing Item* Split wood used to make fish traps and canoe or kayak stringers. Roots used to make floats. (202:188) **Iroquois** *Fuel* Bark used to start fires. (142:83) **Koyukon** *Ceremonial Items* Knot ring worn by children on a string around the neck to make them skilled with their hands. *Cooking Tools* Roots used for carving spoons and bowls. *Fasteners* Roots skinned and used to lash birch bark baskets. *Fuel* Wood used for household heating fuel. *Good Luck Charm* Golden needles conferred good luck to those who found them. *Hide Preparation* Rotten wood pulverized, mixed with rotten willow and used to smoke hides. (119:50) *Protection* Trees protected those who slept beneath them, especially from malevolent spirits. (119:49) Trees nullified dangerous spiritual forces. Boughs taken home as talismans for protection. (119:50) **Malecite** *Waterproofing Agent* Pitch used for waterproofing seams in canoes. (160:6) **Micmac** *Fuel* Wood used for kindling and fuel. (159:258) **Tanana, Upper** *Containers* Roots woven into waterproof containers.<sup>57</sup> Small, dead tree used to dry fish on. *Cooking Tools* Rough bark used to cut fish on, prevented the fish from slipping. Bark made into a container and used to roast waterfowl eggs. The spruce bark was cut large enough to surround the eggs, tied around the eggs, and the ends plugged with moss. *Fasteners* Warmed pitch used as glue to patch birchbark canoes and to attach feathers to arrows. *Fuel* Wood used for fuel and building logs. *Hide Preparation* Rotten, reddish colored wood smoke used to tan moose skins. *Hunting & Fishing Item* Roots woven into dip nets.<sup>57</sup> White, inner side of bark used in the bottom of a weir to act as a reflector. Reflector used in order to more easily spot fish as they swam through the weir. Wood used to build weirs, fish traps, fish racks, fish rafts, and boat poles. *Insecticide* Needles burned to keep mosquitoes away. *Tools* Wood used to make boats, boat paddles, shovels, skin stretchers, and wedges for chopping wood. (102:2)

***Picea mariana*** (P. Mill.) B.S.P., Black Spruce

• **Drug**—Algonquin, Quebec *Dermatological Aid* Gum used as a salve. *Internal Medicine* Infusion of branch tips used for “healing the insides.” *Unspecified* Used in the medicinal sudatory. (18:127) **Cree, Woodlands** *Antidiarrheal* Decoction of cones taken for diarrhea. *Burn Dressing* Pitch mixed with grease and used as ointment for bad burns. *Dermatological Aid* Pitch mixed with grease and used as ointment for skin rashes, scabies, and persistent scabs. *Oral Aid* Cone chewed for a sore mouth. *Throat Aid* Decoction of cones used as a gargle for sore throats. *Toothache Remedy* Cone chewed for toothaches. *Venereal Aid* Decoction of cones and other herbs taken for venereal disease. (79:17) *Gastrointestinal Aid* Pitch used as a stomach medicine. (67:234) *Pediatric Aid* Compound poul- tice of ashes applied to infant's navel. *Strengtheners* Decoction of plants used as a strengthening bath. (79:17) **Oweekeno** *Antirheumatic (External)* Decoction of bark used as a soak for soreness. Pitch mixed with badge moss and used for arthritic joints. *Dermatological Aid* Pitch boiled and used for dermatitis. Pitch mixed with pounded dog- tooth lichens and used for wounds. *Gastrointestinal Aid* Decoction of bark used for gastrointestinal difficulties. *Unspecified* Pitch eaten as medicine. (43:68) **Quinault** *Dermatological Aid* Poul- tice of gum applied to cuts and wounds. *Throat Aid* Infusion of inner bark taken for throat problems. (79:17) **Sikani** *Cough Medicine* Inner bark chewed for a cough. (150:51, 52) **Thompson** *Antidiarrheal* Decoction

of burned cone ashes taken for dysentery. *Eye Medicine* Needles used to restore eyesight. A blind person, or one with poor eyesight, rubbed his hands with the needles and then rubbed his eyes with his hands to restore his eyesight. *Panacea* Decoction of boughs used for any kind of illness. *Unspecified* Infusion of bark taken as a medicine. Decoction of inner bark taken as a medicine. Evergreen tops considered good medicine. (187:100) **Tlingit** *Toothache Remedy* Compound containing warmed seeds used for toothache. *Veneral Aid* Compound poultice of sap applied for syphilis. (107:284) **Tsimshian** *Hunting Medicine* Boughs used by shamans, hunters, and fishers during preparatory and purification rituals. (43:317)

- **Food**—**Haisla & Hanaksiala** *Candy* Pitch chewed like chewing gum. (43:175) **Hesquiat** *Candy* Cooled, rendered pitch chewed like gum. (185:41) **Kitasoo** *Dried Food* Inner bark cooked and dried for later use. (43:317) **Kwakiutl, Southern** *Candy* Pitch used as chewing gum. (183:293) **Makah** *Candy* Pitch used as chewing gum. (67:234) Pitch chewed as gum for pleasure. (79:17) *Unspecified* “Little cones” and buds used for food. (67:234) Young shoots eaten raw. (79:17) **Oweekeno** *Candy* Pitch boiled and used for chewing. (43:68) **Quinault** *Candy* Pitch chewed as gum for pleasure. (79:17)
- **Fiber**—**Bella Coola** *Basketry* Long roots split and used to make finely woven baskets. (184:198) **Hahwunkwut** *Basketry* Roots used to make cooking bowls, mush baskets, and other small baskets. (117:183) **Haisla & Hanaksiala** *Basketry* Roots mixed with red cedar bark and used to make baskets. (43:175) **Hesquiat** *Building Material* Wood sometimes used as lumber. (185:41) **Hoh** *Building Material* Timber used to make shakes, clapboards, and framing timbers. *Cordage* Limbs and roots shredded, pounded, and used to make cord and rope. (137:59) **Kitasoo** *Building Material* Branches used by hunters as shelter. (43:317) **Kwakiutl, Southern** *Basketry* Roots used to make baskets. (183:296) Roots burned over a fire, freed from root bark, dried, split, and used to make baskets. (183:269) *Clothing* Roots used to make hats. (183:296) Roots burned over a fire, freed from root bark, dried, split, and used to make hats. *Cordage* Roots burned over a fire, freed from root bark, dried, split, and used to make ropes. *Mats, Rugs & Bedding* Roots burned over a fire, freed from root bark, dried, split, and used to make mats. *Sewing Material* Roots burned over a fire, freed from root bark, dried, split, and used for “sewing wood.” (183:269) **Nitinaht** *Basketry* Split roots used for basketry. (67:234) Roots soaked, split in quarters, and used to make sturdy pack baskets. (186:71) *Caulking Material* Pitch used to fill cracks and knot holes in canoes. (67:234) **Oweekeno** *Basketry* Roots used for structural elements in basketry. (43:68) **Poliklah** *Basketry* Roots used to make baskets. The body material of baskets was spruce roots, which were dug out and cut off in lengths of 2½ to 3 feet and from ½ to 1 inch in diameter. These were at once (while full of sap and soft) split into broad flat bands, and these in turn were subdivided by knife and teeth until the desired size was obtained—a little larger than coarse thread, about like small twine. The vertical rods were hazel. The overlay was bear grass. The design was commonly of black maidenhair fern stem or salmon red strands made by dyeing the stem bundles of *Woodwardia* fern with chewed alder bark. (117:170) **Quileute** *Basketry* Roots used for basketry. (79:17) *Building Material* Timber used to make shakes, clapboards, and framing timbers. (137:59) *Caulking Material* Pitch used for caulking canoes. *Clothing* Roots used for rain hats. (79:17)

*Cordage* Limbs and roots shredded, pounded, and used to make cord and rope. (137:59) **Quinault** *Caulking Material* Pitch used for caulking canoes. (79:17) **Yurok** *Basketry* Roots used to make the horizontal weave in coarse baskets used for drying foods in the smokehouse. (6:43)

- **Other**—**Hahwunkwut** *Cooking Tools* Roots used to make cooking bowls, mush baskets, and other small baskets. (117:183) **Haisla** *Lighting* Pitch applied to the ends of red cedar torches used in night fishing. **Haisla & Hanaksiala** *Containers* Roots and red cedar bark used to make bag-like implement for the oolichan (candlefish) grease rendering process. *Fasteners* Branches and roots made into pegs, dipped in pitch, and used as nails to hold together bent boxes. *Hunting & Fishing Item* Wood made into rake-like implements and used to catch herring and oolichans (candlefish). Wood used to make oolichan spears. Wood used to make arrows. *Tools* Wood used to make digging sticks. Wood used to make a bark peeling tool. **Hanaksiala** *Ceremonial Items* Boughs used to hit and rub boys as part of a ritual treatment to increase their strength and tolerance. (43:175) **Hesquiat** *Ceremonial Items* Boughs used at girl's puberty potlatch to brush with sweeping motions and scare away bad influences. *Fasteners* Rendered pitch used as a glue for arrows and harpoons before they were tied. *Fuel* Knots used as fuel to keep the fire burning all night. *Weapon* Sharpened knots used to make a weapon. (185:41) **Hoh** *Toys & Games* Timber used to make toys. (137:59) **Kitasoo** *Protection* Prickly leaves used to discourage and repel animals. (43:317) **Kwakiutl, Southern** *Fasteners* Roots burned, dried, split, and used as strings to tie nets, hooks, and harpoons together. *Hunting & Fishing Item* Roots burned over a fire, freed from root bark, dried, split, and used to make fish nets. *Sacred Items* Branch tips used as sacred items. (183:269) **Makah** *Fasteners* Pitch used as glue to repair items such as harpoons. (67:234) *Hunting & Fishing Item* Warmed pitch used to protect the harpoon point. (79:17) **Nitinaht** *Ceremonial Items* Branches used ceremonially to initiate the children. (67:234) Branches used in winter dances and to make traditional costumes for initiation ceremonies. *Fasteners* Roots used for binding gaff implement joints. *Hunting & Fishing Item* Wood used to make the longer prong in the two-pronged salmon harpoon. Pitch used as a protective coating for fishing spears and whaling harpoon heads. (186:71) *Paint* Pitch used like shellac on harpoons. The pitch was ignited and caught with a mussel shell as it melted. The whale hunter's entire family would join in and chew the pitch until it was the right consistency. Then the hunter would put the pitch on his harpoon, smooth it over, and then burn off the excess. Finally, he would shine it until it was smooth like shellac. *Waterproofing Agent* Pitch used to waterproof boxes. These boxes were used only for cold materials, as hot water would melt the pitch. (67:234) **Quileute** *Hunting & Fishing Item* Roots used to tie the tines of salmon spears. Saplings used for the spring poles of snares for deer, elk, and other game animals. (79:17) **Toys & Games** Timber used to make toys. (137:59) **Quinault** *Hunting & Fishing Item* Roots used to tie the tines of salmon spears. (79:17) **Thompson** *Protection* Branches rubbed on skin to protect one against evil or “witchcraft.” The protective powers were attributed to the prickly needles. (187:100) **Tsimshian** *Ceremonial Items* Boughs used by shamans, hunters, and fishers during preparatory and purification rituals. (43:317)

**Picea sp.**, Spruce

- **Drug—Carrier** *Cold Remedy* Inner bark chewed for colds. *Tuberculosis Remedy* Inner bark chewed for tuberculosis. (31:69) **Cree** *Throat Aid* Cones chewed for sore throats. (97:18) *Veneral Aid* Gum used as a salve for syphilitic sores. (16:495) **Iroquois** *Antirheumatic (External)* Compound decoction applied to parts affected by rheumatism. *Antirheumatic (Internal)* Compound decoction taken for rheumatism. *Cold Remedy* Compound decoction or infusion of plants taken for colds. *Cough Medicine* Compound decoction taken for coughs. *Dermatological Aid* Gum applied to ingrown nails and cuts and used as a chewing gum. *Emetic* Infusion taken for colds and to vomit in the spring. (87:268) *Tuberculosis Remedy* Gum used for tuberculosis. (141:36) **Navajo** *Ceremonial Medicine* Plant used for “Shooting, Witch, Lightning and Night Chant” ceremonies. *Stimulant* Used to make an arrow and shot over the person to revive them from fainting. (55:21) **Penobscot** *Dermatological Aid* Poultice of soft gum or pine pitch applied to boils and abscesses. (156:309)
- **Food—Penobscot** *Candy* Gum extensively chewed as a “pastime.” (156:309)
- **Fiber—Carrier** *Mats, Rugs & Bedding* Needles used to make tent floor coverings. (31:69) **Eskimo, Alaska** *Building Material* Wood used to support buildings and to build the framework for sod-covered buildings. *Canoe Material* Logs and poles used for making kayak parts, weapon and tool handles, and other utilitarian objects. (1:34) **Hoh** *Basketry* Limbs and roots split, pared, scraped, and used to make baskets. **Quileute** *Basketry* Limbs and roots split, pared, scraped, and used to make baskets. (137:59)
- **Other—Eskimo, Alaska** *Cooking Tools* Wood used to build fish drying racks and legs for elevated caches. *Fuel* Logs considered an important source of fuel for heating the homes and steam baths of the village. *Tools* Logs and poles used for making kayak parts, tool handles, and other utilitarian objects. *Weapon* Logs and poles used for making and weapon handles. (1:34) **Iroquois** *Smoke Plant* Dried roots used to make cigars and smoked. (141:36) **Navajo** *Ceremonial Items* Used to make hoops, dresses, collars, bows, and arrows for many different ceremonies. *Tools* Twigs used as beaters to make a high, stiff, lasting lather of yucca roots and water. (55:21)

**Picradeniopsis**, Asteraceae

- Picradeniopsis oppositifolia** (Nutt.) Rydb. ex Britt., Oppositeleaf Bahia
- **Drug—Navajo, Ramah** *Dermatological Aid* Poultice of chewed leaves applied to red ant bites. *Gastrointestinal Aid* Cold infusion of leaves taken after swallowing a red ant. *Herbal Steam* Steam from compound containing plant used medicinally. *Panacea* Plant used as “life medicine.” (as *Bahia oppositifolia* 191:49)

**Picradeniopsis woodhousei** (Gray) Rydb., Woodhouse’s Bahia

- **Drug—Zuni** *Dermatological Aid* Poultice of chewed root applied to sores and rashes. (as *Bahia woodhousei* 27:374) *Emetic* Infusion of whole plant taken, vomiting ensued, for “sick stomach.” (as *Bahia woodhousei* 166:44) *Gastrointestinal Aid* Infusion of root taken for stomachache. (as *Bahia woodhousei* 27:374)

**Pilea**, Urticaceae**Pilea pumila** (L.) Gray, Canadian Clearweed

- **Drug—Cherokee** *Dermatological Aid* Stems rubbed between the toes for itching. *Dietary Aid* and *Pediatric Aid* Infusion given to children to reduce excessive hunger. (80:52, 53) **Iroquois** *Respiratory Aid* “Squeeze water out of stem and inhale for sinus problems.” (87:308)

**Piloblephis**, Lamiaceae**Piloblephis rigida** (Bartr. ex Benth.) Raf., Wild Pennyroyal

- **Drug—Seminole** *Ceremonial Medicine* Infusion of leaves added to food after a recent death. (as *Pycnothymus rigidus* 169:342) *Cold Remedy* Infusion of plant taken for colds. (as *Pycnothymus rigidus* 169:283) *Dermatological Aid* Infusion of roots applied to sores and ulcers on the legs and feet. (as *Pycnothymus rigidus* 169:307) *Emetic* Plant used as an emetic during religious ceremonies. (as *Pycnothymus rigidus* 169:409) *Febri-fuge* Infusion of plant taken for fevers. (as *Pycnothymus rigidus* 169:283) *Pediatric Aid* Plant used for chronically ill babies. (as *Pycnothymus rigidus* 169:329) *Stimulant* Decoction of whole plant minus the roots used as a bath for hog sickness: unconsciousness. (as *Pycnothymus rigidus* 169:229)
- **Food—Seminole** *Spice* Plant used for soup flavoring. (as *Pycnothymus rigidus* 169:482)

**Pimpinella**, Apiaceae**Pimpinella anisum** L., Anise Burnet Saxifrage

- **Drug—Cherokee** *Respiratory Aid* Infusion of half a teaspoonful in a cup of hot water taken for catarrh. (80:23) **Delaware** *Cathartic* Roots used as a cathartic. *Gastrointestinal Aid* Roots used as a stomach tonic. (176:33) **Delaware, Oklahoma** *Cathartic* Root used as a cathartic. (175:28, 78) *Gastrointestinal Aid* and *Tonic* Root used as a stomach tonic. (175:28)

**Pinaceae**, see *Abies*, *Larix*, *Picea*, *Pinus*, *Pseudotsuga*, *Tsuga***Pinguicula**, Lentibulariaceae**Pinguicula lutea** Walt., Yellow Butterwort

- **Drug—Seminole** *Analgesic* and *Gastrointestinal Aid* Infusion of whole plant taken for raw meat sickness: severe abdominal pains. (169:276, 277)

**Pinguicula pumila** Michx., Small Butterwort

- **Drug—Seminole** *Analgesic* and *Gastrointestinal Aid* Infusion of whole plant taken for raw meat sickness: severe abdominal pains. (169:276, 277)

**Pinguicula vulgaris** L., Common Butterwort

- **Other—Oweekeno** *Good Luck Charm* Dried roots kept for good luck. (43:106)

**Pinus**, Pinaceae, conifer**Pinus albicaulis** Engelm., Whitebark Pine

- **Food—Coeur d’Alene** *Unspecified* Nutlets used for food. (178:90) Nutlets cooked in hot ashes and used for food. (178:93) **Montana Indian** *Unspecified* Inner bark used for food. Nuts were an important article of food. (19:18) **Okanagan-Colville** *Unspecified* Seeds used for food. *Winter Use Food* Seeds gathered and stored for winter use. (188:27) **Spokane** *Unspecified* Nutlets used for food. (178:344) **Thompson** *Dried Food* Dried nuts kept alone in sacks or mixed with dried serviceberries and stored for future use. *Porridge* Parched seeds pound-

ed in a mortar to make a flour and mixed with water to form a mush. (187:101) *Unspecified* Seeds oven cooked or fire roasted. (164:492) Seeds eaten roasted or raw, but often considered bitter. If too many raw seeds were eaten, it would cause constipation. Roasted seeds were therefore preferred to raw seeds. (187:101) *Winter Use Food* Seeds cooked, crushed, mixed with dried serviceberries, and preserved for winter use. (164:492) Cooked, crushed seeds mixed with dried berries and preserved for winter use. (187:101)

***Pinus aristata*** Engelm., Bristlecone Pine

- **Drug**—Shoshoni *Dermatological Aid* Poultice of heated pitch applied to sores and boils. (180:117)

***Pinus attenuata*** Lemmon, Knobcone Pine

- **Other**—Karak *Decorations* Nuts used as beads and ornaments for dresses. (as *P. tuberculata* 148:379)

***Pinus banksiana*** Lamb., Jack Pine

- **Drug**—Cree, Woodlands *Dermatological Aid* Poultice of inner bark applied to deep cuts. (109:50) **Menominee** *Unspecified* Every part of tree used as a medicine. (151:45) **Ojibwa** *Anticonvulsive* Plant used for fits. *Stimulant* Plant used for fainting. (as *P. banksiana* 135:244) Leaves used as a reviver. (153:379) **Potawatomi** *Dermatological Aid* Pitch from boiled cones used as an ointment for unspecified ailment. *Pulmonary Aid* Leaves used as a fumigant to clear congested lungs. *Stimulant* Leaves used as a fumigant to revive a comatose patient. (154:70)
- **Food**—Cree, Woodlands *Unspecified* Inner bark used for food. (109:50)
- **Fiber**—Algonquin, Tête-de-Boule *Caulking Material* Gum used to caulk canoes. (132:130) **Menominee** *Sewing Material* Small, boiled roots used as cords to sew birchbark canoe and stitching sealed with pitch or resin. (151:75) **Ojibwa** *Mats, Rugs & Bedding* Boughs used on the ground or floor, covered with blankets and other bedding, and used as a bed. (as *P. banksiana* 135:244) *Sewing Material* Roots used as fine sewing material for canoes and other coarse and durable sewing. (153:421) **Potawatomi** *Sewing Material* Roots used as a heavy sewing material. The roots extend near the surface of the ground through the sandy soil for 30 to 35 feet and were easy to pull out of the ground in their entire length. When they were gathered they were made into coils and sunk beneath the surface of the lake until the outer bark had loosened from the root. Then, they were peeled and split in half, each half being a serviceable cord for sewing together canoes and bark strips intended for the roofs of wigwams and for other purposes. (154:113)
- **Other**—Cree, Woodlands *Hide Preparation* Dry, open cones mixed with rotten white spruce wood used to smoke tan hides. (109:50) **Potawatomi** *Lighting* Pine pitch and cedar used to make torches and attached to the canoe bow for night hunting. (154:122) *Waterproofing Agent* Pitch from the cones used to waterproof sewn seams. (154:113)

***Pinus contorta*** Dougl. ex Loud., Lodgepole Pine

- **Drug**—Bella Coola *Antirheumatic (External)* Compound containing gum used as poultice on arms for rheumatism. *Dermatological Aid* Gum applied to cuts and chewed gum applied to broken skin. *Heart Medicine* Compound containing gum used as poultice on chest for heart trouble. *Tuberculosis Remedy* Decoction of gum taken for con-

sumption. (150:49, 50) **Blackfoot** *Tuberculosis Remedy* Infusion of pitch taken for tubercular coughs. Here is a fine example of the origin and use of a “personal medicine” which was later expanded to include general therapeutic practice. There was once a woman named Last Calf who was riddled with tuberculosis. While she and her husband were camped near a beaver lodge, she noticed the animal's tracks in the mud and left some food for it. The beaver took the gift and returned the favor by appearing to her in a vision. He gave her a cure for tuberculosis. She was to collect the pitch of the lodgepole pine, boil it in water, and drink the infusion while uttering a special song. (The song had no words.) Last Calf's husband was alarmed at this treatment and cautioned her against poisoning but she went ahead and drank the brew. She said she felt as though she were going to die and began vomiting profusely. She drank again with the same result, but the next morning her chest was cleared as never before. (86:73) **Carrier, Northern** *Dermatological Aid* Compound decoction of needle tips taken for paralysis and body sores. *Eye Medicine* Gum painted on eye “to remove white scum” and for snow-blindness. *Orthopedic Aid* Compound decoction of needle tips taken for paralysis, weakness, or sores. *Stimulant* Compound decoction of needle tips taken for constitutional weakness. **Carrier, Southern** *Analgesic* Decoction of new shoots taken for stomach pain. *Gastrointestinal Aid* Decoction of new shoots taken for stomach pain. (150:49, 50) **Eskimo, Alaska** *Cold Remedy* Juice taken for colds. *Cough Medicine* Juice taken for coughs. *Unspecified* Sap used as a medicine. (149:331) **Flathead** *Burn Dressing* Poultice of heated sap and bone marrow used for burns. *Dermatological Aid* Poultice of sap, red axle grease, and Climax chewing tobacco used for boils. (82:52) **Gitksan** *Blood Medicine* Inner bark eaten as a blood purifier and used as a cathartic. *Cathartic* Needles or inner bark eaten or decoction of inner bark taken as a purgative. *Diuretic* Needles eaten or decoction of inner bark taken as a purgative and diuretic. (150:49, 50) *Tonic* Decoction of bark used as a tonic. (73:152) *Tuberculosis Remedy* Decoction of inner bark taken for consumption and gonorrhoea. (150:49, 50) *Unspecified* Bark used for medicines. (73:152) *Venerical Aid* Decoction of inner bark taken for gonorrhoea and other “serious ailments.” (150:49, 50) **Kutenai** *Tuberculosis Remedy* Inner bark eaten for tuberculosis. (82:52) **Kwakiutl** *Cough Medicine* Decoction of buds and pitch taken for coughs. *Gastrointestinal Aid* Decoction of buds and pitch taken for stomachaches. (183:269) **Okanagan-Colville** *Gastrointestinal Aid* Cambium layer eaten for stomach troubles such as ulcers. Decoction of sap taken for ulcers. *Throat Aid* Pitch sucked and juice swallowed for sore throats. (188:28) **Okanagon** *Cold Remedy* Gum used for colds. *Cough Medicine* Gum used for coughs. *Orthopedic Aid* Decoction of bark gum and fat rubbed on the body for muscle and joint aches. *Throat Aid* Gum used for sore throats. (125:40) **Quinault** *Dermatological Aid* Poultice of pitch applied to open sores. *Throat Aid* Buds chewed for sore throats. (79:17) **Salish, Coast** *Dermatological Aid* Sap mixed with deer tallow and used for psoriasis and other diseases. *Misc. Disease Remedy* Sap mixed with deer tallow and used for psoriasis and other diseases. (182:69, 70) **Shuswap** *Cough Medicine* Infusion of inner bark taken for coughs. *Tuberculosis Remedy* Infusion of inner bark taken for tuberculosis. (123:51) **Sikani** *Cough Medicine* Pitch chewed and saliva swallowed for a cough. (150:49, 50) **Thompson** *Analgesic* Salve of boiled sap and grease applied for pains. *Anti-*

- rheumatic (External)* Salve of boiled sap and grease applied for rheumatism. (164:461) *Cold Remedy* Gum used for colds. (125:40) Salve of boiled sap and grease used for colds. (164:461) *Cough Medicine* Gum used for coughs. (125:40) Salve of boiled sap and grease used for coughs. (164:461) *Dermatological Aid* Pitch mixed with bear tallow, rose petals, and red ocher and used as face cream or for blemishes. (187:102) *Disinfectant* Salve of resin with animal fat applied to body as a purifier after sweat bath. (164:504) Pitch used as a sort of "cold cream" with disinfectant properties. *Misc. Disease Remedy* Infusion of twigs with needles attached used for influenza. (187:102) *Orthopedic Aid* Decoction of bark gum and fat rubbed on the body for muscle and joint aches. (125:40) Salve of boiled sap and grease applied for muscle and joint soreness. (164:461) *Pediatric Aid* Pitch mixed with bear tallow, rose petals, and red ocher and rubbed on the skin of newborn babies. (187:102) *Pulmonary Aid* Salve of boiled sap and grease applied to back and chest for congestion. (164:461) *Throat Aid* Gum used for sore throats. (125:40) Salve of boiled sap and grease used for sore throats. (164:461) *Tlingit Venereal Aid* Compound infusion of sprouts and bark taken for syphilis. (as *P. inops* 107:283)
- **Food—Blackfoot** *Candy* Pitch chewed like gum. (86:104) **Coeur d'Alene** *Unspecified* Cambium layer used for food. (178:91) **Flathead** *Candy* Pitchy secretions chewed as gum. *Unspecified* Inner bark used for food. Seeds used for food. (82:52) **Gitksan** *Unspecified* Sap eaten fresh. (73:151) **Hesquiat** *Candy* Pitch chewed like gum. (185:44) **Kutenai** *Unspecified* Inner bark used for food. (82:52) **Okanagan-Colville** *Forage* Cambium layer eaten by grizzly bears. *Unspecified* Cambium layer used for food. (188:28) **Okanagon** *Staple* Cambium layer used as a principal food. (178:239) *Unspecified* Cambium layer and sap used for food. (125:38) **Salish, Coast** *Bread & Cake* Juicy inner bark dried in cakes and used for food. *Unspecified* Juicy inner bark eaten fresh. (182:70) **Shuswap** *Unspecified* Inner bark used for food. (123:51) **Spokan** *Unspecified* Cambium used for food. (178:344) **Thompson** *Beverage* Needles used to make a tea-like beverage. Twigs with needles attached used to make a tea-like beverage. *Candy* Young shoots of branches chewed for the honey. *Dried Food* Cambium and adjacent phloem tissue dried for winter use. (187:102) *Unspecified* Cambium layer and sap used for food. (125:38) Cambium and adjacent phloem tissue eaten fresh. (187:102) **Wet'suwet'en** *Dried Food* Inner bark strips dried and stored for future food use. *Unspecified* Sap eaten fresh. (73:151)
  - **Fiber—Blackfoot** *Building Material* Wood used to make travois and tepee poles. *Furniture* Wood used to make backrest poles and bed supports. The backrest poles were cut about five forearms in length and dried over a fire of rotten logs. One end of the pole was perforated and the other end sharpened. Then a stick was inserted through the hole and the pole etched. Later it was painted red and blue with buffalo shoulder blade applicators. Backrest poles were often notched to record the number of camp moves. (86:116) **Cheyenne** *Building Material* Used for tepee poles. (83:46) Trunks used for tepee poles. (83:6) **Montana Indian** *Building Material* Poles used to make the foundations for tepees. (82:52) **Thompson** *Building Material* De-limbed trunks used as framework poles for traditional sleeping platforms. (187:102)
  - **Other—Blackfoot** *Cooking Tools* Wood burls scraped with a rough stone, grease applied to prevent cracking and made into a bowl. *Fas-*

*teners* Sticks notched to act as fasteners on designated food storage bags. Resin boiled with buffalo phallus and used as a glue for head-dresses and bows. *Musical Instrument* Used to make wind chimes and presented to newly married couples. *Toys & Games* Wood used to make story sticks. Story sticks were prepared by older men and presented to children in return for favors. The sticks were notched to count the number of stories that the man would tell the child. They were often varnished with a solution of boiled hoof and steer phallus and sometimes red ocher was added. Then the stick was polished with a piece of rawhide. Story sticks were sometimes used to hang tepee doors. *Waterproofing Agent* Resin boiled with buffalo phallus and applied to moccasins for waterproofing. (86:116) **Hesquiat** *Fasteners* Pitch used on joints of implements, arrows, and harpoons, before bound with twine. *Preservative* Chewed pitch sprayed onto mats to preserve them. (185:44) **Kwakiutl, Southern** *Cooking Tools* Wood used to make fire tongs. *Tools* Wood used to make cedar bark peelers, digging sticks, and board bending tools. (183:296) **Nitinaht** *Ceremonial Items* Wood used to make small totem poles and model canoes. (186:73) **Okanagan-Colville** *Ceremonial Items* Wood placed in a basket of water to bring rain and pine cones burned to stop rain. *Containers* Bark used to make temporary, berry picking containers. *Season Indicator* Pollen cone ripening used as an indication that the cambium was ready to harvest. (188:28) **Salish, Coast** *Fasteners* Pitch used to fasten arrowheads onto shafts. (182:70) **Tolowa** *Hunting & Fishing Item* Branches rubbed on the hunters' bodies to hide the human scent. (6:44)

***Pinus contorta*** Dougl. ex Loud. **var. *contorta***, Lodgepole Pine

- **Drug—Haisla & Hanaksiala** *Antirheumatic (External)* Smoldering twigs applied to arthritic or injured joints for the pain and swelling. (43:178) **Kwakwaka'wakw** *Unspecified* Buds and pitch used medicinally. (43:70) **Nitinaht** *Dermatological Aid* Pitch mixed with melted deer tallow and used as a skin cosmetic. (186:73)
- **Fiber—Tsimshian** *Building Material* Branches used by hunters as shelter to discourage and repel animals. (43:318)
- **Other—Haisla** *Tools* Wood used to make maul heads. **Haisla & Hanaksiala** *Paint* Twigs burned and used as a pigment material for tattoos. *Tools* Smoldering twigs used to singe and trim hair. (43:178) **Kwakwaka'wakw** *Fuel* Wood used for firewood. *Hunting & Fishing Item* Pitch used to trap hummingbirds and the bird's hearts used in love medicines. *Tools* Wood used to make implements. (43:70) **Nitinaht** *Hunting & Fishing Item* Pitch used as protective coating for whaling and fishing equipment. (186:73) **Tsimshian** *Protection* Branches used by hunters as shelter to discourage and repel animals. (43:318)

***Pinus contorta* var. *latifolia*** Engelm. ex S. Wats., Tall Lodgepole Pine

- **Fiber—Blackfoot** *Building Material* Wood used to make tepee frames. (97:18)
- **Other—Thompson** *Hunting & Fishing Item* Wood used to make a leister pole. (187:102)

***Pinus contorta* var. *murrayana*** (Grev. & Balf.) Engelm., Murray Lodgepole Pine

- **Drug—Klamath** *Eye Medicine* Pitch placed inside the lid for sore eyes. (as *P. murrayana* 45:89)

- **Food**—**Montana Indian Starvation Food** Inner cambium layer of the bark eaten in times of scarcity. (as *P. murrayana* 19:18) **Okanagon Unspecified** Cambium layer and sap used for food. **Thompson Unspecified** Cambium layer and sap used for food. (125:38) Sap eaten especially in the spring. (as *P. murrayana* 164:483)
- **Fiber**—**Dakota Building Material** Tree used for tepee poles. (as *P. murrayana* 70:63) **Klamath Canoe Material** Trunk used to make poles to push boats through shallow water. (as *P. murrayana* 45:89) Peeled sapling used to make poles to propel canoes. (as *P. murrayana* 46:728) **Montana Indian Basketry** Young bark used to make baskets. **Building Material** Smaller trees stripped of the bark and used for lodge poles and extensively for lumber. (as *P. murrayana* 19:18) **Paiute Building Material** Barkless trunks used as tepee poles. (111:41) **Thompson Building Material** Trunk used as a favorite for building. **Scouring Material** Pitch mixed with grease and used for smoothing and polishing steatite pipes. (as *P. murrayana* 164:496)
- **Other**—**Klamath Containers** Bark used to make buckets for gathering berries. (as *P. murrayana* 45:89)

***Pinus coulteri*** D. Don, Coulter's Pine

- **Fiber**—**Diegueño Basketry** Needles used in making baskets. (84:29)

***Pinus echinata*** P. Mill., Shortleaf Pine

- **Drug**—**Choctaw Anthelmintic** Cold infusion of buds taken for worms. (177:5) **Nanticoke Analgesic** "Pellets of tar" considered "beneficial for soreness of the back." (175:55) **Cathartic** "Pellets of tar" used as a cathartic. (175:55, 84) **Orthopedic Aid** "Pellets of tar" considered "beneficial for soreness of the back." (175:55) **Rappahannock Dermatological Aid** Compound infusion or decoction of top branches used as wash for swellings. **Emetic** Compound with grated dried bark taken to induce vomiting. **Veterinary Aid** Compound with dried bark fed to dogs with distemper to induce vomiting. (161:27)
- **Fiber**—**Cherokee Building Material** Wood used for lumber. **Canoe Material** Wood used to make 30- to 40-foot-long canoes. (80:49)
- **Other**—**Cherokee Decorations** Wood used to carve. (80:49)

***Pinus edulis*** Engelm., Twoneedle Pinyon

- **Drug**—**Apache, Mescalero Cold Remedy** Needles burned and smoke inhaled for colds. (14:35) **Apache, Western Dermatological Aid** Heated pitch applied to the face to remove facial hair. (26:185) **Apache, White Mountain Venereal Aid** Leaves chewed for venereal diseases. (136:159) **Havasupai Dermatological Aid** Poultice of melted gum applied to cuts. **Veterinary Aid** Poultice of melted gum applied to horses for cuts. (197:205) **Hopi Dermatological Aid** Poultice of gum used to exclude air from cuts and sores. (200:32) **Disinfectant** Gum smoke used as disinfectant for family of dead person. (200:63) **Tuberculosis Remedy** Plant used for "consumption." (200:35, 63) **Witchcraft Medicine** Gum applied to forehead as a protection from sorcery. (200:63) **Hualapai Expectorant** Decoction of inner bark taken as an expectorant tea. **Other** Fresh, white pitch burned to purify the air. (195:35) **Isleta Dermatological Aid** Gum mixed with tallow and used as a salve for cuts and open sores. (100:37) **Keres, Western Dermatological Aid** Pitch used on open sores. **Gastrointestinal Aid** Infusion of foliage used as an emetic to clean the stomach. (171:60) **Navajo Ceremonial Medicine** Needles used in the medicine for the "War Dance." Pitch painted all over the patient in the War Dance. (55:21) **Dermatological**

**Aid** Plant used for cuts and sores. (55:97) Gum with tallow and red clay and used as a salve on open cuts and sores. (55:21) **Emetic** Resin used as an emetic. (90:162) **Navajo, Ramah Analgesic** Compound decoction used for headache. **Burn Dressing** Poultice of chewed buds applied to burns. **Ceremonial Medicine** Decoction of wood or needles used as ceremonial emetic. **Cold Remedy** Compound decoction used for colds. Fumes from burning resin inhaled for head colds. **Cough Medicine** Compound decoction used for cough. **Ear Medicine** Pulverized, dried buds used as fumigant for earache. **Emetic** Decoction of wood or needles used as ceremonial emetic. **Febrifuge** Compound decoction used for fever. **Misc. Disease Remedy** Compound decoction used for influenza. **Other** Compound containing inner bark used for injuries. (191:12, 13) **Tewa Dermatological Aid** Poultice of gum used to exclude air from cuts and sores. (42:347) Resin applied to cuts and sores to keep out the air. (138:41) **Zuni Dermatological Aid** Powdered resin sprinkled in opened abscess or mixed with lard or Vaseline and placed in abscess. Powdered resin used for skin infections. (27:373) **Diaphoretic** Needles chewed and swallowed as a diaphoretic. **Disinfectant** Powdered gum sprinkled on lanced groin swellings as an antiseptic. **Diuretic** Needles eaten and infusion of twigs used as a diuretic and diaphoretic for syphilis. **Venereal Aid** Needles eaten and infusion of twigs used as a diuretic and diaphoretic for syphilis. Powdered gum sprinkled on scraped syphilitic ulcers. (166:57, 58)

- **Food**—**Apache, Chiricahua & Mescalero Pie & Pudding** Seeds mixed with yucca fruit pulp to make a pudding. **Special Food** Seeds ground, rolled into balls and eaten as a delicacy. (33:43) **Unspecified** Secretion from the trunk chewed. (33:45) **Apache, Mescalero Dried Food** Nuts parched, ground, mixed with datil fruit, mescal, mesquite beans, or sotol and used for food. **Special Food** Nuts used as an essential food during girls' puberty ceremonies. (14:35) **Apache, Western Candy** Pitch used as chewing gum. **Porridge** Pinyon and corn flour mixed and cooked into a mush. **Staple** Used as a staple food. Nuts eaten raw, roasted, or ground into flour. **Winter Use Food** Nuts stored in baskets or pottery jars. (26:185) **Apache, White Mountain Unspecified** Nuts eaten raw. (136:159) **Gosiute Unspecified** Nuts used for food. (39:377) **Havasupai Preserves** Seeds parched, ground, kneaded into seed butter, and eaten with fruit drinks or spread on bread. (197:67) **Soup** Nuts ground with the shells and used to make soup. (197:73) **Spice** Sprigs placed in the cooking pit with porcupine, bobcat, or badger to improve the taste of the meat. **Unspecified** Nuts formerly used as an important food source. (197:205) **Hopi Special Food** Nuts roasted and eaten as an after supper luxury. (120:18) **Unspecified** Nuts used for food. (42:347) Nuts eaten for food. (200:63) **Hualapai Beverage** Needles used to make a tea. **Bread & Cake** Nuts formed into cakes. **Candy** Pitch chewed as a gum. **Porridge** Nuts used to make a paste. **Soup** Nuts used to make a soup. **Unspecified** Nuts eaten raw or roasted. (195:35) **Isleta Staple** Nuts formerly used as a staple food. (100:37) **Unspecified** Seeds formerly considered an important food. (32:40) **Winter Use Food** Nuts gathered and stored for winter use. (100:37) **Jemez Unspecified** Nuts gathered in large quantities to save and sell. (44:26) **Keres, Western Unspecified** Raw or roasted nuts used for food. (171:60) **Keresan Winter Use Food** Nuts gathered in large quantities, roasted, and eaten during the winter. (198:562) **Navajo Bread & Cake** Ground nuts formed into cakes. (110:21) **Candy** Sap

- used as a chewing gum. (55:21) *Porridge* Nuts boiled into a gruel. (110:21) *Preserves* Roasted nuts mashed into a butter. (55:21) Nuts roasted, cracked and shelled on a metate, ground fine, made into butter, and used with bread. (165:222) *Special Food* Ground nuts rolled into balls and eaten as a delicacy. (110:21) *Staple* Nuts hulled, parched, and ground with cornmeal to make a flour. (32:40) *Unspecified* Hardened resinous secretions chewed. (32:32) Nuts hulled, roasted, and eaten without further preparation. (32:40) Seeds used for food. (90:162) Nuts eaten raw or roasted directly from the shell. (110:21) **Navajo, Ramah** *Candy* Resin used for chewing gum. *Preserves* Roasted, ground nuts made into butter and spread on corn cakes or mixed with roasted, ground corn. *Starvation Food* Inside bark used as an emergency ration, when food was scarce. *Winter Use Food* Nuts gathered and stored for winter use. Roasted, ground nuts made into sun dried cakes and stored for winter. (191:12) **Pueblo** *Unspecified* Hardened resinous secretions chewed. (32:32) Seeds formerly considered an important food. (32:40) **Sia** *Unspecified* Nuts gathered in considerable quantities, roasted, and used for food. (199:107) **Tewa** *Unspecified* Fresh or roasted seeds formerly considered an important food. (32:40) Nuts used for food. (42:347) Nuts formerly roasted and used for food. (138:41) **Zuni** *Winter Use Food* Nuts gathered in great quantities, toasted, and stored for winter use. (166:70)
- **Fiber—Apache, Mescalero** *Furniture* Young trees used for the main hoop of infant cradleboards. (14:35) **Havasupai** *Building Material* Wood used for house construction. *Caulking Material* Melted gum used to plug a leaky canteen or other containers. (197:205) **Navajo** *Building Material* Logs used to make hogans for ordinary and ceremonial purposes. Boughs used to build the corral for public exhibitions at the close of a ceremony. *Furniture* Wood used to make various parts of the cradle. (55:21) **Navajo, Ramah** *Basketry* Resin used in pottery and basketry making. *Building Material* Rot- and wood-eating-beetle-resistant logs used as the chief building material for hogans. Wood used to make summer shade houses. Branches used to cover a sweat house. Wood used for fence posts and corral construction. (191:12)
  - **Dye—Hopi** *Unspecified* Gum used in the preparation of certain dyes. (42:347) Gum used to prepare certain dyes. (200:63) **Jemez Red** Gum from old and new trees used as a red paint for jars and bowls. (44:26) **Navajo Black** Gum used to make black dye. A black dye was made from pinyon gum, the leaves and twigs of sumac, and a native yellow ocher. The sumac leaves were put in water and allowed to boil until the mixture became strong. While this was boiling, the ocher was powdered and roasted. Pinyon gum was then added to the ocher and the whole roasted again. As roasting proceeded, the gum melted, and finally the mixture was reduced to a black powder. This was cooled and thrown into the sumac mixture, forming a rich blue-black fluid which was essentially an ink. When this process was finished the wool was put in and allowed to boil until it was dyed the right shade. This same dye was also used to color leather and buckskin. (55:21) **Navajo, Ramah** *Black* Resin used as an ingredient of black dye for wool or basketry. (191:12) **Tewa** *Unspecified* Gum used in the preparation of certain dyes. (42:347)
  - **Other—Apache, Mescalero** *Ceremonial Items* Pollen used instead of cattail pollen in ceremonies. *Waterproofing Agent* Resin used for waterproofing woven water jugs. (14:35) **Apache, Western** *Waterproofing Agent* Pitch used to waterproof baskets. (26:185) **Apache, White Mountain** *Waterproofing Agent* Pitch warmed and applied inside and out to waterproof water jugs. (136:150) **Havasupai** *Cash Crop* Nuts sold in considerable quantities to stores. *Fuel* Wood used for firewood. *Paint* Gum used in the paint used on the base of arrows. *Tools* Wood used to make the knife for trimming mesal heads. *Waterproofing Agent* Gum used to waterproof basketry water jugs and basketry drinking cups. (197:205) **Hopi** *Ceremonial Items* Gum put on hot coals and fumes used to smoke people and their clothes after a funeral. Pollen used for the Snake Ceremonial. *Fasteners* Gum used in making turquoise mosaics. (42:347) Gum used in making turquoise mosaics. (200:63) *Protection* Gum put on forehead when going outside of house as protection against sorcery. *Waterproofing Agent* Gum used to waterproof and repair pottery vessels. Gum used to prevent absorption of moisture and warping. (42:347) Gum used in waterproofing and repairing pottery vessels. (200:63) **Hualapai** *Fasteners* Pitch used to glue arrows and cradleboards. Pitch spread on the palms of the hand to make gripping rope easier. *Waterproofing Agent* Melted pitch used for waterproofing baskets. (195:35) **Jemez** *Cash Crop* Nuts gathered in large quantities to save and sell. (44:26) **Keres, Western** *Cash Crop* Nuts used for trade. *Cooking Tools* Pitch rubbed on stone to blacken and the stone used to make paper bread from black corn. *Paint* Pitch mixed with ground lichens or mineral colors to make a paint medium. (171:60) **Navajo** *Cash Crop* Seeds gathered in large quantities and sold or traded. (32:40) Nuts gathered and sold or traded. (55:21) Seeds used as a commercial crop. (90:162) Nuts sold to the nearest trading posts. (110:21) Nuts sold to the Hano, Jemez, and the Keresan Pueblos. (138:41) *Ceremonial Items* Pitch smeared on burier's body before burying person and on forehead and under the eyes during mourning. Wood used to make ceremonial pokers and wands. Wood charcoal used to make the best black for sand paintings. Sapling, stripped of its branches, carried by the Talking God on the fourth day of the Night Chant. Tree used for ceremonial purposes. On the ninth day of the Night Chant, The Slayer of Alien Gods and The Child of the Water deposit their cigarettes in the shade of a tree, preferably a pinyon, while The Shooting Divinity lays hers on the ground in a cluster of snakeweed. Branches used to make the circle of branches for the Mountain Chant. Bunches of needles carried in each hand by dancers on the last night of the Mountain Chant. (55:21) *Fasteners* Resin used to cement turquoise in jewelry. (90:162) *Fuel* Wood used for firewood. *Incense & Fragrance* Dried gum, together with parts of different birds, used as an incense for ceremonial fumigation. *Jewelry* Dried seeds used to make necklaces, bracelets, anklets, and wristlets. *Tools* Wood used to make loom poles, beams, and uprights used in the construction of looms. *Waterproofing Agent* Gum used to make water bottles watertight. The gum was heated and poured into the jar, and by turning the jar, the melted gum was brought in contact with the entire inner surface, after which the surplus was poured off. The outside was also covered with the gum to which a red clay had been added so that the bottle, when finished, had a reddish hue. (55:21) Resin used to waterproof containers. (90:162) **Navajo, Ramah** *Cash Crop* Nuts gathered and sold to make up a considerable portion of the cash income of many families. *Ceremonial Items* Branches, preferably one broken from a lightning struck tree, used in Evilway cere-

monials as pokers. Needles used in Evilway ceremonials as pokers. *Containers* Resin used in pottery and basketry making. *Fuel* Wood used for fires because it throws fewer sparks. *Stable Gear* Wood used to make saddle horns. *Tools* Wood used to make sharp sticks for perforating buckskin and various other tools. *Toys & Games* Wood used to make tops for spinning and sticks used in the moccasin game. (191:12) **Pueblo** *Cash Crop* Seeds gathered in large quantities and sold or traded. **Spanish American** *Cash Crop* Seeds gathered in large quantities and sold or traded. (32:40) **Tewa** *Ceremonial Items* Gum put on hot coals and fumes used to smoke people and their clothes after a funeral. Pollen used for the Snake Ceremonial. *Fasteners* Gum used in making turquoise mosaics. (42:347) *Fuel* Used extensively for firewood. (138:41) *Protection* Gum put on forehead when going outside of house as protection against sorcery. *Waterproofing Agent* Gum used to waterproof and repair pottery vessels. Gum used to prevent absorption of moisture and warping. (42:347) **Tewa of Hano** *Waterproofing Agent* Resin used to mend cracked water jars. (138:41)

### *Pinus elliottii* Engelm., Slash Pine

- **Drug—Seminole** *Analgesic* Decoction of wood bits or bark applied externally as an analgesic. (as *P. caribaea* 169:167) *Antirheumatic (External)* Decoction of wood or bark used as a bath for aches and pains. (as *P. caribaea* 169:286) *Dermatological Aid* Decoction of roots and buds used for ballgame sickness: sores, back or limb pains, and hemorrhoids. (as *P. caribaea* 169:269) Decoction of wood or bark used as a bath for sores and cuts. (as *P. caribaea* 169:286) *Hemorrhoid Remedy* and *Orthopedic Aid* Decoction of roots and buds used for ballgame sickness: sores, back or limb pains, and hemorrhoids. (as *P. caribaea* 169:269)
- **Fiber—Seminole** *Basketry* Plant used to make baskets. *Building Material* Plant used to make houses. *Furniture* Plant used to make Big-house seats. (as *P. caribaea* 169:480)
- **Other—Seminole** *Ceremonial Items* Plant used for religious scarification. *Fasteners* Plant used to make arrow point glue. *Hide Preparation* Plant used for tanning. *Lighting* Plant used to make torches. *Toys & Games* Plant used to make ball poles. (as *P. caribaea* 169:480)

### *Pinus flexilis* James, Limber Pine

- **Drug—Navajo, Ramah** *Ceremonial Medicine* Plant used as a ceremonial emetic. *Cough Medicine* Plant used as a cough medicine. *Emetic* Plant used as a ceremonial emetic. *Febrifuge* Plant used as medicine for fever. *Hunting Medicine* Plant smoked by hunters for “good luck.” (191:13)
- **Food—Apache, Chiricahua & Mescalero** *Unspecified* Seeds roasted and hulled or sometimes the seeds ground, shell and all, and eaten. (33:43) **Montana Indian** *Unspecified* Nuts were an important article of food. (19:18)
- **Other—Navajo** *Ceremonial Items* Wood used to make the small bow and arrow used in the Witch and Shooting Chants. (55:23)

### *Pinus glabra* Walt., Spruce Pine

- **Drug—Cherokee** *Anthelmintic* Given for worms. *Antidiarrheal* Bark chewed “to check bowels.” *Antirheumatic (External)* Oil used to bathe painful joints. *Antirheumatic (Internal)* Syrup taken for chronic rheumatism. *Cold Remedy* Infusion, steam, and oil used in various ways as cold remedy. *Cough Medicine* Syrup taken by pregnant

women with cough. *Dermatological Aid* Poultice of tar used on scald head, tetterworm, stone bruises, and ulcers. *Febrifuge* Compound infusion of needles to “break out fever.” *Gastrointestinal Aid* Taken for colics and gout. *Gynecological Aid* Compound infusion of needles for “child-bed-fevers.” Syrup taken by pregnant women with cough and poultice used for swollen breasts. *Hemorrhoid Remedy* Compound infusion of root taken for piles. *Kidney Aid* Taken for “weak back or kidneys.” *Laxative* Taken as a gentle laxative. *Misc. Disease Remedy* Taken for gout, to break out measles, and for complications from mumps. *Orthopedic Aid* Taken for “weak back or kidneys.” *Other* Skim turpentine off root decoction and use on deer’s skin for drawing plaster. *Respiratory Aid* Compound infusion of needles in apple juice taken by ballplayers “for wind.” Syrup taken for “catarrh (ulcer of the lungs).” *Sedative* Given for hysterics. *Stimulant* Compound infusion of root taken as a stimulant. *Tuberculosis Remedy* Tar used for consumption. *Urinary Aid* Syrup used as poultice for swollen testicles caused by mumps. *Venereal Aid* Syrup taken for chronic rheumatism and venereal disease. (80:49)

- **Other—Cherokee** *Incense & Fragrance* Needles or gum used to scent soap. (80:49)

### *Pinus jeffreyi* Grev. & Balf., Jeffrey Pine

- **Food—Paiute, Northern** *Candy* Sap crystallized, gathered, and eaten like candy. *Winter Use Food* Sap crystallized, gathered, and stored for winter use. (59:53)
- **Fiber—Diegueño** *Basketry* Needles used in making baskets. Butt ends of the needle clusters were left protruding on the outside of the basket as a decorative touch. *Building Material* Bark used to make shelters for those gathering acorns in the mountains. (84:29)
- **Other—Paiute, Northern** *Cash Crop* Sap crystallized, gathered, and sold. (59:53)

### *Pinus lambertiana* Dougl., Sugar Pine

- **Drug—Kawaiisu** *Carminative* Dried sap powder eaten for stomach gas. *Eye Medicine* Powdered sap and milk used as drops for sore eyes and gives infants good eyes. *Laxative* Dried sap powder eaten to loosen the bowels. *Pediatric Aid* Powdered sap and milk used as drops for sore eyes and gives infants good eyes. (206:50) **Mendocino Indian** *Cathartic* Plant used as a cathartic. (41:306) **Miwok** *Eye Medicine* Sugar pine sugar used as a wash for sore or blind eyes. (12:151) **Pomo** *Unspecified* Sugar found in bark wounds ground up, molded into cakes, and used as a medicine. (11:79)
- **Food—Karok** *Unspecified* Roasted seeds used for food.<sup>58</sup> (6:44) Coagulated sap gathered from hollow trees and eaten without preparation or mixing with other foods. Nuts roasted and used for food. (148:378) *Winter Use Food* Roasted seeds stored for winter use.<sup>58</sup> (6:44) Nuts roasted and stored for winter use. (148:378) **Kawaiisu** *Sweetener* Sap, drained through a hole cut into the tree, dried into a “powdered sugar” and eaten. *Unspecified* Seeds eaten raw, roasted, parched, boiled, or pounded and mixed with cold water. (206:50) **Klamath** *Unspecified* Seeds used for food. (45:88) **Mendocino Indian** *Unspecified* Nuts used for food. (41:306) **Miwok** *Sweetener* Sugar pine sugar eaten as a delicacy. (12:151) *Unspecified* Shelled nutmeats used for food. (12:150) Pulverized nutshells and meat made into peanut butter and used for feasts. (12:151) **Pomo** *Unspecified* Nuts rarely used for food. (11:79) Nuts used for food. Pitch used for food. (66:11) **Pomo**,

**Kashaya Candy** Pitch chewed for gum. *Sweetener* Pitch tasted sweet like candy. *Unspecified* Nuts, inside the cone, eaten fresh. *Winter Use Food* Nuts, inside the cone, dried for winter use. (72:93) **Shasta Bread & Cake** Nuts dried, powdered, made into small cakes, and eaten with a very thin mush made of grass seeds. *Dried Food* Nuts dried and eaten. *Unspecified* Whole nuts mixed with powdered salmon and eaten. (93:308) **Yuki Candy** Sweet exudation chewed as gum. (49:88)

- **Fiber—Karok Building Material** Wood used for building sweat houses. (148:378)
- **Other—Karok Fasteners** Pitch used as an adhesive. (148:378) **Jewelry** Seeds used as beads in jewelry. (6:44) **Pomo, Kashaya Toys & Games** Pitch used in whistles. (72:93)

### ***Pinus monophylla*** Torr. & Frém., Singleleaf Pinyon

- **Drug—Apache, Western Dermatological Aid** Heated pitch applied to the face to remove facial hair. (26:185) **Cahuilla Dermatological Aid** Pitch used as a face cream by girls to prevent sunburn. (15:102) **Gosiute Anthelmintic** Decoction of gum taken for worms or other intestinal parasites. (39:350) **Havasupai Dermatological Aid** Poultice of melted gum applied to cuts. *Veterinary Aid* Poultice of melted gum applied to horses for cuts. (197:205) **Hopi Dermatological Aid** Poultice of gum used to exclude air from cuts and sores. *Disinfectant* Gum smoke used as disinfectant for family of dead person. *Witchcraft Medicine* Gum applied to forehead as a protection from sorcery. (200:63) **Kawaiisu Contraceptive** Cooked pitch taken by women who wanted no more children. *Dermatological Aid* Pitch used as salve on cuts. *Gynecological Aid* Cooked pitch taken by women to stop menstruation. *Pediatric Aid* Cooked pitch given to adolescent girls to keep youthful and increase life span. (206:50) **Paiute Analgesic** Poultice of heated resin applied for general muscular soreness. *Antidiarrheal* Decoction of resin or simple or compound pills of resin taken for diarrhea. *Antiemetic* Decoction of resin taken for nausea. *Anti-rheumatic (Internal)* Decoction of resin taken for rheumatism. *Cold Remedy* Compound poultice of heated resin applied for chest congestion from colds. Simple or compound decoction of several plant parts taken for colds. *Dermatological Aid* Compound poultice of pitch applied to sores, cuts, swellings, and insect bites. Simple or compound poultice of heated resin applied to draw boils or slivers. *Febrifuge* Decoction of resin taken for fevers. *Gastrointestinal Aid* Decoction of resin taken for indigestion, nausea, or bowel troubles. *Gynecological Aid* Decoction of resin taken as a tonic after childbirth and for general debility. *Misc. Disease Remedy* Decoction of resin taken for influenza. *Orthopedic Aid* Poultice of heated resin applied to treat any general muscular soreness. *Pulmonary Aid* Compound poultice of heated resin applied for chest congestion from colds. Poultice of heated resin applied for pneumonia. *Throat Aid* Resin chewed or pulverized resin applied with swab for sore throat. *Tonic* Decoction of resin taken as a tonic after childbirth and for general debility. *Tuberculosis Remedy* Decoction of resin taken for tuberculosis and influenza. *Venereal Aid* Compound decoction of resin taken for venereal disease. Decoction of resin taken, resin chewed or used as pills for venereal disease. Pulverized resin dusted on syphilitic sores. (180:117, 118) **Shoshoni Analgesic** Poultice of heated resin applied for sciatic pains or muscular soreness. Poultice of heated resin used for sciatic pains and general muscular soreness. *Antiemetic* De-

coction of resin taken for nausea. *Cold Remedy* Compound decoction of several plant parts taken for colds. Smoke of pitch compound inhaled for colds. *Cough Medicine* Compound decoction of pitch taken for coughs. *Dermatological Aid* Compound decoction of needles used as antiseptic wash for rashes. Compound poultice of pitch applied to sores, cuts, swellings, and insect bites. Poultice of heated resin applied to draw boils or imbedded slivers. *Disinfectant* Compound decoction of needles used as antiseptic wash for measles and other rashes. *Febrifuge* Decoction of resin taken for fevers. *Gastrointestinal Aid* Decoction of resin taken for indigestion, nausea, or bowel troubles. *Kidney Aid* Compound decoction of resin taken for the kidneys. *Misc. Disease Remedy* Compound decoction of needles used as antiseptic wash for measles. Compound decoction of pitch taken for smallpox. *Orthopedic Aid* Poultice of heated resin applied for sciatic pains or muscular soreness. *Poultice* Poultice of heated resin applied for ruptures. *Pulmonary Aid* Poultice of heated resin applied for pneumonia. *Venereal Aid* Decoction of resin taken for venereal disease. *Veterinary Aid* Smoke from root compound inhaled by horses for distemper. (180:117, 118) **Washo Cold Remedy** Compound decoction of resin taken for colds. *Venereal Aid* Decoction of needles or wood taken or fresh resin used as pills for gonorrhea. (180:117, 118)

- **Food—Apache, Western Candy** Pitch used as chewing gum. *Porridge* Pinyon and corn flour mixed and cooked into a mush. *Staple* Used as a staple food. Nuts eaten raw, roasted, or ground into flour. *Winter Use Food* Nuts stored in baskets or pottery jars. (26:185) **Cahuilla Baby Food** Nuts used as one of the few foods fed to babies instead of a natural milk diet. *Beverage* Ground nuts mixed with water and used as a drink. *Dried Food* Cooked, unshelled nuts stored for future use. *Porridge* Roasted, shelled nuts eaten whole or ground and made into mush. (15:102) **Cocopa Unspecified** Pinyons eaten in the mountains away from home. (37:188) **Diegueño Unspecified** Nuts used for food. (84:30) Seeds used for food. (88:215) **Gosiute Unspecified** Nuts used for food. (39:377) **Havasupai Spice** Sprigs placed in the cooking pit with porcupine, bobcat, or badger to improve the taste of the meat. *Unspecified* Nuts formerly used as an important food source. (197:205) **Hopi Unspecified** Nuts eaten for food. (200:63) **Kawaiisu Porridge** Roasted, steamed seeds pounded into a meal, mixed with cold water, and eaten. *Unspecified* Roasted, steamed seeds eaten hulled or unhulled. Roasted, steamed seeds hulled, the kernels boiled and eaten. *Winter Use Food* Unhulled seeds strung on cord, dried, and stored in sacks for winter use. (206:50) **Paiute Dried Food** Nuts sun dried or roasted and stored for future use. *Porridge* Roasted nuts ground into a flour and mixed with water into a paste or mush. *Soup* Roasted nuts ground into a flour and mixed with water into a soup. *Staple* Roasted nuts ground into flour. (167:241) *Unspecified* Nuts eaten and obtained from Nevada. Seeds used for food. (111:42) Nuts roasted and eaten whole. *Winter Use Food* Nuts gathered in great quantity and stored for future use. (167:241) **Paiute, Northern Bread & Cake** Nuts roasted, winnowed, dried, ground into a meal, made into a stiff flour dough, and eaten. (59:51) **Candy** Gum chewed as gum. (59:53) *Dried Food* Nuts dried and stored for future use. *Ice Cream* Nuts roasted, dried, ground into a meal, made into a stiff dough, frozen, and eaten like ice cream. *Soup* Nuts roasted, ground into a fine flour, and cooked into a thick soup. (59:51) **Shoshoni Unspecified** Nuts formed an important part of the diet. (117:443) **Tubat-**

- ulabal** *Unspecified* Nuts used extensively for food. (193:15) **Washo** *Dried Food* Roasted nuts eaten fresh or stored for later use. (10:13) *Porridge* Nuts used to make mush. (10:14)
- **Fiber**—**Cahuilla** *Basketry* Needles and roots used to make baskets. *Building Material* Bark used as roofing material in house construction. (15:102) **Havasupai** *Building Material* Wood used for house construction. *Caulking Material* Melted gum used to plug a leaky canteen or other containers. (197:205)
  - **Dye**—**Hopi** *Unspecified* Gum used to prepare certain dyes. (200:63)
  - **Other**—**Apache, Western** *Waterproofing Agent* Pitch used to waterproof baskets. (26:185) **Cahuilla** *Cash Crop* Nuts used as an important trade item. *Fasteners* Pitch used as an adhesive for mending pottery and baskets and attaching arrow points to shafts. *Fuel* Wood, high combustibility, used for firewood and kindling. *Incense & Fragrance* Wood, gave off a pleasant odor, used for firewood. (15:102) **Havasupai** *Cash Crop* Nuts sold in considerable quantities to stores. *Fuel* Wood used for firewood. *Paint* Gum used in the paint used on the base of arrows. *Tools* Wood used to make the knife for trimming mescal heads. *Waterproofing Agent* Gum used to waterproof basketry water jugs and basketry drinking cups. (197:205) **Hopi** *Fasteners* Gum used in making turquoise mosaics. *Waterproofing Agent* Gum used in waterproofing and repairing pottery vessels. (200:63) **Kawaiisu** *Jewelry* Cracked shells pinched by children onto the ear lobes and worn as ornaments. *Waterproofing Agent* Hot pitch applied to waterproof the inside and outside of a basketry water bottle. (206:50)

***Pinus monticola*** Dougl. ex D. Don, Western White Pine

- **Drug**—**Hoh** *Cough Medicine* Gum used for coughs. (137:58) **Kwakiutl** *Cough Medicine* Pitch used for coughs. *Dermatological Aid* Pitch used for sores. *Gastrointestinal Aid* Pitch used for stomachaches. *Reproductive Aid* Gum chewed by women for fertility and by girls to become pregnant without sex. (183:270) **Lummi** *Tuberculosis Remedy* Infusion of bark taken for tuberculosis. (79:16) **Mahuna** *Antirheumatic (Internal)* Plant used for rheumatism. (140:60) **Nitinaht** *Dermatological Aid* Pitch mixed with melted deer tallow and used as a skin cosmetic. (186:73) **Quileute** *Cough Medicine* Gum used for coughs. (137:58) **Quinault** *Blood Medicine* Infusion of bark taken to purify the blood. *Gastrointestinal Aid* Infusion of bark taken for stomach disorders. (79:16) **Shuswap** *Tuberculosis Remedy* Bark used for tuberculosis. (123:51) **Skagit** *Antirheumatic (External)* Decoction of young shoots used as a soak for rheumatism. *Dermatological Aid* Decoction of bark used for cuts and sores. *Tuberculosis Remedy* Infusion of bark taken for tuberculosis. (79:16) **Thompson** *Panacea* Infusion of boughs used for any kind of illness by old people. *Unspecified* Pitch used medicinally. (187:103)
- **Food**—**Paiute** *Unspecified* Nuts served as a minor source of subsistence. (111:40) **Salish, Coast** *Dried Food* Inner bark dried in cakes and used for food. *Unspecified* Inner bark eaten fresh. (182:71) **Shuswap** *Unspecified* Cones used for food. (123:51) **Thompson** *Unspecified* Gummy substance collected from trunk and branches and chewed. (164:493)
- **Fiber**—**Okanagan-Colville** *Canoe Material* Bark used to make sturgeon nosed canoes. (188:29) **Skagit** *Canoe Material* Used rarely to make light dugouts. (79:16)
- **Other**—**Nitinaht** *Ceremonial Items* Wood used to make small totem poles and model canoes. *Hunting & Fishing Item* Pitch used as protective coating for whaling and fishing equipment. (186:73) **Paiute** *Ceremonial Items* Green branch thrown into the fire and rain will come. (111:40) **Salish, Coast** *Fasteners* Pitch used to fasten arrowheads onto shafts. (182:71)

***Pinus muricata*** D. Don, Bishop Pine

- **Food**—**Pomo, Kashaya** *Unspecified* Nuts eaten fresh. *Winter Use* *Food* Nuts dried for winter use. (72:92)
- **Fiber**—**Pomo** *Basketry* Root used in basketry. (66:11)
- **Other**—**Pomo** *Fuel* Wood used for firewood. (66:11) **Pomo, Kashaya** *Fasteners* Pitch used like glue. *Hunting & Fishing Item* Roots used in making fish traps. (72:92)

***Pinus ponderosa*** P. & C. Lawson, Ponderosa Pine

- **Drug**—**Cheyenne** *Dermatological Aid* Pitch used to hold the hair in place. (82:50) Gum used as a salve or ointment for sores and scabby skin. (83:6) **Flathead** *Analgesic* Poultice of pitch and melted animal tallow or lard used for backache. *Antirheumatic (External)* Poultice of pitch and melted animal tallow or lard used for rheumatism. Boughs used in sweat lodges for muscular pain. *Dermatological Aid* Pitch warmed and used for boils and carbuncles. Needles jabbed into the scalp for dandruff. *Gynecological Aid* Needles heated and used for faster delivery of the placenta. (82:50) **Navajo** *Ceremonial Medicine* Pollen used in the "Night Chant" medicine. (55:23) **Navajo, Ramah** *Ceremonial Medicine* Cones with seeds removed used as a ceremonial medicine. Needles used as a ceremonial emetic. *Cough Medicine* Compound decoction of needles taken for bad coughs and fever. *Emetic* Needles used as a ceremonial emetic. *Febrifuge* Compound decoction of needles taken for fever and bad cough. (191:13, 14) **Okanagan-Colville** *Abortifacient* Green buds never chewed by pregnant women because it would cause a miscarriage. *Antihemorrhagic* Decoction of plant tops taken for internal hemorrhaging. *Dermatological Aid* Poultice of pitch applied to boils. *Eye Medicine* Infusion of dried buds used as an eyewash. *Febrifuge* Decoction of plant tops taken for high fevers. *Gastrointestinal Aid* Good medicine for the stomach. *Witchcraft Medicine* Needles spread on the floor of the sweat house to fight off "plhax," witchcraft. (188:29) **Okanagon** *Eye Medicine* Decoction of gum used as an ointment for sore eyes. (125:41) **Paiute** *Dermatological Aid* Poultice of dry, chewed pitch used on boils. (111:40) **Shuswap** *Dermatological Aid* Plant used to remove underarm odors. *Panacea* and *Pediatric Aid* Infusion of plant used as a wash for sick babies. *Stimulant* Used in the sweat house to hit oneself at the hottest point. (123:52) **Thompson** *Antirheumatic (External)* Pitch used for aching backs, joints, and limbs. (187:104) *Dermatological Aid* Boiled gum mixed with grease and used as an ointment for sores. (164:466) Decoction of tops used in washing the face and head by girls who want fair and smooth skin. (164:508) Poultice of gum applied to boils, sores, and chapped skin. White gum was used as a poultice with buckskin on boils and chronic sores while reddish gum was used on hard, red sores. The reddish gum was mixed with any kind of lard, such as deer fat, strained, and used on sores. Pitch made into a salve and used for boils or cuts. The pitch ointment was left on the skin for 3 or 4 days. It was said to get quite itchy, but after a while, the pitch was removed with the bandage and then took effect. If the pitch stuck to the skin, it was not ready to remove. *Ear*

- Medicine* Poultice of warmed gum applied to the ear for earache. (187:104) *Eye Medicine* Decoction of gum used as an ointment for sore eyes. (125:41) Boiled gum mixed with grease and used as an ointment for inflamed eyes. (164:466) *Pediatric Aid* Gum used on babies' skin like baby oil. The ointment caused the baby to sleep all the time, just like aspirin. *Sedative* Gum used on babies' skin like baby oil causing them to sleep all the time. (187:104) *Veterinary Aid* Hot gum and animal fat poured on horses' sores or wounds. (164:514)
- **Food—Blackfoot** *Unspecified* Inner bark used for food. (97:18) **Cheyenne** *Candy* Pitch chewed as a gum. (82:50) *Unspecified* Seeds used for food. Young male cones chewed for the juice. (83:6) **Coeur d'Alene** *Unspecified* Nutlets used for food. (178:90) Cambium layer used for food. (178:91) **Havasupai** *Unspecified* Nuts roasted and eaten. (197:206) **Kawaiisu** *Unspecified* Kernels eaten raw. (206:51) **Klamath** *Sauce & Relish* Cambium layer scraped off and eaten as a relish. *Starvation Food* Cambium layer scraped off and eaten in time of famine. *Unspecified* Sweet layer between bark and sapwood scraped and used for food. (45:89) **Miwok** *Dried Food* Cones' extracted nuts gathered, dried in the sun, and eaten. (12:150) **Montana Indian** *Unspecified* Inner bark eaten in the spring. (19:18) Inner bark formerly used for food. (82:50) **Navajo, Ramah** *Unspecified* Bark eaten raw. (191:13) **Okanagan-Colville** *Candy* Pitch used as chewing gum. Green buds chewed and the juice sucked by children. *Frozen Food* Cambium frozen for future use. *Unspecified* Cambium used for food. Seeds eaten like nuts. *Winter Use Food* Seeds stored for winter use. (188:29) **Okanagon** *Staple* Nutlets or seeds used as a principal food. Cambium layer used as a principal food. (178:239) *Unspecified* Seeds used for food. (125:39) **Paiute** *Candy* Dried pitch used as chewing gum. *Dried Food* Inner bark sun dried and stored. *Unspecified* Inner bark eaten fresh and raw. Seeds used for food. (111:40) **Sanpoil & Nespelem** *Unspecified* Cambium layer eaten raw. This was an important food. The bark was removed in sections with the aid of wooden wedges. Sap scrapers were made from the rib of the deer by cutting it to an appropriate length, sharpening the edges, and rounding the working end. (as *P. poderosa* 131:103) Pine nuts eaten without special preparation. (131:104) **Shasta** *Bread & Cake* Nuts dried, powdered, made into small cakes, and eaten with a very thin mush made of grass seeds. *Dried Food* Nuts dried and eaten. *Unspecified* Whole nuts mixed with powdered salmon and eaten. (93:308) **Spokan** *Unspecified* Nutlets used for food. Cambium used for food. (178:344) **Thompson** *Porridge* Seeds and whitebark pine seeds placed in a bag, pounded into a powder, mixed with water, and eaten. (187:104) *Unspecified* Seeds used for food. (125:39) Cambium of young twigs eaten. (164:484) Seeds eaten in small quantities. (164:491)
  - **Fiber—Diegueño** *Basketry* Needles used in making baskets. *Building Material* Bark used to make shelters for those gathering acorns in the mountains. (84:29) **Hopi** *Building Material* Used for large roof timbers. (200:63) **Isleta** *Building Material* Wood used to furnish the beams or "vega (or viga) poles" of the houses. (100:37, 51) **Karok** *Basketry* Bigger roots used for basketry. (6:45) Root fibers used to make baskets. (148:378) **Kawaiisu** *Building Material* Needles used as an outer covering for the winter house. (206:51) **Klamath** *Canoe Material* Logs used to make boats. (45:89) Single logs used to make dugout canoes. (46:728) **Maidu** *Basketry* Roots used as the overlay twine warps and overlay twine weft bases in the manufacture of baskets. (173:71) **Mendocino Indian** *Building Material* Wood used for lodge poles. (41:307) **Mewuk** *Building Material* Branches with tips down used to hang from the top of acorn caches to keep out the rain in winter. (117:346) **Montana Indian** *Building Material* Most important lumber tree in the state. *Canoe Material* Trunks hollowed by fire to make dugouts. (19:18) **Navajo, Ramah** *Building Material* Wood used for hogans, fence posts, and corral construction. Branches often used to cover a sweat house. *Furniture* Wood used to make boards and cradle bow of the two-board type of baby cradle. A young tree, in an area where few people go and therefore not likely to be cut down, is selected, corn pollen is sprinkled on it from the bottom upward, and a solid piece is taken from the east side. As the cradle is made, prayers are said but no songs sung. If the first baby is a boy, the top tips of the boards are truncated, if it is a girl, they are pointed; thereafter either kind can be used for either sex and the cradle is saved for later children unless the baby dies. The cradle is rubbed with red ochre and tallow to protect it from evil spirits who never use red paint. Formerly, a buckskin covering was used over the top but now a blanket is considered better. The footboard is moved down as the baby grows and the cradle is discarded when the baby begins to walk. Small branches of a tree from which squirrels have gnawed the bark are tied together in a row about 5 inches long and tied to the cradle to keep the baby from hurting himself (until he is 3 years old). Dirt from a spot where a squirrel has landed on the ground is placed in a buckskin bag and attached to the sticks as an additional precaution (effective even when the baby is grown). *Snow Gear* Wood slabs tied together with yucca fiber used as snowshoes. (191:13) **Okanagan-Colville** *Building Material* Needles used as insulation for underground storage pits. *Canoe Material* Wood used to make dugout canoes. (188:29) **Paiute** *Building Material* Bark used to make houses. (111:40) **Thompson** *Building Material* Needles used as insulation on the roofs of pit houses. (187:104) **Thompson, Upper (Fraser Band)** *Canoe Material* Used to make dugout canoes. **Thompson, Upper (Lytton Band)** *Canoe Material* Used to make dugout canoes. (164:499) **Wintoon** *Basketry* Straight stems used for making baskets. (117:264)
  - **Dye—Cheyenne** *Blue* Roots used to make a blue dye. (83:6) *Unspecified* Used to make a dye. (83:46)
  - **Other—Blackfoot** *Tools* Twigs used as twirling sticks in fire making. (97:18) **Cheyenne** *Musical Instrument* Pitch used to make bone and wooden whistles and flutes. (82:50) Gum placed inside whistles and flutes to improve their sounds. (83:6) **Crow** *Fasteners* Pitch used as glue. (82:50) **Hopi** *Ceremonial Items* Plant parts smoked ceremonially. *Tools* Used to make ladders. (200:63) **Hualapai** *Cash Crop* Trees considered a main economic resource for the tribe. (195:21) **Isleta** *Fuel* Wood used as principal source of firewood. (100:37) **Kawaiisu** *Ceremonial Items* Branch used to hang the outgrown cradle of a male child so the boy will grow strong like the tree. *Containers* Needles used to form a layer in the roasting of the yucca "heart." (206:51) **Klamath** *Fuel* Dried needles stuffed loosely between cross sticks and lighted to ignite them. (46:735) **Mendocino Indian** *Fasteners* Pitch used for the adhesive qualities. *Fuel* Wood used for fuel. (41:307) **Montana Indian** *Tools* Twigs used for twirling sticks in fire production. (19:18) **Navajo, Ramah** *Containers* Bark used to make containers for sand painting pigments. *Fuel* Wood used for firewood. *Stable*

*Gear* Wood used to make saddle horns, pommel, and back. (191:13) *Nez Perce Fasteners* Pitch used as glue. *Lighting* Pitch used to make torches. (82:50) *Okanagan-Colville Ceremonial Items* Smoldering cones thrown into the air in the direction of rain clouds to make the rain stop. *Fasteners* Pitch used to cement feathers onto arrow shafts. *Hide Preparation* Rotten wood used for smoking deer hides. (188:29) *Paiute Fasteners* Pitch used as glue in arrow making and other manufactures. *Preservative* Pitch used to protect pictures painted on rocks. *Waterproofing Agent* Melted pitch used to waterproof the outside of water jugs woven of willow. (111:40) *Shuswap Fuel* Bark used as fuel because it cooled quickly and enemies cannot tell how long ago camp was broken. *Hide Preparation* Wood used for smoking buckskin. (123:52) *Thompson Containers* Needles used to line food caches and cellars. *Cooking Tools* Needles supported on a framework of poles used for drying cooked berries. The needles were interspersed between layers of dried salmon or any other food being stored. They kept the food dry but allowed air to circulate around it to prevent spoiling. (187:104) *Incense & Fragrance* Needles inserted into the flesh under the arms by girls who wish their armpits to smell sweet. (164:508) *Smoking Tools* Plant tops hollowed out with mock orange sticks and used to make the stems of smoking pipes. *Waterproofing Agent* Pitch used to waterproof moccasins and other items. (187:104) *Thompson, Upper (Fraser Band) Fuel* Dry cones mixed with fir bark to make the best smoke for smoking skins. *Thompson, Upper (Lytton Band) Fuel* Dry cones mixed with fir bark to make the best smoke for smoking skins. (164:499)

***Pinus ponderosa*** P. & C. Lawson **var. *ponderosa***, Ponderosa Pine

- **Other**—Tewa of Hano *Ceremonial Items* Leaves attached to prayer feathers prepared during December ceremonies. (as *P. brachyptera* 138:41)

***Pinus ponderosa* var. *scopulorum*** Engelm., Ponderosa Pine

- **Food**—Apache, Chiricahua & Mescalero *Bread & Cake* Inner bark scraped off and baked in the form of cakes. *Starvation Food* Seeds ground, rolled into balls, and eaten raw only in times of food scarcity. *Unspecified* Bark boiled or eaten raw. (as *P. scopulorum* 33:43)
- **Fiber**—Jemez *Building Material* Used as timbers for roofs. (as *P. scopulorum* 44:26) **Keres, Western** *Building Material* Wood used for logs. (as *P. scopulorum* 171:61)
- **Other**—Hopi *Ceremonial Items* Plant smoked ceremonially. Plant used in the Su-ya-lung ceremony. *Season Indicator* Needles attached to prayer sticks to bring cold. *Tools* Wood used to make kiva ladders. (42:348)

***Pinus pungens*** Lamb., Table Mountain Pine

- **Fiber**—Cherokee *Building Material* Wood used for lumber. *Canoe Material* Wood used to make 30- to 40-foot-long canoes. (80:49)
- **Other**—Cherokee *Decorations* Wood used to carve. (80:49)

***Pinus quadrifolia*** Parl. ex Sudworth, Parry Pinyon

- **Drug**—Cahuilla *Dermatological Aid* Pitch used as a face cream by girls to prevent sunburn. (15:102)
- **Food**—Cahuilla *Baby Food* Nuts used as one of the few foods fed to babies instead of a natural milk diet. *Beverage* Ground nuts mixed with water and used as a drink. *Dried Food* Cooked, unshelled nuts stored for future use. *Porridge* Roasted, shelled nuts eaten whole or

ground and made into mush. (15:102) **Diegueño** *Unspecified* Nuts used for food. (84:30) Seeds used for food. (88:215)

- **Fiber**—Cahuilla *Basketry* Needles and roots used to make baskets. *Building Material* Bark used as roofing material in house construction. (15:102)
- **Other**—Cahuilla *Cash Crop* Nuts used as an important trade item. *Fasteners* Pitch used as an adhesive for mending pottery and baskets and attaching arrow points to shafts. *Fuel* Wood, high combustibility, used for firewood and kindling. *Incense & Fragrance* Wood, gave off a pleasant odor, used for firewood. (15:102)

***Pinus resinosa*** Soland., Red Pine

- **Drug**—Algonquin, Tête-de-Boule *Cold Remedy* Poultice of wetted, inner bark applied to the chest for strong colds. (132:129) **Ojibwa** *Stimulant* Powdered, dried leaves used as a reviver or inhalant. *Unspecified* Bark and cones used medicinally. (153:379) **Ojibwa, South** *Analgesic* Decoction of leaves and bark used as herbal steam for headache and backache. Poultice of crushed leaves and bark applied for headache. (91:198) **Potawatomi** *Stimulant* Leaves used as a fumigant to revive a comatose patient. (154:70)
- **Fiber**—Ojibwa *Building Material* Resin boiled twice, added to tallow, and used for mending roof rolls of birch bark. *Caulking Material* Resin boiled twice, added to tallow, and used for caulking canoes. (153:421)
- **Other**—Chippewa *Toys & Games* Used for toys. (53:378) **Ojibwa** *Waterproofing Agent* Resin boiled twice and added to tallow to make a serviceable waterproof pitch. (153:421)

***Pinus rigida*** P. Mill., Pitch Pine

- **Drug**—Iroquois *Antirheumatic (Internal)* Pitch taken for rheumatism. *Burn Dressing* Pitch used for burns. *Dermatological Aid* Compound infusion applied as a poultice to break open boils. Pitch applied to cuts in joints and boils. *Laxative* Pitch taken as a laxative. (87:267) **Shinnecock** *Dermatological Aid* Poultice applied to boils and abscesses. (30:121)
- **Fiber**—Cherokee *Building Material* Wood used for lumber. *Canoe Material* Wood used to make 30- to 40-foot-long canoes. (80:49)
- **Other**—Cherokee *Decorations* Wood used to carve. (80:49) **Iroquois** *Insecticide* Smoke from burning leaves used to get rid of fleas. (87:267)

***Pinus sabiniana*** Dougl. ex Dougl., California Foothill Pine

- **Drug**—Costanoan *Antirheumatic (Internal)* Pitch chewed for rheumatism. (21:6) **Mendocino Indian** *Burn Dressing* Pitch applied to burns. *Dermatological Aid* Pitch applied to sores. (41:307) **Miwok** *Burn Dressing* Crushed nuts' charcoal applied to burns. *Dermatological Aid* Crushed nuts' charcoal applied to sores and abrasions. (12:149) **Wailaki** *Antirheumatic (Internal)* Gum chewed for rheumatism. **Yokia** *Analgesic* Burning twigs and leaves used as sweat bath for rheumatism pain. *Antirheumatic (External)* Burning twigs and leaves used as sweat bath for rheumatism pain. *Dermatological Aid* Burning twigs and leaves used as sweat bath for bruises. *Diaphoretic* Burning twigs and leaves used as sweat bath for rheumatism pain and bruises. *Tuberculosis Remedy* Infusion of bark taken for consumption. (41:307)
- **Food**—Costanoan *Unspecified* Pine nuts used for food. (21:248) **Kawaiisu** *Porridge* and *Unspecified* Seeds eaten fresh, roasted,

boiled, or pounded, and mixed with cold water. (206:52) **Mendocino Indian Starvation Food** Fresh, inner bark formerly used for food during prolonged winters when other foods were scarce. (41:307) **Mewuk Unspecified Nuts** used for food. (117:333) **Miwok Unspecified Nuts** and cone pith eaten for food. (12:149) **Pomo Unspecified Nuts** rarely used for food. (11:79) **Pomo, Kashaya Staple** Dried nut eaten whole or pounded into a flour and mixed with pinole. *Unspecified Nuts* eaten fresh. *Winter Use Food* Nuts dried for winter use. (72:92) **Shasta Bread & Cake** Nuts dried, powdered, made into small cakes, and eaten with a very thin mush made of grass seeds. *Dried Food* Nuts dried and eaten. *Unspecified* Whole nuts mixed with powdered salmon and eaten. (93:308) **Tubatulabal Unspecified Nuts** used extensively for food. (193:15) **Wailaki Candy** Gum chewed by children for pleasure. (41:307)

- **Fiber—Kawaiisu Building Material** Needles used as an outer covering for the winter house. (206:52) **Mewuk Basketry** Sprouts used to make coiled bowls. (117:335) **Miwok Basketry** Twigs and rootlets used as sewing material for coiled basket. *Building Material* Needles used for thatch. Bark used for house coverings. *Mats, Rugs & Bedding* Needles used for bedding and floor covering. (12:149) **Pomo Basketry** Root fiber used to make twined baskets. (9:138) Root wood used to make V-shaped baskets for carrying acorns. (41:307) Young growth split into ribbon-like strands and used for basket body material. (117:296) **Wintoon Building Material** Wood used to make planks for houses. (117:273)

- **Other—Karak Decorations** Nuts used as beads to decorate dance dresses. (148:378) **Kawaiisu Containers** Needles used to form a layer in the roasting of the yucca "heart." *Smoke Plant* Seeds put into the liquid used to moisten dry tobacco meal and shaped into plugs. (206:52) **Mahuna Protection** Trees used for protection from lightning. (140:40) **Mendocino Indian Decorations** Pitch burned and the resulting soot used for tattooing. *Musical Instrument* Logs formerly hollowed out by fire and used as drums for dances. **Pomo Fasteners** Pitch exudations used to fasten feathers on arrows. (41:307) *Hunting & Fishing Item* Pitch used to make the eyes for deer hunting masks. (117:284) **Yuki Fasteners** Formerly used like a glue to hold feathers on the body in times of war. (41:307)

### *Pinus* sp., Pine

- **Drug—Alabama Antidiarrheal** Decoction of inner bark taken for dysentery. (177:5) **Cherokee Other** Decoction of root used on deer-skin for a "drawing plaster." (203:74) **Navajo Ceremonial Medicine** Needles, in water, used ceremonially. In the first ceremony of the fourth day of the Mountain Chant, the medicine man carried a bowl of pine needles in water in which the patient washed both hands. He then drank some of it and finally bathed his feet and legs to the thighs, his arms and shoulders, his body, and then his face and head, before he emptied the remainder over his back. (55:23) **Sanpoil Dermatological Aid** Poultice of pitch applied to bring boils to a head. (131:221)

- **Food—Apache, Western Unspecified** Inner bark used for food. (26:192) **Paiute Dried Food** Roasted, dried seeds stored for later use without further cooking. (111:43)

- **Fiber—Navajo Building Material** Bark used as a covering for summer shelters. (55:23)

- **Other—Navajo Ceremonial Items** Gum mixed with gypsum and used as a white paste on the "spirits of the fire" in the Fire Dance. Wood used to make the bull-roarer for some ceremonies. *Containers* Wood used to make a tinderbox for fire by friction. Bark used to make the trays for the colored powders used in the sand paintings. *Fuel* Wood used extensively for firewood. *Toys & Games* Wood used to make the ball for the game, shinny. *Waterproofing Agent* Gum used to make water bottles watertight. (55:23) **Paiute Ceremonial Items** Pine nuts used around the wrist when dancing, the number of nuts increased magically. (111:43)

### *Pinus strobus* L., Eastern White Pine

- **Drug—Abnaki Cough Medicine** Decoction of bark and another plant used for coughs. (144:163) **Algonquin, Tête-de-Boule Cold Remedy** Poultice of wetted, inner bark applied to the chest for strong colds. (132:129) **Chippewa Dermatological Aid** Compound poultice of trunk of young tree applied to cuts and wounds. (53:352) Poultice of pitch applied to felons and similar inflammations. (71:123) **Delaware, Ontario Analgesic** Poultice of pitch applied to draw out the poison and pain from boils. (175:68) *Dermatological Aid* Pitch applied to boils to "draw out the poison and reduce the pain." *Kidney Aid* Infusion of twigs taken for kidney disorders. (175:68, 82) *Pediatric Aid* Powder from decayed plant used on babies "because of its healing properties." (175:68) *Pulmonary Aid* Infusion of twigs taken for pulmonary diseases. (175:68, 82) *Unspecified* Powder from decayed plant used on babies "because of its healing properties." (175:68) **Iroquois Anti-rheumatic (Internal)** Decoction of raw bark taken for rheumatism. (87:264) *Blood Medicine* Infusion of young trees taken as a blood tonic, "don't vomit." (87:266) *Cold Remedy* Compound decoction taken for colds, coughs, and rheumatism. (87:264) Steam from decoction of bark inhaled for head cold. (87:267) *Cough Medicine* Compound decoction or infusion taken for colds, coughs, or rheumatism. (87:264) *Dermatological Aid* Powdered wood used on chafed babies, sores, and improperly healed navels. (87:265) Compound decoction used as wash and compound poultice applied to deep cuts. Decoction of bark used for skin eruptions and scabs. Poultice used for drawing thorns and slivers. Strained, compound poultice used for cuts, bruises, sores, and scabs on face. (87:266) Compound decoction used as salve for cuts and wounds. Decoction of shaved knots, "better than penicillin," used for poison ivy. (87:267) *Dietary Aid* Decoction of knots taken to increase the appetite. *Emetic* Decoction of one knot taken to vomit for regular consumption. (87:265) Decoction of branches taken as a spring emetic. Decoction used as an emetic "when someone dies and you can't forget it." (87:266) *Gastrointestinal Aid* Raw bark taken for the stomach and cramps. (87:265) Compound decoction taken to clean the stomach. *Liver Aid* Compound decoction taken for gall. (87:266) *Misc. Disease Remedy* Raw bark taken to prevent typhoid. (87:265) *Orthopedic Aid* Decoction of leaves used as a wash for nonwalking 2- or 3-year-old infants. (87:264) Compound poultice of leaves bound to broken bones. Poultice of gum applied to broken coccyx. Raw bark taken for rheumatism and stiff limbs. (87:265) *Other* Compound used as a sugar medicine. (87:267) *Panacea* Leaves burned in spring and fall, smoke used to fill the house and prevent all sickness. (87:265) *Pediatric Aid* Decoction of leaves used as a wash for nonwalking 2- or 3-year-old infants. (87:

264) Powdered wood used on chafed babies, sores, and improperly healed navels. (87:265) *Psychological Aid* Decoction used as an emetic “when someone dies and your can’t forget it.” (87:266) *Pulmonary Aid* Compound decoction of bark taken by fat people for breathing difficulties. (87:264) Compound decoction taken for shortness of wind. (87:266) Salve applied to chest for chest cold. *Throat Aid* Taken for infections and sore throats. (87:267) *Tuberculosis Remedy* Decoction of knots taken for consumption. Decoction of one knot taken to vomit for regular consumption. (87:265) Decoction of twigs taken for scrofula. (87:267) *Venereal Aid* Compound decoction used as a salve on dry, cracked, venereal diseased penis. (87:265) *Veterinary Aid* Decoction of twigs used for boils on horses’ necks. (87:267) *Witchcraft Medicine* Burning branch smoke drove away ghosts from the house of returning people. Smoke from plant used as a wash for a person who has seen a dead person. (87:266) **Menominee Analgesic** Infusion of bark, an important medicine, taken for chest pain. (151:46) *Dermatological Aid* Poultice of pounded inner bark applied to sores. (54:132) Poultice of pounded bark applied to wounds, sores, or ulcers. (151:46) **Micmac Cold Remedy** Bark, leaves, and stems used for colds. *Cough Medicine* Bark, leaves, and stems used for coughs. *Dermatological Aid* Bark used for wounds and sap used for hemorrhaging. (40:59) Boiled inner bark used for sores and swellings. (156:317) **Hemostat** Sap used for hemorrhaging. *Kidney Aid* Plant parts used for kidney trouble. *Misc. Disease Remedy* Bark, leaves, and stems used for gripe. Inner bark, bark, and leaves used for scurvy. (40:59) **Mohegan Analgesic** Poultice of sap or gum applied for boil and abscess pains. (176:74) *Cold Remedy* Cold infusion of bark taken for colds. (174:264) Bark, sap, or gum used for coughs, colds, and boils. (176:130) *Cough Medicine* Infusion of bark used for stubborn cough and pitch chewed for cough. (30:121) Infusion of bark taken for coughs and colds. (174:269) Infusion of dried inner bark used as a cough remedy. *Dermatological Aid* Sap or gum applied to boil or abscess pains. (176:74, 130) **Montagnais Cold Remedy** Boiled gum taken for colds. *Throat Aid* Boiled gum taken for sore throats. *Tuberculosis Remedy* Boiled gum taken for consumption. (156:315) **Ojibwa Stimulant** Dried leaves used as a reviver or inhalant. (153:379) *Unspecified* Plant used for medicinal purposes. (135:244) Bark and cones used medicinally. (153:379) **Ojibwa, South Analgesic** Boiled, crushed leaves used as herbal steam for headache and backache. Poultice of crushed leaves applied for headaches. *Herbal Steam* Boiled, crushed leaves used as herbal steam for headache and backache. (91:198) **Potawatomi Dermatological Aid** Pitch or resin of wood and bark used as the base for a salve. (154:70) **Shinnecock Cough Medicine** Infusion of bark used for stubborn cough and pitch chewed for cough. (30:121)

- **Food—Iroquois Unspecified** Species used for food. (196:119) **Micmac Beverage** Bark used to make a beverage. (159:258) **Ojibwa Unspecified** Young staminate catkins of this pine cooked for food and stewed with meat. One might think this would taste rather like pitch, but they assured the writer that it was sweet and had no pitchy flavor. (153:407)
- **Fiber—Cherokee Building Material** Wood used for lumber. *Canoe Material* Wood used to make 30- to 40-foot-long canoes. (80:49) **Ojibwa Caulking Material** Pitch from boiled cones and resin used for caulking and waterproofing. (153:421) *Mats, Rugs & Bedding* Boughs

used on the ground or floor, covered with blankets and other bedding, and used as a bed. (135:244) **Potawatomi Caulking Material** Pitch rendered from the bark or cone and used to caulk boats and canoes. (154:122)

- **Other—Cherokee Decorations** Wood used to carve. (80:49) **Micmac Fuel** Wood used for kindling and fuel. (159:258) **Ojibwa Waterproofing Agent** Pitch from boiled cones and resin used for caulking and waterproofing. (153:421)

### ***Pinus taeda* L., Loblolly Pine**

- **Fiber—Cherokee Building Material** Wood used for lumber. *Canoe Material* Wood used to make 30- to 40-foot-long canoes. (80:49)
- **Other—Cherokee Decorations** Wood used to carve. (80:49)

### ***Pinus virginiana* P. Mill., Virginia Pine**

- **Drug—Cherokee Anthelmintic** Given for worms. *Antidiarrheal* Bark chewed “to check bowels.” *Antirheumatic (External)* Oil used to bathe painful joints. *Antirheumatic (Internal)* Syrup taken for chronic rheumatism. *Ceremonial Medicine* Branches burned and ashes thrown on hearth fire after a death in the home. *Cold Remedy* Infusion, steam, and oil used in various ways as cold remedy. *Cough Medicine* Syrup taken by pregnant women with cough. *Dermatological Aid* Poultice of tar used on scald head, tetterworm, stone bruises, and ulcers. *Febrifuge* Compound infusion of needles used to “break out fever.” *Gastrointestinal Aid* Taken for colics and gout. *Gynecological Aid* Compound infusion of needles used for “child-bed-fevers.” Syrup taken by pregnant women with cough and poultice used for swollen breasts. *Hemorrhoid Remedy* Compound infusion of root taken for piles. *Kidney Aid* Taken for “weak back or kidneys.” *Laxative* Taken as a gentle laxative. *Misc. Disease Remedy* Taken for gout, to break out measles, and for complications from mumps. *Orthopedic Aid* Taken for “weak back or kidneys.” *Other* Skim turpentine off root decoction and use on deer’s skin for drawing plaster. *Respiratory Aid* Compound infusion of needles in apple juice taken by ball-players “for wind.” Syrup taken for “catarrh (ulcer of the lungs).” *Sedative* Given for hysterics. *Stimulant* Compound infusion of root taken as a stimulant. *Tuberculosis Remedy* Tar used for consumption. *Urinary Aid* Syrup used as poultice for swollen testicles caused by mumps. *Venereal Aid* Syrup taken for chronic rheumatism and venereal disease. (80:49) **Choctaw Anthelmintic** Infusion of buds taken for worms. (as *P. mitis* 25:24) **Rappahannock Kidney Aid** Rolled, hardened sap used as pills and taken for kidney trouble. (161:27)
- **Other—Cherokee Incense & Fragrance** Needles or gum used to scent soap. (80:49)

### **Piperaceae, see *Peperomia*, *Piper***

### ***Piper*, Piperaceae**

#### ***Piper methysticum* G. Forst., Kava**

- **Drug—Hawaiian Analgesic** Roots chewed for sharp, blinding headaches. *Cold Remedy* Plant and other plants pounded, squeezed, the resulting juice heated and taken for chills and hard colds. *Dermatological Aid* and *Eye Medicine* Roots chewed to prevent contagious diseases of all sorts, especially skin diseases and eye troubles. *Gastrointestinal Aid* Plant ashes and other ashes rubbed on children for a disorderly stomach. *Gynecological Aid* Plant pieces and other plants mixed with water and taken for weaknesses arising from vir-

ginity. Plant pieces and other plants mixed with coconut milk and taken for displacement of the womb. *Misc. Disease Remedy* Roots chewed to prevent contagious diseases of all sorts, especially skin diseases and eye troubles. *Oral Aid* Plant ashes and other ashes rubbed on children for thick white coatings on the tongue. *Pediatric Aid* Buds chewed by children for general debility. (2:17)

### *Piper nigrum* L., Black Pepper

- **Drug**—Cherokee *Dermatological Aid* Used as an astringent. *Stimulant* Used as a stimulus. (80:48)
- **Food**—Cherokee *Spice* Used to season food. (80:48) Haisla & Hanakiala *Spice* Used for seasoning. (43:259)

### *Piperia*, Orchidaceae

#### *Piperia elegans* (Lindl.) Rydb., Hillside Bogorchid

- **Food**—Pomo, Kashaya *Vegetable* Baked bulbs eaten like baked potatoes. (as *Habenaria elegans* 72:62)

#### *Piperia* sp.

- **Drug**—Mahuna *Dermatological Aid* Plant used for black widow and scorpion bites. *Eye Medicine* Plant used for trachoma. *Snakebite Remedy* Plant used for rattlesnake bites. (140:34)

#### *Piperia unalascensis* (Spreng.) Rydb., Alaska Rein Orchid

- **Food**—Pomo, Kashaya *Vegetable* Baked bulbs eaten like baked potatoes. (as *Habenaria unalascensis* 72:62)

### *Piptatherum*, Poaceae

#### *Piptatherum miliaceum* (L.) Coss., Smiloglass

- **Food**—Paiute *Staple* Roasted and ground into flour. (as *Oryzopsis miliacea* 167:244)

### *Pipturus*, Urticaceae

#### *Pipturus* sp., Mamaki

- **Drug**—Hawaiian *Pediatric Aid* Seeds eaten by infants for general debility of the body. *Strengtheners* Seeds eaten by expectant mothers for general debility of the body. Seeds eaten by infants for general debility of the body. (2:71)
- **Other**—Hawaiian *Tools* Wood made into clubs and used to beat the tapa. (2:71)

### *Pisum*, Fabaceae

#### *Pisum sativum* L., Garden Pea

- **Food**—Cherokee *Vegetable* Peas used for food. (80:48) Navajo, Ramah *Vegetable* Used as a garden vegetable. (191:34) Okanagan-Colville *Unspecified* Seeds used for food. (188:106) Papago *Unspecified* Species used for food. Pima *Unspecified* Species used for food. (36:120)

### Pittosporaceae, see *Pittosporum*

### *Pittosporum*, Pittosporaceae

#### *Pittosporum* sp., Ho-a-wa

- **Drug**—Hawaiian *Tuberculosis Remedy* Fruit and other plants pounded and resulting liquid used as a wash for scrofulous neck swellings. (2:44)

### *Pityopsis*, Asteraceae

#### *Pityopsis graminifolia* (Michx.) Nutt. var. *graminifolia*,

Narrowleaf Silkgrass

- **Drug**—Choctaw *Oral Aid* Burned plant ashes used for mouth sores. (as *Chrysopsis graminea* 25:24) Plant ashes used as powder for mouth sores. (as *Chrysopsis graminifolia* 177:60) Seminole *Cold Remedy* Infusion of plant taken for colds. *Febrifuge* Infusion of plant taken for fevers. (as *Chrysopsis graminifolia* 169:283)

### *Plagiobothrys*, Boraginaceae

#### *Plagiobothrys arizonicus* (Gray) Greene ex Gray, Arizona Popcornflower

- **Dye**—Diegueño *Red* Red coating on outside leaves and lower stems used as a red pigment to paint the body and face. (84:30)

#### *Plagiobothrys fulvus* var. *campestris* (Greene) I. M. Johnston, Fulvous Popcornflower

- **Food**—Mendocino Indian *Staple* Seeds used to make pinole. Seeds winnowed, parched, and flour eaten dry. *Unspecified* Crisp, tender shoots and flowers used as a sweet and aromatic food. (as *P. campestris* 41:382)
- **Dye**—Mendocino Indian *Red* Matter at the base of young leaves used by women and children to stain their cheeks crimson. (as *P. campestris* 41:382)
- **Other**—California Indian *Paint* Red matter around root used as rouge. (as *P. campestris* 118:55)

#### *Plagiobothrys jonesii* Gray, Mojave Popcornflower

- **Other**—Kawaiisu *Paint* Juice from the stem and root juncture used to paint the face “just for fun.” (206:52)

#### *Plagiobothrys nothofulvus* (Gray) Gray, Rusty Popcornflower

- **Food**—Yuki *Vegetable* Young leaves eaten as greens. (49:85)
- **Other**—Kawaiisu *Paint* Juice from the stem and root juncture used to paint the face “just for fun.” (206:52)

### *Plagiomnium*, Mniaceae, moss

#### *Plagiomnium insigne* (Mitt.) Koponen, Badge Mniium

- **Drug**—Bella Coola *Antirheumatic (External)* Poultice of crushed “leaves” applied to infections and swellings. *Blood Medicine* Poultice of “leaves” used for blood blisters. *Breast Treatment* Poultice of “leaves” used for breast abscesses in women. *Dermatological Aid* Poultice of “leaves” used for boils. (184:196) Oweekeno *Antirheumatic (External)* Heated or cooled poultice of boiled plant and Sitka spruce pitch applied to sore and swollen joints. *Dermatological Aid* Poultice of boiled plant and Sitka spruce pitch applied to cuts for the swelling. *Internal Medicine* Plant dried, chewed for the juice, and swallowed for internal ailments. (43:52)

***Plagiomnium juniperinum***, Hair Cap Moss

- **Drug**—Heiltzuk *Antirheumatic (External)* Plant used as an anti-swelling medicine. (43:53)

**Plantaginaceae**, see *Plantago****Plantago***, Plantaginaceae***Plantago aristata*** Michx., Largebracted Plantain

- **Drug**—Cherokee *Analgesic* Poultice of leaf applied for headache. *Antidiarrheal* Infusion of root taken for dysentery and infusion given to check babies' bowels. *Antidote* Infusion used for poisonous bites and stings. *Burn Dressing* Poultice of wilted or scalded leaf applied to burns. *Dermatological Aid* Poultice used for blisters, ulcers, insect stings, and infusion used orally and as wash. *Eye Medicine* Juice used for sore eyes. *Gastrointestinal Aid* Taken for bowel complaints. *Gynecological Aid* Infusion taken to "check discharge" and used as a douche. *Orthopedic Aid* Compound infusion of leaf given to strengthen a child learning to walk. *Pediatric Aid* Compound infusion of leaf given to strengthen a child learning to walk. Infusion given to check babies' bowels. *Snakebite Remedy* Infusion used for snakebites. *Urinary Aid* Taken for "bloody urine." (80:50)

***Plantago australis* ssp. *hirtella*** (Kunth) Rahn, Mexican Plantain

- **Drug**—Tolowa *Dermatological Aid* Poultice of leaves applied to cuts and boils. Yurok *Dermatological Aid* Poultice of steamed leaves applied to boils. (as *P. hirtella* 6:45)

***Plantago cordata*** Lam., Heartleaf Plantain

- **Drug**—Houma *Burn Dressing* and *Dermatological Aid* Poultice of raw leaves and oil or grease used on cuts, sores, burns, and boils. (158:62)

***Plantago lanceolata*** L., Narrowleaf Plantain

- **Drug**—Cherokee *Analgesic* Poultice of leaf applied for headache. *Antidiarrheal* Infusion of root taken for dysentery and infusion given to check babies' bowels. *Antidote* Infusion used for poisonous bites, stings, and snakebites. *Burn Dressing* Poultice of wilted or scalded leaf applied to burns. *Dermatological Aid* Poultice used for blisters, ulcers, insect stings, and infusion used orally and as wash. *Eye Medicine* Juice used for sore eyes. *Gastrointestinal Aid* Taken for bowel complaints. *Gynecological Aid* Infusion taken to "check discharge" and used as a douche. *Orthopedic Aid* Compound infusion of leaf given to strengthen a child learning to walk. *Pediatric Aid* Compound infusion of leaf given to strengthen a child learning to walk. Infusion given to check babies' bowels. *Snakebite Remedy* Infusion used for snakebites. *Urinary Aid* Taken for "bloody urine." (80:50) **Kawaiisu** *Ear Medicine* Infusion of leaves put in the ear for earaches. (206:52)
- **Food**—Mendocino Indian *Fodder* Plant used as fodder for cattle. (41:388)

***Plantago macrocarpa*** Cham. & Schlecht., Seashore Plantain

- **Drug**—Aleut *Tonic* Decoction of root taken as a tonic. (8:428)
- **Food**—Alaska Native *Vegetable* Young, tender leaves used raw in salads or cooked as spinach. (85:43)

***Plantago major*** L., Common Plantain

- **Drug**—Abnaki *Analgesic* Poultice of leaves applied for pain. *Antirheumatic (External)* Poultice of leaves applied to the foot for rheu-

matism or swellings. (144:172) **Algonquin, Quebec** *Poultice* Leaves used as poultices. (18:231) **Algonquin, Tête-de-Boule** *Burn Dressing* Poultice of leaves applied to burns. *Dermatological Aid* Poultice of leaves applied to wounds and contusions. (132:130) **Carrier** *Cough Medicine* Decoction of plant taken for coughs. *Gastrointestinal Aid* Decoction of plant taken for stomach problems. *Laxative* Decoction of plant taken as a laxative. (31:86) **Cherokee** *Analgesic* Poultice of leaf applied for headache. *Antidiarrheal* Infusion of root taken for dysentery and infusion given to check babies' bowels. *Antidote* Infusion used for poisonous bites, stings, and snakebites. *Burn Dressing* Poultice of wilted or scalded leaf applied to burns. *Dermatological Aid* Poultice used for blisters, ulcers, insect stings, and infusion used orally and as wash. *Eye Medicine* Juice used for sore eyes. *Gastrointestinal Aid* Taken for bowel complaints. *Gynecological Aid* Infusion taken to "check discharge" and used as a douche. *Orthopedic Aid* Compound infusion of leaf given to strengthen a child learning to walk. *Pediatric Aid* Compound infusion of leaf given to strengthen a child learning to walk. Infusion given to check babies' bowels. *Snakebite Remedy* Infusion used for snakebites. *Urinary Aid* Taken for "bloody urine." (80:50) **Chippewa** *Antirheumatic (External)* Poultice of chopped, fresh leaves applied for rheumatism. (53:362) *Dermatological Aid* Simple or compound poultice of chopped root or fresh leaf used for inflammations. (53:348) *Snakebite Remedy* Poultice of chopped, fresh leaves, and root applied to snakebites. (53:353) **Costanoan** *Febrifuge* Decoction of roots taken for fever. *Laxative* Decoction of roots taken for constipation. (21:11) **Delaware** *Gynecological Aid* Plant combined with other plant parts and used for female diseases. *Unspecified* Poultice of crushed leaves used medicinally. (176:37) **Delaware, Oklahoma** *Gynecological Aid* Compound containing plant used for "female diseases." *Unspecified* Poultice of crushed leaves used for unspecified ailments. (175:31, 82) **Delaware, Ontario** *Dermatological Aid* Poultice of crushed leaves applied to bruises. (175:66, 82) **Hesquiatic** *Dermatological Aid* Poultice of leaves used for drawing out the pus from sores, cuts, and infections. (185:70) **Iroquois** *Blood Medicine* Infusion of roots with other roots used to purify the blood. (141:59) *Dermatological Aid* Poultice of leaves applied to sores. Poultice of boiled flower stems applied to abscesses. *Gastrointestinal Aid* Infusion of seeds taken to facilitate digestion and reduce intestinal inflammation. *Gynecological Aid* Infusion of seeds taken to regulate and shorten menses. (142:98) *Respiratory Aid* Infusion of roots with other roots used for difficult breathing caused by lower chest pains. (141:59) **Isleta** *Gastrointestinal Aid* Infusion of leaves used as a stomach tonic. (100:38) **Kawaiisu** *Ear Medicine* Infusion of leaves put in the ear for earaches. (206:52) **Keres, Western** *Blood Medicine* Roots used for blood medicine. (171:61) **Kwakiutl** *Dermatological Aid* Poultice of leaves applied to draw blisters on sores and swellings. (183:287) **Mahuna** *Dermatological Aid* Plant used to dislodge and draw out poisonous thorns and splinters. (140:16) **Meskwaki** *Burn Dressing* Infusion of leaves used for burns. *Dermatological Aid* Fresh leaf used for swellings. *Diuretic* Infusion of leaves taken for bowel troubles and as a urinary. *Gastrointestinal Aid* Infusion of leaves used for bowel troubles and as a urinary. (152:234, 235) **Mohegan** *Burn Dressing* Leaves bound over burns. *Dermatological Aid* Leaves bound over bruises. (174:266) Poultice of fresh leaves applied to insect bites, cuts, or swellings. (176:74, 130) *Snakebite*

*Remedy* Leaves bound over snakebites to draw out poison. (174:266) Poultice of fresh leaves applied to snake and insect bites to remove poison. (176:74) **Navajo, Ramah Disinfectant** Cold infusion of plant taken for "lightning infection." *Panacea* Root used as a "life medicine." (191:45) **Nitinaht Dermatological Aid** Poultice of moist leaves placed on cuts, boils, and open sores. *Disinfectant* Poultice of moist leaves placed on infections and boils. *Gastrointestinal Aid* Leaves chewed and swallowed for stomach ulcers. (186:115) **Ojibwa Burn Dressing** Poultice of soaked leaves bound on burns, scalds, and snakebites. *Dermatological Aid* Poultice of soaked leaves bound on bruises, sprains, sores, and bee stings. *Orthopedic Aid* Poultice of soaked leaves bound on bruises, sprains, or sores. *Snakebite Remedy* Poultice of soaked leaves bound on snakebites. (153:380, 381) *Unspecified* Poultice of pounded leaves applied for medicinal purposes. (5:2317) **Okanagan-Colville Dermatological Aid** Poultice of mashed leaves applied to kill the germs of sores. (188:111) **Paiute Cold Remedy** Decoction of root taken for colds. *Dermatological Aid* Poultice of leaves bound onto cuts and wounds to promote healing without scars. *Pulmonary Aid* Decoction of root taken for pneumonia. (180:119, 120) **Ponca Dermatological Aid** Hot leaves applied to foot to draw out thorns or splinters. (70:115) **Potawatomi Dermatological Aid** Poultice of heated leaf bound on swellings and inflammations. *Throat Aid* Decoction of root taken to lubricate throat for removal of lodged bone. (154:71, 72) **Rappahannock Febrifuge** Poultice of ground leaves used for fever. (161:25) **Shinnecock Dermatological Aid** Poultice of pounded leaves applied to draw out inflammation from sore spots. *Eye Medicine* Infusion of leaves used as a wash for sore eyes. (30:119) **Shoshoni Antirheumatic (External)** Compound poultice of leaves applied to wounds, swellings, and rheumatism. (180:119, 120) *Dermatological Aid* Poultice and infusion of whole plant used for battle bruises. Poultice of raw leaves with wild clematis applied to wounds. (118:43) Compound poultice of leaves applied for wounds, bruises, swellings, and boils. Poultice of mashed leaves applied to dropsical swellings and infections. *Disinfectant* Poultice of mashed leaves applied to dropsical swellings and infections. *Gastrointestinal Aid* Decoction of root taken for stomach trouble. *Kidney Aid* Poultice of mashed leaves applied to dropsical swellings and infections. (180:119, 120) **Shuswap Dermatological Aid** Poultice of mashed plants applied to sores. *Diaphoretic* Leaf rubbed on the body to produce sweating. (123:64) **Thompson Dermatological Aid** Poultice of chewed leaves used for sores and carbuncles. *Hemorrhoid Remedy* Poultice of chewed leaves used for hemorrhoids. (187:236) **Yurok Dermatological Aid** Poultice of steamed leaves applied to boils. (6:46)

- **Food—Acoma Unspecified** Young leaves used for food. (32:42) **Cherokee Vegetable** Leaves cooked and eaten as greens. (80:50) Cut leaves and stems cooked with fatback. (126:52) **Keres, Western Unspecified** Tender shoots used for food. (171:61) **Laguna Unspecified** Young leaves used for food. - **Other**—Iroquois *Protection* Decoction of smashed, dried roots taken to frighten away ghosts. (as *Habenaria fimbriata* 87:290)

*Platanthera leucostachys* Lindl., Bog Orchid

- **Drug**—Thompson *Analgesic* Plant used in the sweat bath for rheumatism and various joint and muscle aches. *Antirheumatic (External)* Heated decoction of plant used as a wash for rheumatism. Plant used in the sweat bath for rheumatism and various joint and muscle aches. (as *Habenaria leucostachys* 164:467) *Disinfectant* Decoction of whole plant used as a wash after the purifying sweat bath. (as *Habenaria leucostachys* 164:504) *Herbal Steam* Plant used in the sweat bath for rheumatism and various joint and muscle aches. Plant steamed in the sweat bath for rheumatism and other joint and muscle aches. (as *Habenaria leucostachys* 164:467) *Hunting Medicine* Plant used to wash guns "to insure good luck when hunting." *Love Medicine* Plant used in wash by women "hoping to gain a mate and have success in love." (as *Habenaria leucostachys* 164:506) *Orthopedic Aid* Plant used in the sweat bath for sprains, stiff and aching muscles and joints. (as *Habenaria leucostachys* 164:467)
- **Other**—Thompson *Good Luck Charm* Plant used in a wash by both

sexes "to obtain riches and property." Plant used in wash to make young men "lucky, good looking and sweet smelling." (as *Habenaria leucostachys* 164:506)

*Platanthera × media* (Rydb.) Luer, Bog Orchid

- **Drug**—Potawatomi *Love Medicine* Women rubbed this plant on their cheek as a love charm to enable them to secure a good husband. (as *Habenaria dilatata* var. *media* 154:121)

*Platanthera orbiculata* (Pursh) Lindl. **var. orbiculata**, Large Roundleaved Orchid

- **Drug**—Iroquois *Dermatological Aid* Poultice of leaves applied to sores caused by scrofula and cuts. *Tuberculosis Remedy* Poultice of leaves bound to sore caused by scrofula. (as *Habenaria orbiculata* 87:289) **Montagnais** *Dermatological Aid* Poultice of leaves applied to blisters on hands or feet. (as *Habenaria orbiculata* 156:313)

*Platanthera psycodes* (L.) Lindl., Lesser Purple Fringed Orchid

- **Drug**—Iroquois *Analgesic* Infusion of single root and flowers given to young children for cramps. (as *Habenaria psycodes* 87:289) *Gynecological Aid* Infusion of root taken as a parturition medicine. *Panacea* Compound infusion taken or placed on injured part, a "Little Water Medicine." (as *Habenaria psycodes* 87:290) *Pediatric Aid* Infusion of single root and flowers given to young children for cramps. (as *Habenaria psycodes* 87:289)

*Platanthera sparsiflora* (S. Wats.) Schlechter **var. sparsiflora**, Canyon Bog Orchid

- **Food**—San Felipe *Starvation Food* Plant used as food in times of food shortage. (as *Habenaria sparsiflora* 32:30)

*Platanthera stricta* Lindl., Modoc Bog Orchid

- **Drug**—Kwakiutl *Love Medicine* Compound with plant used as a love charm. (as *Habenaria saccata* 183:275)

### *Platanus*, Platanaceae

*Platanus occidentalis* L., American Sycamore

- **Drug**—Cherokee *Abortifacient* Compound decoction taken "for menstrual period." *Antidiarrheal* Taken for dysentery. (80:58) Infusion of inner bark taken for dysentery. (177:26) *Cathartic* Taken as a purgative. (80:58) Decoction of roots taken by women during menses as a cathartic. (177:26) *Cough Medicine* Infusion of inner bark taken for cough. *Dermatological Aid* Bark ooze used as wash for infected sores and infusion given for infant rash. *Emetic* Taken as an emetic. (80:58) Decoction of roots taken by women during menses as an emetic. (177:26) *Gastrointestinal Aid* Compound used in steam bath for indigestion or biliousness. *Gynecological Aid* Compound decoction used to aid in expelling afterbirth. (80:58) Decoction of roots taken by women during menses as an emetic and cathartic. (177:26) *Misc. Disease Remedy* Infusion of inner bark taken for measles. *Other* Compound infusion of bark taken for "bad disease." *Pediatric Aid* Infusion given for infant rash. *Urinary Aid* Taken for milky urine. (80:58) Infusion of inner barks taken for difficult urination with yellow discharge. (177:26) **Creek** *Tuberculosis Remedy* Bark used in medicine taken for pulmonary tuberculosis. (172:659) Decoction of bark taken for pulmonary tuberculosis. (177:26) **Delaware** *Cold Remedy* Infusion of three chips from east side of honey locust and sycamore trees

used as drinks for colds. *Throat Aid* Infusion of bark mixed with honey locust bark and used as a gargle for hoarseness and sore throat. (176:30) **Delaware, Oklahoma** *Cold Remedy* Compound infusion of bark taken for colds. (as *P. occidentalis* 175:25) *Throat Aid* Compound infusion of bark gargled for hoarseness and sore throat. (as *P. occidentalis* 175:25, 78) **Iroquois** *Antirheumatic (External)* Compound infusion of bark and roots used as foot soak for rheumatism. *Dermatological Aid* Compound decoction used for skin eruptions, scabs, and eczema. (87:348) **Mahuna** *Gastrointestinal Aid* Plant used for internal ulcers. *Respiratory Aid* Plant used for catarrh. (140:24) **Meskwaki** *Analgesic* Bark eaten for internal pains. *Blood Medicine* Infusion of bark taken as a blood purifier and used for colds. *Cold Remedy* Infusion of bark used for colds and to purify the blood. *Dermatological Aid* Compound containing bark used on knife or ax wounds. *Dietary Aid* Bark eaten to become fat. *Hemostat* Bark used for hemorrhages and lung troubles. *Misc. Disease Remedy* Infusion of bark used as wash to dry smallpox pustules and prevent scars. *Pulmonary Aid* Bark used for lung troubles and hemorrhages. (152:235)

- **Fiber—Cherokee** *Building Material* Wood used for lumber. (80:58)
- **Other—Cherokee** *Fasteners* Wood used to make buttons. (80:58)

### *Platanus racemosa* Nutt., California Sycamore

- **Drug—Costanoan** *Panacea* Infusion of plant used as a general remedy. (21:20) **Diegueño** *Blood Medicine* Decoction of bark used as a tonic for the blood. (88:217) *Respiratory Aid* Decoction of bark taken for a week for asthma. (84:30) **Kawaiisu** *Unspecified* Infusion of bark taken for the relief of some indisposition. Decoction of small bark pieces taken for an unrecorded indisposition. (206:53)
- **Food—Costanoan** *Unspecified* Inner bark used for food. (21:249) **Kawaiisu** *Beverage* Small bark pieces boiled in water and drunk warm with sugar. (206:53)
- **Fiber—Cahuilla** *Building Material* Limbs and branches used in house construction. (15:105)
- **Other—Costanoan** *Cooking Tools* Leaves used to wrap bread during baking. (21:249)

### *Platystemon*, Papaveraceae

#### *Platystemon californicus* Benth., California Creamcups

- **Food—Mendocino Indian** *Vegetable* Green leaves eaten as greens. (41:351)

### *Pleomele*, Agavaceae

#### *Pleomele aurea* (Mann) N. E. Br., Golden Hala Pepe

- **Drug—Hawaiian** *Febrifuge* Buds, bark, root bark, and other plants pounded and resulting liquid taken for chills and high fever. *Pulmonary Aid* Leaves, bark, root bark, and other plants pounded and resulting liquid taken for lung troubles. *Respiratory Aid* Leaves, bark, root bark, and other plants pounded and resulting liquid taken for asthma. (as *Dracaena aurea* 2:42)

### *Pleopeltis*, Polypodiaceae, fern

#### *Pleopeltis polypodioides* (L.) Andrews & Windham **ssp. polypodioides**, Resurrection Fern

- **Drug—Houma** *Analgesic* Decoction of fronds taken for headaches. *Oral Aid* Cold decoction of fronds used as a wash for babies' sore

mouth or thrush. Decoction of fronds used for bleeding gums. *Pediatric Aid* Cold decoction of fronds used as a wash for babies' sore mouth or thrush. *Vertigo Medicine* Decoction of fronds taken for dizziness. (as *Marginaria polypodioides* 158:55)

### *Pleurotus*, Tricholomataceae, fungus

#### *Pleurotus ostreatus*, Oyster Mushroom

- **Food—Pomo, Kashaya** *Vegetable* Cooked on hot stones, baked in the oven, or fried. (72:131)

### *Pluchea*, Asteraceae

#### *Pluchea foetida* (L.) DC., Stinking Camphorweed

- **Drug—Choctaw** *Febrifuge* Decoction of leaves taken "during attacks of fever." (25:23) Decoction of leaves taken for fevers. (177:63)

#### *Pluchea sericea* (Nutt.) Cav., Arrow Weed

- **Drug—Havasupai** *Throat Aid* Leaves chewed or boiled for throat irritations. (162:285) **Paiute** *Antidiarrheal* Decoction of root taken for diarrhea, especially bloody diarrhea. *Gastrointestinal Aid* Raw root chewed or decoction of root taken for indigestion. (180:120) **Pima** *Antidiarrheal* Decoction of roots taken for diarrhea. (47:105) *Dermatological Aid* Infusion of root bark used as a wash for the face and sore eyes. (as *P. borealis* 146:79) *Eye Medicine* Decoction of roots used for sore eyes. (47:105) Infusion of bark used as a wash for the face and sore eyes. (as *P. borealis* 146:79) *Gastrointestinal Aid* Decoction of roots taken for stomachaches. *Pediatric Aid* and *Sedative* Poultice of roots applied to soothe nervous child that cried while sleeping. *Veterinary Aid* Poultice of chewed roots applied to snakebites on horses. (47:105)
- **Food—Cahuilla** *Unspecified* Roots roasted and eaten. (15:105) **Pima** *Forage* Plants browsed by deer, horses, and cattle. (47:105)
- **Fiber—Cahuilla** *Building Material* Long, slender, pliable stems with leaves used as a roofing material. Long, slender, pliable stems with leaves interwoven with stronger materials into walls of houses. Used in the construction of ramadas, windbreaks, fences, and granaries. (15:105) **Havasupai** *Building Material* Plant used for thatch in building houses. *Furniture* Straight stems used to form the back of the cradleboard. (as *Tessaria sericea* 197:249) **Hualapai** *Building Material* Shafts used to make thatch for houses. *Furniture* Shafts used to make cradleboard beds. (195:27) **Luiseño** *Building Material* Plant formerly used to roof houses. (as *P. borealis* 155:228)
- **Other—Cahuilla** *Hunting & Fishing Item* Used to make arrow shafts. (15:105) **Havasupai** *Hunting & Fishing Item* Stems used to make arrows, especially for children. *Tools* Sticks used to peg a hide to the ground while stretching it during tanning. (as *Tessaria sericea* 197:249) **Hualapai** *Hunting & Fishing Item* Shafts used to make cradleboard beds, arrow shafts, and thatch for houses. (195:27) **Luiseño** *Hunting & Fishing Item* Plant used to make arrows. (as *P. borealis* 155:206) Plant sometimes used to make arrows. (as *P. borealis* 155:228) **Papago** *Tools* Used as a spindle for spinning cotton. (34:59)

#### *Pluchea* sp., Indian Balm

- **Drug—Houma** *Febrifuge* Decoction of dried plant taken for fevers. *Hemorrhoid Remedy* Decoction of dried plant taken for piles. (158:63)

### **Plumbaginaceae**, see *Limonium*, *Plumbago*

**Plumbago**, Plumbaginaceae**Plumbago zeylanica** L., Wild Leadwort

- **Drug**—Hawaiian *Antirheumatic* (External) Poultice of pounded bark, leaves, and roots applied to swollen parts of the body. *Dermatological Aid* Leaves, stems, other plant parts, and fruit juice made into a paste and applied to sores. (as *Chunbago zelanica* 2:25)

**Polemoniaceae**, see *Collomia*, *Eriastrum*, *Gilia*, *Ipomopsis*, *Leptodactylon*, *Linanthus*, *Loeseliastrum*, *Navarretia*, *Phlox*, *Polemonium*

## *Polemonium*, Polemoniaceae

***Polemonium elegans*** Greene, Elegant Jacobs ladder

- **Drug**—**Thompson Dermatological Aid** Compound decoction containing several species used as a wash for the head and hair. (164:467)

***Polemonium pulcherrimum* ssp. *lindleyi*** (Wherry) V. Grant, Lindley's Polemonium

- **Drug**—**Thompson Dermatological Aid** Decoction of plant used as a wash for the head and hair. (as *P. humile* 164:467)

***Polemonium reptans*** L., Greek Valerian

- **Drug**—**Meskwaki Cathartic** Compound containing root used as powerful physic. **Diuretic** Compound containing root used as powerful urinary. (152:235, 236)

## *Poliomintha*, Lamiaceae

***Poliomintha incana*** (Torr.) Gray, Hoary Rosemarymint

- **Drug**—**Comanche Adjuvant** Leaves chewed by medicine woman retaining other drugs in her mouth to sweeten the taste. Used to increase the efficacy of other medicine plants. (as *Poliomentha inean* 99:7) **Hopi Antirheumatic (External)** Plant used for rheumatism. **Ear Medicine** Plant used for ear trouble. (42:351) **Navajo, Kayenta Dermatological Aid** Plant used for sores. (205:41) **Tewa Antirheumatic (External)** Plant used for rheumatism. **Ear Medicine** Plant used for ear trouble. (42:351)
- **Food**—**Hopi Dried Food** Dried plant stored for winter use. (42:351)

Dried for winter use. (200:91) **Spice** Flowers boiled with a certain mush to give it a flavor. (190:165) Flowers used as flavoring. (200:91) *Unspecified* Plant eaten raw or boiled. (42:351) Plant dipped in salted water and eaten. (56:19) Flowers eaten. Flowers eaten and also boiled with a certain mush to give it a flavor. (190:165) Eaten raw or boiled. (200:91) **Tewa Dried Food** Dried plant stored for winter use. **Spice** Flowers used as flavoring. *Unspecified* Plant eaten raw or boiled. (42:351)

## **Polygalaceae**, see *Polygala*

## *Polygala*, Polygalaceae

***Polygala alba*** Nutt., White Milkwort

- **Drug**—**Sioux Ear Medicine** Decoction of root used for earache. (19:18)

***Polygala cornuta*** Kellogg, Sierran Milkwort

- **Drug**—**Miwok Analgesic** Decoction used for pains. **Cold Remedy** Decoction used for colds. **Cough Medicine** Decoction used for coughs. **Emetic** Decoction used as an emetic. (12:172)

***Polygala lutea*** L., Orange Milkwort

- **Drug**—**Choctaw Dermatological Aid** Poultice of dried blossoms mixed with water applied to swellings. (25:24) Poultice of dried blossoms applied to swellings. (177:35) **Seminole Antirheumatic (External)**, **Blood Medicine**, and **Heart Medicine** Plant used for sapiyi sickness: heart palpitations, yellow skin, body swelling, and short breath. (169:264) **Other** Complex infusion of whole plant taken for chronic conditions. (169:272) **Respiratory Aid** Plant used for sapiyi sickness: heart palpitations, yellow skin, body swelling, and short breath. (169:264)

***Polygala paucifolia*** Willd., Gaywings

- **Drug**—**Iroquois Dermatological Aid** Infusion of plant taken and poultice of leaves applied to abscesses on limbs. (87:368) Decoction of plant used as a wash for boils and syphilitic sores. (87:369) **Orthopedic Aid** Compound poultice of plants applied to sore legs. (87:368) **Pediatric Aid** and **Veneral Aid** Decoction of plant used as a wash for babies with syphilitic sores. (87:369)

***Polygala polygama*** Walt., Racemed Milkwort

- **Drug**—**Montagnais Cough Medicine** Decoction of plant used as a cough medicine. (156:314)

***Polygala rugelii*** Shuttlw. ex Chapman, Yellow Milkwort

- **Drug**—**Seminole Antirheumatic (External)**, **Blood Medicine**, **Heart Medicine**, and **Respiratory Aid** Plant used for sapiyi sickness: heart palpitations, yellow skin, body swelling, and short breath. (169:264) **Snakebite Remedy** Infusion of plant taken for snakebites. (169:297)

***Polygala senega*** L., Seneca Snakeroot

- **Drug**—**Blackfoot Respiratory Aid** Decoction of roots used for respiratory diseases. (97:42) **Cherokee Abortifacient** Used as an emmenagogue. **Antirheumatic (Internal)** Used for rheumatism. **Cathartic** Infusion of root or root powder taken as a cathartic. **Cold Remedy** Used for colds. **Diaphoretic** Used as a sudorific. **Diuretic** Used as a diuretic and cathartic. **Expectorant** Infusion of root or root powder taken as an expectorant. **Kidney Aid** Used for "dropsy" and infusion of root or root powder used as an expectorant. **Other** Used for "inflammatory

complaints" and swellings. *Pulmonary Aid* Used for pleurisy and croup. *Snakebite Remedy* Root chewed, "sufficient quantity" swallowed, and wound poulticed with the rest. (80:55) **Chippewa** *Anti-convulsive* Compound infusion or decoction of root taken for "fits." (51:63, 64) Compound decoction of root taken for convulsions. (53:336) *Heart Medicine* Compound decoction of root prepared ceremonially and taken for heart trouble. (53:338) *Hemostat* Compound infusion or decoction of root used on bleeding wounds. (51:63, 64) Compound decoction of root used on bleeding wounds. (53:336) *Stimulant* Compound infusion or decoction of root taken or used externally as stimulant. (51:63, 64) Compound decoction of root taken as a stimulant. (53:364) *Tonic* Compound decoction of root or dried root alone taken as a tonic. (53:336) *Unspecified* Roots carried for general health and safe journeys. (53:376) **Cree, Woodlands** *Blood Medicine* Infusion of blooms taken as a blood medicine. *Oral Aid* Root used for sore mouths. *Panacea* Powdered roots added to a many herb remedy and used for various ailments. *Throat Aid* Chewed root juice swallowed for sore throats. *Toothache Remedy* Root applied directly to a tooth for toothache. (109:51) **Malecite** *Cold Remedy* Dried roots chewed for colds. (116:244) **Meskwaki** *Heart Medicine* Decoction of root taken for heart trouble. (152:236) **Micmac** *Cold Remedy* Root used for colds. (40:59) **Ojibwa** *Unspecified* Plant used for medicinal purposes. (135:235) **Ojibwa, South** *Cold Remedy* Decoction of root used for colds. *Cough Medicine* Decoction of root used for cough. *Gastrointestinal Aid* Infusion of leaves taken to "destroy water bugs that have been swallowed." *Throat Aid* Infusion of leaves taken for sore throat. (91:199)

### *Polygala verticillata* L., Whorled Milkwort

- **Drug—Cherokee** *Other* Infusion taken for "summer complaint." (80:45) **Iroquois** *Other* and *Pediatric Aid* Infusion of plant given to babies with "summer complaint." (87:369)

**Polygonaceae**, see *Chorizanthe*, *Coccoloba*, *Eriogonum*, *Fagopyrum*, *Oxyria*, *Polygonum*, *Rheum*, *Rumex*

### *Polygonatum*, Liliaceae

#### *Polygonatum biflorum* (Walt.) Ell., King Solomon's Seal

- **Drug—Cherokee** *Antidiarrheal* Taken for dysentery. *Breast Treatment* Used for breast diseases. *Dermatological Aid* Hot poultice of bruised root used to draw risings or carbuncles. *Gastrointestinal Aid* Infusion of roasted roots taken for stomach trouble. *Gynecological Aid* Taken by females afflicted with "whites or profuse menstruation." *Pulmonary Aid* Used for lung diseases. *Tonic* Root used as a mild tonic for "general debility." (80:56) **Chippewa** *Sedative* Plant used to insure sound sleep. (71:126) **Menominee** *Analgesic* Compound poultice of boiled, mashed root applied for sharp pains. (54:134) *Stimulant* Smudge of compound containing dried root used to revive unconscious patient. (151:41) **Meskwaki** *Stimulant* Root heated on coals and fumes inhaled by unconscious patient to revive him. (152:230) **Ojibwa** *Cathartic* Root used as a physic and decoction used as cough remedy. *Cough Medicine* Decoction of root used as a cough remedy and root used as a physic. (153:374) **Rappahannock** *Dermatological Aid* Decoction of roots applied as a salve to cuts, bruises, and sores. *Orthopedic Aid* Decoction of roots applied as a salve to cuts and bruises. (161:30)

- **Food—Cherokee** *Bread & Cake* Roots dried, beaten into flour, and used to make bread. (80:56) Roots used to make bread. (126:47) *Spice* Roots ground and used as salt. (80:56) *Unspecified* Young growth boiled, fried, and eaten. (204:252) *Vegetable* Leaves cooked and eaten as greens. (80:56) Stems and leaves parboiled, rinsed, fried with grease and salt until soft, and eaten as a potherb. *Winter Use Food* Stems and leaves mixed with bean salad and wanegedum (*angelico*, *Ligusticum canadense*), blanched, and boiled for 3 hours in a can. - **Drug—Meskwaki Antidiarrheal** Infusion of leaves and stems used for children with flux. *Gynecological Aid* Compound decoction of root taken for injured womb. *Oral Aid* Root used for mouth sores. *Pediatric Aid* Infusion of leaves and stems used for children with flux. (as *P. muhlenbergii* 152:236) **Ojibwa Analgesic** Infusion of plant taken for stomach pain. *Gastrointestinal Aid* Infusion of plant used for stomach pain. *Hunting Medicine* Plant used as hunting medicine. (as *P. muhlenbergii* 153:381) Dried flowers included in the hunting medicine and smoked to attract deer to the hunter. (as *P. muhlenbergii* 153:431)
- **Food—Lakota Unspecified Species** used for food. (as *P. coccineum* 139:54) **Sioux Sauce & Relish** Young shoots eaten in the spring as a relish. (as *P. emersum* 19:18)

***Polygonum amphibium* var. *stipulaceum* Coleman**, Water Smartweed

- **Drug—Potawatomi Unspecified Root** used for unspecified ailments. (154:72)

***Polygonum arenastrum* Jord. ex Boreau**, Ovalleaf Knotweed

- **Drug—Iroquois Gynecological Aid** Decoction of whole plant used for miscarriage injuries. *Love Medicine* Powdered, dry root placed in other person's tea as a love medicine. *Orthopedic Aid* Decoction of whole plant used for lame back. *Veterinary Aid* Decoction of plant mixed with feed and given to heifers to restore their milk. (87:314)

***Polygonum argyrocoleon* Steud. ex Kunze**, Silversheath Knotweed

- **Food—Cocopa Dried Food** Seeds parched, ground, and eaten. (37:187)

***Polygonum aviculare* L.**, Prostrate Knotweed

- **Drug—Cherokee Analgesic** Taken for painful urination. Infusion mixed with meal used as poultice for pain. *Antidiarrheal* Infusion of root given to children for diarrhea. *Dermatological Aid* Used for "scaldhead." *Pediatric Aid* Infusion of root given to children for diarrhea. Leaves rubbed on children's thumb to prevent thumb sucking. *Poison* Used to poison fish and infusion mixed with meal used as poultice for pain. *Poultice* Used as a poultice for "swelled and in-

flamed parts." *Urinary Aid* Taken for "gravel," painful urination, and bloody urine. (80:55) **Choctaw Gynecological Aid** Strong infusion of whole plant taken freely to prevent abortion. (28:286) **Iroquois Antidiarrheal** Infusion of plant and another plant given to children for diarrhea. (141:40) *Dermatological Aid* Compound poultice of raw plants applied to cuts and wounds. *Orthopedic Aid* and *Pediatric Aid* Compound decoction taken and poultice used for baby's broken coccyx. (87:313) Infusion of plant and another plant given to children for diarrhea. (141:40) **Mendocino Indian Dermatological Aid** Decoction of whole plant used as an astringent. (41:345) **Navajo, Ramah Analgesic** and *Gastrointestinal Aid* Warm infusion of plant taken for stomachache. (191:23) **Thompson Antidiarrheal** and *Pediatric Aid* Decoction of whole plant taken, especially by children, for diarrhea. (187:238)

***Polygonum bistorta* L.**, Meadow Bistort

- **Drug—Aleut Tonic Root** used as a tonic. (189:263)
- **Food—Eskimo, Inupiat Unspecified Roots** eaten raw and cooked. *Vegetable* Leaves preserved in seal oil and eaten with any meat or eaten raw in salads. (98:19)

***Polygonum bistorta* var. *plumosum* (Small) Boivin**, Meadow Bistort

- **Food—Alaska Native Dietary Aid** Leaves rich in vitamin C and pro-vitamin A. *Soup* Roots boiled and added to stews. *Unspecified Roots* boiled, mixed with seal oil, and eaten. *Vegetable* Leaves mixed with other greens, cooked, and eaten. (85:49)

***Polygonum bistortoides* Pursh**, American Bistort

- **Drug—Miwok Dermatological Aid** Poultice of root used on sores and boils. (12:172)
- **Food—Blackfoot Soup** Roots used in soups and stews. (97:33) Roots used in soups and stews. (114:278) **Cheyenne Unspecified** Fresh roots boiled with meat. (as *Bistorta bistortoides* 76:173) Species used for food. (83:46) Roots formerly used for food. (83:32)

***Polygonum careyi* Olney**, Carey's Smartweed

- **Drug—Potawatomi Cold Remedy** and *Febrifuge* Infusion of entire plant taken for cold accompanied by fever. (154:72)

***Polygonum cuspidatum* Sieb. & Zucc.**, Japanese Knotweed

- **Food—Cherokee Vegetable** Cooked leaves used for food. (126:53)

***Polygonum densiflorum* Meisn.**, Denseflower Knotweed

- **Drug—Hawaiian Blood Medicine** Infusion of pounded whole plants and other plants strained and taken to purify the blood. (as *P. glabrum* 2:48)

***Polygonum douglasii* Greene**, Douglas's Knotweed

- **Food—Klamath Porridge** Ground, parched seeds used to make meal and eaten dry or mixed with water and boiled. (45:95) **Montana Indian Staple** Parched seeds made into meal. (19:18)

***Polygonum douglasii* ssp. *johnstonii* (Munz) Hickman**, Johnston's Knotweed

- **Drug—Navajo, Ramah Nose Medicine** Plant used as snuff for nose troubles. (as *P. sawatchense* 191:24)

***Polygonum hydropiper* L.**, Marshpepper Knotweed

- **Drug—Cherokee Analgesic** Taken for painful urination. Infusion

mixed with meal used as poultice for pain. *Antidiarrheal* Infusion of root given to children for diarrhea. *Dermatological Aid* Used for "scaldhead." *Pediatric Aid* Infusion of root given to children for diarrhea. Leaves rubbed on children's thumb to prevent thumb sucking. *Poison* Used to poison fish and infusion mixed with meal used as poultice for pain. *Poultice* Used as a poultice for "swelled and inflamed parts." *Urinary Aid* Taken for "gravel," painful urination, and bloody urine. (80:55) **Iroquois** *Analgesic* Poultice of wetted plant applied to the forehead for headaches. (141:40) *Febrifuge* Decoction of plant taken for fever, chills, and "when cold." *Gastrointestinal Aid* Decoction of small piece of plant taken for indigestion. Whole plant used for children with swollen stomachs. *Pediatric Aid* Whole plant used for children with swollen stomachs. (87:314) **Malecite** *Kidney Aid* Infusion of dried leaves used for dropsy. (116:244)

- **Food—Cherokee** *Unspecified* Young growth boiled, fried, and eaten. (as *P. hydropiper* 204:253) **Iroquois** *Spice* Whole plant, except the roots, used by older people as pepper. (141:40)

***Polygonum lapathifolium*** L., Curlytop Knotweed

- **Drug—Apache, White Mountain** *Unspecified* Plant used for medicinal purposes. (136:159) **Keres, Western** *Gastrointestinal Aid* Infusion of plant taken for stomach trouble. (171:62) **Navajo, Ramah** *Ceremonial Medicine* Cold infusion of plant used as ceremonial chant lotion. (191:23, 24) **Potawatomi** *Febrifuge* Infusion of whole plant used for fever. (154:72) **Zuni** *Cathartic* Decoction of plant taken as an emetic and purgative. *Emetic* Decoction of root taken as an emetic and purgative. (166:58)

***Polygonum pennsylvanicum*** L., Pennsylvania Smartweed

- **Drug—Chippewa** *Anticonvulsive* Infusion of plant tops taken for epilepsy. (71:129) **Iroquois** *Veterinary Aid* Decoction of plant given to horses for colic and "when urine is bound up." (87:314) **Menominee** *Antihemorrhagic* Infusion of leaf taken for "hemorrhage of blood from the mouth." *Gynecological Aid* Compound infusion of leaf taken to aid postpartum healing. (151:47) **Meskwaki** *Antidiarrheal* Used to wipe anus for bloody flux. *Hemorrhoid Remedy* Used for piles. (152:236, 237)

***Polygonum persicaria*** L., Spotted Ladysthumb

- **Drug—Cherokee** *Analgesic* Decoction mixed with meal and used as poultice for pain. *Dermatological Aid* Crushed leaves rubbed on poison ivy. *Urinary Aid* Infusion taken for "gravel." (80:26) **Chippewa** *Analgesic* Decoction of leaves and flowers taken for stomach pain. *Gastrointestinal Aid* Simple or compound decoction of flowers and leaves taken for stomach pain. (53:344) **Iroquois** *Antirheumatic (External)* Decoction of plant used as a foot and leg soak for rheumatism. *Heart Medicine* Plant used for heart trouble. *Veterinary Aid* Plant rubbed over horses to keep flies away. (87:315)

***Polygonum punctatum*** Ell., Dotted Smartweed

- **Drug—Chippewa** *Analgesic* and *Gastrointestinal Aid* Compound decoction of leaves and flowers taken for stomach pain. (53:344) **Houma** *Analgesic* and *Orthopedic Aid* Decoction of root taken for pains and swellings in the legs and joints. (158:58) **Iroquois** *Psychological Aid* Compound decoction taken for "loss of senses during menses." (87:315)

***Polygonum ramosissimum*** Michx., Bushy Knotweed

- **Drug—Navajo, Ramah** *Analgesic* and *Gastrointestinal Aid* Warm infusion of plant taken for stomachache. *Panacea* Plant used as a "life medicine." (191:24)

***Polygonum* sp.**, Smartweed

- **Drug—Algonquin, Quebec** *Hemostat* Leaves used for bleeding. (18:161)
- **Food—Paiute** *Unspecified* Species used for food. (167:244)

***Polygonum virginianum*** L., Jumpseed

- **Drug—Cherokee** *Pulmonary Aid* Hot infusion of leaves with bark of honey locust given for whooping cough. (as *Tovara virginiana* 80:42)

***Polymnia***, Asteraceae

***Polymnia canadensis*** L., Whiteflower Leafcup

- **Drug—Houma** *Dermatological Aid* Poultice of crushed leaves applied to swellings. (158:63) **Iroquois** *Toothache Remedy* Plant used as toothache medicine. (87:468)

**Polypodiaceae**, see *Phlebodium*, *Pleopeltis*, *Polypodium*

***Polypodium***, Polypodiaceae, fern

***Polypodium californicum*** Kaulfuss, California Polypody

- **Drug—Mendocino Indian** *Eye Medicine* Infusion of roots used as a wash for sore eyes. **Wailaki** *Antirheumatic (External)* Root juice rubbed on areas affected by rheumatism. *Dermatological Aid* Root juice rubbed on sores. (41:303) **Yurok** *Disinfectant* Rhizomes used as an "antibiotic" for infections. (6:46)

***Polypodium glycyrrhiza*** D. C. Eat., Licorice Fern

- **Drug—Bella Coola** *Oral Aid* Rhizomes chewed to flavor the mouth. *Throat Aid* Rhizomes chewed and juice swallowed for sore throat. (184:196) **Haisla** *Analgesic* Rhizomes used for chest pains. *Respiratory Aid* Rhizomes used for shortness of breath. **Haisla & Hanaksiala** *Cold Remedy* Rhizomes used for colds. *Cough Medicine* Rhizomes used for coughs. *Throat Aid* Rhizomes chewed or sucked for sore throats. (43:158) **Hesquiat** *Carminative* Rhizomes growing on the wild crabapple used for gas. *Cough Medicine* Long, slender rhizomes eaten as a medicine for coughs. *Oral Aid* Long, slender rhizomes eaten raw to sweeten the mouth. *Throat Aid* Long, slender rhizomes eaten as a medicine for sore throats. (185:30) **Kitasoo** *Cough Medicine* Rhizomes used for coughs. *Throat Aid* Rhizomes used for sore throats. (43:312) **Kwakiutl** *Antidiarrheal* Compound decoction of plants or roots taken for diarrhea. (183:266) *Antiemetic* and *Antihemorrhagic* Roots sucked and juice swallowed for vomiting blood. (183:264) **Makah** *Unspecified* Rhizomes used for internal ailments. (67:220) **Nitinaht** *Cough Medicine* Licorice flavored rhizomes chewed and juice swallowed for coughs. *Respiratory Aid* Licorice flavored rhizomes chewed and juice swallowed for sore chest. (186:64) **Nootka** *Alterative* and *Venereal Aid* Plant used as an excellent alterative for venereal complaints. (as *P. falcatum* 170:80, 81) **Oweekeno** *Cough Medicine* Rhizomes chewed for coughs. *Throat Aid* Rhizomes chewed for sore throats. (43:59) **Thompson** *Cold Remedy* Rhizomes chewed or infusion of rhizomes taken for colds. *Oral Aid* Rhizomes used as medicine for sore gums. *Throat Aid* Rhizomes chewed or infusion of rhizomes taken for sore throats. (187:91)

- **Food**—Hesquiat *Vegetable* Long, slender rhizomes eaten raw as a food and to sweeten the mouth. (185:30) **Kwakiutl**, *Southern Dietary Aid* Roots kept in the mouth to prevent hunger and thirst. *Starvation Food* Roots dried, steamed, and eaten during famines. *Unspecified* Roots scorched, pounded, cut in bite-size pieces, dipped in oil, and chewed and sucked by old people. (183:264) **Makah** *Dietary Aid* Rhizomes chewed, on hunting trips, to curb the appetite. *Unspecified* Rhizomes eaten raw, especially by children, because of the licorice flavor. (67:220) **Thompson** *Candy* Rhizomes chewed for the pleasant, sweet, licorice flavor. (187:91)

***Polypodium hesperium*** Maxon, Western Polypody

- **Drug**—Thompson *Cold Remedy* Rhizomes chewed or infusion of rhizomes taken for colds. *Oral Aid* Rhizomes used as medicine for sore gums. *Throat Aid* Rhizomes chewed or infusion of rhizomes taken for sore throats. (187:91)
- **Food**—Thompson *Candy* Rhizomes chewed for the pleasant, sweet, licorice taste. (187:91)

***Polypodium incanum*** Sw., Resurrection Fern

- **Drug**—Seminole *Other* Complex infusion of leaves taken for chronic conditions. (169:272) *Psychological Aid* Infusion of plant used to steam and bathe the body for insanity. (169:291)

***Polypodium scolieri*** Hook. & Grev., Leathery Polypody

- **Food**—Hesquiat *Candy* Children chewed the thick rhizomes. (185:30) **Makah** *Unspecified* Species used for food. (67:221)

***Polypodium virginianum*** L., Rock Polypody

- **Drug**—Abnaki *Gastrointestinal Aid* Used for stomachaches. (144:154) Decoction of whole plant used for stomachaches. (144:162) **Algonquin**, **Quebec** *Heart Medicine* Used to make a medicinal tea for heart disease. (18:123) **Bella Coola** *Analgesic* Simple or compound decoction taken for stomach pains. *Gastrointestinal Aid* Compound decoction of root taken for stomach pain, not vomiting or diarrhea. *Throat Aid* Roots chewed for swollen, sore throat and compound decoction used for stomach pain. (as *P. vulgare* 150:48) **Cherokee** *Dermatological Aid* Poultice used for inflamed swellings and wounds and infusion taken for hives. (80:60, 61) **Cowichan** *Cold Remedy* Rhizomes used for colds. *Gastrointestinal Aid* Rhizomes used for stomach ailments. *Throat Aid* Rhizomes used for sore throat. (as *P. vulgare* 182:69) **Cowlitz** *Misc. Disease Remedy* Infusion of crushed stems taken for the measles. (as *P. vulgare* 79:13) **Cree**, **Woodlands** *Tuberculosis Remedy* Decoction of leaf taken for tuberculosis. (109:51) **Green River Group** *Cough Medicine* Baked or raw roots used as a cough medicine. (as *P. vulgare* 79:13) **Iroquois** *Misc. Disease Remedy* Compound decoction taken for cholera. (87:260) **Klallam** *Cough Medicine* Baked or raw roots used as a cough medicine. **Makah** *Cough Medicine* Peeled stems chewed for coughs. (as *P. vulgare* 79:13) **Malecite** *Pulmonary Aid* Infusion of pounded roots used for pleurisy. (as *P. vulgare* 116:252) **Micmac** *Diuretic* Infusion of plant used for urine retention. (145:55) *Pulmonary Aid* Roots used for pleurisy. (40:59) **Quinault** *Cough Medicine* Baked or raw roots used as a cough medicine. (as *P. vulgare* 79:13) **Saanich** *Cold Remedy* Rhizomes used for colds. *Gastrointestinal Aid* Rhizomes used for stomach ailments. *Throat Aid* Rhizomes used for sore throat. (as *P. vulgare* 182:69) **Skagit**, **Upper** *Dermatological Aid* Plant used to make a demulcent. *Expecto-*

*rant* Plant used to make an expectorant. *Laxative* Plant used to make a laxative. (as *P. vulgare* 179:42)

- **Food**—Salish, **Coast** *Dried Food* Rhizomes sun dried and used as a winter food. *Substitution Food* Rhizomes formerly used as a substitute for sugar. *Unspecified* Rhizomes eaten fresh. (as *P. vulgare* 182:69)

***Polypogon***, Poaceae

***Polypogon monspeliensis*** (L.) Desf., Annual Rabbitsfoot Grass

- **Drug**—Navajo, **Kayenta** *Heart Medicine* Infusion of ashes taken for palpitations. (205:16)
- **Food**—Tubatulabal *Unspecified* Used extensively for food. (193:15)
- **Other**—Navajo, **Kayenta** *Soap* Used as lotion to wash a snake figurine before painting it. (205:16)

**Polyporaceae**, see *Fomes*, *Fomitopsis*, *Ganoderma*, *Polyporus*

***Polyporus***, Polyporaceae, fungus

***Polyporus harlowii***, Bracket Fungus

- **Food**—Isleta *Unspecified* Fungi boiled or baked and eaten. *Winter Use Food* Fungi stored for winter use. **Pueblo** *Special Food* Fungi boiled and eaten as a delicacy. (32:33)

***Polyporus* sp.**

- **Drug**—Blackfoot *Antidiarrheal* Infusion of plant taken for diarrhea and dysentery. (86:67)
- **Other**—Blackfoot *Ceremonial Items* Used in the Firelighters bundle of the Horn Society for use as punk to light a fire easily. *Incense & Fragrance* Used as incense to keep ghosts away. Beginning at the bottom of the frond, the player touched each leaflet, first on one side of the stem and then the other and said "tiip" each time he touched a leaflet. Whoever went the farthest up the frond won. There was no gambling on this game. (148:378) **Klallam** *Toys & Games* Leaves pulled off the plants by children playing an endurance game. (79:13) **Kwakiutl** *Ceremonial Items* Plant used as a charm to call the northwest wind. **Kwakiutl, Southern** *Containers* Leaves used to line food storage boxes, berry picking baskets, and berry drying racks. *Cooking Tools* Leaves used to line steaming pits. (183:265) **Makah** *Cooking Tools* Leaves used for lining cooking pits, both above and below the foods. Leaves used to wipe salmon. (67:221) Leaves used to line pits when steaming sprouts. (79:13) *Toys & Games* Fronds used in the game, pile pile.<sup>59</sup> (67:221) Leaves pulled off the plants by children playing an endurance game. (79:13) **Nitinaht** *Cooking Tools* Leaves used for lining cooking pits, both above and below the foods. (67:221) Fronds placed below and above food in steaming pits. (186:62) *Toys & Games* Fronds used in the game, pile pile.<sup>59</sup> (67:221) Fronds used in games. (186:62) **Oweekeno** *Containers* Leaves used as a liner for oolichan (candlefish) bins and pits. (43:56) **Paiute** *Decorations* Plant used to decorate graves. *Toys & Games* Kids played with it as a feather. (111:36) **Pomo** *Cooking Tools* Fronds used for lining the top and bottom of an earth oven in baking acorn bread. Fronds used as a lining for an acorn-leaching basin. (66:11) **Pomo, Kashaya** *Cooking Tools* Fronds used to line an earth baking oven or sand leaching basin. (72:47) **Quileute** *Cooking Tools* Leaves used to line pits when baking camas. **Quinault** *Cooking Tools* Leaves used to line pits when baking rhizomes or camas. (79:13) **Saanich** *Ceremonial Items* Fronds used during initiation dances. **Salish, Coast** *Cooking Tools* Large, fleshy leaves used for laying food on and for spreading on berry drying racks. (182:69) **Squaxin** *Containers* Leaves spread on racks for berries to dry. (79:13) **Thompson** *Containers* Rootstocks used to line the steaming pits for cooking "Indian potatoes" and other root-type foods. (187:89)

### *Polystichum munitum* (Kaulf.) K. Presl. **ssp. munitum**, Western Swordfern

- **Food—Costanoan** *Unspecified* Rhizomes eaten, boiled or baked in coals. (21:247)
- **Other—Costanoan** *Cooking Tools* Fronds used to line earth ovens. (21:247)

### *Polytaenia*, Apiaceae

#### *Polytaenia nuttallii* DC., Nuttall's Prairie Parsley

- **Drug—Meskwaki** *Antidiarrheal* and *Gynecological Aid* Decoction of seeds taken by women for severe diarrhea. (152:249)

**Polytrichaceae**, see *Polytrichum*

***Polytrichum***, Polytrichaceae, moss

***Polytrichum commune*** Hedw., Hair Moss

- **Drug**—Nitinaht *Gynecological Aid* Plant chewed by women in labor to speed up the process. (186:59)

**Pontederiaceae**, see *Heteranthera*, *Pontederia*

***Pontederia***, Pontederiaceae

***Pontederia cordata*** L., Pickerel Weed

- **Drug**—Malecite *Contraceptive* Infusion of plant used to prevent pregnancy. (116:259) **Micmac** *Contraceptive* Herbs used to prevent pregnancy. (40:59) **Montagnais** *Panacea* “Brew” from plant used for “illness in general.” (156:315)

***Populus***, Salicaceae

***Populus ×acuminata*** Rydb., Lanceleaf Cottonwood

- **Food**—Lakota *Fodder* Boughs and bark fed to horses during winter. (106:33)
- **Fiber**—Lakota *Building Material* Used for posts and other building materials. (106:33) **Navajo**, **Ramah** *Building Material* Used for hogan construction. (191:22)
- **Other**—Lakota *Fuel* Used for fuel. (106:33) **Navajo**, **Ramah** *Ceremonial Items* Root used to make snake figurines. *Tools* Used to make fire drills. (191:22)

***Populus alba*** L., White Poplar

- **Drug**—Iroquois *Cold Remedy* Infusion of inner bark taken to “cleans you out after a cold.” *Love Medicine* Compound decoction of branches used as a body wash for anti-love medicine. *Tonic* Infusion of inner bark taken as a tonic. (87:293) **Ojibwa** *Antirheumatic (External)* Infusion of pounded plants used as wash for rheumatism. *Blood Medicine* Infusion of bark and root or decoction of bark taken for internal blood diseases. *Panacea* Infusion of pounded plants used as wash for general illnesses. (135:231) *Unspecified* Roots and bark used for medicinal purposes. (135:243)
- **Other**—Ojibwa *Paper* Wood used for pulpwood. (135:243)

***Populus angustifolia*** James, Narrowleaf Cottonwood

- **Food**—Apache, White Mountain *Candy* Buds used as chewing gum. *Unspecified* Buds used for food. (136:159) **Montana Indian** *Fodder* Young twigs fed to horses when other food was not obtainable. *Unspecified* Inner bark considered a valuable mucilaginous food. (19:19) **Navajo** *Candy* Buds used as chewing gum. *Unspecified* Buds used for food. **Zuni** *Candy* Buds used as chewing gum. *Unspecified* Buds used for food. (136:159)
- **Fiber**—Gosiute *Basketry* Shoots used to make baskets. (39:378) **Montana Indian** *Building Material* Wood used for fire and shelter during the winter. (19:19) **Navajo** *Furniture* Soft wood used for parts of the cradle. (55:37)
- **Other**—Montana Indian *Fuel* Wood used for fire and shelter during the winter. *Smoke Plant* Inner bark used for “kinnikinnick.” (19:19)

***Populus balsamifera*** L., Balsam Poplar

- **Drug**—Algonquin, Quebec *Dermatological Aid* Spring buds used to make a salve. Poultrice of steeped, root scrapings applied to open

sores. Buds used to make a salve and applied to open sores. *Disinfectant* Poultrice of steeped, root scrapings applied to infected wounds. Buds used to make a salve and applied to infected wounds. (18:148) **Bella Coola** *Analgesic* Branches with leaves used in a sweat bath for pains similar to rheumatism. Decoction of rotten leaves used as a bath for body pain. Poultrice of compound containing buds applied for lung or hip pains. *Antirheumatic (External)* Leaves used in sweat bath for pains similar to rheumatism. *Diaphoretic* Branches with leaves used in a sweat bath for pains similar to rheumatism. *Orthopedic Aid* Poultrice of compound containing buds applied to lung or hip pain. *Pulmonary Aid* Poultrice of compound containing buds applied for lung pains. **Carrier**, **Northern** *Dermatological Aid* Poultrice of chewed, green roots applied to bleeding wounds. *Eye Medicine* Decoction of inner bark used as an eyewash. **Carrier**, **Southern** *Cough Medicine* and *Pulmonary Aid* Decoction of buds taken for “coughs and lung affections.” (150:54) **Chippewa** *Analgesic* Compound decoction of root taken for back pain. (53:356) *Dermatological Aid* Decoction of buds used as salve for frostbite, sores, and inflamed wounds. (71:126) *Gynecological Aid* Compound decoction of root taken for “female weakness.” (53:356) Compound infusion of root taken for excessive flowing during confinement. (53:358) *Heart Medicine* Compound decoction of root, bud, and blossom prepared ceremonially and used for the heart. (53:338) *Orthopedic Aid* Poultrice of infusion or decoction of used buds for sprains or strained muscles. (53:362) **Cree**, **Woodlands** *Disinfectant* Poultrice of fresh leaves applied to a sore to draw out the infection. *Hemostat* Poultrice of sticky buds applied directly to the nostril for a nosebleed. (109:52) **Malecite** *Dermatological Aid* Bud balm and burdock roots used for sores. (116:247) **Micmac** *Dermatological Aid* Buds and other parts of plant used as salve for sores. *Venereal Aid* Buds and other parts of plant used as salve for chancre. (40:59) **Ojibwa** *Antirheumatic (External)* Infusion of pounded plants used as wash for rheumatism. *Blood Medicine* Decoction of bark taken for internal blood diseases. (135:231) *Cold Remedy* Buds cooked in grease and rubbed in nostrils for cold. *Dermatological Aid* Buds cooked in grease and used as salve for cuts, wounds, or bruises. (153:387) *Panacea* Infusion of pounded plants used as wash for general illnesses. (135:231) *Respiratory Aid* Buds cooked in grease and rubbed in nostrils for catarrh or bronchitis. (153:387) **Paiute** *Gastrointestinal Aid* Decoction of sap taken for stomach disorders. (180:121, 122) **Potawatomi** *Dermatological Aid* Buds melted with tallow and used as ointment for sores or eczema. (154:80, 81) **Shoshoni** *Analgesic* Decoction of root used as a lotion for headaches. *Blood Medicine* Compound decoction of bark taken as a blood tonic. *Tonic* Compound decoction of bark taken as a blood tonic and for general debility. *Tuberculosis Remedy* Simple or compound decoction of bark taken for tuberculosis. *Venereal Aid* Simple or compound decoction of bark taken for venereal disease. (180:121, 122) **Tanana**, **Upper** *Cold Remedy* Decoction of buds taken for colds. Buds heated on top of a wood stove and the aroma inhaled for colds. Decoction of mashed buds used for colds. *Cough Medicine* Decoction of buds taken for coughs. *Dermatological Aid* Mashed buds cooked in grease or dried, powdered buds used as a salve for rashes and sores. *Panacea* Decoction of buds taken for colds, coughs, and other illnesses. (102:4)

- **Food**—Montana Indian *Fodder* Young twigs fed to horses when oth-

er food was not obtainable. *Unspecified* Inner bark considered a valuable mucilaginous food. (19:19) **Tanana, Upper Unspecified** Sap used for food. (102:4)

- **Fiber—Klamath Clothing** Bark used in the manufacture of cloth. (45:94) **Montana Indian Building Material** Wood used for fire and shelter during the winter. (19:19)
- **Other—Carrier, Southern Insecticide** Resin from buds used to repel mosquitoes, blackflies, and gadflies. (150:54) **Cree, Woodlands Hunting & Fishing Item** Buds mixed with other ingredients to make a trap lure. (109:52) **Eskimo, Inuktitut Hunting & Fishing Item** Bark used for fishing floats. *Insecticide* Bark burned for a mosquito repelling smoke. *Smoke Plant* Leaf galls used with or as tobacco. (202:188) **Montana Indian Fuel** Wood used for fire and shelter during the winter. *Smoke Plant* Inner bark used for “kinnikinnick.” (19:19) **Ojibwa Paper** Wood used for pulpwood. (135:243) **Tanana, Upper Cooking Tools** Soft wood used to make bowls and other items. *Fuel* Wood used for fuel. *Preservative* Wood used to smoke fish. *Smoke Plant* Wood ashes mixed with tobacco and smoked. *Toys & Games* Bark used to make toys. (102:4)

***Populus balsamifera* L. ssp. *balsamifera***, Balsam Poplar

- **Drug—Anticosti** *Dermatological Aid* Poultice of buds and alcohol applied to wounds. (as *P. tacamahacca* 143:65) **Cherokee Antirheumatic (Internal)** Tincture of buds used for chronic rheumatism. *Dermatological Aid* Juice of buds used on sores. *Gastrointestinal Aid* Tincture of buds used for colic and bowels. *Stimulant* Given to “persons of phlegmatic habits.” *Toothache Remedy* Used for aching teeth. *Venereal Aid* Tincture of buds used for old venereal complaints. (as *P. candicans* 80:24) **Iroquois Anthelmintic** Compound decoction with bark taken to kill worms in adults. (87:291) *Antirheumatic (Internal)* Used for arthritis. *Blood Medicine* Compound with whisky taken as blood remedy and for tapeworms. (87:292) *Dermatological Aid* Compound decoction used for skin eruptions and scabs. *Laxative* Compound decoction of bark taken as a laxative. *Veterinary Aid* Decoction of bark taken by people and given to horses for worms. (87:291) **Menominee Cold Remedy** Decoction of resinous buds in fat used in the nostrils for a head cold. *Dermatological Aid* Decoction of resinous buds in fat used as a salve for wounds. (as *P. candicans* 151:52)
- **Other—Ojibwa Paper** Wood used for pulpwood. (135:243) **Thompson Stable Gear** Wood used to make the sides of riding and pack saddles. (as *P. tacamahacca* 164:497)

***Populus balsamifera* ssp. *trichocarpa*** (Torr. & Gray ex Hook.)  
Brayshaw, Black Cottonwood

- **Drug—Bella Coola** *Dermatological Aid* Buds mixed with chewed and warmed mountain goat kidney fat and used as a face cream. Infusion of buds mixed with eulachon (candlefish) grease or sockeye salmon oil and rubbed on scalp for baldness. *Orthopedic Aid* Poultice of buds applied for hip pains. *Pulmonary Aid* Infusion of buds and animal fat taken for whooping cough. Poultice of buds applied for lung and hip pains. *Throat Aid* Infusion of buds in dogfish oil taken for sore throat. *Tuberculosis Remedy* Buds mixed with balsam sap and used for tuberculosis. (as *P. trichocarpa* 184:210) **Flathead Cold Remedy** Bark eaten for colds. *Dermatological Aid* Poultice of leaves used for bruises, sores, and boils. *Venereal Aid* Infusion of young branches,

buds, and other plants taken for syphilis. (as *P. trichocarpa* 82:68) **Haisla & Hanaksiala Burn Dressing** Buds cooked with mountain goat fat and rubbed on the face for sunburn. *Dermatological Aid* Buds used to make a hair dressing. Buds cooked with mountain goat fat and rubbed on the body to soften the skin. (43:284) **Hesquiat Dermatological Aid** Decoction of buds mixed with deer fat and used to make a fragrant salve. (185:75) **Hoh Unspecified** Infusion of bark used for medicine. (as *P. trichocarpa* 137:60) **Karok Love Medicine** Leaves used as a love medicine. (as *P. trichocarpa* 148:381) **Klallam Eye Medicine** Infusion of buds used as an eyewash. (as *P. trichocarpa* 79:26) **Kutenai Dermatological Aid** Poultice of leaves used for bruises, sores, and boils. *Respiratory Aid* Infusion of bark taken for tuberculosis. Infusion of bark taken for whooping cough. (as *P. trichocarpa* 82:68) **Kwakiutl Dermatological Aid** Buds and oil used as a hair tonic. Buds rubbed on the skin to prevent sunburn. (42:346) Roots carved into kachina dolls for children and tourists. (200:71) **Hualapai Musical Instrument** Trunk hollowed out and used as a drum. (195:3) **Navajo Ceremonial Items** Wood used to make prayer sticks. Wood used to carve the image of a duck for the Water Chant. **Containers** Wood used to make tinderboxes. **Fuel** Sticks used in making fire by friction and fiber used for tinder. **Tools** Wood used to make the frame of the loom. **Toys & Games** Wood used to make dice. Wood used to make clubs for the moccasin game. (55:37)

**Populus tremuloides** Michx., Quaking Aspen

- **Drug**—**Abnaki Anthelmintic** Used as a vermifuge. (144:155) Infusion of bark taken as a vermifuge. (144:165) **Algonquin, Tête-de-Boule Antirheumatic (External)** Poultice of shredded roots applied to joints for rheumatism. (132:130) **Bella Coola Venereal Aid** Decoction of root bark taken for gonorrhea with urethral hemorrhage. (150:54) **Blackfoot Gastrointestinal Aid** Infusion of bark used for heartburn. (86:83) **Gynecological Aid** Infusion of bark scrapings taken by women about to give birth. (86:61) **Panacea** Infusion of bark used for general dis-

comfort. (86:83) **Carrier, Southern** *Analgesic and Gastrointestinal Aid* Decoction of bark taken for stomach pain. (150:54) **Chippewa** *Dermatological Aid* Poultice of chewed bark or root applied to cuts. (53:350) *Gynecological Aid* Compound infusion of root taken for "excessive flowing" during confinement. (53:358) *Heart Medicine* Compound decoction of inner bark prepared ceremonially for heart trouble. (53:338) **Cree, Woodlands** *Dermatological Aid* Poultice of crushed leaf applied to bee stings to reduce the irritation. Poultice of inner bark used as a wound dressing. *Hemostat* White, powdery substance on the outer bark surface scraped off and used as a styptic. *Venereal Aid* Bark outer surface scraped and used for venereal disease. Decoction of bark taken for venereal disease. (109:52) **Delaware, Ontario** *Cold Remedy* Compound containing bark taken for colds. (175:82) **Flathead** *Other* Infusion of bark used for ruptures. (82:37) **Gitksan** *Cathartic* Bark used as a purgative. (73:152) Decoction of bark taken as a purgative. *Dermatological Aid* Poultice of chewed or mashed root bark applied to cuts. (150:54) **Haisla** *Laxative* Decoction of bark taken as a laxative. **Haisla & Hanaksiala** *Oral Aid* Leaves used for mouth abscesses. (43:286) **Iroquois** *Anthelmintic* Decoction of bark taken for worms. *Gastrointestinal Aid* Infusion of bark taken for cramps caused by worms. *Misc. Disease Remedy* Cold, compound infusion of bark taken for measles. Poultice of wetted bark applied for pleurisy. *Pediatric Aid* Infusion of bark from young trees given when "baby cries, but is not sick." (87:292) Infusion of bark or decoction of young shoots given to children for worms. *Urinary Aid* Compound used for bed-wetting. (87:293) *Venereal Aid* Infusion of roots or bark used internally and externally for venereal diseases. *Veterinary Aid* Decoction of bark mixed with feed for horses for worms. (87:292) Decoction of bark given to dogs and cats with fits caused by worms. (87:293) **Isleta** *Orthopedic Aid* Bark used as casts in setting broken limbs. (as *P. aurea* 100:38) **Meskwaki** *Cold Remedy, Cough Medicine, and Pediatric Aid* Decoction of buds used as a nasal salve by children and adults for coughs and colds. (152:245) **Micmac** *Cold Remedy* Bark used for colds. *Dietary Aid* Bark used to stimulate the appetite. (40:59) **Montagnais** *Anthelmintic* Infusion of dried bark given to children suffering from worms. (156:315) **Ojibwa** *Dermatological Aid* Poultice of bark applied to cuts and wounds. *Orthopedic Aid* Poultice of inner bark applied to sore arm or leg and used as a splint for broken limb. (153:388) **Okanagan-Colville** *Dermatological Aid* Bark powder used on the feet and underarms as a deodorant and antiperspirant. *Eye Medicine* Infusion of young growth used as a bath for bruised eyes. (188:134) **Okanagon** *Antirheumatic (External)* Decoction of stems and branches used as a wash for rheumatism. *Antirheumatic (Internal)* Decoction of stems and branches taken for rheumatism. *Gastrointestinal Aid* Decoction of stems and branches taken for dyspepsia. (125:41) **Paiute** *Cough Medicine* Infusion of inner bark taken for coughs from pneumonia. *Febrifuge* Infusion of inner bark taken for fever with excessive perspiration. (111:61) **Penobscot** *Cold Remedy and Diaphoretic* Infusion of bark taken as a diaphoretic for colds. (156:310) **Potawatomi** *Veterinary Aid* Burned bark ashes mixed with lard and used as a salve for sores on horses. (154:81) **Salish** *Venereal Aid* Decoction of rootlets and stems taken for syphilis. (178:294) **Shoshoni** *Venereal Aid* Decoction of bark taken over a long period of time for venereal disease. (180:120, 121) **Sikani** *Anthelmintic* Infusion of scraped bark taken for worms and caused a

stool immediately. *Dermatological Aid* Poultice of pulverized bark and water applied as paste to wounds. (150:54) **Tanana, Upper** *Cold Remedy* Decoction of inner bark, outer bark, and Hudson Bay tea used for colds. *Cough Medicine* Decoction of inner bark, outer bark, and Hudson Bay tea used for coughs. (102:5) **Tewa** *Urinary Aid* Decoction of leaves taken for urinary trouble. (138:42) **Thompson** *Antirheumatic (External)* Decoction of stems and branches used as a wash for rheumatism. *Antirheumatic (Internal)* Decoction of stems and branches taken for rheumatism. (125:41) *Dermatological Aid* Wood ash mixed with water or grease and used as a salve on swellings. (164:464) Powdery substance from bark rubbed on girls' armpits so that they would not grow underarm hair. The powder was rubbed on girls' armpits after their first menstrual period. Young men, too, rubbed the powdery substance on their arms and faces to prevent the growth of hair. Wood ashes rubbed on men's faces and arms to prevent the growth of hair. (187:277) *Disinfectant* Decoction of bark rubbed on adolescents' bodies for purification. (164:504) *Gastrointestinal Aid* Decoction of stems and branches taken for dyspepsia. (125:41) *Pediatric Aid* Decoction of bark rubbed on adolescents' bodies for purification. (164:504) *Psychological Aid* Decoction of branches taken by people suffering from insanity through excessive drinking. (187:277) *Venereal Aid* Decoction of branches or roots taken and used as a wash for syphilis. (164:464)

- **Food—Apache, Chiricahua & Mescalero** *Bread & Cake* Inner bark scraped off and baked in the form of cakes. *Unspecified* Bark boiled or eaten raw. (33:43) **Apache, Mescalero** *Spice* Sap used as flavoring for wild strawberries. (14:50) **Blackfoot** *Fodder* Bark made an excellent winter food for horses. (86:89) Bark fed to horses during the winter. (97:28) *Snack Food* Cambium used as a snack food by children. *Special Food* Bark sucked by anyone observing a liquid taboo. *Unspecified* Cambium used for food. (86:104) Inner bark eaten in the spring. (97:28) **Cree, Woodlands** *Preservative* Dry, rotted wood used to make a fire to smoke cure whitefish and moose meat. *Unspecified* Cambium eaten fresh in early summer. Inner bark used for food in the spring. (109:52) **Montana Indian** *Fodder* Young twigs fed to horses when other food was not obtainable. *Unspecified* Inner bark considered a valuable mucilaginous food. (19:19) **Navajo, Ramah** *Starvation Food* Inner bark eaten raw as an emergency ration. (191:22) **Tanana, Upper** *Preservative* Wood used to smoke fish. *Unspecified* Sap and cambium used for food. (102:5) **Thompson** *Forage* Bark eaten by beavers. (187:277)
- **Fiber—Cheyenne** *Building Material* Logs used to make Sundance lodges. (82:37) Trunks used to construct the medicine lodge for the Sun Dance ceremony. (83:46) Trunks used to build the Sun Dance Lodge. (83:37) **Cree, Woodlands** *Building Material* Poles placed upon the birch bark cover of a tepee to secure it. Poles used to frame a tepee. (109:52) **Crow** *Building Material* Logs used to make Sundance lodges. (82:37) **Klamath** *Clothing* Bark used to make hats. (19:19) **Paiute** *Building Material* Young trees used for tent and tepee poles. (111:61) **Thompson, Upper (Fraser Band)** *Canoe Material* Wood used to make dugout canoes. (164:497)
- **Other—Blackfoot** *Toys & Games* Bark or moistened leaves used to make whistles. (86:119) **Cree, Woodlands** *Hunting & Fishing Item*

Trees used to make a deadfall trap for bear. *Toys & Games* Short section of fresh branch used to make a toy whistle. (109:52) **Hopi Ceremonial Items** Plant smoked ceremonially. (as *P. aurea* 200:71) **Montana Indian Fuel** Wood used for fire and shelter during the winter. (19:19) Used occasionally for firewood. (82:37) *Smoke Plant* Inner bark used for "kinnikinnick." (19:19) **Navajo Ceremonial Items** Tree important to the Sun's House Chant. This tree, according to legend, has the distinction of being the first tree against which the bear rubs his back in the Sun's House Chant. The others are red willow, fir, and chokecherry. (55:38) **Navajo, Ramah Ceremonial Items** Stem used to make Evilway hoop. *Cooking Tools* Knots used to make wooden cups. (191:22) **Ojibwa Paper** Wood used for pulpwood. (135:243) **Okanagan-Colville Tools** Logs used to scrape deer hides. (188:134) **Paiute Fuel** Dry limbs used as a source of fuel. (111:61) **Shuswap Toys & Games** Branches used by boys to make whistles. (123:68) **Tanana, Upper Fuel** Wood used for fuel. *Smoke Plant* Wood ashes mixed with tobacco and used for chewing tobacco. (102:5) **Thompson Hunting & Fishing Item** Decoction of branches used to wash traps, guns, buckskins, and hunters. The decoction was used to wash humans such as hunters who desired to be exceptionally "clean." *Protection* Decoction of branches used as a protective bath against witches. (187:277)

## Porophyllum, Asteraceae

**Porophyllum gracile** Benth., Slender Poreleaf

- **Drug—Havasupai Analgesic** Decoction of pounded plant taken for pain. *Antirheumatic (External)* Decoction of pounded plant rubbed in as a liniment. *Antirheumatic (Internal)* Decoction of pounded plant taken for aches. *Dermatological Aid* Decoction of pounded plant used as a wash on sores. *Gastrointestinal Aid* Decoction of pounded plant taken for abdominal pain. (197:249) **Paiute Abortifacient** Decoction of root taken as "a regulator for delayed menstruation." (as *P. leucospermum* 180:122) **Shoshoni Abortifacient** Plant used to regulate delayed menstruation. (as *P. leucospermum* 118:46)

## Porphyra, Bangiaceae, alga

**Porphyra abbottae** Krishnamurthy, Edible Seaweed

- **Drug—Hanaksiala Gastrointestinal Aid** Decoction of plant taken or poultice applied for any kind of sickness in the stomach or body. *Orthopedic Aid* Poultice of plant applied to broken collarbones. *Panacea* Decoction of plant taken or poultice applied for any kind of sickness in the stomach or body. (43:131)
- **Food—Haisla & Hanaksiala Dried Food** Plant gathered and dried for winter use. *Sauce & Relish* Plant dried, crushed, and sprinkled on various foods as a condiment. (43:131) **Kitasoo Bread & Cake** Plant pressed into boxes to form compressed cakes, dried, and stored for future use. *Unspecified* Plant eaten with salmon roe or butter clams. (43:304) **Oweekeno Bread & Cake** Whole plant formed into flat sheets, pressed in boxes, dried, and made into cakes. *Dried Food* Whole plant dried for future use. *Unspecified* Whole plant cooked and eaten with salmon eggs, cooked salmon, clams, herring eggs, and other foods. (43:47)
- **Other—Tsimshian Cash Crop** Plant used for trade. (43:304)

**Porphyra laciniata** (Lightfoot) Agardh, Seaweed

- **Food—Alaska Native Dried Food** Leaves sun dried, chopped, dried, and stored in closed containers. *Snack Food* Leaves sun dried,

chopped, dried, and eaten raw like popcorn. *Soup* Leaves used in fish stews and soups. (85:141)

**Porphyra lanceolata** (Setchell) G. M. Smith

- **Food—Pomo, Kashaya Dried Food** Fresh seaweed dried for later use. *Unspecified* Fresh seaweed baked and eaten. (72:126) **Tolowa Unspecified** Species used for food. **Yurok Unspecified** Species used for food. (6:47)

**Porphyra perforata** J. Agardh

- **Food—Hesquiat Unspecified** Boiled with herring spawn and eaten with dogfish oil or eulachon (candlefish) oil. (edible seaweed 185:25) **Pomo Bread & Cake** Weeds stacked like cakes and dried until needed. *Dried Food* Seaweed sun dried and used for food. (11:94) *Winter Use Food* Plant made into a cake, cooked in earth oven, and stored for winter consumption. (66:10) **Pomo, Kashaya Dried Food** Fresh seaweed dried for later use. *Unspecified* Fresh seaweed baked and eaten. (72:125)
- **Other—Nitinah Cash Crop** Plants formerly sold to the Chinese. (edible seaweed 186:54)

**Porphyra sp.**, Red Laver

- **Food—Bella Coola Dried Food** Sun dried and eaten alone or cooked with other food. (184:195) **Kwakiutl, Southern Bread & Cake** Plants allowed to rot, shaped into cakes, sun dried, and eaten with dried salmon at feasts. *Dessert* Mixed with water, beaten until frothy and white, and eaten as a dessert. *Dried Food* Plants sun dried, boiled with clams or creamed corn, and eaten with large amounts of oulachen (candlefish) grease. *Snack Food* Plants sun dried and eaten as a snack. *Unspecified* Strips lightly browned, pulverized, cooked, and used for food. (183:262) **Nitinah Unspecified** Plant used for food. (67:210)

## Porteranthus, Rosaceae

**Porteranthus sp.**

- **Drug—Creek Gynecological Aid** Plant thought to be used by women during their menstrual periods. (172:667)

**Porteranthus stipulatus** (Muhl. ex Willd.) Britt., Indian Physic

- **Drug—Cherokee Antirheumatic (External)** Roots used for rheumatism. *Cold Remedy* Mild infusion used in slight doses for colds. *Dermatological Aid* Cold infusion of root given or root chewed "for bee and other stings." *Emetic* Mild infusion taken as an emetic. (as *Gillenia stipulata* 80:40) Decoction or strong infusion of whole plant taken a pint at a time as an emetic. (as *Gillenia stipulata* 203:74) *Kidney Aid* Infusion taken for kidneys. *Liver Aid* Compound taken for liver. *Orthopedic Aid* Poultice used for "leg swelling." *Respiratory Aid* Mild infusion used in slight doses for asthma. *Toothache Remedy* Infusion used for toothache. *Veterinary Aid* Tincture of root given for "milksick."

**Porteranthus trifoliatus** (L.) Britt., Bowman's Root

- **Drug—Cherokee Antirheumatic (External)** Poultice used for rheumatism. *Cold Remedy* Mild infusion used in slight doses for colds. *Dermatological Aid* Cold infusion of root given or root chewed "for bee and other stings." (as *Gillenia trifoliata* 80:40) Infusion of roots used as a wash for leg scratches. (as *Gillenia trifoliata* 177:27) *Emetic*

Mild infusion taken as an emetic. (as *Gillenia trifoliata* 80:40) Decoction or strong infusion of whole plant taken a pint at a time as an emetic. (as *Gillenia trifoliata* 203:74) *Kidney Aid* Infusion taken for kidneys. *Liver Aid* Compound taken for liver. *Orthopedic Aid* Poultice used for "leg swelling." *Respiratory Aid* Mild infusion used in slight doses for asthma. *Toothache Remedy* Infusion used for toothache. *Veterinary Aid* Tincture of root given for "milksick." (as *Gillenia trifoliata* 80:40) **Iroquois** *Antidiarrheal* Compound decoction of leaves and switches taken for diarrhea. (as *Gillenia trifoliata* 87:349) *Cathartic* Plant used as a physic. *Cold Remedy* Infusion of roots taken for colds, fevers, and chills caused by fever and sore throats. *Diaphoretic* Decoction of roots taken to cause sweating. *Febrifuge* Infusion of roots taken for colds, fevers, and chills caused by fever and sore throats. *Misc. Disease Remedy* Decoction of roots taken for grippe. *Throat Aid* Infusion of roots taken for colds, fevers, and chills caused by fever and sore throats. (as *Gillenia trifoliata* 87:350)

**Portulacaceae**, see *Calandrinia*, *Cistanthe*, *Claytonia*, *Lewisia*, *Portulaca*, *Talinum*

## **Portulaca**, Portulacaceae

**Portulaca oleracea** L., Little Hogweed

- **Drug**—**Cherokee** *Anthelmintic* Compound decoction taken for worms. *Ear Medicine* Juice used for earache. (80:51) **Hawaiian** *Strengtheners* Plant and other plants pounded, squeezed, and resulting liquid taken to check run-down conditions. (2:24) **Iroquois** *Antidote* Good medicine to cure you if someone has given you some bad medicine. *Burn Dressing* Poultice of mashed plant used on burns. *Dermatological Aid* Poultice of entire plant used on bruises. (87:318) **Keres, Western** *Antidiarrheal* Infusion of leaf stems used for diarrhea. *Blood Medicine* Infusion of leaf stems used as an antiseptic wash for blood clots. *Oral Aid* Raw leaves rubbed in mouth for difficulty in opening the mouth. (171:62) **Navajo** *Analgesic* Plant used for pain. (55:97) *Gastrointestinal Aid* Plant taken for stomachaches. *Panacea* Plant used to "cure sick people." (55:47) **Rappahannock** *Dermatological Aid* Compound decoction of bruised leaves applied as salve for "footage" trouble. (161:28)
- **Food**—**Acoma** *Vegetable* Plants cooked with meat and eaten like spinach. (32:43) **Apache, Chiricahua & Mescalero** *Unspecified* Eaten without preparation or cooked with green chile and meat or animal bones. (33:46) **Hopi** *Unspecified* Cooked in a gravy. (200:75) **Iroquois** *Vegetable* Cooked and seasoned with salt, pepper, or butter. (196:118) **Isleta** *Vegetable* Plants oven dried, stored, and used as greens during the winter. (32:43) *Winter Use Food* Plants dried in ovens, stored, and used as greens in the winter. (100:39) **Keres, Western** *Vegetable* Plant cooked with meat as greens. (171:62) **Laguna** *Vegetable* Plants cooked with meat and eaten like spinach. (32:43) **Luiseño** *Vegetable* Plant used for greens. (155:232) **Navajo** *Unspecified* Seeds used for food. (55:47) **Navajo, Ramah** *Spice* Leaves used as a potherb. *Vegetable* Leaves boiled as greens with meat. (191:26) **Pima, Gila River** *Unspecified* Leaves boiled and eaten. (133:7) **Tewa** *Unspecified* Fleshy plant tops boiled and eaten. (138:59)

**Portulaca oleracea** L. **ssp. oleracea**, Little Hogweed

- **Drug**—**Navajo, Kayenta** *Misc. Disease Remedy* Plant used as a lotion for scarlet fever. (as *P. retusa* 205:22)

- **Food**—**Hopi** *Unspecified* Plant boiled with meats and eaten. (as *P. retusa* 56:15) Plant formerly cut up fine and eaten in gravy. (as *P. retusa* 138:60) **Navajo** *Forage* Plant used as a good sheep forage. *Unspecified* Seeds used for food. (as *P. retusa* Engelm. 55:47) Plants used for food. (as *P. retusa* 90:154) **Pima, Gila River** *Unspecified* Leaves boiled and eaten. (as *P. retusa* 133:7) **San Felipe** *Unspecified* Young plants fried or boiled and mixed with young peas. *Vegetable* Young plants used as greens. (as *P. retusa* 32:43)

**Portulaca sp.**, Common Purslane

- **Food**—**Pima, Gila River** *Vegetable* Leaves used as greens. (133:5)

## **Postelsia**, Lessoniaceae

**Postelsia palmaeformis** Ruprecht, Sea Palm

- **Drug**—**Hesquiat** *Strengtheners* Whalers rubbed four or eight pieces of plant on their arms to make them as strong as the plant. (185:26) **Nitinaht** *Anticonvulsive* Plants burned and ashes used for convulsions. *Psychological Aid* Plants burned and ashes used for craziness. *Strengtheners* Stipes dried, burned, powdered, mixed with raccoon marrow, and salve used to strengthen young boys. **Nootka** *Strengtheners* Stipes dried, burned, powdered, mixed with raccoon marrow, and salve used to strengthen young boys. (186:54)
- **Food**—**Hesquiat** *Dried Food* Stipes and fronds with attached herring eggs dried for later use.<sup>6</sup> (185:24) **Pomo** *Unspecified* Cooked stalks used for food. Raw stalks chewed like sugar cane. (as *P. palmiformis* 66:10) Plant chewed raw. (11:95) **Pomo, Kashaya** *Dried Food* Stems cut into long strips and sun dried for winter use. *Unspecified* Fresh stem chewed raw or baked in an oven or hot ashes. (72:126)
- **Fiber**—**Hesquiat** *Sporting Equipment* Dried stipes use as "pucks" and hitting sticks.<sup>5</sup> (185:24)
- **Other**—**Nitinaht** *Toys & Games* Tough, rubbery holdfasts carved into "beach hockey" balls. (186:54)

**Postelsia sp.**, Short Beach Kelp

- **Fiber**—**Hesquiat** *Sporting Equipment* Dried stems used as "pucks" and sticks for "beach hockey." (185:18)

**Potamogetonaceae**, see *Potamogeton*, *Ruppia*

## **Potamogeton**, Potamogetonaceae

**Potamogeton diversifolius** Raf., Waterthread Pondweed

- **Fiber**—**Kawaiisu** *Cordage* Dried stem fibers used to make a strong cord. (206:53)
- **Other**—**Kawaiisu** *Containers* Dried stem fibers made into strong cords and used to make carrying nets. *Hunting & Fishing Item* Dried stem fibers made into strong cords and used to make rabbit nets. (206:53)

**Potamogeton natans** L., Floating Pondweed

- **Drug**—**Navajo, Ramah** *Ceremonial Medicine* and *Emetic* Decoction of plant taken as ceremonial emetic. (191:15)

**Potamogeton sp.**, Pondweed

- **Drug**—**Iroquois** *Witchcraft Medicine* Compound poultice bound to "soreness all over in men from being witched." (87:272)
- **Food**—**Hesquiat** *Forage* Plant browsed by deer. (185:17) Deer wade into the water and put their heads under the surface to eat this plant. (185:56)

**Potentilla**, Rosaceae**Potentilla arguta** Pursh, Tall Cinquefoil

- **Drug**—Okanagan-Colville *Gynecological Aid* Infusion of roots taken by women after childbirth. (188:126)

**Potentilla arguta** Pursh **ssp. arguta**, Tall Cinquefoil

- **Drug**—Chippewa *Analgesic* Dry, pulverized root pricked into temples or placed in nostrils for headache. (as *Drymocallis arguta* 53:338) *Antidiarrheal* Simple or compound decoction of root taken for dysentery. (as *Drymocallis arguta* 53:344) *Dermatological Aid* Poultice of moistened, dried, powdered root applied to cuts. (as *Drymocallis arguta* 53:350)

**Potentilla canadensis** L., Dwarf Cinquefoil

- **Drug**—Iroquois *Antidiarrheal* Infusion of pounded roots taken for diarrhea. (87:353) *Natchez Witchcraft Medicine* Plant given to one who was bewitched. (172:667)

**Potentilla crinita** Gray, Bearded Cinquefoil

- **Drug**—Navajo, Ramah *Panacea* Cold infusion of whole plant taken as “life medicine.” (191:31)

**Potentilla glandulosa** Lindl., Gland Cinquefoil

- **Drug**—Gosiute *Dermatological Aid* Plant taken and poultice of plant applied to swollen parts. *Unspecified* Root used as medicine. (39:378) *Okanagon Stimulant* Infusion of whole plant taken as a stimulant. *Tonic* Infusion of whole plant taken as a tonic. *Thompson Stimulant* Infusion of whole plant taken as a stimulant. (125:42) Weak decoction of leaves taken as a stimulant. (164:469) Decoction of leaves or whole plant said to be slightly stimulant. (164:494) *Tonic* Infusion of whole plant taken as a tonic. (125:42) Decoction of plant taken as a tonic for “general out-of-sorts feeling.” (164:469)

**Potentilla gracilis** Dougl. ex Hook., Northwest Cinquefoil

- **Drug**—Okanagan-Colville *Analgesic* Infusion of pounded roots taken as a general tonic for pains. *Antidiarrheal* Infusion of pounded roots taken for diarrhea. *Antirheumatic (Internal)* Infusion of pounded roots taken as a general tonic for aches. *Blood Medicine* Infusion of pounded roots taken as a blood tonic. *Dermatological Aid* Infusion of pounded roots used to wash sores. *Venereal Aid* Infusion of pounded roots taken for gonorrhoea. (188:127) *Thompson Dermatological Aid* Poultice of mashed leaves, roots, and subalpine fir pitch used on wounds, to draw out the pain. (187:263)

**Potentilla hippiana** Lehm. **var. hippiana**, Woolly Cinquefoil

- **Drug**—Navajo, Kayenta *Burn Dressing* Plant used as a lotion for burns. *Dermatological Aid* Powdered plant applied to sores caused by a bear. *Gynecological Aid* Plant used to expedite childbirth. (205:26) Navajo, Ramah *Dermatological Aid* Poultice of fresh leaves applied to injury. *Panacea* Cold infusion of root taken as “life medicine.” (191:31)

**Potentilla nana** Willd. ex Schlecht., Arctic Cinquefoil

- **Drug**—Eskimo *Unspecified* Root eaten for the medicinal value. (as *P. hyperctica* 149:325)

**Potentilla norvegica ssp. monspeliensis** (L.) Aschers. & Graebn., Norwegian Cinquefoil

- **Drug**—Chippewa *Throat Aid* Decoction of root gargled or root

chewed for sore throat. (as *P. monspeliensis* 53:342) Navajo, Ramah *Analgesic* Cold infusion of whole plant used for pain. *Venereal Aid* Fumes from plant used for sexual infection. (as *P. monspeliensis* 191:31) Ojibwa *Cathartic* Plant known to be a physic, even by the very young. (as *P. monspeliensis* 153:384) **Potawatomi** *Unspecified* Root used for unspecified malady. (as *P. monspeliensis* 154:77)

**Potentilla pensylvanica** L., Pennsylvania Cinquefoil

- **Drug**—Navajo, Ramah *Panacea* Root used as a “life medicine.” (191:31)

**Potentilla recta** L., Sulphur Cinquefoil

- **Drug**—Okanagan-Colville *Dermatological Aid* Poultice of pounded leaves and stems applied to open sores and wounds. *Internal Medicine* Infusion of leaves taken for all types of internal troubles. (188:127)

**Potentilla simplex** Michx., Common Cinquefoil

- **Drug**—Cherokee *Antidiarrheal* Infusion of root taken for dysentery. *Dermatological Aid* Infusion of astringent root used as a mouthwash for “thrash.” *Febrifuge* Used for “fevers and acute diseases with great debility.” *Oral Aid* Infusion of root used as a mouthwash for “thrash.” *Pulmonary Aid* Root eaten and infusion of root used by ballplayers “for wind” and safety. (as *P. simplex* 80:29)

**Potentilla sp.**, Five Finger

- **Drug**—Cherokee *Febrifuge* Infusion given for fever. (203:74) **Paiute** *Laxative* Whole plant used as a laxative. (118:42)

**Pottiaceae**, see *Barbula***Prenanthes**, Asteraceae**Prenanthes alata** (Hook.) D. Dietr., Western Rattlesnakeroot

- **Drug**—Bella Coola *Analgesic* Poultice of chewed root applied to any painful part of body. *Burn Dressing* Poultice of chewed root applied to burns. *Cold Remedy* Decoction of root taken and small dose given to babies for colds. *Pediatric Aid* Decoction of roots taken daily and small dose given to babies for colds. (150:65)

**Prenanthes alba** L., White Rattlesnakeroot

- **Drug**—Chippewa *Gynecological Aid* Dried, powdered root added to food to produce postpartum milk flow. (53:360) **Iroquois** *Dermatological Aid* Poultice of roots applied to dog bites. (87:479) *Snakebite Remedy* Poultice of roots applied to rattlesnake bites. *Stimulant* Infusion of smashed roots used as wash for weakness. (87:478) **Ojibwa** *Diuretic* Milk of lettuce used, especially in female diseases, as a diuretic. *Gynecological Aid* Milk of plant used as a diuretic for female diseases and root used as a female remedy. (153:365)

**Prenanthes altissima** L., Tall Rattlesnakeroot

- **Drug**—Iroquois *Snakebite Remedy* Poultice of smashed roots applied to rattlesnake bites. (87:480)

**Prenanthes aspera** Michx., Rough Rattlesnakeroot

- **Drug**—Choctaw *Analgesic* Decoction of roots and plant tops used as an anodyne. *Diuretic* Decoction of roots and plant tops used as a stimulating diuretic. *Other* Plant used as a “secernant” (which induces secretion). *Stimulant* Plant used as a stimulant. (as *Nabalus asper* 28:288)

***Prenanthes serpentaria*** Pursh, Cankerweed

- **Drug**—Cherokee *Analgesic* Roots used in stomachache medicine. (80:35)
- **Food**—Cherokee *Vegetable* Leaves eaten as cooked salad. (80:35)

***Prenanthes trifoliolata*** (Cass.) Fern., Gall of the Earth

- **Drug**—Cherokee *Analgesic* Roots used in stomachache medicine. (80:35) **Iroquois** *Dermatological Aid* Poultice of roots applied to skin swellings or bristles on a toe or foot. (87:480) *Eye Medicine* Decoction of roots used as drops for sore eyes. *Hunting Medicine* Compound infusion of root used as wash for rifles, a “deer hunting medicine.” *Love Medicine* Root chewed and rubbed on hands and face as a love medicine. *Snakebite Remedy* Roots used for rattlesnake bites. (87:479)
- **Food**—Cherokee *Vegetable* Leaves eaten as cooked salad. (80:35)

**Primulaceae**, see *Anagallis*, *Androsace*, *Dodecatheon*, *Glaux*, *Lysimachia*, *Trientalis*

**Proboscidea**, Pedaliaceae***Proboscidea althaeifolia*** (Benth.) Dcne., Devilshorn

- **Drug**—Pima *Analgesic* and *Antirheumatic (External)* Plant moxa used for rheumatic pains. (as *Martynia arenaria* 47:107)
- **Food**—Cahuilla *Unspecified* Seeds used for food. (15:107) **Papago** *Unspecified* Young pods used for food. (as *Martynia arenaria* 47:107)
- **Fiber**—Pima *Basketry* Used for basket making. (as *Martynia arenaria* 47:107)
- **Other**—Cahuilla *Tools* Hooked thorns used as a tool in mending baskets and broken pottery. (15:107)

***Proboscidea louisianica*** (P. Mill.) Thellung, Common Devilsclaw

- **Fiber**—Kawaiisu *Basketry* Long, pointed seed capsule horns used as the black pattern material in coiled basketry. (206:53)
- **Dye**—Shoshoni *Black* Dried pods used as black dye, pieces buried in wood ashes to deepen the shade. (as *Martynia proboscides* 118:7)
- **Other**—Panamint *Decorations* Used as black decorations for baskets. (as *Martynia proboscidea* 105:78)

***Proboscidea louisianica* ssp. *fragrans*** (Lindl.) Bretting, Ram's Horn

- **Food**—Papago *Dried Food* Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (as *Martynia fragrans* 34:24) *Unspecified* Seeds boiled and eaten. (as *Martynia fragrans* 34:25)
- **Fiber**—Papago *Basketry* Pods softened with lye and water, split, bent, and used as sewing withes in coiled basketry. (as *Martynia fragrans* 34:57)

***Proboscidea louisianica*** (P. Mill.) Thellung **ssp. *louisianica***, Louisiana Ram's Horn

- **Food**—Apache, Chiricahua & Mescalero *Unspecified* Seeds eaten by prisoners of war in Oklahoma. (as *Martynia louisiana* 33:45)
- **Other**—Hopi *Ceremonial Items* Used in the preparation of ceremonial paraphernalia. (as *Martynia louisiana* Mill. 200:92)

***Proboscidea parviflora*** (Woot.) Woot. & Standl., Doubleclaw

- **Food**—Havasupai *Dried Food* Fruit sun dried for future use. *Unspecified* Seeds used for food. (197:241) **Hualapai** *Unspecified* Young pods used for food. (195:38)

- **Fiber**—Havasupai *Basketry* Spines stored and used as decorative elements in basketry. (197:241) **Hualapai** *Basketry* Mature pods used for the black designs in baskets. (195:38)

***Proboscidea parviflora*** (Woot.) Woot. & Standl. **ssp. *parviflora***, Doubleclaw

- **Drug**—Pima *Analgesic* and *Antirheumatic (External)* Plant moxa used for rheumatic pains. (as *Martynia parviflora* 47:107)
- **Food**—Papago *Unspecified* Young pods used for food. **Pima** *Unspecified* Seeds dried, cracked, and eaten like pine nuts. (as *Martynia parviflora* 47:107)
- **Fiber**—Pima *Basketry* Used extensively for basket making. (as *Martynia parviflora* 47:107)
- **Other**—Pima *Designs* Seedpods used as black designs for coiled baskets. (as *Martynia parviflora* 47:116)

***Proboscidea* sp.**, Devilsclaw

- **Food**—Pima, Gila River *Snack Food* Seeds eaten raw as a snack food. (133:7) *Unspecified* Oily seeds used for food. (133:5)

**Prosopis**, Fabaceae***Prosopis chilensis***, Algarrobo

- **Food**—Kiowa *Fodder* Leaves used for fodder. *Vegetable* Pounded beans and pods used for food. (as *Ceratonia chilensis* 192:33)

***Prosopis glandulosa*** Torr., Honey Mesquite

- **Drug**—Apache, Mescalero *Eye Medicine* Juice from leaves used for irritated eye lids. *Pediatric Aid* and *Urinary Aid* Infusion of bark used for children with enuresis. (14:37) **Comanche** *Gastrointestinal Aid* Leaves chewed and juice swallowed to neutralize acid stomach. (29:523) **Isleta** *Eye Medicine* Decoction of leaves and pods without beans used as an eye medicine. (100:39) **Keres, Western** *Eye Medicine* Leaves made into an eyewash. (171:63)
- **Food**—Acoma *Porridge* Beans formerly ground into flour and prepared as mush. *Unspecified* Beans eaten raw or cooked as string beans. (32:43) **Apache** *Bread & Cake* Seeds ground into flour and used in pancakes. *Preserves* Beans boiled, pounded or ground, hand kneaded, and made into a jam. (as *P. prosopis* 32:45) **Apache, Chiricahua & Mescalero** *Beverage* Cooked pods and seeds ground, water added, mixture allowed to ferment, and used as a beverage. (33:53) *Bread & Cake* Bean flour made into pancakes and bread. Beans were gathered, boiled, pounded on a hide or ground on a metate, placed in a pan, and worked with the hands until a thick consistency was attained. *Pie & Pudding* Pods boiled in water, taken out, mashed, boiled again, and eaten as pudding. (33:41) *Spice* Root used to flavor drinks and make them stronger. (33:51) *Substitution Food* Flour used in the absence of sugar to sweeten an intoxicating drink. (33:50) *Unspecified* Beans cooked with meat and seed coats spit out when eaten. (33:41) **Apache, Mescalero** *Beverage* Beans boiled, strained, and used as a drink. *Staple* Beans ground into flour, mixed with other plant foods, and eaten. (14:37) **Comanche** *Staple* Pods made into a meal and used for food. (29:523) **Isleta** *Bread & Cake* Beans ground into a flour and used to make bread. (100:39) *Candy* Beans toasted and eaten as a confection by sucking out the juice. (32:43) Roasted beans eaten as a confection. (100:39) **Keres, Western** *Porridge* Beans ground into a flour, made into a mush, and used for food. *Vegetable*

Beans eaten raw for the sweet taste or cooked like string beans. (171:63) **Kiowa Fodder** Leaves used for fodder. *Vegetable* Pounded beans and pods used for food. (192:33) **Laguna Porridge** Beans formerly ground into flour and prepared as mush. *Unspecified* Beans eaten raw or cooked as string beans. (32:43) **Pima Candy** White resinous secretions used to make candy. (as *P. prosopis* 32:45) **Yavapai Staple** Pods pulverized and made into a meal for transporting. (65:257)

• **Other—Apache, Mescalero Hunting & Fishing Item** Resin used for fletching arrows. (14:37) **Isleta Hunting & Fishing Item** Limbs used to make shafts for hunting arrows. (100:39)

***Prosopis glandulosa* Torr. var. *glandulosa***, Honey Mesquite

- **Food—Apache, Western Beverage** Pounded bean pulp squeezed for the juice and drunk just like milk. *Bread & Cake* Dried seeds pounded into flour, moistened, allowed to harden into cakes, and stored. *Candy* Dried beans pounded into flour and eaten as candy. *Dried Food* Pods dried and stored. *Porridge* Dried beans pounded into flour and mixed into a mush. *Staple* Fresh pods pounded into a flour. *Substitution Food* Pitch chewed as a substitute for gum. (as *P. chilensis* 26:176) **Havasupai Beverage** Plant used to make a drink. (as *P. juliflora* 197:66) *Candy* Pods eaten raw like a stick of candy. (as *P. juliflora* 197:228) **Kamia Unspecified** Pod used for food. (as *P. juliflora* 62:23) **Kiowa Fodder** Leaves used for fodder. Leaves used for fodder. Leaves used for fodder. *Vegetable* Pounded beans and pods used for food. Pounded beans and pods used for food. Pounded beans and pods used for food. (as *P. juliflora glandulosa* 192:33) **Luiseño Staple** Ground beans made into a flour and used for food in some places. (as *P. juliflora* 155:231) **Mahuna Bread & Cake** Bean pods ground into flour and used to make cakes and tarts. *Dried Food* Dried bean pods eaten raw. *Porridge* Bean pods ground into flour, mixed with hot or cold water, and eaten as porridge. (as *P. juliflora* 140:57) **Mari-copa Beverage** Unripe beans pounded and mixed with water to make a drink. (as *P. juliflora* 37:181) **Mohave Bread & Cake** Dried bean pods ground into a meal and used to make cakes. *Dried Food* Beans dried and stored in giant basket granaries for winter use. *Vegetable* Beans eaten raw or roasted. (as *P. juliflora* 168:46) **Paiute Unspecified** Pounded beans used for food. (as *P. juliflora* 118:27) **Papago Staple** Fruits and seeds used for food. (as *P. chilensis* 36:60) **Seri Porridge** Beans ground into a meal, mixed with water or sea lion oil, and eaten. (as *P. juliflora* 50:136) **Southwest Indians Unspecified** Seeds used for food. (as *P. chilensis* 17:15) **Yuma Beverage** Dried pods boiled to make a beverage. Pods crushed and steeped in water to make a beverage. *Bread & Cake* Meal molded into cakes for storage. *Dried Food* Pods dried on roof tops and stored. *Staple* Pods crushed or ground into a meal. (as *P. juliflora* 37:181)
- **Fiber—Havasupai Furniture** Wood used to make the base frame of the cradleboard. (as *P. juliflora* 197:228) **Seri Cordage** Outer root tissues pounded, split, worked between the hand and the mouth, and twisted into cords. *Mats, Rugs & Bedding* Root strips made into doughnut-shaped head pads used to balance earthen water jars on the heads. *Sewing Material* Outer root tissues woven into rough fabric. (as *P. juliflora* 50:134)
- **Other—Apache, Western Fasteners** Pitch used to attach arrow points to shafts. *Fuel* Used for firewood. (as *P. chilensis* 26:176) **Havasupai Fuel** Wood used for firewood. (as *P. juliflora* 197:228) **Navajo Hunt-**

*ing & Fishing Item* Wood used to make bows. (as *P. chilensis* 55:58) **Seri Hunting & Fishing Item** Fiber made into cord used for bows. (as *P. juliflora* 50:138)

***Prosopis glandulosa* var. *torreyana*** (L. Benson) M. C. Johnston, Western Honey Mesquite

- **Drug—Cahuilla Dermatological Aid** Gum diluted with water and used as a wash for open wounds and sores. *Eye Medicine* Gum diluted with water and used as a wash for sore eyes. (as *P. juliflora* var. *torreyana* 15:107) **Diegueño Eye Medicine** Infusion of leaves used as an eyewash. *Febrifuge* Infusion of leaves taken for fevers. (as *P. juliflora* var. *torreyana* 88:218)
- **Food—Cahuilla Beverage** Blossoms used to make tea. Pods crushed into a pulpy juice and used to make a beverage. Pod meal and water used to make a beverage. *Bread & Cake* Pod meal and water used to make cakes. *Porridge* Pod meal and water used to make mush. *Staple* Pods dried and ground into a meal. *Unspecified* Roasted blossoms stored in pottery vessels and cooked in boiling water when needed. Pods eaten fresh. (as *P. juliflora* var. *torreyana* 15:107) **Cocopa Unspecified** Pods used for food. *Winter Use Food* Pods stored for later use. (as *P. odorata* 64:267) **Diegueño Bread & Cake** Beans ground into a meal and used to make cakes. (84:32) **Kawaiisu Bread & Cake** Seeds pounded and molded into a cake without cooking. Pods crushed into a meal, molded into a dry cake, and stored and eaten at a later time. *Porridge* Pods crushed into a meal and eaten with water. (206:54) **Pima Beverage** Beans sun dried, pounded into meal, mixed with cold water, and used as a drink. (as *P. odorata* 95:261) **Yavapai Unspecified** Seeds used for food. (as *Cercidium torreyana* 63:211) Parched, ground seeds dampened, sometimes mixed with ground saguaro seed, and used for food. (as *Cercidium torreyanum* 65:256) **Yuma Beverage** Pods crushed and steeped in water to make a beverage. *Dried Food* Pit cooked pods dried and stored in baskets. Pods dried on roof tops and stored. *Staple* Beans dried thoroughly and pounded into meal. *Unspecified* Pit cooked pods pounded in a mortar and prepared as food. (as *P. odorata* 37:181)
- **Fiber—Cahuilla Building Material** Large limbs used as corner posts for houses, as rafters, and granary posts. Leaves used for roofing houses. *Clothing* Pounded, rubbed, and pulled bark used as a soft fiber for weaving skirts and making diapers for babies. *Cordage* Pounded, rubbed, and pulled bark used as a soft fiber to make a carrying net for pottery. (as *P. juliflora* var. *torreyana* 15:107)
- **Other—Cahuilla Cooking Tools** Trunk used to make wooden mortars. *Fasteners* Gum used as an adhesive for arrows. Gum used to secure foreshafts to arrows and baskets to mortars. *Fuel* Wood used as firewood for cooking, baking pottery, and warmth. Bark used as kindling for cooking and firewood in sweat houses. *Hunting & Fishing Item* Smaller limbs used for bow making. Fire hardened branches used as the foreshaft inserted into the main shaft of an arrow. *Paper* Bark used as a wrapping. (as *P. juliflora* var. *torreyana* 15:107) *Protection* Trees used by women as shaded working areas, out of the direct rays of the sun, for grinding food. (as *P. juliflora* var. *torreyana* 15:114) *Tools* Thorns used to puncture the skin for tattooing. (as *P. juliflora* var. *torreyana* 15:107) **Diegueño Cooking Tools** Wood used to make wooden spoons and other utensils. (84:32) *Fuel* Wood used for firewood. (as *P. juliflora* var. *torreyana* 88:218) *Tools* Wood used to

make knives for cutting yucca stalks, pottery paddles, and tools for digging pottery clay. (84:32)

***Prosopis pubescens*** Benth., Screwbean Mesquite

- **Drug**—Apache, Mescalero *Ear Medicine* Pods soaked in water and used for earache. (as *Strombocarpa pubescens* 14:44) Apache, Western *Ear Medicine* Bean placed in ear for earache. (26:178) **Cahuilla Unspecified** Roots and bark had medicinal value. (15:118) **Paiute Eye Medicine** Infusion of gummy exudate on bark used as an eyewash. (180:123) **Pima Dermatological Aid** Decoction of roots used as a wash or powdered roots applied to sores. (as *Strombocarpa pubescens* 47:96) Powdered root bark or decoction used to dress wounds. (146:79) *Gynecological Aid* Infusion of roots taken for troubles with menses. (as *Strombocarpa pubescens* 47:96) **Tewa Ear Medicine** Pods twisted into the ear for an earache. (138:69)
- **Food**—Apache, Chiricahua & Mescalero *Beverage* Fruit ground and sugar added to make a thick drink. (as *Strombocarpa pubescens* 33:53) *Bread & Cake* Pods dried, washed, ground into flour, and made into bread. *Dried Food* Fruits gathered, dried, and stored in sacks. *Special Food* Raw pods chewed and eaten as a delicacy. (as *Strombocarpa pubescens* 33:41) **Cahuilla Beverage** Pods crushed into a pulpy juice and used to make a beverage. Pod meal and water used to make a beverage. *Bread & Cake* Pod meal and water used to make cakes. *Dried Food* Ripe pods allowed to dry or picked after fully dried and ground into meal. *Staple* Pods used as one of the important food staples. Ripe pods allowed to dry or picked after fully dried and ground into meal. Pod meal and water used to make mush. (15:118) **Hualapai Dried Food** Pods dried and stored for later use. *Unspecified* Pods used for food. (195:45) **Isleta Unspecified** Pods chewed for the starch content and agreeable taste. (as *Strombocarpa pubescens* 100:43) **Kamia Unspecified** Coiled pod used for food. (62:23) **Mohave Beverage** Bean pods rotted in a pit for a month, dried, ground into a flour, and used to make a drink. *Vegetable* Bean pods used for food. (168:46) **Paiute Unspecified** Pounded beans used for food. (118:27) **Pima Beverage** Beans ground, mixed with water, and made into a nourishing and sweet beverage. (as *Strombocarpa pubescens* 47:96) Beans sun dried, pounded into meal, mixed with cold water, and used as a drink. (95:261) *Candy* Fresh, sugary pods chewed by children. *Forage* Pods and foliage eaten by grazing animals. (as *Strombocarpa pubescens* 47:96) *Staple* Beans pit roasted for several days, dried, and ground into a pinole. (as *Strombocarpa pubescens* 32:45) Beans pit cooked, dried, pounded, and eaten as pinole. (146:75) **Pima, Gila River Snack Food** Sap eaten as a snack food by all age groups. Catkins eaten as a snack food by all age groups. *Staple* Beans used to make flour. (133:5) Fruit used as a staple food. (133:7)
- **Fiber**—Cahuilla *Building Material* Large limbs used in construction. (15:118) **Hualapai Furniture** Roots used to make cradleboard frames. (195:45) **Pima Building Material** Wood used for fence posts. (as *Strombocarpa pubescens* 47:96)
- **Other**—Cahuilla *Hunting & Fishing Item* Small limbs used to make bows. *Tools* Long branch made into a mescal cutter to sever agave leaves. (15:118) **Pima Fuel** Wood used for fuel. (as *Strombocarpa pubescens* 47:96) **Pima, Gila River Season Indicator** Leaves used as a sign that planted crops would be safe from freezing weather. (133:6)

***Prosopis* sp.**, Mesquite

- **Food**—Hualapai *Dried Food* Beans dried and stored for winter use. (195:44)
- **Fiber**—Hualapai *Furniture* Roots used to make cradleboards. (195:44)
- **Dye**—Hualapai *Unspecified* Black sap used to make hair dye. (195:44)

***Prosopis velutina*** Woot., Velvet Mesquite

- **Drug**—Papago *Dermatological Aid* Poultice of chewed leaves applied for red ant stings. Poultice of chewed leaves applied to red ant stings. Poultice of pulverized gum applied to sores and impetigo. Poultice of pulverized plant applied to sores and impetigo pustules. (34:65) **Pima Analgesic** Cold infusion of leaves taken for headaches. Decoction of gum held in mouth for painful gums or applied to painful burns. *Antidiarrheal* Infusion of roots taken for diarrhea. *Burn Dressing* Decoction of gum applied to burns to prevent soreness. *Cathartic* Decoction of gum taken to cleanse the system. (47:93) Decoction of inner bark taken as a cathartic. (146:79) *Dermatological Aid* Decoction of beans used as bleach for severe sunburn. Decoction of gum applied to chapped and cracked fingers or sore lips. Poultice of dried gum applied to prevent infection in newborn's navel. Resin used for sores. (47:93) Decoction of black gum used as a wash for open wounds. (146:79) *Disinfectant* Poultice of dried gum applied to prevent infection in newborn's navel. (47:93) *Emetic* Decoction of inner bark taken as an emetic. (146:79) *Eye Medicine* Decoction of leaves applied as poultice to pink eye. (47:93) Decoction of black gum used as a wash for sore eyes. (146:79) *Gastrointestinal Aid* Cold infusion of leaves taken for stomach troubles. *Oral Aid* Decoction of gum held in the mouth for painful gums or sore lips. *Other* Decoction of gum applied as a lotion for "bad disease." *Pediatric Aid* Poultice of dried gum applied to prevent infection in newborn's navel. (47:93)
- **Food**—Cocopa *Unspecified* Pods used for food. *Winter Use Food* Pods stored for later use. (64:267) **Maricopa Unspecified** Beans formerly eaten as an important food. (32:44) **Papago Candy** Gum-like secretions found on branches and chewed. Gum-like secretions found on branches, dried, ground, boiled in gruel, cooled, and eaten like candy. (34:28) *Dried Food* Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (34:24) *Preserves* Gum-like secretions found on branches, dried, ground, mixed with saguaro syrup, and eaten like jam. (34:28) *Staple* Beans ground into flour and used for food. (34:25) Beans pounded in mortars and used as a staple food. (34:45) *Unspecified* Pods eaten fresh. Beans and pods pounded into a pulpy mass, boiled, and used for food. (34:25) **Pima Beverage** Beans pounded, added to cold water, strained, and used as a sweet drink. (47:93) *Bread & Cake* Seeds ground into flour and used to make bread. (32:44) Beans boiled, cooled, pressed out into dump-lings, and eaten. *Candy* Gum formerly eaten raw as a sweet. (47:93) White gum used to make candy. (146:74) *Porridge* Beans used to make mush. (47:93) *Staple* Seeds ground into flour and eaten as a pinole. (32:44) Beans parched, ground, and eaten as pinole. *Substitution Food* Inner bark used as a substitute for rennet. (146:74) *Sweetener* Seeds ground into flour and used to sweeten pinole. (32:44) *Unspecified* Sugary bean pods relished as food. Catkins sucked for their sweet taste. (47:93) Beans and pods pounded, ground, and used for food. Catkins eaten raw. (146:74) **Pima, Gila River Beverage** Pods crushed in a wooden mortar, soaked in water, and used to make vau

(a drink). *Bread & Cake* Pods made into flour and used to make an uncooked cake or loaf. (133:4) *Snack Food* Sap eaten as a snack food by all age groups. Catkins eaten as a snack food by all age groups. *Staple* Beans used to make flour. (133:5) Fruit used as a staple food. (133:7) *Winter Use Food* Pods stored in great quantities in large arrowweed baskets or bins. (133:4)

- **Fiber—Papago Basketry** Used as the warp element of baskets. (34:59) *Building Material* Posts of wood, forked at the top, used for the core of the house frame. (34:66) *Other* Roots used for curved structures in wrapped weaving. (34:53) **Pima Building Material** Wood used for fence posts. *Furniture* Roots used to make cradle frames. (47:93)
- **Dye—Pima Black** Decoction of gum applied to gray hair and used with black clay or mud as a black hair dye. (47:93)
- **Other—Papago Cooking Tools** Green sticks used to turn roasting ears of corn. (34:35) *Fasteners* “Gum” used to fasten handles to gourds. (34:68) *Fuel* Used to heat stones for baking cholla buds and joints. (34:15) *Protection* Posts used to make a fence to protect tobacco plants from marauding animals. (as *P. velutina* 34:37) *Tools* Two-foot-long, sword-shaped slabs sharpened and used as weed hoes. (34:32) **Pima Cooking Tools** Green wood used to make ladles. (47:93) *Fuel* Stumps used as fuel for pit baking. (47:58) Wood used for fuel. *Paint* Resin boiled and used as a pottery paint. *Toys & Games* Sticks used in gambling games. Wood made into balls and used in racing games. (47:93) **Pima, Gila River Cash Crop** Wood cut and sold. (133:9) *Season Indicator* Leaves used as a sign that planted crops would be safe from freezing weather. (133:6)

## *Prunella*, Lamiaceae

*Prunella vulgaris* L., Common Selfheal

- **Drug—Algonquin, Quebec Febrifuge** Infusion of leaves used for fevers. (18:224) **Bella Cooola Heart Medicine** Weak decoction of roots, leaves, and blossoms taken for the heart. (150:63) **Blackfoot Dermatological Aid** Infusion of plant used to wash a burst boil. Infusion of plant applied to neck sores. (86:78) *Eye Medicine* Infusion of plant used as an eyewash to keep the eyes moist on cold or windy days. (86:82) *Veterinary Aid* Infusion of plant used for saddle and back sores on horses. Infusion of plant used as an eyewash for horses. (86:90) **Catawba Misc. Disease Remedy** Plant used in certain diseases. (157:191) **Cherokee Adjuvant** Used to flavor other medicines. *Burn Dressing* Cold infusion used as a wash for burns. *Dermatological Aid* Infusion of root used as wash for bruises, diabetic sores, cuts, and acne. (80:54) **Chippewa Cathartic** Compound decoction of root taken as a physic. (53:346) **Cree, Hudson Bay Throat Aid** Plant used or herb chewed for sore throats. (92:303) **Delaware Febrifuge** Plant tops used to make a cooling drink and body wash for fevers. (176:37) **Delaware, Oklahoma Febrifuge** Liquid made from plant tops taken and used as a wash for fever. (175:31, 78) **Iroquois Analgesic** Infusion of plant taken for backaches. (87:425) *Antidiarrheal* Decoction of plants taken for diarrhea. (87:423) *Antiemetic* Decoction of plants taken for vomiting and diarrhea. *Blood Medicine* Compound decoction of roots and shoots taken as a blood purifier. (87:424) *Cold Remedy* Decoction of plants taken for colds. *Cough Medicine* Decoction of plants taken for coughs. (87:423) *Emetic* Decoction of whole plant taken as an emetic. (87:425) *Febrifuge* Decoction of plants taken for fevers and shortness of breath. (87:424) *Gastrointestinal Aid* Infusion

of plants taken for stomach cramps and biliousness. (87:423) Compound infusion of roots and plants taken for upset stomachs. (87:424) Infusion of plant taken for biliousness. *Gynecological Aid* Decoction of whole plant taken to strengthen the womb. (87:425) *Hemorrhoid Remedy* Compound decoction of roots taken and used as wash for piles. (87:424) *Misc. Disease Remedy* Plant used for sugar diabetes. (87:425) *Orthopedic Aid* Compound decoction of plants used as steam bath for sore legs or stiff knees. (87:424) Infusion of plant taken for backaches. *Panacea* Infusion of plant taken for any ailment. (87:425) *Pediatric Aid* Compound infusion of plants given to babies that cry too much. *Psychological Aid* Compound infusion of plants taken for sickness caused by grieving. *Pulmonary Aid* Decoction or infusion of roots taken for shortness of breath. *Respiratory Aid* Infusion of roots taken for heaves or shortness of breath. *Sedative* Compound infusion of plants given to babies that cry too much. *Tuberculosis Remedy* Compound decoction of roots taken for consumption. *Venereal Aid* Compound decoction of roots and shoots taken for venereal disease. (87:424) **Menominee Antidiarrheal** and *Pediatric Aid* Infusion of stalk used, especially good for babies, for dysentery. (54:131) **Mohegan Febrifuge** “Drink” made from leaves taken and used as a wash for fevers. (176:74, 130) **Ojibwa Gynecological Aid** Compound containing root used as a female remedy. (153:372) *Hunting Medicine* Root, sharpened the powers of observation, used to make a tea to drink before going hunting. (153:430) **Quileute Dermatological Aid** Plant used for boils. **Quinault Dermatological Aid** Plant juice rubbed on boils. (79:45) **Salish, Coast Dermatological Aid** Leaves used for boils, cuts, bruises, and skin inflammations. (182:84) **Thompson Tonic** Hot or cold infusion of plant taken as a tonic for general indisposition. (164:471)

- **Food—Cherokee Vegetable** Leaves cooked and eaten as greens. (80:54) Small leaves used as a potherb. (as *Frunella vulgaris* 126:44) Leaves cooked with sochan (*Rudbeckia laciniata*), creaseys (probably *Lepidium virginicum*), and other potherbs and eaten. (204:253) **Thompson Beverage** Plant soaked in cold water and used as one of the most common drinks. (164:494)

## *Prunus*, Rosaceae

*Prunus americana* Marsh., American Plum

- **Drug—Cherokee Cough Medicine** Bark used to make cough syrup. *Kidney Aid* Infusion of bark taken for the kidneys. *Urinary Aid* Infusion of bark taken for the bladder. (80:50) **Cheyenne Ceremonial Medicine** Branches used for the Sun Dance ceremony. *Oral Aid* Smashed fruits used for mouth disease. (83:35) **Chippewa Anthelmintic** Compound decoction of root taken for worms. (53:346) *Dermatological Aid* Compound poultice of inner bark applied to cuts and wounds. (53:352) *Disinfectant* Compound decoction of inner bark used as a disinfectant wash. (53:366) Decoction of bark used as a disinfecting wash. (53:376) **Meskwaki Oral Aid** Root bark used as an astringent medicine for mouth cankers. (152:242) **Mohegan Respiratory Aid** Infusion of twigs taken for asthma. (174:270) Infusion of twigs taken for asthma. (176:74, 130) **Ojibwa, South Antidiarrheal** Compound decoction of small rootlets taken for diarrhea. (91:200) **Omaha Dermatological Aid** Poultice of boiled root bark applied to skin abrasions. (70:87) **Rappahannock Unspecified** “An ingredient of a medicine made after diagnosis.” (161:31)

- **Food**—Apache, Mescalero *Dried Food* Fruits dried and stored for future food use. (14:50) **Cherokee Beverage** Fruit used to make juice. *Fruit* Fruit used for food. *Preserves* Fruit used to make jelly. (80:50) **Cheyenne Pie & Pudding** Fruits, sugar, and flour used to make a pudding. *Special Food* Fruits pulverized, sun dried, boiled, and eaten as a delicacy. (83:35) *Winter Use Food* Sun dried plums stored for winter use. (76:177) **Chippewa Bread & Cake** Berries cooked, spread on birch bark into little cakes, dried, and stored for winter use. *Fruit* Berries eaten raw. (53:321) **Crow Fruit** Ripe plums used fresh. *Winter Use Food* Ripe plums dried for winter use. (19:19) **Dakota Dried Food** Fruit boiled, pitted, and dried for winter use. (69:364) Highly valued fruit pitted and dried for winter use. (70:87) *Fruit* Fruit eaten fresh. (69:364) Highly valued fruit eaten fresh and raw. (70:87) *Sauce & Relish* Fruit made into a sauce. (69:364) Highly valued fruit cooked as a sauce. (70:87) **Iroquois Beverage** Fruit sun dried and boiled in water to make coffee. (196:145) *Bread & Cake* Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) **Isleta Fruit** Fruits eaten for food. Fruits eaten fresh. (32:46) Fruit eaten for food. (100:40) **Kiowa Fruit** Fruit gathered in great quantities and used immediately. *Winter Use Food* Fruit gathered in great quantities, dried, and stored for winter use. (192:29) **Lakota Fruit** Fruits eaten fresh. (106:37) Fruits eaten for food. (139:56) *Starvation Food* Fruits dried and eaten during famines. (106:37) **Meskwaki Fruit** Plums eaten fresh. *Preserves* Plums made into plum butter for winter use. (152:263) **Ojibwa Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. *Soup* Dried fruit ground into a flour and used to make soup. (135:235) **Omaha Dried Food** Fruit pitted and dried for winter use. (68:326) Highly valued fruit pitted and dried for winter use. (70:87) *Fruit* Fruit eaten fresh in season. (68:326) Highly valued fruit eaten fresh and raw. *Sauce & Relish* Highly valued fruit cooked as a sauce. **Pawnee Dried Food** Highly valued fruit eaten fresh and raw, cooked as a sauce, or dried with the pits for winter use. *Fruit* Highly valued fruit eaten fresh and raw. *Sauce & Relish* Highly valued fruit cooked as a sauce. **Ponca Dried Food** Highly valued fruit pitted and dried for winter use. *Fruit* Highly valued fruit eaten fresh and raw. *Sauce & Relish* Highly valued fruit cooked as a sauce. **Winnebago Dried Food** Highly valued fruit pitted and dried for winter use. *Fruit* Highly valued fruit eaten fresh and raw. *Sauce & Relish* Highly valued fruit cooked as a sauce. (70:87)
  - **Fiber**—Dakota *Brushes & Brooms* Tough, elastic twigs bound into bundles and used as brooms for sweeping the floor. **Omaha Brushes & Brooms** Tough, elastic twigs bound into bundles and used as brooms for sweeping the floor. **Pawnee Brushes & Brooms** Bound bundles of tough, elastic twigs used a brooms for sweeping the floor. **Ponca Brushes & Brooms** Tough, elastic twigs bound into bundles and used as brooms for sweeping the floor. **Winnebago Brushes & Brooms** Tough, elastic twigs bound into bundles and used as brooms for sweeping the floor. (70:87)
  - **Dye**—Chippewa *Mordant* Inner bark scraped and used to set the color of a yellow dye. (53:374) *Red* Inner bark boiled with other inner barks and bloodroot and used to make a red dye. (53:371) *Yellow* Single handful of shredded roots boiled with bloodroot to make a dark yellow dye. (53:374) **Isleta Red** Root bark, alder root bark, and mountain mahogany root bark used to make a red dye for buckskin. (100:40) **Navajo Red** Roots used as a red dye for wool. (55:54)
  - **Other**—Dakota *Ceremonial Items* Sprout or young growth made into a wand and used ceremonially. The sprout or young growth was made into a wand by peeling it and painting it with emblematic colors and designs. An offering which consisted of tobacco or anything acceptable to higher powers was attached to the top of the wand and usually made for the benefit of the sick. The offering could be made anywhere and by anyone as long as it was executed with appropriate ceremony, but was most efficiently performed if an altar were prepared at which the wand was placed upright with the offering fastened near the top. (70:87) *Hide Preparation* Fruit dried with buffalo hides in preparing them for tanning. *Toys & Games* Seeds used to make playing pieces of a game similar to dice. (69:364) **Mohegan Water Indicator** Crotched sticks used to locate underground water. (176:87) **Omaha Season Indicator** Blossoms used as an indicator of when to plant corn, beans, and squashes. (70:87)
- Prunus andersonii*** Gray, Desert Peach
- **Drug**—Paiute *Antidiarrheal* Decoction of stems, leaves, or roots taken for diarrhea. *Antirheumatic (Internal)* Weak decoction of bark taken for rheumatism. (180:123) *Cold Remedy* Infusion of branches taken for colds. (118:38) Hot infusion of leaves or decoction of branches taken for colds. *Misc. Disease Remedy* Decoction of dried bark strips taken as a winter tonic to ward off influenza. *Tonic* Decoction of dried bark strips taken as a winter tonic to ward off influenza. *Tuberculosis Remedy* Decoction of bark taken or twigs chewed for tuberculosis. (180:123)
  - **Food**—Cahuilla *Fruit* Fruit considered a great delicacy, important food and a highly prized food source. *Preserves* Fruit boiled, sweetened with sugar, and used to make jelly. (15:119)
- Prunus angustifolia*** Marsh., Chickasaw Plum
- **Food**—Comanche *Fruit* Fresh fruits used for food. *Winter Use Food* Stored fruits used for food. (29:523)
- Prunus armeniaca*** L., Apricot
- **Food**—Hopi *Unspecified Species* used for food. (200:79) **Keresan Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (198:558)
- Prunus cerasus*** L., Sour Cherry
- **Drug**—Cherokee *Blood Medicine* Compound used as a blood tonic. *Cold Remedy* Infusion of bark taken for colds. *Cough Medicine* Infusion of bark taken for coughs. *Dermatological Aid* Astringent root bark used in a wash for old sores and ulcers. Root bark used as a wash for old sores and ulcers. *Febrifuge* Infusion or decoction of bark used for fevers, including the “great chill.” *Gastrointestinal Aid* Boiled fruit used for “blood discharged from bowels.” Used in steam bath for indigestion, biliousness, and jaundice. *Gynecological Aid* Warm infusion given when labor pains begin. *Misc. Disease Remedy* Compound of barks added to corn whisky and used to break out measles. *Oral Aid* Infusion of bark used for “thrash.” *Throat Aid* Decoction of inner bark used for laryngitis. (80:28, 29)
  - **Food**—Cherokee *Fruit* Fruit used for food. (80:28)
  - **Fiber**—Cherokee *Building Material* Wood used for lumber. *Furni-*

ture Wood used to make furniture. (80:28)

- **Other—Cherokee** *Decorations* Wood used to carve. (80:28)

**Prunus dulcis** (P. Mill.) D. A. Webber, Sweet Almond

- **Food—Hopi** *Unspecified* Species used for food. (as *P. amygdalus* 200:79)

**Prunus emarginata** (Dougl. ex Hook.) Walp., Bitter Cherry

- **Drug—Bella Coola** *Heart Medicine* Decoction of root and inner bark taken daily for heart trouble. (150:58) Infusion of bark used for heart trouble. *Tuberculosis Remedy* Infusion of bark used for tuberculosis. (184:209) **Cowichan** *Cold Remedy* Infusion of bark and crabapple bark used as a cure-all tonic for colds. *Panacea* Infusion of bark and crabapple bark used as a cure-all tonic for numerous ailments. (182:87) **Hoh** *Blood Medicine* Decoction of bark used as a blood remedy. (137:64) **Kwakiutl** *Cancer Treatment* Bark used to wrap lint after treating tumors. (20:383) *Dermatological Aid* Bark used to cover poultice on swellings. (20:382) Bark ash rubbed on newborn's chest to protect against rash and sore mouth. (20:383) Bark ash rubbed on chest of baby as protection from rashes. Infusion of bark taken for eczema. (183:290) *Dietary Aid* Roots applied to nipples of mother to induce the infant to nurse. (20:386) Roots applied to the nipples of a mother to induce her infant to nurse. (183:290) *Gynecological Aid* Roots applied to nipples of mother to induce the infant to nurse. (20:386) Decoction of split roots taken for blood discharge. *Heart Medicine* Infusion of bark taken for heart trouble. (183:290) *Hemostat* Poultice of bark strips used for holding down all kinds of plasters applied to bleeding wounds. (as *P. emarginata* var. *villosa* 20:384) *Oral Aid* Bark ash rubbed on newborn's chest to protect against rash and sore mouth. Poultice of rubbed root applied to sores in child's mouth. (20:383) Bark ash rubbed on chest of baby as protection from mouth sores. Roots held in the mouth by children with canker sores. (183:290) *Pediatric Aid* Plant used as part of charm worn by children to ward off disease. (20:379) Bark ash rubbed on newborn's chest to protect against rash and sore mouth. Poultice of rubbed root applied to sores in child's mouth. (20:383) Roots applied to nipples of mother to induce the infant to nurse. (20:386) Bark ash rubbed on chest of baby as protection from rashes and mouth sores. Roots applied to the nipples of a mother to induce her infant to nurse. Roots held in the mouth by children with canker sores. (183:290) *Preventive Medicine* Plant used as part of charm worn by children to ward off disease. (20:379) *Tuberculosis Remedy* Infusion of bark taken for tuberculosis. (183:290) **Lummi** *Gynecological Aid* Bark chewed to facilitate childbirth. Infusion of rotten wood taken as a contraceptive. (79:37) **Makah** *Blood Medicine* Bark used as a blood purifier. *Laxative* Bark used as a laxative. *Tonic* Bark used as a tonic. (67:266) **Nitinaht** *Panacea* Infusion of bark taken as a general tonic for healing any sickness. (186:120) **Okanagan-Colville** *Gastrointestinal Aid* Berries eaten as a laxative for "sour stomach." (188:127) **Paiute** *Eye Medicine* Infusion of bark used as an eye medicine. (111:85) **Quileute** *Blood Medicine* Decoction of bark used as a blood remedy. (137:64) **Quinault** *Gynecological Aid* Infusion of rotten wood taken as a contraceptive. *Laxative* Decoction of bark taken as a laxative. (79:37) **Saanich** *Cold Remedy* Infusion of bark and crabapple bark used as a cure-all tonic for colds. *Panacea* Infusion of bark and crabapple bark used as a cure-all tonic for numerous ailments. *Psychological Aid* Concoction of

roots and gooseberry roots used to make children intelligent and obedient. (182:87) **Skagit** *Cold Remedy* Decoction of bark taken for colds. *Gynecological Aid* Infusion of rotten wood taken as a contraceptive. **Skokomish** *Cold Remedy* Decoction of bark taken for colds. *Gynecological Aid* Infusion of rotten wood taken as a contraceptive. (79:37) **Thompson** *Orthopedic Aid* Bark used to wrap splints for broken limbs. *Unspecified* Infusion of branches taken for an unspecified illness. (187:263)

- **Food—Cahuilla** *Fruit* Fruit considered a great delicacy, important food and a highly prized food source. (15:119) **Coeur d'Alene** *Fruit* Berries occasionally eaten fresh. (178:90) **Hoh** *Preserves* Fruits used to make jelly. (137:64) **Klamath** *Fruit* Fruit used for food. (45:98–99) **Quileute** *Preserves* Fruits used to make jelly. (137:64) **Shuswap** *Fruit* Cherries used for food. (123:67) **Thompson** *Dessert* Fruits sometimes eaten as a dessert. *Fruit* Fruits eaten occasionally because of the bitter taste. (187:263)
- **Fiber—Bella Coola** *Basketry* Bark formerly used for imbricating baskets. (184:209) **Hanaksiala** *Basketry* Bark used to make baskets. (43:272) **Hesquiat** *Basketry* Bark used in basket decoration and in weaving the large part of the berry picking baskets. (185:73) **Nitinaht** *Basketry* Bark strips used to make baskets. (67:266) **Okanagon** *Basketry* Bark split and used to make baskets. *Mats, Rugs & Bedding* Bark split and used to make mats. (125:40) **Salish, Coast** *Basketry* Bark used for imbrication in cedar bark baskets. (182:87) **Shuswap** *Basketry* Bark used for basket trim. (123:67) **Snohomish** *Basketry* Bark used in the imbricated designs of baskets. (79:37) **Thompson** *Basketry* Bark split and used to make baskets. (125:40) Bark softened and used to make baskets. (164:497) Bark used extensively in basketry. (164:498) Tough, waterproof bark used with grass stems for imbrication of coiled split cedar root baskets. The basket was either left a natural light reddish brown color or was dyed by burying it in damp earth or letting it sit in a rusty tin can. After being buried a short time, it became a dark brown color and when kept for a longer time, it became black. *Building Material* Bark made into twine and used for reinforcement of old suspension bridges. *Cordage* Bark used to make twine. (187:263) *Mats, Rugs & Bedding* Bark split and used to make mats. (125:40) Bark softened and used to make mats. (164:497)
- **Other—Bella Coola** *Containers* Bark formerly used for wrapping implements. (184:209) **Clallam** *Hunting & Fishing Item* Bark fashioned into twine and used as fishing line. (57:202) **Haisla & Hanaksiala** *Decorations* Wood used for carving. (43:272) **Hesquiat** *Fasteners* Bark used to wrap the joints of implements such as harpoons, where the head is fixed to the shaft. First some pitch was smeared over the joint, then the cherry bark was wrapped around and bound tightly with twine or sinew. Finally more pitch was plastered over to make the joint completely watertight. Cherry bark is both strong and flexible and is decorative as well. (185:73) **Klamath** *Weapon* Branches used for whips. (45:98–99) **Nitinaht** *Ceremonial Items* Bark used to make the reed for a ceremonial wolf whistle. *Fasteners* Smooth, tough bark used for binding and wrapping joints of fishing and hunting implements. (186:120) **Okanagan-Colville** *Decorations* Bark used to imbricate split cedar root baskets. Bark used to decorate bows, "tomahawk" handles, and pipestems. Root bark used to imbricate cedar root baskets. (188:127) **Okanagon** *Containers* Bark split and used to make bags. (125:40) **Quinault** *Fasteners* Bark used to tie the prongs of

fish spears. (79:37) **Salish, Coast Containers** Wood used for the hearth. *Fuel* Wood used for fuel and the hearth and drill in making friction fires. *Hunting & Fishing Item* Bark used to make harpoons, spears, fishing lines, nets, and other hunting gear. *Tools* Wood used for the drill to make friction fires. (182:87) **Thompson Containers** Bark split and used to make bags. (125:40) Bark softened and used to make bags. (164:497) *Decorations* Bark used to bind bows considered a decorative contrast to the wood of the bows. *Fasteners* Bark used to bind bows in the middle and ends for strength. (164:498)

***Prunus fasciculata*** (Torr.) Gray, Desert Almond

- **Food**—**Cahuilla Fruit** Fruit considered a great delicacy, important food and a highly prized food source. (15:119)
- **Other**—**Kawaiisu Hunting & Fishing Item** Straight twigs, fitted into the hollow stems of carizzo grass main shafts, used as arrow fore-shafts. *Tools* Used as a drill in fire making. (206:55)

***Prunus fremontii*** S. Wats., Desert Apricot

- **Food**—**Cahuilla Fruit** Fruit considered a great delicacy, important food and a highly prized food source. (15:119)

***Prunus gracilis*** Engelm. & Gray, Oklahoma Plum

- **Food**—**Kiowa Candy** Dried fruit used as an ingredient in making candy. *Winter Use Food* Dried fruit stored for winter use, eaten uncooked, or pounded and made into cakes. (192:30)

***Prunus ilicifolia*** (Nutt. ex Hook. & Arn.) D. Dietr., Holly Leaf Cherry

- **Drug**—**Diegueño Cough Medicine** Infusion of leaves taken as a cough medicine. (88:217) **Mahuna Cough Medicine** Infusion of bark or roots taken for coughs. (140:18)
- **Food**—**Cahuilla Fruit** Fruit considered a great delicacy, important food and a highly prized food source. (15:119) **Costanoan Fruit** Fruits eaten for food. *Unspecified* Soaked, roasted inner kernels used for food. (21:249) **Diegueño Bread & Cake** Large seed cracked, the kernel extracted, pounded into a meal, and made into patties and roasted. *Fruit* Fruit eaten fresh. (84:32) Fruit used for food. *Porridge* Seeds ground, leached, and used to make atole. (88:217) **Luiseno Fruit** Fruit used for food. (as *Cerasus ilicifolia* 155:232) Fruit, similar to plums or cherries, formerly used to some extent as food. *Porridge* Sun dried fruit kernels made into a flour and cooked in an earthen vessel. The sun dried fruit kernels were extracted from the shells, made into a flour, and then leached to remove the bitterness. The flour was either leached with hot water, placed in a rush basket, and warm water poured over it, or placed in a sand hole and warm water poured over it to remove the bitterness. (155:194) **Staple** Kernels ground into a flour and used for food. (as *Cerasus ilicifolia* 155:232) *Unspecified* Pulp eaten for food. (155:194) **Mahuna Fruit** Berries eaten mainly to quench the thirst. (140:70)
- **Other**—**Costanoan Hunting & Fishing Item** Wood used for bows. (21:249)

***Prunus nigra*** Ait., Canadian Plum

- **Drug**—**Algonquin, Quebec Cough Medicine** Infusion of inner bark taken for coughs. *Unspecified* Infusion of roots used as a medicinal tea. (18:184) **Meskwaki Antiemetic** Infusion of bark used to settle stomach when it will not retain food. (152:242)
- **Food**—**Algonquin, Quebec Fruit** Fruit eaten. *Preserves* Fruit made

into preserves. (18:95) **Iroquois Bread & Cake** Fruit mashed, made into small cakes and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) **Meskwaki Fruit** Plums eaten fresh. *Preserves* Plums made into plum butter for winter use. (152:263) **Ojibwa Fruit** Large quantities of plums found in thickets and gathered for food. *Preserves* Large quantities of plums found in thickets and gathered for preserves. (153:409)

- **Dye**—**Ojibwa Mordant** Inner bark used as an astringent color fixative in dyeing with other plant dyes. (153:426)

***Prunus pensylvanica*** L. f., Pin Cherry

- **Drug**—**Algonquin, Quebec Blood Medicine** Infusion of bark taken for blood poisoning. *Cough Medicine* Infusion of bark taken for coughs. *Disinfectant* Infusion of bark taken for infections. *Pulmonary Aid* Infusion of bark taken for bronchitis. (18:184) **Algonquin, Tête-de-Boule Hemostat** and *Pediatric Aid* Poultice of boiled, shredded inner bark applied to bleeding umbilical cord. (132:130) **Cherokee Blood Medicine** Compound used as a blood tonic. *Cold Remedy* Infusion of bark taken for colds. *Cough Medicine* Infusion of bark taken for coughs. *Dermatological Aid* Astringent root bark used in a wash for old sores and ulcers. Root bark used as a wash for old sores and ulcers. *Febrifuge* Infusion or decoction of bark used for fevers, including the “great chill.” *Gastrointestinal Aid* Boiled fruit used for “blood discharged from bowels.” Used in steam bath for indigestion, biliousness, and jaundice. *Gynecological Aid* Warm infusion given when labor pains begin. *Misc. Disease Remedy* Compound of barks added to corn whisky and used to break out measles. *Oral Aid* Infusion of bark used for “thrash.” *Throat Aid* Decoction of inner bark used for laryngitis. (80:28, 29) **Cree, Woodlands Eye Medicine** Infusion of inner bark used for sore eyes. (109:53) **Gitksan Unspecified** Bark used for medicine. (73:152) **Iroquois Burn Dressing** Compound of roots applied as a salve to burns. (87:359) *Cough Medicine* Bark and another bark used to make cough syrup. (142:91) **Malecite Dermatological Aid** Outer layer of dried trees used as a powder for prickly heat. (116:250) Infusion of bark used for erysipelas. (116:256) *Pediatric Aid* Outer layer of dried trees used for chafed babies. (116:250) **Micmac Dermatological Aid** Wood used for chafed skin and prickly heat. *Misc. Disease Remedy* Bark used for erysipelas. (40:59) **Ojibwa Cough Medicine** Inner bark used as a cough remedy. (153:385) **Ojibwa, South Analgesic** Decoction of crushed root taken for stomach pains. *Gastrointestinal Aid* Decoction of crushed root taken for stomach disorders. (91:199) **Potawatomi Analgesic** and *Cough Medicine* Infusion of inner bark taken internal pain and cough. (154:77) **Wet’suwet’en Cough Medicine** Bark used for coughs. (73:152)
- **Food**—**Algonquin, Quebec Fruit** Fruit eaten fresh. *Preserves* Fruit made into jelly. (18:95) **Cherokee Fruit** Fruit used for food. (80:28) *Pie & Pudding* Fruit used to make pies. *Preserves* Fruit used to make jam. (126:58) **Cree, Woodlands Preserves** Juice used to make jelly. (109:53) **Iroquois Bread & Cake** Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. (196:128) *Fruit* Fruit used for food. (141:46) Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes

soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) **Ojibwa Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (135:235) Berries used for food. The pin cherry was abundant around the Flambeau Reservation and the Ojibwe were fond of it. It was an education in itself to see a group of Ojibwe women working on mats with a supply of fruit laden branches beside them. With one hand they would start a stream of berries into the mouth and the stream of cherry stones ejected from the other corner of the mouth seemed ceaseless. The Pillager Ojibwe also had the tree and used it in the same manner. (153:409) *Soup* Dried fruit ground into a flour and used to make soup. (135:235) **Potawatomi Fruit** Cherries eaten as the women worked making baskets. (154:108)

- **Fiber**—**Cherokee Building Material** Wood used for lumber. *Furniture* Wood used to make furniture. (80:28)

- **Other**—**Cherokee Decorations** Wood used to carve. (80:28)

### ***Prunus persica*** (L.) Batsch, Peach

- **Drug**—**Cherokee Anthelmintic** Decoction or teaspoon of parched seed kernels taken for worms. *Antiemetic* Infusion of scraped bark taken for vomiting. *Cathartic* Infusion of any part taken as a purgative. *Dermatological Aid* Used for skin diseases and leaves wrung in cold water used to bathe swelling. *Febrifuge* Strong infusion taken for fever. *Gastrointestinal Aid* Infusion of leaves taken for sick stomach. (80:47, 48) **Delaware Anthelmintic** Infusion of leaves used to expel pinworms. *Antiemetic* and *Pediatric Aid* Infusion of leaves used by children for vomiting. (176:31) **Koasati Orthopedic Aid** Leaves rubbed on the scratches of tired legs. (177:27) **Navajo Cathartic** Plant used as a purgative. (55:96) Dried fruit used as a purgative. (55:54) **Rappahannock Kidney Aid** Infusion of fresh or dried leaves taken for kidney trouble. (161:33)
- **Food**—**Cherokee Fruit** Fruit used for food. (80:47) **Havasupai Beverage** Dried fruits pounded, stewed, and the water drunk. *Dried Food* Fruit split open, pitted, and sun dried for later consumption. (197:224) **Hopi Dried Food** Fruits split open and dried for winter use. *Fruit* Fruits eaten fresh. (200:79) **Iroquois Bread & Cake** Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:129) **Keres, Western Fruit** Fresh peaches eaten for food. *Winter Use Food* Peaches dried for winter use. (171:63) **Keresan Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (198:562) **Navajo, Ramah Fruit** Favorite fruit used for food. (191:31) **Seminole Unspecified** Plant used for food. (169:507)
- **Dye**—**Navajo Yellow** Leaves used as a yellow dye. (55:54)
- **Other**—**Hopi Tools** Wood used to make weaving batons. (200:79)

### ***Prunus pumila*** L., Sandcherry

- **Food**—**Menominee Fruit** Berries eaten fresh. *Preserves* Berries sometimes gathered and preserved. (151:71) **Ojibwa Dried Food** Fruit used dried. *Fruit* Fruit used fresh. (5:2221) This species was plentiful on sandy openings in the forest and the fruit gathered for food. (153:409)

### ***Prunus pumila* var. *besseyi*** (Bailey) Gleason, Western Sandcherry

- **Food**—**Dakota Dried Food** Pitted fruit dried for winter use. (as *P. besseyi* 69:364) Fruit dried for winter use. (as *P. besseyi* 70:88) *Fruit*

Pitted fruit eaten fresh. (as *P. besseyi* 69:364) *Sauce & Relish* Fruit used to make a sauce during the fruiting season. (as *P. besseyi* 70:88) **Lakota Fruit** Fruits eaten for food. (as *P. besseyi* 139:56) **Omaha Dried Food** Fruit dried for winter use. (as *P. besseyi* 70:88) *Fruit* Fruit eaten fresh. (as *P. besseyi* 68:326) *Sauce & Relish* Fruit used to make a sauce during the fruiting season. **Pawnee Dried Food** Fruit dried for winter use. *Sauce & Relish* Fruit used to make a sauce during the fruiting season. **Ponca Dried Food** Fruit dried for winter use. *Sauce & Relish* Fruit used to make a sauce during the fruiting season. (as *P. besseyi* 70:88)

- **Other**—**Lakota Paint** Fruit used to paint the face. (as *P. besseyi* 139:56)

### ***Prunus pumila* var. *susquehanae*** (hort. ex Willd.) Jaeger, Sesquehana Sandcherry

- **Food**—**Potawatomi Beverage** Cherries used to improve the flavor of whisky. (as *P. cuneata* 154:107)

### ***Prunus serotina*** Ehrh., Black Cherry

- **Drug**—**Cherokee Blood Medicine** Compound used as a blood tonic. *Cold Remedy* Infusion of bark taken for colds. *Cough Medicine* Infusion of bark taken for coughs. *Dermatological Aid* Astringent root bark used in a wash for old sores and ulcers. Root bark used as a wash for old sores and ulcers. *Febrifuge* Infusion or decoction of bark used for fevers, including the "great chill." (80:28, 29) Decoction of bark used as a wash for chills and fevers. (177:28) Infusion of bark taken for fevers. (203:74) *Gastrointestinal Aid* Boiled fruit used for "blood discharged from bowels." Used in steam bath for indigestion, biliousness, and jaundice. *Gynecological Aid* Warm infusion given when labor pains begin. (80:28, 29) Infusion of bark taken for childbirth. (177:28) *Misc. Disease Remedy* Compound of barks added to corn whisky and used to break out measles. (80:28, 29) Decoction of bark used as a wash for ague. (177:28) *Oral Aid* Infusion of bark used for "thrash." *Throat Aid* Decoction of inner bark used for laryngitis. (80:28, 29) **Chippewa Anthelmintic** Compound decoction of root taken for worms. (53:346) *Burn Dressing Powder* containing powdered root applied to burns. (53:354) *Dermatological Aid* Compound poultice of inner bark applied to cuts and wounds. (53:352) Poultice of fresh roots or decoction of bark used as a wash for "scrofulous neck." Powder containing powdered root applied to ulcers. (53:354) *Disinfectant* Compound decoction of inner bark used as a disinfectant wash. (53:366) *Misc. Disease Remedy* and *Pediatric Aid* Decoction of root given for "cholera infantum." (53:346) *Tuberculosis Remedy* Poultice of root applied or decoction of bark used as a wash for scrofulous, neck sores. (53:354) **Delaware Antidiarrheal** Bark used for diarrhea. *Cough Medicine* Fruits used to make cough syrup. *Tonic* Bark combined with other roots and used as a tonic. (176:32) **Delaware, Oklahoma Antidiarrheal** Bark used as a diarrhea remedy. *Cough Medicine* Fruit used to make cough syrup. *Tonic* Compound containing bark taken as a tonic. (175:27, 78) **Delaware, Ontario Gynecological Aid** Compound infusion of bark taken for "diseases peculiar to women." *Tonic* Compound infusion of bark taken as a tonic for general debility. (175:68, 82) **Iroquois Analgesic** Decoction of bark taken or poultice applied to forehead and neck for headaches. (87:362) *Blood Medicine* Compound infusion of bark and roots taken as a blood purifier. (87:361) Infusion of roots and other roots taken by young mothers for

thick blood. (141:46) *Burn Dressing* Compound of roots applied as a salve to burns. (87:362) *Cold Remedy* Infusion or decoction of bark taken or inhaled for colds or sore throats. (87:361) *Cough Medicine* Decoction of bark taken for consumption or an "old cough." (87:360) *Dermatological Aid* Compound decoction taken for "sores all over the body caused by bad blood." Compound poultice of bark applied to chancres caused by syphilis or cuts. (87:361) Compound decoction used as wash for parts affected by "Italian itch." (187:107) *Tonic* Decoction of young twigs and leaves used for the tonic properties. (as *P. mucronata* 164:494) *Urinary Aid* Decoction of twigs or shoots taken as a bladder remedy. (as *P. douglassii* 125:42)
- **Food**—Apache, White Mountain *Candy* Pitch used as gum. (as *P. mucronata* 136:159) **Gosiute** *Candy* Gum used for chewing gum. (as *P. douglasii* 39:378) **Karok** *Beverage* Young sprouts used to make tea. (6:48) **Montana Indian** *Substitution Food* Leaves sometimes used as a substitute for coffee. (as *P. mucronata* 19:20) **Paiute** *Spice* Boughs or branches used for flavoring barbecued bear meat. (as *P. mucronata* 111:44) **Round Valley Indian** *Substitution Food* Fresh leaves used as a substitute for coffee. (as *P. mucronata* 41:309) **Shuswap** *Sweetener* Sap used as a sugar-like food. (123:52) **Thompson** *Sweetener* Wild sugar gathered and eaten whenever possible. (187:107) **Yuki** *Substitution Food* Fresh leaves used as a substitute for coffee. (as *P. mucronata* 41:309) **Yurok** *Beverage* Young sprouts used to make tea. *Candy* Young sprouts used to chew. (6:48)
- **Fiber**—Klamath *Canoe Material* Single logs used to make dugout canoes. (as *P. mucronata* 46:728) **Montana Indian** *Building Material* Wood used extensively for lumber. (as *P. mucronata* 19:20) **Paiute** *Mats, Rugs & Bedding* Boughs used on the floor of sweat houses and for camping beds. (as *P. mucronata* 111:44) **Round Valley Indian** *Basketry* Small roots used to make baskets. (as *P. mucronata* 41:309) **Salish, Coast** *Caulking Material* Pitch used to patch canoes or water vessels. (182:71) **Thompson** *Building Material* Logs considered important for construction. Young, second growth boughs used to make early summer lodges. *Caulking Material* Pitch used for caulking canoes. *Mats, Rugs & Bedding* Boughs used as floor coverings for lodges and sweat houses. The boughs were generally mixed with juniper and sagebrush branches for the sweat house floor coverings. Boughs used in the sweat lodge as a mat for scrubbing the skin. The scrubbing mats prevented them from having body odor and made them feel fresh and clean. *Snow Gear* Wood from young trees used to make snowshoe frames. (187:107)
- **Other**—Bella Coola *Fuel* Bark used as a valuable fuel. (184:198) **Blackfoot** *Hunting & Fishing Item* Wood used to make bows. (97:18) **Clallam** *Fuel* Bark and wood used for firewood. *Hunting & Fishing Item* Wood used to make spear and harpoon shafts. (57:195) **Haisla** *Hunting & Fishing Item* Wood used to make herring and oolichan (candlefish) rakes. **Haisla & Hanaksiala** *Fasteners* Pitch used for bindings. (43:179) **Havasupai** *Ceremonial Items* Branches used ceremonially. (197:206) **Hesquiat** *Fuel* Pitch laden bark and limbs used as an excellent fuel. In Hesquiat mythology, Black Bear used to break off Douglas fir bark with one swipe of his paw and pile it on end in the fire. Raven wanted to have a meal with Bear and he tried to imitate Bear in collecting fuel, but he could not break off the bark; he only hurt himself. When the fire was going, Bear put his paws up to the fire and oil dripped out of them into a dish. Raven watched him doing this, and when Bear went over to eat at Raven's house, Raven tried to produce oil in a similar manner. But no oil came out of his feet, and his claws burned and shriveled up into their present state. (185:44) **Hopi** *Ceremonial Items* Branches considered important in many of the ceremonies. (as *P. mucronata* 200:63) **Isleta** *Ceremonial Items* Trees cut, brought to the pueblo, and used in the Easter cere-

monies. Boughs used in the Easter and Evergreen dances. (as *P. mucronata* 100:41) **Jemez Ceremonial Items** Branches used by the Koshares for dances. (as *P. mucronata* 44:26) **Keres, Western Ceremonial Items** Plant sometimes used in ceremonies. (as *P. mucronata* 171:64) **Keresan Ceremonial Items** Used to make costumes for dancers, prayer sticks, and other ceremonial items. (as *P. mucronata* 198:563) **Kitasoo Fuel** Wood used as an excellent fuel source. (43:318) **Navajo Cash Crop** Bartered with the Hano for corn and meal. (as *P. mucronata* 138:42) **Oweekeno Fuel** Wood used for firewood, especially for cooking fish. (43:70) **Pomo, Kashaya Fasteners** Pitch used like glue. **Fuel** Wood used for firewood. (72:49) **Round Valley Indian Lighting** Small branches used as torches in fishing. (as *P. mucronata* 41:309) **Salish, Coast Fuel** Bark used as a top-quality fuel. **Hunting & Fishing Item** Knots steamed, placed in hollow kelp stems overnight and bent to make halibut and cod hooks. (182:71) **Tewa Ceremonial Items** Branches used in almost all dances. Twig used as part of the headdress worn in dances. **Tewa of Hano Ceremonial Items** Branches and twigs used in almost all the winter dances. (as *P. mucronata* 138:42) **Thompson Ceremonial Items** Boughs used for scrubbing and purification by girls at puberty. **Cooking Tools** Dry wood broken and placed in a thick layer above and below the food in the cooking pit and used as fuel. Peeled twig bundles used as whippers for soapberries. **Fuel** Rotten wood used as fuel for smoking hides. **Good Luck Charm** Boughs used as scrubbers by boys and girls at puberty because it would bring good luck. The branches were boiled for good luck and good health, either to drink or used as a wash. **Hunting & Fishing Item** Young saplings used to make dip net hoops and handles. Boughs used by hunters to scrub themselves before hunting so that the deer could not smell them. (187:107)

***Pseudotsuga menziesii* var. *glauca*** (Beissn.) Franco, Rocky Mountain Douglas Fir

- **Drug—Okanagan-Colville Blood Medicine** Decoction of first-year-growth shoots taken as an emetic for anemia. **Dermatological Aid** Infusion of boughs with other plants taken and used to wash the skin and hair during sweat baths. Decoction of bark used for allergies caused by touching water hemlock. **Emetic** Decoction of first-year-growth shoots taken as an emetic for high fevers and anemia. **Febri-fuge** Decoction of first-year-growth shoots taken as an emetic for high fevers. (188:34)
  - **Food—Okanagan-Colville Unspecified** White, crystalline sugar exuded from branches and eaten alone or with balsamroot seeds. **Winter Use Food** White, crystalline sugar exuded from branches and stored for future use. (188:34)
  - **Fiber—Okanagan-Colville Building Material** Wood used to make tepee poles and spear shafts. Boughs used to cover the floor of the sweat house. (188:34)
  - **Other—Okanagan-Colville Ceremonial Items** Boughs used by be-reaved persons to scrub themselves as a purification ritual. **Containers** Boughs used under a freshly killed deer while butchering it. **Hunting & Fishing Item** Wood used to make tepee poles and spear shafts. **Season Indicator** Pollen shedding cones used as an indication that ponderosa pine cambium was ripe. **Soap** Boughs used to scrub the body during a sweat bath to impart a nice smell and make the skin clean. (188:34)
- Pseudotsuga menziesii*** (Mirbel) Franco var. ***menziesii***, Douglas Fir
- **Drug—Bella Coola Analgesic** Gum mixed with dogfish oil and taken as emetic and purgative for intestinal pains. **Antidiarrheal** Gum mixed with dogfish oil and taken as emetic and purgative for diarrhea. **Antirheumatic (Internal)** Gum mixed with dogfish oil and taken as emetic and purgative for rheumatism. **Cathartic** Gum and dogfish oil taken as a purgative for many ailments. **Cold Remedy** Gum mixed with dogfish oil and taken as emetic and purgative for colds. **Diuretic** Decoction of gum taken warm as a diuretic for gonorrhea. **Emetic** Gum and dogfish oil taken as an emetic for many ailments. **Gastrointestinal Aid** Gum mixed with dogfish oil and taken as emetic and purgative for intestinal pains. **Laxative** Gum mixed with dogfish oil and taken as emetic and purgative for constipation. **Venereal Aid** Decoction of gum taken warm as a diuretic for gonorrhea. Gum mixed with dogfish oil and taken as emetic and purgative for gonorrhea. (as *P. taxifolia* 150:51) **Cowlitz Cold Remedy** Decoction of plant taken as a cold medicine. **Dermatological Aid** Poultice of pitch applied to sores. (as *P. taxifolia* 79:19) **Karok Disinfectant** Boughs used as an antiseptic. **Herbal Steam** Plant used as sweat house fuel. (as *P. taxifolia* 148:379) **Navajo, Kayenta Analgesic** Plant used for headaches. **Disinfectant** Plant used for fumigation. **Gastrointestinal Aid** Plant used for stomach disease. (as *P. taxifolia* 205:15) **Navajo, Ramah Ceremonial Medicine** Needles used as a ceremonial emetic. **Emetic** Needles used as a ceremonial emetic. (as *P. taxifolia* 191:14) **Quinault Dermatological Aid** Poultice of pitch applied to sores. **Skagit Dermatological Aid** Poultice of pitch applied to sores. **Disinfectant** Decoction of bark used as an antiseptic for infections. **Squaxin Cold Remedy** Decoction of plant taken as a cold medicine. **Swinomish Analgesic** Decoction of needles applied as poultice to the chest to draw out the pain. **Cold Remedy** Decoction of root bark taken for colds. **Oral Aid** Bud tips chewed for mouth sores. **Throat Aid** Bud tips chewed for sore throats. **Tonic** Decoction of needles taken as a general tonic. (as *P. taxifolia* 79:19)
  - **Food—Apache, White Mountain Candy** Pitch used as gum. (as *P. taxifolia* 136:159) **Cowlitz Candy** Pitch chewed as a gum. (as *P. taxifolia* 79:19) **Karok Spice** Boughs used as “seasoning” for barbecued elk or deer meat. (as *P. taxifolia* 148:379) **Klallam Candy** Pitch chewed as a gum. **Quinault Candy** Pitch chewed as a gum. (as *P. taxifolia* 79:19)
  - **Fiber—Hoh Building Material** Formerly used to make shakes and clapboards for houses. (as *P. taxifolia* 137:58) **Karok Building Material** Wood used to make planks. (as *P. taxifolia* 148:379) **Maidu Basketry** Twigs used as coarse twine warp in the manufacture of baskets. (as *P. taxifolia* 173:71) **Quileute Building Material** Formerly used to make shakes and clapboards for houses. (as *P. taxifolia* 137:58) **Yuki Building Material** Branches used to make camp shelters. (as *P. taxifolia* 49:93)
  - **Dye—Swinomish Brown** Bark boiled and used on fish nets as a light brown dye to make them invisible to the fish. (as *P. taxifolia* 79:19)
  - **Other—Chehalis Fuel** Bark used for firewood. **Good Luck Charm** Warmed cones used as charms to stop the rain. **Hunting & Fishing Item** Used to make salmon spears and harpoons. **Cowlitz Fuel** Bark used for firewood. **Good Luck Charm** Cones placed near the fire and used as charms to bring sunshine. **Hunting & Fishing Item** Used to make salmon spears and harpoons. **Green River Group Fuel** Bark

used for firewood. *Hunting & Fishing Item* Used to make salmon spears and harpoons. (as *P. taxifolia* 79:19) **Hopi Ceremonial Items** Plant used for the Ni-man and Po-wa-me ceremony. (as *P. taxifolia* 42:353) **Karok Decorations** Soot from burned pitch rubbed into the punctures made in tattooing a girl's chin. *Good Luck Charm* Boughs considered "good luck." *Hunting & Fishing Item* Wood used to make the salmon harpoon shaft and dip net poles. Boughs used in fire to pass the bow and arrow through, to prevent the deer from smelling the hunter. *Tools* Wood used to make the hook for climbing sugar pine trees. (as *P. taxifolia* 148:379) **Klallam Fuel** Bark used for firewood. *Hunting & Fishing Item* Used to make salmon spears and harpoons. **Lummi Fuel** Bark used for firewood. *Hunting & Fishing Item* Used to make salmon spears and harpoons. (as *P. taxifolia* 79:19) **Navajo Ceremonial Items** Branches used in the Shooting Chant. (as *P. taxifolia* 55:23) **Navajo, Ramah Ceremonial Items** Used to make garment for garment ceremony of Evilway. Used to make bow and chant arrow for overshooting ceremony of Evilway. Branches used to make Holyway big hoop. Used to make unravelers for several ceremonials. Branches attached to masks and carried in hands by god impersonators in Nightway. (as *P. taxifolia* 191:14) **Nitinaht Fuel** Bark and wood used for fuel. *Hunting & Fishing Item* Hard knots used to make molded halibut hooks. Wood used to make sea urchin spear shafts, seal spears, and poles for placing codfish lures. (186:73) Used as a pole to place fishing lures in the water. (186:95) **Pomo Fuel** Wood used for firewood. (as *P. taxifolia* 66:11) **Quinault Fuel** Bark used for firewood. *Hunting & Fishing Item* Used to make shafts for harpoons, salmon spears, and handles of dip nets. **Skagit Fuel** Bark used for firewood. *Hunting & Fishing Item* Used to make salmon spears and harpoons. **Swinomish Fuel** Bark used for firewood. *Hunting & Fishing Item* Used to make salmon spears and harpoons. (as *P. taxifolia* 79:19)

## *Psidium*, Myrtaceae

### *Psidium guajava* L., Guava

- **Drug**—**Hawaiian Antidiarrheal** Buds chewed by mothers and given to infants for diarrhea. Buds chewed for diarrhea. *Antihemorrhagic* Infusion of pounded roots and other plants strained and taken for bowel or intestinal hemorrhage. *Dermatological Aid* Buds and other plants pounded and resulting liquid applied to deep cuts. *Orthopedic Aid* Buds and other plants pounded and resulting liquid applied to sprains. *Pediatric Aid* Buds chewed by mothers and given to infants for diarrhea. (as *P. guajava* 2:55)
- **Food**—**Seminole Unspecified** Plant used for food. (169:464)
- **Other**—**Seminole Hunting & Fishing Item** Plant used to make bows. (169:464)

## *Psilostrophe*, Asteraceae

### *Psilostrophe sparsiflora* (Gray) A. Nels., Greenstem Paperflower

- **Drug**—**Hopi Adjuvant** Plant used with other plants to make medicine stronger. (42:354) **Navajo, Kayenta Antidiarrheal** Plant used as a diarrhea medicine. *Blood Medicine* Plant used as a postpartum blood purifier. *Dermatological Aid* Poultice of plant applied to wounds. *Gynecological Aid* Plant used as a postpartum blood purifier. *Panacea* Plant used as a life medicine. (205:49)
- **Other**—**Hopi Ceremonial Items** Plant used in the Snake Dance ceremonials. (42:354)

### *Psilostrophe tagetina* (Nutt.) Greene, Woolly Paperflower

- **Drug**—**Navajo, Ramah Analgesic** Strong infusion taken for stomachache or as a cathartic. *Cathartic* Strong infusion of plant taken as a cathartic. *Ceremonial Medicine* Cold infusion of leaves used as ceremonial eyewash. *Dermatological Aid* Infusion of plant used as lotion for itching. *Eye Medicine* Cold infusion of leaves used as ceremonial eyewash. *Gastrointestinal Aid* Strong infusion of plant taken for stomachache. *Throat Aid* Cold infusion gargled or poultice of leaves applied for sore throat. (191:52) **Zuni Snakebite Remedy** Compound poultice of root applied with much ceremony to rattlesnake bite. (166:53)
- **Dye**—**Apache, White Mountain Yellow Blossoms** used to make a yellow dye. (136:160) **Keres, Western Yellow** Boiled, crushed flowers used for yellow paint or dye. (171:64) **Zuni Yellow Blossoms** used to make a yellow dye. (166:80)
- **Other**—**Keres, Western Paint** Boiled, crushed flowers used for yellow paint or dye. (171:64) **Zuni Ceremonial Items and Paint Blossoms** used by personators of anthropic gods for painting masks and for coloring bodies yellow.<sup>62</sup> (166:97)

## *Psoralidium*, Fabaceae

### *Psoralidium lanceolatum* (Pursh) Rydb., Lemon Scurfpea

- **Drug**—**Arapaho Analgesic** Snuff of leaves and sneezeweed blossoms inhaled for headaches. Infusion of leaves used on the head for headaches. *Dermatological Aid* Oily leaves rubbed on the skin for dryness. (121:48) *Throat Aid* Fresh leaves chewed for sore throat and voice. (118:38) Root chewed for hoarseness. (121:48) **Cheyenne Ceremonial Medicine** Plant used for certain ceremonies. (76:178) **Navajo, Kayenta Dermatological Aid** Plant used as a lotion and poultice of plant applied to itch and sores. (205:29) **Navajo, Ramah Analgesic** Cold infusion of plant taken for stomachache and menstrual pain. *Ceremonial Medicine* Cold infusion of plant used as ceremonial chant lotion. *Gastrointestinal Aid* Cold infusion of plant taken for stomachache. *Gynecological Aid* Cold infusion of plant taken for menstrual cramps. *Venereal Aid* Compound decoction of root used for venereal disease. *Witchcraft Medicine* Cold infusion of plant used as a lotion for protection from witches. (191:34) **Zuni Gastrointestinal Aid** Fresh flower eaten for stomachaches. (27:376)
- **Fiber**—**Great Basin Indian Cordage** Roots used to make string and nets. (121:48)
- **Other**—**Cheyenne Ceremonial Items** Only used in certain ceremonies. (76:178)

### *Psoralidium tenuiflorum* (Pursh) Rydb., Slimflower Scurfpea

- **Drug**—**Dakota Tuberculosis Remedy** Decoction of plants taken for consumption. (as *Psoralea floribunda* 69:366) Compound decoction of root taken for consumption. (70:93) **Lakota Analgesic** Infusion of roots used for headaches. (139:48) **Navajo, Ramah Misc. Disease Remedy** Infusion of plant taken or leaves smoked for influenza. *Veterinary Aid* Plant used several ways for sheep with coughs. (191:34) **Zuni Disinfectant** Poultice of moistened leaves applied to any body part for purification. (166:58)
- **Food**—**Yavapai Beverage** Used as ingredient of modern intoxicant made from mescal. (65:257)
- **Fiber**—**Dakota Clothing** Plant tops used to make garlands worn like

hats in hot weather. (as *Psoralea floribunda* 69:366) Plant tops used to make garlands worn on the head as protection from the sun on very hot days. (70:93)

- **Other**—**Dakota Protection** Plant tops used to make garlands worn on the head as protection from the sun on very hot days. (70:93) **Keres, Western Unspecified** Plant known and named but no use was specified. (171:64) **Kiowa Cooking Tools** Stout stem used as a fork to eat buffalo steak. (192:34) **Lakota Insecticide** Plant smudge used against mosquitoes. (139:48) **Navajo Smoke Plant** Leaves smoked by the masker after the feast celebrating the completion of masks for the Night Chant. (55:58)

## *Psorothamnus*, Fabaceae

***Psorothamnus fremontii*** (Torr. ex Gray) Barneby  
**var. fremontii**, Frémont's Dalea

- **Drug**—**Paiute Antihemorrhagic** Decoction of root or plant tops taken for internal hemorrhages. **Shoshoni Gastrointestinal Aid** Decoction of roots taken for stomach trouble. (as *Dalea fremontii* 180:64)

***Psorothamnus polydenius*** (Torr. ex S. Wats.) Rydb., Nevada  
Smokebush

- **Drug**—**Paiute, Northern Cathartic** Infusion of bark taken as a physic. **Cold Remedy** Infusion of bark taken for light colds. **Misc. Disease Remedy** Decoction of brush taken for the flu. **Pulmonary Aid** Decoction of brush taken for pneumonia. **Throat Aid** Decoction of brush taken for sore throats. (59:126)

***Psorothamnus polydenius*** (Torr. ex S. Wats.) Rydb.  
**var. polydenius**, Nevada Smokebush

- **Drug**—**Paiute Analgesic** Decoction of stem taken for muscular pain and stem chewed for facial neuralgia. Decoction of stems taken for stomachaches. **Antidiarrheal** Strong infusion of plant taken for diarrhea. **Antirheumatic (External)** Hot decoction of plant used as a wash for rheumatism. **Cold Remedy** Plant used in a variety of ways for colds. **Cough Medicine** Plant used in a variety of ways for coughs. **Dermatological Aid** Powdered, dried stems or crushed fresh stems used for sores. **Disinfectant** Simple or compound decoction of stems and tops used as an antiseptic bath for measles. Simple or compound decoction of stems and tops used as an antiseptic bath for smallpox. **Diuretic** Decoction of plant tops taken to induce urination. **Gastrointestinal Aid** Decoction of plant taken for stomachaches. **Kidney Aid** Compound decoction of stems and tops taken for kidney ailments. **Misc. Disease Remedy** Decoction of plant taken and used as an antiseptic wash for measles. Decoction of plant used as an antiseptic wash for smallpox. Decoction of stems taken for influenza. **Orthopedic Aid** Infusion of plant taken for muscular pains. **Pulmonary Aid** Plant used in several ways for pneumonia. Sweetened decoction of stems taken for whooping cough. **Toothache Remedy** Stems chewed for toothache or face neuralgia. **Tuberculosis Remedy** Plant used in several ways for tuberculosis. **Venereal Aid** Decoction of plant taken for venereal diseases. **Shoshoni Analgesic** Decoction of plant tops taken for pains in the back over the kidneys. Decoction of stems taken for stomachaches. **Antidiarrheal** Strong infusion of plant taken for diarrhea. **Cold Remedy** Plant used in a variety of ways for colds. **Cough Medicine** Plant used in a variety of ways for coughs. **Disinfectant** Simple or compound decoction of stems and tops used as an

antiseptic bath for smallpox. **Gastrointestinal Aid** Decoction of plant taken for stomachaches. **Kidney Aid** Simple or compound decoction of plant tops used for kidney pain and urine incontinence. **Misc. Disease Remedy** Decoction of stems taken for influenza. Simple or compound decoction of plant taken and used as a wash for smallpox. **Pulmonary Aid** Plant used in several ways for pneumonia. **Tuberculosis Remedy** Plant used in several ways for tuberculosis. **Urinary Aid** Decoction of plant tops taken for kidney pain and urine incontinence. **Venereal Aid** Decoction of plant taken for venereal diseases. (as *Dalea polyadenia* 180:64–66)

***Psorothamnus scoparius*** (Gray) Rydb., Broom Dalea

- **Drug**—**Keres, Western Dermatological Aid** Infusion of plant rubbed on spider bites. **Emetic** Infusion of plant used as an emetic. **Gastrointestinal Aid** Infusion of plant used for stomach trouble. (as *Parosela scoparia* 171:57)

## *Ptelea*, Rutaceae

***Ptelea trifoliata*** L., Common Hoptree

- **Drug**—**Menominee Adjuvant** Root bark used as a seasoner and to render other medicines potent. **Panacea** Root considered a sacred medicine and credited with all sorts of cures. (151:51) **Meskwaki Adjuvant** Root often added to other medicines to make them potent. **Pulmonary Aid** Compound infusion of pounded root used for lung troubles, a good medicine. (152:244)

***Ptelea trifoliata* ssp. pallida var. pallida** (Greene) V. Bailey,  
Pallid Hoptree

- **Drug**—**Havasupai Gastrointestinal Aid** and **Pediatric Aid** Decoction of leaves rubbed on a child's abdomen for stomachaches. **Poison** Leaves made into poison and used on arrow tips for hunting large game and in warfare.<sup>63</sup> (as *P. pallida* 197:229)
- **Other**—**Havasupai Fuel** Wood used for firewood. **Hunting & Fishing Item** Leaves made into poison and used on arrow tips for hunting large game.<sup>63</sup> **Weapon** Leaves made into poison and used on arrow tips in warfare.<sup>63</sup> (as *P. pallida* 197:229)

***Ptelea trifoliata* ssp. trifoliata var. mollis** Torr. & Gray, Common Hoptree

- **Food**—**San Felipe Fruit** Fruits commonly eaten by children. (as *P. tomentosa* 32:47)

**Pteridaceae**, see *Acrostichum*, *Adiantum*, *Argyrosma*, *Cheilanthes*, *Cryptogramma*, *Pellaea*, *Pentagramma*

## *Pteridium*, Dennstaedtiaceae, fern

***Pteridium aquilinum*** (L.) Kuhn, Western Brackenfern

- **Drug**—**Alaska Native Poison** Full grown fronds poisonous to cattle. (85:51) **Cherokee Antiemetic** Root used as a tonic and antiemetic and given for "cholera-morbus." **Disinfectant** Root used as an antiseptic. **Misc. Disease Remedy** Root used as a tonic, antiseptic, antiemetic, and for "cholera-morbus." **Tonic** Root used as a tonic. (80:33) **Costanoan Dermatological Aid** Decoction of root used as hair rinse or roots rubbed on scalp for hair growth. (21:5) **Hesquiat Cancer Treatment** Young shoots eaten as medicine for "troubles with one's insides," such as cancer of the womb. (185:32) **Iroquois Antidiarrheal** Decoction taken for diarrhea. **Antirheumatic (Internal)** Compound

used for rheumatism. *Blood Medicine* Cold, compound decoction of roots taken for weak blood. *Gynecological Aid* Compound decoction taken for prolapse of uterus. Decoction taken when suffering after birth. Decoction used to make "good blood" after menses, taken after baby's birth. *Liver Aid* Used as a liver and rheumatism medicine. *Tuberculosis Remedy* Compound decoction taken during the early stages of consumption. Decoction of plant taken by women for tuberculosis. *Urinary Aid* Compound decoction taken by men to retain urine. *Venereal Aid* Compound used for infection, probably venereal disease. *Witchcraft Medicine* Ingredients placed in coffin with root shaped into a person and the person dies in 10 days. (87:259) **Koasati Analgesic** Decoction of ground roots taken for chest pain. (177:4) **Mendocino Indian Veterinary Aid** Plant used as a diuretic for horses. (41:304) **Menominee Gynecological Aid** Decoction of root taken for "caked breast" and a dog whisker used to pierce teat. (as *Pteris aquilina* 151:48) **Micmac Pediatric Aid** and *Stimulant* Fronds of plant used for weak babies and old people. (as *Pteris aquilina* 40:60) **Montagnais Orthopedic Aid** Fronds used as a bed to strengthen babies' backs and old people. *Pediatric Aid* Fronds used as a bed to strengthen babies' backs. (as *Pteris aquilina* 156:315) **Ojibwa Analgesic** Infusion of root taken by women to allay stomach cramps. Smoke from dried leaves on coals used for headaches. *Gynecological Aid* Infusion of root taken by women to allay stomach cramps. (as *Pteris aquilina* 153:382) **Okanagan-Colville Poison** Fronds considered poisonous when mature and known to contain carcinogenic substances. (188:18) **Thompson Antihemorrhagic** Infusion of rhizomes taken for vomiting blood, possibly from internal injuries. *Antirheumatic (External)* Leaves used in a steam bath for arthritis. The leaves were placed over red-hot rocks in a steaming pit, a little water was added, and the person laid on top of the fronds. *Cold Remedy* Decoction of rhizomes taken for colds. *Dermatological Aid* Poultice of pounded fronds and leaves applied to sores of any type. Fronds, pounded with a rock, mixed with leaves and melted pine pitch, strained, and applied to sores from one to several days. *Dietary Aid* Decoction of rhizomes taken for lack of appetite. *Orthopedic Aid* Poultice of boiled, pounded fronds mixed with leaves, and used to set broken bones in place. Decoction of leaves used as a bath for broken bones or poultice of leaves used to bind broken bones. (187:90) **Yana Burn Dressing** Poultice of pounded, heated roots applied to burns. (as *Pteris aquilina* 147:253)

- **Food—Alaska Native Substitution Food** Young fiddleheads peeled, boiled, or steamed and eaten as a substitute for asparagus. *Winter Use Food* Young fiddleheads canned for winter use. (85:51) **Atsugewi Unspecified** Raw leaves and tender stems used for food. (61:139) **Bella Coola Unspecified** Rhizomes toasted and eaten in summer. (184:197) **Clallam Staple** Rhizomes roasted, pounded into a flour, and eaten. (57:194) **Costanoan Unspecified** Young fronds eaten raw or cooked. (21:247) **Hahwunkwut Unspecified** Roots cooked in ground ovens. (as *Pteris aquilina* 117:185) **Hesquiat Vegetable** Long, mashed rhizomes eaten boiled or steamed. (185:32) **Kwakiutl, Southern Unspecified** Rhizomes roasted, beaten until soft, broken into pieces, and used for food. (183:265) **Mahuna Unspecified** Young shoots cut, cooked, and eaten like asparagus. (as *Pteris aquilina* 140:58) **Montana Indian Unspecified** Peeled root roasted for food. (as *Pteris aquilina* 19:20) **Nitinaht Unspecified** Rhizomes roasted, pounded, and inner portions used for food. *Vegetable* Long, thick rhizomes formerly

steamed, dried, and used as a vegetable food in winter. (186:63) **Ojibwa Soup** Young fern sprouts used as a soup material. The tips were thrown into hot water for an hour to rid them of ants, then put into soup stock and thickened with flour. The flavor resembles wild rice. Hunters were very careful to live wholly upon this when stalking does in the spring. The doe feeds upon the fronds and the hunter does also, so that his breath does not betray his presence. He claims to be able to approach within 20 feet without disturbing the deer, from which distance he can easily make a fatal shot with his bow and arrow. After killing the deer, the hunter will eat whatever strikes his fancy. *Unspecified* Young fern tips, with coiled fronds, were like asparagus tips, only not stringy like asparagus. (as *Pteris aquilina* 153:408) **Okanagon Unspecified** Rootstocks boiled or roasted and used for food. (125:38) **Salish, Coast Bread & Cake** Rhizomes pounded into flour and baked to make bread. *Unspecified* Rhizomes eaten fresh in late fall or winter. Young shoots used for food. (182:69) **Sierra Staple** Roots used as a staple food. (41:304) **Skagit, Upper Unspecified** Roots roasted in ashes, peeled, and eaten. (179:40) **Thompson Staple** Cooked, inner rhizome pounded into a flour and used for food. (187:90) *Unspecified* Rootstocks boiled or roasted and used for food. (125:38) Rootstocks cooked and eaten. Rootstocks used as a nutritious food. (164:482) Dried, toasted rhizomes beaten with a stick to remove the bark and the white insides used for food. The rhizomes were usually eaten with fish and were said to be very sweet, but one informant's father said it would give her worms. Fiddleheads broken off and the stem portion of the shoot used for food, often with fish. (187:90)

- **Fiber—Costanoan Basketry** Roots used in basketry. (21:247) **Mendocino Indian Basketry** Root wood split into flat bands and used for the black strands of cheap baskets. (41:304) **Mewuk Basketry** Split roots used for the black design in coiled basketry. (as *Pteris aquilina* 117:328) **Nitinaht Mats, Rugs & Bedding** Fronds used for bedding while camping. (186:63) **Pomo Basketry** Root fiber made into coils and used in basketry. (9:139) **Round Valley Indian Basketry** Root wood, not frequently used, split and used for the black strands of cheap baskets. (41:304) **Shuswap Mats, Rugs & Bedding** Used for bedding in camp. (123:49) **Ukiah Basketry** Root wood, not frequently used, split and used for the black strands of cheap baskets. (41:304)
- **Other—Clallam Cooking Tools** Fronds used to cover berry baskets and to wipe fish before hanging up to smoke. (57:194) **Costanoan Containers** Fronds used to line acorn-leaching pits and earth ovens. *Protection* Fronds used as sunshades. (21:247) **Okanagan-Colville Containers** Fronds dipped in water and used in pit cooking to place over and under the food. *Water Indicator* Ferns considered to be a sign of water when traveling through the mountains. (188:18) **Oweekeno Fuel** Rhizomes chewed, used as punk in a clamshell, and placed in a fire. (43:58) **Shuswap Protection** Used to cover berry baskets. (123:49)

***Pteridium aquilinum* var. *latiusculum*** (Desv.) Underwood ex Heller, Western Brackenfern

- **Drug—Iroquois Veterinary Aid** Rhizomes, raspberry leaves, and wheat flour given to cows at birthing. (as *P. latiusculum* 141:34)

***Pteridium aquilinum* var. *pubescens*** Underwood, Hairy Brackenfern

- **Drug**—**Makah** *Toothache Remedy* Fiddleheads placed on each side of the gums adjacent to the affected tooth for toothaches. (67:224) **Pomo, Kashaya** *Dermatological Aid* Young, curled frond juice used as a body deodorant. (72:44) **Tolowa** *Anticonvulsive* Poultice of pulverized leaves applied for *Toxicodendron* poisoning. (6:48)
- **Food**—**Chehalis Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Cowlitz Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. Young plant tops eaten raw. **Green River Group Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Klallam Unspecified** Rhizomes roasted, peeled and the starchy centers eaten. **Lummi Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. (79:14) **Makah Unspecified** Steamed rhizomes used for food. (67:224) Rhizomes roasted, peeled, and the starchy centers eaten. (79:14) **Nitinaht Unspecified** Steamed rhizomes used for food. (67:224) **Quileute Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Quinault Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Skagit Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Skokomish Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Snohomish Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Squaxin Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. **Swinomish Unspecified** Rhizomes roasted, peeled, and the starchy centers eaten. (79:14)
- **Fiber**—**Kawaiisu Basketry** Leaf midrib or root used for the black pattern material in coiled basketry. (206:55) **Pomo Basketry** Root used in basketry. (as *Pteris aquilina* var. *lanuginosa* 66:11) **Pomo, Kashaya Basketry** Root pounded to remove bark, bark core split into layers and used as material for basket design. (72:44) **Squaxin Mats, Rugs & Bedding** Leaves used for camp bedding. (79:14)
- **Other**—**Karok Containers** Leaves used under draining fish. (as *Pteris aquilina* var. *lanuginosa* 148:377) **Cooking Tools** Leaves used to clean eels and salmon. (6:48) **Maidu Decorations** Roots used as decorative coil thread and decorative overlay twine in the manufacture of baskets. (as *Pteridium aquilinum* var. *lanuginosa* 173:71) **Makah Cooking Tools** Leaves placed beneath fish being cleaned and used to wipe the fish. (79:14) **Paiute Preservative** Plant used to cover berry baskets to keep the berries fresh. (111:36) **Quileute Cooking Tools** Leaves placed beneath fish being cleaned and used to wipe the fish. **Squaxin Cooking Tools** Leaves placed beneath fish being cleaned and used to wipe the fish. **Swinomish Cooking Tools** Leaves placed beneath fish being cleaned and used to wipe the fish. (79:14) **Yurok Containers** Leaves used in layers to dry food. **Cooking Tools** Fronds used as plates to serve fish, to put over fish to keep the flies off, and to clean fish. (6:48)

***Pteridium caudatum*** (L.) Maxon, Southern Brackenfern

- **Drug**—**Seminole Orthopedic Aid** Plant used for turkey sickness: permanently bent toes and fingers. Roots used for turkey sickness: permanently bent toes and fingers. (as *Pteris caudata* 169:166, 236)

***Pteridium* sp.**, Fern

- **Fiber**—**Yokut Basketry** Roots used to make the black designs on baskets. (117:405)

***Pterocaulon***, Asteraceae

***Pterocaulon virgatum*** (L.) DC., Wand Blackroot

- **Drug**—**Seminole Abortifacient** Infusion of plant used “to correct ir-

regularities and to relieve menstrual pain.” (as *P. undulatum* 169:284) **Antidiarrheal** and **Antihemorrhagic** Infusion of plant taken for otter sickness: severe diarrhea, bloody stools, and severe stomachache. (as *P. undulatum* 169:223) **Cold Remedy** Infusion of plant taken for colds. **Febrifuge** Infusion of plant taken for fevers. (as *P. undulatum* 169:283) **Gastrointestinal Aid** Infusion of plant taken for otter sickness: severe diarrhea, bloody stools, and severe stomachache. (as *P. undulatum* 169:223) Plant used for water bison sickness: digestive difficulties. (as *P. undulatum* 169:306) **Gynecological Aid** Decoction of roots used for backache and excessive bleeding following childbirth. (as *P. undulatum* 169:271) Infusion of plant used “to correct irregularities and to relieve menstrual pain.” (as *P. undulatum* 169:284) Decoction of roots taken for backache and excessive bloody discharge after giving birth. (as *P. undulatum* 169:326) **Orthopedic Aid** Decoction of roots used for persistent backache. **Other** Decoction of roots used for chronic sickness. (as *P. undulatum* 169:271) Infusion of plant taken for beaver sickness. (as *P. undulatum* 169:304) **Pulmonary Aid** Plant used for pulmonary disorders. (as *P. undulatum* 169:282) **Unspecified** Plant used medicinally. (as *P. undulatum* 169:164)

***Pterospora***, Ericaceae

***Pterospora andromedea*** Nutt., Woodland Pinedrops

- **Drug**—**Cheyenne Antihemorrhagic** Cold infusion of ground stems and berries taken for lung hemorrhages. (76:183) Cold infusion of stem and berries taken for “bleeding at the lungs.” (75:39) **Dermatological Aid** Cold infusion of ground stems and berries used as an astringent. (76:183) Plant used as an astringent. (75:39) **Disinfectant** Infusion of ground berries and stems used as an astringent. (76:183) **Hemostat** Cold infusion of ground stems and berries used as snuff for nosebleeds. (76:183) Decoction of stem and berries snuffed and used as wash to prevent nosebleed. (75:39) **Nose Medicine** Infusion of ground berries and stems snuffed up the nose and put on the head for nosebleed. (76:183) **Pulmonary Aid** Cold infusion of ground stems and berries taken for lung hemorrhages. (76:183) Decoction of plant taken for bleeding “at the lungs.” (75:39) Infusion of ground berries and stems taken for lung hemorrhage. (76:183) **Keres, Western Emetic** Boiled plant used as an emetic. (171:64) **Okanagan-Colville Venereal Aid** Infusion of roots taken for gonorrhea. (188:102)
- **Food**—**Kawaiisu Unspecified** Stems eaten raw, “roasted,” or baked below the fire “like mushrooms.” (206:55)
- **Other**—**Jemez Ceremonial Items** Leaves smoked in the kiva. (44:26)

***Pteryxia***, Apiaceae

***Pteryxia terebinthina*** (Hook.) Coult. & Rose **var. terebinthina**, Turpentine Wavewing

- **Drug**—**Okanagan-Colville Dermatological Aid** Poultice of dried, pounded, peeled roots, alone or with Vaseline, applied to sores. **Tonic** Infusion of dried, pounded roots taken as a general tonic. (as *Cymopteris terebinthinus* var. *terebinthinus* 188:60)

***Puccinellia***, Poaceae

***Puccinellia distans*** (Jacq.) Parl., Weeping Alkaligrass

- **Food**—**Gosiute Unspecified** Seeds formerly used for food. (as *Glyceria distans* 39:370)

**Pulsatilla**, Ranunculaceae**Pulsatilla occidentalis** (S. Wats.) Freyn, White Pasqueflower

- **Drug**—Okanagon *Gastrointestinal Aid* Decoction of roots or plants taken for stomach and bowel troubles. (as *Anemone occidentalis* 125:40) **Thompson Antirheumatic (External)** Infusion of plant used as a wash for rheumatism. *Eye Medicine* Infusion of plant used as an eye-wash. (187:249) *Gastrointestinal Aid* Decoction of roots or plants taken for stomach and bowel troubles. (as *Anemone occidentalis* 125:40) Decoction of root or whole plant taken for stomach and bowel troubles. (as *Anemone occidentalis* 164:459) *Unspecified Plant* used medicinally for unspecified purpose. (as *Anemone occidentalis* 164:466)

**Pulsatilla patens** (L.) P. Mill., American Pasqueflower

- **Drug**—Omaha *Analgesic* Poultice of crushed, fresh leaves applied for rheumatism and neuralgia. (70:80, 81) *Antirheumatic (External)* Poultice of crushed, fresh leaves applied to affected part for rheumatism. (70:80–82)

**Pulsatilla patens ssp. multifida** (Pritz.) Zamels, Cutleaf Anemone

- **Drug**—Blackfoot *Dermatological Aid* Poultice of crushed leaves applied to affected parts as a counterirritant. (as *Anemone patens* var. *wolfgangiana* 97:35) *Gynecological Aid* Decoction of plant taken to speed delivery. (as *Anemone patens* 86:60) **Cheyenne Poison** Plant considered poisonous. *Stimulant* Smashed root used symbolically by passing over the body to revive a person. *Unspecified Plant* used for the medicinal properties. (as *Anemone nuttalliana* 83:34) **Chippewa Analgesic** Dried, pulverized leaves “smelled” for headache. (as *P. hirsutissima* 53:336) *Pulmonary Aid* Compound decoction of root taken for lung trouble. (as *P. hirsutissima* 53:340) **Great Basin Indian Antirheumatic (External)** Poultice of fresh leaves used as a counterirritant for rheumatism. (as *P. hirsutissima* 121:47)
- **Other**—Blackfoot *Toys & Games* Leaves acted as a vesicant and given to unsuspecting people as toilet paper as a prank. (as *Anemone patens* 86:107)

**Pulsatilla sp.**, Pasqueflower

- **Drug**—Blackfoot *Antirheumatic (External)* Poultice of leaves applied for rheumatism. (118:43)

**Punicaceae**, see *Punica***Punica**, Punicaceae**Punica granatum** L., Pomegranate

- **Other**—Navajo *Jewelry* Blossoms used to make necklaces. (55:66)

**Purshia**, Rosaceae**Purshia glandulosa** Curran, Desert Bitterbrush

- **Drug**—Kawaiisu *Analgesic* Plant used for menstrual cramps. *Emetic* Decoction of inner bark and leaves used as an emetic. *Gynecological Aid* Plant used for menstrual cramps. *Laxative* Decoction of inner bark and leaves used as a laxative. *Veneral Aid* Decoction of inner bark and leaves used for gonorrhoea. (206:55)

**Purshia mexicana** (D. Don) Henrickson, Mexican Cliffrose

- **Drug**—Apache, White Mountain *Unspecified* Leaves used for medicinal purposes. (as *Cowania mexicana* 136:156) *Gosiute Unspecified*

Leaves used as a medicine. (as *Cowania mexicana* 39:367) **Havasupai Cold Remedy** Decoction of green branches, sagebrush, and juniper used for colds to loosen the mucus. *Laxative* Decoction of green branches, sagebrush, and juniper used as a laxative for colds. (as *Cowania mexicana* 197:223) **Hualapai Antirheumatic (Internal)** Leaves chewed for arthritis. *Dermatological Aid* Leaves made into a tea for bathing and cleansing the skin. (as *Cowania mexicana* 195:31) **Paiute Cathartic** Decoction of leaves and stems or flowers taken as a physic. *Cold Remedy* Decoction of leaves and stems or flowers taken for colds. *Veneral Aid* Decoction of leaves and stem or flowers taken for venereal diseases. **Shoshoni Cathartic** Decoction of leaves and stems or flowers taken as a physic. *Dermatological Aid* and *Disinfectant* Decoction of plant parts used as an antiseptic wash for smallpox or measles. *Kidney Aid* Decoction of leaves and stems or flowers taken for pains over the kidneys. *Misc. Disease Remedy* Plant used in several compounds taken and used as washes for smallpox and measles. *Veneral Aid* Decoction of leaves and stem or flowers taken for venereal diseases. (as *Cowania mexicana* 180:61)

- **Fiber**—Havasupai *Clothing* Bark crushed, rubbed into softness, and stuffed into overshoes for warmth. Soft bark used as an absorbent diaper for children. *Mats, Rugs & Bedding* Soft bark used in a thick layer in infants’ cradleboards. Bark made into loosely twisted ropes and used to make sleeping mats. (as *Cowania mexicana* 197:223) **Hualapai Building Material** Inner bark used for huts and the lining of sweat houses. *Clothing* Inner bark used for diapers, clothing, and sandals. (as *Cowania mexicana* 195:31)
- **Other**—Havasupai *Fuel* Fine, soft bark used as tinder for the fire drill. (as *Cowania mexicana* 197:223)

**Purshia stansburiana** (Torr.) Henrickson, Stansbury Cliffrose

- **Drug**—Hopi *Dermatological Aid* Plant used in a wash for wounds. (as *Cowania mexicana* var. *stansburiana* 42:304) Plant used in a wash for wounds. (as *Cowania stansburiana* 200:32, 78) *Emetic* Plant used as an emetic. (as *Cowania mexicana* var. *stansburiana* 42:304) Bark used as an emetic. (as *Cowania stansburiana* 200:34, 78) **Navajo, Ramah Ceremonial Medicine** Leaves used as an emetic in various ceremonies. *Cough Medicine* Decoction of leaves taken for bad cough. *Emetic* Leaves used as an emetic in various ceremonies. (as *Cowania stansburiana* 191:30)
- **Food**—Navajo *Forage* Plant used for deer and livestock forage. (as *Cowania stansburiana* 90:159)
- **Fiber**—Hopi *Clothing* Bark spun and woven into kilts worn by the snake priests. (as *Cowania mexicana* var. *stansburiana* 42:304) Bark spun and woven into kilts worn by the snake priests. (as *Cowania stansburiana* 200:78) *Mats, Rugs & Bedding* Bark used as padding for the cradleboard. (as *Cowania mexicana* var. *stansburiana* 42:304) Bark from large stems used as the padding for cradleboards. (as *Cowania stansburiana* 200:78) **Navajo Mats, Rugs & Bedding** Softened bark used as backing for cradleboards and as stuffing for pillows. (as *Cowania stansburiana* 55:53) **Navajo, Ramah Clothing** Shredded bark used for bedding or diaper for cradleboard. *Mats, Rugs & Bedding* Shredded bark used for bedding or stuffed into a sack for pillows. (as *Cowania stansburiana* 191:30)
- **Dye**—Navajo *Brown* Pounded leaves and stems mixed with pounded juniper and used to make a tan dye. *Yellow-Brown* Pounded leaves

and stems mixed with pounded juniper and used to make a yellow brown dye. (as *Cowania stansburiana* 55:53)

- **Other—Hopi** *Ceremonial Items* Plant used ceremonially on the Po-wa-mu altar. (as *Cowania mexicana* var. *stansburiana* 42:304) *Hunting & Fishing Item* Used for arrows. (as *Cowania stansburiana* 200:78) **Keres, Western** *Hunting & Fishing Item* Plant sometimes used for arrow shafts. (as *Cowania stansburiana* 171:38) **Navajo** *Ceremonial Items* Wood used to make female prayer sticks for the Night Chant. Wood used to make arrows for the Mountain Chant Ceremony. *Toys & Games* Softened bark used to stuff baseballs. (as *Cowania stansburiana* 55:53)

***Purshia tridentata*** (Pursh) DC., Antelope Bitterbrush

- **Drug—Klamath** *Cough Medicine* Infusion of root taken for coughs. (as *Kunzia tridentata* 45:98) Infusion of roots taken for coughs. (as *Kunzia tridentata* 163:131) *Emetic* Ripe fruit mashed in cold water and taken as an emetic. (as *Kunzia tridentata* 45:98) Infusion of smashed, dried, ripe, bitter fruits taken as an emetic. (as *Kunzia tridentata* 163:131) *Pulmonary Aid* Infusion of root taken for lung and bronchial troubles. (as *Kunzia tridentata* 45:98) Infusion of roots taken for lung troubles. (as *Kunzia tridentata* 163:131) *Respiratory Aid* Infusion of root taken for lung and bronchial troubles. (as *Kunzia tridentata* 45:98) Infusion of roots taken for bronchial troubles. (as *Kunzia tridentata* 163:131) **Montana Indian** *Emetic* Dry, ripe fruits mashed in cold water and used as an emetic. *Pulmonary Aid* Infusion of roots taken for lung troubles. (19:20) **Navajo** *Gynecological Aid* Plant taken during confinement. (90:154) **Navajo, Ramah** *Ceremonial Medicine* Leaves used as an emetic in various ceremonies. *Disinfectant* Leaves chewed by hunters for “deer infection.” *Emetic* Leaves used as an emetic in various ceremonies. *Febrifuge* Decoction of root used for fever. *Gynecological Aid* Decoction of root used to facilitate delivery of placenta. *Hunting Medicine* Leaves chewed by hunters for good luck in hunting. (191:31) **Paiute** *Analgesic* Compound infusion of twigs and leaves taken for tubercular lung pain. *Cathartic* Decoction of leaves or twigs taken as a physic. *Cold Remedy* Decoction of leaves taken for colds. *Dermatological Aid* Poultice of leaf, decoction of plant or leaf powder used for skin problems. *Emetic* Decoction of leaves or twigs taken as an emetic. *Liver Aid* Decoction of leaf taken for liver trouble. *Misc. Disease Remedy* Decoction of plant taken and used as a wash for smallpox, chickenpox, and measles. *Pulmonary Aid* Decoction of leaf taken for pneumonia. *Tonic* Decoction of leaf taken as a “blood or general tonic.” *Tuberculosis Remedy* Compound decoction of bark taken for tuberculosis and tubercular lung pain. *Venereal Aid* Decoction of leaves or inner bark taken for venereal diseases. (180:126–128) **Paiute, Northern** *Anthelmintic* Decoction of sun dried leaves taken for intestinal worms. *Gastrointestinal Aid* Decoction of sun dried leaves taken to vomit and move the bowels for stomachaches and constipation. *Laxative* Decoction of sun dried leaves taken to vomit and move the bowels for stomachaches and constipation. (59:126) **Sanpoil** *Antihemorrhagic* Infusion of crushed berries used for hemorrhage. *Laxative* Infusion of crushed berries used for constipation. (131:217) **Shoshoni** *Antihemorrhagic* Decoction of inner bark taken to aid the healing of an internal rupture. *Cathartic* Decoction of leaves or twigs taken as a physic. *Dermatological Aid* Decoction of leaf used as a wash for

the swelling of milk leg. Poultice of leaf, decoction of plant or leaf powder used for skin problems. *Emetic* Decoction of leaves or twigs taken as an emetic. *Misc. Disease Remedy* Simple or compound decoction of plant taken and used as a wash for diseases with rashes. *Other* Bundle of inner bark strips sucked and decoction of leaf used as a wash for milk leg. *Tonic* Decoction of leaf taken as a “blood or general tonic.” Decoction of leaf taken as a blood tonic or general tonic. *Venereal Aid* Compound decoction of inner bark taken specifically for gonorrhea. Decoction of leaves or roots taken for venereal diseases. **Washo** *Cathartic* Decoction of ripe, whole seeds taken as a physic. (180:126–128)

- **Food—Navajo** *Forage* Considered an important browse plant. (90:154) **Okanagan-Colville** *Forage* Plant eaten by deer. (188:128)
- **Fiber—Navajo** *Clothing* Bark used for diapers. (90:154) **Navajo, Ramah Mats, Rugs & Bedding** Shredded bark used as bedding for cradleboard. (191:31) **Paiute** *Clothing* Bark used to make moccasins. (111:82)
- **Dye—Great Basin Indian** *Purple* Seed coats used to make a violet dye. (121:48) **Klamath** *Purple* Outer seed coat used as a purple stain to produce temporary color on arrows, bows, and other objects. (as *Kunzia tridentata* 45:98) **Montana Indian** *Purple* Outer seed coats used to make a purple stain for wood. (19:20)
- **Other—Navajo** *Hunting & Fishing Item* Used to make arrows. (55:54) **Navajo, Ramah** *Ceremonial Items* Twig and leaf ash used for Evilway blackening. (191:31) **Okanagan-Colville** *Fuel* Branches used for fuel. Branches used to make the initial fire for pit cooking. (188:128) **Paiute** *Fuel* Large branches that grow close to the roots used as firewood. (111:82)

***Pycnanthemum***, Lamiaceae

***Pycnanthemum albescens*** Torr. & Gray, Whiteleaf Mountainmint

- **Drug—Choctaw** *Cold Remedy* Hot decoction of leaves taken as diaphoretic for colds. (25:24) Decoction of leaves taken to cause sweating for colds. (177:54) *Diaphoretic* Hot decoction of leaves taken as diaphoretic for colds. (25:24) Decoction of leaves taken to cause sweating for colds. (177:54)

***Pycnanthemum californicum*** Torr., Sierra Mint

- **Drug—Miwok** *Cold Remedy* Decoction taken for colds. (12:172)

***Pycnanthemum flexuosum*** (Walt.) B.S.P., Appalachian Mountainmint

- **Drug—Cherokee** *Analgesic* Poultice of leaves used for headache. *Antidiarrheal* Infusion taken with “green corn” to prevent diarrhea. *Cold Remedy* Infusion taken for colds. *Dermatological Aid* Warm infusion used to bathe inflamed penis and infusion taken for upset stomach. *Febrifuge* Infusion taken for fevers. *Gastrointestinal Aid* Infusion used for upset stomach. *Heart Medicine* Infusion of leaves taken for “heart trouble.” (80:45)
- **Food—Cherokee** *Unspecified* Species used for food. (80:45)

***Pycnanthemum incanum*** (L.) Michx., Hoary Mountainmint

- **Drug—Cherokee** *Analgesic* Poultice of leaves used for headache. *Antidiarrheal* Infusion taken with “green corn” to prevent diarrhea. *Cold Remedy* Infusion taken for colds. *Dermatological Aid* Warm infusion used to bathe inflamed penis and infusion taken for upset stomach. *Febrifuge* Infusion taken for fevers. *Gastrointestinal Aid* In-

fusion used for upset stomach. *Heart Medicine* Infusion of leaves taken for "heart trouble." (80:45) **Choctaw Analgesic** Infusion of mashed leaves taken and used as a wash for headaches. *Panacea* Infusion of mashed leaves blown on sickly patient. **Koasati Analgesic** Decoction of roots taken for headaches. *Hemostat* Soaked plants put up the nose for nosebleeds. *Stimulant* Cold infusion of leaves taken and used as a bath for laziness. (177:55)

- **Food—Cherokee Unspecified** Species used for food. (80:45)

***Pycnanthemum virginianum*** (L.) T. Dur. & B. D. Jackson ex B. L. Robins. & Fern., Virginia Mountainmint

- **Drug—Chippewa Abortifacient** Decoction of powdered root taken for "stoppage of periods." (as *Koellia virginiana* 53:358) *Febrifuge* Compound decoction of leaves taken for chills and fever. (as *Koellia virginiana* 53:354) **Lakota Cough Medicine** Infusion of plant taken for coughs. (139:50) **Meskwaki Alterative** Infusion of leaf used as an alterative "when a person is all run down." *Febrifuge* Infusion of plant tops taken for chills. *Misc. Disease Remedy* Infusion of plant tops taken for ague. *Stimulant* Compound containing florets applied at nostrils to rally a dying patient. (152:226, 227)

- **Food—Chippewa Spice** Buds and flowers used to season meat or broth. (as *Koellia virginiana* 53:318)

- **Other—Meskwaki Hunting & Fishing Item** Leaves used to scent mink traps. (152:273)

## ***Pyrola***, Ericaceae

***Pyrola americana*** Sweet, American Wintergreen

- **Drug—Cherokee Dermatological Aid** "Stick on cuts and sores to heal them." (as *P. rotundifolia* 80:55) **Ojibwa Hunting Medicine** Dried leaves used to make tea and drunk as good luck potion in the morning before the hunt started. (153:430)

***Pyrola asarifolia*** Michx., Liverleaf Wintergreen

- **Drug—Carrier, Southern Eye Medicine** Decoction of leaves or leaves and roots used as an eyewash. (150:62) **Cree, Woodlands Antihemorrhagic** Decoction of plant taken for coughing up blood. *Eye Medicine* Infusion of leaves used for sore eyes. (109:54) **Karok Ceremonial Medicine, Pediatric Aid, and Sedative** Decoction of plant used as a steam bath for "goofy" child in the Brush Dance. (148:387) **Shoshoni Liver Aid** Decoction of root taken for liver trouble. (180:128)

***Pyrola asarifolia*** Michx. **spp. asarifolia**, Liverleaf Wintergreen

- **Drug—Micmac Antihemorrhagic** Parts of plant used for spitting blood. *Kidney Aid* Parts of plant used for kidney trouble. *Venereal Aid* Parts of plant used for gonorrhea. (as *P. uliginosa* 40:60) **Montagnais Panacea** Decoction of leaves taken for any ailment. (as *P. uliginosa* 156:314) **Penobscot Antihemorrhagic** Compound infusion of plant taken for "spitting up blood." *Kidney Aid* Compound infusion of plant taken for kidney trouble. *Tonic* Compound infusion of plant taken as a tonic. *Venereal Aid* Compound infusion of plant taken for gonorrhea. (as *P. uliginosa* 156:311)

***Pyrola chlorantha*** Sw., Greenflowered Wintergreen

- **Drug—Navajo, Kayenta Antidiarrheal** Plant used for infants with bloody diarrhea. *Gynecological Aid* Plant used for menorrhagia. *Hemostat* Plant used as a hemostatic. *Pediatric Aid* Plant used for infants with bloody diarrhea. (205:35)

- **Other—Navajo, Kayenta Ceremonial Items** Used in paint for the God Impersonators. (205:35)

***Pyrola elliptica*** Nutt., Waxflower Shinleaf

- **Drug—Cherokee Dermatological Aid** "Stick on cuts and sores to heal them." (80:55) **Chippewa Unspecified** Poultice of plant and two other plants used medicinally. (71:138) **Iroquois Anticonvulsive** Decoction of roots and leaves given to babies with fits or epileptic seizures. (87:408) *Antirheumatic (Internal)* Compound infusion of plants taken for rheumatism. *Blood Medicine* Compound used for bad blood. *Dermatological Aid* Compound used for neck sores. *Eye Medicine* Decoction of plant used as drops for sore eyes, sties, and inflamed lids. *Gastrointestinal Aid* Compound decoction of whole plants taken for indigestion. *Orthopedic Aid* Compound infusion of smashed plants applied as poultice to sore legs. (87:409) *Pediatric Aid* Decoction of roots and leaves given to babies with fits or epileptic seizures. (87:408) **Mohegan Oral Aid** Infusion of leaves used as a gargle for sores or cankers in the mouth. (174:264) Infusion of leaves used as a mouthwash for canker sores. *Throat Aid* Infusion of leaves used as a wash for mouth sores and sore throat. (176:74, 130) **Montagnais Stimulant** Decoction of root taken for "weakness." (156:315) **Nootka Cancer Treatment** Poultice of bruised plant applied to "tumors." (170:79)

***Pyrola picta*** Sm., Whiteveined Wintergreen

- **Drug—Karok Panacea and Pediatric Aid** Infusion of plant used as a wash for sick child. (148:387)

***Pyrola* sp.**, Wintergreen

- **Drug—Blackfoot Cough Medicine** Infusion of flowers given to children with coughs. (86:73) *Dermatological Aid* Poultice of chewed roots applied to wounds. (86:84) *Diuretic* Infusion of leaves and/or roots taken as a diuretic. (86:70) *Ear Medicine* Poultice of chewed roots applied to ear disorders. *Eye Medicine* Poultice of chewed roots applied to eye disorders. (86:82) *Gynecological Aid* Infusion of leaves and roots taken to expel the afterbirth. (86:61) *Laxative* Infusion of leaves taken as a laxative. (86:68) *Pediatric Aid* Infusion of flowers given to children with coughs. *Throat Aid* Root pieces used for throat lozenges. (86:73) Infusion of roots applied to swollen neck glands. (86:78) **Nootka Gastrointestinal Aid** Plant used for "derangement" of stomach and bowels. (170:81) **Thompson Gynecological Aid** Plant chewed at childbirth to ease confinement. (164:462)
- **Food—Malecite Beverage** Used to make tea. (160:6)

## ***Pyrrhopappus***, Asteraceae

***Pyrrhopappus carolinianus*** (Walt.) DC., Carolina Desertchicory

- **Drug—Cherokee Blood Medicine** Infusion taken to purify blood. (80:31)
- **Food—Kiowa Unspecified** Autumn, sweet roots used for food. (as *Sitilias caroliniana* 192:61)

***Pyrrhopappus pauciflorus*** (D. Don) DC., Desertchicory

- **Drug—Navajo, Ramah Ceremonial Medicine and Emetic** Flower stalks used as a ceremonial emetic. (as *P. multicaulis* 191:52)
- **Other—Keres, Western Unspecified** Plant known and named but no use was specified. (as *Sitilias multicaulis* 171:69)

***Pyrularia***, Santalaceae***Pyrularia pubera*** Michx., Buffalo Nut

- **Drug**—Cherokee *Dermatological Aid* Used as a salve for “old sores.” *Emetic* Nut chewed to “make vomit for colic.” (80:27)

***Pyrus***, Rosaceae***Pyrus communis*** L., Common Pear

- **Food**—Cherokee *Fruit* Fruit used for food. (80:48) **Hopi Unspecified** Species used for food. (200:79) **Iroquois Bread & Cake** Fruit mashed, made into small cakes and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:129) **Seminole Unspecified** Plant used for food. (169:496)

***Pyrus sp.***, Service Tree

- **Drug**—Cree, Hudson Bay *Dermatological Aid* Branch bark used for its astringent qualities. *Misc. Disease Remedy* Branch bark used for inflammatory diseases. *Pulmonary Aid* Branch bark used for pleurisy. (92:303)
- **Food**—Iroquois *Dried Food* Fruits cut up in thin slices, strung on twine, dried, and used for food. *Fruit* Fruits eaten raw. Fruits boiled or baked and eaten. *Sauce & Relish* Fruits cut up and used as sauce. (124:94)

***Quercus***, Fagaceae***Quercus agrifolia*** Née, California Live Oak

- **Drug**—Mahuna *Hemostat* and *Pediatric Aid* Plant used for newborns with bleeding navels. (140:56)
- **Food**—Cahuilla *Bread & Cake* Acorns ground into a fine meal and used to make bread.

*Dried Food* Dried acorns stored for a year or more in granaries. *Porridge* Cooked acorns used to make mush. *Special Food* Acorn meat considered a delicacy and favored at social and ceremonial occasions. (15:121) **Costanoan Unspecified** Acorns used for food. (21:248) **Luiseño Porridge** Acorns leached, ground into a meal, cooked in an earthen vessel, and eaten. (155:194) *Staple* Acorns eaten as a staple food. (155:193) Acorns from storage granaries pounded in a mortar and pestle to make a flour.<sup>64</sup> *Winter Use Food* Acorns formerly gathered for storage in acorn granaries. (155:194) **Pomo Unspecified** Acorns used for food. (66:12) **Pomo, Kashaya Dried Food** Acorns sun dried before storing. *Porridge* Acorns used as flour for pancakes, bread, mush, or soup.<sup>45</sup> (72:80)

- **Other**—Cahuilla *Cash Crop* Acorn meal exchanged for pinyon nuts, mesquite beans, and palm tree fruit. Acorn meal used as payment to a shaman for special services. *Fuel* Dried wood considered an ideal firewood for heating and cooking. *Hunting & Fishing Item* Acorns used as bait in trigger traps to capture small animals. *Jewelry* Unhusked acorns dried and strung as necklaces. *Musical Instrument* Acorns gathered on a cord and swung against the teeth to produce music. *Toys & Games* Acorns used by children in a game like jacks and for juggling. (15:121)

***Quercus agrifolia*** Née var. ***agrifolia***, California Live Oak

- **Drug**—Diegueño *Dermatological Aid* Decoction of chipped bark used as a wash for sores. (84:33)
- **Food**—Diegueño *Porridge* Acorns shelled, pounded, leached, and cooked into a mush or gruel. (84:33)
- **Other**—Diegueño *Fuel* Bark used as fuel for firing pottery. (84:33)

***Quercus alba*** L., White Oak

- **Drug**—Cherokee *Antidiarrheal* Bark used for chronic dysentery. *Dermatological Aid* Astringent bark chewed for mouth sores. Infusion of bark applied to sore, chapped skin. *Disinfectant* Bark used as an antiseptic. *Emetic* Bark used as an emetic. (80:46) Bark used as an emetic. (203:74) *Febrifuge* Bark used after long, intermittent fevers and as a wash for chills and fevers. *Gastrointestinal Aid* Bark used for indigestion and “any debility of the system.” *Oral Aid* Bark chewed for mouth sores. *Respiratory Aid* Infusion of bark taken for asthma. *Throat Aid* Decoction of inner bark used for “lost voice.” *Tonic* Bark used as a tonic. *Urinary Aid* Unspecified liquid preparation taken for “milky urine.” (80:46) **Delaware Cough Medicine** Infusion of bark used for severe coughs. *Disinfectant* Infusion of bark used as a disinfectant. *Gynecological Aid* Infusion of bark used as a douche. *Throat Aid* Infusion of bark used for sore throats. (176:30) **Delaware, Oklahoma Cough Medicine** Infusion of bark taken for severe cough. (175:25, 78) *Dermatological Aid* Strong infusion of bark used to cleanse bruises and ulcers. (175:25) *Disinfectant* Compound containing bark used as an antiseptic. (175:78) *Gynecological Aid* Infusion of bark used as an excellent douche. *Panacea* Bark used in many medicinal compounds. (175:25, 78) *Throat Aid* Strong infusion of bark gargled for a sore throat. (175:25) **Delaware, Ontario Gynecological Aid** Compound infusion of bark taken for “diseases peculiar to women.” *Tonic* Compound infusion of bark taken as a tonic. (175:68, 82) **Houma Antirheumatic (External)** Crushed root mixed with whisky and used as liniment on rheumatic parts. (158:56) **Iroquois Psychological Aid** Compound decoction used to counteract loneliness. *Tuberculosis Remedy* Compound decoction of bark taken for consumption. *Veterinary Aid* Bark used for horses with distemper. *Witchcraft Medicine* Compound decoction used “when your woman goes off and won’t come back.” (87:303) **Menominee Unspecified** Inner bark used in compounds. (151:36) **Meskwaki Antidiarrheal** Compound containing bark used for diarrhea. *Pulmonary Aid* Decoction of inner bark taken to “throw up phlegm from the lungs.” (152:221) **Micmac Dietary Aid** Nuts used to induce thirst. *Hemorrhoid Remedy* Plant parts used for bleeding piles. (40:60) **Mohegan Analgesic** Infusion of bark used as liniment for muscular pains. (30:121) Infusion of inner bark used as liniment for humans and horses with pain. (176:75) *Antirheumatic (External)* Infusion of inner bark used as a liniment for pain. (176:75, 132) *Cold Remedy* Bark used for colds. (176:132) *Orthopedic Aid* Infusion of bark used as liniment for muscular pains. (30:121) Infusion of bark used as a liniment for people. *Veterinary Aid* Infusion of bark used as a liniment for horses. (174:266) Infusion of inner bark used as a liniment for horses with pain. (176:75, 132) **Ojibwa, South Antidiarrheal** Decoction of root bark and inner bark taken for diarrhea. (91:198) **Penobscot Dietary Aid** Acorns eaten to induce thirst and plenty of water thought to be beneficial. (156:309) *Hemorrhoid Remedy* Infusion of bark taken for bleeding piles. (156:

310) **Shinnecock** *Analgesic* Infusion of bark used as liniment for muscular pains. *Orthopedic Aid* Infusion of bark used as liniment for muscular pains. (30:121)

- **Food—Iroquois** *Unspecified* Acorns used for food. (196:123)
- Menominee** *Pie & Pudding* Acorns boiled, simmered to remove lye, ground, sifted, and made into pie. *Porridge* Acorns boiled, simmered to remove lye, ground, sifted, and made into mush with bear oil seasoning. *Staple* Acorns boiled, simmered to remove lye, ground, sifted, cooked in soup stock to flavor, and eaten. (151:66) **Meskwaki** *Beverage* Ground, scorched acorns made into a drink similar to coffee. *Porridge* Dried acorns made into mush. (152:257) **Ojibwa** *Soup* Acorns soaked in lye water to remove bitter tannin taste, dried for storage, and used to make soup. Lye for leaching acorns was obtained by soaking wood ashes in water. Acorns were put in a net bag and then soaked in the lye, then rinsed several times in warm water. The acorns were then dried for storage, and when wanted, pounded into a coarse flour which was used to thicken soups or form a sort of mush. (153:401)
- **Fiber—Cherokee** *Basketry* Used to make baskets. *Building Material* Wood used for lumber, railroad ties, wagon spokes and rims. *Furniture* Wood used to make furniture. Used to make woven chair bottoms. (80:46) **Ojibwa** *Building Material* Wood used in making wigwams and for several other things. (153:418)
- **Other—Cherokee** *Cooking Tools* Wood used to make corn beaters and mortars. Leaves used to wrap dough for bread making. *Fuel* Wood used for firewood. (80:46) **Ojibwa** *Tools* Wood was of much value, especially for making awls to punch holes in birch bark. (153:418)

**Quercus bicolor** Willd., Swamp White Oak

- **Drug—Iroquois** *Misc. Disease Remedy* Compound decoction of bark taken for cholera. *Orthopedic Aid* Compound decoction of bark taken for broken bones. *Respiratory Aid* Compound of leaves smoked and exhaled through the nostrils for catarrh. *Tuberculosis Remedy* Compound decoction of bark chips taken for consumption. *Witchcraft Medicine* Used "when wife runs around, takes away lonesomeness." (87:303)
- **Food—Iroquois** *Unspecified* Acorns used for food. (196:123)
- **Other—Chippewa** *Cleaning Agent* Bark boiled with hemlock and soft maple bark and the liquid used to clean the rust from traps. The solution was believed to prevent the trap from becoming rusty again. (71:128)

**Quercus chrysolepis** Liebm., Canyon Live Oak

- **Drug—Mendocino Indian** *Poison* Nuts considered poisonous. (41:342)
- **Food—Cahuilla** *Bread & Cake* Acorns ground into a fine meal and used to make bread. *Dried Food* Dried acorns stored for a year or more in granaries. *Porridge* Cooked acorns used to make mush. *Special Food* Acorn meat considered a delicacy and favored at social and ceremonial occasions. (15:121) **Diegueño** *Porridge* Acorns shelled, pounded, leached, and cooked into a mush or gruel. (84:33) **Karok** *Fruit* Fruit buried from 1 to 4 years to kill the bugs and worms and used for food. (6:49) *Unspecified* Acorns used for food. (148:382) **Kawaiisu** *Bread & Cake* Acorns made into a fine meal, cooked into a mush, and allowed to stand and harden into a "cake." *Staple* Acorns

dried, pounded, sifted into a fine meal, and leached. *Winter Use Food* Acorns stored for future use.<sup>65</sup> (206:56) **Luißeño** *Porridge* Acorns leached, ground into a meal, cooked in an earthen vessel, and eaten. *Staple* Acorns from storage granaries pounded in a mortar and pestle to make a flour.<sup>64</sup> (155:194) *Substitution Food* Acorns used as a substitution during a scarcity of common live oak or black oak. (155:193) *Winter Use Food* Acorns formerly stored in acorn granaries. (155:194) **Pomo** *Bread & Cake* Acorns used to make bread. *Porridge* Acorns used to make mush. (117:290) **Shasta** *Bread & Cake* Acorns pounded, winnowed, leached, and made into bread. *Porridge* Acorns pounded, winnowed, leached, and made into mush. *Soup* Acorns pounded, winnowed, leached, and made into thin soup. *Staple* Acorns used as the basic staple. (93:308) **Tubatulabal** *Unspecified* Acorns used extensively for food. (193:15) **Wintoon** *Dried Food* Acorns dried and preserved for future use. *Unspecified* Acorns leached all winter in cold, wet, swampy ground, boiled or roasted, and eaten in the spring. (117:265)

- **Fiber—Kawaiisu** *Building Material* Logs used in house construction. (206:56)
- **Dye—Diegueño** *Black* Acorn cups soaked in water containing iron and used as a black dye to color basket materials. (84:33)
- **Other—Cahuilla** *Cash Crop* Acorn meal exchanged for pinyon nuts, mesquite beans, and palm tree fruit. Acorn meal used as payment to a shaman for special services. *Fuel* Dried wood considered an ideal firewood for heating and cooking. *Hunting & Fishing Item* Acorns used as bait in trigger traps to capture small animals. *Jewelry* Unhusked acorns dried and strung as necklaces. *Musical Instrument* Acorns gathered on a cord and swung against the teeth to produce music. *Toys & Games* Acorns used by children in a game like jacks and for juggling. (15:121) **Kawaiisu** *Fasteners* Acorn meal used to mend cracks in clay pots. *Toys & Games* Acorn cupule used to make a top for children. (206:56)

**Quercus douglasii** Hook. & Arn., Blue Oak

- **Drug—Kawaiisu** *Burn Dressing* Poultice of ground galls and salt applied to burns. *Dermatological Aid* Poultice of ground galls and salt applied to sores and cuts. *Eye Medicine* Ground gall powder and salt wrapped in a small piece of cloth and dipped in water applied to sore eyes. (206:56) **Midoo** *Throat Aid* Leaves chewed for sore throats. (117:310)
- **Food—Kawaiisu** *Bread & Cake* Acorns made into a fine meal, cooked into a mush, and allowed to stand and harden into a "cake." *Staple* Acorns dried, pounded, sifted into a fine meal, and leached. *Winter Use Food* Acorns stored for future use.<sup>65</sup> (206:56) **Mendocino Indian** *Bread & Cake* Thick acorns used to make bread. *Soup* Thick acorns used to make soup. (41:342) **Miwok** *Bread & Cake* Acorns ground into a meal and used to make bread and biscuits. *Porridge* Acorns considered a staple food and used to make mush. *Soup* Acorns ground into a meal and used to make soup. *Winter Use Food* Whole acorns stored for winter use. (12:142) **Tubatulabal** *Unspecified* Acorns used extensively for food. (193:14) **Yana** *Bread & Cake* Acorn flour used to make bread. *Dried Food* Acorns dried for winter use. *Porridge* Acorn flour used to make mush. *Staple* Dried acorns ground into flour. (147:249) **Yokut** *Unspecified* Acorns used for food. (117:420)
- **Fiber—Kawaiisu** *Basketry* Branches used to make rims for twined

work baskets. *Building Material* Logs used in house construction. (206:56)

- **Other—Kawaiisu** *Cooking Tools* Wood used to carve a ladle about a foot long. A branch with a bulge was sought and the bulge was hollowed out by burning to form the bowl. Such a utensil was used for stirring and dipping out foods. *Fasteners* Acorn meal used to mend cracks in clay pots. *Fuel* Wood preferred as firewood for roasting yuca bulbs. Spongy pith material used for starting fires. *Toys & Games* Acorn cupule used to make a top for children. (206:56) **Miwok** *Cash Crop* Acorns gathered in large quantities and traded for other foods. (12:142)

### *Quercus dumosa* Nutt., California Scrub Oak

- **Drug—Diegueño** *Eye Medicine* Decoction of broken galls used as an eyewash. (84:33) **Luißeño** *Dermatological Aid* Gallnuts used for sores and wounds and as an astringent. (155:233)
- **Food—Cahuilla** *Bread & Cake* Acorns ground into a fine meal and used to make bread. *Dried Food* Dried acorns stored for a year or more in granaries. *Porridge* Cooked acorns used to make mush. *Special Food* Acorn meat considered a delicacy and favored at social and ceremonial occasions. (15:121) **Diegueño** *Porridge* Acorns shelled, pounded, leached, and cooked into a mush or gruel. (84:33) **Kawaiisu** *Bread & Cake* Acorns made into a fine meal, cooked into a mush, and allowed to stand and harden into a “cake.” *Staple* Acorns dried, pounded, sifted into a fine meal, and leached. *Winter Use Food* Acorns stored for future use.<sup>65</sup> (206:56) **Luißeño** *Porridge* Acorns leached, ground into a meal, cooked in an earthen vessel, and eaten. *Staple* Stored acorns pounded in a mortar and pestle to make a flour.<sup>64</sup> (155:194) *Substitution Food* Acorns used only when more preferred species could not be obtained. (155:193) *Winter Use Food* Acorns formerly stored in acorn granaries. (155:194) **Pomo, Kashaya** *Forage* Acorns not used by people but eaten as a favorite food by deer, squirrels, chipmunks, quail, and jays. (72:82) **Tubatulabal** *Unspecified* Acorns used extensively for food. (193:15)
- **Fiber—Diegueño** *Basketry* Branches, with willow branches, used to make acorn storage baskets. *Furniture* Branches used as framework material for cradles. (84:33) **Kawaiisu** *Building Material* Logs used in house construction. (206:56)
- **Other—Cahuilla** *Cash Crop* Acorn meal exchanged for pinyon nuts, mesquite beans, and palm tree fruit. Acorn meal used as payment to a shaman for special services. *Fuel* Dried wood considered an ideal firewood for heating and cooking. *Hunting & Fishing Item* Acorns used as bait in trigger traps to capture small animals. *Jewelry* Unhusked acorns dried and strung as necklaces. *Musical Instrument* Acorns gathered on a cord and swung against the teeth to produce music. *Toys & Games* Acorns used by children in a game like jacks and for juggling. (15:121) **Kawaiisu** *Fasteners* Acorn meal used to mend cracks in clay pots. *Toys & Games* Acorn cupule used to make a top for children. (206:56)

### *Quercus dunnii* Kellogg, Palmer Oak

- **Food—Diegueño** *Fruit* Fruit formerly used for food. (as *Q. palmeri* 88:216) **Paiute** *Porridge* Acorns boiled into mush. *Winter Use Food* Acorns stored for future use in pits lined and covered with sage bark. (as *Q. palmeri* 167:246)

### *Quercus ellipsoidalis* E. J. Hill, Northern Pin Oak

- **Drug—Menominee** *Abortifacient* Compound decoction of inner bark taken for suppressed menses caused by cold. (54:133)
- **Food—Menominee** *Beverage* Roasted acorn ground for coffee. (151:66)

### *Quercus emoryi* Torr., Emory's Oak

- **Food—Apache, Western** *Unspecified* Acorns eaten whole and raw, ground on a metate, or boiled. (26:174) **Papago** *Candy* Acorns chewed as a confection. (34:47) *Unspecified* Acorns eaten fresh from the shell. (34:19) Acorns used for food. (36:61) **Yavapai** *Cooking Agent* Ground meat used as thickening for venison stew. *Winter Use Food* Nuts stored for later use. (65:257)

### *Quercus engelmannii* Greene, Engelmann's Oak

- **Food—Diegueño** *Candy* Bark gum pounded, washed, and chewed like chewing gum. *Porridge* Acorns shelled, pounded, leached, and cooked into a mush or gruel. (84:33) **Luißeño** *Porridge* Acorns leached, ground into a meal, cooked in an earthen vessel, and eaten. *Staple* Stored acorns pounded in a mortar and pestle to make a flour.<sup>64</sup> (155:194) *Substitution Food* Acorns used only when more preferred species could not be obtained. (155:193) *Winter Use Food* Acorns formerly stored in acorn granaries. (155:194)

### *Quercus falcata* Michx., Southern Red Oak

- **Drug—Cherokee** *Antidiarrheal* Bark used for chronic dysentery. *Dermatological Aid* Astringent bark chewed for mouth sores. Infusion of bark applied to sore, chapped skin. *Disinfectant* Bark used as an antiseptic. *Emetic* Bark used as an emetic. *Febrifuge* Bark used after long, intermittent fevers and as a wash for chills and fevers. *Gastrointestinal Aid* Bark used for indigestion and “any debility of the system.” *Oral Aid* Bark chewed for mouth sores. *Respiratory Aid* Infusion of bark taken for asthma. *Throat Aid* Decoction of inner bark used for “lost voice.” *Tonic* Bark used as a tonic. *Urinary Aid* Unspecified liquid preparation taken for “milky urine.” (80:46)
- **Fiber—Cherokee** *Basketry* Used to make baskets. *Building Material* Wood used for lumber, railroad ties, wagon spokes and rims. *Furniture* Wood used to make furniture. Used to make woven chair bottoms. (80:46)
- **Other—Cherokee** *Cooking Tools* Wood used to make corn beaters and mortars. Leaves used to wrap dough for bread making. *Fuel* Wood used for firewood. (80:46)

### *Quercus gambelii* Nutt., Gambel's Oak

- **Drug—Isleta** *Reproductive Aid* Acorns eaten to give greater sexual potency. (32:47) Consumption of acorns believed to give greater sexual potency. (100:41) **Navajo, Ramah** *Analgesic* Decoction of root bark used for postpartum pain. *Cathartic* Decoction of root bark used as a cathartic. *Ceremonial Medicine* and *Emetic* Leaves used as a ceremonial emetic. *Gynecological Aid* Decoction of root bark used for postpartum pain and to help in delivery of placenta. *Panacea* Root bark used as a “life medicine.” (191:22)
- **Food—Acoma** *Staple* Acorns ground into meal. *Unspecified* Acorns boiled and eaten. (32:47) **Apache, Chiricahua & Mescalero** *Fruit* Raw fruit used for food. *Winter Use Food* Acorns roasted slightly, pounded, mixed with dried meat, and stored away in hide containers. (33:42) **Apache, Western** *Unspecified* Acorns eaten whole and raw, ground on a metate, or boiled. (26:174) **Apache, White Mountain** *Unspecified*

Acorns used for food. (136:160) **Cochiti Staple** Acorns ground into meal. *Unspecified* Acorns boiled and eaten. (32:47) **Havasupai Porridge** Acorns parched, ground, and used to make mush. *Soup* Acorns parched, ground, and used to make soup. (197:67) *Spice* Acorns ground and added to flavor beef or deer soups. (197:74, 215) *Unspecified* Acorns parched on a tray or eaten raw. (197:215) **Hualapai Soup** Acorns used to make soup. *Unspecified* Acorns roasted and used for food. (195:12) **Isleta Staple** Acorns formerly used as a staple food. (100:41) **Laguna Staple** Acorns ground into meal. *Unspecified* Acorns boiled and eaten. (32:47) **Navajo, Ramah Staple** Acorns eaten raw, boiled, roasted in ashes, or dried, ground, and cooked like cornmeal. (191:22) **Neeshenam Bread & Cake** Acorns ground into flour, soaked in water, and baked to make a bread. *Porridge* Acorns ground into flour, soaked in water, and cooked to make mush. (129:374) **Pueblo Unspecified** Acorns formerly used extensively for food. **San Felipe Staple** Acorns ground into meal. *Unspecified* Acorns boiled and eaten. (32:47) **Yavapai Cooking Agent** Acorns sometimes added as thickening to venison stews. *Unspecified* Uncooked acorns used for food. (65:257)

- **Fiber**—Navajo, Ramah *Building Material* Whole trees used for shade house construction. *Furniture* Wood used to make frames for baby cradles. (191:22)
- **Dye**—Navajo, Ramah *Unspecified* Red leaf galls and red clay or gum used to make stripes on arrow shafts between and below the feathers. (191:22)
- **Other**—Apache, White Mountain *Hide Preparation* Bark used to tan skins. (136:160) **Havasupai Tools** Wood used to make handles for implements, such as hoes and axes. (197:215) **Hopi Ceremonial Items** Plant used in Oaqol ceremony. (42:355) **Isleta Tools** Wood used to make handles and other wooden portions of various implements. (100:41) **Jemez Hunting & Fishing Item** Hard, tough wood made into clubs and used in rabbit hunts. (44:27) **Navajo, Ramah Ceremonial Items** Wood used to make ceremonial bull-roarers. *Tools* Wood used to make ax handles, hoe handles, digging sticks, and weaving tools. Wood sticks notched by sheepherders to keep track of the days they have worked. (191:22)

**Quercus gambelii** Nutt. **var. gambelii**, Gambel's Oak

- **Drug**—Isleta *Reproductive Aid* Acorns eaten to give greater sexual potency. (as *Q. utahensis* 32:47) **Keres, Western Emetic** Infusion of ground leaves and oak galls used as an emetic. *Oral Aid* and *Pediatric Aid* Velvet pubescence rubbed on babies' tongues to remove milk coating. (as *Q. utahensis* 171:64)
- **Food**—Acoma *Staple* Acorns ground into meal. *Unspecified* Acorns boiled and eaten. **Cochiti Staple** Acorns ground into meal. *Unspecified* Acorns boiled and eaten. (as *Q. utahensis* 32:47) **Keres, Western Staple** Acorns ground into flour. *Unspecified* Acorns boiled and eaten. (as *Q. utahensis* 171:64) **Laguna Staple** Acorns ground into meal. *Unspecified* Acorns boiled and eaten. (as *Q. utahensis* 32:47) **Navajo Unspecified** Acorns seldom used for food. (as *Q. utahensis* 165:222) **Pueblo Unspecified** Acorns formerly used extensively for food. **San Felipe Staple** Acorns ground into meal. *Unspecified* Acorns boiled and eaten. (as *Q. utahensis* 32:47) **Tewa Unspecified** Acorns used for food. (as *Q. utahensis* 138:44)
- **Fiber**—Tewa of Hano *Sewing Material* Wood used to make embroi-

dery stretchers. (as *Q. utahensis* 138:44)

- **Other**—Tewa *Tools* Woods used to make digging sticks. *Weapon* Woods used to make bows and war clubs. **Tewa of Hano Tools** Wood used to make rabbit sticks and other utensils. (as *Q. utahensis* 138:44)

**Quercus garryana** Dougl. ex Hook., Oregon White Oak

- **Drug**—Cowlitz *Tuberculosis Remedy* Decoction of bark taken for tuberculosis. (79:27) **Karok Gynecological Aid** Infusion of plant taken by mother before her first baby comes. Pounded bark rubbed on abdomen and sides of mother before her first delivery. (148:382)
- **Food**—Chehalis *Unspecified* Acorns roasted and eaten. **Cowlitz Unspecified** Acorns buried in the mud for leaching and used for food. (79:27) **Karok Unspecified** Acorns used for food. (148:382) **Mendocino Indian Bread & Cake** Acorns used to make bread. *Soup* Acorns used to make soup. (41:343) **Nisqually Unspecified** Acorns used for food. (79:27) **Paiute Unspecified** Autumn acorns buried in mud to ripen and eaten. (111:65) **Pomo Bread & Cake** Acorns used to make bread. *Porridge* Acorns used to make mush. (117:290) *Unspecified* Acorns used for food. (66:12) **Pomo, Kashaya Dried Food** Acorns sun dried before storing. *Porridge* Acorns used as flour for pancakes, bread, mush, or soup.<sup>45</sup> (72:81) **Salish, Coast Unspecified** Acorns steamed, roasted, or boiled and used for food. (169:250) *Orthopedic Aid* Decoction of bark used for ballgame sickness: sores, back or limb pains, and hemorrhoids. (169:269)
- **Food**—Seminole *Unspecified* Plant used for food. (169:471)
- **Other**—Seminole *Cleaning Agent* Plant used to make lye. *Toys & Games* Plant used to make ball sticks. (169:471)

### *Quercus prinus* L., Chestnut Oak

- **Food**—Iroquois *Unspecified* Acorns used for food. (196:123)
- **Fiber**—Cherokee *Building Material* Wood used to make railroad ties. (80:46)
- **Dye**—Cherokee *Brown* Bark used to make a tan dye. (80:46)

### *Quercus pumila* Walt., Running Oak

- **Food**—Seminole *Unspecified* Plant used for food. (169:493)

### *Quercus pungens* Liebm., Pungent Oak

- **Food**—Navajo *Candy* Gum used for chewing gum. (55:41)
- **Dye**—Navajo *Brown* Bark exudation used as a tan dye. (55:41)
- **Other**—Keres, Western *Tools* Wood used for tool handles. Twigs used to tie warp of rugs to beam while weaving. (171:64) **Navajo Ceremonial Items** Wood charcoal used as the black for sand paintings. *Paint* Gum used for painting arrows between the feathers. *Tools* Wood used to make batten for weaving. (55:41)

### *Quercus rubra* L., Northern Red Oak

- **Drug**—Cherokee *Antidiarrheal* Bark used for chronic dysentery. *Dermatological Aid* Astringent bark chewed for mouth sores. Infusion of bark applied to sore, chapped skin. *Disinfectant* Bark used as an antiseptic. *Emetic* Bark used as an emetic. *Febrifuge* Bark used af-

- ter long, intermittent fevers and as a wash for chills and fevers. *Gastrointestinal Aid* Bark used for indigestion and "any debility of the system." *Oral Aid* Bark chewed for mouth sores. *Respiratory Aid* Infusion of bark taken for asthma. *Throat Aid* Decoction of inner bark used for "lost voice." (80:46) Decoction of inner bark taken for hoarseness. (177:17) *Tonic* Bark used as a tonic. *Urinary Aid* Unspecified liquid preparation taken for "milky urine." (80:46) **Chippewa Heart Medicine** Compound decoction of inner bark prepared ceremonially for heart trouble. (53:338) **Delaware Cough Medicine** Infusion of bark used for severe coughs. *Throat Aid* Infusion of bark used for hoarseness. (176:30) **Delaware, Oklahoma Cough Medicine** Infusion of bark taken for severe cough. *Throat Aid* Infusion of bark taken for hoarseness. (175:25, 78) **Mahuna Toothache Remedy** Plant juice used for straightening and setting loose teeth. (140:25) **Malecite Antidiarrheal** Infusion of plant and fir buds or cones used for diarrhea. (116:244) Infusion of bark or roots used for diarrhea. (116:255) **Micmac Antidiarrheal** Bark and roots used for diarrhea. (40:60) **Ojibwa Blood Medicine** Decoction of bark taken for internal blood diseases. (as *Q. rubra* 135:231) *Heart Medicine* and *Respiratory Aid* Bark used for "heart troubles and bronchial affections." (153:369, 370) *Unspecified* Plant used for medicinal purposes. (135:242) *Venereal Aid* Infusion of root bark taken for gonorrhea. (as *Q. rubra* 135:231) **Ojibwa, South Antidiarrheal** Decoction of root bark and inner bark taken for diarrhea. (91:198) **Potawatomi Antidiarrheal** Inner bark used for flux. (154:58) **Rappahannock Dietary Aid** Infusion of north side bark taken as an appetizer. *Tonic* Decoction of bark and leaves taken as a beneficial beverage (bitters). (161:26)
- **Food**—Dakota *Unspecified* Acorns leached with basswood ashes to remove the bitter taste and used for food. (70:75) **Iroquois Unspecified** Acorns used for food. (196:123) **Ojibwa Staple** Acorns leached with lye and used as of the most important starchy foods. (153:402) **Omaha Unspecified** Acorns freed from tannic acid by boiling with wood ashes and used for food. (68:327) Acorns leached with basswood ashes to remove the bitter taste and used for food. **Pawnee Unspecified** Acorns leached with basswood ashes to remove the bitter taste and used for food. **Ponca Unspecified** Acorns leached with basswood ashes to remove the bitter taste and used for food. (70:75) **Potawatomi Porridge** Dried, ground acorns used as a flour to make gruel. Hardwood ashes and water furnished the lye for soaking the acorns, to swell them and remove the tannic acid. A bark bag or reticule served to hold the acorns while they were washed through a series of hot and cold water to remove the lye. Then they were dried in the sun and became perfectly sweet and palatable. They were ground on depressions of rocks which served as a mortar with a stone pestle, to a flour, which was cooked as a gruel, sometimes called samp. (154:100)
  - **Fiber**—Cherokee *Basketry* Used to make baskets. *Building Material* Wood used for lumber, railroad ties, wagon spokes and rims. *Furniture* Wood used to make furniture. Used to make woven chair bottoms. (80:46)
  - **Dye**—Ojibwa *Unspecified* Bark used in tanning and coloring. (135:242) **Omaha Black** Bark used to make a black dye for porcupine quills. (68:325) **Potawatomi Red-Brown** Rushes gathered for mat weaving and boiled with bark to impart a brownish red dye. (154:120)

• **Other—Cherokee** *Cooking Tools* Wood used to make corn beaters and mortars. Leaves used to wrap dough for bread making. *Fuel* Wood used for firewood. (80:46) **Ojibwa** *Hide Preparation* Bark used in tanning and coloring. (135:242) **Potawatomi** *Designs* Leaves used to furnish a design for beadwork. (154:120)

**Quercus rubra** L. var. *rubra*, Northern Red Oak

• **Drug—Alabama** *Dermatological Aid* Decoction of bark used as a wash for bad smelling sores on the head or feet. *Orthopedic Aid* and *Pediatric Aid* Infusion of bark given to child old enough to walk but too weak to do so. *Pulmonary Aid* Infusion of bark taken for lung trouble. *Throat Aid* Decoction of bark taken for sore throats. **Cherokee** *Antidiarrheal* Infusion of twig juice taken for dysentery. (as *Q. borealis* var. *maxima* 177:16) **Iroquois** *Dermatological Aid* Complex compound decoction used as wash for affected parts of “Italian itch.” Poultice of powdered bark bound to ruptured or improperly healed navels. (as *Q. borealis* var. *maxima* 87:304)

(21:20) **Creek** *Orthopedic Aid* and *Pediatric Aid* Compound decoction of bark used as a wash to strengthen children unable to walk. (172:665) **Dakota** *Gastrointestinal Aid* and *Pediatric Aid* Decoction of root bark given for bowel trouble, especially in children. (70:75) **Iroquois** *Other* Infusion of bark and elm bark taken for ruptures caused by violence. (141:38) *Throat Aid* Poultice of inner bark used for “sore throats that will not heal.” *Tuberculosis Remedy* Compound used for tuberculosis. (87:302) **Malecite** *Unspecified* Used to make medicines. (160:6) **Mendocino Indian** *Dietary Aid* Plant used for fattening. (41:26) **Neeshenam** *Antirheumatic (Internal)* Burning pitch smoke inhaled for rheumatism. *Burn Dressing* Poultice of powdered acorns applied to burns or scalds. *Cold Remedy* Burning pitch smoke inhaled for colds. *Cough Medicine* Burning pitch smoke inhaled for coughs. (129:374) *Dermatological Aid* Pitch rubbed on wounds, sores, or arrow wounds. *Psychological Aid* Poultice of hot pitch and powdered, burned acorns applied to mourning widows. (129:375) **Omaha** *Gastrointestinal Aid* and *Pediatric Aid* Decoction of root bark given for bowel trouble, especially in children. **Pawnee** *Gastrointestinal Aid* and *Pediatric Aid* Decoction of root bark given for bowel trouble, especially in children. **Ponca** *Gastrointestinal Aid* and *Pediatric Aid* Decoction of root bark given for bowel

trouble, especially in children. **Winnebago** *Gastrointestinal Aid* and *Pediatric Aid* Decoction of root bark given for bowel trouble, especially in children. (70:75)

• **Food—Apache, Mescalero** *Unspecified* Acorns boiled, pounded, and mixed with mescal. Acorns eaten raw. (14:41) **Chippewa** *Unspecified* Acorns, with the tannin removed by using wood ash lye and leached out with water, used for food. (71:129) **Comanche** *Unspecified* Acorns used for food. (29:524) **Concow** *Bread & Cake* Acorns made into bread and eaten. *Porridge* Acorns made into mush and eaten. (41:333) **Costanoan** *Unspecified* Acorns used for food. (21:248) **Iroquois** *Beverage* Fresh nutmeats crushed, boiled, and liquid used as a drink. *Bread & Cake* Fresh nutmeats crushed and mixed with bread. *Pie & Pudding* Fresh nutmeats crushed and mixed with corn pudding. *Soup* Acorns boiled, roasted, pounded, mixed with meal or meat, and eaten as soup. *Special Food* Fresh nutmeats crushed, boiled, and oil used as a delicacy in corn bread and pudding. *Unspecified* Acorns eaten raw by children. (124:99) **Malecite** *Unspecified* Acorns baked and used for food. (160:6) **Miwok** *Bread & Cake* Acorns ground into a meal and used to make bread and biscuits. *Soup* Acorns ground into a meal and used to make soup. (12:142) **Navajo** *Staple* Dried acorns ground into flour. *Unspecified* Acorns boiled like beans and roasted over coals. (55:40) **Round Valley Indian** *Bread & Cake* Nuts dried, cracked, pulverized, water added, and the dough made into bread. *Porridge* Nuts dried, cracked, pulverized, water added, and the dough made into brownish red mush. (41:333)

• **Fiber—Apache, Mescalero** *Building Material* Used for poles in dome-shaped lodges and as tepee stakes. *Furniture* Used as footrests for cradleboards. (14:41) **Comanche** *Building Material* Trunks used for fence posts. (29:524) **Navajo** *Basketry* Twigs used as the framework of a temporary carrying basket. A temporary carrying basket was made of two staves or bows of oak twigs crossed in the center and brought upwards to the hoop. This framework was then covered with sheep or goatskin. These carrying baskets were usually made in the field for carrying yucca fruits. (55:40)

• **Dye—Chippewa** *Black* Used with grindstone dust or black earth to make a black dye. (53:372) *Red* Inner bark boiled, cedar ashes added, and used to make a red dye. (53:370)

• **Other—Apache, Chiricahua & Mescalero** *Fuel* Wood used on fire to heat cooking stones. (33:36) *Tools* Branches used to dig out crowns of the mescal plants. (33:35) **Apache, Mescalero** *Cooking Tools* Used to make platters and shelves for mescal cakes. *Stable Gear* Used to make stirrups. *Tools* Used to make digging sticks and wooden tweezers. *Toys & Games* Used to make toy bows. (14:41) **Cherokee** *Hunting & Fishing Item* Wood used to make bows. (80:21) **Chippewa** *Tools* Used for awls. (53:378) **Costanoan** *Cooking Tools* Wood used for bowls and mortars. *Fuel* Bark used as tinder. (21:248) **Miwok** *Cooking Tools* Wood used to make mush stirring paddles. (12:146) **Navajo** *Ceremonial Items* Used to make digging sticks for the Female Shooting Life Chant for digging medicinal roots. Sticks inserted in crevice above door during the dedication and purification of the hogan. Curled twig used as a drum stick in the War Dance Ceremony. Wood used, because of its hardness and great resisting power, in nearly all of the ceremonies. *Containers* Acorn shells used to hold medicine and a hummingbird was made to sip from each shell. *Hunting & Fishing Item* Used to make throwing sticks. The Navajo throwing

stick, which was of oak, was made by whittling the piece down to the shape of a batten and then heating it and bending it over the knee to give it a slight curve. *Tools* Used to make batten stick for weaving. Concave hole in wood used as a die to make metallic hemispheres for beads and sunflower blossoms. Used to make hoes and digging sticks. *Toys & Games* Sticks kicked out of the ground while playing "football." Stick curved in hot ashes to make a J-shaped stick or bat for shinny and other games. *Weapon* Wood used to make the bow carried into war. Branches used to make clubs. In warfare, clubs were used by some of the warriors. The older type consisted of a grooved stone, which was hafted by twisting a small branch from an oak twice around the grooved section of the stone and tying the free ends together. (55:40) **Pima, Desert Cash Crop** Acorns used for trade. (133:6)

### *Quercus stellata* Wengen., Post Oak

- **Drug**—**Cherokee Antidiarrheal** Bark used for chronic dysentery. (80:46) Infusion of twig juice taken for dysentery. (177:18) *Dermatological Aid* Astringent bark chewed for mouth sores. Infusion of bark applied to sore, chapped skin. *Disinfectant* Bark used as an antiseptic. *Emetic* Bark used as an emetic. *Febrifuge* Bark used after long, intermittent fevers and as a wash for chills and fevers. *Gastrointestinal Aid* Bark used for indigestion and "any debility of the system." *Oral Aid* Bark chewed for mouth sores. *Respiratory Aid* Infusion of bark taken for asthma. *Throat Aid* Decoction of inner bark used for "lost voice." *Tonic* Bark used as a tonic. *Urinary Aid* Unspecified liquid preparation taken for "milky urine." (80:46) Infusion of inner bark taken for difficult urination with discharge. **Choctaw Gastrointestinal Aid** Decoction of bark taken for stomachaches. (177:18) **Creek Antidiarrheal** Bark used to make a drink taken for dysentery. (172:659) Infusion of bark taken for dysentery. (177:18)
- **Food**—**Kiowa Beverage** Acorns used to make a drink similar to coffee. *Dried Food* Dried, pounded acorns used for food. (192:22)
- **Fiber**—**Cherokee Basketry** Used to make baskets. *Building Material* Wood used for lumber, railroad ties, wagon spokes and rims. *Furniture* Wood used to make furniture. Used to make woven chair bottoms. (80:46)
- **Other**—**Cherokee Cooking Tools** Wood used to make corn beaters and mortars. Leaves used to wrap dough for bread making. *Fuel* Wood used for firewood. (80:46) **Kiowa Fuel** Wood used for firewood. *Smoke Plant* Leaves used as cigarette wrappers for the peyote ceremony. (192:22)

### *Quercus texana* Buckl., Nuttall Oak

- **Dye**—**Choctaw Red** Burned bark and black gum ash added to water and used as a red dye. (25:14)
- **Other**—**Choctaw Paint** Bark, post oak, and live oak boiled and used for paint. (25:14)

### *Quercus turbinella* Greene, Shrub Live Oak

- **Food**—**Hualapai Bread & Cake** Acorns used to make bread. *Soup* Acorns used to make stew. *Unspecified* Acorns roasted like pinyons. (195:11) **Mohave Porridge** Acorns used to make mush. (37:187) **Pima, Gila River Snack Food** Fruits eaten raw as a snack food. (133:7)
- **Other**—**Cocopa Cash Crop** Acorns gathered and traded with the Paipai for wild sheep skins. (37:187) **Havasupai Tools** Wood used to make the hoe and ax handles. (197:215)

### *Quercus velutina* Lam., Black Oak

- **Drug**—**Cherokee Antidiarrheal** Bark used for chronic dysentery. *Dermatological Aid* Astringent bark chewed for mouth sores. Infusion of bark applied to sore, chapped skin. *Disinfectant* Bark used as an antiseptic. *Emetic* Bark used as an emetic. *Febrifuge* Bark used after long, intermittent fevers and as a wash for chills and fevers. *Gastrointestinal Aid* Bark used for indigestion and "any debility of the system." *Gynecological Aid* Compound infusion of bark of black oak taken for "female trouble." *Oral Aid* Bark chewed for mouth sores. *Respiratory Aid* Infusion of bark taken for asthma. *Throat Aid* Decoction of inner bark used for "lost voice." *Tonic* Bark used as a tonic. *Urinary Aid* Unspecified liquid preparation taken for "milky urine." (80:46) **Delaware Cold Remedy** Infusion of inner bark used as a gargle for colds. *Throat Aid* Infusion of inner bark used as a gargle for hoarseness. (176:30) **Delaware, Oklahoma Cold Remedy** Infusion of inner bark taken and used as a gargle for colds. *Throat Aid* Decoction of inner bark taken and used as a gargle for hoarseness. (175:25, 78) **Menominee Eye Medicine** Decoction of crushed bark used as a wash for sore eyes. (151:36) **Meskwaki Pulmonary Aid** Compound containing inner bark used for lung troubles. (152:222)
- **Food**—**Lakota Staple** Acorns used to make flour. (139:49) **Ojibwa Unspecified** Acorns, with tannic acid extracted, equally as good as other acorns. (153:402)
- **Fiber**—**Cherokee Basketry** Used to make baskets. *Building Material* Wood used for lumber, railroad ties, wagon spokes and rims. *Furniture* Wood used to make furniture. Used to make woven chair bottoms. (80:46)
- **Dye**—**Ojibwa Mordant** Bark used for a reddish yellow dye and to set its own color. *Red-Yellow* Bark used for a reddish yellow dye and to set its own color. (153:425)
- **Other**—**Cherokee Cooking Tools** Wood used to make corn beaters and mortars. Leaves used to wrap dough for bread making. *Fuel* Wood used for firewood. (80:46)

### *Quercus virginiana* P. Mill., Live Oak

- **Drug**—**Houma Antidiarrheal** Decoction of bark taken for dysentery. (158:56) **Mahuna Unspecified** Bark used for medicine. (140:55) **Seminole Analgesic** Decoction of wood bits or bark applied externally as an analgesic. (169:167) *Antirheumatic (External)* Decoction of wood or bark used as a bath for aches and pains. (169:286) *Dermatological Aid* Decoction of bark used for ballgame sickness: sores, back or limb pains, and hemorrhoids. Decoction of wood or bark used as a bath for sores and cuts. (169:269, 286) *Hemorrhoid Remedy* Decoction of bark used for ballgame sickness: sores, back or limb pains, and hemorrhoids. (169:269) *Love Medicine* Decoction of wood ashes placed on the tongue to cleanse the body and strengthen the marriage. (169:250) *Orthopedic Aid* Decoction of bark used for ballgame sickness: sores, back or limb pains, and hemorrhoids. (169:269)
- **Food**—**Mahuna Dessert** Acorns ground into a fine meal, sun dried, made into porridge, cooked, and eaten as a dessert. *Unspecified* Acorns ground into a fine meal, sun dried, made into porridge, and eaten with deer meat. (140:55) **Seminole Fodder** Acorns used as hog food. (169:493)
- **Fiber**—**Mahuna Mats, Rugs & Bedding** Leaves used to make mattress bedding. (140:55) **Seminole Caulking Material** Plant used to make mortar. (169:493)

- **Dye**—**Houma** *Red* Roots and bark boiled to make a red basket dye. (158:56) **Mahuna** *Black* Bark blended with other oak barks and roots and used to make a black dye for buckskins. *Brown* Bark blended with other oak barks and roots and used to make a light or dark brown dye for buckskin. *Gray* Bark blended with other oak barks and roots and used to make a gray dye for buckskins. *Red* Bark blended with other oak barks and roots and used to make a red dye for buckskins. *White* Bark blended with other oak barks and roots and used to make a white dye for buckskins. *Yellow* Bark blended with other oak barks and roots and used to make a yellow dye for buckskins. (140:55)
- **Other**—**Choctaw** *Paint* Bark, red oak, and post oak boiled and used for paint. (as *Q. virens* 25:14) **Seminole** *Cleaning Agent* Plant used to make lye. *Fuel* Wood used to burn out mortar hollow. *Hide Preparation* Plant used for tanning. *Tools* Plant used to make pestles and cane mills. (169:493)

### **Quercus wislizeni** A. DC., Interior Live Oak

- **Drug**—**Miwok** *Cough Medicine* Decoction of bark taken as a cough medicine. *Dermatological Aid* and *Pediatric Aid* Pulverized, outer bark dusted on running sores and particularly used for babies with sore umbilicus. (12:172)
- **Food**—**Luiseño** *Porridge* Acorns leached, ground into a meal, cooked in an earthen vessel, and eaten. (155:194) *Staple* Stored acorns pounded in a mortar and pestle to make a flour.<sup>64</sup> *Substitution Food* Acorns used only when more preferred species could not be obtained. (155:193) *Winter Use Food* Acorns formerly stored in acorn granaries. (155:194) **Miwok** *Bread & Cake* Acorns ground into a meal and used to make bread and biscuits. *Porridge* Acorns considered a staple food and used to make mush. *Soup* Acorns ground into a meal and used to make soup. *Winter Use Food* Whole acorns stored for winter use. (12:142) **Neeshenam** *Unspecified* Acorns occasionally used for food. (129:374) **Tubatulabal** *Unspecified* Acorns used extensively for food. (193:15)

### **Quercus wislizeni** var. *frutescens* Engelm., Interior Live Oak

- **Drug**—**Kawaiisu** *Antirheumatic (Internal)* Decoction of inner bark taken for arthritis. *Burn Dressing* Ground plant applied to burns. (206:56)
- **Food**—**Diegueño** *Porridge* Acorns shelled, pounded, leached, and cooked into a mush or gruel. (84:33) **Kawaiisu** *Bread & Cake* Acorns made into a fine meal, cooked into a mush, and allowed to stand and harden into a “cake.” *Staple* Acorns dried, pounded, sifted into a fine meal, and leached. *Winter Use Food* Acorns stored for future use.<sup>65</sup> (206:56)
- **Fiber**—**Kawaiisu** *Basketry* Branches used to make rims for twined work baskets. *Building Material* Logs used in house construction. (206:56)
- **Other**—**Kawaiisu** *Fasteners* Acorn meal used to mend cracks in clay pots. *Toys & Games* Acorn cupule used to make a top for children. (206:56)

### **Quincula**, Solanaceae

#### **Quincula lobata** (Torr.) Raf., Chinese Lantern

- **Drug**—**Kiowa** *Misc. Disease Remedy* Decoction of roots taken or poultice of pounded roots applied for grippe. (as *Physalis lobata* 192:50)

- **Food**—**Kiowa** *Preserves* Berries gathered to make jelly. Berries gathered to make jelly. (192:50)
- **Other**—**Kiowa** *Toys & Games* Bladdery envelope blown up by children and busted on the forehead. (192:50)

### **Ramalina**, Usneaceae, lichen

#### **Ramalina menziesii**, Spanish Moss

- **Fiber**—**Pomo**, **Kashaya** *Clothing* Used for baby diapers and other sanitary purposes. (72:123)

### **Ranunculaceae**, see *Aconitum*, *Actaea*,

*Anemone*, *Aquilegia*, *Caltha*, *Cimicifuga*, *Clematis*, *Consolida*, *Coptis*, *Delphinium*,

*Hepatica*, *Hydrastis*, *Myosurus*, *Pulsatilla*, *Ranunculus*, *Thalictrum*, *Trautvetteria*, *Trollius*, *Xanthorrhiza*

### **Ranunculus**, Ranunculaceae

#### **Ranunculus abortivus** L., Littleleaf Buttercup

- **Drug**—**Cherokee** *Dermatological Aid* Used as poultice for abscesses. *Oral Aid* Infusion used for “thrash.” *Sedative* Juice used as sedative. *Throat Aid* Infusion gargled for sore throat. (80:31) **Iroquois** *Anticonvulsive* Compound decoction of roots taken by men and women for epilepsy. (87:325) *Antidote* Decoction of smashed root taken to counteract poison. (87:320) *Blood Medicine* Compound infusion of roots taken for blood disease which caused fainting. (87:325) *Emetic* Decoction of root taken to vomit for stomach trouble and to counteract poison. (87:320) Compound decoction of plants taken to vomit after taking epilepsy medicine. *Eye Medicine* Decoction of roots and leaves used as wash for sore eyes from catching cold. (87:325) *Gastrointestinal Aid* Decoction of smashed root taken for stomach trouble. *Misc. Disease Remedy* Decoction of roots taken to dry up smallpox. (87:320) *Orthopedic Aid* Compound decoction of roots taken for stiff muscles. *Psychological Aid* Compound decoction of plants taken for “loss of senses during menses.” (87:325) *Snakebite Remedy* Decoction of smashed root used as a wash for snakebites. (87:320) *Toothache Remedy* Plant used for sore teeth. (87:325) **Meskwaki** *Hemostat* Root used as a styptic for nosebleeds. (152:239)
- **Food**—**Cherokee** *Vegetable* Leaves cooked and eaten as greens. (80:31)

#### **Ranunculus acris** L., Tall Buttercup

- **Drug**—**Abnaki** *Analgesic* Used for headaches. (144:155) Flowers and leaves smashed and sniffed for headaches. (144:166) **Bella Coola** *Dermatological Aid* Poultice of pounded roots applied to boils. (as *R. acris* 150:57) **Cherokee** *Dermatological Aid* Used as poultice for abscesses. *Oral Aid* Infusion used for “thrash.” *Sedative* Juice used as sedative. *Throat Aid* Infusion gargled for sore throat. (80:31) **Iroquois** *Analgesic* Poultice of smashed plant applied to chest for pains. *Antidiarrheal* Infusion of roots taken for diarrhea. *Antihemorrhagic* Poultice of smashed plant applied to chest for colds. (87:320) *Blood Medicine* Poultice of plant fragments with another plant applied to the skin for excess water in the blood. (141:42) **Micmac** *Analgesic* Leaves used for headaches. (40:60) **Montagnais** *Analgesic* Crushed leaves inhaled for headaches. (156:315)

- **Food**—Cherokee *Vegetable* Leaves cooked and eaten as greens. (80:31)

***Ranunculus aquatilis*** L., Whitewater Crowfoot

- **Food**—Gosiute *Unspecified* Entire plant boiled and eaten. (39:379)

***Ranunculus bulbosus*** L., St. Anthony's Turnip

- **Drug**—Iroquois *Toothache Remedy* Root placed in cavity to break up the tooth for a toothache. *Venereal Aid* Decoction of plants taken for venereal disease. (87:320)

***Ranunculus californicus*** Benth., California Buttercup

- **Food**—Miwok *Unspecified* Dried, stored, parched, pulverized seeds used for food. (12:155) **Neeshenam** *Bread & Cake* Seeds parched, ground into flour and used to make bread. *Porridge* Seeds parched, ground into flour, and used to make mush. *Staple* Seeds parched, ground into flour, and used for food. (129:377)
- **Other**—Pomo, Kashaya *Toys & Games* Flower put under the chin by a child, if yellow was reflected, the child would like butter. (72:30)

***Ranunculus californicus* var. *cuneatus*** Greene, California Buttercup

- **Other**—Karak *Musical Instrument* Stems split and sucked on to make sounds. (6:49)

***Ranunculus cymbalaria*** Pursh, Alkali Buttercup

- **Drug**—Kawaiisu *Dermatological Aid* Mashed leaves and flowers applied as salve to sores and cuts. (206:58) **Navajo** *Venereal Aid* Plant used for syphilis. (55:96) **Navajo, Kayenta** *Panacea* Plant used as a life medicine. (205:22)
- **Food**—Iroquois *Unspecified* Mature leaves used for food. (142:87)

***Ranunculus cymbalaria* var. *saximontanus*** Fern., Rocky Mountain Buttercup

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Plant used as an emetic in various ceremonies. (191:27)

***Ranunculus flabellaris*** Raf., Yellow Water Buttercup

- **Drug**—Meskwaki *Cold Remedy* Flower stigmas used as snuff to induce sneezing for catarrh and head colds. *Respiratory Aid* Compound containing leaves used as a snuff for catarrh and head cold. (as *R. delphinifolius* 152:239, 240)

***Ranunculus glaberrimus*** Hook., Sagebrush Buttercup

- **Drug**—Okanagan-Colville *Analgesic* Poultice of mashed and dampened whole plants applied to pains of any kind. *Antirheumatic (External)* Poultice of mashed and dampened whole plants applied to sore joints. *Poison* Dried or mashed, fresh whole plant placed on a piece of meat as poisoned bait for coyotes. (188:119) **Thompson** *Dermatological Aid* Poultice of mashed flowers used for warts. (187:249) *Poison* Flowers or whole plant rubbed on arrow points as a poison. (164:512) Plant considered a skin irritant. (187:249)

***Ranunculus hispidus* var. *nitidus*** (Chapman) T. Duncan, Bristly Buttercup

- **Drug**—Iroquois *Toothache Remedy* Root placed in cavity to break up the tooth for a toothache. (as *R. septentrionalis* 87:320)

***Ranunculus inamoenus*** Greene, Graceful Buttercup

- **Drug**—Navajo, Ramah *Hunting Medicine* Cold infusion of plant tak-

en and used as a lotion to protect hunters from animals. (191:27)

- **Food**—Acoma *Unspecified* Roots used for food. (32:48) **Keres, Western** *Unspecified* Roots considered good to eat. (171:65) **Laguna** *Unspecified* Roots used for food. (32:48)

***Ranunculus lapponicus*** L., Lapland Buttercup

- **Drug**—Eskimo, Kuskokwagmiut *Dietary Aid* Plants soaked and eaten by starving persons before eating other food. (122:23)
- **Food**—Eskimo, Inuktitut *Soup* Leaves and stems stewed with duck and fresh fish. (202:183)

***Ranunculus occidentalis*** Nutt., Western Buttercup

- **Drug**—Aleut *Poison* Flower juice slipped into food to cause a person "to waste away to nothing." (8:428)
- **Other**—Shasta *Season Indicator* Plant blooms indicated the coming of the summer salmon. (93:310)

***Ranunculus occidentalis* var. *eisenii*** (Kellogg) Gray, Western Buttercup

- **Food**—Mendocino Indian *Staple* Smooth, flat, and orbicular seeds used alone or mixed with other seeds to make pinole. (as *R. eisenii* 41:347) **Pomo** *Staple* Seeds used to make pinoles. (11:87)

***Ranunculus occidentalis* var. *rattanii*** Gray, Western Buttercup

- **Food**—Pomo *Staple* Seeds used to make pinoles. (11:87)

***Ranunculus pallasii*** Schlecht., Pallas's Buttercup

- **Drug**—Eskimo, Inupiat *Poison* Young shoots poisonous, if not boiled. (98:143)
- **Food**—Alaska Native *Unspecified* Young, tender shoots cooked and eaten. (85:53) **Eskimo, Alaska** *Unspecified* Shoots and stems boiled until tender and eaten with seal oil. (1:35) Rootstocks used as food, but became bitter after leaves developed. (4:715)

***Ranunculus pensylvanicus*** L. f., Pennsylvania Buttercup

- **Drug**—Ojibwa *Hunting Medicine* Seeds used as a hunting medicine. (153:383) Seeds smoked in hunting medicine to lure buck deer near enough for a shot with bow and arrow. (153:431) **Potawatomi** *Dermatological Aid* Plant used as an astringent medicine for unspecified diseases. (154:75)
- **Dye**—Ojibwa *Red* Entire plant boiled to yield a red coloring dye and bur oak added to set the color. (153:426) **Potawatomi** *Yellow* Entire plant boiled with rushes or flags to dye them yellow; used to make mats or baskets. (154:123)

***Ranunculus recurvatus*** Poir., Blisterwort

- **Drug**—Cherokee *Dermatological Aid* Used as poultice for abscesses. *Oral Aid* Infusion used for "thrash." *Sedative* Juice used as sedative. *Throat Aid* Infusion gargled for sore throat. (80:31) **Iroquois** *Laxative* Compound decoction of roots taken to loosen bowels and for venereal disease. *Toothache Remedy* Decoction of roots taken to "kill the worms" in sore and hollow teeth. *Venereal Aid* Decoction of roots taken for venereal disease. (87:320)
- **Food**—Cherokee *Vegetable* Leaves cooked and eaten as greens. (80:31)
- **Dye**—Menominee *Red* Boiled root used for red coloring. (151:79)

***Ranunculus repens*** L., Creeping Buttercup

- **Drug**—Hesquiat *Analgesic* and *Antirheumatic (External)* Poultice of

chewed leaves used for muscular aches and rheumatic pains. *Dermatological Aid* Poultice of chewed leaves used for sores. *Gynecological Aid* Three or four leaves eaten to help heal the insides after childbirth. *Other* Chewed leaves swallowed for general sickness. (185:71) **Thompson** *Poison* Plant considered a skin irritant. (187:249)

- **Food**—**Hesquiat** *Forage* Eaten by cows and deer. (185:71)

### **Ranunculus reptans** L., Buttercup

- **Food**—**Makah** *Unspecified* Roots cooked on hot rocks, dipped in whale or seal oil, and eaten with dried salmon eggs. **Quileute** *Unspecified* Roots cooked on hot rocks, dipped in whale or seal oil, and eaten with dried salmon eggs. (79:29)

### **Ranunculus sceleratus** L., Celeryleaf Buttercup

- **Drug**—**Thompson** *Poison* Flowers or whole plant rubbed on arrow points as a poison. (164:512)

### **Ranunculus sceleratus var. multifidus** Nutt., Blister Buttercup

- **Drug**—**Keres, Western** *Poison* Plant considered poisonous. (as *R. eremogones* 171:65)

### **Ranunculus sp.**, Buttercup

- **Drug**—**Costanoan** *Dermatological Aid* Decoction of plant used as a wash for wounds. (21:8) **Iroquois** *Veterinary Aid* Compound decoction given to cows when bearing a calf and womb comes out. (87:324) **Thompson** *Poison* Flowers of several species used as a poison on arrowheads. (164:512) *Tuberculosis Remedy* Poultice of mashed root mixed with pitch applied to the chest for tuberculosis. (187:249)
- **Food**—**Cherokee** *Unspecified* Leaves boiled and used for food. (204:253) **Skokomish** *Winter Use Food* Roots eaten as winter food. (79:30)

### **Ranunculus uncinatus** D. Don ex G. Don, Hooked Buttercup

- **Drug**—**Thompson** *Antirheumatic (External)* Decoction of plant used as a wash or steam for stiff, sore muscles, and rheumatism. (as *R. douglasii* 164:473) *Disinfectant* Decoction of whole plant used as a body wash for purification in sweat house. (as *R. douglasii* 164:505) *Herbal Steam* Decoction of plant used as a sweat bath wash for stiff, sore muscles and bones. Decoction of plant used as a wash or steam for stiff, sore muscles and rheumatism. *Orthopedic Aid* Decoction of plant used as a sweat bath wash for stiff, sore muscles and bones. (as *R. douglasii* 164:473) *Poison* Plant considered a skin irritant. (187:249)

## **Raphanus**, Brassicaceae

### **Raphanus sativus** L., Wild Radish

- **Food**—**Costanoan** *Unspecified* Raw stems used for food. (as *R. sativum* 21:252)

## **Ratibida**, Asteraceae

### **Ratibida columnifera** (Nutt.) Woot. & Standl., Upright Prairie Coneflower

- **Drug**—**Cheyenne** *Analgesic* Decoction of leaves and stems used as wash for pain. *Dermatological Aid* Decoction of leaves and stems used for poison ivy rash. *Snakebite Remedy* Decoction of leaves and stems used as wash to draw out poison of a rattlesnake's bite. (as *R. columnaris* 76:188) Leaves and stems boiled and solution used for rattlesnake bites. (83:23) **Dakota** *Analgesic* Flowers used for chest pains and other ailments. *Dermatological Aid* Flowers used for wounds. *Panacea* Flowers used for chest pains and other ailments.

(as *R. columnaris* 69:368) **Keres, Western** *Gynecological Aid* Crushed leaves rubbed on mothers' breast to wean child. ## **Rhamnus**, Rhamnaceae

### **Rhamnus alnifolia** L'Hér., Alderleaf Buckthorn

- **Drug**—**Iroquois** *Antidote* Infusion of plant taken and poultice applied to swelling caused by poison. *Blood Medicine* Infusion of bark given to children as a blood purifier. *Cathartic* Infusion of bark given to children as a physic. *Dermatological Aid* Infusion of plant taken and poultice applied to swelling caused by poison. *Orthopedic Aid* Infusion given and used as a wash for bad backs. *Pediatric Aid* Infusion given and used as a wash for peevish children. Infusion of bark given to children as a tonic, physic, and as blood purifier. *Sedative* Infusion given and used as a wash for peevish children. *Tonic* Infusion of bark given to children as a tonic. *Venereal Aid* Compound decoction of roots taken for gonorrhoea. (87:381) **Meskwaki** *Laxative* Decoction of bark taken for constipation. (152:241) **Potawatomi** *Cathartic* Inner bark used as a physic. (154:75)

### **Rhamnus cathartica** L., Common Buckthorn

- **Drug**—**Cherokee** *Cathartic* Bark and fruit used as a cathartic. *Der-*

*matological Aid* Decoction of bark used for itch. *Eye Medicine* Used as wash for sore and inflamed eyes. (80:27)

***Rhamnus crocea*** Nutt., Redberry Buckthorn

- **Food**—Cahuilla *Fruit* Berries used for food. (15:131)

***Rhamnus crocea* ssp. *ilicifolia*** (Kellogg) C. B. Wolf, Hollyleaf Redberry

- **Drug**—Kawaiisu *Analgesic* Decoction of roots and bark taken for internal soreness. Plant smoke inhaled for headaches. *Antirheumatic (Internal)* Plant smoke inhaled for rheumatism. *Blood Medicine* Infusion of roots and bark taken as a blood medicine. Plant used by women for blood shortages. *Cold Remedy* Decoction of roots and bark taken for colds. *Cough Medicine* Decoction of roots and bark taken for coughs. *Dermatological Aid* Plant used for boils and carbuncles. *Diuretic* Decoction of roots used to increase urination. *Gastrointestinal Aid* Plant used for stomach disorders and the spleen. *Gynecological Aid* Plant used by women for blood shortages. *Kidney Aid* Plant used for the kidneys. *Laxative* Decoction of roots used to loosen the bowels and as a laxative. *Liver Aid* Plant used for the liver and spleen. *Stimulant* Infusion of roots and bark taken when “one feels tired and run down.” *Venereal Aid* Decoction of roots used for gonorrhea. (as *R. ilicifolia* 206:58) **Yuki** *Unspecified* Inner bark used as a “good medicine.” (as *R. ilicifolia* 41:369)
- **Other**—Wintoon *Lighting* Wood used for torches because it burned a long time. (as *R. crocea ilicifolia* 117:276)

***Rhamnus* sp.**, Buckthorn

- **Drug**—Costanoan (Olhonean) *Cathartic* Infusion of bark taken as a cathartic. (as *Rhamus* 117:374) **Iroquois** *Dermatological Aid* Poultice of ripe berry jelly applied to sores. (as *Rhamus* 117:374) *Emetic* Bark used as an emetic. (87:380)
- **Food**—Cahuilla *Preserves* Plant boiled into a jelly-like substance and eaten. (15:131)

***Rheum***, Polygonaceae

***Rheum rhabarbarum*** L., Garden Rhubarb

- **Food**—Haisla & Hanaksiala *Unspecified* Petioles used for food. (43:259) **Kitasoo** *Pie & Pudding* Stalks used to make pie. *Preserves* Stalks used to make jam. (43:340)

***Rheum rhaponticum*** L., False Rhubarb

- **Drug**—Cherokee *Antidiarrheal* Used for dysentery. *Cathartic* Used as a mild purgative. *Dermatological Aid* Used as an astringent. *Laxative* Infusion of plant taken for constipation. *Poison* Leaves considered poisonous. *Strengtheners* Used for strengthening. (80:52)
- **Food**—Cherokee *Unspecified* Species used for food. (80:52)

***Rhexia***, Melastomataceae

***Rhexia virginica*** L., Handsome Harry

- **Drug**—Micmac *Throat Aid* Leaves and stems used as a throat cleanser. (40:60) **Montagnais** *Throat Aid* “Brew” from leaves and stems used for cleaning the throat. (156:314)
- **Food**—Montagnais *Beverage* Leaves and stems used to make a sour drink. (156:314)

***Rhizomnium***, Mniaceae, moss

***Rhizomnium glabrescens*** (Kindb.) Koponen

- **Drug**—Bella Coola *Antirheumatic (External)* Poultice of crushed “leaves” applied to infections and swellings. *Blood Medicine* Poultice of “leaves” used for blood blisters. *Breast Treatment* Poultice of “leaves” used for breast abscesses in women. *Dermatological Aid* Poultice of “leaves” used for boils. (184:196)

**Rhizophoraceae**, see *Rhizophora*

***Rhizophora***, Rhizophoraceae

***Rhizophora mangle*** L., American Mangrove

- **Dye**—Seminole *Unspecified* Plant used as a buckskin dye. (169:468)

***Rhododendron***, Ericaceae

***Rhododendron albiflorum*** Hook., Cascade Azalea

- **Drug**—Okanagon *Dermatological Aid* Poultice of powdered, burned wood and grease applied to swellings. *Gastrointestinal Aid* Decoction of bark taken as a stomach remedy. (125:40) **Skokomish** *Cold Remedy* Decoction of buds taken for colds. *Dermatological Aid* Poultice of chewed buds applied to cuts. *Gastrointestinal Aid* Chewed buds eaten for an ulcerated stomach. *Throat Aid* Decoction of buds taken for sore throats. (79:43) **Thompson** *Dermatological Aid* Poultice of powdered, burned wood and grease applied to swellings. (125:40) Wood ash mixed with grease and used as a salve for swellings. (164:460) *Gastrointestinal Aid* Decoction of bark taken as a stomach remedy. (125:40)
- **Food**—Okanagan-Colville *Beverage* Leaves used to make tea. (188:102) **Thompson** *Preservative* Branches used in bottoms of berry baskets and on top of the berries to keep them fresh. (187:216)
- **Other**—Thompson *Incense & Fragrance* Used as a scent. (164:502)

***Rhododendron calendulaceum*** (Michx.) Torr., Flame Azalea

- **Drug**—Cherokee *Antirheumatic (External)* Peeled and boiled twig rubbed on rheumatism. *Gynecological Aid* Infusion taken by women. (80:24)
- **Food**—Cherokee *Unspecified* Fungus “apple” formed on the stem eaten to appease thirst. (80:24)
- **Other**—Cherokee *Decorations* Flowers used to decorate the home. (80:24)

***Rhododendron macrophyllum*** D. Don ex G. Don, Pacific Rhododendron

- **Drug**—Karak *Ceremonial Medicine* Plant used in the luck-getting ceremony of the sweat house. (as *R. californicum* 148:387)
- **Other**—Pomo *Decorations* Flowers used for dance wreaths. (as *R. californicum* 66:14) **Pomo, Kashaya** *Ceremonial Items* Flowers used in dance wreaths at the Strawberry Festival. (72:98)

***Rhododendron maximum*** L., Great Laurel

- **Drug**—Cherokee *Analgesic* Compound used as liniment for pains and poultice of leaves used for headache. (80:52) Infusion of leaves put on scratches made over the location of the pain. (177:49) *Antirheumatic (Internal)* Compound decoction of leaf taken for rheumatism. *Ceremonial Medicine* “Throw clumps of leaves into a fire and dance around it to bring cold weather.” *Heart Medicine* Infusion of leaf taken for heart trouble. (80:52) *Other* Decoction of leaves rubbed into scratches made on legs as preliminary treatment. (177:49)

- **Other**—Cherokee *Cooking Tools* Wood used to make spoons. *Decorations* Wood used to carve. *Smoking Tools* Wood used to make pipes. (80:52)

**Rhododendron occidentale** (Torr. & Gray ex Torr.) Gray, Western Azalea

- **Other**—Pomo *Decorations* Flowers used for dance wreaths. (66:14) Pomo, Kashaya *Ceremonial Items* Flowers used in dance wreaths at the Strawberry Festival. (72:21)

**Rhododendron occidentale** (Torr. & Gray ex Torr.) Gray  
**var. occidentale**, Western Azalea

- **Drug**—Modesse *Antidote* Used for poisoning. (as *Azalea occidentalis* 117:224)

**Rhodymeniaceae**, see *Rhodymenia*

**Rhodymenia**, Rhodymeniaceae, alga

**Rhodymenia palmata** (L.) Greville, Dulse

- **Food**—Alaska Native *Dried Food* Leaves air dried and stored for winter use. *Soup* Leaves air dried and added to soups and fish head stews. *Unspecified* Leaves eaten fresh or singed on a hot stove or griddle. (85:143)

**Rhus**, Anacardiaceae

**Rhus aromatica** Ait., Fragrant Sumac

- **Drug**—Natchez *Dermatological Aid* Poultice of root applied to boils. (172:667) Ojibwa *Ceremonial Medicine* Bark and berries used in medicine ceremonies. *Unspecified* Bark and berries used in medicinal purposes. (135:234) Ojibwa, South *Antidiarrheal* Compound decoction of root taken for diarrhea. (91:201)
- **Food**—Midoo *Fruit* Berries pounded and eaten. (117:312)
- **Other**—Lakota *Smoke Plant* Leaves mixed with tobacco and smoked. (139:32)

**Rhus copallinum** L., Flameleaf Sumac

- **Drug**—Cherokee *Antiemetic* Red berries eaten for vomiting. *Burn Dressing* Infusion poured over sunburn blisters. (80:57) *Dermatological Aid* Decoction of bark used as a wash for blisters. (177:36) *Gynecological Aid* Infusion of bark taken “to make human milk flow abundantly.” *Urinary Aid* Red berries chewed for bed-wetting. (80:57) Creek *Antidiarrheal* Decoction of root taken for dysentery. (172:659) Decoction of roots taken for dysentery. (177:36) Delaware *Dermatological Aid* Poultice of roots applied to sores and skin eruptions. Infusion of leaves used to cleanse and purify skin eruptions. *Oral Aid* Berries used to make mouthwash. *Venereal Aid* Infusion of roots used for venereal disease. (176:32) Delaware, Oklahoma *Ceremonial Medicine* Leaves and root used in “ceremonial tobacco mixture.” *Dermatological Aid* Poultice of roots or infusion of leaves used for sores and skin eruptions. *Oral Aid* Berries used to make mouthwash. *Venereal Aid* Infusion of root taken for venereal disease. (175:26, 78) Koasati *Orthopedic Aid* and *Pediatric Aid* Decoction of leaves used as a bath and given to babies to make them walk. (177:36) Ojibwa *Ceremonial Medicine* Bark and berries used in medicine ceremonies. *Unspecified* Bark and berries used for medicinal purposes. (135:234)
- **Food**—Cherokee *Fruit* Berries used for food. (80:57)

(106:35) **Ojibwa Dried Food** Fruit dried for future use. *Fruit* Fruit eaten fresh. (as *R. gracile* 135:236) **Omaha Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (68:326) Berries used for food in season. **Ponca Fruit** Berries used for food in season. **Winnebago Fruit** Berries used for food in season. (as *Grossularia missouriensis* 70:84)
- **Other—Omaha Toys & Games** Unripe, acidulous berries used in children's games. The children were divided into two teams and each child was given a portion of the unripe berries which were to be eaten without making a grimace. The team less successful in completing the task had to forfeit to the winners and execute some performances for their amusement such as hopping backwards on one foot. (as *Grossularia missouriensis* 70:84)

### **Ribes montigenum** McClatchie, Gooseberry Currant

- **Food—Cahuilla Fruit** Berries eaten fresh. (15:133)
- **Other—Keres, Western Unspecified** Plant known and named but no use was specified. (171:66)

### **Ribes nevadense** Kellogg, Sierran Currant

- **Food—Miwok Fruit** Raw berries used for food. (12:162) **Tolowa Spice** Leaves placed between seaweed patties to keep them from sticking and flavors the patties. (6:50)

### **Ribes oxyacanthoides** L., Canadian Gooseberry

- **Drug—Cree, Woodlands Gynecological Aid** Decoction of stems and wild black currant stems used for sickness after childbirth. (109:55) **Ojibwa Unspecified** Root and bark used for medicinal purposes. (135:236)
- **Food—Blackfoot Fruit** Berries eaten fresh. *Soup* Berries added to soups. (86:104) **Cree, Woodlands Fruit** Berries eaten fresh. (109:55) **Gosiute Dried Food** Berries dried and stored for winter use. *Fruit* Berries used for food. (39:379) **Ojibwa Dried Food** Fruit dried for future use. *Fruit* Fruit eaten fresh. (135:236) Berries gathered for fresh food. Berries often cooked with sweet corn. *Preserves* Berries used to make preserves for winter use. (153:410)
- **Other—Blackfoot Toys & Games** Berries used by children to play a game. The children sat in a circle and began counting to 10, each child counting one number around the circle. The tenth child would take five berries and eat them at once, trying his best not to show a bitter face. If he was successful, the child next to him would do the same and this would continue until one grimaced at the sour taste. He was then struck on the thigh with a knuckle punch, thus giving the name "punctured berry" to the plant. The child who never grimaced won all the others' berry supplies. (86:122)

### **Ribes oxyacanthoides ssp. irriguum** (Dougl.) Sinnott, Idaho Gooseberry

- **Drug—Thompson Gastrointestinal Aid and Tonic** Decoction of root taken as a tonic for the stomach. (as *Grossularia irrigua* 164:472)
- **Food—Okanagan-Colville Bread & Cake** Berries, alone or mixed with other berries, used to make cakes. *Forage* Berries eaten by bears. *Fruit* Berries eaten green. *Winter Use Food* Berries canned for future use. (as *R. irriguum* 188:107) **Sanpoil & Nespelem Fruit** Berries eaten fresh. (as *R. irriguum* 131:102) **Thompson Beverage** Berries used to make juice. (as *R. irriguum* 187:227) *Fruit* Berries mainly eaten fresh. (as *Grossularia irrigua* 164:489) Berries eaten fresh or cooked. *Pie & Pudding* Berries used to make pies. (as *R. irriguum* 187:227)
- **Other—Okanagan-Colville Cash Crop** Berries dried, mixed with bitterroot, and sold to the Thompson. (as *R. irriguum* 188:107)

### **Ribes oxyacanthoides** L. **ssp. oxyacanthoides**, Canadian Gooseberry

- **Drug—Chippewa Analgesic and Gynecological Aid** Compound decoction of berry taken for back pain and "female weakness." (as *Grossularia oxyacanthoides* 53:356)

### **Ribes oxyacanthoides ssp. setosum** (Lindl.) Sinnott, Inland Gooseberry

- **Food—Cheyenne Fruit** Fruit eaten raw or cooked. *Winter Use Food* Dried fruit formed into little cakes and used for winter food. (as *Grossularia setosa* 76:175) **Montana Indian Fruit** Fruit highly esteemed as an article of diet. (as *R. setosum* 19:21)

### **Ribes pinetorum** Greene, Orange Gooseberry

- **Drug—Navajo, Ramah Ceremonial Medicine** Leaves used as emetics in various ceremonies. *Emetic* Leaves used as a ceremonial emetic. (191:30)
- **Food—Apache, Chiricahua & Mescalero Bread & Cake** Fruit ground and compressed into cakes for winter use. (33:44) **Navajo, Ramah Fruit** Berries used for food. (191:30)

- **Other**—Navajo, Ramah *Hunting & Fishing Item* Stems used to make arrow shafts. Thorns used to make arrow points. (191:30)

***Ribes quercetorum*** Greene, Rock Gooseberry

- **Food**—Kawaiisu *Dried Food* Berries dried in the shade for about a week and stored. *Fruit* Berries eaten fresh. *Preserves* Fresh berries boiled into a jelly. (206:59) **Tubatulabal** *Fruit* Berries used extensively for food. (193:15)

***Ribes roezlii*** Regel, Sierran Gooseberry

- **Food**—Atsugewi *Fruit* Fresh berries used for food. (61:139) **Karok** *Fruit* Fresh berries used for food. (6:50) **Kawaiisu** *Dried Food* Berries dried in the shade for about a week and stored. *Fruit* Berries eaten fresh. *Preserves* Fresh berries boiled into a jelly. (206:59) **Miwok** *Fruit* Pulverized, raw berries used for food. (12:162) **Yurok** *Fruit* Fresh berries used for food. (6:50)

***Ribes rotundifolium*** Michx., Appalachian Gooseberry

- **Drug**—Cherokee *Antidiarrheal* Infusion of bark taken “to check bowels.” *Misc. Disease Remedy* Infusion taken for measles. *Sedative* Infusion of leaf taken for nerves. (80:36) **Iroquois** *Other* Compound decoction of bark taken for fortune-telling or divination. (87:345)

- **Drug**—Ojibwa *Dermatological Aid* Poultice of bark applied to sores as a styptic and healing aid. *Hemostat* Bark used as a styptic and poultice for sores. (153:388)

***Salix fuscescens*** Anderss., Alaska Bog Willow

- **Drug**—Eskimo, Western *Eye Medicine* Cotton used by old men in inner corner of eye for watery sore eye. (108:60) *Oral Aid* Leaves chewed for mouth sores. (108:17, 60)

***Salix gooddingii*** Ball, Goodding's Willow

- **Drug**—Pima *Febri-fuge* Decoction of leaves and bark taken as a febri-fuge. (47:108)
- **Food**—Cocopa & Yuma *Unspecified* Honeydew obtained from cut branches. (37:218) Mohave *Beverage* Young shoots used to make tea. (37:201) Pima *Unspecified* Catkins eaten raw. (47:108) Yuma *Beverage* Leaves and twig bark steeped to make tea. *Unspecified* Bark eaten raw or cooked in hot ashes. (37:201)
- **Fiber**—Cahuilla *Furniture* Wood used to make cradleboards. (15:135) Pima *Basketry* Used as foundations for outdoor storage baskets. *Mats, Rugs & Bedding* Bark used as padding in baby cradles. (47:108) *Sewing Material* Small, green branches split in two, peeled, twisted, dried, and used for sewing coiled baskets. (47:116)
- **Other**—Pima *Containers* Used to make bird cages. *Hunting & Fishing Item* Used to make bows. (47:108)

***Salix hindsiana*** Benth., Hinds's Willow

- **Drug**—Pomo, Kashaya *Throat Aid* Decoction of bark or leaves used for sore throats. Infusion of leaves used for laryngitis. (72:118)
- **Food**—Kawaiisu *Candy* Sticky, sweet substance relished like candy and honey. (206:61)
- **Fiber**—Costanoan *Basketry* Shoots used in basketry. (21:249) Karok *Basketry* Stems used for the main ribs in baskets as an alternate for *Corylus* stems. (6:53) Twigs used to make the warp sticks for twined baskets. Roots scraped, dried, and used on the inside of the overlaid twined baskets. (as *S. sessilifolia* var. *hindsiana* 148:381) Kawaiisu *Building Material* Used in house construction. Used as the poles for the winter house and sweat house construction. (206:61) Pomo, Kashaya *Basketry* Root used in twined baskets. Switches used for twined baskets and foundations in coiled baskets. *Building Material* Large branches used as the framework for thatched summer homes, sudatories, and other construction. (72:118) Tolowa *Basketry* Roots used in basketry. (6:53) Ukiyah *Basketry* Roots used to make baskets. (as *S. argyrophylla* 41:331)
- **Other**—Costanoan *Fuel* Twigs used for kindling. (21:249) Kawaiisu *Containers* Twigs with leaves used as “wrappers” to hold buckeye nuts and fish. *Hunting & Fishing Item* Used to make bows and arrows for hunting small game and birds. *Smoking Tools* Twigs with leaves used as “wrappers” to hold tobacco. *Tools* Used to make long needles for sewing tule into mats. *Toys & Games* Split stems used to make clappers and whistles. (206:61) Tubatulabal *Cooking Tools* Used to wrap up fish before roasting. (193:11) Ukiyah *Hunting & Fishing Item* Straight wands made into arrows. Large limbs used to make weirs for catching fish. (as *S. argyrophylla* 41:331)

***Salix hookeriana*** Barratt ex Hook., Dune Willow

- **Drug**—Makah *Antidote* Leaves used as an antidote for shellfish poisoning. *Dermatological Aid* Infusion of roots used as a hair wash. (79:27) Quileute *Sports Medicine* Roots rubbed on bodies of athletes in training. (as *S. piperi* 79:26)
- **Food**—Quileute *Spice* Leaves put in cooking baskets and used as a food flavoring. (as *S. piperi* 79:26)
- **Fiber**—Makah *Basketry* Used to make baskets. Nitinaht *Mats, Rugs & Bedding* Soft roots used as a towel to rub down after bathing. (as *S. piperi* 67:242) Quileute *Basketry* Bark used extensively for basketry. (as *S. piperi* 79:26)

- **Other**—**Quileute Hunting & Fishing Item** Young trees used for fish weir poles. (as *S. piperi* 79:26)

***Salix humilis*** Marsh., Prairie Willow

- **Drug**—**Cherokee Antidiarrheal** Infusion of bark taken to check bowels. **Dermatological Aid** Decoction or infusion of bark used as a wash to make the hair grow. Bark used as a poultice. **Febrifuge** Infusion taken for fever. **Respiratory Aid** Root chewed by ballplayers “for wind.” **Throat Aid** Infusion of inner bark taken for lost voice and root chewed for hoarseness. **Tonic** Bark used as a tonic. (80:61) **Delaware Venereal Aid** Infusion of roots and other plants used for scrofula and venereal disease. (176:34) **Delaware, Oklahoma Tuberculosis Remedy** Compound infusion of plant used for scrofula. **Venereal Aid** Compound infusion of plant used for venereal disease. (175:29, 78) **Menominee Antidiarrheal** Root taken from shrub bearing insect galls and used for dysentery and diarrhea. **Gastrointestinal Aid** Root taken only from shrub bearing insect galls and used for spasmodic colic. (151:52) **Tonic** Decoction of stalk taken as a general tonic. (54:133) **Meskwaki Antidiarrheal** Infusion of root used for flux and enemas. **Hemostat** Leaves used for stopping a hemorrhage. **Laxative** Infusion of root used for flux and giving enemas. (152:245)

***Salix humilis* var. *tristis*** (Ait.) Griggs, Prairie Willow

- **Drug**—**Catawba Gynecological Aid** Plant used for sore nipples. **Oral Aid** and **Pediatric Aid** Infusion of roots used as a wash for children with sore mouths. (as *S. tristis* 177:13) **Delaware Reproductive Aid** Infusion of roots used by women for displacement of the womb. **Venereal Aid** Infusion of plant and roots of other plants used for scrofula and venereal disease. (as *S. tristis* 176:34) **Seminole Analgesic, Antidiarrheal, and Eye Medicine** Infusion of plant taken for sun sickness: eye disease, headache, high fever, and diarrhea. (as *S. tristis* 169:208) **Febrifuge** Infusion of plant taken and rubbed on the body for high fevers. (as *S. tristis* 169:202) Infusion of plant taken for sun sickness: eye disease, headache, high fever, and diarrhea. (as *S. tristis* 169:208) **Hunting Medicine** Infusion of plant used as a hunting medicine to increase hunting luck. (as *S. tristis* 169:371) **Other** Plant used to make a medicine and given to students in medical training. (as *S. tristis* 169:103)

***Salix interior*** Rowlee, Sandbar Willow

- **Drug**—**Iroquois Analgesic** Infusion of stems and other plant parts used for side pains. (141:39) **Thompson Unspecified** Roots used medicinally for unspecified purpose. (164:465)
- **Fiber**—**Chippewa Basketry** Cut, peeled willows dipped in hot water to make them tough and pliable and made into baskets. The best time for weaving willow baskets of various forms and sizes was during the springtime. (as *S. longifolia* 71:126) **Cree, Woodlands Basketry** Stems used to rim birch bark baskets. (109:58) **Gosiute Basketry** Wood used to make baskets, fish weirs, and water jugs. (as *S. longifolia* 39:380) **Omaha Basketry** Peeled stems used in basketry. (70:73) **Ute Basketry** Used in basketry. (as *S. longifolia* 38:36)
- **Dye**—**Potawatomi Red** Willow and some other species of willow used for a scarlet dye. (as *S. longifolia* 154:123)
- **Other**—**Cree, Woodlands Containers** Stems used to make a stopper for a sturgeon skin jar. **Cooking Tools** Stems used to make a fish roasting stick. **Fasteners** Bark used to tie or fasten many things.<sup>72</sup> **Hunting & Fishing Item** Stems used to make bows and arrows. Bark

made into netting and used to catch fish. **Tools** Stems used to make a bead weaving loom. Bark made into netting to clean pitch used in sealing birchbark canoes. **Toys & Games** Branches used to make whistles. (109:58) **Gosiute Containers** Wood used to make baskets and water jugs. **Hunting & Fishing Item** Wood used to make fish weirs. (as *S. longifolia* 39:380) **Thompson Fasteners** Slender and tough stems used as withes. **Stable Gear** Bark used to weave saddle blankets. (as *S. longifolia* 164:498)

***Salix irrorata*** Anderss., Sandbar Willow

- **Fiber**—**Apache, White Mountain Basketry** Withes used to make baskets and water jugs. Withes used to make baskets to be sold. (136:150) Split withes used to make baskets. **Building Material** Split withes used as tepee and wickiup thatching. (136:160) **Tewa Basketry** Used for basketry. (138:49) **Zuni Basketry** Slender switches used to make baskets. **Building Material** Stems formerly used for filling between the house rafters. (166:81)
- **Other**—**Apache, White Mountain Containers** Withes used to make baskets and water jugs. (136:150) **Cooking Tools** Withes tied together and used to stir mush and other foods. **Toys & Games** Wood used to make the poles and hoops for the pole game. Split withes used to make the three dice and throwing sticks for the setdilh game. (136:160) **Keres, Western Ceremonial Items** Branches made into prayer sticks. (171:68) **Zuni Cooking Tools** Eight or 12 willows trimmed at the ends, tied together, and used for stirring fire toasted foods. The willows were used for stirring corn, popcorn, and any other food toasted over a fire. (166:70)

***Salix lasiolepis*** Benth., Arroyo Willow

- **Drug**—**Costanoan Cold Remedy** Infusion of bark or young leaves or decoction of flowers used for colds. (21:21) **Mendocino Indian Antidiarrheal** Infusion of leaves taken for diarrhea. **Dermatological Aid** Decoction of bark used as a wash for the itch. **Diaphoretic** Infusion of bark taken to cause sweating for any disease. **Febrifuge** Infusion of bark taken for chills and fever. **Panacea** Infusion of bark taken to cause sweating for any disease. (41:331) **Mewuk Febrifuge** Decoction of bark used for fevers. **Misc. Disease Remedy** Decoction of bark used for measles. (as *S. dasiolipis* 117:366)
- **Fiber**—**California Indian Cordage** Inner bark used in spring to make rope. (118:60) **Costanoan Basketry** Shoots used in basketry. (21:248) **Kawaiisu Basketry** Stems split for coiled baskets and as weft in twined baskets; unsplit as warps in twined baskets. (206:61) **Mendocino Indian Cordage** Tough, inner fiber formerly used to make rope and garments. **Round Valley Indian Building Material** Branches used as thatching to provide shade around houses. (41:331) **Shoshoni Basketry** Strands used to make baskets. (117:445)
- **Other**—**Mendocino Indian Smoke Plant** Inner bark portions dried, powdered, and used as substitutes for chewing tobacco. **Round Valley Indian Fuel** Wood used for fuel. **Protection** Trees planted in circles and used to protect the dancers from the sun and wind. (41:331)

***Salix lasiolepis*** Benth. var. *lasiolepis*, Tracy Willow

- **Fiber**—**Diegueño Basketry** Branches used to make acorn storage baskets. (84:39)

***Salix lucida*** Muhl., Shining Willow

- **Drug**—**Micmac Hemostat** Bark used for bleeding. **Respiratory Aid**

- Bark used for asthma. (40:61) **Montagnais Analgesic** Infusion of leaves taken and poultice of bark applied for headache. (156:315) **Ojibwa Dermatological Aid** Poultice of bark used for sores and applied to bleeding cuts. *Hemostat* Bark used on bleeding cuts. (153:388) **Penobscot Respiratory Aid** Bark smoked for asthma. (156:309)
- **Other—Montagnais Smoke Plant** Dried bark smoked as a substitute for tobacco. (156:315) **Ojibwa Smoke Plant** Peeled, toasted, and flaked bark used for “kinnikinnick” or smoking mixture. (153:422)

***Salix lucida* ssp. *lasiandra*** (Benth.) E. Murr., Pacific Willow

- **Drug—Bella Coola Antidiarrheal** Cold infusion of charred, pulverized sticks taken for diarrhea. *Dermatological Aid* Folded inner bark inserted in knife cuts and used for incisions. (as *S. lasiandra* 150:53) **Navajo, Ramah Ceremonial Medicine** Decoction of leaves used as ceremonial emetic. *Disinfectant* Painted internode of stem held by baby for “lightning infection.” *Emetic* Decoction of leaves used as ceremonial emetic. *Pediatric Aid* Painted internode of stem held by baby for “lightning infection.” (as *S. lasiandra* 191:22) **Okanagan-Colville Orthopedic Aid** Decoction of branch tips used for soaking the feet and legs for cramps. (as *S. lasiandra* 188:135) **Pomo, Kashaya Cold Remedy** Decoction of leaves used for colds. *Throat Aid* Decoction of leaves used for sore throats. (as *S. lasiandra* 72:118)
- **Fiber—Chehalis Cordage** Inner bark twisted and made into two-ply strings. (as *S. lasiandra* 79:26) **Gosiute Basketry** Wood used to make baskets, fish weirs, and water jugs. (as *S. lasiandra* 39:380) **Navajo, Ramah Building Material** Used for hogan construction. (as *S. lasiandra* 191:22) **Panamint Basketry** Used as the primary basket material. Twigs used to make the withes for the three-rod foundation coils of baskets. (as *S. lasiandra* 105:77) **Pomo, Kashaya Basketry** Branches used as the warp for twined baskets and foundation in coiled baskets. (as *S. lasiandra* 72:118) **Shoshoni Basketry** Used for foundation in baskets. Bark used as thread in baskets. (as *S. lasiandra* 118:7) **Ute Basketry** Used in basketry. (as *S. lasiandra* 38:36)
- **Other—Cowlitz Tools** Wood used to make drills for fire drills. (as *S. lasiandra* 79:26) **Gosiute Containers** Wood used to make baskets and water jugs. *Hunting & Fishing Item* Wood used to make fish weirs. (as *S. lasiandra* 39:380) **Haisla & Hanaksiala Cooking Tools** Branches used to hang drying oolichans (candlefish). *Tools* Wood used to make mallet heads. (as *S. lasiandra* 43:287) **Navajo, Ramah Ceremonial Items** Stem used to make Lightningway hoop. *Tools* Stem used to make loom frames. *Toys & Games* Branches used to make hobby-horses for children. (as *S. lasiandra* 191:22) **Nitinaht Cooking Tools** Wood used to make single-pronged barbecue sticks for roasting salmon. (as *S. lasiandra* 186:127) **Salish, Coast Hunting & Fishing Item** Wood used to make bows. (as *S. lasiandra* 182:88)

***Salix melanopsis*** Nutt., Dusky Willow

- **Drug—Montana Indian Adjuvant and Antirheumatic (External)** Poles used for framework of “sweat tepee” for rheumatism. *Cold Remedy* Poles used for framework of “sweat tepee” for colds. *Febrifuge* Bark used for certain fevers. (as *S. fluviatilis* 19:22)
- **Fiber—Dakota Basketry** Peeled stems used in basketry. (as *S. fluviatilis* 69:361) **Flathead Basketry** Willow made into baskets cemented with gum and used to cook fish. **Mandan Mats, Rugs & Bedding** Leaves woven into mats and used in the sweat tepees. **Montana Indian Cordage** Used extensively for cordage. (as *S. fluviatilis* 19:22)

***Salix myricoides*** Muhl. var. *myricoides*, Bayberry Willow

- **Drug—Iroquois Venereal Aid** Compound used for syphilis with chancres. (as *S. glaucophylloides* 87:294)

***Salix nigra*** Marsh., Black Willow

- **Drug—Cherokee Antidiarrheal** Infusion of bark taken to check bowels. *Dermatological Aid* Decoction or infusion of bark used as a wash to make the hair grow. Bark used as a poultice. *Febrifuge* Infusion taken for fever. *Respiratory Aid* Root chewed by ballplayers “for wind.” *Throat Aid* Infusion of inner bark taken for lost voice and root chewed for hoarseness. *Tonic* Bark used as a tonic. (80:61) **Houma Blood Medicine** Decoction of roots and bark taken for “feebleness” due to thin blood. *Febrifuge* Decoction of roots and bark taken for fever. (158:60) **Iroquois Carminative** Compound decoction taken for stomach gas. *Cough Medicine* Compound decoction taken for coughs. *Throat Aid* Used for mouth and throat abscesses. (87:294) **Koasati Analgesic** Infusion of roots taken for headaches. *Febrifuge* Cold infusion of roots taken for fevers. *Gastrointestinal Aid* Decoction of roots taken for dyspepsia. (177:13) **Micmac Dermatological Aid** Poultice of bruised leaves used on sprains and bruises. Poultice of scraped root and spirits applied to bruises and sprains. *Orthopedic Aid* Poultice of bruised leaves applied to sprains and bruises. Poultice of scraped root and spirits applied to sprains and broken bones. (as *S. vulgare* 156:317)
- **Fiber—Papago Basketry** Twigs split in half lengthwise, sun dried, and used as the foundation of coiled basketry. (34:56) Used for sewing coiled basketry. (34:58) **Other** Twigs used for curved structures in wrapped weaving. (34:53)

***Salix pedicellaris*** Pursh, Bog Willow

- **Drug—Ojibwa Gastrointestinal Aid** Bark used for stomach troubles. (153:388, 389)

***Salix planifolia* ssp. *pulchra*** (Cham.) Argus, Tealeaf Willow

- **Drug—Eskimo, Alaska Anesthetic** Bark and leaves chewed to numb the mouth and throat. *Eye Medicine* “Cotton” used to dry “moist eyes.” *Oral Aid* Bark and leaves chewed for mouth sores. (1:34) **Eskimo, Inupiat Oral Aid** Leaves made the mouth smell good. (as *S. pulchra* 98:10) **Eskimo, Nunivak Analgesic** Infusion of leaves and bark used as an analgesic. *Oral Aid* Plant chewed for sore mouth. (as *S. pulchra* 149:325) **Eskimo, Western Oral Aid** Leaves chewed for mouth sores. (as *S. pulchra* 108:17)
- **Food—Alaska Native Dietary Aid** Shoots probably the first spring source of vitamin C. Leaves used as one of the richest sources of vitamin C. *Unspecified* Shoots peeled and eaten raw. Young, tender leaves mixed with seal oil and eaten raw. *Winter Use Food* Leaves mixed with seal oil and stored in barrels, kegs, or seal pokes for winter use. (as *S. pulchra* 85:61) **Eskimo, Alaska Unspecified** Young leaves gathered in the spring and eaten raw with seal oil. (1:34) Cambium layer scraped off and eaten. *Vegetable* Young shoots and catkins used fresh or in seal oil. (as *S. pulchra* 4:715) *Winter Use Food* Leaves soaked in seal oil and saved for future use. (1:34) Young shoots and catkins stored in oil for winter use. (as *S. pulchra* 4:715) **Eskimo, Arctic Unspecified** Leaves used for food. (as *S. pulchra* 128:29) **Eskimo, Inupiat Beverage** Dried leaves used to make tea. *Soup* Dried leaves used in soups. *Vegetable* Leaves used as greens in fresh salads. *Winter Use*

*Food* Leaves preserved in seal or fish oil or canned for winter use and eaten with meat or fish. (as *S. pulchra* 98:10)

***Salix prolixa*** Anderss., Mackenzie's Willow

- **Fiber**—Montana Indian *Sporting Equipment* Younger stems used extensively for making walking sticks. (as *S. mackenziana* 19:23)
- **Other**—Blackfoot *Ceremonial Items* Wood used to make ceremonial sticks. (as *S. mackenzieana* 97:32)

***Salix pyrifolia*** Anderss., Balsam Willow

- **Drug**—Ojibwa *Gastrointestinal Aid* Plant used for stomach troubles. *Sedative* Plant used for trembling. *Stimulant* Plant used for fainting. *Unspecified* Bark used for medicinal purposes. (as *S. balsamifera* 135:243)

***Salix rotundifolia*** Trautv., Least Willow

- **Drug**—Eskimo, Nunivak *Analgesic* Infusion of leaves and bark used as an analgesic. *Oral Aid* Plant chewed for sore mouth. (149:325)

***Salix scouleriana*** Barratt ex Hook., Scouler's Willow

- **Drug**—Bella Coola *Dermatological Aid* Folded inner bark inserted in knife cuts and used for incisions. (150:54) Okanagan-Colville *Dermatological Aid* Poultice of inner cambium and powdered tree fungus applied to serious cuts. *Gynecological Aid* Shredded inner bark used for sanitary napkins to "heal a woman's insides." Decoction of branches taken by women for several months after childbirth to increase the blood flow. *Hemostat* Poultice of bark and sap applied as a wad to bleeding wounds. *Orthopedic Aid* Poultice of damp inner bark applied to the skin over a broken bone. *Pediatric Aid* Decoction of branches taken by women after childbirth and helped the baby through the breast milk. (188:136) Sanpoil *Antidiarrheal* Decoction of roots taken to counteract diarrhea. (131:220)
- **Food**—Shuswap *Preservative* Wood used to smoke salmon. (123:68)
- **Fiber**—Gosiute *Basketry* Wood used to make baskets, fish weirs, and water jugs. (as *S. flavescens* 39:380) Okanagan-Colville *Clothing* Bark twisted into cord and used to make bags and dresses. *Cordage* Branches and bark twisted into strong rope. *Sewing Material* Bark used for sewing birch bark onto basket frames. (188:136) Tolowa *Basketry* Roots used to make baskets. (6:53) Wet'suwet'en *Cordage* Bark strips used for cord or rope. (73:154) Yurok *Basketry* Roots used to make baskets. (6:53)
- **Other**—Gosiute *Containers* Wood used to make baskets and water jugs. *Hunting & Fishing Item* Wood used to make fish weirs. (as *S. flavescens* 39:380) Haisla *Toys & Games* Whips used to lash opponents in the Haisla "hoop and pole game." Players attempted to spear a rolling hoop. If a player succeeded in spearing the hoop, he was lashed by his opponent with a willow whip. If, however, the spearman retrieved his spear, the hoop, and the whip, his team would get the next throw of the hoop. Haisla & Hanaksiala *Cleaning Agent* Leaves used to wipe slime from fish. *Containers* Sticks used to string discoidal basaltic seaweed cooking stones when not being used. *Cooking Tools* Leaves layered with salmon and western hemlock boughs to allow the fish to drain. Branches used as barbecue racks for salmon. *Hunting & Fishing Item* Withes used as fish stringers to transport fish downstream. *Walking Sticks* Wood used to make walking sticks or canes. (43:288) Karok *Containers* Roots used to make the fire hearth. *Tools* Roots used to make the fire drill. (148:381)

Okanagan-Colville *Containers* Bark twisted into cord and used to make bags and dresses. *Fasteners* Bark twisted into cord and used to tie things together. (188:136) Shuswap *Ceremonial Items* Inner bark headbands used by pubescent girls and young men, in ritual isolation and training. *Fasteners* Tough, bark strips poked through the roots of dog tooth violet, to hang them for drying. (123:68) Wet'suwet'en *Cooking Tools* Bark strips used for hanging fish. *Hunting & Fishing Item* Bark strips used for twining into nets or fish line. (73:154)

***Salix sericea*** Marsh., Silky Willow

- **Drug**—Iroquois *Oral Aid* Used for mouth and throat abscesses. (87:294)

***Salix sessilifolia*** Nutt., Northwest Sandbar Willow

- **Fiber**—Pomo *Basketry* Used in basketry as foundation rods. (118:6)

***Salix sitchensis*** Sanson ex Bong., Sitka Willow

- **Drug**—Eskimo, Alaska *Dermatological Aid* Poultice of pounded bark applied to wounds. (149:331) Karok *Ceremonial Medicine* Roots and branches used in the World Renewal ceremony fire. (148:381) Klallam *Tonic* Decoction of peeled bark taken as a tonic. (79:26) Okanagan-Colville *Gastrointestinal Aid* Infusion of stalks taken for stomach ailments. (188:136) Skagit *Tonic* Decoction of peeled bark taken as a tonic. (79:26)
- **Fiber**—Clallam *Cordage* Bark made into string. (57:203) Hoh *Basketry* Limbs split, pared, scraped, and used to make baskets. (137:60) Klallam *Cordage* Bark peeled, twisted, and used to make string. (79:26) Quileute *Basketry* Limbs split, pared, scraped, and used to make baskets. (137:60) Quinault *Cordage* Bark used to make lines for tump-lines and slings. Snohomish *Cordage* Bark used to make a two-ply string. (79:26) Tolowa *Basketry* Roots used to make baskets. Yurok *Basketry* Roots used to make baskets. (6:53)
- **Other**—Haisla *Toys & Games* Whips used to lash opponents in the "hoop and pole game." Branches used as barbecue racks for salmon. *Hunting & Fishing Item* Withes used as fish stringers to transport fish downstream. *Walking Sticks* Wood used to make walking sticks or canes. (43:288) Quinault *Hunting & Fishing Item* Bark used to make the harpoon lines in sea lion hunting gear. (79:26)

***Salix sitchensis* var. *coulteri*** Jepson, Sitka Willow

- **Fiber**—Karok *Basketry* Roots used to make baskets. (148:381)
- **Other**—Karok *Containers* Roots used as a fire hearth. *Cooking Tools* Twigs used by fishermen to string salmon steaks while drying. *Protection* Branch tied to the bow of a boat as a charm against danger when crossing the river in high water. *Tools* Roots used as a fire drill. Whole plant beaten with a stick to make the wind blow on hot days. (148:381) Pomo *Fuel* Used for firewood. (66:12)

***Salix* sp.**, Willow

- **Drug**—Abnaki *Eye Medicine* Used for sore eyes. (144:155) Decoction of bark and bark from two other plants used for eye pain. (144:170) Alabama *Febrifuge* Cold infusion of roots taken or used as a bath for fevers. (177:12) Blackfoot *Antidiarrheal* Infusion of plant used to counteract the laxative effect of the chokecherry infusion. *Antihem-*

- orrhagic* Infusion of fresh, crushed roots used for internal hemorrhage. (86:68) *Dermatological Aid* Dried, crushed roots soaked in water and grease used as a tonic for dandruff and straightening the hair. (86:124) Infusion of roots mixed with kidney fat and applied to head sores. (86:78) *Eye Medicine* Infusion of roots used for bloodshot or troublesome eyes. (86:82) *Gastrointestinal Aid* Infusion of fresh, crushed roots used for “waist troubles.” (86:68) *Throat Aid* Infusion of roots swallowed for throat constrictions. (86:74) *Veterinary Aid* Chewed roots spat into the horse’s eye for cloudiness and bloodshot. (86:90) **Cheyenne** *Dermatological Aid* Bark peeled and used for cuts. (82:67) **Chickasaw** *Analgesic* Roots used for headache or poultice of branches applied for severe headache. *Antidiarrheal* Decoction of roots taken for dysentery. *Hemostat* Roots used for nosebleed. (177:12) **Chippewa** *Antidiarrheal* Root taken alone, or in compounds for dysentery. *Gastrointestinal Aid* Compound decoction of inner bark taken for indigestion. (53:342) **Comanche** *Eye Medicine* Stem ashes used for sore eyes. (29:524) **Costanoan** *Dermatological Aid* Infusion of leaves used as a hair rinse. Leaves used as a paste rubbed into the scalp for falling hair. (21:21) **Cree** *Venereal Aid* Decoction of bark used as a wash for syphilitic sores. (16:495) **Creek** *Antiemetic* Compound infusion of root taken for fever with nausea and vomiting. *Antirheumatic (External)* Compound infusion of root used as a wash for rheumatism. (172:655) *Antirheumatic (Internal)* Plant used for rheumatism. (177:12) *Dermatological Aid* Compound infusion of root used as a wash for swellings. (172:655) *Emetic* Plant used as an emetic. (177:12) *Febrifuge* Compound infusion of root taken for fever with nausea and vomiting. (172:655) Roots used for fevers. (177:12) *Gastrointestinal Aid* Compound infusion of root taken for biliousness. (172:655) Roots used for biliousness. (177:12) *Kidney Aid* Compound infusion of root taken for dropsy. (172:655) Decoction of roots taken or used as a bath for dropsy. (177:12) *Misc. Disease Remedy* Compound infusion of root taken for malaria. (172:655) Roots used for malaria. (177:12) *Other* Compound infusion of root taken for dropsy and “deer sickness.” *Venereal Aid* Compound infusion of root taken for “the clap.” (172:655) **Crow** *Analgesic* Bark chewed for headache. *Emetic* Stem tips formerly chewed as an emetic. *Oral Aid* Bark chewed for tooth hygiene. (82:67) **Eskimo, Inuktitut** *Dermatological Aid* Poultice of wetted leaves applied to bee stings. (202:192) **Eskimo, Western** *Antihemorrhagic* Decoction of leaves or bark taken for lung hemorrhage. (108:24) *Oral Aid* Decoction of inner bark used as a wash for mouth sores. (108:5, 6) *Preventive Medicine* Leaves eaten in early summer to protect against disease. (108:43) *Pulmonary Aid* Decoction of leaves or bark taken for lung hemorrhage. (108:24) Strong decoction of leaves or bark taken regularly for lung hemorrhage. (108:5, 6) *Throat Aid* Decoction of inner and outer bark gargled for sore throat. (108:23) Decoction of bark gargled for sore throat. (108:5, 6) **Flathead** *Dermatological Aid* Bark chewed and used for cuts. *Eye Medicine* Leaves and young stem tips used to make an eyewash. (82:67) **Iroquois** *Emetic* Compound decoction taken to vomit during initial stages of consumption. *Tuberculosis Remedy* Compound decoction taken to vomit during initial stages of consumption. (87:294) **Isleta** *Dermatological Aid* Decoction of leaves used as a skin bath. (100:42) **Kiowa** *Antirheumatic (External)* Infusion of leaves used as a wash for rheumatic aches. *Pulmonary Aid* Infusion of leaves used as a wash for pneumonia. *Toothache Remedy* Bark chewed for tooth-
- aches. (192:19) **Klallam** *Throat Aid* Decoction of bark taken for sore throats. *Tuberculosis Remedy* Decoction of bark taken for tuberculosis. (79:26) **Makah** *Unspecified* Used for medicine. (67:242) **Nez Perce** *Emetic* Formerly used as an emetic. *Gastrointestinal Aid* Twigs used to “clean out” the insides. (82:67) **Ojibwa** *Respiratory Aid* Heated poultice of inner bark applied to the throat for diphtheria. (5:2302) **Okanagan-Colville** *Dermatological Aid* Poultice of inner cambium and powdered tree fungus applied to serious cuts. *Gynecological Aid* Shredded inner bark used for sanitary napkins to “heal a woman’s insides.” Decoction of branches taken by women for several months after childbirth to increase the blood flow. *Hemostat* Poultice of bark and sap applied as a wad to bleeding wounds. *Orthopedic Aid* Poultice of damp inner bark applied to the skin over a broken bone. *Pediatric Aid* Decoction of branches taken by women after childbirth and helped the baby through the breast milk. (188:136) **Omaha** *Ceremonial Medicine* Plant used for the ritual of mourning. (68:322) Stems thrust in gashes on forearms of grieving young men at funeral ceremony. (70:73, 74) **Paiute** *Antidiarrheal* Burned root taken as pills or infusion of burned stems taken for diarrhea. *Blood Medicine* Decoction of root taken as a blood purifier. *Cathartic* Decoction of woody stems taken as a physic. *Dermatological Aid* Powder from dried, pulverized roots applied to syphilitic or purulent sores. Powder of dried stem bark applied to infant’s navel. *Diuretic* Infusion of burned stems taken by adults and children for “failure to urinate.” *Laxative* Infusion of young twigs with salt taken as a laxative. *Misc. Disease Remedy* Infusion of burned stems taken by adults and children for intestinal influenza. *Orthopedic Aid* Compound decoction of roots taken for lumbago. *Pediatric Aid* Infusion of burned stems given to children for diarrhea, taken by adults and children for “failure to urinate,” and taken by adults and children for intestinal influenza. Powder of dried, stem bark applied to infant’s navel. *Tonic* Decoction of root bark taken as a spring tonic. *Venereal Aid* Several species used in various ways for venereal disease. (180:133–136) **Penobscot** *Cold Remedy* Infusion of bark taken in large quantities for colds. (156:309) **Shoshoni** *Analgesic* Decoction of root taken for stomachaches. *Dermatological Aid* Decoction of leaves and twigs rubbed into the scalp for dandruff. *Gastrointestinal Aid* Decoction of root taken for stomachaches. *Toothache Remedy* Poultice of mashed roots applied to the gums for toothaches. *Venereal Aid* Several species used in various ways for venereal disease. (180:133–136) **Sikani** *Dermatological Aid* Young willow chewed and saliva applied to sores. (150:54) **Tanana, Upper** *Oral Aid* Fresh leaves chewed for mouth sores. (102:7) **Thompson** *Analgesic* Decoction of plant used as a wash for pain and swelling, especially of feet. *Dermatological Aid* Decoction of plant used as a wash for pain and swelling, especially of feet. (164:471) Leaves used in shoes or moccasins as padding for tired or sore feet. Decoction of bark used as a wash for sores. (187:279) *Orthopedic Aid* Decoction of plant used as a wash for pain and swelling, especially of feet. (164:471) Branches used as splints for broken limbs and rubbed on compound fractures. Decoction of bark used for bathing broken bones. Poultice of boiled bark used for a period of time for broken bones. *Toothache Remedy* Bark chewed for toothache. (187:279)
- **Food—Blackfoot** *Unspecified* Scraped cambium eaten especially by children. Peeled galls used for food. (86:105) **Eskimo, Inuktitut** *Soup* Leaves added to stews and soups. *Unspecified* Leaves eaten raw in

spring. (202:189) Early leaves used for food. (202:192) **Tanana, Upper Unspecified** Sap and leaves eaten raw. Young sprouts and sap used for food. (102:7) **Thompson Forage** Plant enjoyed by moose. (187:279)

- **Fiber—Abnaki Basketry** Used to make baskets and whistles. (144:166) **Blackfoot Building Material** Boughs used to make sweat lodge frames. (86:122) Wands, sharpened at both ends, used to construct the dome shape of the sweat lodge. Branches used to construct the many different sweat lodges. The Horn Society sweat lodge was constructed of 14 willows. The Holy Woman's sweat lodge in the Sun Dance was made of 100 willows, which had been gathered by members of the Pigeon Society. The Motokiks Society (a woman's society) constructed its lodge with 12 willows. Medicine Pipes had 14. The used frame of a sweat lodge was left on the prairie. (86:17) Sticks used as lodgpoles for small hunting tepees. *Canoe Material* Wood used to make the circular frames for bull boats. (97:32) *Furniture* Boughs used to make backrest slats. (86:122) Sticks used to make backrests, part of the furniture of the tepee. (97:32) **Costanoan Building Material** Wood made into poles used as basic element of house construction. *Cordage* Bark braided into rope. (21:249) **Dakota Building Material** Poles used to sustain the thatch of the earth lodges and to form the frame of the bath lodges. (70:73) **Hopi Building Material** Used in roof construction. (200:72) **Hualapai Basketry** Used as the frame in coiled basketry. *Building Material* Used to make shelters. (195:29) **Isleta Basketry** Twigs used to make baskets. *Building Material* Branches and leaves used for thatching houses. (100:42) **Kiowa Building Material** Branches used in construction of summer shelters. (192:19) **Klamath Snow Gear** Wood used to make frames for snowshoes. (45:94) **Maidu Basketry** Stalks used to make the coiled foundations and coarse twine in the manufacture of baskets. (173:71) **Montana Indian Basketry** Wood used to make baskets. *Cordage* Wood used to make ropes. *Furniture* Wood used to make backrests for tepees and cradleboards. *Mats, Rugs & Bedding* Wood used to make mattresses for tepees. *Snow Gear* Wood used to make snowshoes. (82:67) **Navajo Basketry** Branches used to make permanent carrying baskets. *Cordage* Branches used to make a braided strap worn across the forehead to support a water bottle. *Furniture* Branches used to make cradle canopies. (55:38) **Okanagan-Colville Clothing** Bark twisted into cord and used to make bags and dresses. (188:136) **Omaha Building Material** Young poles used for the framework of the vapor bath lodges. (68:324) **Paiute Basketry** Strong, flexible willows used to make baskets. *Building Material* Willow used to construct house and sweat house frames. Willow used to make sheds for wind drying fish. *Cordage* Woven willow bark made into string and used to make salmon traps. *Furniture* Willow used to make baby baskets and cradleboards. (111:61) **Pawnee Building Material** Poles used to sustain the thatch of the earth lodges and to form the frame of the bath lodges. (70:73) **Pomo Basketry** Stem used as foundation material in basketry. (9:138) **Tanana, Upper Basketry** Stems used to make baskets for storing dried fish and meat. Stems used to make rims for birch bark baskets. Stems used to make basket rims. *Building Material* Stems used to make the semispherical frame of the traditional style sweat house. Stems and branches used as the siding on a smokehouse. Stems used in the construction of various shelters. *Cordage* Split, outer bark twisted into twine. Stems used to make line. Bark used to make line. Stems used to make fish hangers and

lashings. *Snow Gear* Stems and spruce bark used to make a temporary sled for transporting meat across ice. (102:7) **Thompson Basketry** Split withes used for weaving baskets. *Building Material* Branches with the bark and leaves twisted and used for tying and binding in construction.<sup>74</sup> Split withes heated and twisted to make cabling for suspension bridges in "the old days." *Canoe Material* Dry logs lashed together to make rafts. Branches used in making fish traps, weirs, and rafts. (187:279) *Clothing* Bark of dead trees used to make capes and aprons. (164:499) *Cordage* Long shoots made into rope and used in lashing together fish drying racks and fish weir stakes. Softened stems twisted to make rope and used to lash together fish drying racks. Split withes used to make string and rope. *Furniture* Branches used to make cradle hoops. (187:279) *Mats, Rugs & Bedding* Bark of dead trees used to make mats and fiber blankets. (164:499) **Winnebago Building Material** Poles used to sustain the thatch of the earth lodges and to form the frame of the bath lodges. (70:73) **Yuki Basketry** Used as basket material. (103:423)

- **Dye—Micmac Black** Roots used to make a black dye. **Montagnais Black** Roots used to make a black dye. (156:317)
- **Other—Abnaki Containers** Used to make containers. (144:156) *Toys & Games* Used to make baskets and whistles. (144:166) **Blackfoot Containers** Wood used to make the top and bottom hoop of buckets, basins, and other containers. *Fasteners* Wood used to make tepee pegs and pins. (97:32) *Incense & Fragrance* Gall pitch used for incense during the annual ceremonies of the Motokiks and Kaispa Societies. (86:17) *Toys & Games* Branch with loosened bark used as a buzzing whistle. (86:122) **Chippewa Smoke Plant** Used for smoking and general utility. (53:378) **Eskimo, Inuktitut Cooking Tools** Small branches used to string fish for drying. *Fuel* Wood used for firewood. (202:189) *Smoke Plant* Dried leaves added to tobacco in place of shelf fungus. (202:182) *Snuff* Ground galls used for snuff. (202:192) **Hopi Ceremonial Items** Used to make prayer sticks. Occasionally used in ceremonies. (200:72) **Hualapai Fuel** Used for firewood. (195:29) **Keresan Ceremonial Items** Used extensively in making prayer sticks. (198:564) **Kiowa Protection** Leafy stems used to make wreaths worn by the women and children as sunshades during long walks. (192:19) **Kwakiutl, Southern Hunting & Fishing Item** Bark used to make fishing line and reef nets. (183:292) **Luiseno Hunting & Fishing Item** Plant used to make bows. (155:233) **Micmac Smoke Plant** Leaves used as tobacco. (159:258) **Montana Indian Cooking Tools** Wood used to make meat racks. *Fasteners* Wood used to make pins and pegs for tepees. *Hunting & Fishing Item* Wood used to make fish and fox traps. *Musical Instrument* Wood used to make drums. *Stable Gear* Wood used to make stirrups and hoops for catching horses. *Tools* Wood used to make scrapers for removing hair from hides. *Toys & Games* Wood used to make gambling wheels. *Walking Sticks* Wood used to make walking sticks. (82:67) **Navajo Ceremonial Items** Sticks used for the Night Chant and Mountain Chant. For the first day's ceremony of the Mountain Chant, willow sticks were gathered to make the emblem of the concentration of the four winds. A square was made with these sticks, leaving the ends projecting at the corners. The square was then placed over the invalid's head. For the rite of charcoal painting in the Night chant, a quantity of willow sticks, together with several pieces of pine bark, were burned to charcoal. The ashes of two different kinds of weeds, together with the ashes of two small feath-

ers, were then added to the fat of a goat, mountain sheep, or other animal, made into balls, and daubed on the usual parts of the body. Branches used to make prayer sticks, prayer stick foundations, and plumed wands. Peeled sticks made into the talisman used in the Night Chant. *Containers* Branches used to make or sew water bottles. *Hunting & Fishing Item* Branches hardened by pounding with a stone and used to make lances. Branches used to make arrow shafts. *Tools* Branches made into hoops and used inside the buckskin sack of a bellows. Branches made into heddle sticks and used in weaving. (55:38) **Nitinaht** *Ceremonial Items* Soft roots used by young boys and girls as pre-scrubbers in the first stage of adulthood training. (186:127) **Okanagan-Colville** *Containers* Bark twisted into cord and used to make bags and dresses. (188:136) **Omaha** *Ceremonial Items* Stems used in funeral customs. The burial ceremony occurred 4 days after the death. The young men and friends of the family of the deceased accompanied the funeral party to the grave where they made parallel gashes in the skin of the forearm and thrust the willow stems into the gashes. The stems were bathed with the young men's blood who attested their sympathy to the living and sang the tribal Song to the Spirit. The song was one of cheer to the departing spirit and one of sympathy to the bereaved. (70:73) **Paiute** *Containers* Willow covered with pine pitch used to make water jugs. *Cooking Tools* Willows used to make drinking vessels and cooking vessels. Willow woven into a tray and used for winnowing seeds. *Hunting & Fishing Item* Willow used to build fish weirs. *Musical Instrument* Sticks wrapped formerly with buckskin but now with cloth and used for drum sticks. (111:61) **Tanana, Upper** *Containers* Stems used to make fish hangers, basket rims, lashing, and in the construction of various shelters. *Fasteners* Stems used to fasten spruce poles into a fence for capturing caribou. *Fuel* Wood used for firewood and smoking fish. *Hunting & Fishing Item* Split, outer bark twisted into twine and used to make a dip net. *Protection* Leafless stems or branches waved in the air to scare wolves away. Wolves were said to dislike the noise this made and would leave the area. (102:7) **Tewa** *Ceremonial Items* Twigs, one for every household in the village, used in December ceremonies. (138:48) **Thompson** *Containers* Bark of dead trees used to make capes and aprons. (164:499) Peeled, cleaned bark braided and woven together with Indian hemp fiber to make storage bags. *Fasteners* Softened stems twisted to make rope and used to lash together fish drying racks. Long shoots made into ropes and used for lashing together fish drying racks and fish weir stakes. Branches with the bark and leaves twisted and used for tying and binding in construction.<sup>74</sup> *Hunting & Fishing Item* Branches used in making fish traps, weirs, and rafts. (187:279)

***Salix washingtonia***, American Willow

• **Drug**—**Mahuna** *Blood Medicine* Infusion of pounded leaves taken as a blood tonic. (140:32)

## ***Salsola***, Chenopodiaceae

***Salsola australis*** R. Br., Prickly Russian Thistle

• **Drug**—**Navajo** *Dermatological Aid* Poultice of chewed plants applied to ant, bee, and wasp stings. (as *S. kali* var. *tragus* 55:44) **Navajo, Ramah** *Dermatological Aid* Infusion of plant ashes used internally and externally for smallpox. *Misc. Disease Remedy* Infusion of plant

ashes taken and used externally for smallpox and influenza. (as *S. pestifer* 191:25)

- **Food**—**Havasupai** *Forage* Young plants eaten by horses. (as *S. kali* 197:218) **Navajo** *Unspecified* Roasted seeds used for food. (as *S. kali* var. *tenuifolia* 90:155) Sprouts boiled and eaten with butter or small pieces of mutton fat. *Vegetable* Very young, raw sprouts chopped into salads. (as *S. kali* 110:27) **Navajo, Ramah** *Fodder* Young plants used for sheep and horse feed. (as *S. pestifer* 191:25)
- **Other**—**Keres, Western** *Unspecified* Plant known and named but no use was specified. (as *S. pestifer* 171:68)

## ***Salvia***, Lamiaceae

***Salvia apiana*** Jepson, White Sage

- **Drug**—**Cahuilla** *Cold Remedy* Leaves eaten, smoked, and used in the sweat house for colds. *Dermatological Aid* Crushed leaves and water used as a hair shampoo, dye, and hair straightener. Poultice of fresh, crushed leaves applied before retiring to the armpits for body odors. *Eye Medicine* Seeds used as eye cleansers. *Hunting Medicine* Leaves used to prevent bad luck if a menstruating woman accidentally touched hunting equipment. (15:136) **Diegueño** *Blood Medicine* Infusion of leaves taken as a tonic for the blood. (88:219) *Cold Remedy* Decoction of leaves taken for colds. (84:39) *Cough Medicine* Infusion of leaves taken as a cough medicine. (88:219) *Misc. Disease Remedy* Leaves burned in hot coals to fumigate the house after a case of sickness such as measles. *Other* Decoction of leaves taken for a serious case of poison oak that "has entered the blood." (84:39) **Mahuna** *Gynecological Aid* Infusion of roots taken to heal internally and remove particles of afterbirth. (as *Ramona polystachya* 140:14)
- **Food**—**Cahuilla** *Spice* Leaves used as flavoring for mush. *Staple* Parched seeds ground into a flour and used to make mush. (15:136) **Diegueño** *Porridge* Seeds mixed with wheat or wild oats, toasted, ground fine, and eaten as a dry cereal. *Unspecified* Young stalks eaten raw. (84:39) **Luiseno** *Unspecified* Ripe stem tops peeled and eaten uncooked. Seeds eaten for food. (as *Ramona polystachya* 155:229)
- **Other**—**Cahuilla** *Hunting & Fishing Item* Fresh, crushed leaves applied to armpits by hunters to eliminate body odors and detection from game. (15:136)

***Salvia carduacea*** Benth., Thistle Sage

- **Food**—**Cahuilla** *Porridge* Parched seeds ground into flour, mixed with other seeds, and used to make mush. (15:136) **Diegueño** *Spice* Seeds added to wheat to improve the flavor. (84:41) **Luiseno** *Unspecified* Seeds used for food. (155:229) **Tubatulabal** *Unspecified* Seeds used extensively for food. (193:15)

***Salvia columbariae*** Benth., Chia

- **Drug**—**Cahuilla** *Disinfectant* Poultice of seed mush applied to infections. *Eye Medicine* Seeds used to cleanse the eyes or remove foreign matter from the eyes. (15:136) **Costanoan** *Eye Medicine* Gelatinous seeds placed in the eye to remove foreign objects. *Febrifuge* Infusion of seeds taken for fevers. (21:16) **Diegueño** *Strengtheners* Seeds kept in the mouth and chewed during long journeys on foot, to give strength. (84:41) **Kawaiisu** *Eye Medicine* Seeds placed in the eye for irritation and inflammation. (206:62) **Mahuna** *Eye Medicine* Seeds placed under the eyelids while sleeping to remove sand particles. (140:54)

- **Food**—**Cahuilla Beverage** Seeds used to make a beverage. *Dietary Aid* Seeds used to render water palatable by removing the alkalies. *Staple* Parched seeds ground into flour and used to make cakes or mush. (15:136) **Costanoan Staple** Seeds used for pinole. (21:253) **Diegueño Spice** Seeds added to wheat to improve the flavor. (84:41) **Kawaiisu Beverage** Seeds parched, pounded, mixed with water, and used as a beverage. (206:62) **Luiseño Unspecified** Seeds used for food. (155:229) **Mahuna Porridge** Seeds winnowed, ground into a fine meal, and made into porridge. (140:54) **Mohave Beverage** Seeds ground and mixed with water. *Staple* Seeds used to make pinole. (37:187) **Paiute Porridge** Seeds used to make mush. (167:243) **Papago Beverage** Seeds steeped and used as tea-like drinks for refreshment. (34:27) **Pima Beverage** Seeds made into a popular, mucilaginous beverage. (146:77) **Pima, Gila River Beverage** Seeds used to make a mucilaginous drink. *Porridge* Seeds used to make a mucilaginous mass and eaten. (133:5) *Unspecified* Seeds eaten raw and parched. (133:7) **Pomo Staple** Seeds used to make pinoles. (11:87) Ground seeds used for pinole. (118:28) **Tubatulabal Unspecified** Seeds used extensively for food. (193:15) **Yavapai Unspecified** Species used for food. (65:258)
- **Fiber**—**Mahuna Building Material** Formerly used to cover dwellings. (140:54)

### *Salvia dorrii* (Kellogg) Abrams, Grayball Sage

- **Drug**—**Kawaiisu Analgesic** Decoction of leaves used as a wash for headaches. *Gastrointestinal Aid* Infusion of leaves taken for stomachaches. *Witchcraft Medicine* Plant thrown into the fire to keep away the ghosts. (206:62) **Paiute Pediatric Aid** Infusion of leaves taken by children for colds and sore throat. (as *Ramona incana* 118:38) **Paiute, Northern Analgesic** Decoction of leaves taken and used as a wash for headaches. *Cold Remedy* Decoction of leaves taken for colds. (59:129) *Venereal Aid* Decoction of leaves taken for gonorrhea. (59:125)
- **Other**—**Kawaiisu Protection** Plant thrown on the fire at night to keep away the spirits and ghosts. (206:62)

### *Salvia dorrii* ssp. *dorrii* var. *incana* (Benth.) Strachan, Purple Sage

- **Drug**—**Hopi Anticonvulsive** Smoke blown in face or plant taken in a drink for epilepsy or faintness. (as *S. carnosa* 200:33, 91) *Other* Plant used as a “deer medicine.” *Stimulant* Plant used as a medicine for an epileptic or faint person. (as *S. carnosa* 200:91) **Okanagan-Colville Cold Remedy** Decoction or infusion of leaves used for colds. *Panacea* Decoction or infusion of leaves used for any illness of a general nature. (188:110) **Paiute Analgesic** Decoction of leaf or stem taken, used as a wash, and fumes inhaled for headaches. Decoction of leaf and sometimes stem taken for stomachaches. *Cold Remedy* Compound of dried plant smoked for colds. Compound poultice of crushed leaves applied for chest congestion from colds. Decoction of leaf or stem taken and poultice applied for colds. Infusion or simple or compound decoction of leaf and sometimes stem used for colds. *Cough Medicine* Decoction of leaf or stem taken and poultice applied for coughs. *Ear Medicine* Decoction of leaf used as drops and poultice of leaf and stem used for earaches. *Eye Medicine* Decoction of leaves used as an eyewash. *Febrifuge* Decoction of leaf or stem taken and poultice applied for fever. *Gastrointestinal Aid* Decoction of leaf and sometimes stem taken for stomachaches or indigestion. *Herbal Steam* Decoction of leaf and sometimes stem used as herbal steam

for headaches. *Misc. Disease Remedy* Decoction of leaf and sometimes stem taken for fevers and influenza. *Poultice* Poultice of boiled plant tops applied to swollen leg veins. *Pulmonary Aid* Compound poultice of crushed leaves applied for chest congestion from colds. Decoction of leaves and sometimes stems taken for pneumonia. *Venereal Aid* Decoction of leaf and sometimes stem taken for venereal disease. **Shoshoni Analgesic** Decoction of leaf and sometimes stem taken for stomachaches. *Cold Remedy* Infusion or decoction of leaves, and sometimes stems, taken for colds. *Gastrointestinal Aid* Decoction of leaf and sometimes stem taken for stomachaches or indigestion. *Other* Decoction of plant tops used as a wash for swollen leg veins. *Pediatric Aid* and *Throat Aid* Decoction of leaf or stem given and used as a wash for children’s sore throat. **Washo Cold Remedy** Infusion or decoction of leaves, and sometimes stems, taken for colds. *Respiratory Aid* Dried leaves smoked in a pipe to clear congested nasal passages. (as *S. carnosa* 180:136, 137)

### *Salvia lyrata* L., Lyreleaf Sage

- **Drug**—**Catawba Dermatological Aid** Roots used as a salve for sores. (157:191) Root salve applied to sores. (177:55) **Cherokee Antidiarrheal** Infusion taken to check bowels. *Cold Remedy* Infusion taken for colds. *Cough Medicine* Infusion taken for coughs. *Diaphoretic* Used as a mild diaphoretic. *Gynecological Aid* Taken by weakly females. *Laxative* Infusion taken as a laxative. *Respiratory Aid* Syrup of leaves and honey taken for asthma. *Sedative* Infusion taken for nervous debility. *Stimulant* Taken by persons of phlegmatic habits. (80:53)

### *Salvia mellifera* Greene, Black Sage

- **Drug**—**Costanoan Analgesic** Green leaves chewed for gas pains. Poultice of heated leaves applied to the ear for earache pain. *Carminative* Green leaves chewed for gas pains. *Cough Medicine* Decoction of plant taken for coughs. *Ear Medicine* Poultice of heated leaves applied to the ear for earache pain. *Heart Medicine* Infusion of green leaves taken for heart disorders. *Orthopedic Aid* Decoction of plant used as a bath for paralysis. *Throat Aid* Poultice of heated leaves applied to the neck for sore throats. (21:16) **Mahuna Cough Medicine** Infusion of plant taken for chronic bronchial coughs. *Respiratory Aid* Infusion of plant taken for chronic bronchial coughs. (as *Audibertias stachyoides* 140:19)
- **Food**—**Cahuilla Spice** Leaves and stalks used as a food flavoring. *Staple* Parched seeds ground into a meal. (15:136) **Luiseño Unspecified** Seeds used for food. (as *Ramona stachyoides* 155:229)

### *Salvia officinalis* L., Kitchen Sage

- **Drug**—**Cherokee Antidiarrheal** Infusion taken to check bowels. *Cold Remedy* Infusion taken for colds. *Cough Medicine* Infusion taken for coughs. *Diaphoretic* Used as a mild diaphoretic. *Gynecological Aid* Taken by weakly females. *Laxative* Infusion taken as a laxative. *Respiratory Aid* Syrup of leaves and honey taken for asthma. *Sedative* Infusion taken for nervous debility. *Stimulant* Taken by persons of phlegmatic habits. (80:53) **Mohegan Anthelmintic** “Sage tea” taken as a vermifuge. *Panacea* Fresh leaves chewed to benefit the entire body. (176:75, 132) *Tonic* Green or dried leaves used to make a tonic. (176:132)

### *Salvia* sp., Sage

- **Drug**—**Jemez Kidney Aid** Decoction of plant taken or raw plant eat-

en for kidney troubles. (44:27) **Rappahannock** *Misc. Disease Remedy* Infusion of leaves given frequently to children for measles. (161:33)

## **Sambucus**, Caprifoliaceae

**Sambucus canadensis** L., American Elder

• **Drug**—**Algonquin, Quebec** *Emetic* Infusion of bark scraped upward and used as an emetic. *Laxative* Infusion of bark scraped downward and used as a laxative. (18:236) **Cherokee** *Antirheumatic (Internal)* Infusion of berry used for rheumatism. *Burn Dressing* Salve used for burns. *Cathartic* Used as a cathartic. *Dermatological Aid* Salve used for skin eruptions and infusion taken as tonic for boils. *Diaphoretic* Infusion of flowers taken to “sweat out fever.” *Disinfectant* Leaves used to wash sores to prevent infection. *Diuretic* Used as a diuretic. *Emetic* Used as an emetic. *Kidney Aid* Taken for “dropsy.” *Other* Decoction taken for “summer complaint.” *Pediatric Aid* Given for “light sickness among children” and taken for “dropsy.” (80:33) **Chickasaw** *Analgesic* Infusion of branches applied to head for severe headaches. (177:58) **Chippewa** *Emetic* Infusion of roots taken as an emetic. (71:142) **Choctaw** *Liver Aid* Decoction of seeds and roots taken for liver troubles. **Creek** *Breast Treatment* Poultice of pounded roots applied to swollen breasts. (177:58) *Gynecological Aid* Poultice of pounded root or stalk skin applied to women for swollen breast. - **Food**—**Paiute, Northern** *Dried Food* Berries dried for future use. *Fruit* Berries used for food. *Soup* Berries dried and boiled into a soup. (59:50)

***Sambucus racemosa* ssp. *pubens* var. *arborescens*** (Torr. & Gray) Gray, Pacific Red Elder

- **Drug**—**Cowlitz** *Orthopedic Aid* Poultice of leaves or bark applied to sore joints for the swelling. (as *S. callicarpa* 79:47) **Haisla & Hanaksiala** *Abortifacient* Leaves boiled and used to shorten pregnancy. *Gastrointestinal Aid* Berries cooked and eaten for stomach problems. *Reproductive Aid* Leaves boiled and used in aiding childbirth. **Hanaksiala** *Analgesic* Poultice of cooked shoots applied for pain. Cooked shoots put in bath water and used as a soak for pain. *Antirheumatic (External)* Poultice of cooked shoots applied to sore, arthritic areas. Cooked shoots put in bath water and used as a soak for sore, arthritic areas. *Dermatological Aid* Root slivers inserted into boil eruptions. (43:229) **Hoh** *Cold Remedy* Infusion of roots or bark used for colds. *Cough Medicine* Infusion of roots or bark used for coughs. *Gynecological Aid* Infusion of roots or bark used by women during confinement. (as *S. callicarpa* 137:69) **Makah** *Dermatological Aid* Poultice of pounded leaves applied to an abscess or boil. (as *S. callicarpa* 79:47) **Nitinaht** *Cathartic* Infusion of bark and roots taken by boys and girls as a purgative to cleanse the system. *Psychological Aid* Bark used with black twinberry bark for nervous breakdowns. (186:100) **Quileute** *Cold Remedy* Infusion of roots or bark used for colds. *Cough Medicine* Infusion of roots or bark used for coughs. *Gynecological Aid* Infusion of roots or bark used by women during confinement. (as *S. callicarpa* 137:69) **Quinault** *Gynecological Aid* Decoction of bark applied to breast after childbirth to start milk flow. **Squaxin** *Blood Medicine* and *Disinfectant* Infusion of leaves used as a wash on area infected with blood poisoning. (as *S. callicarpa* 79:47)
- **Food**—**Chehalis** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. **Cowlitz** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. **Green River Group** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. (as *S. callicarpa* 79:47) **Haisla** *Fruit* Berries used extensively, especially to mix with and extend other berries. **Haisla & Hanaksiala** *Beverage* Berries used to make wine. *Dried Food* Berries dried for future use. *Winter Use Food* Berries formerly an important winter food.

**Hanaksiala** *Fruit* Berries mixed with blueberries, Pacific crabapples, and oolichan (candlefish) grease and eaten. (43:229) **Hoh** *Fruit* Berries pit baked and used for food. *Sauce & Relish* Fruits used to make a sauce. *Winter Use Food* Berries cooked, wrapped in skunk cabbage leaves, and preserved for winter use. (as *S. callicarpa* 137:69) **Klallam** *Fruit* Berries used for food. (as *S. callicarpa* 78:197) *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. **Makah** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. (as *S. callicarpa* 79:47) **Nitinaht** *Fruit* Berries formerly used for food. *Preserves* Berries pounded, dried, soaked in water until jam-like, mixed with sugar, and used for food. (186:100) **Oweekeno** *Dried Food* Berries dried for storage. *Preserves* Berries used to make jam. (43:90) **Quileute** *Fruit* Berries pit baked and used for food. *Sauce & Relish* Fruits used to make a sauce. (as *S. callicarpa* 137:69) *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. (as *S. callicarpa* 79:47) Berries cooked, wrapped in skunk cabbage leaves, and preserved for winter use. (as *S. callicarpa* 137:69) **Quinault** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. **Skagit** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. (as *S. callicarpa* 79:47) **Skagit, Upper** *Dried Food* Berries steamed, pulped, and dried for winter use. (as *S. callicarpa* 179:38) *Fruit* Fruit eaten fresh. (as *S. callicarpa* 179:37) **Skokomish** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. **Snomish** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. **Squaxin** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. **Swinomish** *Winter Use Food* Berries steamed on rocks, cooled, and eaten in the winter. (as *S. callicarpa* 79:47) **Yurok** *Fruit* Fresh berries used for food. (as *S. callicarpa* 6:53)

- **Other—Haisla & Hanaksiala** *Cooking Tools* Leaves used to whip soapberries. *Hunting & Fishing Item* Wood used to make points for oolichan (candlefish) and squirrel spears. (43:229) **Nitinaht** *Sacred Items* Pithy branches hollowed out and used to make ceremonial and sacred wolf whistles. *Toys & Games* Used to make children's whistles and "pea shooters." (186:100) **Yurok** *Containers* Leaves used to pack sturgeon eggs while cooking. (as *S. callicarpa* 6:53)

***Sambucus racemosa* ssp. *pubens* var. *leucocarpa*** (Torr. & Gray) Cronq., European Red Elderberry

- **Drug—Mahuna** *Misc. Disease Remedy* Blossoms used for measles. (as *S. pubens* 140:10)
- **Food—Mahuna** *Fruit* Berries eaten mainly to quench the thirst. (as *S. pubens* 140:70)

***Sambucus racemosa* ssp. *pubens* var. *melanocarpa*** (Gray) McMinn, Black Elderberry

- **Drug—Paiute** *Antidiarrheal* Dried ripe berries eaten or decoction of root taken for diarrhea. *Cold Remedy* Decoction of flowers taken for colds. *Cough Medicine* Decoction of flowers taken for coughs. *Dermatological Aid* Poultice of boiled, mashed root applied to cuts and wounds. Poultice of leaves applied to bruises. *Gynecological Aid* Poultice of boiled, mashed root applied to caked breasts. *Hemostat* Poultice of bruised leaves applied to bleeding wounds. *Pediatric Aid* and *Tonic* Decoction of flowers given to children as a spring tonic. **Shoshoni** *Antidiarrheal* Decoction of root taken for dysentery. *Blood Medicine* Decoction of root taken as a blood tonic. *Cold Remedy* De-

coction of blossoms taken for colds. *Cough Medicine* Decoction of blossoms taken for coughs. *Tuberculosis Remedy* Decoction of blossoms taken for tuberculosis. (as *S. melanocarpa* 180:137, 138)

***Sambucus racemosa* ssp. *pubens* var. *microbotrys*** (Rydb.) Kearney & Peebles, European Red Elderberry

- **Food—Apache** *Fruit* Fruits eaten fresh or cooked. (as *S. microbotrys* 32:50) **Apache, Chiricahua & Mescalero** *Preserves* Fruit cooked with a sweet substance, strained, and eaten as jelly. (as *S. microbotrys* 33:46)

***Sambucus* sp.**, Elderberry

- **Drug—Iroquois** *Dermatological Aid* Poultice of crushed leaves and other leaves applied to blue swellings. (141:61)
- **Food—Coeur d'Alene** *Fruit* Berries eaten fresh. (178:89) **Kiowa** *Fruit* Berries used for food. (192:52) **Okanagon** *Staple* Berries used as a principal food. (178:238) **Poliklah** *Fruit* Berries used for food. (117:173) **Spokane** *Fruit* Berries used for food. (178:343)
- **Other—Iroquois** *Tools* Stems made into the shuttle used for weaving. (142:99)

***Sambucus tridentata*** DC., Antelope Brush

- **Drug—Paiute** *Emetic* Infusion of leaves taken as an emetic. *Laxative* Infusion of leaves taken as a laxative. (167:317)

***Sanguinaria***, Papaveraceae

***Sanguinaria canadensis*** L., Blood Root

- **Drug—Abnaki** *Abortifacient* Used as an abortifacient. (144:154) *Veterinary Aid* Used as an abortifacient for horses. (144:167) **Algonquin** *Love Medicine* Used as a love charm and red dye for skin, clothing, and weapons. (22:142) **Algonquin, Quebec** *Heart Medicine* Root chewed for heart trouble. *Tonic* Rhizomes used to make a medicinal tonic. (18:171) **Cherokee** *Cough Medicine* Decoction of root in small doses and infusion with broomsedge used for coughs. *Dermatological Aid* Used as wash for ulcers and sores and infusion with vinegar used for tetterworm. *Nose Medicine* Used as "snuff for polypus." *Pulmonary Aid* Decoction of root taken in small doses for lung inflammations and croup. *Respiratory Aid* Pulverized root sniffed for catarrh. (80:26) **Chippewa** *Analgesic* Compound decoction of root taken for cramps. *Gastrointestinal Aid* Compound decoction of root taken for stomach cramps. (53:344) *Unspecified* Plant used medicinally. (71:131) **Delaware** *Gastrointestinal Aid* Combined with other roots and used as a stomach remedy. *Strengtheners* Pea-sized piece of roots taken every morning for 30 days for general debility. (176:38)
- **Delaware, Oklahoma** *Gastrointestinal Aid* Compound containing root used as a "stomach remedy." *Panacea* Piece of root eaten daily "for general debility." (175:32, 80) *Tonic* Root used in a tonic. (175:80)
- **Delaware, Ontario** *Antiemetic* Infusion of powdered root taken for vomiting. *Blood Medicine* Compound containing root taken as a blood purifier. (175:68, 82) **Iroquois** *Analgesic* Infusion of roots taken for inside pain. (87:335) *Anthelmintic* Compound infusion of roots and whisky taken as blood remedy and for tapeworms. (87:338) *Antidiarrheal* Compound infusion of plants taken for diarrhea. *Antiemetic* Compound infusion of plants taken for vomiting. (87:336) *Antihemorrhagic* Infusion of roots taken for stomach and lump hemorrhages. (87:335) *Blood Medicine* Compound infusion of roots taken to purify the blood and loosen the bowels. Infusion of branches tak-

en as a blood tonic, "don't vomit." (87:336) Compound infusion of roots taken as a blood purifier. (87:337) *Carminative* Compound decoction of roots taken for stomach gas. (87:336) *Cold Remedy* Dried plant used as a snuff for head colds. (87:335) Decoction or infusion of roots taken for colds. (87:337) Plant chewed for colds. (87:338) *Cough Medicine* Compound infusion of roots and liquor taken as consumption cough medicine. (87:336) Decoction of powdered roots or infusion of roots taken for coughs. (87:337) *Dermatological Aid* Infusion of mashed roots taken or poultice applied to cuts or poison ivy. Plant juice taken as a wound medicine. Poultice of plants applied for drawing thorns and slivers or on leg sores. (87:336) Infusion of split root used as a wash for cuts and boils. Poultice of cooked roots applied to cuts and wounds. (87:337) Decoction of roots taken for swellings above the waist, wounds, and sores. Plant chewed for sores and cuts. (87:338) *Ear Medicine* Infusion of dried root fragments used as ear drops for earaches. (141:44) *Emetic* Decoction of branches or infusion of roots taken as a spring emetic. (87:336) *Eye Medicine* Decoction of powdered root used as a wash for sore eyes. *Febrifuge* Infusion of plants or decoction of roots or powdered roots taken for fevers. (87:337) *Gastrointestinal Aid* Infusion of roots taken for stomach hemorrhages. (87:335) Compound infusion of plants taken for upset stomach. Decoction of smashed roots taken for stomach cramps. (87:336) Compound decoction of bark taken to clean the stomach and for ulcers. Compound taken for intestinal trouble. Decoction of dried roots taken for ulcers or by women who are ugly. (96:114) **Yellow** Fresh or dried roots used as a dark yellow dye to paint faces with clan marks.<sup>77</sup> (153:426) **Omaha** *Red* Root boiled with objects as a red dye. *Unspecified* Root used as a decorative skin stain. **Ponca** *Red* Root boiled with objects as a red dye. *Un-*

- specified* Root used as a decorative skin stain. (70:83) **Potawatomi** *Unspecified* Root used as facial paint to put on clan and identification marks. (154:121) **Winnebago** *Red* Root boiled with objects as a red dye. *Unspecified* Root used as a decorative skin stain. (70:83)
- **Other**—**Delaware** *Ceremonial Items* Roots used to make the face paint for the Big House Ceremony. (176:38) **Delaware, Oklahoma** *Ceremonial Items* Root used as a ceremonial face paint. (175:32, 80)
  - Omaha** *Paint* Plant used as a red skin stain. (68:324)

## *Sanicula*, Apiaceae

### *Sanicula bipinnata* Hook. & Arn., Poison Sanicle

- **Drug**—**Miwok** *Snakebite Remedy* Poultice of boiled plant applied to snakebites. (12:172)
- **Food**—**Karok** *Vegetable* Leaves eaten as greens. (148:386)
- **Other**—**Karok** *Water Indicator* Plant grew near good luck water. This plant grew naturally in swamps. It was believed that even if you found it in a dry place, if you searched you would find water nearby. The water bubbled up in a little hole and disappeared again soon. This was good luck water. When a woman was making baskets, she went to it, if she knew where it was, and washed her hands. Then she would have good luck in making her baskets and perhaps would sell them at a high price. When people were gambling, they would go and wash their hands in a “lucky water.” If you found a lucky water, you would not tell anyone, but would keep it secret, so that no unclean person would go near it. (148:386)

### *Sanicula bipinnatifida* Dougl. ex Hook., Purple Sanicle

- **Drug**—**Miwok** *Panacea* Decoction of root taken as a cure-all. *Snakebite Remedy* Infusion of leaves applied to snakebites. (12:172)

### *Sanicula canadensis* L., Canadian Blacksnakeroot

- **Drug**—**Chippewa** *Abortifacient* Decoction of powdered root taken for “stoppage of periods.” (53:358) *Gynecological Aid* Compound decoction of root taken during confinement. (53:360) **Houma** *Heart Medicine* Hot decoction of root taken for heart trouble. (158:64)

### *Sanicula crassicaulis* Poepp. ex DC., Pacific Blacksnakeroot

- **Drug**—**Miwok** *Dermatological Aid* Poultice of leaves used for rattlesnake bites and other wounds. *Snakebite Remedy* Poultice of leaves used for rattlesnake bites and other wounds. (as *S. menziesii* 12:173)
- **Other**—**Mendocino Indian** *Good Luck Charm* Roots chewed, rubbed on the body, and used for good luck in gambling. (as *S. menziesii* 41:373)

### *Sanicula marilandica* L., Maryland Sanicle

- **Drug**—**Iroquois** *Antidote* Compound decoction of plants taken to vomit to counteract a poison. (87:397) *Dermatological Aid* Decoction of roots used as a wash and given to children with sore navels. (87:396) *Emetic* Compound decoction of plants taken to vomit to counteract a poison. (87:397) *Kidney Aid* Decoction of plants taken for dropsy. *Laxative* Compound decoction of roots taken to loosen the bowels. *Pediatric Aid* Decoction of roots used as a wash and given to children with sore navels. *Venereal Aid* Compound decoction of roots taken for venereal disease. (87:396) **Malecite** *Abortifacient* Infusion of bulb roots used for irregular menstruation. (116:258) **Menominee** *Witchcraft Medicine* Root thought to be used by sorcerers for evil purposes. (151:55) **Micmac** *Abortifacient* Roots used for irregular

menstruation. *Analgesic* Roots used for menstrual pain. *Antirheumatic (Internal)* Roots used for rheumatism. *Gynecological Aid* Roots used for menstrual pain and slow parturition. *Kidney Aid* Roots used for kidney trouble. *Snakebite Remedy* Roots used as a snakebite remedy and for rheumatism. (40:61) **Ojibwa** *Febrifuge* Infusion of root used for various fevers. *Snakebite Remedy* Poultice of pounded root applied to rattlesnake bite or any snakebite. (153:391)

### *Sanicula odorata* (Raf.) K. M. Pryer & L. R. Phillippe, Clustered Blacksnakeroot

- **Drug**—**Malecite** *Analgesic* Infusion of plant and spikenard used by women with back and side pain. *Kidney Aid* Infusion of plant and spikenard used for kidney trouble. (as *S. gregaria* 116:257) **Menominee** *Witchcraft Medicine* Root thought to be used by sorcerers for evil purpose. (as *S. gregaria* 151:56) **Meskwaki** *Dermatological Aid* Plant used as an astringent and for nosebleeds. *Hemostat* Steam of burning plant on hot stones inhaled for nosebleed. (as *S. gregaria* 152:250)

### *Sanicula smallii* Bickn., Small's Blacksnakeroot

- **Drug**—**Cherokee** *Analgesic* and *Gastrointestinal Aid* Infusion with pink lady's slipper taken for stomach cramps and colic. *Orthopedic Aid* Used as a liniment and infusion taken for colic. (80:55)

### *Sanicula* sp., Sanicle

- **Drug**—**Pomo, Kashaya** *Unspecified* Plant used medicinally. (72:102)
- **Food**—**Neeshenam** *Unspecified* Roots used for food. *Vegetable* Leaves eaten as greens. (129:377)

### *Sanicula tuberosa* Torr., Turkey Pea

- **Food**—**Mendocino Indian** *Unspecified* Bulbs eaten raw. (41:374) **Neeshenam** *Unspecified* Eaten raw, roasted, or boiled. (as *S. luberosa* 129:377) **Pomo** *Unspecified* Tuberous roots eaten raw. (11:89)

## Santalaceae, see *Comandra*, *Geocaulon*, *Pyrularia*

## *Sanvitalia*, Asteraceae

### *Sanvitalia abertii* Gray, Albert's Creeping Zinnia

- **Drug**—**Navajo** *Diaphoretic* Plant used to increase perspiration. *Oral Aid* Plant chewed for mouth sores. (55:88) **Navajo, Ramah** *Analgesic* Cold infusion of leaves taken and used as lotion for headache. Compound decoction used for menstrual pain. *Cold Remedy* Chewed leaves swallowed for cold. *Dermatological Aid* Poultice of chewed leaves or infusion of leaves applied to skin sores. *Febrifuge* Cold infusion of leaves taken and used as lotion for fever. *Gynecological Aid* Compound decoction of plant used for menstrual pain. *Oral Aid* Warm infusion used as mouthwash and leaves chewed for canker sores. *Panacea* Plant used as “life medicine.” *Snakebite Remedy* Compound decoction of plant used for snakebite. *Throat Aid* Chewed leaves swallowed for sore throat. *Toothache Remedy* Leaves chewed for toothache. (191:53)

## Sapindaceae, see *Dodonaea*, *Sapindus*

## *Sapindus*, Sapindaceae

### *Sapindus saponaria* L., Wingleaf Soapberry

- **Other**—**Seminole** *Jewelry* Plant used to make beads. (169:468)

### *Sapindus saponaria* var. *drummondii* (Hook. & Arn.) L. Benson, Western Soapberry

- **Drug**—**Kiowa** *Dermatological Aid* Poultice of sap applied to wounds. (as *S. drummondii* 192:41)
- **Other**—**Comanche** *Toys & Games* Stems used to make arrows for aratsi game. (as *S. drummondii* 29:524) **Papago** *Hunting & Fishing Item* and *Weapon* Wood used to make stone-tipped hunting arrows. (as *S. drummondii* 34:71)

## *Sapium*, Euphorbiaceae

*Sapium biloculare* (S. Wats.) Pax, Mexican Jumpingbean

- **Drug**—**Seri** *Poison* Juice used for arrow poison. (50:138)
- **Other**—**Seri** *Hunting & Fishing Item* Straight stems used to make arrow shafts. (50:138)

## *Saponaria*, Caryophyllaceae

*Saponaria officinalis* L., Bouncing Bet

- **Drug**—**Cherokee** *Dermatological Aid* Used as a poultice for boils. (80:26) **Mahuna** *Analgesic* Poultice of leaves applied to spleen pain. *Dermatological Aid* Root juice used as a hair tonic. (140:40)
- **Other**—**Cherokee Soap** Used for soap. (80:26) **Mahuna Soap** Juice used as a hair shampoo. (140:40)

**Sapotaceae**, see *Chrysophyllum*, *Sideroxylon*

## *Sarcobatus*, Chenopodiaceae

*Sarcobatus vermiculatus* (Hook.) Torr., Greasewood

- **Drug**—**Cheyenne** *Blood Medicine* Sharpened stick used to draw out bad blood. *Ceremonial Medicine* Sharpened stick used in acupuncture ceremony. *Veterinary Aid* Stick used to make holes in horse's shoulder for sprained or bruised legs. (83:17) **Hopi** *Ceremonial Medicine* Plant used for kiva fuel. (56:18) **Keres, Western** *Dermatological Aid* Crushed leaves used for insect bites. *Emetic* Infusion of leaves used as an emetic for lightning shock. (171:68) **Navajo** *Dermatological Aid* Plant used for insect bites. (55:97) **Navajo, Ramah** *Gastrointestinal Aid* Warm infusion of leaves taken to kill a swallowed red ant. (191:25) **Paiute** *Antidiarrheal* Infusion of burned plant taken for diarrhea. *Antihemorrhagic* Infusion of burned plant taken for rectal bleeding. (180:138, 139) **Paiute, Northern** *Toothache Remedy* Wood or roots heated until burned or blackened and used on aching and decayed teeth. (59:129)
- **Food**—**Keres, Western** *Forage* Shrub used as winter pasture for sheep. (171:68) **Montana Indian** *Vegetable* Young twigs used for greens. (19:23) **Navajo** *Forage* Used as forage by sheep and eaten for the salt. (55:44) *Fruit* "Seeds" (actually fruits) used for food. (90:155) **Navajo, Ramah** *Fodder* Used for sheep and horse feed in the spring. (191:25) **Pima** *Forage* Succulent, young leaves and branches eaten by cattle and sheep. *Starvation Food* Seeds roasted and eaten during "hard times." (47:71)
- **Fiber**—**Hopi** *Building Material* Wood used for construction. (42:358) Strong wood used in general construction. (200:74) *Furniture* Wood used for clothes hooks in houses. (42:358)
- **Other**—**Cheyenne** *Ceremonial Items* Sticks used to make man designs upon which Sun Dancers stood. (83:17) *Hunting & Fishing Item* Used to make arrow shafts. (83:46) Wood used for arrow shafts. *Smoking Tools* Small sticks wrapped with buffalo hair and used as a tamper for tobacco pipes. (83:17) **Hopi** *Cooking Tools* Wood used for stir-

ring rods. (42:358) Strong wood used to make stirring rods. (200:74) *Fuel* Wood used for fuel. (42:358) Shrub used as one of the four prescribed fuels for the kivas. (56:18) Strong wood used as the chief kiva fuel. (200:74) *Hunting & Fishing Item* Wood used for rabbit sticks and arrows. (42:358) Strong wood used to make arrows. (200:74) *Musical Instrument* Wood used for musical rasps. (42:358) Strong wood used to make musical rasps. (200:74) *Tools* Wood used for planting and lease rods. (42:358) Used to make planting sticks and poorer boomerangs. Used to make planting sticks and poorer boomerangs. (190:162) Strong wood used for rabbit sticks, planting sticks, lease rods, and clothes hooks. (200:74) **Jemez** *Toys & Games* Plant part kicked to see who kicked it the farthest, in racing games. (44:27) **Navajo** *Ceremonial Items* Roots carved into an image of a snake for the Lightning Chant, Beauty Chant, and Mountain Chant. *Fuel* Used as firewood. *Tools* Wood used to make planting sticks, knitting needles, heddle sticks, and distaff handles used in weaving. *Toys & Games* Wood used to make dice. *Weapon* Wood used to make war bows. (55:44) **Navajo, Ramah** *Cooking Tools* Stems tied together with buckskin and used for mush stirring sticks. (191:25) **Paiute** *Tools* Twigs used as needles in the manufacture of tule and cattail mats. (111:69)

## *Sarcocornia*, Chenopodiaceae

*Sarcocornia pacifica* (Standl.) A. J. Scott, Pacific Swampfire

- **Food**—**Alaska Native** *Vegetable* Young plants used in salads or for pickles. (as *Salicornia pacifica* 85:57)

## *Sarcostemma*, Asclepiadaceae

*Sarcostemma cynanchoides* ssp. *hartwegii* (Vail) R. Holm, Hartweg's Twinevine

- **Food**—**Luisiño** *Unspecified* Plant eaten raw with salt. (as *Philibertia heterophylla* 155:230) **Papago** *Candy* Gum-like secretions heated over coals and chewed by children. (as *Philibertia heterophylla* 34:28) **Pima** *Candy* Milk extracted from main stem, baked or boiled, and used as chewing gum. (as *Funastrum heterophyllum* 47:82) **Pima, Gila River** *Baby Food* Sap roasted on coals and eaten primarily by children. (133:7)

**Sarraceniaceae**, see *Darlingtonia*, *Sarracenia*

## *Sarracenia*, Sarraceniaceae

*Sarracenia purpurea* L., Purple Pitcherplant

- **Drug**—**Algonquin, Quebec** *Gynecological Aid* Infusion of leaves taken to make childbirth easier. *Urinary Aid* Decoction of root tops taken for urinary difficulties. (18:173) **Algonquin, Tête-de-Boule** *Diuretic* Roots used as a diuretic. *Urinary Aid* Roots mixed with beaver kidneys and used for urinary tract diseases. (132:131) **Cree, Woodlands** *Abortifacient* Decoction or infusion of leaves taken for sickness associated with absence of menstrual period. *Gynecological Aid* Decoction of root given to women to prevent sickness after childbirth. Decoction of root and other herbs taken to expel the afterbirth. *Orthopedic Aid* Decoction taken for lower back pain. *Venereal Aid* Decoction of roots taken for venereal disease. (109:59) **Iroquois** *Basket Medicine* Used as a "basket medicine." *Dietary Aid* Plant used as a medicine for thirst. *Febrifuge* Compound decoction of leaves taken for recurring chills followed by fever. Infusion of dried leaves taken

for high fever and shakiness. (87:342) Infusion of leaves and other plant fragments used for chills. (141:43) *Liver Aid* Compound infusion of whole roots taken for liver sickness. *Love Medicine* Powdered plant sprinkled on person for a love medicine. *Pulmonary Aid* Cold decoction of whole plant taken for whooping cough. Plant used for pneumonia. *Sports Medicine* Powdered plant sprinkled on person for a lacrosse medicine. (87:343) **Malecite** *Tuberculosis Remedy* Infusion of plants used for consumption. (116:251) **Menominee** *Witchcraft Medicine* Plant thought to be used by sorcerers. (151:52, 53) **Micmac** *Antihemorrhagic* Herbs used for spitting blood. (40:61) Strong decoction of root taken for "spitting blood" and pulmonary complaints. (156:316) *Kidney Aid* Herbs used for kidney trouble and consumption. *Misc. Disease Remedy* Roots used for smallpox and herbs used for consumption. (40:61) *Pulmonary Aid* Decoction of root taken for "spitting blood and other pulmonary complaints." *Throat Aid* Infusion of root taken for sore throat. (156:316) *Tuberculosis Remedy* Herbs used for consumption. (40:61) **Montagnais** *Misc. Disease Remedy* Infusion of leaves used as medicine for smallpox. (156:314) **Ojibwa** *Gynecological Aid* Infusion of root used "to help a woman accomplish parturition." (153:389) **Penobscot** *Antihemorrhagic* Infusion of plant taken for "spitting up blood." *Kidney Aid* Infusion of plant "supposedly" taken for kidney trouble. (156:310) **Potawatomi** *Gynecological Aid* Foliage used to make a "squaw remedy." (154:82)

- **Other—Chippewa** *Toys & Games* Used for toys. (53:378) **Cree**, **Woodlands** *Cooking Tools* Leaf used by children as a toy kettle to cook meat over an open fire. (109:59) **Potawatomi** *Cooking Tools* Leaves used for a drinking cup when out in the woods or swamp. (154:123)

## **Sassafras**, Lauraceae

**Sassafras albidum** (Nutt.) Nees, Sassafras

- **Drug—Cherokee** *Anthelmintic* Compound taken for worms. (80:54) Infusion of bark used as a wash or given to children with worms. (177:24) *Antidiarrheal* Infusion of root bark taken for diarrhea. *Antirheumatic (Internal)* Infusion taken for rheumatism. *Blood Medicine* Infusion taken to purify blood. *Cold Remedy* Infusion of root bark taken for colds. *Dermatological Aid* Taken for skin diseases and used to poultice wounds and sores. *Dietary Aid* Infusion of bark taken for "overfatness." *Eye Medicine* Used as a wash for sore eyes. *Misc. Disease Remedy* Taken for ague. (80:54) *Oral Aid* Roots chewed to remove odor caused by eating ramps (*Allium tricoccum?*). (126:44) *Pediatric Aid* Infusion of bark used as a wash or given to children with worms. (177:24) *Venereal Aid* Taken for venereal diseases. (80:54) **Chippewa** *Blood Medicine* Infusion of root bark taken to thin the blood. (as *S. variifolium* 71:130) **Choctaw** *Blood Medicine* Decoction of roots taken to thin the blood. *Misc. Disease Remedy* Decoction of roots taken for measles. (177:24) **Creek** *Unspecified* Plant used for unspecified medicinal purpose. (as *S. variifolium* 172:661) **Delaware** *Blood Medicine* Root bark used as a blood purifier. (176:30) **Delaware, Oklahoma** *Blood Medicine* Compound containing root bark used as a blood purifier. (175:25, 80) *Tonic* Bark used in a tonic. (175:80) **Houma** *Misc. Disease Remedy* Decoction of fresh or dried root taken for measles and scarlet fever. (158:60) **Iroquois** *Anthelmintic* Compound infusion of roots and whisky taken as blood remedy and for tapeworms. (87:334) *Antirheumatic (Internal)* Compound infusion of plant with whisky taken for rheumatism. *Blood Medicine* Decoction of pith from

new sprouts used as blood medicine. (87:333) Decoction or infusion of bark taken as a blood purifier and for watery blood. Decoction or infusion of roots taken for watery blood or to clear the blood. Plant taken to thin the blood. (87:334) *Cold Remedy* Infusion of roots taken by women for colds. *Dermatological Aid* Leaves used as a poultice for wounds, cuts, and bruises. (87:333) *Eye Medicine* Infusion or decoction of plant used as a wash for sore eyes or cataracts. (87:334) *Febri-fuge* and *Gynecological Aid* Infusion of roots taken by women with fevers after childbirth. *Hemostat* Decoction of pith from new sprouts used for nosebleed. *Hypotensive* Decoction of pith from new sprouts or roots taken for high blood pressure. (87:333) Plant taken for blood pressure. *Orthopedic Aid* Compound decoction of roots taken for swellings on the shins and calves. *Tonic* Taken as a tonic. (87:334) **Koasati** *Dermatological Aid* Poultice of mashed leaves applied to bee stings. *Heart Medicine* Decoction of roots taken for heart troubles. (177:24) **Mohegan** *Eye Medicine* Infusion of young shoots used as a wash for sore eyes. (as *S. officinale* 176:75, 132) *Tonic* Complex compound infusion including sassafras root taken as spring tonic. (as *S. sassafras* 174:266) Root, leaves, and bark mixed with other herbs to make a tonic. (as *S. officinale* 176:75, 132) **Nanticoke** *Febri-fuge* Infusion of root taken to ward off "fever and ague." (175:56, 84) *Misc. Disease Remedy* Infusion of plant taken to prevent fever and ague. (175:56) **Rappahannock** *Burn Dressing* Decoction of branch pith used as wash for burns. *Dermatological Aid* Infusion of roots taken for the rash of measles. *Eye Medicine* Decoction of branch pith used as wash for sore eyes. *Febri-fuge* Infusion of roots taken for the fever of measles. *Misc. Disease Remedy* Infusion of roots taken for the rash and fever of measles. *Sedative* Infusion of root taken as a nerve medicine. *Stimulant* Raw buds chewed to "increase vigor in males." *Tonic* Infusion of root taken as a spring tonic. (as *S. molle* 161:26) **Seminole** *Analgesic* Bark used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. (169:188) Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (169:227) Plant used for gallstones and bladder pain. (169:275) *Antidiarrheal* Bark used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. (169:188) Infusion of plant taken by small children for raccoon sickness: diarrhea. (169:218) Infusion of bark taken by babies and adults for otter sickness: diarrhea and vomiting. (169:222) Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (169:227) Decoction of plant taken for wolf ghost sickness: diarrhea and painful defecation. (169:228) *Anti-emetic* Decoction of bark used for horse sickness: nausea, constipation, and blocked urination. (169:188) Infusion of bark taken by babies and adults for otter sickness: diarrhea and vomiting. (169:222) Infusion of bark taken as an emetic and rubbed on the body for cat sickness: nausea. (169:224) Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (169:227) Decoction of roots taken and rubbed on the stomach for continuous vomiting. (169:307) *Cathartic* Decoction of plant taken for wolf ghost sickness: diarrhea and painful defecation. (169:228) *Ceremonial Medicine* Bark used as an emetic in purification after funerals, at doctor's school, and after death of patient. (169:167) *Cold Remedy* Infusion of plant used as a mouthwash and gargle for colds. *Cough Medicine* Plant used as a cough medicine. (169:281) *Dermatological Aid* Infusion of bark taken and used as bath for babies with monkey sickness:

fever, itch, and enlarged eyes. (169:219) *Dietary Aid* Infusion of bark taken by babies for opossum sickness: appetite loss and drooling. (169:220) Infusion of bark taken as an emetic by children and adults for dog sickness: appetite loss and drooling. (169:225) *Emetic* Bark used as an emetic to “clean the insides.” (169:167) Infusion of bark taken as an emetic and rubbed on the body for cat sickness: nausea. (169:224) *Eye Medicine* Infusion of bark taken and used as bath for babies with monkey sickness: fever, itch, and enlarged eyes. *Febrifuge* Infusion of bark taken and used as bath for babies with monkey sickness: fever, itch, and enlarged eyes. (169:219) *Gastrointestinal Aid* Bark used for cow sickness: lower chest pain, digestive disturbances, and diarrhea. (169:188) Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (169:227) *Laxative* Decoction of bark used for horse sickness: nausea, constipation, and blocked urination. (169:188) *Oral Aid* Infusion of bark taken by babies for opossum sickness: appetite loss and drooling. (169:220) Infusion of bark taken as an emetic by children and adults for dog sickness: appetite loss and drooling. (169:225) *Other* Infusion of plant taken and rubbed on the body for “mythical wolf” sickness. (169:306) *Pediatric Aid* Infusion of plant taken by small children for raccoon sickness: diarrhea. (169:218) Infusion of bark taken and used as bath for babies with monkey sickness: fever, itch, and enlarged eyes. (169:219) Infusion of bark taken by babies for opossum sickness: appetite loss and drooling. (169:220) Infusion of bark taken by babies and adults for otter sickness: diarrhea and vomiting. (169:222) Infusion of bark taken as an emetic by children and adults for dog sickness: appetite loss and drooling. (169:225) *Throat Aid* Infusion of plant used as a mouthwash and gargle for sore throats. (169:281) *Unspecified* Plant used for medicinal purposes. (169:161) Plant used as medicine. (169:158) Plant used medicinally. (169:164) *Urinary Aid* Decoction of bark used for horse sickness: nausea, constipation, and blocked urination. (169:188) Infusion of plant taken for wolf sickness: vomiting, stomach pain, diarrhea, and frequent urination. (169:227) Plant used for gallstones and bladder pain. (169:275)

- **Food**—**Cherokee** *Beverage* Roots and barks used to make a beverage tea. (80:54) Red and white roots, red roots preferred, used to make tea. (126:44) **Chippewa** *Beverage* Root bark used to make a pleasant, tea-like beverage. *Spice* Leaves used in meat soups for the bay leaf-like flavor. (as *S. variifolium* 71:130) **Choctaw** *Spice* Pounded, dry leaves added to soup for flavor. (as *Laurus sassafras* 25:8)
- **Fiber**—**Cherokee** *Furniture* Wood used to make furniture. (80:54)
- **Other**—**Cherokee** *Fertilizer* Flowers mixed with beans for planting. *Incense & Fragrance* Used to scent soap. (80:54)

## **Satureja**, Lamiaceae

**Satureja douglasii** (Benth.) Briq., Yerba Buena

- **Drug**—**Cahuilla** *Cold Remedy* Decoction of plant parts taken for colds. *Febrifuge* Decoction of plant parts taken for fevers. (15:139) **Costanoan** *Anthelmintic* Decoction of plant used for pinworms. *Toothache Remedy* Poultice of warm leaves applied to jaw or plant held in mouth for toothaches. (21:17) **Karok** *Kidney Aid* Infusion of leaves taken for the kidneys. *Love Medicine* Infusion of leaves taken as an aphrodisiac. (6:54) **Luiseno** *Cold Remedy* Decoction of plant parts taken for colds. *Febrifuge* Decoction of plant parts taken for fevers. (15:139) *Unspecified* Infusion of plant used for medicinal pur-

poses. (as *Micromeria douglasii* 155:229) **Mahuna** *Sedative* Infusion of plant taken as a sedative for insomnia. (as *Micromeria douglasii* 140:23) **Mendocino Indian** *Blood Medicine* Infusion of dried, leafy vines taken to purify the blood. *Gastrointestinal Aid* Infusion of dried, leafy vines taken for colic. (as *Micromeria chamissonis* 41:383) **Pomo** *Blood Medicine* Infusion of plant taken to purify the blood. *Dietary Aid* Decoction of plant taken for becoming thin. *Gastrointestinal Aid* Decoction of plant taken for upset stomach. (as *Micromeria chamissonis* 66:15) **Pomo, Kashaya** *Blood Medicine* Decoction of crawling stems and leaves used to purify the blood. *Cold Remedy* Decoction of crawling stems and leaves used for chest colds. *Gastrointestinal Aid* Decoction of crawling stems and leaves used for an upset stomach and thinness. *Sedative* Decoction of crawling stems and leaves used to make you sleepy. (72:121) **Saanich** *Blood Medicine* Infusion of leaves taken for the blood. (182:84) **Yurok** *Blood Medicine* Infusion of leaves taken for the blood. (6:54)

- **Food**—**Diegueño** *Beverage* Leaves used to make mint tea. (84:41) **Luiseno** *Beverage* Plant used to make a tea. (as *Micromeria douglasii* 155:211) **Mendocino Indian** *Substitution Food* Slender, leafy vines made into rolls, dried, and used as a substitute for tea. (as *Micromeria douglasii* 41:383) **Pomo, Kashaya** *Beverage* Decoction of crawling stems and leaves used as a beverage tea. (72:121) **Saanich** *Beverage* Leaves used to make a refreshing tea. (182:84) **Tolowa** *Beverage* Fresh leaves used to make a refreshing tea. (6:54)
- **Other**—**Karok** *Incense & Fragrance* Leaves put in hats and clothes and vines hung around the neck as perfume. (as *Micromeria chamissonis* 148:389)

**Satureja hortensis** L., Summer Savory

- **Drug**—**Cherokee** *Analgesic* Snuff of leaves used for headache. (80:54)

**Saururaceae**, see *Anemopsis*, *Saururus*

## **Saururus**, Saururaceae

**Saururus cernuus** L., Lizard's Tail

- **Drug**—**Cherokee** *Dermatological Aid* Roasted and mashed roots used as poultice. (80:43) *Poultice* Roasted and mashed roots used as poultices. (203:74) **Choctaw** *Dermatological Aid* Poultice of boiled, mashed roots applied to wounds. (25:23) **Ojibwa** *Antirheumatic (External)* Infusion of pounded plants used as wash for rheumatism. *Gastrointestinal Aid* Infusion of plant taken for stomach troubles and plant used as stomach medicine. *Panacea* Infusion of pounded plants used as wash for general illnesses. (135:231) **Seminole** *Antirheumatic (External)* Plant used for fire sickness: fever and body aches. (169:204) Roots used for rheumatism. (169:286) *Dermatological Aid* Poultice of plant applied to spider bites. (169:307) *Emetic* Plant used as an emetic during religious ceremonies. (169:409) *Febrifuge* Plant used for fire sickness: fever and body aches. (169:204) *Other* Complex infusion of whole plant taken for chronic conditions. (169:272) *Unspecified* Plant used for medicinal purposes. (169:161)

**Saxifragaceae**, see *Boykinia*, *Darmera*, *Heuchera*, *Leptarrhena*, *Lithophragma*, *Mitella*, *Parnassia*, *Penthorum*, *Saxifraga*, *Tellima*, *Tiarella*, *Tolmiea*

## **Saxifraga**, Saxifragaceae

**Saxifraga ferruginea** Graham, Rustyhair Saxifrage

• **Drug**—**Bella Coola** *Urinary Aid* Decoction of root and leaf taken for “strangulation of the bladder.” (as *S. bongardi* 150:58)

**Saxifraga micranthidifolia** (Haw.) Steud., Lettuceleaf Saxifrage

• **Food**—**Cherokee** *Unspecified* Young growth boiled, fried with ramps (*Allium tricoccum?*), and eaten. (204:252) *Vegetable* Leaves used in salads or wilted in boiling water with bacon grease dripped on the top. (126:54)

**Saxifraga nelsoniana** D. Don **ssp. nelsoniana**, Brook Saxifrage

• **Food**—**Alaska Native** *Dietary Aid* Leaves prepared and eaten soon after picking as a good source of vitamin C and provitamin A. *Unspecified* Leaves mixed with seal or walrus oil and eaten raw. (as *S. punctata* 85:63) **Eskimo, Alaska** *Unspecified* Leaves and stalks eaten raw with seal oil and fish. (as *S. punctata* ssp. *nelsoniana* 1:36) Leaves eaten fresh or in oil. Leaves preserved for long periods in oil. (as *Saxifraga punctata* 4:715) *Winter Use Food* Leaves preserved in seal oil for later use. (as *Saxifraga punctata* ssp. *nelsoniana* 1:36) **Eskimo, Arctic** *Vegetable* Leaves eaten raw with seal blubber or as “sauerkraut.” (as *S. punctata* 128:29) **Eskimo, Inupiat** *Vegetable* Leaves preserved in seal oil and eaten with fish or meat or used fresh in salads. (as *S. punctata* 98:21)

**Saxifraga pensylvanica** L., Eastern Swamp Saxifrage

• **Drug**—**Cherokee** *Dermatological Aid* Poultice of root used for sore, swollen muscles. (80:26) **Iroquois** *Blood Medicine* Compound infusion of roots and leaves taken as a blood purifier. *Ceremonial Medicine* Ingredient in “Little Water Medicine” ritual. *Kidney Aid* Infusion of roots taken for weak kidneys or dropsy. Compound used for dropsy. *Panacea* Compound infusion taken or placed on injured part, a “Little Water Medicine.” (87:344) **Menominee** *Unspecified* Remedy known as “the rabbit’s ear,” less famous than *Valeriana uliginosa*. (151:53)

• **Food**—**Cherokee** *Vegetable* Leaves eaten raw as greens. (80:26)

**Saxifraga spicata** D. Don, Spiked Saxifrage

• **Food**—**Alaska Native** *Dietary Aid* Leaves used as a fair source of vitamin C. *Vegetable* Young, tender leaves used as a salad green. (85:65) **Eskimo, Alaska** *Unspecified* Young, tender leaves eaten raw with seal oil and often with fish. Young stems eaten raw. (1:36)

**Saxifraga tricuspidata** Rottb., Three Toothed Saxifrage

• **Food**—**Eskimo, Inuktitut** *Unspecified* Flowers eaten as food. (202:186)

**Scaevola**, Goodeniaceae

**Scaevola sericea** Vahl, Beach Naupaka

• **Drug**—**Hawaiian** *Dermatological Aid* Root bark pounded, mixed with salt, and used for cuts and skin diseases. (as *Scaevola frutescens* 2:72)

**Schedonnardus**, Poaceae

**Schedonnardus paniculatus** (Nutt.) Trel., Tumblegrass

• **Other**—**Apache, Chiricahua & Mescalero** *Containers* Moist grass laid onto hot stones to prevent steam from escaping. (33:36)

**Schizachyrium**, Poaceae

**Schizachyrium scoparium** (Michx.) Nash **ssp. scoparium**,

Little Bluestem

• **Drug**—**Comanche** *Venereal Aid* Stem ashes used for syphilitic sores. (as *Andropogon scoparius* 29:520)

• **Fiber**—**Lakota** *Clothing* Grass rubbed into softness and used as fur-like insulation in moccasins during the winter. (as *Andropogon scoparius* 139:28)

• **Other**—**Comanche** *Ceremonial Items* Bundles of stems used as switches in the sweat lodge. (as *Andropogon scoparius* 29:520)

**Schkuhria**, Asteraceae

**Schkuhria multiflora** Hook. & Arn., Manyflower False Threadleaf

• **Drug**—**Navajo, Ramah** *Oral Aid* Plant chewed 10 minutes for mouth sores. (as *Bahia neomexicana* 191:49)

**Schoenocrambe**, Brassicaceae

**Schoenocrambe linearifolia** (Gray) Rollins, Slimleaf Plainsmustard

• **Drug**—**Navajo, Ramah** *Ceremonial Medicine* and *Eye Medicine* Infusion of leaves used as a ceremonial eyewash. *Oral Aid* Cold infusion of leaves used as a mouthwash for sore gums. (as *Hesperidanthus linearifolius* 191:29)

**Scirpus**, Cyperaceae

**Scirpus acutus** Muhl. ex Bigelow, Hardstem Bulrush

• **Drug**—**Clallam** *Other* Used to suck out the cause of an illness. (57:201) **Cree, Woodlands** *Hemostat* Poultice of stem pith applied under the dressing to stop bleeding. (109:59) **Montana Indian** *Dietary Aid* Roots chewed “as a preventative to thirst.” (as *S. lacustris occid.* 19:23) **Navajo, Ramah** *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (191:19) **Thompson** *Hemostat* and *Pediatric Aid* Burned stalk ashes used on baby’s bleeding navel. (187:115)

• **Food**—**Cheyenne** *Unspecified* Inner part of stems eaten raw. (83:8) **Cree, Woodlands** *Unspecified* Stem base and tender leaf bases eaten fresh as collected by boat. Stem base and roots used for food. (109:59) **Dakota** *Unspecified* Tender, white stem base eaten fresh and uncooked. (as *S. lacustris* 69:359) **Gosiute** *Unspecified* Lower, tender stem portions formerly used for food. (as *S. lacustris* var. *occidentalis* 39:381) **Hesquiat** *Forage* Cows were said to eat it. (185:53) **Hopi** *Unspecified* Lower end of the stalk eaten raw. (as *S. lacustris* 190:159) **Klamath** *Unspecified* Seeds used for food. (as *S. lacustris occidentalis* 45:92) **Montana Indian** *Sauce & Relish* Roots boiled with water and made into a syrup. *Staple* Roots made into flour and used to make bread. *Unspecified* Roots eaten raw. Seeds used for food. (as *S. lacustris occidentalis* 19:23) **Paiute, Northern** *Unspecified* Roots peeled and eaten raw, boiled, or roasted. (59:49) Shoots eaten raw. Rhizomes peeled and chewed to extract the juices. Basal lengths of stalks eaten fresh. (60:72) **Pomo** *Unspecified* New sprouts eaten in the spring. (as *S. lacustris* 117:284) *Vegetable* Roots eaten as greens. Young shoots eaten as greens. (as *S. lacustris* var. *occidentalis* 11:92) **Sioux** *Unspecified* Young, spring shoots used for food. (as *S. lacustris occidentalis* 19:23) **Tubatulabal** *Unspecified* Roots used for food. (193:15)

• **Fiber**—**Dakota** *Mats, Rugs & Bedding* Stems pressed flat between the fingers and used to make household mats. (as *S. lacustris* 69:359) **Hesquiat** *Basketry* Round, pithy stems used to make baskets, shopping basket handles, and basket lids. *Mats, Rugs & Bedding* Dried stems used to make mats; excellent mattresses. (185:53) **Karok** *Mats*,

*Rugs & Bedding* Used for making matting. (148:380) **Klallam Mats**, *Rugs & Bedding* Used to make mats. (79:22) **Klamath Basketry** Stems used for baskets. (as *S. lacustris occidentalis* 45:92) Outer surface split and twisted into weft cords and warp used in making baskets. (as *S. lacustris* 46:737) *Clothing* Stems used for hats. *Mats, Rugs & Bedding* Stems used for mats. (as *S. lacustris occidentalis* 45:92) **Maidu Basketry** Stalks used as the overlay twine warp, upper portions only, in the manufacture of baskets. (173:71) **Makah Mats, Rugs & Bedding** Used to make mats. (79:22) **Montana Indian Mats, Rugs & Bedding** Stems used for making mats. (as *S. lacustris occidentalis* 19:23) **Nitinaht Mats, Rugs & Bedding** Tall, round stems sun dried and sewn together to make mats, sleeping compartments, and mattresses. (186:81) **Okanagan-Colville Building Material** Stems dried, sewn into large mats and used to make "tepees," temporary shelters, doors, and windows. (188:36) **Paiute, Northern Basketry** Used for wefts and binding tule items. (60:81) *Building Material* Used to build houses. (59:49) *Clothing* Used to secure the edges of skirts. (60:81) Used as the warps for sandals. (60:83) Used as the warps and the twining wefts for clothing. (60:86) *Mats, Rugs & Bedding* Used to secure the edges of mats. (60:81) Used to make twined mats for the insides of houses. Used in a simple pile for seating. (60:87) **Pomo Basketry** Stems used to make plain-twined baskets. *Canoe Material* Stems used to make boats. (as *S. lacustris* var. *occidentalis* 9:140) *Clothing* Skins used as swaddling clothes or soft padding. (as *S. lacustris* var. *occidentalis* 11:92) **Pomo, Kashaya Basketry** Root used to form the black part of the basket design. (72:28) **Shuswap Building Material** Used for weaving entrance covers, curtains, windbreaks, and for drying salmon. (123:54) **Snohomish Mats, Rugs & Bedding** Used to make mats. (79:22) **Thompson Building Material** Stems laid in an overlapping fashion and used for roofing. *Clothing* Stems woven or sewn with Indian hemp twine to make capes, bags, and Indian doctor headdresses. *Mats, Rugs & Bedding* Stems woven or sewn with Indian hemp twine to make mats. Food was placed on tule mats in order to dry it. The mats were also used as place mats for eating, as floor covering in lodges, as room partitions in pit houses, as walls for summer lodges and as mattresses and pillows. (187:115)

- **Other—Dakota Toys & Games** Long stems made into a ball and used as an instrument in children's games. The long stems were made into a ball by bending over the base of several together and the remaining length braided together to form a swinging handle. (as *S. lacustris* 69:359) **Hopi Ceremonial Items** Ceremonially associated with water. (as *S. lacustris* 200:70) **Kansa Ceremonial Items** Braided stems used as one of the five coverings of the sacred clamshell. The sacred clamshell was kept wrapped in five coverings. The innermost covering was the bladder of a buffalo bull; the second, a covering made of the spotted skin of a fawn; the third, a covering made of braided cattails; the fourth, a very broad piece of deerskin; and finally the fifth and outermost covering was made of braided hair from the head of a buffalo bull. (as *S. lacustris* 68:323) **Okanagan-Colville Ceremonial Items** Stems used to make headdresses for Indian doctors. *Containers* Stems woven into storage bags and used to store dried meat, fish, and berries. *Cooking Tools* Stems dried, sewn into large mats and used for drying berries and cutting and drying meat and fish. (188:36) **Paiute, Northern Containers** Used to make egg bags for transporting gathered eggs. (60:78) *Fasteners* Used for wefts and binding

tule items. Used as ties for sandals. (60:81) **Thompson Containers** Stems woven or sewn with Indian hemp twine to make bags. *Decorations* Stems woven or sewn with Indian hemp twine to make Indian doctor headdresses. (187:115)

### ***Scirpus americanus*** Pers., American Bulrush

- **Drug—Kwakiutl** *Dermatological Aid* and *Pediatric Aid* Grass and oil used on child's head to make the hair grow long and thick. (183:272)
- **Food—Keres, Western Unspecified** Roots and tender shoots used for food. (as *S. alneyi* 171:68)
- **Fiber—Hesquiat Basketry** Rushes used in weaving handles for baskets and shopping bags. *Clothing* Rushes used in weaving hats. (185:54) **Kwakiutl, Southern Basketry** Leaves used to make baskets. (183:296) Leaves used to make baskets. *Clothing* Leaves used to make hats. (183:272) **Makah Basketry** Shoots used to make baskets. (67:332) **Nitinaht Basketry** Leaves used for the bottoms and ribs of "grass" baskets. (186:79) **Pomo, Kashaya Basketry** Root used to form the black part of the basket design. Root used to form the black part of the basket design. (72:28) **Salish, Coast Basketry** Flat, fibrous leaves sun dried and used to make baskets. *Mats, Rugs & Bedding* Flat, fibrous leaves dried and used to make mats. (182:73)
- **Other—Hanaksiala Hunting & Fishing Item** Plant used by children to make tiny snares to catch small fish. (as *S. pungens* ssp. *monophyllus* var. *longisetis* 43:192)

### ***Scirpus cyperinus*** (L.) Kunth, Wool Grass

- **Fiber—Ojibwa Basketry** Small rushes formerly used for woven storage bags. *Mats, Rugs & Bedding* Small rushes used for a certain kind of mat. (153:418) **Potawatomi Mats, Rugs & Bedding** Fruiting tops used as a resilient material for stuffing and making pillows. (154:118)

### ***Scirpus fluviatilis*** (Torr.) Gray, River Bulrush

- **Fiber—Pomo, Kashaya Basketry** Root used to form the black part of the basket design. Roots were stained by burying them in the mud with ashes until a black color was obtained. (72:28)

### ***Scirpus maritimus*** L., Saltmarsh Bulrush

- **Food—Paiute, Northern Porridge** Seeds parched, ground into flour, and made into mush. (60:74) *Unspecified* Seeds used for food. (59:48) *Winter Use Food* Seeds parched and stored for later use. (60:74) **Pima, Gila River Unspecified** Roots eaten raw. (133:7)
- **Fiber—Paiute, Northern Basketry** Used for wefts and binding tule items. *Clothing* Used to secure the edges of skirts. (60:81) Used as the warps for sandals. (60:83) Used as the warps and the twining wefts for clothing. (60:86) *Mats, Rugs & Bedding* Used to secure the edges of mats. (60:81) Used to make twined mats for the insides of houses. Used in a simple pile for seating. (60:87) **Pomo Basketry** Root stock fibers used as design material for baskets. (9:137) Grass used for basketry. This sedge has a central section, coal black, which color can be deepened by burying in manure or in blue mud. (118:6)
- **Other—Paiute, Northern Fasteners** Used for wefts and binding tule items. Used as ties for sandals. (60:81) **Panamint Decorations** Roots used as dark brown or black decorations for baskets. (as *S. palendousus* 105:78)

### ***Scirpus microcarpus*** J. & K. Presl, Panicked Bulrush

- **Drug—Malecite** *Dermatological Aid* Poultice of pounded roots used for abscesses. (as *S. rubrotinctus* 116:247) *Throat Aid* Infusion of

plants and blue flag used as a gargle for sore throats. (as *S. rubrotinctus* 116:248) **Micmac** *Dermatological Aid* Roots used for abscesses. *Throat Aid* Herbs used for sore throats. (as *S. rubrotinctus* 40:61)

**Fiber**—**Makah** *Basketry* Leaves used for the bottom portion of baskets. (67:332) **Okanagan-Colville** *Basketry* Used to make berry picking and root digging baskets. (188:37)

**Other**—**Okanagan-Colville** *Containers* Used over and under food in steaming pits. *Decorations* Used to make fringe for buckskin dresses. (188:37) **Thompson** *Tools* Grass formerly used to cut a newborn baby's umbilical cord. (187:116)

***Scirpus nevadensis*** S. Wats., Nevada Bulrush

• **Drug**—**Cheyenne** *Ceremonial Medicine* Plant used in the Sun Dance ceremony. (83:8)

• **Food**—**Cheyenne** *Unspecified* Peeled roots eaten raw. (76:170)

• **Fiber**—**Cheyenne** *Mats, Rugs & Bedding* Stems woven into mats and used like blankets on wooden mattresses. (76:170)

***Scirpus pallidus*** (Britt.) Fern., Cloaked Bulrush

• **Drug**—**Navajo, Ramah** *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (191:19)

***Scirpus pungens*** Vahl, Threesquare Bulrush

• **Food**—**Paiute, Northern** *Porridge* Seeds ground lightly into a flour and boiled into a mush. (59:49) Seeds parched, ground into flour, and made into mush. (60:74)

***Scirpus robustus*** Pursh, Alkali Bulrush

• **Food**—**Montana Indian** *Unspecified* Autumn tubers used for food. (as *S. campestris* 19:23) **Pomo** *Vegetable* Young shoots eaten as greens. Roots eaten as greens. (11:92)

• **Fiber**—**Kawaiisu** *Basketry* Slender rootstock cores used as pattern material for coiled baskets. (206:63) **Pomo** *Basketry* Stems used to make plain-twined baskets. Plant made into the heavy hoop used at the opening of the conical burden basket. *Building Material* Stems used for thatch. Stems used as foundation material. (9:140) *Clothing* Skins used as swaddling clothes or soft padding. (11:92) *Mats, Rugs & Bedding* Stems used to make mats. *Sewing Material* Root used as a weft or sewing material. (9:140) **Pomo, Kashaya** *Basketry* Root used to form the black part of the basket design. (72:28)

***Scirpus* sp.**, Rat Grass

• **Drug**—**Houma** *Orthopedic Aid* Decoction of plant used as a wash for weak legs. *Pediatric Aid* and *Sedative* Decoction of plant given to nervous, fretful, crying children. (158:60)

• **Food**—**Cahuilla** *Bread & Cake* Pollen used to make cakes. *Staple* Roots ground into flour. Seeds eaten raw or ground into mush. (15:139) **Costanoan** *Unspecified* Roots eaten raw or ground into flour and cooked. (21:255) **Keres, Western** *Unspecified* Tender shoots used for food. (171:68) **Luiseno** *Unspecified* Tender, young shoots eaten raw. (155:233) **Pima, Gila River** *Snack Food* Tubers eaten as snack food primarily by children. (133:5) **Thompson** *Unspecified* Fleshy rootstocks baked and eaten. (164:481)

• **Fiber**—**Cahuilla** *Building Material* Stalks used for roofing. *Mats, Rugs & Bedding* Stalks used for bedding, mats, and weaving materials. (15:139) **Costanoan** *Basketry* Roots used in basketry. *Building Material* Stems used as thatch. *Canoe Material* Stems bundled and made into rafts. (21:255) **Costanoan (Olhonean)** *Building Material* Plant used

to make houses. (117:373) **Houma** *Brushes & Brooms* Plants dried and used to make brooms. (158:60) **Paiute** *Mats, Rugs & Bedding* Used to make mats. (111:52) **Pomo** *Basketry* Rootstocks used to make fine baskets. (41:316) **Thompson** *Mats, Rugs & Bedding* Grass-like herbs used extensively for table mats. (164:497)

• **Other**—**Cahuilla** *Ceremonial Items* Plant used to make ceremonial bundles and images for image burning ceremony. *Hunting & Fishing Item* Plant areas used by nesting water fowl and used as indicator by hunters of game. (15:139) **Costanoan** *Smoking Tools* Hollow stems made into pipes. (21:255) **Havasupai** *Toys & Games* Plant braided by children to make a whip. (197:211) **Thompson** *Containers* Grass-like herbs used extensively to weave coarse bags and nets. (164:497)

***Scirpus tabernaemontani*** K. C. Gmel., Softstem Bulrush

• **Drug**—**Cherokee** *Emetic* Decoction used as emetic. (as *S. validus* 80:27) Decoction of plant taken as an emetic. (as *S. validus* 177:6) *Oral Aid* Compound used as medicine for "spoiled saliva." (as *S. validus* 80:27) **Cree, Woodlands** *Hemostat* Poultice of stem pith applied under the dressing to stop bleeding. (as *S. validus* 109:60) **Iroquois** *Snakebite Remedy* Compound decoction of roots and stems used as a poultice for snakebite. *Tuberculosis Remedy* Compound taken for consumption caused by *Nuphar lutea*. (as *S. validus* 87:275) **Potawatomi** *Love Medicine* Flowers used by women as a love medicine. (as *S. validus* 154:118)

• **Food**—**Chippewa** *Unspecified* Sweet bulbs eaten raw in midsummer. (as *S. validus* 53:320) **Cree, Woodlands** *Unspecified* Stem base and roots used for food. Stem base and tender leaf bases eaten fresh as collected by boat. (as *S. validus* 109:60) **Dakota** *Unspecified* Fresh, raw stems used for food. (as *S. validus* 70:69) **Hopi** *Unspecified* Lower end of the stalk eaten raw. (as *S. validus* 190:159) **Kawaiisu** *Unspecified* Tender, lower portions of the plant eaten raw. (as *S. validus* 206:63) **Lakota** *Unspecified* Species used for food. (as *S. validus* 139:26) **Ute** *Unspecified* Lower, tender portions of the plant used for food. (as *S. validus* 38:36)

• **Fiber**—**Chippewa** *Mats, Rugs & Bedding* Used for mats. (as *S. validus* 53:378) Plant used for weaving floor and wall mats. (as *S. validus* 71:124) **Dakota** *Mats, Rugs & Bedding* Stems used to weave into matting. (as *S. validus* 70:69) **Kawaiisu** *Building Material* Stems sewn with cord, made into mats, and used as interior and exterior walls in house construction. Stems used as wall filler in house construction. *Mats, Rugs & Bedding* Stems sewn with cord, made into mats, and used as rugs, meat platters, cradle linings, and sleeping mats. (as *S. validus* 206:63) **Lakota** *Mats, Rugs & Bedding* Used to make mats. (as *S. validus* 139:26) **Menominee** *Building Material* Bleached, sun dried rushes sewn with basswood string used for covering and side walls of wigwams. Bleached, dried rushes sewn with basswood string used for covering and side walls of medicine lodges. *Mats, Rugs & Bedding* Bleached, sun dried rushes used to weave mats. (as *S. validus* 151:74) **Meskwaki** *Mats, Rugs & Bedding* Long, bleached and dyed rushes used to make mats. (as *S. validus* 152:268) **Ojibwa** *Mats, Rugs & Bedding* Rushes used for the best mats. The bleached rushes were immersed in water for a few days and then cleansed. They selected long rushes, with small diameters, so that the pith content was small. When the mat was in service, such fibers were not readily crushed. The rush, when gathered, is an intense green, white only at the base

where it stands in water. All rushes were first bleached pure white, and afterwards colored as desired. They were pulled, rather than cut, in order to obtain the maximum length. When thoroughly bleached and dried, they dyed them with white men's dyes. Formerly they used native dyes, which they really preferred. The bleached rushes predominated in any rug, and were ivory white in color. The finished rug or mat was 3 feet wide and from 4 to 8 feet long, and sold for from \$8 to \$30 in 1923. The edge was bound securely with nettle fiber cord. (as *S. validus* 153:418) **Omaha Mats, Rugs & Bedding** Stems used to weave into matting. **Pawnee Mats, Rugs & Bedding** Stems used to weave into matting. **Ponca Mats, Rugs & Bedding** Stems used to weave into matting. (as *S. validus* 70:69) **Potawatomi Basketry** Entire, dyed stem used to make baskets. **Mats, Rugs & Bedding** Entire, dyed stem used to make mats. (as *S. validus* 154:112)

- **Other—Chippewa Toys & Games** Used for toys. (as *S. validus* 53:378) **Kawaiisu Ceremonial Items** Used to make images representing the deceased in the ceremony for the dead. **Cooking Tools** Stems sewn with cord, made into mats and used as rugs, meat platters, cradle linings, and sleeping mats. **Stable Gear** Used to make saddles. (as *S. validus* 206:63)

## Scorzonella, Asteraceae

### Scorzonella sp.

- **Food—Paiute Unspecified** Roots roasted and used for food. (104:103)

**Scrophulariaceae**, see *Agalinis, Aureolaria, Bacopa, Besseya, Castilleja, Chelone, Collinsia, Cordylanthus, Digitalis, Diplacus, Epixiphium, Keckiella, Limosella, Linaria, Macranthera, Melampyrum, Mimulus, Nothochelone, Orthocarpus, Pedicularis, Penstemon, Scrophularia, Verbascum, Veronica, Veronicastrum*

## Scrophularia, Scrophulariaceae

**Scrophularia californica** Cham. & Schlecht., California Figwort

- **Drug—Costanoan Dermatological Aid** Poultice of heated twigs applied to swollen sores. Poultice of leaves applied to boils or swellings. **Disinfectant** Decoction of twigs used as a wash for infections. **Eye Medicine** Plant juice used as an eyewash for poor vision. Poultice of leaves applied to sore eyes. (21:15) **Pomo Dermatological Aid** Poultice of heated leaves applied to boils. (66:15) **Pomo, Kashaya Dermatological Aid** Poultice of fresh, warm leaves used to draw a boil to a head. Leaves used to draw the pus out of a burst boil. (72:49)

**Scrophularia californica ssp. floribunda** (Greene) R. J. Shaw, California Figwort

- **Drug—Diegueño Febrifuge** Infusion of roots taken for fevers. (88:219)

**Scrophularia lanceolata** Pursh, Lanceleaf Figwort

- **Drug—Iroquois Antihemorrhagic** Decoction of roots taken for hemorrhage after childbirth. **Blood Medicine** Decoction of roots taken by women for the blood after childbirth. **Cold Remedy** Infusion of roots taken to prevent cramps and colds after birth. (87:434) **Dermatological Aid** Poultice applied for the soreness of sunburns, sunstroke, and frostbite. **Gynecological Aid** Compound decoction of leaves and roots taken for a "sick womb." (87:433) Infusion of roots taken to prevent cramps and colds after birth. **Kidney Aid** Compound taken for dropsy. (87:434)

**Scrophularia marilandica** L., Carpenter's Square

- **Drug—Iroquois Gynecological Aid** Infusion of roots taken by women who are weak due to irregular menses. (87:433) **Meskwaki Unspecified** Roots used as a medicine. (152:247)

### Scrophularia sp.

- **Food—Yavapai Vegetable** Boiled leaves used for greens. (65:258)

## Scutellaria, Lamiaceae

**Scutellaria angustifolia** Pursh, Narrowleaf Skullcap

- **Drug—Miwok Eye Medicine** Decoction used as wash for sore eyes. (12:173)

**Scutellaria californica** Gray, California Skullcap

- **Drug—Mendocino Indian Febrifuge** Plant used for chills and fevers. (41:385)

**Scutellaria elliptica** Muhl. ex Spreng., Hairy Skullcap

- **Drug—Cherokee Abortifacient** Infusion of root used for monthly period. **Antidiarrheal** Infusion of root taken for monthly period and diarrhea. **Breast Treatment** Decoction taken for nerves and compound used for breast pains. **Gynecological Aid** Compound used for expelling afterbirth. **Kidney Aid** Root compound used as a kidney medicine. (80:55)

**Scutellaria galericulata** L., Marsh Skullcap

- **Drug—Delaware Gastrointestinal Aid** Plant tops used as a stomach stimulant. **Laxative** Plant tops used as a laxative. (176:37) **Delaware, Oklahoma Laxative** Plant top used as a laxative and "stomach stimulant." (175:31, 80) **Ojibwa Heart Medicine** Plant used for heart trouble. (153:372)

**Scutellaria incana** Biehler, Hoary Skullcap

- **Drug—Cherokee Abortifacient** Infusion of root used for monthly period. **Antidiarrheal** Infusion of root taken for monthly period and diarrhea. **Breast Treatment** Decoction taken for nerves and compound used for breast pains. **Gynecological Aid** Compound used for expelling afterbirth. **Kidney Aid** Root compound used as a kidney medicine. (80:55)

**Scutellaria lateriflora** L., Blue Skullcap

- **Drug—Cherokee Abortifacient** Infusion of root used for monthly period. **Antidiarrheal** Infusion of root taken for monthly period and diarrhea. **Breast Treatment** Decoction taken for nerves and compound used for breast pains. (80:55) **Emetic** Decoction of roots taken as an emetic to expel the afterbirth. (177:56) **Gynecological Aid** Compound used for expelling afterbirth. (80:55) Decoction of roots taken as an emetic to expel the afterbirth. (177:56) **Kidney Aid** Root compound used as a kidney medicine. (80:55) **Iroquois Misc. Disease Remedy** Infusion of powdered roots taken to prevent smallpox. **Throat Aid** Infusion of powdered roots taken to keep throat clean. (87:422)

**Scutellaria parvula** Michx., Small Skullcap

- **Drug—Meskwaki Antidiarrheal** Plant used for flux. (152:227)

**Scutellaria sp.**, Skullcap

- **Drug—Miwok Cold Remedy** Decoction taken for colds. **Cough Medicine** Decoction taken for coughs. (12:173)

**Sebastiania**, Euphorbiaceae**Sebastiania fruticosa** (Bartr.) Fern., Gulf Sebastiania

- **Drug**—Alabama *Laxative* Roots chewed “to produce a movement of the bowels.” (as *S. ligustrina* 172:665)

**Sedum**, Crassulaceae**Sedum debile** S. Wats., Orpine Stonecrop

- **Other**—Gosiute *Smoke Plant* Leaves formerly used to smoke. (39:381)

**Sedum divergens** S. Wats., Pacific Stonecrop

- **Drug**—Okanagon *Hemorrhoid Remedy* Plant used for piles. *Laxative* and *Pediatric Aid* Plant given to children as a laxative. **Thompson** *Hemorrhoid Remedy* Plant used for piles. *Laxative* and *Pediatric Aid* Plant given to children as a laxative. (125:41) Decoction of whole plant given to children for constipation. (164:463)
- **Food**—Gitksan *Unspecified* Leaves used for food. **Haisla** *Unspecified* Leaves used for food. **Wet'suwet'en** *Unspecified* Leaves used for food. (73:154)

**Sedum integrifolium** (Raf.) A. Nels. **ssp. integrifolium**, Entire-leaf Stonecrop

- **Drug**—Eskimo, Alaska *Oral Aid* Roots chewed and the juice spat out for sores in the mouth. (as *S. rosea* ssp. *integrifolium* 1:36)
- **Food**—Eskimo, Alaska *Beverage* Red plant tops used to make a tea-like beverage. (as *S. rosea* ssp. *integrifolium* 1:36) *Unspecified* Plant eaten fresh, soured, or in oil. Root used for food. (as *Rhodiola integrifolia* 4:715)

**Sedum lanceolatum** Torr., Spearleaf Stonecrop

- **Drug**—Okanagan-Colville *Gynecological Aid* Infusion of stems, leaves, and flowers taken to clean out the womb after childbirth. *Laxative* Infusion of stems, leaves, and flowers taken or raw leaves chewed as a laxative. (188:98)

**Sedum laxum** (Britt.) Berger, Roseflower Stonecrop

- **Food**—Tubatulabal *Unspecified* Rolled in palm of hand with salt grass leaves and stems and eaten. (as *Cotyledon laxa* 193:19) Leaves used for food. (as *Cotyledon laxa* 193:15)

**Sedum rosea** (L.) Scop., Roseroot Stonecrop

- **Drug**—Eskimo, Nunivak *Unspecified* Infusion of flowers used for its medicinal value. (149:325) **Eskimo, Western** *Analgesic* and *Gastrointestinal Aid* Compound decoction of flowers taken for stomachache and intestinal discomfort. (as *S. roseum* 108:5) *Tuberculosis Remedy* Raw flowers eaten for tuberculosis. (as *S. roseum* 108:24, 60)
- **Food**—Alaska **Native** *Unspecified* Roots used for food. *Vegetable* Leaves and succulent, fleshy stems used raw in mixed salads or cooked as a green vegetable. (as *S. roseum* 85:67) **Eskimo, Arctic** *Vegetable* Young leaves and flowering stems eaten raw as salad, cooked as a potherb, or made into a “sauerkraut.” (as *Rhodiola rosea* 128:28) **Eskimo, Inupiat** *Frozen Food* Fermented stems, leaves, and young flower buds frozen through the winter. *Staple* Roots stored buried in the sand and grass and used in hard times when short of food. *Unspecified* Roots eaten with oil. *Vegetable* Fermented stems, leaves, and young flower buds eaten with walrus blubber, any kind of blubber, or oil. Stems, leaves, and young flower buds were preserved by

fermenting in water. A barrel was filled with clean, unchopped rose-root plants which were covered with water. Plants were pressed under the water with a plate and stored in a medium warm to cool place to ferment. If it was too cold, the roseroot would not ferment. If it was too warm, it might spoil first. In 2 to 3 weeks, or, when the plants were squashed together, the lids were taken off and another batch of roseroot was added and covered again. More water was added, when necessary, to cover the plants. Roseroot was continuously added and let to ferment down until the barrel was full. When the taste was just right, the batches were taken out and put into plastic bags, plants and juice together, and frozen. (as *S. roseum* 98:54)

**Sedum sp.**, Sedum

- **Drug**—Costanoan *Dermatological Aid* Decoction of plant or powdered plant used on wounds. *Febrifuge* Decoction of plant used as a gargle for fevers. *Throat Aid* Decoction of plant used as a gargle for sore throats. (21:18) **Makah** *Urinary Aid* Leaves used for bed-wetting. (67:256) **Thompson** *Hemorrhoid Remedy* Decoction of several species used as a wash or poultice of plant applied for piles. (164:463)
- **Food**—Costanoan *Unspecified* Raw leaves and stems used for food. (21:251) **Makah** *Substitution Food* Plant used on journeys in place of unsafe water. (79:31) *Unspecified* Leaves used for food. (67:256)

**Sedum spathulifolium** Hook., Broadleaf Stonecrop

- **Drug**—Bella Coola *Gynecological Aid* Leaves eaten or poultice of warmed leaves used to start maternal milk flow. (150:57) Decoction of stalks taken for easy deliveries. (184:204) **Kuper Island Indian** *Hemostat* Leaves and stems squeezed and juice rubbed over bleeding wounds. (182:81) **Okanagan** *Hemorrhoid Remedy* Plant used for piles. *Pediatric Aid* and *Sedative* Infusion of whole plant used as a wash for babies with extreme nervousness. (125:41) **Songish** *Gynecological Aid* Leaves chewed by women in their ninth month of pregnancy to facilitate childbearing. (182:81) **Thompson** *Hemorrhoid Remedy* Plant used for piles. (125:41) *Laxative* Decoction of whole plant given to children for constipation. (164:463) *Oral Aid* Plant used for sore gums. (187:205) *Pediatric Aid* Infusion of whole plant used as a wash for babies with extreme nervousness. (125:41) Decoction of whole plant used as a wash to soothe cross babies. (164:462) Decoction of whole plant given to children for constipation. (164:463) *Sedative* Infusion of whole plant used as a wash for babies with extreme nervousness. (125:41) Decoction of whole plant used as a wash to soothe cross babies. (164:462)

**Sedum stenopetalum** Pursh, Wormleaf Stonecrop

- **Drug**—Okanagan-Colville *Venereal Aid* Infusion of whole plant taken for venereal disease. (188:98)

**Sedum telephioides** Michx., Allegheny Stonecrop

- **Drug**—Delaware, Ontario *Dermatological Aid* Poultice of crushed leaves applied to wounds as a disinfectant. *Disinfectant* Poultice of crushed leaves applied to infected wounds. (175:66)

**Sedum telephium** L. **ssp. telephium**, Witch's Moneybags

- **Drug**—Iroquois *Dermatological Aid* Plant used when babies cry or for bruises. Poultice of stalks and leaves applied to injuries resulting from witching. *Liver Aid* Compound infusion of whole roots taken for liver sickness. *Other* Rubbed on paralyzed face. *Pediatric Aid* Used for crying babies or bruises. *Veterinary Aid* Infusion of plant

given to horses as a diuretic. *Witchcraft Medicine* Poultice of stalks and leaves applied to injuries resulting from witching. (87:343) **Malecite** *Dermatological Aid* Poultice of pounded leaves used for boils and carbuncles. (as *S. purpureum* 116:247) **Micmac** *Dermatological Aid* Leaves used for boils and carbuncles. (as *S. purpureum* 40:62)

**Selaginellaceae**, see *Selaginella*

## *Selaginella*, Selaginellaceae, spike moss

***Selaginella densa*** Rydb., Lesser Spikemoss

- **Drug**—**Blackfoot** *Antihemorrhagic* Infusion of plant taken for spitting up blood. (86:74) *Gynecological Aid* Decoction of plant used to induce labor and expel the afterbirth. (86:61) *Narcotic* Plant eaten by a starving person for its doping effect and to make one feel unusually strong. (86:105) *Veterinary Aid* Powdered roots applied to the mouth of racehorses to make them hyperactive. (86:90)
- **Food**—**Blackfoot** *Spice* Dried plant used to spice meat. *Starvation Food* Very bitter berries eaten only through necessity and never stored. (86:105)

## *Sempervivum*, Crassulaceae

***Sempervivum* sp.**, Houseleek

- **Drug**—**Mahuna** *Oral Aid* Plant used for the prevention of salivary gland swelling. (140:47)

***Sempervivum tectorum*** L., Common Houseleek

- **Drug**—**Cherokee** *Dermatological Aid* Poultice of wilted plant applied to remove corns. *Ear Medicine* Juice warmed and used for earache. (80:42)

## *Senecio*, Asteraceae

***Senecio anonymus*** Wood, Small's Ragwort

- **Drug**—**Catawba** *Tuberculosis Remedy* Plant used for consumption. (as *S. smallii* 157:191)

***Senecio aureus*** L., Golden Ragwort

- **Drug**—**Cherokee** *Gynecological Aid* Infusion taken to prevent pregnancy. *Heart Medicine* Infusion taken for heart trouble. (80:52) **Iroquois** *Blood Medicine* Decoction of plants taken for the blood. *Diaphoretic* Roots used as a diaphoretic. *Febrifuge* Infusion of rosettes given to children with fevers. *Kidney Aid* Decoction of plants taken for the kidneys. *Orthopedic Aid* Decoction of plants taken for broken bones. *Pediatric Aid* Infusion of rosettes given to children with fevers. (87:473)

***Senecio congestus*** (R. Br.) DC., Marsh Fleabane

- **Drug**—**Eskimo**, **Inuktitut** *Poison* Plant considered poisonous. (202:187) **Eskimo**, **Western** *Poison* Roots considered poisonous. (108:17)
- **Food**—**Eskimo**, **Arctic** *Vegetable* Young leaves and flowering stems eaten raw as salad, cooked as a potherb, or made into a "sauerkraut." (128:27)

***Senecio fendleri*** Gray, Fendler's Ragwort

- **Drug**—**Keres**, **Western** *Psychological Aid* Infusion of plant used for homesickness. (171:68) **Navajo**, **Ramah** *Ceremonial Medicine* Plant used in ceremonial chant lotion. *Dermatological Aid* Plant used for frozen feet. Poultice of moistened, crushed leaves and flowers ap-

plied to pimples or sores. *Gastrointestinal Aid* Decoction taken after swallowing an ant. *Panacea* Plant used as "life medicine." *Pediatric Aid* Strong decoction used for "birth injury." (191:53)

***Senecio flaccidus* var. *douglasii*** (DC.) B. L. Turner & T. M. Barkl., Douglas's Groundsel

- **Drug**—**Costanoan** *Dermatological Aid* Infusion of plant used externally for infected sores or cuts. *Disinfectant* Infusion of plant used externally for infected sores. *Gynecological Aid* Infusion of plant taken by women for "lockjaw" after childbirth. *Kidney Aid* Infusion of plant taken for a "cold in the kidneys." *Other* Infusion of plant taken by women for "lockjaw" after childbirth. (as *S. douglasii* 21:27) **Kawaiisu** *Laxative* Infusion of leaves taken as a strong laxative and could cause death. *Unspecified* Infusion of leaves used as a very strong medicine. (as *S. douglasii* 206:63)
- **Fiber**—**Hopi** *Brushes & Brooms* Plant top used as a brush to remove spines from the prickly pears. (as *S. douglasii* 56:19) **Navajo** *Brushes & Brooms* Tops used as brooms to brush the spines from cactus fruit. (as *S. douglasii* 55:88) Plant top used as a brush to remove spines from the prickly pears. (as *S. douglasii* 56:19)
- **Other**—**Navajo** *Ceremonial Items* Plant boiled and taken before person goes into sweat house, to get a good voice for the Night Chant. (as *S. douglasii* 55:88)

***Senecio flaccidus* Less. var. *flaccidus***, Threadleaf Groundsel

- **Drug**—**Hopi** *Antirheumatic (External)* Poultice of flowers and leaves used for sore muscles. *Dermatological Aid* Poultice of ground leaf used for pimples and skin diseases. (as *S. longilobus* 42:359) Ground leaves applied to pimples. *Orthopedic Aid* Pounded plant smeared over sore muscles. (as *S. longilobus* 200:32, 98) **Jemez** *Stimulant* Plant placed on hot coals and smoke stimulated faint and sick person. (as *S. filifolius* 44:27) **Keres**, **Western** *Dermatological Aid* Leaves used in shoes to prevent sweaty feet. Plant mixed with artemisia and deer marrow to make a salve. *Gastrointestinal Aid* Infusion of 6-inch piece of twig used for stomach trouble. (as *Senecio filifolius* 171:69) **Navajo**, **Kayenta** *Dermatological Aid* Poultice of plant applied to boils. (as *Senecio longilobus* 205:49)
- **Other**—**Keres**, **Western** *Incense & Fragrance* Plant parts used in bed for the good smell. *Insecticide* Plant parts used in bed as a bedbug repellent. (as *Senecio filifolius* 171:69)

***Senecio jacobaea*** L., Stinking Willie

- **Drug**—**Makah** *Unspecified* Infusion of plant used as a medicinal tea. (67:327)

***Senecio multicapitatus*** Greenm. ex Rydb., Ragwort Groundsel

- **Drug**—**Navajo** *Dermatological Aid* Decoction of plants used as a steam bath for sores. (90:156) **Navajo**, **Ramah** *Cathartic* Decoction of root taken as a cathartic. *Gynecological Aid* Decoction of root used to facilitate delivery of placenta. (191:53) **Zuni** *Analgesic* Cold infusion of pulverized root rubbed over limbs for "aching bones." (166:59, 60) *Ceremonial Medicine* Infusion of powdered root ceremonially rubbed on limbs for "aching bones." (166:59) *Eye Medicine* Infusion of blossoms used as drops for inflamed eyes. (166:59, 60) *Orthopedic Aid* Infusion of powdered root ceremonially rubbed on limbs for "aching bones." (166:59)
- **Food**—**Navajo**, **Ramah** *Candy* Root bark used for chewing gum. *Star-*

vation *Food* Roasted, ground seeds, cornmeal, and goat's milk made into flat cakes or mush in times of famine. (191:53)

**Senecio multilobatus** Torr. & Gray ex Gray, Lobeleaf Groundsel

- **Drug**—Navajo, Ramah *Analgesic* Decoction of plant used for menstrual pain. *Ceremonial Medicine* Plant rubbed on body as ceremonial medicine. *Gynecological Aid* Decoction of plant taken for menstrual pain. (191:53) **Yavapai** *Cold Remedy* Decoction of leaf stem inhaled for colds. *Dermatological Aid* Boiled or dried and powdered leaves used for sores. *Gastrointestinal Aid* Decoction of root taken for stomachache. *Nose Medicine* Decoction of leaf steam inhaled for sore nose. *Venereal Aid* Decoction of root used as a wash for gonorrheal sores. (65:261)

**Senecio neomexicanus** Gray, New Mexico Groundsel

- **Drug**—Navajo, Kayenta *Antidote* Plant used as an antidote for narcotics. *Burn Dressing* Powdered plant, poultice of plant applied and plant used as lotion for burns. *Disinfectant* Plant used for bear infections. (205:49) **Navajo, Ramah** *Hunting Medicine* Cold infusion used as lotion for good luck in hunting. (191:53)

**Senecio pseudoarnica** Less., Seaside Ragwort

- **Drug**—Aleut *Dermatological Aid* Poultice of leaves applied to drain cuts and boils. (8:427)
- **Food**—Eskimo, Alaska *Unspecified* Fleshy stems and boiled leaves used for food. The leaves were edible only when boiled. The plant was eaten only when young and tender. (1:38)

**Senecio sp.**, Groundsel

- **Drug**—Ute *Unspecified* Used as medicine. (38:36)
- **Food**—Aleut *Unspecified* Species used for food. (7:29) **Gosiute** *Candy* Latex used as a chewing gum. (39:381)

**Senecio spartioides** Torr. & Gray, Broom Groundsel

- **Drug**—Hopi *Antirheumatic (External)* Poultice of flowers and leaves used for sore muscles. *Dermatological Aid* Poultice of ground leaf used for pimples and skin diseases. (42:360) **Keres, Western** *Gynecological Aid* Infusion of leaves used as a tonic after childbirth. (171:68)

**Senecio triangularis** Hook., Arrowleaf Groundsel

- **Drug**—Cheyenne *Analgesic* Infusion of pulverized leaves or roots taken for chest pains. *Sedative* Infusion of pulverized leaves or roots taken as a sedative. (76:190)

**Senna**, Fabaceae

**Senna hebecarpa** (Fern.) Irwin & Barneby, American Wild Sensitive Plant

- **Drug**—Cherokee *Analgesic* Infusion taken for cramps. *Cathartic* Infusion given to children and adults as a purgative. *Dermatological Aid* Poultice of root used for sores. *Febrifuge* Infusion taken for fever and infusion of root given to children for fever. *Heart Medicine* Infusion of root taken for heart trouble. *Misc. Disease Remedy* Infusion taken for "blacks" (hands and eye sockets turn black). *Pediatric Aid* Infusion given to children as a purgative and for fever. *Pulmonary Aid* Compound taken for pneumonia. *Stimulant* Compound infusion given for fainting spells. (as *Cassia hebecarpa* 80:54) **Iroquois** *Anthelmintic* Plant used as a worm remedy. *Laxative* Compound decoction of flowers taken as a laxative. (as *Cassia hebecarpa* 87:362)

**Senna marilandica** (L.) Link, Maryland Wild Sensitive Plant

- **Drug**—Cherokee *Analgesic* Infusion taken for cramps. *Cathartic* Infusion given to children and adults as a purgative. *Dermatological Aid* Poultice of root used for sores. *Febrifuge* Infusion taken for fever and infusion of root given to children for fever. *Heart Medicine* Infusion of root taken for heart trouble. *Misc. Disease Remedy* Infusion taken for "blacks" (hands and eye sockets turn black). *Pediatric Aid* Infusion given to children as a purgative and for fever. *Pulmonary Aid* Compound taken for pneumonia. *Stimulant* Compound infusion given for fainting spells. (as *Cassia marilandica* 80:54) **Iroquois** *Anthelmintic* Compound infusion taken for tapeworms. *Blood Medicine* Compound infusion taken as a blood remedy. (as *Cassia marilandica* 87:362) **Meskwaki** *Throat Aid* Seeds soaked until mucilaginous, then eaten for sore throat. (as *Cassia marilandica* 152:228)

**Senna occidentalis** (L.) Link, Septicweed

- **Drug**—Hawaiian *Dermatological Aid* Plant and other ingredients pounded, mixed, squeezed, and resulting juice used as wash for skin diseases. (as *Cassia occidentalis* 2:4)
- **Food**—Kiowa *Beverage* Ground seeds boiled to make a coffee-like beverage. (as *Ditremexa occidentalis* 192:31)
- **Other**—Kiowa *Fuel* Wood used for fuel. Wood used for fuel. (as *Ditremexa occidentalis* 192:31)

**Senna tora** (L.) Roxb., Senna

- **Drug**—Houma *Misc. Disease Remedy* Compound decoction of root taken for typhoid. (as *Cassia tora* 158:65)

**Sequoia**, Taxodiaceae, conifer

**Sequoia sempervirens** (Lamb. ex D. Don) Endl., Redwood

- **Drug**—Houma *Blood Medicine* Scraped "knees" or inner bark mixed with whisky and taken as a blood purifier. *Liver Aid* Infusion of inner bark in whisky taken for jaundice and to purify the blood. (as *Taxodium sempervirens* 158:61) **Pomo** *Ear Medicine* Poultice of heated leaves applied for earaches. *Stimulant* Gummy sap taken for rundown conditions. *Tonic* Infusion of gummy sap taken as a tonic. (66:11) **Pomo, Kashaya** *Ear Medicine* Poultice of warmed, new foliage used for earaches. *Stimulant* Gummy sap and water taken as medicine for rundown condition. (72:97) **Tlingit** *Venereal Aid* Compound poultice of bark applied for syphilis. (as *Taxodium sempervirens* 107:283)
- **Fiber**—Costanoan *Basketry* Sprouts from burls used in basketry. (21:248) **Mendocino Indian** *Building Material* Lumber used to construct houses. *Canoe Material* Fallen logs formerly hollowed out by fire and used as canoes. (41:309) **Pomo, Kashaya** *Building Material* Bark leaned together, in a circle, to make a house. (72:97) **Tolowa** *Building Material* Wood used for building materials. *Canoe Material* Wood used to make canoes. **Yurok** *Building Material* Wood used for building materials. *Canoe Material* Wood used to make canoes. (6:55)
- **Other**—Pomo, Kashaya *Toys & Games* Pieces of bark used by young girls to play dolls. (72:97) **Yurok** *Cash Crop* Wood used to make canoes and traded to the Karok. (6:55)

**Serenoa**, Arecaceae

**Serenoa repens** (Bartr.) Small, Saw Palmetto

- **Food**—Seminole *Fruit* Fruit and trunk used for food. (169:504)
- **Fiber**—Choctaw *Basketry* Stems used in basketry. (as *Serenoa serru-*

*lata* 25:13) **Seminole Basketry** Leaf stems used to make medicine baskets. (169:160) Plant used to make baskets. *Brushes & Brooms* Plant used to make brushes. *Cordage* Plant used to make rope. (169:504)

- **Other—Seminole Cash Crop** Plant used to make tourist goods. *Ceremonial Items* Plant used to make dance fans and rattles. *Fuel* Plant used to make flint and steel punk. *Hunting & Fishing Item* Plant used to make fish drags. *Tools* Plant used to make fire fans. *Toys & Games* Plant used to make dolls. (169:504)

## Sesamum, Pedaliaceae

### *Sesamum orientale* L., Sesame

- **Drug—Cherokee Antidiarrheal** Decoction of leaves and seeds given for dysentery. *Cathartic* Oil of seed used as a cathartic. *Gynecological Aid* Decoction of leaves and seeds given for flux. *Misc. Disease Remedy* and *Pediatric Aid* Decoction of leaves and seeds given for cholera infantum. (as *Sesamum indicum* 80:25)

## Shepherdia, Elaeagnaceae

### *Shepherdia argentea* (Pursh) Nutt., Silver Buffalo Berry

- **Drug—Blackfoot Gastrointestinal Aid** Berries eaten for stomach troubles. *Laxative* Berries eaten as a mild laxative. (86:68) **Cheyenne Unspecified** Dried, smashed berries used as an ingredient in medicinal mixtures. (83:24) **Dakota Ceremonial Medicine** Fruit used occasionally in ceremonial feasts at female puberty rites. (as *Lepargyrea argentea* 70:106) **Navajo Febrifuge** Berries taken for fevers. (90:156)
- **Food—Arapaho Preserves** Berries used to make jelly. *Winter Use Food* Berries dried for winter use. (121:49) **Blackfoot Forage** Berries eaten by buffalo. (97:48) **Cheyenne Pie & Pudding** Berries boiled, flour and sugar added, and eaten as a pudding. (83:24) **Dakota Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh in season. (as *Lepargyrea argentea* 70:106) **Gosiute Fruit** Berries used for food. (39:381) **Lakota Dried Food** Berries dried and used for food. *Fruit* Berries eaten fresh. (106:43) Fruits eaten for food. (139:44) **Montana Indian Dried Food** Fruits dried and stored for winter use. (82:57) *Fruit* Fruit eaten fresh. (19:23) Fruits eaten fresh. (82:57) *Preserves* Fruit used to make jelly. (19:23) *Sauce & Relish* Fruits used to make a meat flavoring sauce. (82:57) *Winter Use Food* Fruit dried for winter use. (19:23) **Navajo Dried Food** Dried fruit used for food. *Fruit* Fresh fruit used for food. (90:156) **Omaha Dried Food** Fruit dried for winter use. (as *Lepargyrea argentea* 68:326) Fruit dried for winter use. (as *Lepargyrea argentea* 70:106) *Fruit* Fruit eaten fresh. (as *Lepargyrea argentea* 68:326) Fruit eaten fresh in season. (as *Lepargyrea argentea* 70:106) **Paiute Dried Food** Berries cooked, dried, boiled, drained, crushed, and used for food. *Fruit* Fruits eaten fresh. *Pie & Pudding* Berries, flour, and sugar mixed and eaten as a pudding. (104:100) **Paiute, Northern Dried Food** Berries dried for winter use. *Porridge* Berries dried, mashed, and eaten like a mush. (59:50) **Pawnee Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh in season. **Ponca Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh in season. (as *Lepargyrea argentea* 70:106) **Thompson Fruit** Scarlet, sour fruits eaten fresh. *Winter Use Food* Scarlet, sour fruits preserved for winter use. (as *Lepargyrea argentea* 164:489) **Ute Fruit** Berries formerly used for food. (38:36) **Winnebago Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh in season. (as *Lepargyrea argentea* 70:106)

- **Dye—Blackfoot Red Berries** used to make a red dye. (97:48)

### *Shepherdia canadensis* (L.) Nutt., Russet Buffalo Berry

- **Drug—Algonquin, Quebec Orthopedic Aid** Poultice of hot-water-softened bark and pin cherry bark used to make broken bone plaster or bandage. *Unspecified* Infusion of bark used for a medicinal tea. (18:203) **Carrier Dermatological Aid** Berries, froth, or jelly eaten to reduce injury from mosquito bites. The berries were ripe in June and were eaten at this time to reduce injury from mosquito bites: they seem apparently to feel that the occurrence of berries and mosquitoes simultaneously was a divine indication that one was an antidote for the other. Decoction of branches used as a hair tonic for dyeing and curling the hair. The branches were taken in July, broken up, and boiled for 2 to 3 hours in water, until the liquid looked like brown coffee. The liquid was decanted off and bottled without further treatment but did not deteriorate over a long period of time. To use, the decoction was rubbed into the hair, which was simultaneously curled and dyed a brownish color. *Gynecological Aid* Infusion of roots used in childbirth. (89:12) *Laxative* Decoction of stems taken for constipation. (31:76) *Tuberculosis Remedy* Roots used for tuberculosis. (89:12) **Carrier, Northern Cathartic** Decoction of root taken as a purgative. (150:60) **Cree, Woodlands Antihemorrhagic** Infusion of roots taken for coughing up blood. *Antirheumatic (External)* Decoction of plant applied externally for aching limbs and arthritis. *Dermatological Aid* Decoction of plant applied externally to head and face sores. *Laxative* Infusion of inner bark, scraped from the stem with a downward motion, used as a laxative. *Venereal Aid* Decoction of stems taken for venereal disease. (109:60) **Eskimo, Inupiat Poison** Berries poisonous in great quantities. (98:111) **Flathead Eye Medicine** Bark solution used for sore eyes. (82:53) *Tuberculosis Remedy* Roots used for tuberculosis. *Unspecified* Wood used for drug purposes. (89:12) **Gitksan Antirheumatic (Internal)** Compound decoction of root taken three times a day for rheumatism. *Cough Medicine* Decoction of bark, branches, and leaves taken for chronic cough. *Venereal Aid* Decoction of roots, stem, and branches used as a wash for gonorrhea. (150:60) **Haisla & Hanaksiala Reproductive Aid** Berries given to women in labor to ease the birth. (43:236) **Kutenai Eye Medicine** Bark solution used for sore eyes. (82:53) **Okanagan-Colville Dermatological Aid** Decoction of branches used as a shampoo. *Hunting Medicine* Leaves chewed and spit out by hunter to stop a wounded deer from running. (188:99) **Salish Cathartic** Decoction of twigs taken as a mild physic. *Gastrointestinal Aid* Decoction of twigs taken as a tonic for the stomach. *Tonic* Decoction of twigs taken as a tonic for the stomach. (178:294) **Shuswap Cathartic** Decoction of plants taken by young men in training to purge themselves. *Gastrointestinal Aid* Decoction of berries taken for stomach. (123:61) *Tuberculosis Remedy* Roots used for tuberculosis. *Unspecified* Wood used for drug purposes. (89:12) **Sioux Antidiarrheal** Bark used for diarrhea. *Cathartic* Root used as a cathartic. *Poison* Fruit very acrid and considered poisonous. (19:24) **Tanana, Upper Antirheumatic (External)** Decoction of stems and leaves used as a wash for swellings. *Dermatological Aid* Decoction of stems and leaves used as a wash for cuts. Decoction of whole plant above the ground used as a wash for sores. *Panacea* Decoction of berries taken for sickness. *Tuberculosis Remedy* Decoction of stems and leaves taken for tuberculosis. (102:13) **Thompson Cancer Treat-**

*ment* Decoction of branches and leaves taken in a 1-cupful dose for stomach cancer. (187:209) *Cathartic* Decoction of root or decoction of dried stem and leaves taken as a physic. (as *Lepargyrea canadensis* 164:472) *Dermatological Aid* Berry juice used for acne and boils. (187:209) *Disinfectant* Decoction of stem and leaf taken by hunters and warriors in sweat house to purify. (164:505) *Gastrointestinal Aid* Decoction of bark taken as a tonic for the stomach. (as *Lepargyrea canadensis* 164:472) Berry juice and whip taken in a 1-teaspoon dose for indigestion. Berry juice used for digestive problems. Infusion of fruits and leaves used for ulcers. Berries eaten for stomach cancer. *Heart Medicine* Berry juice and whip taken in a 1-teaspoon dose for heart attacks. *Hypotensive* Decoction of branches and leaves taken in a 1-cupful dose for high blood pressure. Berries eaten for high blood pressure. *Laxative* Decoction of twigs and sticks used as a laxative. *Liver Aid* Berry juice used for gallstones. *Sedative* Infusion of fruits and leaves considered a good sedative. Berry whip said to make one sleepy. (187:209) *Tonic* Decoction of bark taken as a tonic for the stomach. (as *Lepargyrea canadensis* 164:472) Berry jam taken as a tonic. (187:209) *Tuberculosis Remedy* Roots used for tuberculosis. *Umatilla Gynecological Aid* Infusion of roots used in childbirth. (89:12)

- **Food—Alaska Native Dessert** Berries mixed with sugar and water, beaten with hands into foam, and used on desserts like whipped cream. (85:146) **Bella Coola Ice Cream** Berries mixed with water, whipped, and eaten as “Indian ice-cream.” (184:204) **Blackfoot Starvation Food** Bitter berries eaten in lean times. (86:105) **Carrier Dried Food** Berries dried for future use. (31:76) *Fruit* Berries used for food. (89:12) *Ice Cream* Berries beaten by hand in a birch basket into Indian ice cream. (31:76) Berries used to make a froth similar to ice cream. The berries were macerated. In this process, it was most essential that all grease be kept away and the utensils be kept perfectly clean. A smooth froth, almost like ice cream of light consistency, was formed, which was edible and to those accustomed to it of good taste. Sugar was added to sweeten. This froth appeared to be formed from the saponins which were admixed with the other components of the fruit. (89:12) *Preserves* Berries used to make jam. (31:76) Berries used to make jelly. (89:12) **Cheyenne Preserves** Fruit used to make excellent preserves. (as *Lepargyrea canadensis* 76:181) **Clallam Ice Cream** Berries whipped until foamy and eaten as “Indian ice cream.” (57:199) **Coeur d’Alene Fruit** Berries eaten fresh. (178:90) *Ice Cream* Berries used to make a froth similar to ice cream. (89:12) **Eskimo, Inupiat Dessert** Berries, water, and sugar whipped into a foamy dessert. (98:111) **Flathead Beverage** Berries, water, sugar, and lemon or vanilla used to make a drink. (19:24) *Ice Cream* Berries used to make a froth similar to ice cream. (89:12) **Haisla & Hanaksiala Dried Food** Berries dried for future use. *Ice Cream* Berries whipped into a froth and eaten as “Indian ice cream.” *Special Food* Berries served at large gatherings, special occasions, and feasts. (43:236) **Kitasoo Ice Cream** Berries whipped into “Indian ice cream.” *Winter Use Food* Berries canned for future use. (43:331) **Kwakiutl, Southern Fruit** Berries whipped until white and frothy and used for food. (183:282) **Lillooet Ice Cream** Berries used to make a froth similar to ice cream. (89:12) **Makah Dessert** Berries used to make a frothy dessert. (67:288) Berries whipped into a froth and used as dessert at feasts. (79:41) *Dried Food* Purchased berries dried or canned for storage. *Winter Use Food* Pur-

chased berries dried or canned for storage. (67:288) **Montana Indian Dried Food** Berries sun dried and stored for future use. *Fruit* Berries eaten fresh. *Ice Cream* Berries used to make a frothy or foamy “Indian Ice Cream.” (82:53) **Nanaimo Dessert** Berries crushed in water, beaten to make a froth, and eaten as a favorite dessert. (182:82) **Nitinaht Ice Cream** Berries whipped in small amounts of water and eaten as “Indian ice cream” at large feasts. (186:103) **Northwest Indian Beverage** Berries made into a foaming drink. (as *Lepargyrea canadensis* 118:17) **Okanagan-Colville Ice Cream** Berries used to make “Indian ice cream.” (188:99) **Okanagon Beverage** Fruits fermented to make an alcoholic drink. *Fruit* Fruits eaten fresh by children. (125:39) *Staple* Berries used as a principal food. (178:239) **Oregon Indian Beverage** Berries used to make a foaming drink. (as *Lepargyrea canadensis* 118:20) **Oweekeno Fruit** Berries whipped, mixed with sugar, and eaten. *Winter Use Food* Berries canned for future use. (43:93) **Salish, Coast Dessert** Berries crushed in water, beaten to make a froth, and eaten as a favorite dessert. (182:82) **Sanpoil Ice Cream** Berries used to make a froth similar to ice cream. (89:12) **Shuswap Beverage** Canned berry juice used as a beverage during haying time. *Dessert* Berries canned with sugar, mixed with equal amount of water, and whipped into a foam; whipped cream. *Fruit* Berries mixed with timber grass, dried, water added, and beaten to a foam. (123:61) *Ice Cream* Berries used to make a froth similar to ice cream. (89:12) **Spokane Fruit** Berries used for food. (178:343) **Tanana, Upper Fruit** Raw berries whipped with sugar until frothy. Berries mixed with sugar, fried, and eaten. (102:13) **Thompson Beverage** Fruits fermented to make an alcoholic drink. (125:39) Berries squeezed through a rice bag or some other straining cloth and made into juice. *Bread & Cake* Soapberries dried on mats and formed into cakes. The berries were gathered in the summer, but were not hand picked because they were too soft. A clean mat was placed underneath the bush, then a branch laden with fruit was held and hit with a stick until the fruit fell off. The ripe berries were then placed in a basket, heated with hot rocks, and spread out on mats or on a layer of “timbergrass” set on a scaffolding and allowed to dry. A small fire was lit beneath so that the smoke would drive away the flies. The dried soapberry cakes were then broken off, placed in a birch bark basket with water, and “swished” with a whisk of maple bark tied to a stick. The mixture was originally sweetened with the “white” variety of saskatoon berries that were dried and soaked in water to reconstitute them. More recently, sugar was added to the whip to sweeten it. The sweetened froth was served in small containers, first to the men and then to the women, as a sort of dessert or confection. It was said that the soapberries must never come into contact with grease or oil or the berries would not whip. One informant said that special containers were used for the preparation of soapberries, not for cooking or any other purpose, so that the berries could be kept free of grease. It was said that pregnant women should never eat the soapberry whip. *Candy* Berries made into juice and used to make a frothy confection. *Forage* Berries eaten by bears. (187:209) *Fruit* Fruits eaten fresh by children. (125:39) *Preserves* Berries made into jam. (187:209) **Thompson, Lower Ice Cream** Berries used to make a froth similar to ice cream. (89:12)

- **Other—Gitksan Cash Crop** Berries smoke dried and used for trade. (43:236) Berries used for trade. **Nisga Cash Crop** Berries used for

trade. (43:331) **Nuxalkmc** *Cash Crop* Berries smoke dried and used for trade. (43:236) **Okanagan-Colville** *Good Luck Charm* Infusion of branches taken to bring good luck. (188:99) **Shuswap** *Ceremonial Items* Decoction or infusion of berries taken during purification rites. (89:12) **Thompson** *Cash Crop* Berries used as an important trade item. *Good Luck Charm* Decoction of leafless branches taken by hunters to clean out their insides for good luck. The decoction was said to clean the hunters' insides. The hunters also used the decoction to wash themselves and their gear. *Hunting & Fishing Item* Decoction of leafless branches used as a wash for hunting gear. (187:209) **Tsimshian** *Cash Crop* Berries smoke dried and traded. (43:331) **Tsimshian, Coast** *Cash Crop* Berries smoke dried and used for trade. (43:236)

### ***Shepherdia rotundifolia*** Parry, Roundleaf Buffalo Berry

- **Drug**—Havasupai *Poison* Dust from the underside of the leaves said to make the eyes sore and to cause blindness. (197:234) **Navajo, Kayenta** *Analgesic* Ash used as lotion for headaches. *Ceremonial Medicine* Plant used as a Plumeway emetic. *Dermatological Aid* Ash used as lotion to heal navels. *Emetic* Plant used as a Plumeway emetic. *Pediatric Aid* Ash used as lotion to heal navels. *Throat Aid* Ash used as lotion for sore throat. *Toothache Remedy* Ash used as lotion for toothaches. (205:32)

### ***Shepherdia* sp.**, Soap Berry

- **Food**—Thompson *Preserves* Berries collected in large quantities and cured. (178:237)

### ***Sherardia***, Rubiaceae

#### ***Sherardia arvensis*** L., Blue Fieldmadder

- **Dye**—Cherokee *Red* Used to make a red or rose dye. (as *Sherardia arvensis* 80:44)

### ***Shinnersoseris***, Asteraceae

#### ***Shinnersoseris rostrata*** (Gray) S. Tomb, Beaked Skeletonweed

- **Drug**—Navajo *Sedative* Plant smoked as a sedative. (as *Lygodesmia rostrata* 55:88)
- **Other**—Navajo *Ceremonial Items* Plant offered to the antelope at the Corral Chant. (as *Lygodesmia rostrata* 55:88)

### ***Sicyos***, Cucurbitaceae

#### ***Sicyos angulatus*** L., Oneseed Burr Cucumber

- **Drug**—Iroquois *Venerial Aid* Decoction of vine taken for venerial disease. *Veterinary Aid* Compound plants mixed with cow's feed for difficult birth of a calf. (87:451)

### ***Sida***, Malvaceae

#### ***Sida* sp.**, Ilima

- **Drug**—Hawaiian *Gynecological Aid* Flowers and other plants chewed, squeezed, and resulting liquid placed in the vagina for womb troubles. *Laxative* and *Pediatric Aid* Chewed flowers given to infants and children as a laxative. *Respiratory Aid* Flowers, shoots, root bark, and other plants pounded, squeezed, and resulting liquid taken for asthma. *Strengtheners* Bark and other plants pounded, squeezed, and resulting liquid taken for general debility. (2:26)
- **Other**—Hawaiian *Decorations* Plant used to make wreaths. (2:26)

### ***Sidalcea***, Malvaceae

#### ***Sidalcea malviflora*** (DC.) Gray ex Benth., Dwarf Checkermallow

- **Food**—Luiseño *Vegetable* Plant used as greens. (155:231) **Yana** *Spice* Dried, mashed leaves used to flavor black manzanita berries. (147:251)

#### ***Sidalcea neomexicana*** Gray, New Mexico Checkermallow

- **Drug**—Navajo, Ramah *Internal Medicine* Cold infusion of plant taken for internal injury. (191:36)

### ***Sideroxylon***, Sapotaceae

#### ***Sideroxylon foetidissimum*** Jacq., False Mastic

- **Drug**—Seminole *Love Medicine* Decoction of wood ashes placed on the tongue to cleanse the body and strengthen the marriage. (169:250)
- **Food**—Seminole *Unspecified* Plant used for food. (169:494)

- **Other**—Seminole *Cooking Tools* Plant used to make food paddles. *Tools* Plant used to make pestles. (169:494)

#### ***Sideroxylon lanuginosum*** Michx., Gum Bully

- **Food**—Kiowa *Candy* Outer bark yields a mucilaginous substance used as chewing gum. (192:46)

#### ***Sideroxylon lanuginosum*** Michx. **ssp. *lanuginosum***, Gum Bumelia

- **Food**—Kiowa *Candy* Outer bark yields a mucilaginous substance used as chewing gum. (as *Bumelia lanuginosa* 192:46)

#### ***Sideroxylon salicifolium*** (L.) Lam., White Bully

- **Other**—Seminole *Cooking Tools* Plant used to make food paddles. *Hunting & Fishing Item* Plant used to make arrows and bows. (as *Dipholis salicifolia* 169:467)

#### ***Sideroxylon* sp.**, A-laa

- **Drug**—Hawaiian *Adjuvant* Bark, leaves, and wood mixed with other herbs to produce strong remedies. *Febrifuge* Bark, leaves, other ingredients, and water used as a wash and taken for strong fevers. *Strengtheners* Bark, leaves, other ingredients, and water used as a wash and taken for general debility. (2:12)

### ***Silene***, Caryophyllaceae

#### ***Silene acaulis*** (L.) Jacq., Moss Campion

- **Drug**—Gosiute *Gastrointestinal Aid* and *Pediatric Aid* Plant used for children with colic. (39:381)

#### ***Silene acaulis* var. *exscapa*** (All.) DC., Moss Campion

- **Food**—Eskimo, Inuktitut *Unspecified* Raw root skins used for food. (202:182)

#### ***Silene campanulata*** S. Wats., Red Mountain Catchfly

- **Drug**—Karok *Pediatric Aid* and *Unspecified* Plant used as medicine for babies. (148:383)

#### ***Silene douglasii*** Hook. **var. *douglasii***, Douglas's Campion

- **Drug**—Gosiute *Analgesic*, *Emetic*, and *Gastrointestinal Aid* Infusion of roots taken as an emetic for stomach trouble pain. (as *S. multicaulis* 39:350) Warm infusion of pounded plant used as an emetic for

stomach pain. *Veterinary Aid* Plant used as a horse medicine. (as *S. multicaulis* 39:381) **Navajo, Ramah** *Dermatological Aid* and *Veterinary Aid* Cold infusion of plant used as a lotion for coyote bite on humans, sheep, or horses. (as *S. pringlei* 191:27)

***Silene drummondii*** Hook. var. ***drummondii***, Drummond's Campion

- **Drug**—Navajo, Ramah *Panacea* Root used as a "life medicine." (as *Lychnis drummondii* 191:27)

***Silene laciniata*** Cav., Mexican Campion

- **Drug**—Keres, Western *Dermatological Aid* Crushed plant rubbed on ant bites. *Other* Infusion of plant used as a reducing medicine. (171:69)

***Silene laciniata* ssp. *greggii*** (Gray) C. L. Hitchc. & Maguire, Gregg's Campion

- **Drug**—Navajo, Ramah *Burn Dressing* Poultice of leaves applied to burns. *Dermatological Aid* Decoction of root taken for mad dog or mad coyote bite. (191:27)

***Silene latifolia* ssp. *alba*** (P. Mill.) Greuter & Burdet, Bladder Campion

- **Drug**—Ojibwa *Cathartic* Infusion of root used as a physic. (as *Lychnis alba* 153:361)

***Silene menziesii*** Hook., Menzies's Campion

- **Drug**—Okanagan-Colville *Eye Medicine* Infusion of pounded roots used as eye drops for cataracts. (188:95)
- **Other**—Gosiute *Smoke Plant* Dried leaves powdered and formerly used to smoke as a tobacco. (39:381)

***Silene noctiflora*** L., Nightflowering Silene

- **Drug**—Menominee *Unspecified* Plant used as a medicine. (151:28) Navajo, Ramah *Dermatological Aid* Poultice of leaves applied to prairie dog bite. (191:27)

***Silene scouleri*** Hook., Scouler's Campion

- **Drug**—Gosiute *Analgesic*, *Emetic*, and *Gastrointestinal Aid* Warm infusion of pounded plant used as an emetic for stomach pain. *Veterinary Aid* Plant used as a horse medicine. (39:381)

***Silene stellata*** (L.) Ait. f., Widowsfrill

- **Drug**—Meskwaki *Dermatological Aid* Poultice of root applied to dry up swellings that discharge pus. (152:208)

## ***Silphium***, Asteraceae

***Silphium compositum*** Michx., Kidneyleaf Rosinweed

- **Drug**—Cherokee *Gynecological Aid* and *Stimulant* Used as a strong stimulant for whites and taken by weakly females. (80:53)

***Silphium integrifolium*** Michx., Wholeleaf Rosinweed

- **Drug**—Meskwaki *Analgesic* and *Herbal Steam* Root steam directed to crippled area and used for pain. *Kidney Aid* Root used for "one with kidney trouble or who was crippled." *Orthopedic Aid* Root steam directed to crippled area and used for pain. *Urinary Aid* Infusion of leaves used for bladder troubles. (152:216)

***Silphium laciniatum*** L., Compass Plant

- **Drug**—Dakota *Veterinary Aid* Decoction of pounded root used as a

vermifuge for horses. *Witchcraft Medicine* Dried root burned during storms to act as a charm against lightning. (70:132) **Meskwaki** *Emetic* Decoction of smaller roots taken as an emetic. (152:216, 217) **Omaha** *Veterinary Aid* Roots given to horses as a tonic. (68:335) Decoction of root given to horses as a tonic. *Witchcraft Medicine* Dried root burned during storms to act as a charm against lightning. **Pawnee** *Tonic* Decoction of root taken for general debility. *Witchcraft Medicine* Dried root burned during storms to act as a charm against lightning. **Ponca** *Veterinary Aid* Decoction of root given to horses as a tonic. *Witchcraft Medicine* Dried root burned during storms to act as a charm against lightning. **Winnebago** *Witchcraft Medicine* Dried root burned during storms to act as a charm against lightning. (70:132)

- **Food**—Dakota *Candy Gum* from upper part of stem used as chewing gum by children. **Omaha** *Candy Gum* from upper part of stem used as chewing gum by children. **Pawnee** *Candy Gum* from upper part of stem used as chewing gum by children. **Ponca** *Candy Gum* from upper part of stem used as chewing gum by children. **Winnebago** *Candy Gum* from upper part of stem used as chewing gum by children. (70:132)

***Silphium perfoliatum*** L., Cup Plant

- **Drug**—Chippewa *Abortifacient* Simple or compound decoction of root taken for "stoppage of periods." (53:358) *Analgesic* Decoction of root taken for back and chest pain. *Antihemorrhagic* Decoction of root taken for lung hemorrhage. (53:340) *Hemostat* Poultice of moistened, dried root applied to wounds as a styptic. (53:356) *Orthopedic Aid* Decoction of root taken for back pain. *Pulmonary Aid* Decoction of root taken for chest pain. (53:340) **Iroquois** *Emetic* Decoction of roots taken as an emetic. *Orthopedic Aid* Decoction of roots used as face wash for paralysis. *Pediatric Aid* Burned root soot placed on child's cheek to prevent them from seeing ghosts. *Witchcraft Medicine* Burned root soot placed on cheek to prevent sickness caused by the dead. - **Food**—Houma *Fodder* Plants used for hog feed. (158:64) Kamia *Vegetable* Boiled leaves used for food as greens. (62:24) Pima *Unspecified* Leaves and stems rubbed between the palms of the hands and eaten raw. (47:106) Pima, Gila River *Unspecified* Leaves eaten raw and boiled. (133:7) Yaqui *Vegetable* Tender, young leaves boiled in salted water with chile and eaten as greens. (47:106)

## *Sophora*, Fabaceae

### *Sophora nuttalliana* B. L. Turner, Silky Sophora

- **Food**—Acoma *Special Food* Sweet roots chewed as a delicacy. (as *S. serecia* 32:33) Keres, Western *Sweetener* Roots chewed for the sweet taste. (as *S. sericea* 171:71) Laguna *Special Food* Sweet roots chewed as a delicacy. (as *S. serecia* 32:33) Navajo *Forage* Plant used by sheep for forage. (as *S. sericea* 55:58) San Felipe *Special Food* Sweet roots chewed as a delicacy. (as *S. serecia* 32:33)

### *Sophora secundiflora* (Ortega) Lag. ex DC., Mescal Bean

- **Drug**—Comanche *Ear Medicine* Decoction of ground beans used for earaches and ear sores. (as *S. secundiflora* 99:3)
- **Other**—Comanche *Decorations* Beans used as ornaments, possibly for ceremonial purposes. (29:524) *Protection* Seeds carried by medicine men as protection against contamination from menstrual blood. (as *S. secundiflora* 99:3)

## *Sorbus*, Rosaceae

### *Sorbus americana* Marsh., American Mountainash

- **Drug**—Algonquin, Quebec *Cold Remedy* Infusion of inner bark taken for colds. Infusion of terminal buds and inner bark taken for colds. *Tonic* Infusion of inner bark and sweet flag used as a tonic. (as *Pyrus americana* 18:177) Algonquin, Tête-de-Boule *Psychological Aid* Buds and inner bark fibers boiled and used for moral depression. *Strengthen* Buds and inner bark fibers boiled and used for general weakness. (132:131) Iroquois *Gastrointestinal Aid* Fruit used to facilitate digestion. (142:91) Malecite *Analgesic* Infusion of bark used for pain after childbirth. (as *Pyrus americana* 116:258) *Dermatological Aid* Poultice of burned bark used for boils. (as *Pyrus americana* 116:247) Micmac *Analgesic* Bark used for “mother pains.” *Dermatological Aid* Bark used for boils. *Emetic* Parts of plant used as an emetic. (as *Pyrus americana* 40:60) *Gastrointestinal Aid* Infusion of root taken for colic. (156:317) *Gynecological Aid* Bark used for “mother pains.” (as *Pyrus americana* 40:60) *Unspecified* Infusion of bark taken for unspecified purpose. (156:317) Montagnais *Blood Medicine* Decoction of bark taken to purify the blood and to stimulate the appetite. *Dietary Aid* Decoction of bark taken to stimulate the appetite and to purify the blood. (156:313) Ojibwa *Unspecified* Root bark used for medicinal purposes. (as *Pyrus americana* 135:236) *Venereal Aid* Infusion of root bark taken for gonorrhoea. (as *Pyrus americana* 135:231) Penobscot *Emetic* Plant used as an emetic. (156:309) Potawatomi *Unspecified* Inner bark used as a medicine. (as *Pyrus americana* 154:78) Tlingit *Pulmonary Aid* Plant used for pleurisy. (as *Pyrus sambucifolius* 107:283)
- **Food**—Algonquin, Quebec *Fruit* Fruit used for food. (as *Pyrus americana* 18:90) Montagnais *Forage* Berries eaten by bears. *Fruit* Berries used for food. (156:313) Ojibwa *Fruit* Fruit used for food. (as *Pyrus sambucifolia* 135:236)
- **Fiber**—Ojibwa *Canoe Material* Wood used to make ribs for canoes. *Snow Gear* Wood used to make snowshoe frames. *Sporting Equipment* Wood used to lacrosse clubs. (as *Pyrus americana* 135:236)

### *Sorbus aucuparia* L., European Mountainash

- **Drug**—Potawatomi *Cold Remedy* Infusion of leaves taken as a cold medicine. *Emetic* Infusion of leaves taken as an emetic for pneumonia, diphtheria, and croup. *Misc. Disease Remedy* Infusion of leaves taken as an emetic for diphtheria. *Pulmonary Aid* Infusion of leaves taken as an emetic for pneumonia and croup. (as *Pyrus aucuparia* 154:78)

***Sorbus decora*** (Sarg.) Schneid., Northern Mountainash

- **Drug**—Cree, Woodlands *Antirheumatic (External)* Decoction of inner bark from the stem base used for rheumatism. *Orthopedic Aid* Decoction of peeled sticks taken for back pain. Decoction of inner bark from the stem base used for backaches. (109:61)

***Sorbus scopulina*** Greene, Greene Mountainash

- **Drug**—Okanagan-Colville *Pediatric Aid* and *Urinary Aid* Infusion of branches given to young children with bed-wetting problems. (188:133) *Wet'suwet'en Febrifuge* Bark used for fevers. *Tonic* Bark used as a tonic. *Unspecified* Bark used for general sickness. (73:152)

***Sorbus sitchensis*** M. Roemer, Western Mountainash

- **Drug**—Bella Coola *Antirheumatic (Internal)* Infusion of root and branch bark taken for rheumatism. *Gastrointestinal Aid* Infusion of root and branch bark taken for stomach troubles. (184:210) **Carrier** *Unspecified* Scraped bark used for medicine. (31:70) **Okanagan-Colville** *Pediatric Aid* and *Urinary Aid* Infusion of branches given to young children with bed-wetting problems. (188:133) **Thompson Ear Medicine** Warmed stick used in the ear for earache. *Kidney Aid* Infusion of branches taken for weak kidneys, to stop frequent urination. (187:273)
- **Food**—Thompson *Dried Food* Berries sometimes dried for storage. *Fruit* Berries boiled and eaten alone. *Soup* Berries boiled and eaten in soups such as salmon head soup. *Spice* Berries cooked with mar-mot to flavor meat, and a cluster of berries was added to the top of a jar of blueberries as a flavor when canning. *Winter Use Food* Berries usually buried and kept fresh. (187:273)
- **Other**—Bella Coola *Insecticide* Berries rubbed on the scalp for lice. (184:210)

***Sorbus sitchensis* var. *grayi*** (Wenzig) C. L. Hitchc., Gray's Mountainash

- **Drug**—Heiltsuk *Dermatological Aid* Berries mashed and rubbed on the head for lice. (43:116)
- **Food**—Heiltsuk *Forage* Considered a food for black bears. (43:116)

***Sorbus sitchensis*** M. Roemer **var. *sitchensis***, Sitka Mountainash

- **Drug**—Bella Coola *Antirheumatic (Internal)* Decoction of root bark or stem bark taken or used as bath for rheumatism. *Eye Medicine* Decoction of root bark or inner bark of stem used as eyewash. *Gastrointestinal Aid* Decoction of root bark or inner bark of stem taken "for the stomach." **Carrier, Southern** *Cold Remedy* Bark chewed for colds. **Gitksan** *Cathartic* Crushed fresh fruit eaten raw as a strong purgative. (as *Pyrus sitchensis* 150:59)
- **Food**—Okanagon *Fruit* Fruits occasionally used for food. **Thompson** *Fruit* Fruits occasionally used for food. (as *Pyrus sitchensis* 125:38) Fruits eaten except by some of the Upper Thompsons. (as *Pyrus sitchensis* 164:488)

***Sorghum***, Poaceae

***Sorghum bicolor*** (L.) Moench **ssp. *bicolor***, Broomcorn

- **Food**—Hopi *Sauce & Relish* Used as a sweet syrup. (as *S. vulgare* 200:66)

***Sorghum halepense*** (L.) Pers., Johnson Grass

- **Food**—Kiowa *Fodder* Used as a fodder for horses. (192:16)

- **Other**—Kiowa *Toys & Games* Stems and leaves used by children to make grass whistles. (192:16)

**Sparganiaceae**, see *Sparganium*

***Sparganium***, Sparganiaceae

***Sparganium eurycarpum*** Engelm. ex Gray, Broadfruit Burreed

- **Drug**—Iroquois *Febrifuge* Infusion of whole plant and other plant leaves used for chills. (141:71) *Veterinary Aid* Compound of chopped plants mixed with cows feed for difficult birth of calf. *Witchcraft Medicine* Compound poultice bound to "soreness all over in men from being witched." (87:272)
- **Food**—Klamath *Unspecified* Rootstocks used for food. Bulb at base of stem used for food. (45:90) **Okanagan-Colville** *Fodder* Used as hay for cattle. (188:57)
- **Other**—Okanagan-Colville *Containers* Used in pit cooking. (188:57)

***Spartina***, Poaceae

***Spartina alterniflora*** Loisel., Smooth Cordgrass

- **Food**—Iroquois *Forage* Used as forage. (142:106)

***Spartina pectinata*** Link, Prairie Cordgrass

- **Fiber**—Omaha *Building Material* Plant used to support earth coverings of lodges in permanent villages. **Ponca** *Building Material* Plant used as thatching to support the earth coverings of lodges in permanent villages. (as *S. michauxiana* 70:66)

***Sphaeralcea***, Malvaceae

***Sphaeralcea ambigua*** Gray, Desert Globemallow

- **Drug**—Shoshoni *Antiemetic* Decoction of root taken for upset stomach. (180:141, 142) *Antirheumatic (External)* Poultice of mashed root used for swollen feet. (118:43) Poultice of wilted plants bound onto rheumatic or swollen areas. *Cathartic* Decoction of root or whole plant taken as a physic. *Cold Remedy* Decoction of leaves taken for colds. (180:141, 142) *Contraceptive* Infusion of root taken as birth control. (118:46) Decoction of root taken as a contraceptive, "uncertain report." *Dermatological Aid* Poultice of crushed, raw root applied to swellings. Poultice of wilted plants applied for rheumatism or swellings. *Emetic* Decoction of root or whole plant taken as an emetic. *Eye Medicine* Decoction of leaves used as an eyewash. (180:141, 142) *Unspecified* Poultices of cooked root applied medicinally. (118:43) *Venereal Aid* Decoction of root or whole plant taken for venereal disease. *Veterinary Aid* Poultice of boiled plant applied to wire cuts on horses. (180:141, 142)
- **Other**—Shoshoni *Containers* Whole plant boiled, added to red clay, and used to make cups. (118:56) **Yavapai** *Containers* Stems used as a litter for drying mescal. (65:259)

***Sphaeralcea angustifolia*** (Cav.) G. Don, Copper Globemallow

- **Drug**—Navajo *Cold Remedy* Plant used for colds. *Cough Medicine* Plant used for coughs. *Misc. Disease Remedy* Plant used for influenza. (90:163) **Pima** *Antidiarrheal* Decoction of leaves used for diarrhea. *Gastrointestinal Aid* Decoction of root used for biliousness. (146:79)

***Sphaeralcea angustifolia* ssp. *cuspidata*** (Gray) Kearney, Copper Globemallow

- **Other**—Kiowa *Decorations* Flowers appealed to the esthetic nature,

picked and used for bouquets in the home. (as *S. cuspidata* 192:43)

***Sphaeralcea* sp.**, Globemallow

- **Drug**—Hopi *Antidiarrheal* Root chewed or compound decoction taken for diarrhea. (200:34, 85) *Gastrointestinal Aid* Root used for babies with bowel trouble. (200:85) *Orthopedic Aid* Root chewed or decoction used for broken bones, as “there's gristle in the root.” (200:31, 85) *Pediatric Aid* Root used for babies with bowel troubles. (200:34, 85) Luiseño *Emetic* Decoction of leaves taken as an emetic. (155:231)

**Sphagnaceae**, see *Sphagnum*

***Sphagnum***, Sphagnaceae, moss

***Sphagnum dusenii*** C. Jens., Sphagnum

- **Fiber**—Ojibwa *Mats, Rugs & Bedding* Moss gathered and dried to make mattresses. (153:422)

### **Sphagnum** sp.

- **Drug**—Carrier *Dermatological Aid* Berries rubbed on children's sores. *Pediatric Aid* Berries rubbed on children's sores. (31:87) **Nitinah** *Disinfectant* Used as a good disinfectant. (186:59)
- **Food**—Carrier *Beverage* Leaves used to make tea. (31:87) **Haisla & Hanaksiala** *Forage* Plant eaten by grizzly bears. (43:148)
- **Fiber**—Bella Coola *Mats, Rugs & Bedding* Used for padding and bedding. (184:196) **Carrier** *Clothing* Whole plant used as a diaper for small children. (31:87) **Chinook** *Clothing* Used by women for sanitary napkins. *Mats, Rugs & Bedding* Used for bedding in camp. (79:50) **Chippewa** *Other* Used as an absorbent. (53:378) **Eskimo, Inuktitut** *Caulking Material* Used to chink log houses. (202:189) **Haisla** *Clothing* Plant used for diapering infants. (43:148) **Nitinah** *Clothing* Used for baby diapers. (186:59) **Potawatomi** *Mats, Rugs & Bedding* Dried moss used for making pillows and mattresses. (154:124)

### **Sphenosciadium**, Apiaceae

**Sphenosciadium capitellatum** Gray, Woollyhead Parsnip

- **Drug**—Paiute *Venereal Aid* Decoction of roots applied to venereal sores. (167:317)
- **Other**—Paiute *Insecticide* Infusion of root used for lice. (167:317)

### **Spigelia**, Loganiaceae

**Spigelia anthelmia** L., West Indian Pinkroot

- **Drug**—Creek *Anthelmintic* Plant considered a "well-known remedy" for children with worms. (172:669) Plant used as a worm remedy. (177:51) *Pediatric Aid* Plant considered a "well-known remedy" for children with worms. (172:669)

**Spigelia marilandica** (L.) L., Woodland Pinkroot

- **Drug**—Cherokee *Anthelmintic* Infusion taken for worms. (80:40) Decoction of roots taken for worms. (177:51) Used as a general vermifuge. **Creek** *Anthelmintic* Used as a general vermifuge. (203:74)

### **Spiraea**, Rosaceae

**Spiraea alba** Du Roi, White Meadowsweet

- **Drug**—Algonquin, Quebec *Unspecified* Infusion of leaves and stems used as a medicinal tea. (18:176) **Iroquois** *Analgesic* Compound decoction of mashed and powdered dried roots taken for side pain. (87:349)

**Spiraea alba** var. **latifolia** (Ait.) Dippel, White Meadowsweet

- **Drug**—Algonquin, Quebec *Unspecified* Infusion of leaves and stems used as a medicinal tea. (as *Spiraea latifolia* 18:176) **Iroquois** *Anti-emetic* Decoction of plant with other leaves and branches taken for nausea and vomiting. (as *Spiraea latifolia* 141:47)
- **Food**—Abnaki *Beverage* Used to make tea. (as *S. latifolia* 144:152) Leaves used to make tea. (as *S. latifolia* 144:168)

**Spiraea betulifolia** Pallas, White Spirea

- **Drug**—Okanagan-Colville *Analgesic* Decoction of branches used for menstrual pains. Infusion of branches taken for abdominal pains. *Cold Remedy* Infusion of branches taken for colds. *Gastrointestinal*

*Aid* Infusion of branches taken for abdominal pains. *Gynecological Aid* Decoction of branches used for menstrual pains or heavy or prolonged menstruation. *Kidney Aid* Infusion of branches taken for poor kidneys. *Other* Infusion of branches taken for ruptures. (188:133) **Shuswap** *Antidiarrheal* Decoction of roots and leaves taken for diarrhea. *Gastrointestinal Aid* Decoction of roots and leaves taken for the stomach. (123:67) **Thompson** *Cold Remedy* Infusion of whole plant taken for colds. *Gastrointestinal Aid* Infusion of whole plant taken for internal stomach problems. *Venereal Aid* Decoction of leaves and branches taken or used as a bath for venereal diseases. (187:274)

- **Food**—Thompson *Beverage* Plant used to make a tea-like beverage. (187:274)

**Spiraea douglasii** Hook., Douglas's Spirea

- **Drug**—Lummi *Antidiarrheal* Infusion of seeds taken for diarrhea. (79:33)
- **Food**—Thompson *Forage* Dried flower spikes eaten by grouse. (187:274)
- **Fiber**—Thompson *Brushes & Brooms* Branches used to make brooms. (187:274)
- **Other**—Bella Coola *Cooking Tools* Branches used to hang salmon for drying and smoking. (184:210) **Lummi** *Cooking Tools* Used for spreading and cooking salmon. (79:33)

**Spiraea douglasii** var. **menziesii** (Hook.) K. Presl, Menzies's Spirea

- **Other**—Quinault *Cooking Tools* Stems peeled and used to string clams for roasting. (as *S. menziesii* 79:33)

**Spiraea** × **pyramidata** Greene, Pyramid Spirea

- **Drug**—Thompson *Tonic* Decoction of plant taken as a tonic. (164:471)
- **Food**—Thompson *Beverage* Flowers, stems, and leaves boiled and drunk as a tea. (164:494)

**Spiraea salicifolia** L., Willowleaf Meadowsweet

- **Drug**—Mahuna *Cold Remedy* Roots used for chest colds. *Cough Medicine* Roots used for coughs. (140:18) **Meskwaki** *Antidiarrheal* Immature seeds used for bloody flux. (152:243) **Ojibwa** *Hunting Medicine* Root used as a trapping medicine. (153:386) **Potawatomi** *Unspecified* Bark used for unspecified ailments. (154:79, 80)

**Spiraea** sp.

- **Drug**—Iroquois *Antidiarrheal* Compound decoction of shoots or vines used as a wash for babies with diarrhea. *Emetic* Compound decoction of bark taken to vomit. *Love Medicine* Infusion of bark from young twigs taken as an antidote for love medicine. *Orthopedic Aid* Infusion of bark used as a body wash to make children stronger to walk. *Pediatric Aid* Compound decoction of shoots or vines used as a wash for babies with diarrhea. Infusion of bark used as a body wash to make children stronger to walk. *Tuberculosis Remedy* Compound decoction of bark taken during initial stages of consumption. (87:349)

**Spiraea splendens** Baumann ex K. Koch var. **splendens**, Mountain Spirea

- **Drug**—Blackfoot *Laxative* Infusion of root used as an enema. (as *S.*

*densiflora* 86:68) *Venerae Aid* Infusion of roots taken for venereal complaints. (as *S. densiflora* 86:70)

- **Fiber**—Blackfoot *Brushes & Brooms* Flowering stems used as paint-brushes, especially on the large spaces of tepees. (as *S. densiflora* 86:123)

***Spiraea stevenii*** (Schneid.) Rydb., Beauverd Spirea

- **Food**—Tanana, Upper *Beverage* Fresh or dried leaves made into tea. (as *S. beauverdiana* 102:8)
- **Other**—Eskimo, Alaska *Fuel* Plant burned for smoking fish. (as *S. beauverdiana* 1:36)

***Spiraea tomentosa*** L., Steeple Bush

- **Drug**—Algonquin, Quebec *Unspecified* Infusion of leaves and stems used as a medicinal tea. (18:177) **Mohegan** *Antidiarrheal* Infusion of leaves taken for dysentery. (174:266) **Ojibwa** *Antiemetic* Infusion of leaves and flowers taken for the sickness of pregnancy. *Gynecological Aid* Infusion of leaves and flowers taken for the sickness of pregnancy. Infusion of leaves and flowers used to ease childbirth. (153:386)

## ***Spiranthes***, Orchidaceae

***Spiranthes lacera* var. *gracilis*** (Bigelow) Luer, Northern Slender Ladiestresses

- **Drug**—Ojibwa *Hunting Medicine* Roots used as an ingredient of the hunting charm to bring game to the hunter. (as *S. gracilis* 153:431)

***Spiranthes lucida*** (H. H. Eat.) Ames, Shining Ladiestresses

- **Drug**—Cherokee *Pediatric Aid* Warm infusion used as a wash for infants “to insure fast, healthy growth.” *Urinary Aid* Roots with “tway-blade” used “for urinary trouble.” (80:42)

***Spiranthes romanzoffiana*** Cham., Hooded Ladiestresses

- **Drug**—Gosiute *Venerae Aid* Plant used for venereal disease. (39:383)

***Spiranthes* sp.**, Spiral Orchid

- **Drug**—Seminole *Blood Medicine* Decoction of roots used as a blood purifier. (169:304)
- **Food**—Paiute *Unspecified* Roots used for food. (167:244)

## ***Spirogyra***, Zygnemataceae, alga

***Spirogyra* sp.**, Pond Scum

- **Other**—Keres, Western *Unspecified* Alga known and named but no use was specified. (171:72) **Thompson** *Hunting & Fishing Item* Used as a bait in fishing. (164:515)

## ***Sporobolus***, Poaceae

***Sporobolus airoides*** (Torr.) Torr., Alkali Sacaton

- **Food**—Hopi *Starvation Food* Grain occasionally used for food during famines. (200:66)
- **Other**—Apache, Chiricahua & Mescalero *Containers* Moist grass laid onto hot stones to prevent steam from escaping. (33:36)

***Sporobolus contractus*** A. S. Hitchc., Spike Dropseed

- **Food**—Apache, Western *Porridge* Seeds ground, mixed with cornmeal and water, and made into a mush. (as *S. strictus* 26:189) **Apache**, White Mountain *Bread & Cake* Seeds ground and used to make bread and pones. *Porridge* Seeds ground, mixed with meal and water, and eaten as mush. (as *S. strictus* 136:149) **Navajo** *Bread & Cake* Seeds

used to make bread. (165:223)

- **Fiber**—Zuni *Building Material* Grass bunches fastened together and used to construct shelters in or near the distant fields. *Mats, Rugs & Bedding* Grass bunches fastened together to make mats for covering hatchways and other openings in the house. (as *S. strictus* 166:81)
- **Other**—Apache, White Mountain *Cash Crop* Plant gathered and sold. (as *S. strictus* 136:149)

***Sporobolus cryptandrus*** (Torr.) Gray, Sand Dropseed

- **Drug**—Navajo, Ramah *Veterinary Aid* Cold infusion of plant applied to sores or bruises on horse's leg. (191:17)
- **Food**—Apache, Chiricahua & Mescalero *Bread & Cake* Seeds threshed, winnowed, ground, and the flour used to make bread. *Porridge* Seeds boiled and eaten as porridge. (33:48) **Hopi** *Bread & Cake* Plant used to make bread. *Pie & Pudding* Plant used to make pudding. (42:364) **Keres**, Western *Fodder* Grass considered good pony feed. (171:72) **Kiowa** *Fodder* Foliage was a valuable fodder. (as *Vilfa cryptandra* 192:17) **Navajo** *Bread & Cake* Seeds ground to make dumplings, rolls, griddle cakes, and tortillas. (55:26) *Forage* Used as forage by animals. (90:163) **Navajo**, Ramah *Porridge* Ground seeds alone or with corn made into mush or bread. (191:17)
- **Fiber**—Navajo, Ramah *Scouring Material* Bunch about a foot long, tied with string or yucca fiber, used as a brush for cleaning metates. (191:17)

***Sporobolus flexuosus*** (Thurb. ex Vasey) Rydb., Mesa Dropseed

- **Food**—Hopi *Starvation Food* Grain occasionally used for food during famines. (200:66)

***Sporobolus giganteus*** Nash, Giant Dropseed

- **Food**—Hopi *Porridge* Seeds threshed, ground with corn into fine meal and used to make a mush. (120:20) *Spice* Seeds used as flavoring for cornmeal. (42:365)
- **Other**—Hopi *Ceremonial Items* Stems used to make pahos (prayer sticks). Bundles of plant used to cover kiva entrance during Bean Ceremonial. Pollen used in the hunting ceremony. (42:365)

***Sporobolus heterolepis*** (Gray) Gray, Prairie Dropseed

- **Drug**—Ojibwa, South *Dermatological Aid* Poultice of crushed root applied to sores. *Emetic* and *Liver Aid* Decoction of root taken as an emetic “to remove bile.” (91:200)

***Sporobolus wrightii*** Munro ex Scribn., Giant Sacaton

- **Food**—Navajo, Ramah *Porridge* Ground seeds alone or with corn made into mush or bread. (191:17) **Papago** *Dried Food* Seeds basket winnowed, parched, sun dried, cooked, stored, and used for food. (34:24)
- **Fiber**—Apache, Chiricahua & Mescalero *Brushes & Brooms* Stiff stems made into a brush and used to clean spines of cacti. (33:40)

## ***Stachys***, Lamiaceae

***Stachys albens*** Gray, Whitestem Hedgenettle

- **Food**—Kawaiisu *Spice* Bunched leaves used as “cork” for the basketry water bottle, “it gives a good taste to the water.” (206:65)

***Stachys bullata*** Benth., California Hedgenettle

- **Drug**—Costanoan *Dermatological Aid* Poultice of plant applied or decoction taken for swollen sores. *Disinfectant* Poultice of plant ap-

plied or decoction taken for infected sores. *Ear Medicine* Poultice of heated leaves applied for earaches. *Gastrointestinal Aid* Poultice of plant applied or decoction of plant taken for stomachaches. *Throat Aid* Poultice of leaves applied or decoction of roots used as a gargle for sore throats. (21:17) **Pomo, Kashaya** *Dermatological Aid* Poultice of heated leaves used on boils to bring them to a head. (72:77)

***Stachys ciliata*** Epling, Great Hedgenettle

- **Drug**—**Saanich** *Tonic* Infusion of pounded roots used as a spring tonic. (as *S. cooleyae* 182:84)
- **Food**—**Saanich** *Forage* Roots eaten by wounded deer. (as *S. cooleyae* 182:84)
- **Other**—**Haisla & Hanaksiala** *Hunting & Fishing Item* Plant fiber used to make nets. (as *S. cooleyae* 43:256) **Hesquia** *Cooking Tools* Plants laid under fish to keep them clean. (as *S. cooleyae* 185:69)

***Stachys mexicana*** Benth., Emerson Betony

- **Drug**—**Green River Group** *Dermatological Aid* Plant used for boils. **Puyallup** *Dermatological Aid* Plant used for boils. (as *S. ciliata* 79:45)
- **Food**—**Quinault** *Unspecified* Honey sucked out of the blossoms and used for food. (as *S. ciliata* 79:45)
- **Other**—**Makah** *Cooking Tools* Plants used to cover steaming sprouts. **Quinault** *Cooking Tools* Plants used to cover steaming sprouts. (as *S. ciliata* 79:45)

***Stachys palustris*** L., Marsh Hedgenettle

- **Drug**—**Chippewa** *Gastrointestinal Aid* Infusion of fresh or dried leaves taken for “sudden colic.” (53:344) **Delaware** *Venereal Aid* Used with common nightshade, “pretty flower,” and button snakeroot for venereal disease. (176:35) **Delaware, Oklahoma** *Venereal Aid* Compound containing root used for venereal disease. (175:29, 80)
- **Food**—**Gosiute** *Unspecified* Seeds used for food. (39:383)

***Stachys rothrockii*** Gray, Rothrock’s Hedgenettle

- **Drug**—**Navajo, Ramah** *Ceremonial Medicine* Dried leaves used as a ceremonial medicine and plant used in chant lotion. *Dermatological Aid* Decoction of plant used as foot deodorant. *Disinfectant* Dried leaves used for “deer infection.” (191:42)

***Stachys tenuifolia*** Willd. **var. *tenuifolia***, Smooth Hedgenettle

- **Drug**—**Meskwaki** *Cold Remedy* Infusion of leaves taken for bad colds. *Emetic* Infusion of leaves given as an emetic. (152:227)

***Stanleya***, Brassicaceae

***Stanleya albescens*** M. E. Jones, White Princesplume

- **Food**—**Hopi** *Unspecified* Leaves boiled and eaten. (56:15) Boiled and eaten. (190:163) *Vegetable* Eaten as greens in the spring. (200:77)

***Stanleya pinnata*** (Pursh) Britt., Desert Princesplume

- **Drug**—**Havasupai** *Poison* Fresh leaves considered poisonous. (197:220) **Navajo** *Gland Medicine* Poultice of plants applied to glandular swellings. (55:50) **Paiute** *Analgesic* Poultice of mashed root applied for throat pain. *Misc. Disease Remedy* Poultice of mashed root applied for congestion of diphtheria. *Throat Aid* Poultice of mashed root applied for throat pain. *Tonic* Decoction of root taken as a tonic for general debility after an illness. **Shoshoni** *Analgesic* Poultice of pulped root applied for rheumatic pains. *Antirheumatic (External)* Poultice of hot, pulped root applied for rheumatic pains. *Ear Medi-*

*cine* Poultice of hot, pulped root applied for an earache. *Toothache Remedy* Poultice of root applied to gums or placed in cavity for toothache. (180:142) **Zuni** *Dermatological Aid* Poultice of fresh, chewed pods used for itching. (27:375) *Venereal Aid* Powdered plant applied, as a specific, to scraped syphilitic sores. (166:60)

- **Food**—**Havasupai** *Vegetable* Leaves boiled two or three times to remove poisons and eaten. (197:220) Young, fresh, tender leaves boiled, drained, balled into individual portions, and served. (197:66) **Hopi** *Vegetable* Boiled plant used for greens in the spring. (42:366) Eaten as greens in the spring. (200:77) **Kawaiisu** *Vegetable* Leaves and stems boiled, squeezed out in cold water to remove the bitterness, fried in grease, and eaten. (206:65) **Tewa** *Vegetable* Boiled plant used for greens in the spring. (42:366)

**Staphyleaceae**, see *Staphylea*

***Staphylea***, Staphyleaceae

***Staphylea trifolia*** L., American Bladdernut

- **Drug**—**Iroquois** *Antirheumatic (Internal)* Compound infusion of plants taken for rheumatism. *Dermatological Aid* Infusion of powdered bark used as a wash for sore faces. *Gynecological Aid* Compound poultice of bark applied when a woman swells after copulation. *Pediatric Aid* and *Sedative* Infusion of bark used as a wash to keep children from crying. (87:377) **Meskwaki** *Ceremonial Medicine* Seeds used in gourd rattles for dream and medicine dances. (152:248)
- **Other**—**Meskwaki** *Sacred Items* Seeds considered sacred and used in the rattles of the medicine dance. (152:274)

***Stellaria***, Caryophyllaceae

***Stellaria media*** (L.) Vill., Common Chickweed

- **Drug**—**Chippewa** *Eye Medicine* Decoction of leaves strained and used as a wash for sore eyes. (53:360) **Iroquois** *Antirheumatic (External)* Poultice of plant fragments with other plants applied for swellings. (141:41) *Dermatological Aid* Raw, compound poultice applied to cuts and wounds. (87:317)
- **Food**—**Iroquois** *Forage* Plant eaten by chickens. (142:86)

***Stenandrium***, Acanthaceae

***Stenandrium dulce*** (Cav.) Nees, Sweet Shaggytuft

- **Drug**—**Seminole** *Pediatric Aid* and *Sedative* Plant and other plants used as a baby’s charm for fear from dreams about raccoons or opossums. (as *S. floridanum* 169:221) *Stimulant* Decoction of whole plant used as a bath for hog sickness: unconsciousness. (as *S. floridanum* 169:229)

***Stenanthium***, Liliaceae

***Stenanthium occidentale*** Gray, Western Stenanthium

- **Drug**—**Thompson** *Unspecified* Plant used medicinally. (187:129)

***Stenocereus***, Cactaceae

***Stenocereus thurberi*** (Engelm.) Buxbaum, Organ Pipe Cactus

- **Food**—**Apache, Chiricahua & Mescalero** *Fruit* Fruit used for food. (as *Lemaireocereus thurberi* 33:40) **Papago** *Beverage* Juice used as a ceremonial drink. (as *Lemaireocereus thurberi* 34:26) *Bread & Cake* Seeds parched, stored, and used to make meal cakes. *Cooking Agent*

Seeds parched, ground, water added, and oil extracted. (as *Lemaireocereus thurberi* 34:22) *Dried Food* Fruits dried, stored in jars, and used as sweets. (as *Lemaireocereus thurberi* 34:46) *Fodder* Seeds parched and used as a chicken feed. *Preserves* Pulp boiled to a sweet, sticky mass and used like raspberry jam. Juice made into cactus jam and used as the most important sweet in the diet. (as *Lemaireocereus thurberi* 34:22) Fruits made into jam. *Sauce & Relish* Fruits made into a syrup. (as *Lemaireocereus thurberi* 34:46) *Staple* Seeds made into flour and used for food. *Unspecified* Pulp eaten fresh. (as *Lemaireocereus thurberi* 34:22) Fruits and seeds used for food. (as *Lemaireocereus thurberi* 36:59) **Papago & Pima Beverage** Fruit used to make wine. (as *Lemaireocereus thurberi* 35:10) Juice used to make wine. (as *Lemaireocereus thurberi* 35:34) *Candy* Used to make candy. (as *Lemaireocereus thurberi* 35:17) *Fruit* Fruit used for food. (as *Lemaireocereus thurberi* 35:11) *Porridge* Seeds mixed with the pulp, formed into a paste, and eaten. (as *Lemaireocereus thurberi* 35:7) *Preserves* Fruit boiled, without sugar, to make preserves. (as *Lemaireocereus thurberi* 35:17) *Sauce & Relish* Fruit used to make syrup. (as *Lemaireocereus thurberi* 35:11) **Seri Fruit** Fruits eaten for food. *Porridge* Seeds ground to a powder and made into a meal or paste. (as *Lemaireocereus thurberi* 50:134)

- **Fiber**—**Seri Caulking Material** Dried plant skeletons and sea lion oil used as a caulking compound. (as *Lemaireocereus thurberi* 50:136)
- **Other**—**Papago Ceremonial Items** Pulp boiled with water, strained, boiled again, and used as a ceremonial drink. (as *Lemaireocereus thurberi* 34:22) **Papago & Pima Lighting** Used to make torches. (as *Lemaireocereus thurberi* 35:34) *Paint* Fruit used to make ink. (as *Lemaireocereus thurberi* 35:7) **Seri Tools** Dried plant skeletons used as a straight, slender pole for knocking off ripe fruit. (as *Lemaireocereus thurberi* 50:136)

## *Stenotaphrum*, Poaceae

*Stenotaphrum secundatum* (Walt.) Kuntze, St. Augustine Grass

- **Drug**—**Hawaiian Dermatological Aid** Leaf ash used for sores and navel sores on babies. Leaf ash used for skin ulcers. *Gynecological Aid* Leaves and stems pounded, resulting juice mixed with other ingredients and taken for excessive menses. Leaf ash used on the vagina and neighboring parts after giving birth. *Oral Aid* Leaf ash used for excessive saliva from babies' mouths. *Pediatric Aid* Leaf ash used for sores and navel sores on babies. Leaf ash used for excessive saliva from babies' mouths. (as *S. americanum* 2:10)

## *Stenotus*, Asteraceae

*Stenotus lanuginosus* (Gray) Greene **var. lanuginosus**, Cespitose Goldenweed

- **Drug**—**Navajo Gastrointestinal Aid** Plant used for indigestion. *Nose Medicine* Plant used for nose troubles. (as *Aplopappus lanuginosus* 55:96) *Oral Aid* Plant used for sore gums. (as *Aplopappus lanuginosus* 55:97) *Throat Aid* Plant used for throat troubles. (as *Aplopappus lanuginosus* 55:96) *Toothache Remedy* Plant used as a toothache medicine. (as *Aplopappus lanuginosus* 55:80)

## *Stephanomeria*, Asteraceae

*Stephanomeria exigua* Nutt., Small Wirelettuce

- **Drug**—**Hopi Diuretic** and *Venereal Aid* Plant used as a diuretic for

venereal disease. (as *Ptiloria exigua* 200:35, 97) **Navajo, Kayenta Misc. Disease Remedy** Plant used for measles. (205:50)

*Stephanomeria pauciflora* (Torr.) A. Nels., Brownplume Wirelettuce

- **Drug**—**Hopi Gynecological Aid** Root used in various ways to increase mother's milk supply. (as *Ptiloria pauciflora* 200:36, 98) **Navajo, Kayenta Narcotic** Roots used as a narcotic. (205:50) **Navajo, Ramah Gynecological Aid** Strong infusion of root used to hasten delivery of placenta. *Panacea* Root used as a "life medicine." (191:53)
- **Food**—**Kawaiisu Candy** Thick liquid used as chewing gum. (206:65) **Navajo, Kayenta Candy** Used as chewing gum. (205:50) **Navajo, Ramah Candy** Root used for chewing gum. (191:53)
- **Other**—**Navajo, Kayenta Ceremonial Items** Used as a paint ingredient for chant arrows used in various ceremonies. (205:50)

*Stephanomeria runcinata* Nutt., Desert Wirelettuce

- **Drug**—**Keres, Western Eye Medicine** Milky sap used for sore eyes. (as *S. ramosa* 171:72)

*Stephanomeria* sp.

- **Drug**—**Paiute Febrifuge** and *Panacea* Plant used for various ailments, especially fever. (167:317)

*Stephanomeria spinosa* (Nutt.) S. Tomb, Thorn Skeletonweed

- **Drug**—**Cheyenne Cold Remedy, Diaphoretic, and Herbal Steam** Decoction of smashed roots taken and used as a steam bath to cause sweating for colds. *Misc. Disease Remedy* Decoction of smashed roots used as a steam bath for mumps. *Panacea* Plant used for almost every ailment. *Tuberculosis Remedy* Decoction of smashed roots used as a steam bath for tuberculosis. (as *Lygodesmia spinosa* 83:22) **Paiute Antidiarrheal** Decoction of plant tops taken for diarrhea. *Ca-thartic* Decoction of plant tops taken as a physic. *Dermatological Aid* Compound decoction of root used as a wash for swellings. Poultice of cottony fuzz applied to boils or sores to promote healing. *Emetic* Decoction of plant tops taken as an emetic. *Toothache Remedy* Cottony fuzz placed in cavity of aching tooth. **Shoshoni Antiemetic** Decoction of plant tops taken for vomiting. *Eye Medicine* Decoction of plant tops used as an eyewash. *Tonic* Compound decoction of root taken as a tonic. (as *Lygodesmia spinosa* 180:102, 103)

*Stephanomeria tenuifolia* (Raf.) Hall, Narrowleaf Wirelettuce

- **Drug**—**Apache, White Mountain Snakebite Remedy** Poultice of powdered plants applied to rattlesnake bites. (as *Ptiloria tenuifolia* 136:160) **Shoshoni Venereal Aid** Decoction of plant taken for venereal diseases. (180:143) **Thompson Unspecified** Plant used medicinally for unspecified purpose. (as *Ptiloria tenuifolia* 164:468) **Zuni Snakebite Remedy** Poultice of pulverized plant applied and infusion taken for rattlesnake bite. (as *Ptiloria tenuifolia* 166:58)

*Stephanomeria virgata* Benth., Rod Wirelettuce

- **Drug**—**Kawaiisu Eye Medicine** Milky plant juice used as an eye medicine. (206:65)

**Sterculiaceae**, see *Fremontodendron*, *Theobroma*, *Waltheria*

**Stereocaulaceae**, see *Stereocaulon*

**Stereocaulon**, Stereocaulaceae, lichen

***Stereocaulon paschale*** (L.) Hoffm., Flat Lichen

- **Fiber**—Eskimo, Inuktitut *Canoe Material* Used to stuff caribou skins for rafts. (202:190)

**Stictaceae**, see *Sticta*

***Sticta***, Stictaceae, lichen

***Sticta glomulifera***, Tree Lichen

- **Food**—Ojibwa *Unspecified* Boiled until the lichens coagulate like scrambled eggs. (153:406)

***Stillingia***, Euphorbiaceae

***Stillingia* sp.**

- **Drug**—Creek *Abortifacient* Compound decoction of root used as a wash for irregular periods. (172:662) *Cathartic* Plant used as a cathartic. (177:36) *Gynecological Aid* Decoction of root taken and used as a wash after childbirth. (172:662) Decoction of mashed roots used as a bath and taken by women after giving birth. *Reproductive Aid* Cold infusion of pounded roots taken by men to regain potency. (177:36)

***Stillingia sylvatica*** Garden ex L., Queen's Delight

- **Drug**—Cherokee *Venereal Aid* Decoction or tincture of root used for the worst forms of venereal disease or "clap." (80:51)
- **Other**—Kiowa *Season Indicator* Plant considered a rain symbol because the dry land terrapins get under it for shade. (192:37)

***Stillingia sylvatica*** Garden ex L. **ssp. *sylvatica***, Queen's Delight

- **Drug**—Seminole *Antidiarrheal* Plant used as an astringent for diarrhea. (as *S. angustifolia* 169:168) Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (as *S. angustifolia* 169:234) Plant used as a diarrhea medicine. (as *S. angustifolia* 169:275) *Antiemetic* Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (as *S. angustifolia* 169:234) *Blood Medicine* Decoction of roots taken for menstruation sickness: yellow eyes and skin, weakness, and shaking head.<sup>13</sup> (as *S. angustifolia* 169:247) *Dietary Aid* Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (as *S. angustifolia* 169:234) *Other* Decoction of roots taken for menstruation sickness: yellow eyes and skin, weakness, and shaking head.<sup>13</sup> (as *S. angustifolia* 169:247) *Pediatric Aid* Decoction of roots taken by babies and adults for bird sickness: diarrhea, vomiting, and appetite loss. (as *S. angustifolia* 169:234) *Strengtheners* Decoction of roots taken for menstruation sickness: yellow eyes and skin, weakness, and shaking head.<sup>13</sup> (as *S. angustifolia* 169:247)

***Stipa***, Poaceae

***Stipa comata*** Trin. & Rupr., Needleandthread

- **Other**—Blackfoot *Season Indicator* Spread out appearance of grass indicated the best condition for hunting buffalo cows in the fall. (97:22) Navajo, Ramah *Toys & Games* Sharp pointed fruits with long awns used as play arrows by adults and children. (191:17) Okanagan-Colville *Toys & Games* Seeds thrown like darts by playing children. (188:57)

***Stipa neomexicana*** (Thurb. ex Coult.) Scribn., New Mexico  
Needlegrass

- **Other**—Hopi *Ceremonial Items* Plant used for necklaces on the first initiates in the Wu-chim ceremony. (42:367)

***Stipa robusta*** (Vasey) Scribn., Sleepygrass

- **Food**—Navajo, Ramah *Fodder* Used for sheep and horse feed. (191:17)

***Stipa spartea*** Trin., Porcupine Grass

- **Fiber**—Omaha *Brushes & Brooms* Grains bound with sinew and used to make combs or hairbrushes. The grains were firmly bound with sinew, the points being broken or burned off, the grains forming the teeth, the awns bent back, making the attachment for combs or hairbrushes. (68:324) Stiff awns firmly bound into a bundle and the pointed grains burned off to make a hairbrush. **Pawnee** *Brushes & Brooms* Stiff awns firmly bound into a bundle and the pointed grains burned off to make a hairbrush. **Ponca** *Brushes & Brooms* Stiff awns firmly bound into a bundle and the pointed grains burned off to make a hairbrush. (70:66)
- **Other**—Lakota *Toys & Games* Grass heads used in mischievous games in which boys throw a bunch at people to stick them. (139:31) Omaha *Ceremonial Items* Stiff awns firmly bound into a bundle and the pointed grains burned off to make a ceremonial brush. **Pawnee** *Ceremonial Items* Stiff awns firmly bound into a bundle and the pointed grains burned off to make a ceremonial brush. **Ponca** *Ceremonial Items* Stiff awns firmly bound into a bundle and the pointed grains burned off to make a ceremonial brush. (70:66)

***Stipa speciosa*** Trin. & Rupr., Desert Needlegrass

- **Food**—Kawaiisu *Unspecified* Seeds used for food. When ripe in June, the grass was cut off in bunches, tied together with stems of the grass, and thrown over the shoulder into the carrying basket suspended on one's back. Two procedures were used in preparing the seeds for food. First, the grass was spread out on a flat rock, where it was allowed to dry a half day and then threshed by burning. If the fire burned too quickly, green spear grass was added to slow it down. The burned stalks were stirred and lifted with a green stick so that the seeds would fall out. The seeds were gathered and winnowed by being poured from one basket to another. Boiled, the seeds swelled "like rice." A cupful would fill a pot. Second, the grass was dried for a day or two and the seeds beaten out. They would be boiled whole or first pounded to a meal and then cooked. (206:66) **Paiute** *Porridge* Seeds used to make mush. (167:243)

***Streptanthus***, Brassicaceae

***Streptanthus cordatus*** Nutt., Heartleaf Twistflower

- **Drug**—Navajo, Kayenta *Eye Medicine* Root juice used as eye drops for sore eyes. (205:25)
- **Food**—Navajo, Kayenta *Vegetable* Used for greens in foods. (205:25)

***Streptopus***, Liliaceae

***Streptopus amplexifolius*** (L.) DC., Claspleaf Twistedstalk

- **Drug**—Makah *Gynecological Aid* Chewed roots taken to produce labor in case of protracted delay. (79:25) **Micmac** *Antihemorrhagic* Parts of plant used for spitting blood. *Kidney Aid* Parts of plant used for kidney trouble. *Venereal Aid* Parts of plant used for gonorrhea. (40:62) **Montagnais** *Panacea* Infusion of stems and berries taken "for sickness in general." (156:314) **Penobscot** *Antihemorrhagic* Compound

infusion of plant taken for "spitting up blood." *Kidney Aid* Compound infusion of plant taken for kidney trouble. *Tonic* Compound infusion of plant taken as a tonic. *Venerial Aid* Compound infusion of plant taken for gonorrhea. (156:311) **Thompson Analgesic** Compound decoction of roots taken for internal pains. (164:459) *Dietary Aid* Infusion of whole plant taken for loss of appetite. *Gastrointestinal Aid* Infusion of whole plant taken for stomachache. (187:130)

- **Food—Alaska Native** *Fruit* Berries used for food. *Vegetable* Young, tender shoots used in salads. (85:69) **Cherokee** *Vegetable* Leaves cooked and eaten as greens. (80:59) **Hesquiat** *Forage* Eaten by deer. (185:55) **Montagnais** *Forage* Berries and roots eaten by snakes. (156:314) **Nitinaht** *Forage* Berries eaten by wolves. (186:86) **Okanagon** *Fruit* Bright-colored berries used for food. (125:38) **Oweekeno** *Forage* Berries eaten by frogs. (43:79) **Thompson** *Fruit* Bright-colored berries used for food. (125:38) Berries eaten in large quantities. (164:486)
- **Other—Hesquiat** *Toys & Games* Children play with the berries. (185:55) **Thompson** *Incense & Fragrance* Plant tied to the body, clothes, or hair and used as a scent. (164:502)

### ***Streptopus roseus*** Michx., Rosy Twistedstalk

- **Drug—Chippewa** *Eye Medicine* Poultice of steeped root applied to sties. (53:360) **Iroquois** *Gynecological Aid* Infusion of roots taken for fallen womb. (87:284) **Montagnais** *Diaphoretic* Infusion of blossoms taken to cause sweating. (156:314) **Ojibwa** *Cathartic* Plant used as a physic and infusion taken as a cough remedy. *Cough Medicine* Infusion of plant taken as a cough remedy and used as a physic. (153:374) **Okanagon** *Tonic* Plant used as a tonic medicine. (125:42) **Potawatomi** *Cough Medicine* Root used to make a cough syrup or tea. (154:63) **Thompson** *Tonic* Plant used as a tonic medicine. (125:42) *Unspecified* Decoction of root used medicinally. (164:467)
- **Food—Cherokee** *Unspecified* Young growth boiled, fried, and eaten. (204:251) *Vegetable* Leaves cooked and eaten as greens. (80:59) Leaves and stalks mixed with wanegedum (angelico) and sweet salad and cooked as greens. *Winter Use Food* Leaves and stalks mixed with wanegedum (angelico) and sweet salad and canned for future use. (as *S. roseus* 126:48)

### ***Strophostyles***, Fabaceae

#### ***Strophostyles helvula*** (L.) Ell., Trailing Fuzzybean

- **Drug—Houma** *Misc. Disease Remedy* Compound decoction of bean taken for typhoid. (158:65) **Iroquois** *Dermatological Aid* Leaves rubbed on parts affected by poison ivy and warts. (87:365)
- **Food—Choctaw** *Unspecified* Boiled, mashed roots used for food. (as *Phaseolus diversifolius* 25:8)

### ***Stylosanthes***, Fabaceae

#### ***Stylosanthes biflora*** (L.) B.S.P., Sidebeak Pencilflower

- **Drug—Cherokee** *Abortifacient* Compound used to promote menstruation. *Gynecological Aid* Infusion of root used for female complaint. (80:57)

### ***Styphelia***, Epacridaceae

#### ***Styphelia tameiameia*** (Cham. & Schlecht.) F. Muell., Pukiawe

- **Drug—Hawaiian** *Dermatological Aid* and *Tuberculosis Remedy* Flowers and other plants dried, pounded into a powder, and applied to scrofulous sores. (2:49)

### **Styracaceae**, see *Halesia*

### ***Suaeda***, Chenopodiaceae

#### ***Suaeda arborescens***

- **Food—Pima** *Spice* Added as flavoring to greens or cactus fruits. (146:78)
- **Other—Pima** *Containers* Used moistened with cottonwood to line pits for roasting saltbush overnight. (32:23) Layer of plant used to cover the embers in a baking pit. (32:36) *Cooking Tools* Used to cover coals in cooking pits. (146:71) Used to line saltbush roasting pits. (146:78)

#### ***Suaeda calceoliformis*** (Hook.) Moq., Pursh Seepweed

- **Food—Gosiute** *Unspecified* Seeds used for food. (as *S. depressa* 39:383) **Paiute** *Staple* Seeds parched, ground, and eaten as meal. (as *S. depressa* var. *erecta* 104:98) **Paiute, Northern** *Unspecified* Seeds used for food. (as *S. depressa* 59:47)
- **Other—Keres, Western** *Unspecified* Plant known and named but no use was specified. (as *S. erecta* 171:72)

#### ***Suaeda moquinii*** (Torr.) Greene, Mojave Seablite

- **Drug—Hopi** *Analgesic* Poultice of dried leaves used on sore places. (as *S. intermedia* 190:161) *Ceremonial Medicine* Plant used to bathe the doctor before administering to patients. (as *Dondia fruticosa* 200:31, 74) **Navajo, Kayenta** *Gastrointestinal Aid* Plant used for bleeding bowels. (as *S. torreyana* 205:21) **Paiute** *Dermatological Aid* Crushed fresh plants rubbed on chickenpox to stop itching and to dry sores. *Kidney Aid* Decoction of plant taken for kidney trouble. *Misc. Disease Remedy* Crushed fresh plants rubbed on chickenpox to stop itching and to dry sores. *Urinary Aid* Decoction of plant taken for bladder trouble. **Shoshoni** *Kidney Aid* Decoction of plant taken for kidney trouble. *Urinary Aid* Decoction of plant taken for bladder trouble. (as *S. torreyana* var. *ramosissima* 180:143)
- **Food—Navajo** *Porridge* Seeds boiled into a gruel. (as *S. torreyana* 55:45) **Pima, Gila River** *Unspecified* Leaves pit roasted and eaten. (133:7)
- **Other—Papago** *Cooking Tools* Used to line baking pits for roasting chollas. (as *Dondia nigra* 34:15)

#### ***Suaeda* sp.**, Seablite

- **Drug—Cahuilla** *Dermatological Aid* Leaves boiled, mixed with clay, and used as a hair dye. (15:141)
- **Food—Cahuilla** *Staple* Seeds ground into flour and used to make mush and cakes. *Vegetable* Leaves boiled and used as greens. (15:141)
- **Dye—Cahuilla** *Black* Plants boiled in water and used as a black dye for palm mats. (15:141)
- **Other—Cahuilla** *Soap* Plant used in making soap. (15:141)

#### ***Suaeda suffrutescens*** S. Wats., Desert Seepweed

- **Food—Papago** *Spice* Leaves and stalks lined inside cooking holes to give cactus fruits a salty flavor. **Pima** *Spice* Leaves and stalks lined inside cooking holes to give cactus fruits a salty flavor. (as *Dondia suffrutescens* 95:264) Added as flavoring to greens or cactus fruits. (146:78)
- **Other—Papago** *Cooking Tools* Leaves and stalks used to line cooking pits. **Pima** *Cooking Tools* Leaves and stalks used to line cooking pits. (as *Dondia suffrutescens* 95:262)

**Symphoricarpos**, Caprifoliaceae**Symphoricarpos albus** (L.) Blake, Common Snowberry

• **Drug—Chehalis** *Dermatological Aid* Berries used for the hair. Poultice of chewed leaves applied or infusion of leaves used as a wash for injuries. *Venereal Aid* Decoction of root bark taken for venereal disease. (79:47) **Chippewa** *Diuretic* Compound decoction of root taken for “stoppage of urine.” (53:348) **Cowichan** *Burn Dressing* Berries rubbed on skin for burns. *Dermatological Aid* Berries rubbed on skin for rashes and sores. (182:80) **Cree, Woodlands** *Dermatological Aid* Infusion of whole plant taken and applied externally for skin rash. *Eye Medicine* Infusion of fruit used for sore eyes. *Febrifuge* and *Pediatric Aid* Decoction of roots and stems taken for fever associated with teething sickness. *Venereal Aid* Decoction of roots and stems used for venereal disease. (109:62) **Crow** *Veterinary Aid* Decoction of crushed roots used for horses failing to void. **Flathead** *Burn Dressing* Poultice of crushed leaves, fruits, and bark used for burns. *Dermatological Aid* Poultice of crushed leaves, fruits, and bark used for sores, cuts, and chapped and injured skin. *Eye Medicine* Bark and wild rose used to make an eyewash. plants and roots taken and used as wash for liver spots. (87:476) Compound decoction of bark and roots taken for sores caused by bad blood. (87:478) *Emetic* Infusion of roots taken as an emetic. (87:476) *Eye Medicine* Compound infusion of roots and bark taken for dark circles and puffy eyes. *Kidney Aid* Compound infusion of roots and bark taken for kidney trouble and dropsy. *Laxative* Compound decoction of flowers and leaves taken as a laxative. *Love Medicine* Decoction of roots used as wash for a love medicine. *Orthopedic Aid* Compound infusion of roots and bark taken for back pain. *Pulmonary Aid* Compound decoction of dried plants taken for swollen lungs. (87:477) *Toothache Remedy* Flower stem chewed for worms in the teeth that cause decay. *Urinary Aid* Poultice of smashed flowers applied to swollen testicles. (87:476) Decoction of plants used as wash on parts affected by smashed testicles. *Witchcraft Medicine* Decoction of roots used as a wash for an anti-witch medicine. (87:477) **Kiowa** *Gynecological Aid* Decoction of young leaves taken by women for menstrual cramps. (192:62) **Meskwaki** *Pulmonary Aid* Infusion of root taken for chest pain when other remedies fail. (152:218) **Mohegan** *Cathartic* Infusion of plant taken as a physic. (174:266) Strong infusion of dried leaves taken as a physic. (176:76, 132) *Tonic* Dandelion and white daisy used to make wines and taken as tonics. (30:121) Compound decoction or infusion of plants taken as a spring tonic. (174:266) Compound infusion of root taken as a tonic. (176:76, 132) **Ojibwa** *Blood Medicine* Roots used as a blood medicine. (135:238) *Gastrointestinal Aid* Infusion of root taken for heartburn. (153:366) **Papago** *Analgesic* Infusion of blossoms taken for menstrual cramps. *Gynecological Aid* Infusion of blossoms taken for menstrual cramps. (34:65) **Potawatomi** *Tonic* Root used as a bitter tonic. (154:54) **Quileute** *Unspecified* Used for medicine. (137:69) **Rappahannock** *Blood Medicine* Infusion of root taken as a blood tonic. *Gastrointestinal Aid* Infusion of root taken for dyspepsia. (161:34) **Shinnecock** *Tonic* Dandelion and white daisy used to make wines and taken as tonics. (30:121)

- **Food—Apache, Chiricahua & Mescalero** *Spice* Flower used to flavor drinks and make them stronger. (33:51) **Cherokee** *Vegetable* Leaves and stems used for potherbs and salads. (126:35) **Iroquois** *Beverage* Used to make wine. (142:99) *Vegetable* Young plants boiled and eaten as greens. (124:93) Cooked and seasoned with salt, pepper, or butter. (196:118) **Kiowa** *Vegetable* Young leaves used as greens. (192:62) **Malecite** *Unspecified* Species used for food. (160:6) **Menominee** *Vegetable* Leaves cooked with maple sap vinegar for a dish of greens. (151:65) **Meskwaki** *Vegetable* Spring leaves used as greens and cooked with pork. (152:257) **Micmac** *Vegetable* Leaves used as greens in food. (159:258) **Mohegan** *Unspecified* Cooked and used for food. (176:83) **Ojibwa** *Vegetable* Young leaves gathered in spring and cooked as greens with pork or venison and maple sap vinegar. (153:399) **Okanagan-Colville** *Vegetable* Leaves eaten as greens. (188:85) **Papago** *Vegetable* Cooked or uncooked leaves eaten as greens. (34:14) **Potawatomi** *Unspecified* Leaves cooked with maple sap vinegar and often combined with pork or deer meat. (154:98) **Ute** *Unspecified* Leaves formerly used as food. (38:36)
- **Other—Hesquiat** *Toys & Games* Hollow stems made into whistles. (185:62)

***Taraxacum officinale* ssp. *vulgare*** (Lam.) Schinz & R. Keller, Common Dandelion

- **Drug**—Navajo, Ramah *Dermatological Aid* Poultice of crushed plant applied to swellings. *Gynecological Aid* Cold infusion of plant used to speed delivery of baby. (as *T. palustre* var. *vulgare* 191:53) Tewa *Dermatological Aid* Poultice of pulverized leaves mixed with dough applied to a bad bruise. *Orthopedic Aid* Poultice of pulverized fresh leaves used to dress bone fractures. (as *T. taraxacum* 138:61)
- **Food**—Tewa *Vegetable* Young plants eaten as greens. (as *T. taraxacum* 138:61)

### **Taraxacum** sp., Dandelion

- **Food**—Alaska Native *Dietary Aid* Raw, fresh leaves used as an excellent source for vitamin C and provitamin A. *Vegetable* Young, tender leaves used raw or cooked as a green vegetable. (85:71) Algonquin, Quebec *Vegetable* Leaves used for greens. (18:109) Carrier *Vegetable* Leaves boiled and eaten. (31:81) Cree *Starvation Food* Infusion of roots given in copious drafts at hourly intervals. (16:494) Eskimo, Alaska *Unspecified* Boiled leaves of young plants eaten, but not considered an important food source. (1:38) Scalded leaves used for food. (4:716) Eskimo, Arctic *Vegetable* Tender, young leaves eaten in salads and as a potherb. (128:29) Eskimo, Inuktitut *Spice* Used as a condiment in fish soup. (202:185)

### **Tauschia**, Apiaceae

#### **Tauschia arguta** (Torr. & Gray) J. F. Macbr., Southern Umbrellawort

- **Drug**—Luiseño *Unspecified* Root used for medicinal purposes. (as *Deweya arguta* 155:230)

#### **Tauschia parishii** (Coul. & Rose) J. F. Macbr., Parish's Umbrellawort

- **Drug**—Kawaiisu *Analgesic* Dried root smoke inhaled for head pains. Dried root smoke used for eye pains. Ground root applied as a salve for aching limbs. Infusion of roots taken for inside pain. *Cold Remedy* Dried root smoke inhaled for head colds. *Dermatological Aid* Infusion of pounded roots used as a bath for swollen limbs. *Eye Medicine* Dried root smoke used for eye pains. *Orthopedic Aid* Ground root applied as a salve for aching limbs. Infusion of pounded roots used as a bath for swollen limbs. *Toothache Remedy* Mashed, ground root placed on hot rock, and cheek laid on rock for toothache. (206:66)

### **Taxaceae**, see *Taxus*, *Torreya*

### **Taxodiaceae**, see *Sequoia*, *Taxodium*

### **Taxodium**, Taxodiaceae, conifer

#### **Taxodium ascendens** Brongn., Pond Cypress

- **Fiber**—Seminole *Building Material* Plant used to make houses. *Canoe Material* Wood used to make canoes. (169:471)
- **Other**—Seminole *Ceremonial Items* Plant used to make hunting dance posts. Plant used for burial purposes and made into coffin logs. (169:471) *Containers* Wood used to make medicine bowls. (169:95) *Cooking Tools* Plant used to make spoons and food paddles. *Hide Preparation* Plant used for tanning skins. *Hunting & Fishing Item* Plant used to make arrowheads. *Musical Instrument* Plant used to make drums. *Stable Gear* Plant used to make ox yokes and ox bows. *Tools* Plant used to make heddles, mortars, and pestles. *Toys & Games* Plant used to make ball poles, spoon ball sticks, and dolls. (169:471)

#### **Taxodium distichum** (L.) L. C. Rich., Bald Cypress

- **Fiber**—Choctaw *Cordage* Bark used to make cordage. (as *Cupressus disticha* 25:15)

### **Taxus**, Taxaceae, conifer

#### **Taxus baccata** L., English Yew

- **Drug**—Iroquois *Abortifacient* Compound taken for menstruation when stopped by a cold. *Adjuvant* "Put in all medicines to give them strength." *Antirheumatic (External)* Steam from compound decoction used for rheumatism. *Antirheumatic (Internal)* Compound decoction taken for rheumatism. *Cold Remedy* Compound decoction taken for colds. Compound taken for menstruation when stopped by a cold. *Cough Medicine* Compound decoction taken for coughs. *Diaphoretic* Used for colds and sweating. *Orthopedic Aid* Decoction of twigs used for finger or leg numbness. *Respiratory Aid* Steam from decoction used for chest colds. *Tuberculosis Remedy* Compound decoction taken during the early stages of consumption. (87:264)

#### **Taxus brevifolia** Nutt., Pacific Yew

- **Drug**—Bella Coola *Pulmonary Aid* Decoction of branches with leaves taken "for the lungs." (150:48) Chehalis *Diaphoretic* Infusion of crushed leaves used as a wash to cause perspiring. *Panacea* Infusion of crushed leaves used as a wash to improve general health. Cowlitz *Dermatological Aid* Poultice of ground leaves applied to wounds. (79:16) Haihais *Gastrointestinal Aid* Decoction of wood and bark used for stomach pains. *Internal Medicine* Decoction of wood and bark used for internal ailments. (43:319) Hanaksiala *Urinary Aid* Cooled decoction of small wood pieces taken for bloody urine. (43:187) Karok *Blood Medicine* Decoction of bark taken as a "blood medicine." (6:57) *Gastrointestinal Aid* Decoction of twig bark taken for stomachaches. (148:379) Kitasoo *Gastrointestinal Aid* Decoction of wood and bark used for stomach pains. *Internal Medicine* Decoction of wood and bark used for internal ailments. (43:319) Klallam *Analgesic* Decoction of leaves taken for internal injury or pain. (79:16) Mendocino Indian *Poison* Seeds considered poisonous. (41:305) Okanagan-Colville *Burn Dressing* Wood scrapings and Vaseline used as a sunburn ointment. (188:35) Quinault *Dermatological Aid* Poultice of chewed leaves applied to wounds. *Pulmonary Aid* Decoction of dried bark taken as lung medicine. Swinomish *Strengtheners* Smooth twigs of plant rubbed on the body to gain strength. (79:16) Thompson *Panacea* Decoction of bark taken for any illness. (187:111) Tsimshian *Cancer Treatment* Plant used for cancer. *Internal Medicine* Plant used for internal ailments. (43:187) Yurok *Blood Medicine* Decoction of bark taken to "purify the blood." (6:57)
- **Food**—Karok *Fruit* Berries eaten one at a time. (6:57) Mendocino Indian *Fruit* Red, fleshy berries used for food. (41:305)
- **Fiber**—Clallam *Canoe Material* Wood used to make canoe paddles. (57:195) Cowlitz *Brushes & Brooms* Used to make combs. (79:16) Haisla *Canoe Material* Wood used to make boat ribs. (43:187) Heskuiat *Canoe Material* Extremely strong and resilient wood used for implements requiring strength, such as paddles. (185:48) Hoh *Canoe Material* Wood used to make canoe paddles. (137:57) Karok *Sewing Material* Leaves used to sew sacks. (6:57) Kwakiutl, Southern *Brushes & Brooms* Wood used to make combs. (183:271) Nitinaht *Canoe Material* Wood used to make steering paddles and oarlock holders. *Sewing Material* Wood used to make mat making needles. (186:75)

**Oweekeno** *Brushes & Brooms* Wood used to make combs. *Canoe Material* Wood used to make canoe paddles. (43:75) **Pomo** *Basketry* Roots used in basketry. *Sewing Material* Roots twined as fabric. (66:11) **Pomo, Kashaya** *Basketry* Root used as weft in twined baskets and root very strong and especially good for hopper mortar baskets. (72:121) **Quileute** *Canoe Material* Wood used to make canoe paddles. (137:57) **Quinault** *Brushes & Brooms* Used to make combs. *Canoe Material* Used to make canoe bailers. (79:16) **Salish, Coast** *Brushes & Brooms* Wood used to make combs. *Canoe Material* Wood used to make paddles. (182:72) **Thompson** *Snow Gear* Twigs used to make snowshoe frames. (164:500)

- **Other**—**Bella Coola** *Hunting & Fishing Item* Wood used to make harpoon shafts. *Tools* Wood used to make adz handles, bark scrapers, and wedges. (184:198) **Chehalis** *Hunting & Fishing Item* Wood used to make bows and arrows. (79:16) **Clallam** *Cooking Tools* Wood used to make barbecue stakes. *Hunting & Fishing Item* Wood used to make bows and arrows. (57:195) *Smoke Plant* Needles mixed with tobacco and smoked. (57:199) *Tools* Wood used to make digging sticks. (57:195) **Costanoan** *Hunting & Fishing Item* Wood used to make bows. (21:248) **Cowlitz** *Musical Instrument* Used to make drum frames. *Tools* Used to make wedges for splitting logs and digging sticks for roots and clams. (79:16) **Flathead** *Hunting & Fishing Item* Branches used to make bows. (82:49) **Haihais** *Hunting & Fishing Item* Wood used to make bows, arrowheads, and halibut hooks. (43:319) **Haisla & Hanaksiala** *Weapon* Wood used to make war paddles and war clubs. **Hanaksiala** *Hunting & Fishing Item* Wood used to make bows. Wood used to make clubs to knock out fish, and halibut hooks. Sticks used to strike rods of cedar to make noise while driving animals to be killed. *Tools* Wood used to make digging sticks. (43:187) **Hesquiat** *Tools* Extremely strong and resilient wood used for implements requiring strength, such as needles, wedges and mat pressers, and sticks for prying open mussels and chitons. *Weapon* Extremely strong and resilient wood used for implements requiring strength: spear handles and war clubs. (185:48) **Hoh** *Ceremonial Items* Wood used in various ceremonies. *Hunting & Fishing Item* Wood used to make bows, arrows, and whaling harpoon stocks. *Toys & Games* Wood used to make game disks. (137:57) **Karok** *Containers* Bark used as the covering for stone knives. (148:379) *Hunting & Fishing Item* Wood used to make bows. (6:57) Wood used to make bows. *Smoking Tools* Wood used to make tobacco pipes. (148:379) *Tools* Wood used to make various tools. (6:57) Bark used as the handle for stone knives. (148:379) **Kitasoo** *Hunting & Fishing Item* Wood used to make bows, arrowheads, and halibut hooks. (43:319) **Klallam** *Hunting & Fishing Item* Wood used to make bows and arrows. *Smoke Plant* Needles dried, pulverized, and used in place of tobacco for smoking. (79:16) **Klamath** *Hunting & Fishing Item* Wood used for bows. (45:89) **Kwakiutl, Southern** *Cooking Tools* Wood used to make bowls. (183:271) *Tools* Wood used as a bark lifter to peel red cedar bark off the trees. (183:267) Used to make curved digging sticks for prying wild clover roots. (183:285) Wood used to make fire tongs. Trees used to measure strength. Men who could twist a yew tree from crown to butt were considered very strong. (183:271) **Makah** *Containers* Used to make trinket boxes. *Cooking Tools* Used to make spoons and dishes. *Hunting & Fishing Item* Wood used to make bows, arrows, and whale harpoon shafts. (79:16) **Mendocino Indian** *Hunting & Fishing Item* For-

merly used to make the strongest bows. (41:305) **Montana Indian** *Hunting & Fishing Item* Wood used for making bows. (19:24) **Nitinaht** *Ceremonial Items* Branches used as scrubbers in the manhood training rituals of young boys. *Hunting & Fishing Item* Wood used to make bows, clubs, lances, whaling harpoon shafts, and other fishing gear. (186:75) *Tools* Wood used to make chest-high digging sticks. (67:226) Wood used to make digging sticks for harvesting pacific cinquefoil roots. (186:118) Wood used to make digging and prying sticks, mat pressers, and wedges. (186:75) **Okanagan-Colville** *Hunting & Fishing Item* Wood used to make bows. (188:35) **Oweekeno** *Cooking Tools* Wood used to make serving bowls for food. *Hunting & Fishing Item* Wood made into bows for use with arrows. *Tools* Wood used to make digging sticks. (43:75) **Paiute** *Hunting & Fishing Item* Wood used to make bows. (111:39) **Pit River** *Cash Crop* Formerly sold to the Ukiah Indians. (41:305) **Pomo** *Cooking Tools* Wood used for mush stirrers. *Hunting & Fishing Item* Wood used for bows. (66:11) **Pomo, Kashaya** *Cooking Tools* Wood used to make mush stirrers. *Hunting & Fishing Item* Wood used to make bows. *Tools* Wood used to make digging sticks. (72:121) **Quileute** *Ceremonial Items* Wood used in various ceremonies. *Hunting & Fishing Item* Wood used to make bows, arrows, and whaling harpoon stocks. *Toys & Games* Wood used to make game disks. (137:57) **Quinault** *Cooking Tools* Used to make spoons. *Hunting & Fishing Item* Wood used to make bows, arrows, all harpoon shafts, clubs, and dip net frameworks. *Tools* Used to make digging sticks for roots and clams. (79:16) **Salish, Coast** *Fasteners* Pegs dipped in boiling pitch and driven into holes in the corners of a box to seal it. *Hunting & Fishing Item* Wood used to make bows, harpoon shafts, and halibut hooks. *Toys & Games* Wood used to make gambling disks. *Weapon* Wood used to make weapons. (182:72) **Samish** *Hunting & Fishing Item* Wood used to make bows, arrows, all harpoon shafts, clubs, and dip net frameworks. *Smoke Plant* Needles dried, pulverized, and used in place of tobacco for smoking. *Tools* Used to make wedges for splitting logs. (79:16) **Shasta** *Hunting & Fishing Item* Wood used to make bows. (117:217) **Snohomish** *Hunting & Fishing Item* Wood used to make bows and arrows. **Swinomish** *Hunting & Fishing Item* Wood used to make bows, arrows, all harpoon shafts, clubs, and dip net frameworks. *Smoke Plant* Needles dried, pulverized, and used in place of tobacco for smoking. *Tools* Used to make wedges for splitting logs and digging sticks for roots and clams. *Weapon* Used to make war clubs. (79:16) **Thompson** *Ceremonial Items* Branches used by bereaved people to scrub and purify themselves. (187:111) *Hunting & Fishing Item* Wood used for making bows. (164:499) *Tools* Wood “hardened” in the fire and used to make wedges, ax handles, and digging sticks. (187:111) **Tolowa** *Smoking Tools* Wood used to make pipes. **Yurok** *Hunting & Fishing Item* Wood used to make bows. (6:57)

#### ***Taxus canadensis*** Marsh., Canada Yew

- **Drug**—**Abnaki** *Antirheumatic (External)* Leaves used for rheumatism. (144:155) *Antirheumatic (Internal)* Infusion of leaves taken for rheumatism. (144:163) **Algonquin, Quebec** *Antirheumatic (Internal)* Decoction of needles used for rheumatism. *Gynecological Aid* Used in a sudatory taken by women experiencing complications after childbirth and other complaints. *Poultice* Needles used for poultices. *Unspecified* Used in a sudatory taken by women experiencing com-

- plications after childbirth and other complaints. (18:123) **Algonquin, Tête-de-Boule** *Abortifacient* Infusion of young branches, alone or with other plants, used for stomachaches and irregular menses. (132:132) **Chippewa** *Antirheumatic (External)* Compound decoction of twigs used as herbal steam for rheumatism. *Antirheumatic (Internal)* Compound decoction of twigs taken for rheumatism. *Herbal Steam* Compound decoction of twigs taken or used as herbal steam for rheumatism. (53:362) *Other* Plant used as one of the ingredients of “the thirty-two medicine.” (71:122) **Malecite** *Unspecified* Bark used as medicine. (151:54) **Micmac** *Analgesic* and *Blood Medicine* Parts of plant used for afterbirth pain and blood clots. *Febrifuge* Parts of plant used for fever. *Gastrointestinal Aid* Bark used for bowel and internal troubles. *Gynecological Aid* Parts of plant used for afterbirth pain and clots. *Misc. Disease Remedy* Parts of plant used for scurvy. (as *T. minor* 40:62) **Montagnais** *Febrifuge* “Brew” from plant used for weakness and fever. *Stimulant* Compound containing plant used for weakness and fever. (as *T. minor* 156:315) **Penobscot** *Cold Remedy* Infusion of twigs taken for colds. (as *T. minor* 156:309) **Potawatomi** *Diuretic* Infusion of leaves used as a diuretic. *Venereal Aid* Compound containing leaves used for gonorrhea. (154:84, 85)
- **Food**—**Iroquois** *Beverage* Fruits, leaves, cold water, and maple water fermented into a “little beer.” (141:34) **Penobscot** *Beverage* Twigs used to make a beverage. (as *T. minor* 156:309)
  - **Dye**—**Micmac** *Green* Leaves used to make a green dye. **Montagnais** *Green* Leaves used to make a green dye. (156:317)

### *Taxus cuspidata* Sieb. & Zucc., Japanese Yew

- **Fiber**—**Aleut** *Canoe Material* Drift wood bent into ribs for boats. (7:29)

### *Taxus* sp., Yew

- **Other**—**Wintoon** *Hunting & Fishing Item* Wood used to make bows. (117:264)

## Tellima, Saxifragaceae

### *Tellima grandiflora* (Pursh) Dougl. ex Lindl., Bigflower Tellima

- **Drug**—**Nitinaht** *Psychological Aid* Plants chewed as medicine to stop dreams of having sexual intercourse with the dead. *Unspecified* Used as a “special medicine.” (186:127) **Skagit** *Dietary Aid* Decoction of pounded plants taken to restore the appetite. *Panacea* Decoction of pounded plants taken for any kind of sickness. (79:31)

## Teloschistaceae, see *Xanthoria*

## Tephrosia, Fabaceae

### *Tephrosia florida* (F. G. Dietr.) C. E. Wood, Florida Hoarypea

- **Drug**—**Choctaw** *Dermatological Aid* Decoction of beaten roots applied to sores. **Koasati** *Snakebite Remedy* Infusion of roots applied to snakebites. (as *T. ambigua* 177:33)

### *Tephrosia hispidula* (Michx.) Pers., Sprawling Hoarypea

- **Drug**—**Choctaw** *Cough Medicine* Root chewed and juice swallowed, too much would loosen the bowels, for bad coughs. (as *T. elegans* 28:287)

### *Tephrosia purpurea* (L.) Pers., Fishpoison

- **Drug**—**Hawaiian** *Dermatological Aid* Leaves or buds, salt, baked coconut, water, and child’s urine applied to skin diseases and cuts. *Poison* Poisonous herb. (as *T. piscatoria* 2:4) **Seminole** *Hemostat* Decoction of plant used for nosebleeds. (as *Cracca purpurea* 169:304)
- **Other**—**Hawaiian** *Hunting & Fishing Item* Leaves used to poison fish. (as *T. piscatoria* 2:4)

### *Tephrosia virginiana* (L.) Pers., Virginia Tephrosia

- **Drug**—**Catawba** *Analgesic* Leaves put in shoes for pain in the flesh of the body (fever). (157:187) *Antirheumatic (External)* Leaves placed in shoe for rheumatism. (177:33) *Antirheumatic (Internal)* Plant used for rheumatism. *Febrifuge* Leaves put in shoes for pain in the flesh of the body (fever). (157:187) **Cherokee** *Anthelmintic* Infusion taken for worms. *Dermatological Aid* Decoction of roots used as shampoo by women to prevent hair loss. *Kidney Aid* Compound used for kidneys. *Orthopedic Aid* Compound rubbed on limbs of ballplayers to toughen them. (80:31) Decoction of roots given to children to make them strong and muscular. (177:33) *Pediatric Aid* Infusion of root given to children to make them strong and muscular. (80:31) Decoction of roots given to children to make them strong and muscular. (177:33) *Stimulant* Decoction taken for “lassitude.” (80:31) **Creek** *Abortifacient* Compound decoction of plant taken and used as wash for irregular menstruation. *Reproductive Aid* Compound infusion of root used in “cases of loss of manhood.” (as *Cracca virginiana* 172:658) Cold infusion of roots taken by men to regain potency. (177:33) *Tuberculosis Remedy* Roots, a very strong medicine, used in cases of “pulmonary consumption.” (as *Cracca virginiana* 172:658) Plant used for pulmonary tuberculosis. (177:33) *Urinary Aid* Cold, compound infusion of root taken for bladder trouble. (as *Cracca virginiana* 172:658) Cold infusion of mashed roots taken for bladder troubles. (177:33) **Mahuna** *Gynecological Aid* Infusion of plant taken for women’s diseases. (as *Cracca virginiana* 140:15) **Natchez** *Cough Medicine* Plant used as a cough medicine. (177:33)
- **Other**—**Seminole** *Hunting & Fishing Item* Plant used for fish poison. (as *Cracca virginiana* 169:485)

## Tetraclea, Verbenaceae

### *Tetraclea coulteri* Gray, Coulter’s Wrinklefruit

- **Drug**—**Navajo, Ramah** *Ceremonial Medicine* Plant used in a ceremonial chant lotion. *Febrifuge* Plant used as a fever medicine. (191:42)

## Tetradymia, Asteraceae

### *Tetradymia axillaris* A. Nels., Longspine Horsebrush

- **Other**—**Kawaiisu** *Tools* Spines used as tattooing needles. (as *T. spinosa* var. *longispina* 206:66)

### *Tetradymia canescens* DC., Spineless Horsebrush

- **Drug**—**Hopi** *Gynecological Aid* Decoction of leaf and root taken after birth to shrink uterus and stop discharge. (200:35, 98) *Tonic* Plant used as a tonic. (200:98) **Navajo** *Abortifacient* Infusion of plant used as bath for (inducing?) menstruation. (90:156) **Navajo, Ramah** *Analgesic* Cold simple or compound infusion of leaves taken for various aches and pain. *Ceremonial Medicine* Plant used as a ceremonial emetic. *Cold Remedy* Cold simple or compound infusion of leaf used for colds. *Cough Medicine* Cold simple or compound infusion of

leaves taken for cough. *Disinfectant* Cold simple or compound infusion of leaf used for “ghost infection.” *Emetic* Plant used as a ceremonial emetic. *Febrifuge* Cold simple or compound infusion of leaves taken for fever. *Gastrointestinal Aid* Cold simple or compound infusion of leaves taken for stomachache. *Herbal Steam* Leaves used as sweat bath medicine. *Orthopedic Aid* Cold simple or compound infusion of leaves taken for backache. *Witchcraft Medicine* Leaves used as for protection from witches. (191:53) *Shoshoni Cathartic* Infusion or decoction of dried plant taken as a physic. *Venereal Aid* Decoction of plant taken for venereal diseases. (180:144)

- **Dye**—Navajo, Ramah *Yellow* Flowers with two other plants used as a yellow dye for wool. (191:53)
- **Other**—Navajo, Ramah *Ceremonial Items* Plant ash used for Evilway blackening. *Protection* Cold infusion of plant used as a bath by undertakers to prevent the ghost from following. Burning leaf smoke used by undertakers after a burial to prevent the ghost from following. (191:53)

### *Tetradymia comosa* Gray, Hairy Horsebrush

- **Drug**—Paiute *Cold Remedy* Simple or compound decoction of stems and leaves taken for colds. *Cough Medicine* Simple or compound decoction of stems and leaves taken for coughs. *Gastrointestinal Aid* Decoction of stems and leaves used for stomachaches. *Misc. Disease Remedy* Compound decoction of stems taken for influenza. *Pulmonary Aid* Compound decoction of stems taken for pneumonia. **Shoshoni** *Antidiarrheal* Decoction of bark or root taken for diarrhea. *Cold Remedy* Decoction of stems and leaves taken for colds. *Cough Medicine* Decoction of stems and leaves taken for coughs. *Dermatological Aid* Decoction of stems and turpentine used as a wash for swellings from cuts or bruises. *Gastrointestinal Aid* Decoction of stems and leaves used for stomachaches. (180:144, 145)

### *Tetradymia stenolepis* Greene, Mojave Cottonthorn

- **Drug**—Kawaiisu *Dermatological Aid* Spines used for warts. (206:66)
- **Other**—Kawaiisu *Tools* Spines used as tattooing needles. (206:66)

### *Tetranneuris*, Asteraceae

#### *Tetranneuris acaulis* var. *arizonica* (Greene) Parker, Arizona Hymenoxys

- **Drug**—Hopi *Analgesic* Poultice of plant applied for hip and back pain, especially in pregnancy. (as *Actinea acaulis* 200:33, 94) *Anti-rheumatic (External)* Used for severe pains in hips and back. *Gynecological Aid* Used for severe pains in hips and back, especially in pregnant state. (as *Hymenoxys aculis* var. *arizonica* 42:327) Poultice of plant applied for hip and back pain, especially in pregnancy. (as *Actinea acaulis* 200:35, 94) *Orthopedic Aid* Poultice of plant applied to hip and back pain, especially during pregnancy. (as *Actinea acaulis* 200:94) *Stimulant* Used as a stimulant. (as *Hymenoxys aculis* var. *arizonica* 42:327) Plant used to make a stimulating drink. (as *Actinea acaulis* 200:31, 94)

#### *Tetranneuris argentea* (Gray) Greene, Perkysue

- **Drug**—Navajo, Kayenta *Ceremonial Medicine* Plant used in special ceremony for illness caused by lunar eclipse. *Dermatological Aid* Plant used as a lotion for eczema. *Psychological Aid* Plant used for dreaming of being bitten by an “alligator.” (as *Actinea argentea* 205:44) Navajo, Ramah *Disinfectant* Plant used for “coyote infection.”

*Gastrointestinal Aid* Plant used for heartburn. *Other* Cold infusion taken and used as lotion for emergency treatment of injuries. *Panacea* Plant used as “life medicine.” *Witchcraft Medicine* Plant used for protection from witches. (as *Actinea argentea* 191:47)

#### *Tetranneuris scaposa* (DC.) Greene, Stemmy Hymenoxys

- **Drug**—Zuni *Eye Medicine* Infusion of plant used as an eyewash, not for persons with “bad heart.” (166:60, 61)

### *Thalia*, Marantaceae

#### *Thalia geniculata* L., Bent Alligatorflag

- **Food**—Seminole *Unspecified* Plant used for food. (169:505)

### *Thalictrum*, Ranunculaceae

#### *Thalictrum dasycarpum* Fisch. & Avé-Lall., Purple Meadowrue

- **Drug**—Lakota *Dermatological Aid* Seeds chewed and rubbed on the hands as a lotion. *Veterinary Aid* Seeds given to horses to make them lively. (139:56) **Meskwaki** *Love Medicine* Used as a love medicine to reconcile a quarrelsome couple. (152:240) **Ojibwa** *Febrifuge* Infusion of root used for fevers. (153:383) **Pawnee** *Veterinary Aid* Plant mixed with clay and rubbed on muzzle of horses as a stimulant. **Ponca** *Love Medicine* Plant tops rubbed in hands of bachelors as a love charm. (70:80) **Potawatomi** *Dermatological Aid* Seeds peppered on surface of poultices to make them more effective. *Gastrointestinal Aid* Compound containing leaves and seeds used for cramps. (19:25) **Salish, Coast Dried Food** Cambium dried and eaten in spring. *Unspecified* Cambium eaten fresh in spring. (182:71)

• **Fiber—Bella Coola Basketry** Inner bark used to make baskets. *Clothing* Inner bark used to make capes and shaman collars. *Mats, Rugs & Bedding* Inner bark used to make mats. *Scouring Material* Inner bark used for sponges. (184:197) **Chehalis Clothing** Bark coarsely shredded and plaited into skirts, capes, and dresses for women. *Mats, Rugs & Bedding* Bark finely shredded and used as padding for infants' cradles, sanitary pads, and towels. (79:19) **Clallam Basketry** Bark used for basketry. Roots used for coiled and imbricated baskets. *Building Material* Wood used for house planks, posts, and roof boards. *Canoe Material* Wood used for canoes. *Clothing* Bark used for clothing, sanitary napkins, and towels. *Cordage* Limbs used to make rope. *Mats, Rugs & Bedding* Bark used to pad cradles. (57:195) **Flathead Basketry** Bark strips used to make baskets. (82:54) **Gitksan Basketry** Inner bark strips used for basketry. (73:152) *Building Material* Bark sheets used for roofing. (73:153) *Cordage* Inner bark strips used for cordage. (73:152) *Mats, Rugs & Bedding* Bark sheets used for tarpaulins. (73:153) Inner bark strips used for mat making. **Haisla Basketry** Inner bark strips used for basketry. *Cordage* Inner bark strips used for cordage. *Mats, Rugs & Bedding* Inner bark strips used for mat making. (73:152) **Haisla & Hanaksiala Basketry** Bark used for basketry. Branches used in basketry. Roots used as the main structural elements in baskets. *Building Material* Bark used to partition longhouses and make temporary shelters. Bark used for roofing. Wood used to make dancing platforms. Wood used for house posts and planks in traditional house construction. *Canoe Material* Bark used to cover canoes to

keep the rain out. Wood used to carve canoes. *Clothing* Bark used to make hats of various types. Inner bark used to make rain capes. Bark woven into hip length leggings to wear through deep snow. *Cordage* Branches twisted together to make a type of rope used to tie covers to storage boxes. *Furniture* Bark used to make baby cradles. *Mats, Rugs & Bedding* Bark used to make mats to sit on. Inner bark used to make blankets. (43:162) **Hesquiat Basketry** Very long, straight branches or withes used to make baskets. Cedar withes were also split and used to make a wide variety of strong openwork baskets for berry picking and other purposes. These were strengthened at the corners with twisted cedar ropes. The withes were divided with two vertical cuts. The two outer rounds were often used for finer construction and possibly the active weft; the inner piece, flattened on two sides, was usually used for the "framework" (warp and passive weft) of the baskets. Cleaned, finely split inner bark used to weave baskets. *Building Material* Wood prized as a material for house construction: shakes, shingles, and poles. *Canoe Material* Wood prized as a material for carving, especially canoes. *Clothing* Cleaned, finely split inner bark used to weave capes, skirts, and aprons. Shredded inner bark used for diapers. *Cordage* Very long, straight branches or withes used to make ropes. For large ropes, such as those used in whaling, the entire branch would be used. For smaller ropes, the withes were split off into three parts; the heartwood would be removed and the outer part twisted into rope. Branches used for such ropes would be 5 to 8 cm in diameter. Hesquiat cedar ropes were quite famous and were often traded to other tribes. The large ropes were used long ago as whale hunting lines, anchor lines, and binding lines for tying on house planks or tying together one's effects when moving. *Mats, Rugs & Bedding* Cleaned, finely split inner bark used to weave mats. *Scouring Material* Finely beaten bark used as a sponge. Young boys, when they were starting to walk, were rubbed with this bark dipped in cold octopus broth to make them tough. Girls were told to rub the same liquid on their hands to make them strong. (185:35) **Hoh Basketry** Roots split and used to make baskets. *Building Material* Used for house construction. Bark used to make wigwams, summer houses, and hunting lodges. *Canoe Material* Used to make dugout canoes. *Clothing* Bark inner fibers formerly used to make clothing. Inner bark shredded and used to make skirts. Bark used to make an overcoat for fishing in stormy weather. *Cordage* Twigs and roots twisted and used as ropes. *Mats, Rugs & Bedding* Bark used to line cradles. *Other* Twigs used for drying the body after a bath. (137:57) **Kutenai Basketry** Roots split, peeled, and used to make watertight baskets. *Canoe Material* Wood used to make canoe frames. (82:54) **Kwakiutl Building Material** Wood used for building homes. *Canoe Material* Wood used for making canoes. *Clothing* Bark used to make clothing. *Cordage* Bark used to make ropes. (as *T. gigantea* 20:8) **Kwakiutl, Southern Basketry** Roots and bark used to make baskets. (183:296) Fibrous bark used to make baskets. Long, straight branches used for weaving baskets. Roots washed, scorched over a fire, skinned, split in two, scraped, and used to make baskets. *Brushes & Brooms* Shredded bark used for paintbrushes. *Building Material* Long, straight branches used to make nets for tying wall boards onto house frames. *Canoe Material* Wood steamed for flexibility and malleability and used to make canoes. (183:266) *Clothing* Inner bark used to make clothing. Roots and bark used to make hats.

(183:296) Fibrous bark used to make hats. Shredded bark used for diapers. Roots washed, scorched over a fire, skinned, split in two, scraped, and used to make hats. *Cordage* Fibrous bark used to make twine and ropes. (183:266) *Mats, Rugs & Bedding* Inner bark used to make mats and blankets. (183:296) Fibrous bark used to make mats. *Other* Shredded bark used for napkins, towels, and bandages. *Sewing Material* Long, straight branches used for "sewing wood." (183:266) **Makah Basketry** Inner bark used for basketry. *Canoe Material* Wood used to make canoes. *Clothing* Bark pounded until soft and made into clothes. (67:228) Used to make the lining and headbands of rain hats. (79:19) *Mats, Rugs & Bedding* Bark used to line baby cradles. (67:228) Bark cut into narrow strips and woven into mats. (79:19) **Montana Indian Basketry** Bark used to make frame work of baskets. Inner bark used to make sacks. Roots used for making baskets. *Building Material* Wood used for shingles, lumber, fence posts, and for paving. *Canoe Material* Bark used to make canoes. *Clothing* Inner bark woven into cloth. *Cordage* Inner bark used to make cords for fish nets. (19:25) **Nez Perce Basketry** Roots used to make baskets. *Building Material* Bark formerly used to make lean-to shelters while camping. Bark used to cover the roofs of semisubterranean houses. *Canoe Material* Wood hollowed out with fire, smoothed, trimmed, and used to make canoes. *Furniture* Wood used to make cradleboards. (82:54) **Nitinaht Basketry** Young limbs twisted and used to make basket frames and ribs. Bark used to make baskets. Inner bark strips used to make storage baskets and for basket bottoms, rims, and ribs. *Building Material* Wood used for house posts and wall and roofing house boards. *Canoe Material* Wood used to make dugout canoes. *Clothing* Bark used to make waterproof hats, capes, and other articles of clothing. (186:67) *Cordage* Used to make ropes. (67:228) Young limbs twisted and used for rope material. Bark used to make rope. Inner bark split into thin strips, spun, and used for rope and twine. *Mats, Rugs & Bedding* Bark used to make mats. Inner bark woven with dog hair and cottonwood bast fiber to make blankets. (186:67) **Okanagan-Colville Basketry** Bark used for weaving rough baskets. Split roots used to make a high-quality, coiled, watertight, and strong basket. *Brushes & Brooms* Boughs used to scrub the skin in the sweat house. *Building Material* Logs used to make A-frame shelters and to cover the rafters of an underground house. The logs were burned into 6-meter lengths and boards split off with horn wedges. Bark used to make a covering for sweat house frames and insulation for tule tepees. Bark used to make a raised storage cache. *Canoe Material* Wood used to make canoes, frames for birchbark canoes, and paddles. *Mats, Rugs & Bedding* Bark used, when tule not available, for weaving mats. (188:20) **Okanagon Clothing** Inner bark and stems used to make clothing. *Cordage* Inner bark and stems used to make rope and twine. *Mats, Rugs & Bedding* Inner bark and stems used to make mats and blankets. *Sewing Material* Inner bark and stems used to make thread. (125:39) **Oweekeno Basketry** Fibrous tissue used to make baskets. Inner bark used to make baskets. (43:63) Inner bark and roots used to make baskets. (43:66) *Building Material* Wood used for construction. *Canoe Material* Wood used to make dugout canoes. Fibrous tissue used to make canoe bailers. Inner bark used to make canoe bailers. Inner bark used to make sails for canoes. *Clothing* Fibrous tissue used to make napkins and clothing. Inner bark used to make women's aprons, conical rain capes, and napkins. (43:63) Inner

bark used to make dance costumes. Wood used to make hoops worn by dancers as part of their costumes. (43:66) *Cordage* Inner bark made into cordage and used as lanyards or lines and to secure boxes. *Mats, Rugs & Bedding* Fibrous tissue used for weaving mats and screens. (43:63) **Quileute Basketry** Roots split and used to make baskets. *Building Material* Used for house construction. Bark used to make wigwams, summer houses, and hunting lodges. *Canoe Material* Used to make dugout canoes. (137:57) *Clothing* Used to make the lining and headbands of rain hats. (79:19) Bark inner fibers formerly used to make clothing. Inner bark shredded and used to make skirts. Bark used to make an overcoat for fishing in stormy weather. *Cordage* Twigs and roots twisted and used as ropes. *Mats, Rugs & Bedding* Bark used to line cradles. *Other* Twigs used for drying the body after a bath. (137:57) **Quinault Basketry** Limbs used for openwork baskets. *Clothing* Used to make the lining and headbands of rain hats. *Sewing Material* Roots used to sew the corners of wooden boxes. (79:19) **Salish, Coast Basketry** Inner bark beaten to separate the fibers and used to make baskets. *Brushes & Brooms* Wood used to make combs. *Building Material* Wood used to make houses. *Canoe Material* Wood used to make canoes, paddles, and canoe bailers. *Clothing* Inner bark beaten to separate the fibers and used to make hats, diapers, work aprons, and clothing. Inner bark beaten to separate the fibers and used for covering drummers' hands in winter dances. *Cordage* Young, slender branches used to make ropes. *Furniture* Wood used to make cradles. *Mats, Rugs & Bedding* Inner bark soaked, beaten to separate the fibers, and used to make mats and bedding. (182:71) **Shuswap Basketry** Root shaves woven into baskets. (123:50) **Snuqualmie Building Material** Limbs used to tie the poles of summer houses together. **Squaxin Basketry** Limbs used for openwork baskets. Roots used to make coiled and imbricated basketry. (79:19) **Thompson Basketry** Shredded roots used in making basketry. (164:496) Split roots made into coiled, watertight baskets and used for boiling food. The outer strips of the roots were used to make the bottom of the basket, the center core was used in the coils, and the bark of the roots was used for making the edges because of its toughness. The roots could not be harvested in the winter because it was too difficult to scrape the bark off of the stiff, brown roots. In the spring and early fall, the bark was more easily removed and the roots were white. Split roots made into watertight baskets and used for boiling food. Wood splints sometimes used for the inner foundation of baskets rather than root bundles. (187:94) *Canoe Material* Used to make dugout canoes. (164:496) *Clothing* Inner bark and stems used to make clothing. (125:39) Inner root softened, split into strips, and used to make rain cloaks, aprons, and capes. (164:496) *Cordage* Inner bark and stems used to make rope and twine. (125:39) *Furniture* Outer bark used to kneel and sit on in canoes. (164:496) *Mats, Rugs & Bedding* Inner bark and stems used to make mats and blankets. (125:39) Inner root softened, split into strips, and used to make mats. Bark piled up and used as a bed. (164:496) *Scouring Material* Inner bark, maple or cottonwood inner bark used to make scouring pads. (187:94) *Sewing Material* Inner bark and stems used to make thread. (125:39) **Tsimshian Building Material** Wood used for construction. (43:315) Bark sheets used for roofing and tarpaulins. (73:153) *Canoe Material* Wood used to make canoes. *Clothing* Inner bark used to make diapers for infants and rainproof capes. *Mats, Rugs & Bedding* Inner

bark used to make mats. (43:315) Bark sheets used for tarpaulins. (73:153) **Wet'suwet'en Basketry** Inner bark strips used for basketry. (73:152) *Building Material* Bark sheets used for roofing. (73:153) *Cordage* Inner bark strips used for cordage. (73:152) *Mats, Rugs & Bedding* Bark sheets used for tarpaulins. (73:153) Inner bark strips used for mat making. (73:152)

- **Dye—Thompson Green** Leaves and twigs used as a green dye. (164:501)
- **Other—Bella Coola Decorations** Inner bark used for mask decoration. *Fuel* Inner bark used for tinder. (184:197) **Cowlitz Cooking Tools** Bark used to line cooking pits or cut in broad strips, plaited, and used for dishes. (79:19) **Flathead Containers** Whole bark sheets used to make storage containers. (82:54) **Haisla Hunting & Fishing Item** Boughs used to camouflage canoes, especially during duck hunting. *Lighting* Branches covered with Sitka spruce pitch used for night fishing. *Protection* Inner bark dyed and tied to pets to protect them from the dog eater. **Haisla & Hanaksiala Ceremonial Items** Wood used to make ceremonial whistles. Inner bark rings worn around the neck and on the legs by shamans. Bark used for many ceremonial purposes. Wood used to make a special type of "rattle" for ceremonial activities. Wood used to make coffins. *Cleaning Agent* Wood used as toilet sticks prior to the introduction of toilet paper. *Containers* Wood used to make boxes to store many types of food. *Cooking Tools* Inner bark used to whip soapberries. Wood boards used to separate oval-leaved blueberries from the leaves. Wood made into tongs and used to transfer boiling stones from the fire to cooking vessels. *Designs* Wood used to make totem poles and other carvings. *Fasteners* Withes used with pitch to fasten arrowheads to the shafts. *Fuel* Bark and branches used as kindling to start fires. *Hunting & Fishing Item* Inner bark used to make fishing line. Wood made into small sticks to prop open conical nets used to catch oolichans (candlefish). Wood used to make the shafts of oolichan spears and arrows. Wood used to make the hook used to lift oolichan nets to empty their contents into a canoe. Wood made into noisemakers and used to round up animals to be hunted. **Hanaksiala Ceremonial Items** Bark used in the fire dancer's headdress to produce sparks and fire. A baking powder can with a copper tube in front and a flexible hose in the back was filled with burning red cedar outer bark. An aide to the Fire Dancer blew on the hose in the back to produce sparks and smoke at the front of the headdress, which concealed the can and embers. (43:162) **Hesquiat Cooking Tools** Wood used to make serving dippers. *Fuel* Shredded inner bark twisted tightly, tied with cedar bark strips, and used as tinder to start a fire. A story involving cedar—called "nuhtume" by Hesquiat—tells of the time Deer stole fire. This version has Deer taking fire from the Wolves; another says that Deer stole it from Chief Red-winged Blackbird. In both versions Deer attached the soft, shredded cedar bark to his elbows, knees, and horns. He allowed this dry cedar bark to catch fire when he visited the fire's owner. Deer escaped by jumping out through the roof. Since, however, he had to jump into water while fleeing, the only fire that continued to burn was that in the cedar bark on his horns. Thus, Deer did bring back fire but suffered burnt knees and elbows. *Hunting & Fishing Item* Inner bark used to make a scabbard for a sword or spear. Young branches used to make fish traps. *Tools* Long, dried kindling tied with cedar bark and used as torch to burn out excess wood in mak-

ing a canoe. There is a story about Deer and the Chickadees in which Deer was using such a bundle of cedar pieces while making a canoe. He became so absorbed in watching the dancing of the Chickadees that he burned right through the bottom of the canoe. Turner's informant Alice Paul pointed out that a deer is still like that—when he sees anything moving, he stares at it. (185:35) **Hoh** *Cooking Tools* Wood used to make dishes, ladles, and spoons. *Lighting* Inner bark used as lampwicks in oil lamps. (137:57) **Kutenai** *Containers* Bark used to make a storage trunk. *Cooking Tools* Wood used to make bowls. (82:54) **Kwakiutl** *Cooking Tools* Wood used for making utensils. *Tools* Wood used for making implements. (as *T. gigantea* 20:8) **Kwakiutl**, **Southern** *Containers* Wood steamed for flexibility and malleability and used to make boxes. *Cooking Tools* Boughs used in drying seaweed for eating. *Fuel* Wood used for fuel and making friction fires. *Hunting & Fishing Item* Fibrous bark used to make fish nets. Boughs weighted, placed underwater at estuaries, and used for catching herring spawn. Long, straight branches used to make fishing line. (183:266) **Lummi** *Ceremonial Items* Singed limbs used as brooms to sweep off the walls of a house after removal of a corpse. (79:19) **Makah** *Ceremonial Items* Wood used to make totem poles. *Containers* Wood used to make boxes. *Cooking Tools* Wood used to make fish barbecuing sticks and cross pieces. (67:228) *Hunting & Fishing Item* Used to make arrow shafts. Limbs used for towing dead whales out of the water. (79:19) **Montana Indian** *Hunting & Fishing Item* Wood made into floats for fish nets. (19:25) **Nitinaht** *Ceremonial Items* Wood used to make masks. Boughs used by boys in training for manhood. *Containers* Wood used to make storage boxes. Bark sheets used to make cases for storing whale harpoon heads. *Cooking Tools* Wood used to make bowls, cooking boxes, and spreading sticks to prevent dried fish from curling up. *Decorations* Bark used for mask adornments. *Hunting & Fishing Item* Wood used for the slats or poles of fish weirs, gaff sticks, and to make arrow shafts. Young limbs twisted and used as basket traps for fish. Green boughs used to catch herring spawn. (186:67) **Okanagan-Colville** *Ceremonial Items* Infusion of cedar, fir, and rose branches of equal size used as bathing water for sweat house ritual. Boughs used in church on Palm Sunday. *Hunting & Fishing Item* Wood used to make bows and arrows and dip net frames. *Musical Instrument* Wood used to make drum hoops. (188:20) **Okanagon** *Containers* Inner bark and stems used to make bags. (125:39) **Owekeno** *Ceremonial Items* Fibrous tissue used to make ceremonial head, neck, ankle, and wrist rings. (43:63) Wood and inner bark used for shamanistic or other ceremonial activities. Inner bark used to make head rings worn by dancers. Bark used to make neck, wrist, and ankle rings worn by dancers. Inner bark woven into dance screens. (43:66) *Containers* Wood used to make containers. Inner bark used to make boxes. *Cooking Tools* Wood used to make sticks to dry oolichans (candlefish) and made into barbecue racks for salmon and other fish. *Decorations* Wood used for carving. Inner bark used to make masks. *Fuel* Wood used as kindling. *Hunting & Fishing Item* Boughs used to gather herring roe. Wood used to make arrows. (43:63) Branches used to gather herring roe. *Musical Instrument* Wood made into whistles or trumpets and used to announce the dances in the tsaika and glualaxa series. (43:66) *Tools* Wood used to make implements. (43:63) **Paiute** *Musical Instrument* Wood used for drum frames. (111:46) **Quileute** *Containers* Bark cut into strips and used

for storage of string dried clams and smelts. (79:19) *Cooking Tools* Wood used to make dishes, ladles, and spoons. (137:57) *Hunting & Fishing Item* Limbs used for towing dead whales out of the water. (79:19) *Lighting* Inner bark used as lampwicks in oil lamps. (137:57) *Musical Instrument* Small limbs strung with pecten shells and used as dance rattles. *Tools* Used to make the spindle for spinning mountain goat wool. **Quinault** *Hunting & Fishing Item* Limbs used for towing dead whales out of the water. Limbs used for weaving with vine maple sticks to make fish weirs. (79:19) **Saanich** *Ceremonial Items* Boughs used to vigorously scrub the body for purity while bathing. *Hunting & Fishing Item* Roots woven with gooseberry and wild rose roots to make reef nets. **Salish, Coast** *Ceremonial Items* Wood used to make totems, masks, and ceremonial drums. *Containers* Wood used to make coffins and boxes. Wood used for the hearth to make friction fires. *Cooking Tools* Inner bark beaten to separate the fibers and used for threading clams. *Fuel* Outer bark used for fuel. Inner bark beaten to separate the fibers and used for tinder. Wood used as fuel and also as the drill or hearth in making friction fires. *Hunting & Fishing Item* Inner bark beaten to separate the fibers and used to make fishing line. Young, slender branches used to make nets. Wood used to make herring rakes. *Tools* Wood used for the drill to make friction fires. **Salish, Cowichan** *Hunting & Fishing Item* Roots woven with gooseberry and wild rose roots to make reef nets. (182:71) **Shuswap** *Cash Crop* Root sold at annual tribal gathering. *Ceremonial Items* Bark made into a headband and worn by pubescent girls and young men in ritual isolation. *Jewelry* Bark used to make necklaces and belts worn by dancers at tribal gatherings. (123:50) **Skagit** *Ceremonial Items* Limbs burned at night and waved through the houses after a death to scare off the ghosts. **Squaxin** *Hunting & Fishing Item* Used to make herring rakes. Limbs used for weaving with vine maple sticks to make fish weirs. (79:19) **Thompson** *Cash Crop* Roots made into coiled baskets and considered an important trading item. Widows and women who did not have ready access to meat or fish used to make baskets and trade for food. (187:94) *Containers* Inner bark and stems used to make bags. (125:39) Inner root softened, split into strips, and used to make bags. (164:496) *Good Luck Charm* Root “doll formation” considered to bring good luck to anyone who found it. (187:94) **Tsimshian** *Ceremonial Items* Wood made into horns used for ritual purposes. *Cleaning Agent* Wood made into toilet sticks. *Containers* Wood used to make storage boxes and chests. Inner bark used to make containers for collecting, storing, and cooking foods. *Decorations* Wood used to carve totem poles. *Fuel* Inner bark used to start fires. *Hunting & Fishing Item* Wood used to make hunting and fishing tools. *Tools* Wood used to make woodworking tools. (43:315)

**Thymelaeaceae**, see *Daphne*, *Dirca*, *Wikstroemia*

### **Thymophylla**, Asteraceae

**Thymophylla acerosa** (DC.) Strother, Pricklyleaf Dogweed

- **Drug**—*Isleta* *Febrifuge* Decoction of leaves used as a body bath for fevers. (as *Aciphyllaea acerosa* 100:20)
- **Other**—*Keres, Western* *Smoke Plant* Leaves mixed with tobacco for the flavor. (as *Aciphyllaea acerosa* 171:24)

**Thymophylla pentachaeta** var. **belenidium** (DC.) Strother, Fiveneedle Pricklyleaf

- **Drug**—Paiute *Cathartic* Decoction of root taken as a physic. (as *Dyssodia thurberi* 180:67)

***Thymophylla pentachaeta*** (DC.) Small **var. *pentachaeta***,  
Fiveneedle Pricklyleaf

- **Drug**—Navajo, Kayenta *Psychological Aid* Plant used for dreaming of being pursued by a deer. (as *Dyssodia pentachaeta* 205:46)
- **Other**—Navajo, Kayenta *Hunting & Fishing Item* Plant eaten or used as lotion by hunters so deer cannot smell them. (as *Dyssodia pentachaeta* 205:46)

## ***Thymus***, Lamiaceae

***Thymus praecox* ssp. *arcticus*** (Dur.) Jalas, Creeping Thyme

- **Drug**—Delaware, Ontario *Febrifuge* Compound infusion of plant taken for chills and fever. (as *T. serpyllum* 175:56, 84)

## ***Thysanocarpus***, Brassicaceae

***Thysanocarpus curvipes*** Hook., Sand Fringepod

- **Drug**—Mendocino Indian *Gastrointestinal Aid* Decoction of whole plant taken for stomachaches. (as *T. elegans* 41:352)
- **Food**—Mendocino Indian *Staple* Seeds used in pinole mixtures. (as *T. elegans* 41:352)

## ***Tiarella***, Saxifragaceae

***Tiarella cordifolia*** L., Heartleaf Foamflower

- **Drug**—Cherokee *Oral Aid* Infusion held in mouth to “remove white coat from tongue.” (80:34) **Iroquois** *Dermatological Aid* Poultice of smashed roots applied to wounds. *Dietary Aid* Infusion of roots and leaves given to fatten little children. (87:344) *Eye Medicine* Infusion of dried leaves used as drops for sore eyes. (87:345) *Hunting Medicine* Decoction of whole plant used as a wash for the rifle, a “hunting medicine.” *Oral Aid* Infusion of smashed roots given to babies with sore mouths. *Orthopedic Aid* Compound poultice of smashed plants applied to sore backs of babies. (87:344) *Other* Compound decoction of dried roots given to children with “summer complaint.” (87:345) *Pediatric Aid* Compound poultice of smashed plants applied to sore backs of babies. Infusion of roots and leaves given to fatten little children. (87:344) Compound decoction of dried roots given to children with “summer complaint.” (87:345) *Tonic* Infusion of roots and leaves taken as a tonic. (87:344) **Malecite** *Antidiarrheal* and *Pediatric Aid* Infusion of roots used by children for diarrhea. (116:255) **Micmac** *Antidiarrheal* Roots used for diarrhea. (40:62)

***Tiarella trifoliata*** L., Threeleaf Foamflower

- **Drug**—Quileute *Cough Medicine* Raw leaves chewed as a cough medicine. (79:31)

## **Tiliaceae**, see *Tilia*

## ***Tilia***, Tiliaceae

***Tilia americana*** L., American Basswood

- **Drug**—Algonquin, Quebec *Eye Medicine* Infusion of leaves used as an eyewash. *Unspecified* Poultice of leaves used for medicinal purposes. (18:200) **Cherokee** *Antidiarrheal* Compound of inner bark used for dysentery. (80:24) Infusion of inner bark taken for dysentery. (177:42) *Cough Medicine* Jelly used for coughs. *Dermatological Aid* Decoction of bark mixed with cornmeal and used as poultice for

boils. *Gastrointestinal Aid* Inside bark and twigs used during pregnancy for heartburn, weak stomach, and bowels. Used “when stomach has been overheated by too free use of spirituous liquors.” *Snakebite Remedy* Bark from tree struck by lightning chewed and spit on snakebite. *Tuberculosis Remedy* Jelly used for consumption. (80:24) **Iroquois** *Antihemorrhagic* Compound decoction of roots and bark taken for internal hemorrhage. *Burn Dressing* Compound decoction of leaves applied as poultice to burns or scalds. *Diuretic* Infusion of bark taken to increase urination. *Emetic* Compound decoction taken to vomit during initial stages of consumption. (87:384) *Gynecological Aid* Infusion of branches and bark and buds from another plant taken before giving birth. (141:51) *Orthopedic Aid* Decoction of branches used as wash for babies that do not walk but should. (87:383) Compound poultice of leaves applied to broken bones and swollen areas. *Other* Infusion of plant used for severe injuries. *Panacea* Compound infusion of twigs and roots taken as a panacea. (87:384) *Pediatric Aid* Decoction of branches used as wash for babies that do not walk but should. (87:383) *Stimulant* Infusion of shoots taken when feeling worn out. *Tuberculosis Remedy* Compound decoction taken to vomit during initial stages of consumption. (87:384) **Malecite** *Anthelmintic* Infusion of roots or bark used for worms. (116:255) **Meskwaki** *Dermatological Aid* Poultice of boiled inner bark applied to cause boils to open. *Pulmonary Aid* Decoction of twigs taken for lung trouble. (152:248) **Micmac** *Anthelmintic* Roots used for worms. *Dermatological Aid* Bark used for suppurating wounds. (40:62)
- **Food**—Chippewa *Vegetable* Young twigs and buds cooked as greens or eaten raw. (71:136)
- **Fiber**—Algonquin, Tête-de-Boule *Basketry* Used to make baskets stronger. (132:132) **Cherokee** *Building Material* Wood used for lumber. *Cordage* Boiled bark twisted into rope. *Furniture* Used to make chair bottoms. (80:24) **Chippewa** *Canoe Material* Wood used to make dugout canoes. (71:136) *Cordage* Used for twine and general utility. (53:378) Bast made into cordage of all sorts. The bast was boiled and rubbed on a stick to separate the fibers which were spun into thread for sewing, fine yarn for weaving bags, and made into cordage of all sorts. *Sewing Material* Bast made into thread for sewing and fine yarn for weaving bags. (71:136) **Lakota** *Cordage* Inner bark fibers used to make cordage. (139:60) **Malecite** *Clothing* Fiber used to make belts. *Cordage* Fiber used to make ropes. *Sewing Material* Fiber used for sewing birch bark. (160:6) **Menominee** *Basketry* Basswood fiber used for baskets and fish nets. *Cordage* Bast and bark fiber used for cordage. *Mats, Rugs & Bedding* Basswood fiber used for matting. *Snow Gear* Basswood fiber used for nets for snowshoes. (151:76) **Meskwaki** *Basketry* Inner bark two-ply cord used to make baskets and fish nets. *Clothing* Inner bark two-ply cord used to make shoes. *Cordage* Inner bark boiled in lye water, dried, seasoned, and twisted into two-ply cord. *Mats, Rugs & Bedding* Inner bark two-ply cord used to make mats. (152:269) **Ojibwa** *Cordage* Inner bark of young sprouts used to make twine and rope. (135:232) Tough, fibrous bark of young trees furnished ready cordage and string. The women stripped the bark and peeled the outer edge from the inner fiber with their teeth. The rolls were then kept in coils or were boiled and kept as coils until needed, being soaked again when used, to make them pliable. While there were countless uses for this cordage, perhaps the most important was in tying the poles together for the framework of the wigwam

or medicine lodge. When these crossings of poles were lashed together with wet bark fiber, it was easy to get a tight knot which shrank when dry and made an even tighter joint. The bark of an elm or a balsam, cut into broad strips, was then sewed into place on the framework with basswood string. An oak wood awl was used to punch holes in the bark, but Smith notes that, when they made his wigwam, they used an old file end for an awl. He reports that he lived in this new wigwam all the time he was among the Pillager Ojibwe and scarcely a night passed without a group of them visiting him and sitting around the campfire, telling old-time stories. (153:422) *Sewing Material* Inner bark of young sprouts used to make thread. (135:232) **Omaha** *Basketry* Inner bark used to make baskets. *Cordage* Inner bark used to make ropes and cordage. (68:324) Inner bark fiber used to make cordage and rope. **Pawnee** *Mats, Rugs & Bedding* Inner bark fiber used for spinning cordage and weaving matting. **Ponca** *Cordage* Inner bark fiber used to make cordage and rope. (70:102) **Potawatomi** *Basketry* Bark string used for fashioning bags. *Cordage* Bark string used for making cordage. *Sewing Material* Bark string used for sewing the edges of mats. (154:114)

- **Other—Cherokee** *Decorations* Wood used to carve. *Paper* Wood used for pulpwood. (80:24) **Chippewa** *Containers* Bast made into thread for sewing, fine yarn for weaving bags, and into other cordage of all sorts. *Fasteners* Bast strips used for tying the poles of the framework of houses. *Tools* Wood used to make spiles for drawing out maple sap from trees into buckets during sugar making time. (71:136) **Menominee** *Hunting & Fishing Item* Basswood fiber used for matting, baskets, fish nets, and nets for snowshoes. (151:76) **Meskwaki** *Hunting & Fishing Item* Inner bark two-ply cord used to make mats, baskets, fish nets, and shoes. (152:269)

***Tilia americana*** L. var. *americana*, American Basswood

- **Fiber—Abnaki** *Basketry* Inner bark used to make baskets. (as *T. glabra* 144:156)

***Tilia americana*** var. *heterophylla* (Vent.) Loud., American Basswood

- **Drug—Cherokee** *Antidiarrheal* Compound of inner bark used for dysentery. *Cough Medicine* Jelly used for coughs. *Dermatological Aid* Decoction of bark mixed with cornmeal and used as poultice for boils. *Gastrointestinal Aid* Inside bark and twigs used during pregnancy for heartburn, weak stomach, and bowels. Used “when stomach has been overheated by too free use of spirituous liquors.” *Snakebite Remedy* Bark from tree struck by lightning chewed and spit on snakebite. *Tuberculosis Remedy* Jelly used for consumption. (as *T. heterophylla* 80:24)
- **Fiber—Cherokee** *Building Material* Wood used for lumber. *Cordage* Boiled bark twisted into rope. *Furniture* Used to make chair bottoms. (as *T. heterophylla* 80:24)
- **Other—Cherokee** *Decorations* Wood used to carve. *Paper* Wood used for pulpwood. (as *T. heterophylla* 80:24)

***Tillandsia***, Bromeliaceae

***Tillandsia*** sp., Airplant

- **Other—Seminole** *Cooking Tools* Plant used as a water supply for cooking during the dry season. (169:472)

***Tillandsia usneoides*** (L.) L., Spanish Moss

- **Drug—Houma** *Febrifuge* Decoction of moss taken for chills and fever. (158:59)
- **Fiber—Houma** *Cordage* Dried fibers twisted and used for cordage. *Mats, Rugs & Bedding* Dried fibers twisted and used to make floor mats. (158:59)
- **Other—Seminole** *Cooking Tools* Used to remove scum in cooking. *Hide Preparation* Used for tanning. (as *Dendropogon usneoides* 169:472)

***Tiquilia***, Boraginaceae

***Tiquilia latior*** (I. M. Johnston) A. Richards., Matted Crinkleemat

- **Drug—Navajo, Kayenta** *Gastrointestinal Aid* Plant used for gastrointestinal disease. (as *Coldenia hispidissima* var. *latior* 205:39)

***Tolmiea***, Saxifragaceae

***Tolmiea menziesii*** (Pursh) Torr. & Gray, Youth on Age

- **Drug—Cowlitz** *Dermatological Aid* Poultice of fresh leaves applied to boils. (79:31)
- **Food—Makah** *Unspecified* Sprouts eaten raw in early spring. (79:31)

***Torreya***, Taxaceae, conifer

***Torreya californica*** Torr., California Nutmeg

- **Drug—Costanoan** *Analgesic* Smashed nuts and fat rubbed on temples for headaches. *Diaphoretic* Smashed nuts and fat rubbed on body to cause sweating. *Febrifuge* Smashed nuts and fat rubbed on body for chills. *Gastrointestinal Aid* Nuts chewed for indigestion. (as *Tumion californica* 21:6) **Pomo** *Tuberculosis Remedy* Decoction of nuts taken for tuberculosis. (66:11) **Pomo, Kashaya** *Tuberculosis Remedy* Decoction of cracked, soaked nut taken for tuberculosis. (72:78)
- **Food—Mendocino Indian** *Unspecified* Whole nuts roasted and used for food. (as *Tumion californicum* 41:305)
- **Fiber—Pomo** *Basketry* Roots used to make baskets. (as *Tumion californicum* 41:305) Roots used as splints in basketry. (as *Tumion californica* 118:6)
- **Other—Pomo** *Tools* Rigid, sharp-pointed leaves formerly used as needles to prick pitch soot into the skin in tattooing. (as *Tumion californicum* 41:305)

***Touchardia***, Urticaceae

***Touchardia latifolia*** Gaud., Olona

- **Drug—Hawaiian** *Laxative* Slimy substance, water, plant milk, and watermelon juice mixed, strained, and taken as a laxative. *Pediatric Aid* Shoots chewed and given to infants for bodily ailments or weaknesses. *Strengtheners* Shoots chewed and given to infants for bodily ailments or weaknesses. Shoots chewed for bodily ailments or weaknesses. (2:71)
- **Fiber—Hawaiian** *Cordage* Plant fiber used to make fishing lines or ropes. (2:71)

***Townsendia***, Asteraceae

***Townsendia exscapa*** (Richards.) Porter, Stemless Townsendia

- **Drug—Blackfoot** *Veterinary Aid* Decoction of roots given to tired horses to relieve them. (as *T. sericea* 97:61) **Navajo** *Ceremonial Medicine* Chewed and spit upon ceremonial knots to unravel them, “un-

tying medicine." (55:89) **Navajo, Ramah** *Gynecological Aid* Plant chewed or infusion taken to ease delivery. (191:54)

- **Other**—**Navajo, Ramah** *Ceremonial Items* Pollen shaken from a live horned toad onto the unraveler string and used in the "unraveling ceremony." (191:54)

### *Townsendia incana* Nutt., Hoary Townsendia

- **Drug**—**Hopi** *Reproductive Aid* Plant taken to induce pregnancy and insure male child. *Throat Aid* Plant used to clear the throat. (as *T. arizonica* 200:35, 99) **Navajo** *Gynecological Aid* Plant used in labor to facilitate delivery of the baby. (90:156) **Navajo, Kayenta** *Gynecological Aid* Plant used to expedite labor. *Unspecified* Plant used as a strong medicine. (as *T. arizonica* 205:50)

### *Townsendia* sp.

- **Drug**—**Navajo** *Gynecological Aid* Plant used to accelerate deliverance. (55:89)

### *Townsendia strigosa* Nutt., Hairy Townsendia

- **Drug**—**Hopi** *Throat Aid* Plant used to clear the throat. (42:368) **Keres, Western** *Gynecological Aid* Dried leaves ground into a powder and used on lacerations at childbirth. Infusion of plant used as a wash or douche. (171:73) **Navajo** *Gastrointestinal Aid* Decoction of crushed, dried leaves taken for stomach troubles. *Gynecological Aid* Decoction of crushed, dried leaves taken to accelerate deliverance. *Nose Medicine* Dried, pulverized plants used as a snuff for nose troubles. *Throat Aid* Dried, pulverized plants used as a snuff for throat troubles. (55:89)
- **Other**—**Navajo** *Ceremonial Items* Chewed by Night Chant chanter and spit upon prayer sticks to facilitate the disentanglement of string. Juice spat upon the wand used in the Night Chant. (55:89)

## *Toxicodendron*, Anacardiaceae

### *Toxicodendron diversilobum* (Torr. & Gray) Greene, Pacific Poison Oak

- **Drug**—**Diegueño** *Eye Medicine* Decoction of roots used in the eyes for tiny sores inside the lids and to improve vision. (84:43) **Karok** *Contraceptive* Leaf swallowed in the spring as a prophylactic. (as *Rhus diversiloba* 148:385) **Poison** Plant considered poisonous. (6:58) **Mahuna** *Preventive Medicine* Infusion of dried roots taken as an immunity against any further poisoning. (as *Rhus diversiloba* 140:11) **Mendocino Indian** *Dermatological Aid* Moxa of plant used for warts and ringworms. (as *Rhus diversiloba* 41:364) **Tolowa** *Antidote* Buds eaten in the spring to obtain immunity from the plant poisons. *Poison* Plant considered poisonous. (6:58) **Wailaki** *Snakebite Remedy* Poultice of fresh leaves applied to rattlesnake bites. (as *Rhus diversiloba* 41:364) **Yuki** *Dermatological Aid* Plant juice used on warts. (as *Rhus diversiloba* 49:46) **Yurok** *Poison* Plant considered poisonous. (6:58)
- **Food**—**Karok** *Candy* Plant chewed like tobacco, "just to raise heck." (6:58) **Mendocino Indian** *Forage* Fruits eaten by yellowhammers and squirrels as forage. Fruits and leaves eaten by hogs as forage. (as *Rhus diversiloba* 41:364)
- **Fiber**—**Costanoan** *Basketry* Shoots used in basketry. (21:251) **Mendocino Indian** *Basketry* Slender stems used for circular withes in basket making. (as *Rhus diversiloba* 41:364)
- **Dye**—**Pomo** *Black* Charcoal or soot used for tattoo pigment. Ashes

rubbed on children to make skin color darker. The ashes were rubbed on those children who were fathered by a white man to make them look more "Indian" in color. (as *Rhus diversiloba* 66:14) Juice used as a black dye for blackroot sedge. (as *Rhus diversiloba* 118:6)

- **Other**—**Costanoan** *Containers* Leaves used to wrap bread. (21:251) **Karok** *Containers* Leaves used to cover soap plant while cooking in the earth oven. (as *Rhus diversiloba* 148:385) *Cooking Tools* Branches used to prop salmon file open. (6:58) Twigs used to spit the salmon steaks during smoking. (as *Rhus diversiloba* 148:385) **Mendocino Indian** *Cooking Tools* Fresh leaves formerly used to wrap up acorn meal for baking. *Decorations* Black juice used to apply temporary tattoo marks onto the skin. (as *Rhus diversiloba* 41:364) **Pomo, Kashaya** *Designs* Burned wood ashes made into a paste for tattooing. (as *Rhus diversiloba* 72:81)

### *Toxicodendron pubescens* P. Mill., Atlantic Poison Oak

- **Drug**—**Cherokee** *Emetic* Decoction given as an emetic. (as *Rhus toxicodendron* 80:41) Decoction of bark taken as an emetic. (as *Rhus toxicodendron* 177:37) **Delaware** *Unspecified* Poultice of roasted, crushed roots regarded as medicinally valuable. (as *Rhus toxicodendron* 176:33) **Delaware, Oklahoma** *Dermatological Aid* Poultice and salve containing root used on chronic sores and swollen glands. (as *Rhus toxicodendron* 175:27, 78) **Iroquois** *Oral Aid* Poultice of plant applied to infectious sores on lips. *Pediatric Aid* Given to nervous boys and girls. *Sedative* Given to nervous boys and girls. (as *Rhus toxicodendron* ssp. *radicans* 87:373) **Meskwaki** *Dermatological Aid* Poultice of pounded root applied to swelling "to make it open," dangerous. (as *Rhus toxicodendron* 152:201) **Omaha** *Poison* Plant considered poisonous. (as *T. toxicodendron* 70:100) **Paiute** *Poison* Plant considered poisonous. (as *Rhus toxicodendron* 111:88) **Ponca** *Poison* Plant considered poisonous. (as *T. toxicodendron* 70:100) **Potawatomi** *Dermatological Aid* Poultice of pounded root applied to swellings by skilled medicine men. *Poison* Plant considered poisonous. (as *Rhus toxicodendron* 154:38)

### *Toxicodendron radicans* (L.) Kuntze, Eastern Poison Ivy

- **Drug**—**Houma** *Tonic* Decoction of leaves taken as a tonic and "rejuvenator." (158:59)

### *Toxicodendron radicans* (L.) Kuntze ssp. *radicans*, Eastern Poison Ivy

- **Drug**—**Algonquin, Quebec** *Dermatological Aid* Leaves rubbed on the skin affected by a poison ivy reaction. (as *Rhus radicans* 18:194) **Cherokee** *Emetic* Decoction given as an emetic. (as *Rhus radicans* 80:41) **Kiowa** *Dermatological Aid* Plant used for running or nonhealing sores. Whole or broken leaves rubbed over boils or skin eruptions. (as *Rhus radicans* 192:38) **Navajo, Ramah** *Poison* Compound containing plant used to poison arrows. (as *Rhus radicans* 191:35) **Thompson** *Poison* Plant considered poisonous because it caused skin irritations. One informant said that it affected her eyes, causing temporary blindness. (as *Rhus radicans* 187:149)
- **Other**—**Navajo, Ramah** *Good Luck Charm* Leaf chewed and given to opponent to insure good luck in gambling. (as *Rhus radicans* 191:35)

### *Toxicodendron rydbergii* (Small ex Rydb.) Greene, Western Poison Ivy

- **Drug**—**Iroquois** *Blood Medicine* Poultice of plant applied to the skin

as a vesicant for water in the blood. Poultice of plant applied to the skin as a vesicant for water in the blood. (as *Rhus radicans* var. *rydbergii* 141:52) **Lakota Poison** Poisonous plant caused a rash resembling venereal disease. (139:33)

**Toxicodendron vernix** (L.) Kuntze, Poison Sumac

- **Drug—Cherokee** *Dermatological Aid* Plant considered poison and used in some form as a wash for foul ulcers. *Febrifuge* Plant considered poison and taken in some form for fever. *Misc. Disease Remedy* Plant considered poison and taken in some form for ague. *Poison* Plant considered poison and taken in some form for clap and “gleet” or ulcerated bladder. *Respiratory Aid* Plant considered poison and taken in some form for asthma and phthisic. *Urinary Aid* Plant considered poison and taken in some form for ulcerated bladder. *Venereal Aid* Plant considered poison and taken in some form for clap and “gleet.” (as *Rhus vernix* 80:57) **Chippewa Poison** Plant considered poisonous. (as *Rhus vernix* 71:135)

**Tradescantia**, Commelinaceae

**Tradescantia bracteata** Small ex Britt., Longbract Spiderwort

- **Other—Lakota Paint** Flowers made into a blue jelly-like paint used for painting moccasins. (139:26)

**Tradescantia occidentalis** (Britt.) Smyth, Prairie Spiderwort

- **Drug—Meskwaki** *Diuretic* Infusion of root used as a “urinary.” *Psychological Aid* Root gum inserted in cut on head “to stop craziness.” (152:209) **Navajo, Kayenta Love Medicine** Plant used as an aphrodisiac. (205:16) **Navajo, Ramah Disinfectant** Cold infusion of root used internally and externally for “deer infection.” *Internal Medicine* Decoction of root taken for internal injury. *Veterinary Aid* Cold simple or compound infusion given to livestock as an aphrodisiac. (191:20)
- **Food—Acoma Unspecified** Tender shoots eaten without preparation. (32:53) **Hopi Vegetable** Plant used for greens. (42:369) **Keres, Western Unspecified** Tender shoots eaten for food. (171:73) **Laguna Unspecified** Tender shoots eaten without preparation. (32:53)

**Tradescantia pinetorum** Greene, Pinewoods Spiderwort

- **Drug—Navajo, Ramah Veterinary Aid** Cold simple or compound infusion given to livestock as an aphrodisiac. (191:20)

**Tradescantia sp.**, Spiderwort

- **Food—Cherokee Vegetable** Leaves relished as greens. (203:75)

**Tradescantia virginiana** L., Virginia Spiderwort

- **Drug—Cherokee Analgesic** Infusion used for stomachache from overeating. *Antihemorrhagic* Compound infusion taken for “female ailments or rupture.” *Cancer Treatment* Poultice of root used for cancer. *Dermatological Aid* Plant mashed and rubbed on insect bites. *Gastrointestinal Aid* Infusion used for stomachache from overeating. *Gynecological Aid* Compound infusion taken for “female ailments or rupture.” *Kidney Aid* Compound used for kidney trouble. *Laxative* Infusion taken as a laxative and plant mashed and rubbed on insect bites. (80:56, 57)
- **Food—Cherokee Unspecified** Young growth parboiled, fried, frequently mixed with other greens, and eaten. (204:252) **Vegetable** Leaves and stems mixed with other greens or grease and parboiled until tender. (126:33)

**Tragia**, Euphorbiaceae

**Tragia nepetifolia** Cav., Catnip Noseburn

- **Drug—Navajo, Kayenta Snakebite Remedy** Plant used as a lotion to keep snakes away. (205:31) **Navajo, Ramah Panacea** Plant used as “life medicine.” (191:35)
- **Other—Navajo, Kayenta Protection** Plant sprinkled on hogan during rain storm for protection from lightning. (205:31)

**Tragia ramosa** Torr., Branched Noseburn

- **Drug—Keres, Western Dermatological Aid** Infusion of plant used on ant bites. *Pediatric Aid* and *Strengtheners* Nettle used to strike male infants, to increase pain threshold during battle. (171:73)

**Tragopogon**, Asteraceae

**Tragopogon porrifolius** L., Salsify

- **Drug—Navajo, Ramah Ceremonial Medicine** Plant used as a ceremonial emetic. *Dermatological Aid* Cold infusion taken or used as lotion for mad coyote bite on humans or livestock. *Emetic* Plant used as a ceremonial emetic. *Veterinary Aid* Cold infusion taken or used as lotion for mad coyote bite on humans or livestock. (191:54)
- **Food—Navajo Beverage** Latex used as milk. (90:156) **Okanagon Unspecified** Stems broken at the base and hardened juice chewed for food. **Thompson Unspecified** Stems broken at the base and hardened juice chewed for food. (125:38) **Thompson, Upper (Nicola Band) Unspecified** Latex exposed to air, chewed, and swallowed. **Thompson, Upper (Spences Bridge) Unspecified** Latex exposed to air, chewed, and swallowed. (164:484)

**Tragopogon pratensis** L., Meadow Salsify

- **Drug—Navajo, Ramah Ceremonial Medicine** Cold infusion gargled as ceremonial treatment for throat trouble. *Dermatological Aid* Cold infusion used as lotion for boils. *Throat Aid* Cold infusion gargled as ceremonial treatment for throat trouble. *Veterinary Aid* Cold infusion used in large amounts for internal injury to horses. (191:54)
- **Food—Okanagan-Colville Forage** Plant eaten by deer, horses, and cattle. (188:85)

**Tragopogon sp.**, Salsify

- **Food—Cherokee Unspecified** Young plants boiled, fried, and eaten. (204:253) **Thompson Candy** Milky latex chewed for pleasure and later swallowed. The stems were broken, the sap squeezed out, allowed to harden, and then chewed for pleasure. (187:185) **Thompson, Upper (Nicola Band) Unspecified** Milky juice obtained from broken stem bases, dried, and chewed with great enjoyment. (164:493)
- **Fiber—Thompson Mats, Rugs & Bedding** Fluffy pappus of fruits used to make “cotton” for stuffing pillows. (187:185)

**Trautvetteria**, Ranunculaceae

**Trautvetteria caroliniensis** (Walt.) Vail, Carolina Bugbane

- **Drug—Bella Coola Dermatological Aid** Poultice of pounded roots, too strong for children, applied to boils. (as *T. grandis* 150:57)

**Trema**, Ulmaceae

**Trema micranthum** (L.) Blume, Trema

- **Drug—Seminole Reproductive Aid** Bark used for difficult deliveries. (as *T. floridanus* 169:323)

**Trentepohliaceae**, see *Trentepohlia*

**Trentepohlia**, Trentepohliaceae, alga

**Trentepohlia aurea** (L.) Martius

- **Other**—Haisla & Hanaksiala *Paint* Plant used for face paint. (43:132)

**Triadenum**, Clusiaceae

**Triadenum virginicum** (L.) Raf., Virginia Marsh St. Johnswort

- **Drug**—Potawatomi *Febrifuge* Infusion of leaves used for fevers. (as *Hypericum virginicum* 154:60)

**Trianthema**, Aizoaceae

**Trianthema portulacastrum** L., Desert Horsepurslane

- **Food**—Pima *Vegetable* Plants cooked and eaten as greens in summer. (47:64)

**Tribulus**, Zygophyllaceae

**Tribulus terrestris** L., Puncturevine

- **Drug**—Navajo *Ceremonial Medicine* Plant used as a traditional ceremonial medicine. (90:163)

**Tricholomataceae**, see *Armillaria*, *Pleurotus*

**Trichostema**, Lamiaceae

**Trichostema lanatum** Benth., Woolly Bluecurls

- **Drug**—Cahuilla *Gastrointestinal Aid* Decoction of leaves and flowers taken for stomach ailments. (15:141) **Mahuna** *Panacea* Plant used for many ailments. (140:48)

**Trichostema lanceolatum** Benth., Vinegar Weed

- **Drug**—Concow *Analgesic* Infusion of leaves used as a wash for feverish headaches. *Febrifuge* Infusion of leaves used as a wash for feverish headaches. *Misc. Disease Remedy* Infusion of leaves used as a wash for typhoid fever. (41:385) **Costanoan** *Analgesic* Ground leaves rubbed on the skin for pain. *Cold Remedy* Cold infusion of leaves used for colds. Ground leaves rubbed on the face and chest for colds. *Dermatological Aid* and *Disinfectant* Decoction of plant used for infected sores. *Gastrointestinal Aid* Decoction of plant used for stomachaches. (21:17) **Kawaiisu** *Cold Remedy* Infusion of plants taken for colds. *Gastrointestinal Aid* Infusion of plants taken for stomachaches. (206:67) **Miwok** *Analgesic* Decoction of leaves and flowers taken for headaches. *Cold Remedy* Decoction of leaves and flowers taken for colds. (12:173) *Dermatological Aid* Decoction of flat leaves used as bath for pustules and prevented skin eruptions caused by smallpox. *Gynecological Aid* Decoction steam used for uterine trouble. (12:173, 174) *Misc. Disease Remedy* Decoction of leaves and flowers taken for malaria. Decoction of leaves and flowers taken for ague. (12:173) Decoction of leaves and flowers used as a bath for ague, and smallpox. (12:173, 174) *Stimulant* Decoction of leaves and flowers taken for general debility. (12:173) *Toothache Remedy* Leaves chewed and placed in cavity or around aching tooth. (12:173, 174) *Urinary Aid* Decoction of leaves and flowers taken for stricture of the bladder. (12:173) **Tubatulabal** *Analgesic* Infusion of entire plant snuffed up the nose for headaches. *Hemostat* Infusion of entire plant snuffed up the nose for nosebleeds. (193:59)
- **Food**—Kawaiisu *Beverage* Leaves used to make a nonmedicinal beverage. (206:67)

- **Other**—Concow *Hunting & Fishing Item* Fresh leaves mashed and used as a fish poison. (41:385) **Karok** *Insecticide* Plant used in bedding to keep fleas away. (148:389) **Kawaiisu** *Insecticide* Crushed leaves used in bed rolls to discourage fleas. (206:67) **Numlaki** *Hunting & Fishing Item* Fresh leaves mashed and used as a fish poison. (41:385)

**Trichostema** sp., Blue Stinkweed

- **Drug**—Karok *Unspecified* Used for medicine. (117:209)

**Tridens**, Poaceae

**Tridens muticus** (Torr.) Nash var. **muticus**, Rough Tridens

- **Food**—Navajo, Ramah *Fodder* Used for sheep and horse feed. (as *Triodia mutica* 191:17)

**Trientalis**, Primulaceae

**Trientalis borealis** Raf. ssp. **borealis**, Maystar

- **Drug**—Montagnais *Panacea* Infusion of plant used for “general sickness.” *Tuberculosis Remedy* Infusion of plant taken for consumption. (as *T. americana* 156:314)
- **Other**—Ojibwa *Hunting & Fishing Item* Root mixed with many others to make smoking scent that attracted the deer to the hunter. (as *T. americana* 153:431)

**Trientalis borealis** ssp. **latifolia** (Hook.) Hultén, Broadleaf Starflower

- **Drug**—Cowlitz *Eye Medicine* Infusion of plant juice used as an eye-wash. (as *T. latifolia* 79:45) **Paiute** *Eye Medicine* Plant used as an eye medicine. (as *T. latifolia* 111:105)

**Trifolium**, Fabaceae

**Trifolium albopurpureum** Torr. & Gray, Rancheria Clover

- **Food**—Pomo, Kashaya *Unspecified* Leaves eaten alone or with salt or peppernut cakes. (72:36)

**Trifolium bifidum** Gray, Notchleaf Clover

- **Food**—Mendocino Indian *Staple* Seeds eaten as a pinole. *Unspecified* Eaten sparingly when young. (41:360)

**Trifolium ciliolatum** Benth., Foothill Clover

- **Food**—Luiseño *Unspecified* Plant eaten both cooked and raw. Seeds used for food. (155:231) **Miwok** *Dried Food* Steamed clover dried for later use. Dried clover stored for later use. *Unspecified* Raw or steamed clover used for food. (12:160) **Wailaki** *Forage* Eaten by horses with impunity. *Unspecified* Species used for food. **Yokia** *Unspecified* Species used for food. (41:360)

**Trifolium cyathiferum** Lindl., Cup Clover

- **Food**—Mendocino Indian *Unspecified* Flowers eaten as food. (41:361)

**Trifolium dichotomum** Hook. & Arn., Branched Indian Clover

- **Food**—Mendocino Indian *Staple* Seeds eaten as a pinole. *Unspecified* Young leaves sparingly eaten. (41:361)

**Trifolium dubium** Sibthorp, Suckling Clover

- **Drug**—Navajo, Ramah *Ceremonial Medicine* and *Emetic* Plant used as a ceremonial emetic. (191:34) *Hemostat* Poultice of chopped plant applied to cut as hemostat. (191:33)

***Trifolium fucatum*** Lindl., Bull Clover

- **Food**—Mendocino Indian *Unspecified* Herbage used for food. Flowers and seedpods used for food. Seeds eaten raw. (as *T. virescens* 41:361) **Pomo, Kashaya** *Unspecified* Sweet flowers and leaves eaten alone, with salt or peppernut cakes. (72:35)

***Trifolium gracilentum*** Torr. & Gray, Pinpoint Clover

- **Food**—Luiseño *Unspecified* Plant eaten both cooked and raw. (155:231)

***Trifolium hybridum*** L., Alsike Clover

- **Drug**—Iroquois *Gynecological Aid* Cold infusion of plant used as a wash for breasts to increase milk flow. *Veterinary Aid* Cold infusion of plant used as a wash for cow's teats to increase milk flow. (87:364)

***Trifolium microcephalum*** Pursh, Smallhead Clover

- **Food**—Luiseño *Unspecified* Plant cooked and eaten. (155:231)

***Trifolium obtusiflorum*** Hook. f., Clammy Clover

- **Food**—Luiseño *Unspecified* Plant cooked and eaten. (155:231) **Mendocino Indian** *Unspecified* Leaves eaten after acid exudation washed away. (41:361)

***Trifolium pratense*** L., Red Clover

- **Drug**—Algonquin, Quebec *Pulmonary Aid* Infusion of plant taken for whooping cough. (18:188) **Cherokee** *Febrifuge* Infusion taken for fevers. *Gynecological Aid* Infusion taken for fevers and leukorrhea. *Kidney Aid* Infusion taken for "Bright's disease." (80:29) **Iroquois** *Blood Medicine* Decoction of flowers taken as a blood medicine. *Gynecological Aid* Cold infusion of blossoms taken by women for the change of life. (87:363) **Rappahannock** *Blood Medicine* Infusion of stems and leaves used as an ingredient of a blood medicine. (161:31) **Shinnecock** *Cancer Treatment* Teaspoonful of powder mixed in boiling water and taken for cancer. (30:119) **Thompson** *Cancer Treatment* Infusion of heads taken for stomach cancer. (187:224)
- **Food**—Shuswap *Fodder* Used with timothy as a good feed for cows. (123:64) **Thompson** *Fodder* Plant used as food for livestock. (187:224)

***Trifolium repens*** L., White Clover

- **Drug**—Cherokee *Febrifuge* Infusion taken for fevers. *Gynecological Aid* Infusion taken for fevers and leukorrhea. *Kidney Aid* Infusion taken for "Bright's disease." (80:29) **Iroquois** *Dermatological Aid* Compound infusion of whole plant used as a wash for liver spots. *Eye Medicine* Poultice of plant applied to eyes for paralysis. (87:363) Infusion of flowers used as an eyewash. *Respiratory Aid* Infusion of flowers, leaves, and roots of another plant used for asthma. (141:50) **Mohegan** *Cold Remedy* Infusion of plant taken for colds. (174:270) Infusion of dried leaves taken for colds. (176:76, 132) *Cough Medicine* Infusion of plant taken for coughs. (174:270) Infusion of dried leaves taken for coughs. (176:76, 132)

***Trifolium* sp.**, Clover

- **Drug**—Apalachee *Unspecified* Plant water used for medicinal purposes. (81:98) **Costanoan** *Cathartic* Decoction of foliage used or foliage eaten as a purgative. (21:19) **Pomo** *Antiemetic* Decoction of blossoms taken for vomiting. (66:13)
- **Food**—Anticosti *Beverage* Flowers used to make wine. (143:67) **Cahuilla** *Porridge* Seeds ground into a mush. *Vegetable* Leaves eaten raw or boiled as greens. (15:141) **Costanoan** *Unspecified* Foliage used

for food. (21:250) **Diegueño** *Vegetable* Leaves cooked and eaten as greens. (84:43) **Mendocino Indian** *Forage* Eaten as forage by many kinds of animals. *Unspecified* Fresh green foliage eaten before flowering. (41:359) **Miwok** *Dried Food* Steamed clover used for food and dried for later use. *Unspecified* Clover eaten raw or steamed. (12:161) **Round Valley Indian** *Unspecified* Fresh green foliage eaten before flowering. (41:359) **Yuki** *Unspecified* Eaten raw or steamed. (49:88)

***Trifolium variegatum*** Nutt., Whitetip Clover

- **Food**—Mendocino Indian *Vegetable* Eaten considerably as greens. (41:361) **Pomo, Kashaya** *Unspecified* Sweet flowers and leaves eaten alone, with salt or peppernut cakes. (72:36)

***Trifolium willdenowii*** Spreng., Tomcat Clover

- **Food**—Luiseño *Unspecified* Plant eaten cooked or raw. Seeds used for food. (as *T. tridentatum* 155:231) **Miwok** *Unspecified* Raw or steamed leaves eaten before plant bloomed. Raw or steamed buds eaten before plant bloomed. (as *T. tridentatum* 12:160) *Winter Use Food* Steamed, dried leaves soaked in water or boiled before eating in winter. (as *T. tridentatum* 12:161) **Paiute** *Unspecified* Seeds used for food. *Vegetable* Whole plant used, without cooking, as greens. (as *T. tridentatum* 167:243) Young, tender plants eaten uncooked as greens. (as *T. tridentatum* 167:244)

***Trifolium wormskioldii*** Lehmann, Cow Clover

- **Drug**—Makah *Unspecified* Used for medicine. (67:281)
- **Food**—Bella Coola *Unspecified* White, brittle roots formerly pit steamed or boiled and eaten with eulachon (candlefish) grease and stink salmon. (184:205) **Haisla & Hanaksiala** *Unspecified* Rhizomes used for food. (43:251) **Hesquiat** *Unspecified* Steamed or boiled rhizomes eaten with oil or stink salmon eggs. Stink salmon eggs made by placing salmon roe in a codfish stomach, plugging it with a cedarwood cork, and allowing the eggs to ferment. (185:68) **Kawaiisu** *Vegetable* Green leaves eaten raw with salt. (206:68) **Kitasoo** *Unspecified* Rhizomes used for food. (43:337) **Kwakiutl, Southern** *Vegetable* Thin, wiry roots dried, steamed, or boiled, dipped in oil, and eaten as vegetables. (183:285) **Makah** *Unspecified* Roots steamed and eaten. (as *T. fimbriatum* 79:38) **Mendocino Indian** *Unspecified* Flowers and leaves used for food. (41:362) **Miwok** *Beverage* Wilted, dry leaves soaked and stirred in cold water to make a sour drink. *Unspecified* Leaves and flowers, never cooked or dried, eaten raw. (as *T. involucreatum* 12:160) **Nitinaht** *Dried Food* Rhizomes steam cooked, dried, resteamed, dipped in oil, and eaten in winter. (186:110) *Unspecified* Roots eaten raw or cooked with fermented salmon eggs. (67:281) Rhizomes eaten as accompaniments to cooked duck. (186:131) Rhizomes steam cooked, cooled, and eaten immediately. (186:110) *Vegetable* Rhizomes formerly steamed, dried, and used as a vegetable food in winter. (186:63) **Nuxalkmc** *Unspecified* Rhizomes used for food. (43:251) **Oweekeno** *Unspecified* Rhizomes cooked with riceroot and eaten. (43:102) **Paiute** *Vegetable* Leaves eaten uncooked as greens. (as *T. involucreatum* var. *fendleri* 167:244) **Pomo, Kashaya** *Unspecified* Flowers and leaves eaten alone or with salt or peppernut cakes. (72:38) **Tubatulabal** *Unspecified* Leaves and stems used extensively for food. (as *T. involucreatum* 193:15)

***Triglochin***, Juncaginaceae***Triglochin maritimum*** L., Seaside Arrowgrass

- **Drug**—**Blackfoot Poison** Leaves known to be poisonous to stock. (97:19)
- **Food**—**Gosiute Unspecified** Seeds used for food. (39:383) **Klamath Beverage** Roasted and used as a substitute for coffee. *Unspecified* Parched plant used for food. (45:90) **Montana Indian Unspecified** Seeds used for food. (19:25) **Salish Vegetable** Grass-like plant eaten as a vegetable. (185:54)

## **Trillium**, Liliaceae

**Trillium chloropetalum** (Torr.) T. J. Howell, Giant Wakerobin

- **Drug**—**Costanoan Analgesic** Poultice of heated plant applied to the chest for chest pains. (21:28) **Yurok Burn Dressing** Poultice of bulb scrapings applied to burns. (6:59)

**Trillium erectum** L., Red Trillium

- **Drug**—**Abnaki Panacea** Used by children for maladies. (144:155) Bulbs ground and given to sick children with unidentified illnesses. (144:174) *Pediatric Aid* Used by children for maladies. (144:155) Bulbs ground and given to sick children with unidentified illnesses. (144:174) **Cherokee Cancer Treatment** Poultice used for “putrid ulcers, tumors and inflamed parts.” *Cough Medicine* Taken for coughs. *Dermatological Aid* Poultice used for “putrid ulcers, tumors and inflamed parts.” *Gastrointestinal Aid* Taken for bowel complaints. *Gynecological Aid* Infusion used for profuse menstruation, hemorrhages, and the change of life. *Respiratory Aid* Taken for asthma. (80:59) **Iroquois Dermatological Aid** Infusion of rhizomes and flowers from another plant used for pimples and sunburn. (141:66)

**Trillium grandiflorum** (Michx.) Salisb., Snow Trillium

- **Drug**—**Chippewa Antirheumatic (External)** Decoction of root “pricked in with needles” near sore joints. *Ear Medicine* Decoction of root bark used as drops for sore ear. (53:362) **Menominee Abortifacient** Decoction of root taken for “irregularity of the menses.” *Analgesic* Infusion of grated root taken for cramps. *Disinfectant* Decoction of root purified man after intercourse with menstruating woman. (151:41) *Diuretic* Infusion of root used as a diuretic. (54:131) *Eye Medicine* Poultice of grated, raw root applied to eye swellings. (151:41) **Potawatomi Gynecological Aid** Infusion of root taken for sore nipples and, to hasten the effect, the teats are pierced with a dog whisker. (154:63)

**Trillium ovatum** Pursh, Pacific Trillium

- **Drug**—**Karok Dermatological Aid** Plant juice applied to boils. (148:381) **Lummi Eye Medicine** Juice from smashed plants used as drops for sore eyes. **Makah Love Medicine** Poultice of pounded bulbs applied as a love medicine. (79:25) **Paiute Eye Medicine** Decoction of fresh or dried corms used as an eyewash. Fresh root juice dripped into an afflicted eye. (111:58) **Quileute Dermatological Aid** Poultice of scraped bulbs applied to boils. **Skagit Eye Medicine** Infusion of roots used as a wash for sore eyes. *Poison* Plant considered poisonous. (79:25) **Thompson Eye Medicine** Powdered root dropped or blown into sore eyes. (164:472) Infusion of roots placed in the eyes with an eye dropper. (187:130)

**Trillium petiolatum** Pursh, Idaho Trillium

- **Food**—**Okanagan-Colville Appetizer** Roots used to make a tea and taken as an appetizer. (188:50)

**Trillium sessile** L., Toadshade

- **Drug**—**Concow Poison** Plant considered poisonous. **Wailaki Dermatological Aid** Poultice of bruised leaves and crushed roots applied to boils. *Other* Decoction of plant taken to prevent deep and lasting sleep. *Panacea* Decoction of plants taken for any kind of sickness. **Yuki Dermatological Aid** Poultice of bruised leaves and crushed roots applied to boils. *Other* Decoction of plant taken to prevent deep and lasting sleep. *Panacea* Decoction of plants taken for any kind of sickness. (41:329)

**Trillium sp.**, Trillium

- **Drug**—**Iroquois Analgesic** Compound of dried roots used as a snuff for headaches. (87:286) *Antirheumatic (External)* Infusion of powdered plant used on joints for rheumatism, then put on powder. (87:285) *Blood Medicine* Used for the blood. *Cold Remedy* Compound of dried roots used as a snuff for colds. *Dermatological Aid* Crushed plant used as a liniment for chapped hands and sun tan oil. Plant used as wash for the irritated parts from the itch. *Gynecological Aid* Decoction of root taken for “food for woman in the womb.” *Hunting Medicine* Infusion of one smashed root used as a soak for fishing line “to catch fish.” *Orthopedic Aid* Compound decoction of roots taken for stiff muscles. *Poison* Plant not used, “said to be poisonous.” *Respiratory Aid* Compound of dried roots used as a snuff for catarrh. (87:286) *Witchcraft Medicine* Compound used to “detect bewitchment.” (87:285) Dry root carried for luck and for the protection of teeth. (87:286) **Pomo, Kashaya Poison** Plant considered poisonous. (72:116)

**Trillium undulatum** Willd., Painted Trillium

- **Drug**—**Algonquin, Tête-de-Boule Gynecological Aid** Flowers, sepals, and leaves eaten to accelerate the delivery. (132:133)

## **Triodanis**, Campanulaceae

**Triodanis perfoliata** (L.) Nieuwl. **var. perfoliata**, Claspings Venus’s Lookingglass

- **Drug**—**Cherokee Gastrointestinal Aid** Liquid compound of root taken for dyspepsia from overeating. (as *Specularia perfoliata* 80:60) Infusion of roots taken and used as a bath for dyspepsia. (as *Specularia perfoliata* 177:60) **Meskwaki Emetic** Used as an emetic and “will make one sick all day long.” (as *Specularia perfoliata* (152:206)
- **Other**—**Meskwaki Smoke Plant** Smoked at ceremonies. (as *Specularia perfoliata* 152:272)

## **Triosteum**, Caprifoliaceae

**Triosteum perfoliatum** L., Feverwort

- **Drug**—**Cherokee Dermatological Aid** Infusion used for soaking sore feet and ooze used as a wash for leg swelling. *Emetic* Plant used as an emetic. *Febrifuge* Plant used as a febrifuge. *Orthopedic Aid* Infusion used for soaking sore feet and ooze used as a wash for leg swelling. (80:39) **Creek Unspecified** Plant used medicinally for unspecified purpose. (172:667) **Iroquois Abortifacient** Infusion of roots taken for irregular or profuse menses. (87:444) *Analgesic* Compound decoction of roots taken for urinating pain. *Cold Remedy* Cold infusion of roots taken for bad colds. *Diaphoretic* Root used to cause sweating. (87:445) *Dietary Aid* Infusion of roots given to babies and adults to fatten them. (87:444) *Diuretic* Root used as a diuretic. *Gastrointestinal*

*nal Aid* Decoction or poultice of roots used for stomach trouble caused by witchcraft. (87:445) *Gynecological Aid* Decoction or infusion of roots taken for irregular or profuse menses. (87:444) *Laxative Compound* decoction of roots taken as a laxative. (87:445) *Pediatric Aid* Infusion of roots given to babies to fatten them. (87:444) *Pulmonary Aid* Root used for pneumonia. *Throat Aid* Cold infusion of roots taken for dry throats. *Urinary Aid* Compound decoction of roots taken for urinating pain. *Venereal Aid* Root used for venereal disease. *Witchcraft Medicine* Decoction of roots taken for stomach trouble caused by witchcraft. Poultice of smashed roots applied for stomach trouble caused by witchcraft. (87:445) **Meskwaki Analgesic** Root used on a newborn infant with a sore head. *Cathartic* Decoction of root used as a "drink for cleansing the system." *Dermatological Aid* Poultice of root applied to old, raw sores and root used for snakebite. *Pediatric Aid* Root used on a newborn infant with a sore head. *Snakebite Remedy* Root used for snakebite and poultice used for old, raw sores. (152:207, 208)

### ***Tripterocalyx***, Nyctaginaceae

***Tripterocalyx carnea* var. *wootonii*** (Standl.) L. A. Gal., Wooton's Sandpuffs

- **Drug**—Hopi *Pediatric Aid* and *Sedative* Plant placed on child's head to induce sleep. (as *T. wootoni* 200:36, 75) Navajo, Ramah *Other* Cold infusion of plant used for injury from falling off a horse. *Witchcraft Medicine* Cold infusion of plant taken to give protection from witches. (as *T. wootonii* 191:26) Zuni *Diaphoretic* Crushed leaves used in sweat bath for snakebite. *Snakebite Remedy* Infusion of powdered root taken for snakebite. *Throat Aid* Infusion of powdered root taken for swollen glands, especially in the throat. (as *T. wootonii* 166:61) *Witchcraft Medicine* Poultice of powdered seeds and water applied to swellings caused by being witched by a bullsnake. (as *T. wootonii* 27:377)

### ***Trisetum***, Poaceae

***Trisetum spicatum*** (L.) Richter, Spike Trisetum

- **Food**—Gosiute *Unspecified* Seeds used for food. (as *T. subspicatum* 39:383)

### ***Triteleia***, Liliaceae

***Triteleia grandiflora*** Lindl., Wild Hyacinth

- **Drug**—Okanagan-Colville *Poison* Plant considered poisonous. (as *Brodiaea douglasii* 188:41) **Thompson Adjuvant** Bulb used in medicine bag "to make the bag more potent." (164:508) *Unspecified* Bulbs eaten and used medicinally. (187:131)
- **Food**—Okanagan-Colville *Unspecified* Corms used for food. (as *Brodiaea douglasii* 188:41) **Okanagon Unspecified** Bulbs formerly steamed and used for food. (as *Hookera douglasii* 125:37) **Pomo Vegetable** Potatoes used for food. (as *Brodiaea grandiflora* 117:284) **Thompson Unspecified** Bulbs formerly steamed and used for food. (as *Hookera douglasii* 125:37) Bulbs eaten with yellowbell bulbs. (187:131) **Thompson, Upper (Lytton Band) Unspecified** Large bulbs eaten. **Thompson, Upper (Spences Bridge) Unspecified** Large bulbs eaten. (164:481) **Yana Unspecified** Roots roasted and eaten. (as *Brodiaea grandiflora* 147:251)

***Triteleia hyacinthina*** (Lindl.) Greene, Hyacinth Brodiaea

- **Food**—Pomo *Unspecified* Bulbs eaten for food. (as *Hookera nyocintima* var. *lactea* 11:90)

***Triteleia hyacinthina*** (Lindl.) Greene var. ***hyacinthina***, Fool's Onion

- **Food**—Atsugewi *Unspecified* Cooked in earth oven and used for food. (as *Brodiaea hyacinthina* 61:138) **Mendocino Indian Unspecified** Bulbs eaten raw or cooked. (as *Hesperoscordum lacteum* 41:326) **Miwok Unspecified** Bulbs steamed in earth oven and used as food. (as *Brodiaea hyacinthina* 12:156) **Neeshenam Unspecified** Eaten raw, roasted, or boiled. (as *Hesperoscordum lacteum* 129:377) **Paiute Unspecified** Bulbs roasted and used for food. (as *Brodiaea hyacinthina* 104:102) **Vegetable** Root eaten boiled and mashed, like potatoes. (as *Brodiaea hyacinthina* 111:55)

***Triteleia ixioides*** (Ait. f.) Greene, Prettyface

- **Food**—Miwok *Unspecified* Bulbs used for food. (as *Brodiaea ixioides* 12:156)

***Triteleia ixioides* ssp. *scabra*** (Greene) Lenz, Prettyface

- **Food**—Neeshenam *Unspecified* Eaten raw, roasted, or boiled. (as *Calliproa lutea* 129:377)

***Triteleia laxa*** Benth., Grass Nut

- **Food**—Karok *Unspecified* Bulbs roasted and eaten. (as *Brodiaea laxa* 148:380) **Pomo Unspecified** Bulbs eaten for food. Bulbs eaten for food. Bulbs eaten as potatoes. (11:90) Corms cooked in hot ashes or boiled for food. (as *Brodiaea laxa* 66:12) **Pomo, Kashaya Vegetable** Baked or boiled corms eaten like baked or boiled potatoes. (as *Brodiaea laxa* 72:25) **Yuki Unspecified** Bulbs used for food. (41:327) Bulbs cooked and used for food. (as *Brodiaea laxa* 49:86)
- **Other**—Pomo, Kashaya *Ceremonial Items* Flowers used in dance wreaths at the Strawberry Festival. (as *Brodiaea laxa* 72:25)

***Triteleia peduncularis*** Lindl., Longray Tripletilly

- **Food**—Mendocino Indian *Unspecified* Bulbs used for food. (41:329) **Pomo Unspecified** Bulbs eaten for food. (11:90)

### ***Triticum***, Poaceae

***Triticum aestivum*** L., Common Wheat

- **Drug**—Iroquois *Veterinary Aid* Wheat flour, rhizomes from another plant, and raspberry leaves given to cows at birthing. (141:67)
- **Food**—Apache, White Mountain *Bread & Cake* Seeds used to make bread. (as *T. vulgare* 136:161) **Cahuilla Porridge** Parched seeds ground into flour and used to make mush. (15:142) **Haisla & Hanaksiala Bread & Cake** Grains used to make bread. *Staple* Grains used for food. (43:208) Navajo, Ramah *Fodder* Used for horse feed. *Unspecified* Species used for food. (191:17) **Okanagan-Colville Unspecified** Kernels boiled until opened and eaten. (188:57) **Papago Bread & Cake** Used for making native breads. (34:38) *Staple* Grains trampled, winnowed, softened with water, pounded, dried, and ground into flour. (34:37) **Pima Bread & Cake** Seeds ground into meal, water and salt added, and dough used to make tortillas and cakes. (87:269) *Blood Medicine* Fermented compound decoction taken when “blood gets bad and cold.” (87:268) *Cold Remedy* Cold infusion of twigs and bark taken for mild colds with fever. Decoction of smashed needles taken for colds. Infusion of twigs and bark taken for colds. *Cough Medicine* Compound decoction taken for coughs. *Diaphoretic* Infusion of twigs and bark taken to induce sweating. (87:269) *Febrifuge* Fermented compound decoction taken for fever. (87:268) Cold infusion of twigs and bark taken for mild colds with fever. *Misc. Disease Remedy* Compound decoction

taken for cholera. (87:269) *Orthopedic Aid* Fermented compound decoction taken for soreness. *Stimulant* Fermented compound decoction taken when a “person is tired.” (87:268) *Tuberculosis Remedy* Compound decoction taken during early stages of consumption. *Venereal Aid* Compound powder poultice “put in bag, place penis in bag and tie around waist.” (87:269) **Malecite** *Antidiarrheal* Infusion of young bark and fir buds or cones used for diarrhea. (116:244) Infusion of inside bark used for diarrhea. (116:255) *Cold Remedy* Infusion of boughs used for colds. (116:249) *Dermatological Aid* Outer layer of dried trees used as a powder for prickly heat. (116:250) *Kidney Aid* Infusion of boughs used for cold in the kidneys. (116:249) *Pediatric Aid* Outer layer of dried trees used for chafed babies. (116:250) *Unspecified* Bark used as medicine. (160:6) **Menominee** *Analgesic* Infusion of inner bark taken for abdominal pains. *Cold Remedy* Infusion of inner bark taken, 1 quart required, for cold. (151:46) *Dermatological Aid* Compound containing branches steamed for swellings. (54:134) *Diaphoretic* Leaves used in the sudatory. *Gastrointestinal Aid* Infusion of inner bark used for abdominal pains. (151:46) *Herbal Steam* Herbal steam from compound containing branches used for swellings. (54:134) **Micmac** *Antidiarrheal* Inner bark used for diarrhea. (40:62, 63) *Cold Remedy* Bark and stems used for colds. (40:62) *Cough Medicine* Bark used as cough medicine and for gripe. *Dermatological Aid* Inner bark used for chapped skin. (40:62, 63) *Gastrointestinal Aid* Parts of plant used for bowel, stomach, and internal troubles. *Kidney Aid* Roots and stems used for “cold in kidney.” (40:62) *Misc. Disease Remedy* Bark used for gripe and inner bark used for scurvy. (40:62, 63) *Urinary Aid* Roots and stems used for “cold in bladder.” (40:62) **Ojibwa** *Adjuvant* Leaves used to flavor medicinal tea. (153:380) Leaves made into a tea and used as a beverage and to disguise medicine. (153:408) *Dermatological Aid* Bark used for cuts, wounds, and bleeding wounds. *Hemostat* Bark used for bleeding wounds. (153:380) **Potawatomi** *Antidiarrheal* Compound of inner bark used for flux. *Cold Remedy* and *Diaphoretic* Infusion of leaves taken to cause perspiration, which broke up a cold. (154:71)

- **Food**—**Chippewa** *Beverage* Leaves used to make a beverage. (53:317) **Iroquois** *Beverage* Branches and maple water used to make tea. (141:36) **Micmac** *Beverage* Bark used to make a beverage. (159:258) **Ojibwa** *Beverage* Leaves made into a tea and used as a beverage and to disguise medicine. (153:408)
- **Fiber**—**Cherokee** *Basketry* Inner bark used to make baskets. *Building Material* Wood used for lumber. (80:38) **Chippewa** *Building Material* Bark strips used for wigwam coverings. (71:123)
- **Dye**—**Cherokee** *Red-Brown* Bark used to make a rosy tan dye. (80:38) **Chippewa** *Red-Brown* Bark used to make a mahogany-colored dye. (53:371) **Malecite** *Unspecified* Bark used to make a dye and tanning material. (160:6) **Menominee** *Red* Boiled bark used for dark red coloring. (151:78) **Micmac** *Unspecified* Bark used to make a dye. (159:258) **Ojibwa** *Mordant* Bark used with a little rock dust to set the color. *Red-Brown* Bark used with a little rock dust to dye materials a dark red brown. (153:426)
- **Other**—**Cherokee** *Fuel* Wood used for firewood. *Paper* Wood used for pulpwood. *Preservative* Bark used as a source for tannic acid. (80:38) **Chippewa** *Cleaning Agent* Boiled bark used to make a wash to clean rust from steel traps and to prevent further rusting. (71:123)

**Malecite** *Hide Preparation* Bark used to make a dye and tanning material. (160:6) **Micmac** *Fuel* Wood used for kindling and fuel. (159:258) **Ojibwa** *Fuel* Bark used for fuel, when reboiling pitch, because the heat was easy to regulate. (153:422)

***Tsuga caroliniana*** Engelm., Carolina Hemlock

- **Drug—Cherokee** *Antidiarrheal* Root chewed “to check bowels.” *Dermatological Aid* Poultice of bark used for itching armpits. *Gynecological Aid* Compound decoction used to aid in expelling afterbirth. (80:38) Decoction of roots taken to cause discharge of the afterbirth. (177:5) *Kidney Aid* Infusion of stem tips taken for kidneys. (80:38)
- **Fiber—Cherokee** *Basketry* Inner bark used to make baskets. *Building Material* Wood used for lumber. (80:38)
- **Dye—Cherokee** *Red-Brown* Bark used to make a rosy tan dye. (80:38)
- **Other—Cherokee** *Fuel* Wood used for firewood. *Paper* Wood used for pulpwood. *Preservative* Bark used as a source for tannic acid. (80:38)

***Tsuga heterophylla*** (Raf.) Sarg., Western Hemlock

- **Drug—Bella Coola** *Antirheumatic (External)* Poultice of compound containing gum applied to the arms for rheumatism. *Burn Dressing* Poultice of chewed leaves applied to burns. (150:51) Leaves chewed and used for burns. (184:198) *Dermatological Aid* Warm gum applied to cuts. *Heart Medicine* Poultice of compound containing gum applied to the chest for heart trouble. *Internal Medicine* Moxa of twigs applied to the skin for “various internal ailments.” (150:51) Twigs burned and used to cauterize the skin for internal ailments. (184:198) **Chehalis** *Tuberculosis Remedy* Decoction of pounded bark taken for tuberculosis. *Venereal Aid* Decoction of pounded bark taken for syphilis. (79:17) **Clallam** *Antihemorrhagic* Bark boiled, added to licorice ferns, and used for hemorrhages. (57:195) **Cowlitz** *Antihemorrhagic* Infusion of bark taken for hemorrhage. *Dermatological Aid* Infusion of plants used as wash for skin sores. Pitch used to prevent chapping. *Eye Medicine* Infusion of plants used as wash for sore eyes. (79:17) **Gitksan** *Gastrointestinal Aid* Cambium used as a “cleanser.” *Liver Aid* Cambium used for the gallbladder. *Other* Inner bark used for elimination of hard or sharp swallowed objects. (73:152) **Hesquiat** *Antirheumatic (Internal)* Decoction or infusion of bark, from inside of a crevice, taken for rheumatic fever. *Dermatological Aid* Gum and deer grease used on fur seal hunters faces to prevent skin from cracking and peeling in the sun. Gum and deer grease used for healing sores on the face. Poultice of chewed needles used for burns. Pitch and deer fat used on faces to heal abrasions cause by rubbing on hunting camouflage. Pitch and deer fat used as salve to prevent and soothe sunburn. *Eye Medicine* Boughs used by girls, at puberty ceremony, to prevent eye disease to herself and future children. *Other* Decoction or infusion of bark, from inside of a crevice, taken for phlebitis. *Tuberculosis Remedy* Decoction or infusion of bark, from inside of a crevice, taken for tuberculosis and rheumatic fever. (185:44) **Hoh** *Emetic* Bark used as an emetic. (137:58) **Klallam** *Antihemorrhagic* Compound infusion of bark taken for hemorrhage. *Dietary Aid* Infusion of plant tips taken to stimulate appetite. *Tuberculosis Remedy* Infusion of plant tips taken for tuberculosis. (79:17) **Kwakiutl** *Antidiarrheal* Compound decoction of plants or bark taken for diarrhea. (183:264) *Burn Dressing* Cold infusion of scraped, pounded bark applied to burns. *Dermatological Aid* Cold infusion of scraped, pounded bark applied to sores. Moxa of twigs used to cauterize warts

and moles. *Eye Medicine* Infusion of boughs used as a wash for upper lids of inflamed eyes. *Gynecological Aid* Hemlock used as wash and tree tips prayed to by pregnant women to aid delivery. *Hunting Medicine* Branches rubbed on hunters and fishermen to purify them. (183:270) **Kwakwaka'wakw** *Ceremonial Medicine* Plant considered to have special powers to purify and cure. (43:71) **Makah** *Dermatological Aid* Pitch used to prevent sunburn. Poultice of bark applied to obstinate sores. (79:17) Pitch used as a sunburn preventative and rubbed on hair to remove lice. (186:74) *Hemostat* Poultice of plant applied to bleeding wounds. *Internal Medicine* Decoction of plant taken for internal injury. (79:17) **Nitinaht** *Dermatological Aid* Infusion of bark, grand fir and red alder barks taken for bruises. *Internal Medicine* Infusion of bark, grand fir and red alder barks taken for internal injuries. *Orthopedic Aid* Infusion of bark, grand fir and red alder barks taken for broken bones. (186:74) **Oweekeno** *Ceremonial Medicine* Plant considered to have special powers to purify and cure. (43:71) **Quileute** *Dermatological Aid* Poultice of chewed plants applied to swellings. (79:17) *Emetic* Bark used as an emetic. (137:58) **Quinault** *Cold Remedy* Poultice of pitch and ground bark applied to child's chest for a cold. *Laxative* Infusion of plants taken as a laxative. *Pediatric Aid* Poultice of pitch and ground bark applied to child's chest for a cold. (79:17) **Shuswap** *Tuberculosis Remedy* Decoction of bark taken for tuberculosis. (123:53) **Skagit** *Dermatological Aid* and *Eye Medicine* Infusion of plants used as wash for sore eyes. *Throat Aid* Infusion of bark taken for sore throats. (79:17) **Thompson** *Cold Remedy* Infusion of bark used for colds. *Disinfectant* Boughs considered an important disinfectant. One informant noted that those desiring to cleanse themselves would scrub their bodies with the branches. *Misc. Disease Remedy* Infusion of bark used for influenza. (187:111)

- **Food—Alaska Native** *Bread & Cake* Inner bark roasted in a pit oven, sometimes mixed with dried berries, and pressed into cakes. (85:146) **Bella Coola** *Dried Food* Inner bark steamed overnight, pounded, formed into balls, sun dried, and eaten in winter. (184:198) **Cowlitz** *Spice* Branch tips used to flavor cooking bear meat. (79:17) **Gitksan** *Staple* Cambium pit cooked, pounded, formed into cakes, dried, stored, and eaten as a staple food. *Sweetener* Cambium used as a sweetener for other foods. *Winter Use Food* Inner bark used as a survival food in winter. (73:150) **Haisla** *Dried Food* Cambium cooked in skunk cabbage leaves, pounded, dried, and stored for winter use. (43:180) *Staple* Cambium pit cooked, pounded, formed into cakes, dried, stored, and eaten as a staple food. *Sweetener* Cambium used as a sweetener for other foods. *Winter Use Food* Inner bark used as a survival food in winter. (73:150) **Haisla & Hanaksiala** *Winter Use Food* Cambium dried, pounded, served with oolichan (candlefish) grease and Pacific crabapples, and used as winter food. **Hanaksiala** *Bread & Cake* Cambium formed into cakes, cooked, dried, powdered, mixed with water, grease, and fruit, and eaten. (43:180) **Hesquiat** *Candy* Pitch, from the outside of a crevice, chewed like gum. (185:44) **Kitasoo** *Dried Food* Inner bark boiled and dried for storage. *Unspecified* Inner bark soaked in oolichan (candlefish) grease, drained, cooked, and eaten with sugar. (43:318) **Montana Indian** *Bread & Cake* Cambium made into a coarse bread. (19:25) **Nitinaht** *Starvation Food* Old leaves eaten sparingly to keep alive when hungry in the woods. (67:238) Light, green branch tips eaten to relieve hunger

- when lost in the woods. (186:74) *Unspecified* Young growth used for food. (67:238) **Oweekeno** *Dried Food* Inner bark dried for future use. *Unspecified* Inner bark used for food. (43:71) **Salish, Coast** *Dried Food* Cambium dried in sheets and used as a winter food. (182:72) **Wet'suwet'en** *Sweetener* Cambium used as a sweetener for other foods. *Unspecified* Cambium used for food. *Winter Use Food* Inner bark used as a survival food in winter. (73:150)
- **Fiber**—**Haisla & Hanaksiala** *Building Material* Boughs used for making temporary shelters or huts by hunters. (43:180) **Hesquiat** *Mats, Rugs & Bedding* Boughs used as a mattress when camping. (185:44) **Kwakwaka'wakw** *Building Material* Boughs made into huts and used to house girls following their first menstruation. Boughs made into special shelters for hunters, fishers, shamans and their initiates. (43:71) **Makah** *Building Material* Wood used for lumber. (67:238) **Oweekeno** *Building Material* Boughs made into special shelters for hunters, fishers, shamans and their initiates. (43:71) **Quinault** *Building Material* Boughs used as shelters for hunters. *Canoe Material* Young trees used for poling canoes upstream. **Skagit** *Canoe Material* Young trees used for poling canoes upstream. **Snohomish** *Basketry* Inner bark used as a dye for baskets. *Canoe Material* Young trees used for poling canoes upstream. (79:17)
  - **Dye**—**Bella Coola** *Brown* Bark boiled and used as a brown dye for fish nets. (184:198) **Chehalis** *Unspecified* Inner bark made into a dye and used on fish nets to make them invisible to fish and attract them. (79:17) **Clallam** *Red-Brown* Bark boiled and used to make a reddish brown dye. (57:195) **Hesquiat** *Red-Brown* Bark, especially from the inside of a crevice, used as a reddish brown dye. Bark was used to dye the rope used in halibut fishing to make it invisible to the fish. Canoes were often painted with a solution of this bark in water. This stain was made by steeping the bark in water for many days, until the liquid was bright red. (185:44) **Klallam** *Red-Brown* Bark boiled and used as a red-brown dye. **Makah** *Red-Brown* Inner bark pounded, boiled, and used as a red-brown dye. (79:17) **Nitinaht** *Black* Bark chopped into small pieces, pounded, crushed, and boiled to make a black dye. (186:74) *Brown* Bark used as a brown dye for basketry material and gill nets "so the fish won't see it." (67:238) Bark chopped into small pieces, pounded, crushed, and boiled to make different shades of brown dye. (186:74)
  - **Other**—**Bella Coola** *Cleaning Agent* Bark boiled and used on traps to remove rust and give them a clean smell. **Bellabella** *Hunting & Fishing Item* Boughs used to collect herring spawn. (184:198) **Chehalis** *Fuel* Wood used extensively for firewood. (79:17) **Clallam** *Hunting & Fishing Item* Saplings used for fish trap stanchions. Limbs cut, placed around rocks in tidal areas and used to gather lingcod eggs. (57:195) **Haisla & Hanaksiala** *Ceremonial Items* Boughs used among several botanical materials in ritual purification practices. *Cooking Tools* Boughs used under cleaned salmon while draining. *Good Luck Charm* Boughs rubbed on the body for luck on hunting expeditions. *Hunting & Fishing Item* Boughs used to gather herring roe. Boughs used as camouflage by hunters. *Protection* Boughs made into hoops and used to combat witchcraft. *Weapon* Timber used as the "blade" of an executioner's device similar to the guillotine. **Hanaksiala** *Cooking Tools* Boughs used to wrap and cover foods in earth ovens. Boughs used in processing salmon. *Fasteners* Wood made into rings and used to fasten oolichan (candlefish) nets to the piles. *Hide Preparation* Bark used to smoke hides into a dark brown color. *Hunting & Fishing Item* Wood used to make piles for anchoring oolichan (candlefish) nets. *Jewelry* Wood knots used to make labrets worn by women of high social rank. *Tools* Wood used to make digging sticks. Wood used to make mallets. (43:180) **Hesquiat** *Ceremonial Items* Boughs used by girls at puberty for rubbing ceremony. Girls at puberty were brushed on the arms and face with boughs, which were bundled together with soft, fern fronds. The bundle was fist-sized, with needled hemlock twigs sticking out from both ends. Before the rubbing ceremony began, the girl would go down to the edge of the water at sunrise and, four separate times, would dip the branches in the water, suck the water from the branches, then blow it out in a fine spray. At the same time, she would dip her face in the water with her eyes open, four times, each time lifting her head and spraying out the water. This was said to prevent eye disease to herself and future children. All bundles used for this purpose were subsequently deposited in a special place. *Hunting & Fishing Item* Entire trees anchored upside down under the water to collect herring spawn. At herring spawning time, in spring, entire hemlock trees were cut and anchored upside down under the water. The spawn stuck on the branches. The branches were then broken off and the spawn peeled away and eaten fresh, usually after steam cooking. If for later use, the branches were hung outside to be wind dried. When one wanted to eat some, he would soak the branches and rub them to remove the spawn. While being cooked, the eggs would swell and float to the surface and could be scooped off and eaten. Also, hemlock and fern bundles rubbed on hunters' faces and arms to prevent sea mammals from noticing them. (185:44) **Hoh** *Hide Preparation* Bark used for tanning hides. (137:58) **Kitasoo** *Hunting & Fishing Item* Boughs submerged in herring spawning areas to collect the roe. (43:318) **Klallam** *Hunting & Fishing Item* Twigs laid in rivers and used to collect herring eggs. (78:202) Saplings used as stanchions of fish traps strung across a stream. (79:17) **Kwakiutl, Southern** *Ceremonial Items* Wood used to carve masks. *Cooking Tools* Wood used to carve dishes and spoons. *Musical Instrument* Wood used to carve rattles. (183:296) **Kwakwaka'wakw** *Protection* Four rings of boughs used to negate the effects of evil spirits. (43:71) **Lummi** *Hunting & Fishing Item* Young trees used as poles for large dip nets. **Makah** *Hunting & Fishing Item* Boughs immersed in the water and used to collect herring eggs. *Insecticide* Compound of powdered bark and oil or pitch used on the hair to remove vermin. (79:17) **Montana Indian** *Hide Preparation* Bark used for tanning. (19:25) **Nitinaht** *Ceremonial Items* Boughs used as scrubbers in the manhood training rituals of young boys. *Fuel* Slow burning wood used to bank up fires overnight. (186:74) *Hunting & Fishing Item* Wood knots used to make halibut hooks. (186:53) Boughs used to catch herring spawn. Hard, dense knots used to make molded halibut hooks. (186:74) **Oweekeno** *Ceremonial Items* Inner bark and grease made into realistic eyeballs and used in the corpse for the hamatsa ceremony. Boughs made into headdresses and worn by dancers in the Ghost dance. *Cooking Tools* Boughs used to roast fern roots. *Hunting & Fishing Item* Fresh boughs used to gather herring roe. Wood used to make octopus spears. *Protection* Four rings of boughs and ritual bathing used to negate the effects of evil spirits. *Toys & Games* Boughs used to make play houses. (43:71) **Quileute** *Hide Preparation* Bark used for tanning hides. (137:58)

*Waterproofing Agent* Bark finely chopped, boiled, and the juice applied to baskets to make them watertight. **Quinault Fuel Wood** used extensively for firewood. *Hunting & Fishing Item* Young trees used as walkways on top of fish weirs. *Paint* Bark mashed with salmon eggs to make a yellow-orange paint for dip nets and paddles. (79:17) **Salish, Coast Hide Preparation** Bark used to cure hides. (182:72) **Skagit Hunting & Fishing Item** Young trees used in fish trap construction. (79:17) **Thompson Incense & Fragrance** Boughs steamed or rubbed on furniture and used as a room deodorizer and disinfectant. *Tools* Broken boughs used by the handful like a bath brush. (187:111)

***Tsuga mertensiana*** (Bong.) Carr., Mountain Hemlock

- **Drug**—**Bella Coola Burn Dressing** Poultice of chewed leaves applied to burns. *Dermatological Aid* Warm gum applied to cuts. *Internal Medicine* Moxa of twigs applied to the skin for “various internal ailments.” (150:51) **Hoh Emetic** Bark used as an emetic. (137:58) **Kwakiutl Ceremonial Medicine, Dermatological Aid, and Pediatric Aid** Bark used in ritual to make children as light-skinned as the inner bark. (183:271) **Quileute Emetic** Bark used as an emetic. (137:58) **Thompson Cold Remedy** Infusion of bark used for colds. *Disinfectant* Boughs steamed or rubbed on furniture and used as a room deodorizer and disinfectant. *Misc. Disease Remedy* Infusion of bark used for influenza. (187:111) **Tlingit Toothache Remedy** Compound containing warmed seeds used for toothache. *Veneral Aid* Compound poultice of sap applied for syphilis. (as *Pinus mertensiana* 107:284)
- **Fiber**—**Paiute Mats, Rugs & Bedding** Boughs used for camping beds. (111:44) **Thompson Brushes & Brooms** Broken boughs used by the handful as a bath brush. (187:111) *Mats, Rugs & Bedding* Fragrant branches and leaves used for bedding. (164:500)
- **Other**—**Hoh Hide Preparation** Bark used for tanning hides. **Quileute Hide Preparation** Bark used for tanning hides. (137:58) **Thompson Incense & Fragrance** Boughs steamed or rubbed on furniture and used as a room deodorizer and disinfectant. (187:111)

## ***Turricula***, Hydrophyllaceae

***Turricula parryi*** (Gray) J. F. Macbr., Common Turricula

- **Drug**—**Kawaiisu Antirheumatic (External)** Infusion of leaves used as a wash for rheumatism. *Dermatological Aid* Infusion of leaves used as a wash for swellings. (206:68) **Luiseño Unspecified** Plant used for medicinal purposes. (as *Eriodictyon parryi* 155:230)

## ***Tussilago***, Asteraceae

***Tussilago farfara*** L., Coltsfoot

- **Drug**—**Iroquois Cough Medicine** and *Tuberculosis Remedy* Compound infusion of roots taken as a consumption cough medicine. (87:473)

## **Typhaceae**, see *Typha*

## ***Typha***, Typhaceae

***Typha angustifolia*** L., Narrowleaf Cattail

- **Drug**—**Malecite Kidney Aid** Infusion of one root used for gravel. (116:257) **Micmac Urinary Aid** Roots used for gravel. (40:63)
- **Food**—**Hopi Candy** Mature heads chewed with tallow as gum. (200:64) **Pima Bread & Cake** Pollen baked into brownish biscuits and used for food. *Porridge* Pollen mixed with ground wheat, stirred into boil-

ing water, and eaten as a gruel. *Unspecified Tender*, white stalks eaten raw. (47:64)

- **Fiber**—**Pima Basketry** Flower stalks split, dried, and used for basket weaving. *Building Material* Green leaves woven into roofs. *Mats, Rugs & Bedding* Green leaves woven into mats. Silky down used as stuffing for pillows. (47:64)
- **Other**—**Hopi Ceremonial Items** Plant associated ceremoniously with water. (200:64) **Pima Decorations** Dry, yellow pollen used to decorate the face, chest, and back. (47:64)

***Typha domingensis*** Pers., Southern Cattail

- **Food**—**Havasupai Fruit** Ripe, fruiting heads eaten “like corn.” (197:208) **Kawaiisu Unspecified** White stem bases and brown flowers eaten raw. Green seeds used for food. (206:68) **Paiute, Northern Bread & Cake** Seeds gathered into a dough, kneaded, made into flat cakes, and roasted under hot coals. Seeds roasted, winnowed, ground into fine flour, boiled, made into round cakes, and sun dried. (59:48) Dried rhizomes ground into flour, made into mush, and the mush used to make cakes. Pollen mixed with water, kneaded, formed into cakes, and baked. (60:69) *Dried Food* Roots dried for future use. (59:49) Rhizomes peeled and dried for future use. (60:69) *Porridge* Roots dried, ground into flour, and made into a sweet mush. (59:49) Dried rhizomes ground into flour and made into mush. Seeds roasted, ground into a meal, and stone boiled into a mush. (60:69) *Soup* Seeds ground into meal and made into soup. (59:48) *Staple* Seeds roasted, ground into a meal, and eaten with a little water without boiling. (60:69) *Unspecified* Seeds eaten fresh and raw or cooked. Roots peeled, chewed, juice swallowed, and the stringy pulp spat out. Seeds roasted, ground, and eaten in powder form. (59:48) Roots peeled and eaten fresh. (59:49) Stalks used for food. Rhizomes peeled and eaten fresh. Green spikes eaten fresh.<sup>79</sup> Seeds roasted and eaten.<sup>80</sup> (60:69) **Pima, Gila River Unspecified** Roots eaten raw. (133:7)
- **Fiber**—**Havasupai Building Material** Stalks and leaves used in thatching houses. (197:208) **Kawaiisu Building Material** Long leaves used in house construction. (206:68) **Paiute, Northern Basketry** Used for wefts and binding tule items. (60:81) *Building Material* Used for house building materials. (60:69) Used to make shingles for house exteriors. (60:87) *Canoe Material* Used in the construction of duck decoys and boats. (60:69) *Clothing* Used to secure the edges of skirts. (60:81) Leaves twined as weft rows for sandals. (60:83) Used as the twining wefts for clothing. (60:86) *Mats, Rugs & Bedding* Used to secure the edges of mats. (60:81) Leaves used in a simple pile for seating. (60:87)
- **Other**—**Havasupai Paint** Pollen used as a face paint. *Toys & Games* Stalk used to make toy arrows. (197:208) **Paiute, Northern Fasteners** Used for wefts and binding tule items. Used as ties for sandals. (60:81) *Hunting & Fishing Item* Used in the construction of duck decoys and boats. (60:69)

***Typha latifolia*** L., Broadleaf Cattail

- **Drug**—**Algonquin, Quebec Dermatological Aid** Poultice of crushed roots applied to wounds. *Disinfectant* Poultice of crushed roots applied to infections. (18:132) **Apache, Mescalero Unspecified** Pollen used as medicine. (14:46) **Cahuilla Dermatological Aid** Roots used for bleeding wounds. (15:142) **Cheyenne Ceremonial Medicine** Leaves used in the Sun Dance ceremony. (83:13) *Gastrointestinal Aid* Infu-

sion of dried, pulverized root and white base of the leaves taken for abdominal cramps. (76:170) **Dakota Burn Dressing** Down used as a dressing for burns and scalds. *Dermatological Aid* and *Pediatric Aid* Down used on infants to prevent chafing. (70:64, 65) **Delaware Kidney Aid** Roots used for kidney stones. (176:36) **Delaware, Oklahoma Kidney Aid** Root used to dissolve kidney stones. (175:30, 80) **Houma Pulmonary Aid** Decoction of stalks taken for whooping cough. (158:60) **Iroquois Gynecological Aid** "Patient sleeps on mattress made of plant" for cysts of breast. *Hemostat* Infusion of roots used as a wash for bleeding cuts. *Misc. Disease Remedy* "Patient sleeps on mattress made of plant" for cysts of yellow fever. *Orthopedic Aid* Decoction of smashed root applied as poultice for sprains. *Veneral Aid* Root chewed by women for gonorrhea. *Veterinary Aid* Infusion of roots used as a wash for horses with bleeding cuts. (87:271) **Mahuna Hemostat** and *Pediatric Aid* Plant used for newborns with bleeding navels. (140:56) **Malcite Dermatological Aid** Greased leaves used for sores. (116:246) **Meskwaki Dermatological Aid** Poultice of fuzz applied to old sores on neck. (152:248) **Micmac Dermatological Aid** Leaves used for sores. (40:63) **Montana Indian Burn Dressing** Poultice of fruit spikes' "down" applied to burns and scalds. (19:25) **Navajo, Ramah Ceremonial Medicine** and *Emetic* Whole plant used as a ceremonial emetic. (191:14, 15) **Ojibwa Dermatological Aid** Poultice of root inner skin applied to carbuncles and boils. (5:2306) *Other* Fruit fuzz used as a war medicine. (153:390) **Ojibwa, South Dermatological Aid** Poultice of crushed root applied to sores. (91:200) **Okanagan-Colville Dermatological Aid** Cottony fluff used as dressing for wounds. (188:57) **Omaha Burn Dressing** Down used as a dressing for burns and scalds. (70:64, 65) *Ceremonial Medicine* Plant used in various rituals. (68:322) *Dermatological Aid* and *Pediatric Aid* Down used on infants to prevent chafing. **Pawnee Burn Dressing** Down used as a dressing for burns and scalds. *Dermatological Aid* and *Pediatric Aid* Down used on infants to prevent chafing. (70:64, 65) **Plains Indian Dermatological Aid** and *Pediatric Aid* Down used on infants to prevent chafing. (82:60) **Ponca Burn Dressing** Down used as a dressing for burns and scalds. *Dermatological Aid* and *Pediatric Aid* Down used on infants to prevent chafing. (70:64, 65) **Potawatomi Dermatological Aid** Poultice of pounded root applied to inflammations. (154:85) **Sioux Burn Dressing** Poultice of fruit spikes' "down" applied to burns and scalds. *Dermatological Aid* and *Misc. Disease Remedy* Poultice of fruit spikes, down, and coyote fat applied to smallpox pustules. (19:25) **Washo Antidiarrheal** Young flowering heads eaten for diarrhea. (180:146) **Winnebago Burn Dressing** Down used as a dressing for burns and scalds. *Dermatological Aid* and *Pediatric Aid* Down used on infants to prevent chafing. (70:64, 65)

- **Food—Acoma Unspecified** Roots and tender shoots salted and eaten as food. (32:53) **Alaska Native Unspecified** Shoots eaten boiled or roasted. Green flower spikes boiled in salted water and eaten. (85:137) **Apache Unspecified** Roots used for food. (32:53) **Apache, Chiricahua & Mescalero Unspecified** Rootstocks cooked with meat. (33:47) **Apache, Mescalero Unspecified** Species used for food. Stem bases eaten raw or cooked with other foods in early spring. (14:46) **Black-foot Unspecified** Rootstocks used for food. (97:19) **Cahuilla Porridge** Pollen used to make cakes and mush. *Staple* Dried roots ground into a meal. (15:142) **Carrier Unspecified** Stems peeled and eaten. (31:85) **Chehalis Unspecified** Roots and inner stalks baked in ashes and eat-

en. (79:21) **Clallam Unspecified** Fleshy interior eaten raw or pit cooked. (57:197) **Costanoan Unspecified** Roots used for food. Shoots used for food. Pollen used for food. (21:255) **Cree, Woodlands Dried Food** Peeled roots dried over a fire for winter storage. *Unspecified* Fresh stem bases and young shoots eaten in July. Raw roots used for food. Roots taken just before the plant bloomed and eaten raw or dipped in boiling water. (109:62) **Gosiute Unspecified** Seeds roasted and used for food. (39:383) **Keres, Western Unspecified** Roots and tender shoots eaten with salt for food. (171:73) **Klamath Unspecified** Rootstocks used for food. (45:90) **Laguna Unspecified** Roots and tender shoots salted and eaten as food. (32:53) **Lakota Staple** Pollen used as flour. (106:50) **Mendocino Indian Unspecified** Roots and stem bases used for food. (41:310) **Montana Indian Unspecified** Young roots and shoots eaten raw. (19:25) **Navajo, Ramah Unspecified** Rhizomes eaten raw in summer. Young stalks just appearing above the ground used for food. (191:14) **Ojibwa Dried Food** Green flower dried and used for food. *Staple* Pollen used for flour. *Unspecified* Green flower boiled and used for food. (5:2226) **Okanagan-Colville Fruit** Young, fruiting heads boiled or roasted and eaten. *Unspecified* Young sprouts used for food. Roots pit cooked and eaten. (188:57) **Paiute Unspecified** Seeds used for food. (32:53) **Paiute, Northern Bread & Cake** Seeds gathered into a dough, kneaded, made into flat cakes, and roasted under hot coals. Seeds roasted, winnowed, ground into fine flour, boiled, made into round cakes, and sun dried. (59:48) Dried rhizomes ground into flour, made into mush, and the mush used to make cakes. Pollen mixed with water, kneaded, formed into cakes, and baked. (60:69) *Dried Food* Roots dried for future use. (59:49) Rhizomes peeled and dried for future use. (60:69) *Porridge* Roots dried, ground into flour, and made into a sweet mush. (59:49) Dried rhizomes ground into flour and made into mush. Seeds roasted, ground into a meal and stone boiled into a mush. (60:69) *Soup* Seeds ground into meal and made into soup. (59:48) *Staple* Seeds roasted, ground into a meal, and eaten with a little water without boiling. (60:69) *Unspecified* Seeds eaten fresh and raw or cooked. Roots peeled, chewed, juice swallowed, and the stringy pulp spat out. Seeds roasted, ground and eaten in powder form. (59:48) Roots peeled and eaten fresh. (59:49) Stalks used for food. Rhizomes peeled and eaten fresh. Green spikes eaten fresh.<sup>79</sup> Seeds roasted and eaten.<sup>80</sup> (60:69) **Pomo Vegetable** Roots eaten as greens. Young shoots eaten as greens. (11:92) **San Felipe Unspecified** Shoots ground, mixed with cornmeal, and used as food. (32:53) **Sioux Unspecified** Young roots and shoots eaten raw. (19:25) **Tanana, Upper Unspecified** Lower part of stem used for food. (102:9) **Thompson Unspecified** Rootstocks used as an important food. (164:482) **Tubatulabal Unspecified** Roots used extensively for food. (193:15) **Yuma Bread & Cake** Pollen shaped into flat cakes and baked. *Dried Food* Rhizomes dried, stored temporarily, pounded, and boiled with fish. Pollen dried and stored for future use. *Porridge* Young shoots used in combination with corn or tepary meal to make mush. Pollen boiled in water into a thin gruel. *Spice* Pollen used as flavoring. *Unspecified* Fleshy rhizomes eaten without preparation. Young shoots eaten raw. Pollen gathered, sifted, and eaten raw. (37:207)

- **Fiber—Algonquin, Tête-de-Boule Mats, Rugs & Bedding** Wool used to stuff mattresses. (132:132) **Apache, Mescalero Mats, Rugs & Bedding** Leaves used for lodge floor covering. (14:46) **Apache, White**

**Mountain Building Material** Flags used for thatching the tepees and wickiups. (136:161) **Blackfoot Clothing** Down used as diapers. (97:19) **Cahuilla Mats, Rugs & Bedding** Stalks used as matting materials and bedding. (15:142) **Chehalis Basketry** Used to make lightweight baskets. *Clothing* Fruiting stalks made into mats and used for raincoats and capes. *Mats, Rugs & Bedding* Fruiting stalks used to make mats for hangings, screens, mattresses, and coverings. Fruiting stalks made into mats and used for kneeling pads in canoes. (79:21) **Cheyenne Basketry** Leaves formerly used to make baskets. (83:13) **Chippewa Basketry** Used for baskets. (53:378) *Building Material* Leaves used as mats for roofing wigwams. The leaves were laid parallel, with one overlapping another, and were then stitched together with basswood, dogbane, or swamp milkweed fiber. The leaves were said to be quite effective in shedding the rain. (71:124) *Mats, Rugs & Bedding* Used for mats. (53:378) **Clallam Basketry** Used to make baskets. *Mats, Rugs & Bedding* Used to make mats. (57:197) **Cowlitz Basketry** Used to make lightweight baskets. *Clothing* Fruiting stalks made into mats and used for raincoats and capes. *Mats, Rugs & Bedding* Fruiting stalks used to make mats for hangings, screens, mattresses, and coverings. Fruiting stalks made into mats and used for kneeling pads in canoes. (79:21) **Dakota Mats, Rugs & Bedding** Down used for filling pillows, padding cradles, and quilting baby wrappings. Leaves used by children to make mats while playing. The leaves became very brittle once dried and therefore were not put to serious use by adults. (69:359) **Hesquiat Basketry** Dried leaves used in weaving the bottoms of baskets and in making bags. *Mats, Rugs & Bedding* Dried leaves used in making mattresses. (185:58) **Hopi Mats, Rugs & Bedding** Used to make sleeping mats. (34:56) **Iroquois Mats, Rugs & Bedding** Flowers used to stuff pillows. (142:107) **Isleta Building Material** Cattails used to support the mud of thatched roofs. (100:44) **Klallam Basketry** Used to make lightweight baskets. *Clothing* Fruiting stalks made into mats and used for raincoats and capes. *Mats, Rugs & Bedding* Fruiting stalks used to make mats for hangings, screens, mattresses, and coverings. Fruiting stalks made into mats and used for kneeling pads in canoes. (79:21) **Klamath Mats, Rugs & Bedding** Leaves used in the manufacture of mats. Fruiting spike down used as a stuffing material for pillows. (45:90) **Kwakiutl, Southern Mats, Rugs & Bedding** Leaves used to make mats. (183:275) **Lakota Clothing** Fluffy tops used as padding for baby diapers. *Furniture* Fluffy tops used as padding for baby cradleboards. (106:50) *Mats, Rugs & Bedding* Fluffy fruits made into a waterproof quilt and placed over sheeting used for babies. (139:32) **Makah Basketry** Used to make lightweight baskets. *Clothing* Fruiting stalks made into mats and used for raincoats and capes. *Mats, Rugs & Bedding* Fruiting stalks used to make mats for hangings, screens, and mattresses. Fruiting stalks made into mats and used for kneeling pads in canoes. (79:21) **Mendocino Indian Mats, Rugs & Bedding** Down of the fruiting parts used for bedding. (41:310) **Menominee Caulking Material** Root used as a natural oakum for caulking leaks in boats. *Mats, Rugs & Bedding* Leaves used to make mats to cover the winter lodges. (151:77) **Meskwaki Building Material** Leaves used to make rainproof and windproof mats for the side walls of the wigwam. *Caulking Material* Root used as a natural oakum to caulk canoes. *Mats, Rugs & Bedding* Fuzz of the fruit used for pillows and comfort material. (152:269) **Montana Indian Mats, Rugs & Bedding** Leaves used for matting. Fruit spike "down" used for bedding. (19:25)

Leaves used to make mats for tepees, sweat baths, and Sundance lodges. (82:60) **Navajo, Ramah Basketry** Leaves used to make storage baskets, medicine baskets, and water jugs. *Mats, Rugs & Bedding* Leaves used to make bed mats. (191:14) **Nimpkish Clothing** Inner bark used to make clothing. *Mats, Rugs & Bedding* Inner bark used to make mats and blankets. (183:296) **Nitinaht Basketry** Leaves used to make openwork baskets. *Clothing* Leaves used to make skirts. (186:88) **Ojibwa Mats, Rugs & Bedding** Blades used to weave mats. (135:245) Leaves used to make wind- and rainproof mats placed on the sides of the medicine lodge. Fuzz or seed used to make mattresses and sleeping bags. Fuzz or seed used to make a quilt and the quilt used to make a sleeping bag. (153:423) **Okanagan-Colville Building Material** Leaves woven into mats and used for door coverings, sweat houses, and "A-frame"-type shelters. *Clothing* Cottony fruiting heads used as "insoles" for moccasins. Cottony fluff used as diapers. (188:57) **Okanagon Mats, Rugs & Bedding** Leaves and stems used to make mats. (125:39) **Paiute Building Material** Leaves and fruiting stalks sewn and woven into mats wrapped around willow frames to form houses. (111:37) **Paiute, Northern Basketry** Used for wefts and binding tule items. (60:81) *Building Material* Used for house building materials. (60:69) Used to make shingles for house exteriors. (60:87) *Canoe Material* Used in the construction of duck decoys and boats. (60:69) *Clothing* Used to secure the edges of skirts. (60:81) Leaves twined as weft rows for sandals. (60:83) Used as the twining wefts for clothing. (60:86) *Mats, Rugs & Bedding* Used to secure the edges of mats. (60:81) Leaves used in a simple pile for seating. (60:87) **Pomo Clothing** Skins used as swaddling clothes or soft padding. (11:92) **Potawatomi Building Material** Leaves sewn together to make a windproof and waterproof side mat to be applied to the wigwam. *Mats, Rugs & Bedding* Catkins used to make an infant's quilt. (154:114) Fuzzy seeds used to make a soft comforter on which to place a newborn infant. (154:124) **Quinault Basketry** Used to make lightweight baskets. *Clothing* Fruiting stalks made into mats and used for raincoats and capes. *Mats, Rugs & Bedding* Fruiting stalks used to make mats for hangings, screens, mattresses, and coverings. Fruiting stalks made into mats and used for kneeling pads in canoes. (79:21) **Salish, Coast Basketry** Flat leaves sun dried, split, and spun to make baskets. *Mats, Rugs & Bedding* Flat leaves sun dried and woven into mats for insulating winter house walls and kneeling in canoes. (182:77) **Shuswap Mats, Rugs & Bedding** Used to make mats for bedding, drying berries, and for mealtimes. Cotton used for pillows and mattresses. (123:55) **Snohomish Basketry** Used to make lightweight baskets. *Clothing* Fruiting stalks made into mats and used for raincoats and capes. *Mats, Rugs & Bedding* Fruiting stalks used to make mats for hangings, screens, mattresses, and coverings. Fruiting stalks made into mats and used for kneeling pads in canoes. *Sewing Material* Leaves peeled and made into two-ply strings for sewing mats. **Squaxin Basketry** Used to make lightweight baskets. *Clothing* Fruiting stalks made into mats and used for raincoats and capes. *Mats, Rugs & Bedding* Fruiting stalks used to make mats for hangings, screens, mattresses, and coverings. Fruiting stalks made into mats and used for kneeling pads in canoes. (79:21) **Thompson Building Material** Leaves and stems made into mats used as wall insulators and in constructing temporary summer houses. The mats were twined with fiber of Indian hemp or silverberry. *Clothing* Downy seed fluff used as dia-

pers for infants. (187:144) *Mats, Rugs & Bedding* Leaves and stems used to make mats. (125:39) Stalks used to make bedding. Leaves and stems stripped and made into mats. (164:496) Fruiting heads substituted for down and used in stuffing pillows and making beds. (164:498) Leaves and stems made into twined mats and used as mattresses and place mats. Downy seed fluff used in quilts and as a substitute for feathers in stuffing pillows and mattresses. The seed fluff was considered to be “really warm.” (187:144) *Tolowa Clothing* Leaves woven together to make raincoats. *Yurok Clothing* Leaves woven together to make raincoats. *Mats, Rugs & Bedding* Leaves woven together to make a mat. (6:59)

- **Other—Apache, Chiricahua & Mescalero** *Ceremonial Items* Pollen sprinkled as a cross onto largest mescal crown. (33:36) **Apache, Mescalero** *Ceremonial Items* Pollen used in many ceremonies. Leaves used as ground covering for ceremonial tepees during the puberty ritual. (14:46) **Apache, White Mountain** *Ceremonial Items* Pollen used in religious ceremonies. (136:151) **Cahuilla** *Ceremonial Items* Stalks used in constructing ceremonial bundles. (15:142) **Chehalis** *Decorations* Leaf edges used to make imbrications on coiled baskets. (79:21) **Keres, Western** *Ceremonial Items* Ripened cattails shaken in the rain dance to produce clouds. (171:73) **Keresan** *Ceremonial Items* Fuzz used ritually like prayer meal or pollen. (198:560) **Navajo** *Ceremonial Items* Pollen used in the ceremonies. Leaves used to make ceremonial necklaces and wristbands for the Male Shooting Chant. (55:24) **Navajo, Ramah** *Containers* Leaves used to make bed mats, storage baskets, medicine baskets, and water jugs. *Good Luck Charm* Leaves used to make mats hung up in the hogan to bring rain. *Protection* Leaves used to make mats hung up in the hogan to protect it, the people, and the sheep from lightning. (191:14) **Ojibwa** *Weapon* Fuzz of the fruit thrown into the eyes of their enemies, claiming that it blinded them. (153:432) **Okanagan-Colville** *Containers* Leaves used to make storage bags for dried roots and berries. *Protection* Leaves wrapped around the sweat house entrance frame to prevent from getting burned on the wood. (188:57) **Okanagon** *Containers* Leaves and stems used to make bags. (125:39) **Omaha** *Ceremonial Items* Leaf used as one of the required articles in dressing the sacred pipes. (68:323) **Paiute, Northern** *Fasteners* Used for wefts and binding tule items. Used as ties for sandals. (60:81) *Hunting & Fishing Item* Used in the construction of duck decoys and boats. (60:69) **Potawatomi** *Waterproofing Agent* Leaves sewn together to make a windproof and waterproof side mat to be applied to the wigwam. (154:114) **Quinault** *Containers* Used to make large wallet-like pack-sacks. (79:21) **Shuswap** *Cooking Tools* Used to make mats for bedding, drying berries, and for mealtimes. (123:55) **Thompson** *Containers* Leaves and stems used to make bags. (125:39) Leaves and stems stripped and made into bags. (164:496) *Cooking Tools* Leaves and stems used in making “trays” or plates. *Decorations* Leaves used to make headdresses for Indian doctors. (187:144)

### *Typha* sp., Cattail

- **Drug—Omaha** *Burn Dressing* Pulverized root used as paste for burns and covered with ripe blossoms. (58:584)
- **Food—Hualapai** *Bread & Cake* Roots peeled, dried, ground into a flour, and used to make bread. *Unspecified* Young shoots eaten raw or boiled. (195:18) **Pomo, Kashaya** *Unspecified* Young shoots used

- for food. (72:32) **Yuki** *Unspecified* Young stem bases eaten raw. (49:87)
- **Other—Hualapai** *Toys & Games* Used to make the hoop for a game. (195:18)

**Ulmaceae**, see *Celtis*, *Trema*, *Ulmus*

### *Ulmus*, Ulmaceae

*Ulmus americana* L., American Elm

- **Drug—Cheyenne** *Gynecological Aid and Pediatric Aid* Infusion of bark taken by pregnant women to insure stability of children. (83:39) **Choctaw** *Analgesic and Gynecological Aid* Decoction of inner bark taken for menstrual cramps. (177:18) **Delaware** *Cold Remedy* Infusion of inner bark used for colds. *Cough Medicine* Infusion of inner bark used for severe coughs. (176:31) **Delaware, Oklahoma** *Cold Remedy* Infusion of inner bark taken for colds. *Cough Medicine* Infusion of inner bark taken for severe coughs. (175:26, 80) **Houma** *Antidiarrheal* Compound decoction of bark taken for dysentery. (158:56) **Iroquois** *Antidiarrheal and Antiemetic* Compound decoction taken for “summer disease—vomiting, diarrhea and cramps.” *Antihemorrhagic* Compound decoction with smashed twigs taken for internal hemorrhage. *Gastrointestinal Aid* Compound decoction taken for “summer disease”: vomiting, diarrhea, and cramps. *Gynecological Aid* Compound decoction of bark taken to facilitate childbirth and for parturition. Infusion of root bark taken for excessive menstruation. *Hemorrhoid Remedy* Infusion taken for piles caused by contact with menstruating woman. *Orthopedic Aid* Compound decoction of bark taken for broken bones. (87:304) **Other** Infusion of bark used for ruptures caused by exaggerated efforts. (141:40) **Koasati** *Dermatological Aid* Decoction of bark taken and used as a wash for gun wounds. *Gastrointestinal Aid* Infusion of inner bark taken and used as a bath for appendicitis. (177:18) **Meskwaki** *Eye Medicine* Decoction of root bark applied to sore eyes as an eye lotion. (152:251) **Mohegan** *Cold Remedy* Infusion of bark taken for colds. (174:266) Infusion of inner bark taken for colds. (176:76, 132) *Cough Medicine* Infusion of bark taken for coughs. (174:266) Infusion of inner bark taken for coughs. (176:76, 132) **Montana Indian** *Cancer Treatment* Inner bark used as an emollient for tumors. (19:25) **Ojibwa** *Venereal Aid* Infusion of root bark taken for gonorrhea. (135:231) **Penobscot** *Antihemorrhagic* Infusion of bark taken for “bleeding at the lungs.” *Pulmonary Aid* Infusion of bark taken for pulmonary hemorrhage. (156:311) **Potawatomi** *Analgesic* Bark used for cramps. *Antidiarrheal* Bark used for diarrhea. (154:86)
- **Food—Cheyenne** *Beverage* Red, inner bark used like coffee. (83:39)
- **Fiber—Chippewa** *Building Material* Bark peeled during raspberry ripening time and used in the winter for house roofing material. (71:129) **Dakota** *Building Material* Forked trees used for the posts in building the earth lodge. (70:75) **Lakota** *Building Material* Wood used for posts and other building materials. (106:31) **Omaha** *Building Material* Forked trees used for the posts in building the earth lodge. **Pawnee** *Building Material* Forked trees used for the posts in building the earth lodge. **Ponca** *Building Material* Forked trees used for the posts in building the earth lodge. (70:75)
- **Other—Dakota** *Cooking Tools* Log sections used to make corn mor-

tars and pestles. *Fuel* Wood used for fuel. *Stable Gear* Wood used for saddle trees. *Tools* Wood used to make small mortars and pestles for grinding medicines and perfumes. (70:75) *Toys & Games* Fibrous inner bark used for popgun wads. (70:116) **Iroquois** *Stable Gear* Bark used to make dog sled harnesses. (141:40) **Lakota** *Fuel* Wood used for fuel. (106:31) **Omaha** *Cooking Tools* Log sections used to make corn mortars and pestles. *Fuel* Wood used for fuel. *Stable Gear* Wood used for saddle trees. *Tools* Wood used to make small mortars and pestles for grinding medicines and perfumes. (70:75) *Toys & Games* Fibrous inner bark used for popgun wads. (70:116) **Pawnee** *Cooking Tools* Log sections used to make corn mortars and pestles. *Fuel* Wood used for fuel. *Stable Gear* Wood used for saddle trees. *Tools* Wood used to make small mortars and pestles for grinding medicines and perfumes. (70:75) *Toys & Games* Fibrous inner bark used for popgun wads. (70:116) **Ponca** *Cooking Tools* Log sections used to make corn mortars and pestles. *Fuel* Wood used for fuel. *Stable Gear* Wood used for saddle trees. *Tools* Wood used to make small mortars and pestles for grinding medicines and perfumes. (70:75) *Toys & Games* Fibrous inner bark used for popgun wads. **Winnebago** *Toys & Games* Fibrous inner bark used for popgun wads. (70:116)

### ***Ulmus rubra*** Muhl., Slippery Elm

• **Drug—Alabama** *Gynecological Aid* Decoction of bark and gunpowder taken as sympathetic magic for delayed labor. (as *U. fulva* 172:665) Decoction of bark taken for prolonged labor. **Catawba** *Tuberculosis Remedy* Bark used for consumption. (as *U. fulva* 177:19) **Cherokee** *Antidiarrheal* Taken to soothe stomach and bowels and for dysentery and bowels of pregnant women. (80:33) Decoction of inner bark taken for dysentery. (as *U. fulva* 177:19) *Burn Dressing* Poultice of inside bark used for burns. *Cold Remedy* Used for colds. *Cough Medicine* Used for coughs. *Dermatological Aid* Poultice of inside bark used for old sores and wounds. *Eye Medicine* Decoction of bark used to wash eyes. *Gastrointestinal Aid* Taken to soothe stomach and bowels and for heartburn and bowels of pregnant women. *Gynecological Aid* Taken to soothe stomach and bowels and for heartburn and bowels of pregnant women. (80:33) Decoction of bark taken to ease labor. (as *U. fulva* 177:19) *Laxative* Used as a mild laxative and “soothes stomach and bowels.” *Respiratory Aid* Used for catarrh. *Throat Aid* Used for “quinsies.” *Tuberculosis Remedy* Used for “quinsies,” coughs, “consumptions and breast complaints.” (80:33) **Chippewa** *Throat Aid* Decoction of bark gargled or dried root chewed for sore throat. (as *U. fulva* 53:342) **Creek** *Witchcraft Medicine* Decoction of bark with gunpowder taken to speed delivery, sympathetic magic. (as *U. fulva* 172:665) **Dakota** *Laxative* Decoction of inner bark taken as a laxative. (as *U. fulva* 70:76) **Iroquois** *Blood Medicine* Complex compound used as a blood purifier. *Emetic* Compound decoction taken to vomit for sleepiness and weakness. *Eye Medicine* Infusion of bark used as drops and as a wash for sore eyes. (87:305) *Gastrointestinal Aid* Decoction of bark taken to clean stomach and used for biliousness. (87:306) *Gynecological Aid* Compound decoction of bark taken to facilitate childbirth and for parturition. Infusion of bark taken for dry birth. (87:305) *Kidney Aid* Decoction of bark taken for kidneys. (87:306) *Respiratory Aid* Compound of leaves smoked and exhaled through the nostrils for catarrh. *Stimulant* Compound decoction with black center of tree taken when feeling drowsy. (87:305)

*Throat Aid* Raw bark chewed for sore throats. (87:306) *Tuberculosis Remedy* Compound decoction used as a poultice for infected and swollen tubercular glands. (87:304) **Kiowa** *Oral Aid* Fresh, inner bark used as a masticatory. (as *U. fulva* 192:23) **Mahuna** *Orthopedic Aid* Poultice of bark applied to broken and fractured arms or legs. (as *U. pubescens* 140:27) **Menominee** *Cathartic* Infusion of inner bark taken as a physic. *Dermatological Aid* Poultice of inner bark applied to draw pus from a wound. (as *U. fulva* 151:56, 57) **Meskwaki** *Dermatological Aid* Poultice of bark applied to old sores. *Gynecological Aid* Decoction of root taken by women to ease childbirth. (as *U. fulva* 152:251) **Micmac** *Dermatological Aid* Bark used for suppurating wounds. *Pulmonary Aid* Bark used for bleeding lungs. (as *U. fulva* 40:63) **Mohegan** *Cough Medicine* Bark used for coughs. (176:132) *Pulmonary Aid* Inner bark chewed to soothe the lungs. (176:76) *Throat Aid* Inner bark chewed for sore throat. (176:76, 132) **Ojibwa** *Dermatological Aid* Infusion of roots taken and used as a wash for bleeding foot cuts. *Gastrointestinal Aid* Infusion of plants taken for stomach troubles. *Hemostat* Infusion of roots taken and used as a wash for bleeding foot cuts. (as *U. fluva* 135:231) *Throat Aid* Inner bark used for dry, sore throat. (as *U. fulva* 153:392) *Venereal Aid* Plant used for gonorrhea. (as *U. fluva* 135:240) **Omaha** *Laxative* Decoction of inner bark taken as a laxative. **Pawnee** *Laxative* Decoction of inner bark taken as a laxative. **Ponca** *Laxative* Decoction of inner bark taken as a laxative. (as *U. fulva* 70:76) **Potawatomi** *Dermatological Aid* Inner bark used for boils. *Eye Medicine* Poultice of chewed inner bark applied to eye inflammations. *Throat Aid* Inner bark used to lubricate throat for removal of lodged bone. (as *U. fulva* 154:86, 87) **Winnebago** *Laxative* Decoction of inner bark taken as a laxative. (as *U. fulva* 70:76)

• **Food—Kiowa** *Beverage* Inner bark used to brew a “tea.” *Winter Use Food* Dried, stored inner bark used to brew a “tea” during the winter. (as *U. fulva* 192:23) **Omaha** *Preservative* Bark cooked with rendering fat as a preservative. (as *U. fulva* 68:325) Inner bark cooked with buffalo fat as a preservative, to prevent it from becoming rancid. (as *U. fulva* 70:76) *Snack Food* Bark cooked with rendering fat and prized by children as special tidbits. *Spice* Bark cooked with rendering fat as a flavoring. (as *U. fulva* 68:325) Inner bark cooked with buffalo fat for its desirable flavor when rendering out the tallow. *Unspecified* Inner bark cooked with buffalo fat and prized by children as tidbits. (as *U. fulva* 70:76)

• **Fiber—Cherokee** *Sporting Equipment* Inner bark chewed and spat onto baseball glove to make the ball stick to the glove. (80:33) **Dakota** *Building Material* Forked trees used for the posts in building the earth lodge. *Cordage* Inner bark fibers used to make ropes and cords. (as *U. fulva* 70:76) **Menominee** *Basketry* Boiled bark used to make baskets and fish nets. *Mats, Rugs & Bedding* Boiled bark used to make matting. *Snow Gear* Boiled bark used to make nets for snowshoes. (as *U. fulva* 151:77) **Meskwaki** *Building Material* Bark strips used to make sides of the winter wigwam and roof rainproof. (as *U. fulva* 152:270) **Ojibwa** *Building Material* Stripped bark used as a wigwam cover, for the sides of the wigwam. (as *U. fulva* 153:423) **Omaha** *Basketry* Inner bark used to make baskets. (as *U. fulva* 68:324) *Building Material* Forked trees used for the posts in building the earth lodge. (as *U. fulva* 70:76) *Cordage* Inner bark used to make ropes and cordage. (as *U. fulva* 68:324) Inner bark fiber used to make cords and ropes. **Pawnee** *Building Material* Forked trees used for the posts in building the

earth lodge. *Cordage* Inner bark fiber used to make ropes and cords. **Ponca Building Material** Forked trees used for the posts in building the earth lodge. *Cordage* Inner bark fiber used to make cords and ropes. (as *U. fulva* 70:76) **Potawatomi Basketry** Bark used to make boxes and baskets. (as *U. fulva* 154:115) Bark used to make baskets. (as *U. fulva* 154:124) *Building Material* Bark used to make wigwam sides. (as *U. fulva* 154:115) **Winnebago Building Material** Forked trees used for the posts in building the earth lodge. *Cordage* Inner bark fiber used to make cords and ropes. (as *U. fulva* 70:76)

- **Other—Dakota Cooking Tools** Log sections used to make corn mortars and pestles. *Fuel* Weathered bark used to catch the spark in fire making. Wood used for fuel. *Tools* Wood used to make small mortars and pestles for grinding medicines and perfumes. (as *U. fulva* 70:76) *Toys & Games* Fibrous inner bark used for popgun wads. (as *U. fulva* 70:116) **Kiowa Stable Gear** Forked branches used for the saddle frames. (as *U. fulva* 192:23) **Menominee Hunting & Fishing Item** Boiled bark used to make matting, baskets, fish nets, and nets for snowshoes. (as *U. fulva* 151:77) **Omaha Cooking Tools** Log sections used to make corn mortars and pestles. *Fuel* Weathered bark used to catch the spark in fire making. ### *Umbellularia*, Lauraceae

*Umbellularia californica* (Hook. & Arn.) Nutt., California Laurel

- **Drug—Cahuilla Analgesic** Leaves used for headaches. (15:143) **Karok Analgesic** Infusion of plant taken by women for the pains of after-birth. *Cold Remedy* Plant used as steam bath or burning boughs used to fumigate house for colds. (148:383) *Dermatological Aid* Poultice of ground seeds applied to sores. (6:59) *Disinfectant* Boughs used in fire to fumigate the house for colds and other sicknesses. *Gynecological Aid* Infusion of plant taken by women for the pains of afterbirth. *Panacea* Plant used as steam bath or burning bough to fumigate house for any sickness. (148:383) **Mendocino Indian Analgesic** Decoction taken, used as wash, or poultice of leaves applied for headaches. *Antirheumatic (External)* Infusion of leaves used as a bath for rheumatism. *Dermatological Aid* Decoction of leaves used as wash for vermin on the head. *Gastrointestinal Aid* Decoction of plant taken for stomachaches and headaches. Poultice of leaves applied as counterirritant for chronic stomach complaints. *Panacea* Burning leaf vapor used for many diseases. *Stimulant* Nuts eaten as a stimulant. (41:349) **Miwok Analgesic** Poultice of leaves and twigs bound to forehead for headaches. (12:174) **Pomo Analgesic** Poultice of heated leaves applied for rheumatic and neuralgic pains. *Antirheumatic (External)* Poultice of heated leaves applied for rheumatic pains. (66:13) **Pomo, Kashaya Analgesic** Poultice of leaves used for rheumatic and neuralgic pains. Indian doctor would sing and hit you with little branches for pain or headache. *Antirheumatic (External)* Poultice of leaves used for rheumatic pains. *Cold Remedy* Decoction of leaves taken for colds. Indian doctor would sing and hit you with little branches for a cold. *Dermatological Aid* Decoction of leaves used to wash sores. Peppernut charcoal rubbed into a man's mustache to groom it. *Gynecological Aid* Decoction of leaves taken for menstrual cramps and clotting. *Respiratory Aid* Decoction of leaves taken to clear up "slime" in the chest. *Throat Aid* Decoction of leaves taken for sore throats. (72:90) **Yuki Analgesic** Crushed leaves inhaled for headaches. (49:47) Poultice of crushed leaves applied as compress for headaches. *Antirheumatic (External)* Decoction of leaves used as wash for rheumatism. (118:43) *Respiratory Aid* Crushed leaves inhaled to open the nasal passages. (49:47) **Yurok Unspecified** Plant used for medicinal purposes. (6:59)
- **Food—Concow Beverage** Root bark used to make a drink. (41:349) **Costanoan Bread & Cake** Kernels roasted or ground into flour for cakes. *Fruit* Fruits eaten raw or boiled. (21:249) **Karok Unspecified** Seeds shelled, roasted, and eaten. (6:59) Nuts hulled, stored, parched in ashes, cracked open, and eaten. *Winter Use Food* Nuts hulled and stored in big baskets for winter use. (148:383) **Mendocino Indian Bread & Cake** Nuts roasted, shelled, pounded into a small mass, and

molded into “bread.” *Sauce & Relish* Nuts eaten as a relish. Nuts used as a condiment. *Unspecified* Nuts roasted and eaten. (41:349) **Pomo, Kashaya Dried Food** Fruit sun dried. *Fruit* Fleshy end of the husk eaten raw and the kernel roasted and eaten whole. *Unspecified* Roasted kernels or kernel meal cakes eaten with greens, buckeye meal, acorn meal, mush, or seaweed. *Winter Use Food* Pounded kernel meal used to make sun dried, flat cakes and stored for winter use. (72:90) **Tolowa Fruit** Fruit shelled, roasted, and eaten. (6:59) **Yuki Unspecified** Species used for food. (48:47) Nuts roasted in hot ashes, cracked, and eaten. (49:87) **Yurok Fruit** Fruit used for food. *Unspecified* Seeds baked in the sand under a fire and used for food. (6:59)

- **Other—Costanoan Hunting & Fishing Item** Burning leaf smoke used to drive ground squirrels from burrows. *Incense & Fragrance* Leaves hung in bunches to freshen air. (21:249) *Insecticide* Burning leaf smoke used to rid one of fleas. (21:7, 249) **Karok Ceremonial Items** Foliage placed on fire during the Brush Dance to drive evil spirits away. (6:59) *Toys & Games* Leaves thrown into the fire by children to hear them crack like firecrackers. (148:383) **Mendocino Indian Insecticide** Leaves used for fleas. (41:349) **Pomo, Kashaya Hunting & Fishing Item** Leaves rubbed on a man's body before he went hunting to take the body smell away. *Protection* Small, leafy branches hung in homes for protection against any harm that might come into the homes. *Sacred Items* Plant very sacred to the Kashaya Pomo because of its ceremonial uses. (72:90) **Yuki Insecticide** Leafy branches used for fleas. (49:91) **Yurok Good Luck Charm** Leaves burned to take bad luck away, in the house, or the smoke waved over people as they leave. *Insecticide* Plant put under the bed to rid it of fleas. (6:59)

### ***Umbellularia* sp.**, Pepperwood

- **Food—Midoo Unspecified** Nuts buried in mud for a long time to remove the bitterness and used for food. (117:314) **Pomo Unspecified** Nuts roasted in ashes and eaten with fresh clover. (117:284)
- **Fiber—Mewuk Building Material** Branches used to make arbors or shades. (117:349) **Yokut Building Material** Plant used to make shelters and canopies. (117:420)

**Urticaceae**, see *Laportea*, *Pilea*, *Pipturus*, *Touchardia*, *Urtica*

### ***Urtica***, Urticaceae

***Urtica dioica*** L., Stinging Nettle

- **Drug—Cherokee Gastrointestinal Aid** Taken for upset stomach. *Misc. Disease Remedy* Infusion taken for “ague.” (80:46) **Cree, Woodlands Gynecological Aid** Decoction of plant taken to keep blood flowing after childbirth. (109:63) **Hesquiat Analgesic** Nettles rubbed on body for aches, pains, and backaches. *Antirheumatic (External)* Poultice of steamed leaves and roots used on swollen, sore, arthritic legs, ankles, and joints. *Gastrointestinal Aid* Nettles rubbed on stomach when sore. (185:76) **Iroquois Witchcraft Medicine** Compound of plant and dried snake's blood used as a “witching medicine.” (87:307) **Kwakiutl Analgesic** Plant rubbed on the skin for chest pains. *Dermatological Aid* Plant juice rubbed into the scalp to prevent hair from falling out. *Gynecological Aid* Plant juice taken by overdue, pregnant women. *Other* Moxa of plant fiber used to cauterize the skin for various ailments. *Venereal Aid* Plant used for locomotor ataxia. (183:292) **Kwakiutl, Southern Analgesic** Fiber used to cauterize headaches. *Antirheumatic (External)* Fiber used to cauterize swellings. (183:297)

**Lakota Gastrointestinal Aid** Infusion of roots taken for stomach pains. (139:61) **Makah Hunting Medicine** Used to rub the whale hunters' bodies in order to be strong. Leaves rubbed on fishing line to give it a green color or used as medicine for good fishing.<sup>81</sup> *Oral Aid* Stems put under splints to hasten the healing process. *Reproductive Aid* Infusion of roots given to expectant mothers. *Stimulant* Used to rub down after the morning bath. (67:246) **Nitinaht Antirheumatic (External)** Plants whipped over body for arthritis and rheumatism. *Tonic* Young shoots chewed and swallowed as a tonic to prevent sickness. *Unspecified* Plants whipped over body by married persons for affection and faithfulness of spouses. (186:128) **Okanagan-Colville Antirheumatic (External)** Fresh plants used to beat the skin after “sweatousing” and for rheumatic and arthritic pain. (188:140) **Paiute, Northern Antirheumatic (External)** Leaves and stalks used to whip aching arms and legs for rheumatism. *Dermatological Aid* Decoction of roots taken for hives and itches. (59:126) **Shuswap Analgesic and Antirheumatic (External)** Decoction of stems and roots used as a sweat bath for rheumatism pain. *Dermatological Aid* Used for bathing and drinking. *Herbal Steam* Decoction of stems and roots used as a sweat bath for rheumatism pain. (123:70) **Thompson Antirheumatic (External)** Nettles used for arthritis. One informant said that a neighboring woman who had arthritis hit her skin all over with nettles and within 2 months, she was getting strong and healthy again. *Dermatological Aid* Decoction of roots used as a hair tonic for growing long, silky hair. Plant tops used for skin disease. *Hemorrhoid Remedy* Decoction of roots used as a soaking solution for bleeding hemorrhoids. *Orthopedic Aid* Poultice of leaves and stalks used for paralyzed limbs. *Unspecified* Infusion of leaves and tops used as medicine. (187:289)

- **Food—Iroquois Vegetable** Cooked and seasoned with salt, pepper, or butter. (196:118) **Makah Unspecified** Plant tops used for food. (67:246) **Mohegan Vegetable** Combined with pigweed, mustard, plantain, and dock and used as mixed greens. (176:83) **Okanagan-Colville Vegetable** New growths dipped in boiling water and eaten as greens. (188:140) **Shuswap Beverage** Used for bathing and drinking. (123:70) **Thompson Vegetable** Greens cooked as green vegetables. (187:288) Plant tops eaten as a potherb after the arrival of the Chinese. (187:289)
- **Fiber—Hesquiat Cordage** Dried, peeled stems used to make twine, ropes, and herring nets. (185:76) **Lakota Cordage** Stem fibers used to make cordage. (139:61) **Makah Basketry** Fibers used in weaving baskets. *Cordage* Fibers used to make string. **Nitinaht Cordage** Fibers, yellow cedar bark, or cottonwood fibers and dog hair used to make stronger ropes. (67:246) Stems dried, pounded, and spun to make twine for binding and sewing purposes. (186:128) **Thompson Cordage** Plant tops used to make twine and fine thread. The plant tops were made into twine in the same manner as Indian hemp. (187:289)
- **Dye—Makah Green** Leaves rubbed on fishing line to give it a green color or used as medicine for good fishing.<sup>81</sup> (67:246)
- **Other—Cherokee Hunting & Fishing Item** Stems twisted for bow strings. (80:46) **Hesquiat Hunting & Fishing Item** Dried, peeled stems used to make twine, ropes, and herring nets. (185:76) **Makah Ceremonial Items** Used in rituals for whaling and fishing. *Protection* Used to rub seal hunters bodies to protect themselves from the weather. **Nitinaht Hunting & Fishing Item** Fibers used to make fish and duck nets. (67:246) Plants rubbed on fishing lines to eliminate human

odor. (186:112) Used as the leader for fishing. (186:53) Stems dried, pounded, and spun to make fishing lines and duck nets. Plants rubbed in hands to eliminate human odor before touching fishing gear. (186:128) **Okanagan-Colville Ceremonial Items** Plant used to make a tea taken during "sweathousing" and used to "wash" the skin and hair. *Protection* Boiled plant used as a bath to combat witchcraft and a jinx by an evil person. (188:140) **Thompson Hunting & Fishing Item** Plant tops made into twine and fine thread and used for making scoop nets. (187:289)

***Urtica dioica* ssp. *gracilis*** (Ait.) Seland., California Nettle

• **Drug**—**Abnaki** *Hemostat* Used for bloody noses. (as *U. procera* 144:154) Powdered leaves used as a snuff for nosebleeds. (as *U. procera* 144:166) **Bella Coola** *Analgesic* and *Antirheumatic (External)* Used in a sweat bath for pains similar to rheumatism all over the body. (as *U. lyallii* 150:55) *Hemostat* Burning stem fibers used to cauterize sores and swellings. (184:211) *Herbal Steam* Used in a sweat bath for pains similar to rheumatism all over the body. *Orthopedic Aid* Used to sting paralyzed limbs daily to cause sores and revive sensation. (as *U. lyallii* 150:55) **Carrier** *Analgesic* Used as whip for pain. *Dermatological Aid* Rubbed on the skin for rashes. (as *U. gracilis* 31:83) **Chehalis** *Antirheumatic (External)* Whole stalk used as a whip on a person with rheumatism. *Dermatological Aid* Decoction of roots used as a hair wash. (as *U. lyallii* 79:28) **Chippewa** *Antidiarrheal* Infusion of root taken for dysentery. (as *U. gracilis* 53:344) *Diuretic* Compound decoction of root taken for "stoppage of urine." (as *U. gracilis* 53:348) **Cowlitz** *Gynecological Aid* Infusion of nettles taken by women about to deliver a child. *Orthopedic Aid* Poultice of sprouts applied or person whipped with stalk for paralysis. (as *U. lyallii* 79:28) **Gitksan** *Antihemorrhagic* Decoction of plant taken for hemorrhage and many illnesses. *Unspecified* Decoction of entire plant taken for many illnesses. *Urinary Aid* Decoction of plant taken for bladder trouble and many illnesses. (as *U. lyallii* 150:55) **Haisla & Hanaksiala** *Antirheumatic (External)* Poultice of roots applied to aches and swollen joints. (43:294) **Klallam** *Analgesic* Infusion of stalks rubbed on the body for soreness or stiffness. *Orthopedic Aid* Infusion of stalks rubbed on the body for soreness or stiffness. *Panacea* Infusion of nettles taken for many ailments. **Lummi** *Gynecological Aid* Infusion of nettles taken by women to relax the muscles during childbirth. (as *U. lyallii* 79:28) **Miwok** *Antirheumatic (External)* Decoction of root used as a bath for rheumatism. Leaf powder rubbed on affected rheumatic body parts. (as *U. gracilis* 12:174) **Navajo, Ramah** *Poison* Plant considered poisonous. (as *U. gracilis* 191:23) **Ojibwa** *Dermatological Aid* Poultice of soaked leaves applied to heat rash. (as *U. lyallii* 153:392) **Paiute** *Antirheumatic (External)* Decoction of root used as a wash for rheumatism. *Cold Remedy* Decoction of leaves taken for colds. *Diaphoretic*, *Herbal Steam*, and *Misc. Disease Remedy* Plant used as an inhalant in the sweat bath for gripe or pneumonia. *Pulmonary Aid* Plant fumes inhaled in the sweat bath for pneumonia or gripe. *Unspecified* Plant used as switch on body as a counterirritant for unspecified purposes. (as *U. gracilis* 180:146) **Pomo, Kashaya** *Analgesic* Nettle used to strike the skin as a counterirritant for rheumatism and other such pains. *Antirheumatic (External)* Nettle used to strike the skin as a counterirritant for rheumatism. (as *U. lyallii* 72:77) **Potawatomi** *Febrifuge* Infusion of root used for intermittent fevers. *Unspecified*

Infusion of leaves used medicinally for unspecified purposes. (as *U. lyallii* 154:87) **Quileute** *Antirheumatic (External)* Whole stalk used as a whip on a person with rheumatism. *Antirheumatic (Internal)* Infusion of pounded roots taken for rheumatism. **Quinault** *Analgesic* Decoction of peeled bark taken for headaches. *Gynecological Aid* Plant tips chewed by women during labor. *Hemostat* Decoction of peeled bark taken for nosebleeds. *Orthopedic Aid* Whole stalk used as a whip on a person with paralysis. **Samish** *Tonic* Decoction of plant taken as a general tonic. (as *U. lyallii* 79:28) **Shoshoni** *Antirheumatic (External)* Hot poultice of mashed leaves applied for rheumatism. *Blood Medicine* Compound decoction of roots taken as a blood tonic and for general debility. *Cold Remedy* Decoction of leaves taken for colds. *Tonic* Compound decoction of root taken as a blood tonic and for general debility. (as *U. gracilis* 180:146) **Sioux** *Diuretic* Root used for urine retention. (as *U. gracilis* 19:25) **Skagit** *Cold Remedy* Decoction of plant taken for colds. **Skokomish** *Dermatological Aid* Decoction of roots used as a hair wash. **Snohomish** *Cold Remedy* Infusion of nettles taken or nettles rubbed on the body for colds. **Squaxin** *Gynecological Aid* Infusion of crushed leaves taken by women having difficulties in childbirth. **Swinomish** *Tonic* Decoction of plant taken as a general tonic. (as *U. lyallii* 79:28) **Tanaina** *Antirheumatic (Internal)* Plant used for diseases from rheumatism to tuberculosis. *Misc. Disease Remedy* Plant used for diseases from rheumatism to tuberculosis. *Tuberculosis Remedy* Plant used for diseases from rheumatism to tuberculosis. (as *U. lyallii* 149:329) **Thompson** *Orthopedic Aid* Plant dipped in water and rubbed on stiff, sore joints and muscles. (as *U. lyallii* 164:471, 472) **Tolowa** *Dermatological Aid* Poultice of fresh, pounded leaves applied to skin inflammations. (as *U. lyallii* 6:60)

• **Food**—**Alaska Native** *Dietary Aid* Fresh, green leaves used as a good source of provitamin A, vitamin C, and some of the minerals. *Substitution Food* Leaves used as a good substitute for spinach. *Unspecified* Leaves boiled and eaten. (as *U. lyallii* 85:73) **Cowichan** *Vegetable* Young stems and leaves boiled and eaten like spinach. (182:90) **Haisla & Hanaksiala** *Preserves* Plant boiled with sugar to make jam. *Unspecified* Young shoots steamed and eaten with bear meat. (43:294) **Hoh** *Vegetable* Plant tops eaten as greens. (as *U. lyallii* 137:61) **Montana Indian** *Vegetable* Young shoots used as a potherb. (as *U. gracilis* 19:25) **Oweekeno** *Unspecified* Plant fried and eaten. (as *U. dioica* ssp. *gracilis* var. *lyallii* 43:119) **Quileute** *Vegetable* Plant tops eaten as greens. (as *U. lyallii* 137:61) **Saanich** *Vegetable* Young stems and leaves boiled and eaten like spinach. (182:90) **Skagit, Upper** *Unspecified* Tender shoots cooked and eaten. (as *U. lyallii* 179:42)

• **Fiber**—**Bella Coola** *Cordage* Stem fibers sun dried and used to make twine. (184:211) **Dakota** *Clothing* Dried stalk fiber used to make cloth. *Cordage* Dried stalk fiber used to make twine and cordage. (as *U. gracilis* 70:77) **Eskimo, Inuktitut** *Cordage* Dried stem fibers used for twine. (as *U. lyallii* 202:186) **Haisla & Hanaksiala** *Cordage* Fiber used to make cordage, bindings, and nets. (43:294) **Hoh** *Cordage* Roots formerly twisted and made into ropes. (as *U. lyallii* 137:61) **Kwakiutl, Southern** *Cordage* Plants split, dried, pounded, and used to make twine and rope. (183:292) **Menominee** *Basketry* Plant made into hemp twine and used to make fiber bags. (as *U. gracilis* 151:77) **Montana Indian** *Cordage* Bark used for cordage. (as *U. gracilis* 19:25) **Ojibwa** *Sewing Material* Bark or rind used as a fine, stout sewing fiber. (as *U. lyallii* 153:423) **Omaha** *Cordage* Dried stalk fiber used to

make twine and cordage. The fiber was separated from the nettle by either crumpling the dried stalks in the hands or gently pounding it with stones. *Sewing Material* Dried stalk fiber used to make cloth. (as *U. gracilis* 70:77) **Oweekeno** *Cordage* Fiber used to make bow strings, fishing line for jigging, ropes, and oolichan (candlefish) traps. (as *U. dioica* ssp. *gracilis* var. *lyallii* 43:119) **Pawnee** *Clothing* Dried stalk fiber used to make cloth. *Cordage* Dried stalk fiber used to make twine and cordage. **Ponca** *Clothing* Dried stalk fiber used to make cloth. *Cordage* Dried stalk fiber used to make twine and cordage. (as *U. gracilis* 70:77) **Potawatomi** *Cordage* Outer rind twisted into a two-strand cord and used for sewing cattail mats and baskets. (as *U. lyallii* 154:115) **Quileute** *Cordage* Roots formerly twisted and made into ropes. (as *U. lyallii* 137:61) **Skagit, Upper** *Cordage* Mature shoot fibers used to make cordage. (as *U. lyallii* 179:42) **Winnebago** *Clothing* Dried stalk fiber used to make cloth. *Cordage* Dried stalk fiber used to make twine and cordage. (as *U. gracilis* 70:77)

- **Other**—**Bella Coola** *Hunting & Fishing Item* Stem fibers sun dried and used to make fish nets. (184:211) **Dakota** *Ceremonial Items* Dried stalk fiber made into cloth and used in the Sacred Bundle of the Tent of War. *Stable Gear* Dried stalk fiber made into ropes and used to hobble horses. *Toys & Games* Plant fiber used by little boys as wadding for popguns. (as *U. gracilis* 70:77) **Haisla & Hanaksiala** *Cash Crop* Plant used for trade. *Fasteners* Fiber used to make cordage, bindings, and nets. *Hunting & Fishing Item* Fiber used to make nets and bow strings. (43:294) **Kwakiutl, Southern** *Hunting & Fishing Item* Plants split, dried, pounded, and used to make fishing nets. (183:292) **Lummi** *Hunting & Fishing Item* Bark peeled, dried, made into a two-ply string, and used for duck nets. **Makah** *Ceremonial Items* Rubbed on the body to purify it after handling a corpse. (as *U. lyallii* 79:28) **Omaha** *Ceremonial Items* Dried stalk fiber made into cloth and used in the Sacred Bundle of the Tent of War. *Stable Gear* Dried stalk fiber made into ropes and used to hobble horses. *Toys & Games* Plant fiber used by little boys as wadding for popguns. (as *U. gracilis* 70:77) **Oweekeno** *Hunting & Fishing Item* Fiber used to make bow strings, fishing line for jigging, ropes, and oolichan (candlefish) traps. Fiber used to make fishing nets. (as *U. dioica* ssp. *gracilis* var. *lyallii* 43:119) **Pawnee** *Ceremonial Items* Dried stalk fiber made into cloth and used in the Sacred Bundle of the Tent of War. *Stable Gear* Dried stalk fiber made into ropes and used to hobble horses. *Toys & Games* Plant fiber used by little boys as wadding for popguns. **Ponca** *Ceremonial Items* Dried stalk fiber made into cloth and used in the Sacred Bundle of the Tent of War. *Stable Gear* Dried stalk fiber made into ropes and used to hobble horses. *Toys & Games* Plant fiber used by little boys as wadding for popguns. (as *U. gracilis* 70:77) **Quileute** *Hunting & Fishing Item* Rubbed on the bodies of sealers to keep them awake during the night. **Skokomish** *Hunting & Fishing Item* Bark peeled, dried, made into a two-ply string, and used for duck nets. **Snohomish** *Hunting & Fishing Item* Bark peeled, dried, made into a two-ply string, and used for duck nets. (as *U. lyallii* 79:28) **Tsimshian** *Hunting & Fishing Item* Fiber used to make fishing nets. Fiber used to make fishing nets. (43:351) **Winnebago** *Ceremonial Items* Dried stalk fiber made into cloth and used in the Sacred Bundle of the Tent of War. *Stable Gear* Dried stalk fiber made into ropes and used to hobble horses. *Toys & Games* Plant fiber used by little boys as wadding for popguns. (as *U. gracilis* 70:77)

### ***Urtica dioica* ssp. *holosericea*** (Nutt.) Thorne, Stinging Nettle

- **Drug**—**Cahuilla** *Analgesic* Used for headaches and sore backs. *Antirheumatic (External)* Used for rheumatism and muscular stiffness. (as *U. holosericea* 15:143) **Diegueño** *Antirheumatic (External)* Nettles used to whip rheumatic or arthritic joints. (as *U. holosericea* 84:43) **Kawaiisu** *Analgesic* Poultice of leaves applied for headaches. Poultice of mashed plant applied to the neck for pain. Stems and leaves used as a counterirritant for sore limbs and back. *Dermatological Aid* “Children walk through nettles to toughen their skin.” Poultice of leaves applied for sores. *Orthopedic Aid* Stems and leaves used as a counterirritant for sore limbs and back. *Pediatric Aid* “Children walk through nettles to prepare them for practice of witchcraft.” “Children walk through nettles to toughen their skin.” “Younger people walk through nettles to procure dreams.” *Psychological Aid* “Younger people walk through nettles to procure dreams.” *Witchcraft Medicine* “Children walk through nettles to prepare them for practice of witchcraft.” (as *U. holosericea* 206:68) **Mahuna** *Antirheumatic (External)* Leaves rubbed on parts ailing from inflammatory rheumatism. (as *U. holosericea* 140:59) **Miwok** *Analgesic* Branch used to strike affected parts for certain pains. (as *U. gracilis* var. *holosericea* 12:174) **Pomo** *Analgesic* and *Antirheumatic (External)* Nettle used to strike skin as a counterirritant for rheumatic pains. (as *U. gracilis* var. *holosericea* 66:13)
- **Food**—**Cahuilla** *Vegetable* Leaves eaten raw or boiled as greens. (as *U. holosericea* 15:143)
- **Fiber**—**Cahuilla** *Basketry* Fibers used in basket making. *Cordage* Fibers used to make bowstrings and cordage. (as *U. holosericea* 15:143) **Kawaiisu** *Cordage* Outer stem layers separated into long strands and two or three twisted into a cord. (as *U. holosericea* 206:68) **Klamath** *Cordage* Stems used in the manufacture of cords and nets. (as *U. breweri* 45:95) *Snow Gear* Stems used for mesh on snowshoes. (as *U. breweri* 45:94) **Luiseno** *Clothing* Plant fiber made into twine and used to make front aprons worn by women. *Unspecified* Plant sometimes used for fiber. (as *U. holosericea* 155:202)
- **Other**—**Diegueño** *Ceremonial Items* Nettles used to whip young men going through the ceremony to become dancers. (as *U. holosericea* 84:43) **Kawaiisu** *Containers* Outer stem layers made into cord and used to make carrying nets. *Hunting & Fishing Item* Outer stem layers made into cord and used to make rabbit nets. (as *U. holosericea* 206:68) **Klamath** *Hunting & Fishing Item* Stems used in the manufacture of cords and nets. (as *U. breweri* 45:95) **Luiseno** *Containers* Plant fibers made into twine and used to make large-meshed nets for carrying bulky or heavy articles. Plant made into twine and used to make network sacks for carrying acorns and other small seeds. *Hunting & Fishing Item* Plant fiber made into twine and sometimes used to make bowstrings. Plant fiber made into twine, occasionally used to make long nets and draw nets for catching rabbits. Plant fiber made into twine and used to make fishing nets.<sup>14</sup> Plant fiber made into twine and used to make slings. (as *U. holosericea* 155:202)

### ***Urtica* sp., Nettle**

- **Drug**—**Costanoan** *Analgesic* Leaves used to strike aching joints “to reduce the pain.” *Dermatological Aid* Decoction of plant used for hives. *Disinfectant* Decoction of plant used for infected sores. *Orthopedic Aid* Leaves used to strike aching joints “to reduce the pain.”

(21:21) **Sanpoil** *Antirheumatic (External)* Sprig brushed against the affected part for rheumatism. *Dermatological Aid* Sprig brushed against the affected part for swelling. (131:219) **Thompson** *Disinfectant* Plant used to make a wash poured on the body as a purifier after sweat bath. (164:505)

### *Urtica urens* L., Dwarf Nettle

- **Drug—Shuswap** *Analgesic and Antirheumatic (External)* Decoction of stems and roots used as a sweat bath for rheumatism pain. *Dermatological Aid* Used for bathing and drinking. *Herbal Steam* Decoction of stems and roots used as a sweat bath for rheumatism pain. (123:70)
- **Food—Shuswap** *Beverage* Used for bathing and drinking. (123:70)

**Usneaceae**, see *Evernia*, *Letharia*, *Ramalina*, *Usnea*

## *Usnea*, Usneaceae, lichen

### *Usnea longissima*

- **Drug—Nitinaht** *Dermatological Aid* Used for wound dressing material and as bandages. (maidenhair moss 186:55)
- **Fiber—Hanaksiala** *Mats, Rugs & Bedding* Plant used as mattresses at seasonal camps. (old man's beard lichen 43:144) **Nitinaht** *Clothing* Used for baby diapers and female sanitary napkins. (maidenhair moss 186:55)
- **Other—Nitinaht** *Cooking Tools* Used for wiping salmon. (maidenhair moss 186:55) **Oweekeno** *Cleaning Agent* Whole plant used by women to wipe slime when cleaning salmon. (old man's beard lichen 43:50)

### *Usnea* sp., Tree Lichen

- **Drug—Makah** *Dermatological Aid* Used for boils. **Nitinaht** *Dermatological Aid* Used to bandage wounds. (67:211)
- **Food—Hesquiat** *Forage* Plant browsed by deer. (185:17)
- **Fiber—Hanaksiala** *Mats, Rugs & Bedding* Plant used as mattresses at seasonal camps. (43:144) **Makah** *Mats, Rugs & Bedding* Used in bags as pillows when feathers unavailable. **Nitinaht** *Clothing* Used to diaper babies and for women's sanitary napkins. (67:211)
- **Dye—Makah** *Yellow* Used as a source of yellow dye. (67:211)
- **Other—Bella Coola** *Decorations* Formerly used to decorate dance masks. (184:195)

**Ustilaginaceae**, see *Ustilago*

## *Ustilago*, Ustilaginaceae, fungus

### *Ustilago zeae* (Beckm.) Ung., Corn Smut

- **Food—Apache, White Mountain** *Unspecified* Smut boiled and eaten. (136:161) **Hopi** *Unspecified* Used with sweet corn as food. (200:100)
- **Other—Hopi** *Ceremonial Items* Black powder used as a ceremonial body paint. (200:100)

## *Uvularia*, Liliaceae

### *Uvularia grandiflora* Sm., Largeflower Bellwort

- **Drug—Menominee** *Dermatological Aid* Plant used for swellings. (151:41) **Ojibwa** *Analgesic and Gastrointestinal Aid* Root used for stomach pain, perhaps pleurisy. *Pulmonary Aid* Root used for "pain in the solar plexus, which may mean pleurisy." (153:374) **Potawatomi** *Analgesic* Infusion of root used for backache or with lard as a salve

for sore muscles. (154:56, 57) *Orthopedic Aid* Infusion of root mixed with lard and used as salve to massage sore muscles and tendons. Infusion of root used for backaches. (154:64)

### *Uvularia perfoliata* L., Perfoliate Bellwort

- **Drug—Iroquois** *Cough Medicine* Infusion of roots given to children as cough medicine. *Eye Medicine* Infusion of smashed roots used as a wash for sore eyes of any degree. *Orthopedic Aid* Plant used several ways, internally and externally, for broken bones. *Pediatric Aid* Infusion of roots given to children as cough medicine. (87:280)
- **Food—Cherokee** *Unspecified* Plants boiled, fried, and eaten with fat. (204:252)

### *Uvularia sessilifolia* L., Sessileleaf Bellwort

- **Drug—Cherokee** *Antidiarrheal* Infusion of root taken for diarrhea. *Dermatological Aid* Used as poultice for boils. (80:25) **Iroquois** *Blood Medicine* Infusion of roots taken as a blood purifier. *Orthopedic Aid* Infusion of roots taken and roots used as a poultice for broken bones. (87:281) **Ojibwa** *Hunting Medicine* Root used as a part of the hunting medicine to bring a buck deer near the hunter. (as *Oakesia sessilifolia* 153:430)
- **Food—Cherokee** *Vegetable* Leaves eaten as cooked greens. (80:25)

## *Vaccinium*, Ericaceae

### *Vaccinium alpinum* Bigel., Blueberry

- **Food—Eskimo, Alaska** *Fruit* Fruit used for food. (4:715)

### *Vaccinium angustifolium* Ait., Lowbush Blueberry

- **Drug—Algonquin, Quebec** *Gastrointestinal Aid* Infusion of leaves given to infants for colic. *Gynecological Aid* Infusion of leaves used by women after a miscarriage. Infusion of roots used by women to induce labor. *Pediatric Aid* Infusion of leaves given to infants for colic. (18:217) **Chippewa** *Psychological Aid* Dried flowers placed on hot stones as inhalant for "craziness." (53:338) **Iroquois** *Ceremonial Medicine* Berries used ceremonially by those desiring health and prosperity for the coming season. (as *V. pennsylvanicum* 196:142) **Ojibwa** *Blood Medicine* Infusion of leaves taken as a blood purifier. (as *V. pennsylvanicum* 153:369)
- **Food—Abnaki** *Fruit* Fruits eaten for food. (144:171) Fruit used for food. (as *V. angustifolium* 144:152) **Algonquin, Quebec** *Fruit* Berries used fresh. Berries canned or used to make fruit pemmican and pâté. *Pie & Pudding* Berries used to make pies, cobblers, and upside-down cakes. *Preserves* Berries made into preserves and butter. (18:104) **Chippewa** *Fruit* Berries boiled, seasoned, combined with moose fat and deer tallow, and used for food. (53:321) **Iroquois** *Bread & Cake* Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. (as *V. pennsylvanicum* 196:128) *Preserves* Flowers used to make preserves. (142:96) *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (as *V. pennsylvanicum* 196:128) *Unspecified* Flowers eaten fresh. (142:96) **Menominee** *Winter Use Food* Sun dried

berries and dried sweet corn sweetened with maple sugar and stored for winter use. (as *V. pennsylvanicum* 151:66) **Ojibwa Dried Food** Berries sun dried for winter use. (as *V. pennsylvanicum* 135:238) Berries dried like currants and cooked in winter with corn, rice, and venison. (as *V. pennsylvanicum* 153:401) **Fruit** Berries eaten fresh. **Winter Use Food** Berries canned for future use. (as *V. pennsylvanicum* 135:238)

- **Other—Algonquin, Quebec Cash Crop** Berries gathered and sold. (18:104) **Ojibwa Cash Crop** Berries gathered and sold to the nearby stores. (as *V. pennsylvanicum* 135:238)

**Vaccinium cespitosum** Michx., Dwarf Blueberry

- **Food—Alaska Native Bread & Cake** Berries cooked in muffins. Berries eaten raw or cooked in pies, puddings, and muffins. **Dietary Aid** Berries used as a fair source of vitamin C. **Frözen Food** Berries frozen or canned for winter use. **Fruit** Berries eaten raw or cooked in pies, puddings, and muffins. **Pie & Pudding** Berries eaten raw or cooked in pies, puddings, and muffins. **Winter Use Food** Berries frozen or canned for winter use. (as *V. paludicola* 85:107) **Bella Coola Fruit** Berries formerly used for food. (184:205) **Okanagan-Colville Dried Food** Berries dried for future use. **Forage** Berries eaten by domestic sheep. **Fruit** Berries eaten fresh. **Winter Use Food** Berries canned for future use. (188:102) **Paiute Fruit** Berries eaten fresh. **Winter Use Food** Berries sometimes canned. (111:102) **Shuswap Fruit** Berries used for food. (123:63) **Thompson Dried Food** Berries dried loose like raisins or canned and used for food. **Pie & Pudding** Berries used in pies. **Preserves** Berries used in jams. **Winter Use Food** Berries dried loose like raisins or canned and used for food in winter. (187:217)
- **Other—Gosiute Smoke Plant** Leaves formerly dried and used as a tobacco. (39:384)

**Vaccinium cespitosum** Michx. **var. cespitosum**, Tall Bilberry

- **Food—Hanaksiala Bread & Cake** Berries dried in the form of cakes and reconstituted during the winter. (43:244) **Kitasoo Bread & Cake** Berries dried into cakes and eaten. **Fruit** Berries eaten fresh. (43:335) **Oweekeno Fruit** Berries used for food. (43:98) **Special Food** Berries picked for feasts. (43:99)

**Vaccinium cespitosum var. paludicola** (Camp) Hultén, Dwarf Blueberry

- **Food—Hanaksiala Bread & Cake** Berries dried in the form of cakes and reconstituted during the winter. (43:244) **Kitasoo Bread & Cake** Berries dried into cakes and eaten. **Fruit** Berries eaten fresh. (43:335) **Oweekeno Fruit** Berries used for food. (43:98) **Special Food** Berries picked for feasts. (43:99)

**Vaccinium corymbosum** L., Highbush Blueberry

- **Food—Algonquin, Quebec Fruit** Berries canned or used to make fruit pemmican and pâté. Berries used fresh. **Pie & Pudding** Berries used to make pies, cobblers, and upside-down cakes. **Preserves** Berries made into preserves and butter. (18:104) **Iroquois Bread & Cake** Fruit mashed, made into small cakes, and dried for future use. **Dried Food** Raw or cooked fruit sun or fire dried and stored for future use. **Fruit** Dried fruit taken as hunting food. **Sauce & Relish** Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128)
- **Other—Algonquin, Quebec Cash Crop** Berries gathered and sold. (18:104)

**Vaccinium deliciosum** Piper, Blueleaved Huckleberry

- **Food—Hoh Fruit** Berries eaten raw. **Sauce & Relish** Berries stewed and made into a sauce. **Winter Use Food** Berries canned and used as a winter food. **Quileute Fruit** Berries eaten raw. **Sauce & Relish** Berries stewed and made into a sauce. **Winter Use Food** Berries canned and used as a winter food. (137:67) **Thompson Dried Food** Berries dried loose like raisins. **Pie & Pudding** Berries used in pies. **Preserves** Berries used in jams. **Winter Use Food** Berries canned and used for food. (187:217)

**Vaccinium macrocarpon** Ait., Cranberry

- **Drug—Montagnais Pulmonary Aid** Infusion of branches used as a medicine for pleurisy. (as *Oxycoccus macrocarpus* 156:316)
- **Food—Algonquin, Quebec Fruit** Berries used for food. (18:105) **Algonquin, Tête-de-Boule Fruit** Fruits eaten for food. (132:134) **Anticosti Winter Use Food** Fruits stored for winter use. (143:68) **Chippewa Fruit** Berries cooked and used for food. (as *Oxycoccus macrocarpus* 53:321) **Iroquois Bread & Cake** Fruit mashed, made into small cakes, and dried for future use. **Dried Food** Raw or cooked fruit sun or fire dried and stored for future use. **Fruit** Dried fruit taken as a hunting food. **Sauce & Relish** Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) **Ojibwa Fruit** Fruit used for food. (135:238)
- **Other—Ojibwa Cash Crop** Fruit sold by the bushels. (135:238)

**Vaccinium membranaceum** Dougl. ex Torr., Blue Huckleberry

- **Drug—Flathead Antirheumatic (Internal)** Infusion of roots and stems taken for rheumatism and arthritis. **Heart Medicine** Infusion of roots and stems taken for heart trouble. (as *V. globulare* 82:63)
- **Food—Alaska Native Bread & Cake** Berries cooked in muffins. **Dietary Aid** Berries used as a fair source of vitamin C. **Frozen Food** Berries frozen for winter use. **Fruit** Berries eaten raw. **Pie & Pudding** Berries cooked in pies and puddings. **Winter Use Food** Berries frozen or canned for winter use. (85:107) **Bella Coola Fruit** Berries used for food. (184:205) **Coeur d'Alene Dried Food** Berries dried and used for food. **Fruit** Berries eaten fresh, boiled and eaten, or mashed and eaten. **Soup** Berries dried, boiled with roots, and eaten as soup. (178:90) **Hanaksiala Bread & Cake** Berries dried in the form of cakes and reconstituted during the winter. (43:244) **Kitasoo Dried Food** Berries dried for future use. **Fruit** Berries eaten fresh. (43:335) **Klamath Winter Use Food** Dried berries stored for winter use. (45:103) **Montana Indian Bread & Cake** Berries used to make pancakes and muffins. **Dried Food** Fruits sun dried and stored for winter use. (as *V. globulare* 82:63) **Fruit** Fruit eaten fresh. (19:25) Berries eaten fresh. (as *V. globulare* 82:63) **Pie & Pudding** Fruit used for making pies. **Preserves** Fruit used for making jelly. (19:25) Berries used to make jams and jellies. (as *V. globulare* 82:63) **Winter Use Food** Fruit dried for winter. (19:25) **Okanagan-Colville Dried Food** Berries dried, boiled, and eaten. **Fruit** Berries eaten fresh. **Winter Use Food** Berries canned for future use. (188:103) **Okanagan Staple** Berries used as a principal food. (178:239) **Oweekeno Special Food** Berries picked for feasts. (43:99) **Paiute Dried Food** Berries eaten dried. **Fruit** Berries eaten fresh. **Preserves** Berries canned or refrigerated for future use. (111:102) **Shuswap Fruit** Berries used for food. (123:63) **Skagit, Upper Dried Food** Berries pulped, dried, and stored for winter use. **Fruit** Berries eaten fresh. (179:38) **Spokane Fruit** Berries used for food. (178:343) **Thompson Dried Food**

Berries dried or canned for future use. *Frozen Food* Berries frozen for future use. (187:218) *Fruit* Sweet berries eaten as a favorite food. (164:490) Berries eaten fresh. *Preserves* Berries made into jam. (187:218)

***Vaccinium myrsinites*** Lam., Shiny Blueberry

- **Drug**—Seminole *Analgesic* and *Antidiarrheal* Infusion of leaves taken for sun sickness: eye disease, headache, high fever and diarrhea. (169:208) *Ceremonial Medicine* Infusion of plant added to food after a recent death. (169:342) *Cold Remedy* Infusion of plant taken for colds. ***Vitex***, Verbenaceae

***Vitex trifolia* var. *unifoliolata***, Simpleleaf Chastetree

- **Drug—Hawaiian Unspecified** Leaves and wood thoroughly pounded and used to make a good bath. (2:72)
- **Food—Hawaiian Unspecified** Leaves eaten with dried coconut. (2:72)

***Vitis***, Vitaceae

***Vitis aestivalis*** Michx., Summer Grape

- **Drug—Cherokee Antidiarrheal** Compound taken for diarrhea. *Blood Medicine* Infusion of leaf taken “for blood.” *Gastrointestinal Aid* Taken as a “fall tonic” and infusion taken “for stomach.” *Gynecological Aid* Wilted leaves used to draw soreness from breast after birth of a child. *Liver Aid* Infusion of leaf taken for liver. *Oral Aid* Compound decoction used to wash child’s mouth for thrush. *Other* Compound infusion of bark taken for “bad disease.” *Pediatric Aid* Compound decoction used to wash child’s mouth for thrush. *Tonic* Taken as a “fall tonic.” *Urinary Aid* Compound taken for “irregular urination.” (80:37) Infusion of bark taken for urinary troubles. (177:41) **Choctaw Febrifuge** Used as a “refrigerant.” *Gynecological Aid* “Water of the grape vine” taken and used as a wash to induce lactation. *Tonic* Used as a tonic. (28:287)
- **Food—Cherokee Beverage** Fruit mixed with sour grape, pokeberry juice, sugar, and cornmeal used as a juice. *Bread & Cake* Fruit used to make juice and dumplings. (126:60) *Fruit* Fruit used for food. (80:37) Raw fruit used for food. (126:60)

***Vitis aestivalis* Michx. var. *aestivalis***, Summer Grape

- **Drug—Seminole Analgesic** Decoction of leaves and stems taken for headaches. (as *V. rufotomentosa* 169:282) *Ceremonial Medicine* Infusion of plant added to food after a recent death. (as *V. rufotomentosa* 169:342) *Emetic* Plant used as an emetic during religious ceremonies. (as *V. rufotomentosa* 169:409) *Febrifuge* Decoction of leaves and stems taken for fevers. *Gastrointestinal Aid* Decoction of leaves and stems taken for stomachaches. (as *V. rufotomentosa* 169:282) *Pediatric Aid* Plant used for chronically ill babies. (as *V. rufotomentosa* 169:328)

- **Food—Seminole Unspecified Plant** used for food. (as *V. rufotomentosa* 169:475)
- **Fiber—Seminole Building Material** Plant used to make houses. *Cordage* Plant used for coffin lashing. (as *V. rufotomentosa* 169:475)

***Vitis arizonica*** Engelm., Canyon Grape

- **Drug—Navajo Love Medicine** Vine used to make a cross and put on top of the basket of cornmeal and paper bread (flat bread), offered in courtship. (55:62)
- **Food—Apache, Chiricahua & Mescalero Dried Food** Fruit dried and eaten like raisins. *Fruit* Raw fruit eaten fresh. (33:44) **Apache, Mescalero Fruit** Fruits eaten fresh. (14:50) **Apache, Western Beverage** Juice boiled to make wine. *Dried Food* Berries pounded, dried, and stored in sacks. *Fruit* Ripe berries eaten raw. (26:190) **Havasupai Fruit** Fruit used for food. (197:231) **Isleta Fruit** Fruit considered an important part of the diet. (100:44) **Jemez Fruit** Grapes used for food. (44:28)
- **Other—Havasupai Toys & Games** Vines used to make the hoop of the hoop and pole game. (197:231) **Jemez Ceremonial Items** Berry juice mixed with white clay and used as a body paint for dancers. (44:28)

***Vitis californica*** Benth., California Wild Grape

- **Food—Costanoan Fruit** Raw fruits used for food. (21:251) **Karok Fruit** Fruit used for food. (148:386) **Mendocino Indian Preserves** Fruits used to make jelly. (41:369) **Pomo Fruit** Raw berries used for food. (66:14) **Pomo, Kashaya Fruit** Berries eaten fresh. (72:51) **Tubatulabal Fruit** Berries used for food. (193:15) **Wintoon Fruit** Fruit used for food. (117:264) **Yurok Fruit** Fresh berries used for food. (6:62)
- **Fiber—Karok Basketry** Roots used as basketry material for the basket bottoms. (6:62) Roots used to make baskets. *Cordage* Vines used to moor a boat and smaller vines twisted to make ropes. (148:386) **Pomo Basketry** Sapwood used as binding material in basketry. (9:139) Woody parts of vines used for the rims of large, cone-shaped carrying baskets. (41:369) *Cordage* Vines used to make withes to tie things when hunting or traveling. Vines used to tie western service-berry thatch in place on the winter house. (66:14) *Sewing Material* Vines soaked in water and hot ashes, bark removed, wood split into strands and used as thread. (41:369) **Pomo, Kashaya Cordage** Vine made a very strong cord used to tie bundles and for lashing. *Furniture* Vine used to make the hoop on a baby basket. (72:51)
- **Other—Karok Containers** Leaves put over bulbs while cooking in the earth oven. (148:386) *Tools* Stems used for lashings. (6:62) **Miwok Cooking Tools** Green leaves used as top layer, over the hot stones, in the earth oven. (12:139) **Pomo Fasteners** Sapwood used as a binding material for brush fences, rafters, stringers, and posts of earth lodges. (9:139)

***Vitis cinerea*** (Engelm.) Engelm. ex Millard, Graybark Grape

- **Food—Dakota Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (70:102) **Kiowa Dried Food** Grapes gathered in large quantities and dried for later use. *Fruit* Grapes gathered in large quantities and eaten raw. *Preserves* Grapes gathered in large quantities and made into jams and jellies. (192:42) **Omaha Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. **Pawnee Beverage** Fresh sap used as grape juice. *Dried Food* Fruit dried for winter use. *Fruit* Fruit eaten fresh. **Ponca Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. **Winnebago Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (70:102)

**Vitis cinerea var. baileyana** (Munson) Comeaux, Graybark Grape  
 • **Food**—Cherokee *Beverage* Fruit mixed with sour grape, pokeberry juice, sugar, and cornmeal used as a juice. *Bread & Cake* Fruit used to make juice and dumplings. *Fruit* Raw fruit used for food. (as *V. baileyana* 126:60)

**Vitis girdiana** Munson, Valley Grape

- **Drug**—Diegueño *Dermatological Aid* Sap rubbed on falling or thin hair to keep it healthy and make it grow. (84:43)
- **Food**—Cahuilla *Beverage* Fruit used to make wine. *Dried Food* Fruit dried into raisins. *Fruit* Fruit eaten fresh and cooked in stews. *Porridge* Fruit used to make mush. (15:144) **Diegueño** *Dried Food* Fruit dried into raisins and cooked. *Fruit* Fruit eaten fresh. (84:43) **Luiseño** *Fruit* Cooked fruit used for food. (155:231)

**Vitis labrusca** L., Fox Grape

- **Drug**—Cherokee *Antidiarrheal* Compound taken for diarrhea. *Blood Medicine* Infusion of leaf taken “for blood.” *Gastrointestinal Aid* Taken as a “fall tonic” and infusion taken “for stomach.” *Gynecological Aid* Wilted leaves used to draw soreness from breast after birth of a child. *Liver Aid* Infusion of leaf taken for liver. *Oral Aid* Compound decoction used to wash child’s mouth for thrush. *Other* Compound infusion of bark taken for “bad disease.” *Pediatric Aid* Compound decoction used to wash child’s mouth for thrush. *Tonic* Taken as a “fall tonic.” *Urinary Aid* Compound taken for “irregular urination.” (80:37) Infusion of bark taken for urinary troubles. (177:41) **Iroquois** *Veterinary Aid* Decoction of roots mixed with feed to assist horse conception. (87:383) **Mohegan** *Analgesic* Poultice of leaves bound to the head for headache. (174:264) Poultice of leaves applied to painful area. (176:77, 132) *Febri-fuge* Poultice of leaves bound to the head for fever. (174:264)
- **Food**—Cherokee *Beverage* Fruit mixed with sour grape, pokeberry juice, sugar, and cornmeal used as a juice. *Bread & Cake* Fruit used to make juice and dumplings. (126:60) *Fruit* Fruit used for food. (80:37) Raw fruit used for food. (126:60)

**Vitis munsoniana** Simpson ex Munson, Munson’s Grape

- **Drug**—Seminole *Ceremonial Medicine* Infusion of plant added to food after a recent death. (169:342) *Emetic* Plant used as an emetic during religious ceremonies. (169:409) *Pediatric Aid* Plant used for chronically ill babies. (169:328) *Snakebite Remedy* Infusion of plant used to wash snakebites. (169:297)
- **Food**—Seminole *Unspecified* Plant used for food. (169:479)

**Vitis riparia** Michx., Riverbank Grape

- **Food**—Omaha *Dried Food* Fruit dried for winter use. *Fruit* Fruit eaten fresh in season. (68:326)

**Vitis rotundifolia** Michx., Muscadine

- **Food**—Cherokee *Beverage* Fruit mixed with sour grape, pokeberry juice, sugar, and cornmeal used as a juice. *Bread & Cake* Fruit used to make juice and dumplings. *Fruit* Raw fruit used for food. (126:60)

**Vitis rupestris** Scheele, Sand Grape

- **Drug**—Delaware *Reproductive Aid* Vine mixed with other plants and used to increase fertility. *Strengtheners* Vine mixed with other plants and used as a tonic for frail women. (176:31) **Delaware, Oklahoma** *Reproductive Aid* Compound containing vine used as a tonic by frail

women and increases fertility. (175:26, 80) *Tonic* Compound containing vine used as a tonic by frail women and increases fertility. (175:26)

**Vitis shuttleworthii** House, Calloose Grape

- **Other**—Seminole *Hunting & Fishing Item* Plant used to make a deer snare. (169:478)

**Vitis sp.**, Wild Grape

- **Drug**—Chippewa *Dermatological Aid* Vine sap used as a wash for hair. *Pulmonary Aid* Roots and branches used for pulmonary troubles. (71:136) **Mohegan** *Analgesic* Poultice of leaves applied to head for headache. **Shinnecock** *Analgesic* Poultice of leaves applied to head for headache. (30:121)
- **Food**—Comanche *Dried Food* Dried fruits stored for later use. *Fruit* Fresh fruits used for food. (29:524) **Hualapai** *Beverage* Fruit used to make juice. *Dried Food* Fruit sun dried and stored for later use. *Fruit* Fruit eaten raw from the vine. (195:23)

**Vitis vinifera** L., Domestic Grape

- **Food**—Haisla & Hanaksiala *Fruit* Fruit used for food. (43:296)

**Vitis vulpina** L., Frost Grape

- **Drug**—Cherokee *Antidiarrheal* Compound taken for diarrhea. *Blood Medicine* Infusion of leaf taken “for blood.” *Gastrointestinal Aid* Taken as a “fall tonic” and infusion taken for stomach. *Gynecological Aid* Wilted leaves used to draw soreness from breast after birth of a child. *Liver Aid* Infusion of leaf taken for liver. *Oral Aid* Compound decoction used to wash child’s mouth for thrush. *Other* Compound infusion of bark taken for “bad disease.” *Pediatric Aid* Compound decoction used to wash child’s mouth for thrush. *Tonic* Taken as a “fall tonic.” *Urinary Aid* Compound taken for “irregular urination.” (80:37) **Chippewa** *Antirheumatic (Internal)* Infusion of root taken for rheumatism. (as *V. cordifolia* 53:362) *Misc. Disease Remedy* Infusion of root taken for diabetes. (as *V. cordifolia* 53:364) **Delaware, Oklahoma** *Dermatological Aid* Sap considered beneficial to the hair. (175:26) *Gynecological Aid* Vine sap used for leukorrhea. (175:26, 80) **Iroquois** *Blood Medicine* Compound decoction of plants taken to make blood. (87:383) Infusion of plant with root bark from another plant and wine taken for anemia. (141:54) *Gastrointestinal Aid* Infusion of plant given to children with stomach troubles. *Kidney Aid* Decoction of plant taken for kidney trouble. *Other* Vines chewed for hiccups. *Pediatric Aid* Infusion of plant given to children with urinating or stomach troubles. *Urinary Aid* Decoction of plant taken for burning urination. Infusion of plant given to children with urinating troubles. (87:383) **Menominee** *Eye Medicine* Ripe grape squeezed into eye to remove rice husk at rice-making camp. (54:134) Seed or juice used to remove foreign matter from eyes. (as *V. cordifolia* 151:58) **Meskwaki** *Analgesic* Infusion of twigs held in child’s mouth for pain of Indian turnip poisoning. *Antidote* Infusion of twigs held in mouth by children as antidote for poisoning. *Psychological Aid* Decoction of twigs taken for insanity. (as *V. cordifolia* 152:252) **Ojibwa** *Gastrointestinal Aid* Sap used for stomach and bowel troubles. *Gynecological Aid* Decoction of twigs taken to facilitate passing of afterbirth. (153:392)
- **Food**—Cherokee *Fruit* Fruit used for food. (80:37) **Cheyenne** *Fruit* Fruit eaten fresh and never dried. (76:180) **Chippewa** *Fruit* Fruits eaten raw. (as *V. cordifolia* 53:321) **Crow** *Dried Food* Fruit eaten dried.

*Fruit* Fruit eaten fresh. (19:26) **Dakota Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (70:102) **Iroquois Bread & Cake** Fruit mashed, made into small cakes, and dried for future use. *Dried Food* Raw or cooked fruit sun or fire dried and stored for future use. *Fruit* Dried fruit taken as a hunting food. *Sauce & Relish* Dried fruit cakes soaked in warm water and cooked as a sauce or mixed with corn bread. (196:128) *Unspecified* Fresh shoots eaten without peeling. (196:119) **Keres, Western Fruit** Fruit considered an important food. (171:74) **Lakota Fruit** Fruits eaten for food. (139:61) *Special Food* Vine pieces sucked or chewed for thirst during the Sun Dance. (106:44) **Mahuna Fruit** Berries eaten mainly to quench the thirst. (140:70) **Menominee Dried Food** Berries eaten dried. *Fruit* Berries eaten fresh. *Preserves* Berries eaten preserved or jellied. (as *V. cordifolia* 151:72) **Meskwaki Dessert** Grapes, touched by frost, prized as a dessert fruit. (as *V. cordifolia* 152:265) **Ojibwa Preserves** Frosted grapes made into jelly for winter use. (153:411) **Omaha Dried Food** Fruit dried for winter use. (68:326) *Fruit* Fruit eaten fresh. (70:102) *Fruit* Fruit eaten fresh in season. (68:326) *Fruit* Fruit eaten fresh. **Pawnee Beverage** Fresh sap used as grape juice. *Dried Food* Fruit dried for winter use. *Fruit* Fruit eaten fresh. **Ponca Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (70:102) **Sioux Dried Food** Fruit eaten dried. *Fruit* Fruit eaten fresh. (19:26) **Winnebago Dried Food** Fruit dried for winter use. *Fruit* Fruit eaten fresh. (70:102)

**Vittariaceae**, see *Vittaria*

### **Vittaria**, Vittariaceae, fern

**Vittaria lineata** (L.) Sm., Appalachian Shoestring Fern

- **Drug**—Seminole *Other* Complex infusion of leaves taken for chronic conditions. (169:272) *Pediatric Aid* Plant used for chronically ill babies. (169:329) *Psychological Aid* Infusion of plant used to steam and bathe the body for insanity. (169:292) *Unspecified* Plant used for medicinal purposes. (169:162)

### **Vulpia**, Poaceae

**Vulpia octiflora var. glauca** (Nutt.) Fern., Sixweeks Fescue

- **Food**—Gosiute *Unspecified* Seeds used for food. (as *Festuca tenella* 39:369)

**Vulpia octiflora** (Walt.) Rydb. **var. octiflora**, Sixweeks Fescue

- **Food**—Navajo, Kayenta *Unspecified* Seeds roasted and used for food. (as *Festuca octiflora* 205:16)

### **Waldsteinia**, Rosaceae

**Waldsteinia fragarioides** (Michx.)

Tratt., Barren Strawberry

- **Drug**—Iroquois *Blood Medicine* Compound decoction of plants taken as a blood remedy. *Snakebite Remedy* Poultice of smashed plants applied to snakebites. (87:352)

### **Waltheria**, Sterculiaceae

**Waltheria indica** L., Uhaloa

- **Drug**—Hawaiian *Dietary Aid* Root bark, buds, leaves, and other plants pounded and resulting liquid taken for losing weight. *Laxative* and *Pediatric Aid* Buds chewed by the mother and given to infants as a laxative. *Pulmonary Aid* Whole plant and other plants pounded, squeezed, and resulting liquid taken for pulmonary complications. (as *W. americana* 2:37) *Respiratory Aid* Buds and leaves pounded, mixed with water, and taken for asthma. (as *W. americana* 2:12) Whole plant and other plants pounded, squeezed, resulting liquid heated and taken for chronic asthma. Root bark, buds, leaves, and other plants pounded and resulting liquid taken for asthma. *Strengthener* Root bark, buds, leaves, and other plants pounded and resulting liquid taken for run-down condition. *Throat Aid* Root bark chewed and the juice swallowed for sore throats. (as *W. americana* 2:37)

### **Washingtonia**, Arecaceae

**Washingtonia filifera** (L. Linden) H. Wendl., California Fan Palm

- **Food**—Cahuilla *Beverage* Fruit soaked in water to make a beverage. *Dried Food* Fruit sun dried for future use. *Fruit* Fruit eaten fresh. *Porridge* Fruit and seed ground into a flour and used to make mush. *Preserves* Fruit used to make jelly. (15:145) **Cocopa Beverage** Juice squeezed out of fruits, added to water, and used as a beverage. (37:204) **Pima, Gila River Baby Food** Fruits eaten raw primarily by children. (133:7) *Snack Food* Fruit eaten primarily by children as a snack food. (133:5)
- **Fiber**—Cahuilla *Building Material* Long fronds used to make the sides and roofs of waterproof and windproof houses. Long fronds used to make ramadas. (15:145)
- **Other**—Cahuilla *Ceremonial Items* Seeds used as filling material for gourd rattles. Leaves used to make images of the dead burned in the memorial rites. *Cooking Tools* Stems used to make cooking utensils, spoons, and stirring implements. *Hunting & Fishing Item* Stems used to make bows. *Tools* Leaves used for flailing and hulling dried seeds. *Toys & Games* Leaves used to make children's play hoops. (15:145) **Cocopa Musical Instrument** Seeds used in gourd rattles. (37:187)

### **Wikstroemia**, Thymelaeaceae

**Wikstroemia sp.**, Akia Launui

- **Drug**—Hawaiian *Laxative* Plant pounded, squeezed, the resulting liquid poured into a sweet potato and eaten as a laxative. *Respiratory Aid* Plant and other ingredients pounded, squeezed, and the resulting liquid taken for asthma. (2:8)

### **Wislizenia**, Capparaceae

**Wislizenia refracta** Engelm. **ssp. refracta**, Spectacle Fruit

- **Food**—Hopi *Unspecified* Young plants boiled for food. (as *W. melilotoides* 200:78)

### **Woodsia**, Dryopteridaceae, fern

**Woodsia neomexicana** Windham, New Mexico Cliff Fern

- **Drug**—Keres, Western *Gynecological Aid* Infusion of plant used as a douche at childbirth. (as *W. mexicana* 171:74) **Navajo, Ramah Dermatological Aid** Cold, compound infusion taken and used as a lotion for injury, a "life medicine." (as *W. mexicana* 191:11)

**Woodsia scopulina** D. C. Eat., Rocky Mountain Woodsia

- **Other**—Okanagan-Colville *Water Indicator* Ferns considered to be a sign of water when traveling through the mountains. (188:18)

**Woodwardia**, Blechnaceae, fern

**Woodwardia fimbriata** Sm., Giant Chainfern

- **Fiber**—Karok *Basketry* Leaf fiber used to make baskets. Fibers were pounded from the rachis and dyed with *Alnus* bark for use in basketry. The fibers were then dried and coiled for storage. They were soaked to unroll and used. Tolowa *Unspecified* Leaves used to obtain fiber. The two fibers of each leaf were collected at the end of June or the first part of July. The rachis was pounded and fibers fell out. For designs, the fibers were dyed with *Alnus* bark. Yurok *Unspecified* Leaves used to obtain fiber. Fibers were harvested when leaves were fully grown and then dyed with alder bark. The strands could be dyed by chewing in *Alnus* bark and running the fibers through the mouth or by pounding the bark in a mortar and pestle. (6:63)
- **Other**—Pomo, Kashaya *Cooking Tools* Long leaves used to line the top and bottom of earth oven for baking acorn bread and other foods. (72:45)

**Woodwardia radicans** (L.) J. Sm., Rooting Chainfern

- **Drug**—Luiseño *Analgesic* Decoction of roots used externally and internally for pain from injuries. (155:234)
- **Fiber**—Hupa *Basketry* Dyed fronds used in basketry. (118:4) Karok *Basketry* Stems used in basket making. (148:378)
- **Other**—Pomo *Cooking Tools* Fronds used for lining the top and bottom of an earth oven in baking acorn bread. (66:11)

**Woodwardia sp.**, Fern

- **Fiber**—Poliklah *Basketry* Stems used to make the designs on baskets. (117:170)

**Wyethia**, Asteraceae

**Wyethia amplexicaulis** (Nutt.) Nutt., Mulesears Wyethia

- **Drug**—Gosiute *Dermatological Aid* Infusion of roots used for bruise swellings. (39:349) Poultice of roots applied to bruised limbs. *Orthopedic Aid* Poultice of roots applied to swollen limbs. (39:384) Okanagan-Colville *Antirheumatic (External)* Poultice of warmed, pounded roots applied for arthritic or rheumatic pain. (188:85) Paiute *Emetic* Infusion or decoction of pulverized root taken as an emetic. Shoshoni *Dermatological Aid* Poultice of pulped root applied to swellings. *Emetic* Infusion or decoction of pulverized root taken as an emetic. *Misc. Disease Remedy* Decoction of root used as a wash for measles. *Venereal Aid* Compound decoction of root taken as an “unfailing cure for syphilis.” (180:148)
- **Food**—Gosiute *Unspecified* Seeds used for food. (39:384) Montana Indian *Unspecified* Root heated, fermented, and eaten. (19:26)

**Wyethia angustifolia** (DC.) Nutt., California Compassplant

- **Drug**—Costanoan *Dermatological Aid* Poultice of pounded root lather used to draw blisters. *Pulmonary Aid* Poultice of pounded root lather used for lung problems. (21:27) Miwok *Diaphoretic* Decoction of leaves used as a bath for fever and produced perspiration. *Febri-fuge* Decoction of leaves used as a bath for fever. (12:174) Yuki *Emetic* Decoction of roots taken as an emetic. (49:47)

- **Food**—Costanoan *Staple* Seeds eaten in pinole. *Unspecified* Raw stems used for food. (21:255) Pomo *Staple* Seeds used to make pinoles. (11:87) Pomo, Kashaya *Staple* Seeds ground to mix with pinole. *Winter Use Food* Seeds dried for winter use. (72:111) Yuki *Spice* Seeds used to flavor pinole. (49:85)

**Wyethia glabra** Gray, Coast Range Mulesears

- **Food**—Pomo, Kashaya *Unspecified* Seeds used in pinole or eaten fresh. (72:74)

**Wyethia helenioides** (DC.) Nutt., Whitehead Wyethia

- **Other**—Miwok *Cooking Tools* Green leaves used as top layer, over the hot stones, in the earth oven. (12:139)

**Wyethia helianthoides** Nutt., Sunflower Wyethia

- **Food**—Montana Indian *Unspecified* Plant heated, fermented, and eaten. (19:26)

**Wyethia longicaulis** Gray, Humboldt Mulesears

- **Drug**—Mendocino Indian *Analgesic* Decoction of roots used as a wash for headaches. *Antirheumatic (External)* Poultice of baked roots applied for rheumatism. *Burn Dressing* Poultice of dried, powdered roots applied to burns. *Dermatological Aid* Poultice of dried, powdered roots applied to running sores. *Emetic* Decoction of roots taken as an emetic. *Eye Medicine* Decoction of roots used as a wash for inflamed and sore eyes. *Gastrointestinal Aid* Decoction of roots taken for stomach complaints. (41:396)
- **Food**—Mendocino Indian *Staple* Seeds used with parched wheat for pinole. *Unspecified* Leaves and young stems used for food. (41:396) Pomo *Staple* Seeds used to make pinoles. (11:87)

**Wyethia mollis** Gray, Woolly Wyethia

- **Drug**—Klamath *Antirheumatic (External)* Poultice of root used for swellings. (45:106) *Dermatological Aid* Poultice of smashed roots applied to swellings. (163:131) Paiute *Blood Medicine* Decoction of root taken as a blood tonic. *Cathartic* Decoction of root taken as a physic or emetic. *Cold Remedy* Simple or compound decoction of chopped roots taken for colds. (180:148, 149) *Dermatological Aid* Poultice of crushed leaves applied to swellings. (104:196) *Febri-fuge* Compound decoction of chopped roots taken for colds and fevers. (180:148, 149) *Orthopedic Aid* Poultice of crushed leaves applied to broken bones and sprains. (104:196) *Tonic* Decoction of root taken as a blood tonic and for colds. *Tuberculosis Remedy* Decoction of root taken for tuberculosis. *Venereal Aid* Decoction of root taken for venereal diseases. Shoshoni *Cathartic* Decoction of root taken as a physic or emetic. Washo *Cathartic* Decoction of root taken as a physic. *Emetic* Decoction of root taken as an emetic. (180:148, 149)
- **Food**—Paiute *Staple* Seeds parched, ground, and eaten as meal. *Unspecified* Stems and seeds eaten raw. (104:98) Paiute, Northern *Porridge* Seeds parched, winnowed, ground, and used to make mush. *Unspecified* Seeds roasted, ground, sometimes mixed with other seeds, and eaten. *Winter Use Food* Seeds stored for winter use. (59:47)

**Wyethia ovata** Torr. & Gray ex Torr., Southern Mulesears

- **Food**—Paiute *Unspecified* Species used for food. (167:242)

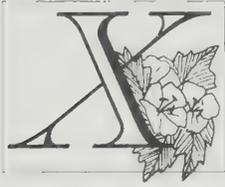

**Wyethia scabra** Hook., Badlands Wyethia

- **Drug**—Hopi *Emetic* Plant said to be a very strong, potentially lethal

emetic. (200:34, 99) *Poison Plant* sometimes used as an emetic, but if not vomited it would kill the person. (200:99) **Navajo, Kayenta Emetic** and *Gastrointestinal Aid* Plant used as an emetic for stomach-aches. (205:51)

**Wyethia sp.**, Narrow Leaf Wyethia

- **Food**—Pomo *Staple* Seeds used to make pinole. (117:284)

## **Xanthium**, Asteraceae

**Xanthium sp.**, Cockleburr

- **Drug**—Jemez *Urinary Aid* Decoction of plant taken for urinary disorders. (44:28)
- **Food**—Yavapai *Staple* Parched, ground seeds made into a meal and eaten dry or moistened and whole seeds stored. (65:258)

**Xanthium spinosum** L., Spiny Cockleburr

- **Drug**—Cherokee *Emetic* Infusion of root given to induce vomiting. *Gastrointestinal Aid* Taken for cramps. *Pulmonary Aid* Infusion given for croup. *Snakebite Remedy* Roots chewed for rattlesnake bite. *Throat Aid* Infusion of bur used "to unstick object in throat." (80:29, 30) **Mahuna** *Kidney Aid* Plant used for the kidneys. (140:69)

**Xanthium strumarium** L., Rough Cockleburr

- **Drug**—Costanoan *Urinary Aid* Decoction of seeds used for bladder ailments. (21:28) **Lakota** *Ceremonial Medicine* Used as a medicine in ceremonies. (139:40) **Paute, Northern** *Oral Aid* Burs rubbed on sore gums to take the pain, poison, and blood out. (as *Xanthium strumarium* 59:130)

**Xanthium strumarium var. canadense** (P. Mill.) Torr. & Gray, Canada Cockleburr

- **Drug**—Apache, White Mountain *Blood Medicine* Roots and leaves used as a blood medicine. (as *X. commune* 136:161) **Houma** *Febri-fuge* Decoction of root taken for high fever. (as *X. commune* 158:60) **Keres, Western** *Dermatological Aid* Poultice of ground seed powder used on open sores or saddle galls. (as *X. commune* 171:74) **Koasati** *Gynecological Aid* Decoction of roots taken to remove the afterbirth. (as *X. commune* 177:64) **Mahuna** *Antirheumatic (Internal)* Plant used for rheumatism. *Kidney Aid* Plant used for diseased kidneys. *Orthopedic Aid* Plant used for total paralysis. *Tuberculosis Remedy* Plant used for tuberculosis. *Venereal Aid* Plant used for gonorrhea. (as *X. canadense* 140:69) **Navajo** *Dermatological Aid* Plant used as a liniment for the armpit to remove excessive perspiration. (as *X. canadense* 55:90) Plant used to decrease perspiration. (as *X. canadense* 90:164) **Pima** *Antidiarrheal* Decoction of burs taken for diarrhea. *Eye Medicine* Pulp used for sore eyes. (as *X. saccharatum* 47:97) Pulp mixed with soot and used for sore eyes. (as *X. canadense* 146:80) *Laxative* Decoction of burs taken for constipation. *Veterinary Aid* Poultice of leaves applied to screwworm sores in livestock. (as *X. saccharatum* 47:97) **Rappahannock** *Dermatological Aid* Decoction of seeds used as salve for sores. (as *X. canadense* 161:31) *Panacea* Compound decoction used for complaint. (as *X. canadense* 161:30) **Tewa** *Antidiarrheal* Plant used for diarrhea. *Antiemetic* Plant used for vomiting. *Pediatric Aid* and *Urinary Aid* Plant used as fumigant for chil-

dren with urinary disorders. (as *X. commune* 138:49) **Zuni** *Ceremonial Medicine* Chewed seeds rubbed on body prior to cactus ceremony to protect from spines. *Dermatological Aid* Compound poultice of seeds applied to wounds or used to remove splinters. (as *X. commune* 166:62, 63)

- **Food**—Apache, White Mountain *Bread & Cake* Seeds ground and used to make bread. (as *X. commune* 136:161) **Costanoan** *Staple* Seeds eaten in pinole. (21:255) **Zuni** *Bread & Cake* Seeds ground, mixed with cornmeal, made into pats, and steamed. (as *X. commune* 32:54) Seeds ground with cornmeal, made into cakes or balls, steamed, and used for food. (as *X. commune* 166:71)
- **Other**—Keres, Western *Paint* Ground, seed powder used as a blue paint for the mask dancers. (as *X. commune* 171:74) **Navajo, Ramah** *Ceremonial Items* Leaf ash used as ceremonial blackening. (as *X. italicum* 191:54) **Pima** *Cooking Tools* Leaves used in roasting pits as containers for beans. (as *X. commune* 32:45)

**Xanthium strumarium var. glabratum** (DC.) Cronq., Rough Cockleburr

- **Drug**—Iroquois *Witchcraft Medicine* Plant used in a witching medicine. (as *X. orientale* 87:469)

## **Xanthorhiza**, Ranunculaceae

**Xanthorhiza simplicissima** Marsh., Yellow Root

- **Drug**—Catawba *Cold Remedy* Decoction of roots taken for colds. *Gastrointestinal Aid* Decoction of roots taken for ulcerated stomachs. (as *Xanthorhiza apiifolia* 157:188) Decoction of plant taken for ulcerated stomach. (as *Xanthorhiza apiifolia* 177:22) *Liver Aid* Decoction of roots taken for jaundice. (as *Xanthorhiza apiifolia* 157:188) Decoction of plant taken for jaundice. (as *Xanthorhiza apiifolia* 177:22) **Cherokee** *Analgesic* Infusion of root taken for cramps. *Blood Medicine* Compound decoction taken as a blood tonic. *Cancer Treatment* Ashes "burnt from greenswitch" used for cancer. *Dermatological Aid* Astringent and tonic infusion of root used for piles. *Eye Medicine* Poultice used for sore eyes. *Hemorrhoid Remedy* Infusion of root used for piles. *Oral Aid* Stem chewed for sore mouth. *Sedative* Infusion taken for nerves. *Throat Aid* Stem chewed for sore throat. *Tonic* Taken as a tonic. (80:62)
- **Dye**—Cherokee *Yellow* Entire plant crushed and used to make a yellow dye. (80:62)

## **Xanthoria**, Teloschistaceae, lichen

**Xanthoria elegans** (Link) Th. Fr.

- **Other**—Haisla & Hanaksiala *Paint* Plant used as pigment for face paint. (43:144) **Kitasoo** *Paint* Used as a yellow pigment for paint. (43:311)

## **Xanthosoma**, Araceae

**Xanthosoma atrovirens** K. Koch & Bouche, Yautia Amarilla

- **Food**—Seminole *Unspecified* Plant used for food. (169:465)

## **Xerophyllum**, Liliaceae

**Xerophyllum sp.**, Beargrass

- **Fiber**—Hahwunkwut *Basketry* Plant used to make cooking bowls, mush baskets, and other small baskets. (117:183) **Karok** *Basketry* Used to make baskets. *Clothing* Used to make basket hats for men

and women. (117:211) **Konomeho Basketry** Plant used to make the design on baskets. (117:234) **Poliklah Basketry** Used to make baskets. (117:170) **Wintoon Basketry** Plant purchased and used extensively in basket overlay and designs. (117:264)

- **Other**—**Hahwunkwut Cooking Tools** Plant used to make cooking bowls, mush baskets, and other small baskets. (117:183) **Poliklah Jewelry** Blades braided to make necklaces. (117:170)

**Xerophyllum tenax** (Pursh) Nutt., Common Beargrass

- **Drug**—**Blackfoot Dermatological Aid** Poultice of chewed roots applied to wounds. *Hemostat* Grated roots used for bleeding. *Orthopedic Aid* Decoction of grated roots used for breaks and sprains. (97:25) **Pomo, Kashaya Dermatological Aid** Roots washed, rubbed to make a lather and used to wash sores. (72:52)
- **Fiber**—**Chehalis Basketry** Plant used to decorate baskets. **Cowlitz Basketry** Plant used to decorate baskets. (79:23) **Hesquiat Basketry** Purchased grass shaved and dyed to make baskets and edging for mats and baskets. (185:56) **Hoh Basketry** Grass used to make baskets. (137:60) **Hupa Basketry** Grass used as a border pattern in baskets. (118:2) Leaves used to make baskets. (148:380) **Karok Basketry** New sprouts used to make baskets, especially for designs. (6:63) Leaves used to make baskets. (148:380) **Klallam Basketry** Plant used to decorate baskets. (79:23) **Maidu Basketry** Blades used as overlay twine in the manufacture of baskets. (173:71) **Makah Basketry** Leaves used for basketry. (67:343) **Montana Indian Basketry** Leaves woven into watertight baskets used for cooking. (as *X. douglasii* 19:27) **Nitinaht Basketry** Grass used as twining material for wrapped and twined baskets. (186:87) **Okanagan-Colville Basketry** Used to decorate baskets. (188:50) **Quileute Basketry** Grass used to make baskets. (137:60) **Quinault Basketry** Plant used to decorate baskets. (79:23) **Yana Clothing** Grass wrapped around the ties of the women's belts. (147:253) **Yurok Clothing** Small leaves used to make dresses. Plants were burned every year. Leaves were harvested in the spring when they first began to grow out from their charred rhizome. Prior to use, the leaves were soaked in water to make them pliable, but if left too long they turned green. (6:63)
- **Other**—**Hupa Decorations** Plant used as dress ornaments. **Karok Decorations** Plant used as dress ornaments. (148:380) **Makah Cash Crop** Leaves sold to the Nootkan and Hesquiat tribes. **Nitinaht Tools** Leaves used for trimming the edges of mats. (186:87)

## Ximenia, Olacaceae

**Ximenia americana** L., Tallow Wood

- **Drug**—**Seminole Antirheumatic (External)** Decoction of inner bark or "beans" used as a body rub and steam for deer sickness: numb, painful limbs and joints. (169:192) Decoction of inner bark used as a body rub and steam for joint swellings. (169:193) *Oral Aid* Decoction of roots used as a mouthwash for sore mouth and gums. *Orthopedic Aid* Infusion of roots used as a steam and rubbed on the legs for soreness. (169:307) *Unspecified* Plant used medicinally. (169:164)
- **Food**—**Seminole Unspecified** Plant used for food. (169:488)

## Xylorhiza, Asteraceae

**Xylorhiza tortifolia** (Torr. & Gray) Greene, Mojave Aster

- **Other**—**Havasupai Incense & Fragrance** Ground leaves carried in the

clothes and used as perfume by men and women to counteract body odors. (197:250)

## Xyridaceae, see Xyris

## Xyris, Xyridaceae

**Xyris ambigua** Bey. ex Kunth, Coastalplain Yelloweyed Grass

- **Drug**—**Seminole Cold Remedy** Infusion of herbage rubbed on the chest for colds. *Pulmonary Aid* Infusion of herbage rubbed on the chest for pulmonary disorders. (169:281)

**Xyris caroliniana** Walt., Carolina Yelloweyed Grass

- **Drug**—**Cherokee Antidiarrheal** Infusion of root taken for diarrhea. *Pediatric Aid* Infusion of root taken for diarrhea and "good for children." (80:62)

**Xyris sp.**, Yelloweyed Grass

- **Drug**—**Seminole Cold Remedy** Infusion of herbage rubbed on the chest for colds. *Pulmonary Aid* Infusion of herbage rubbed on the chest for pulmonary disorders. (169:281) *Witchcraft Medicine* Flowing stems twisted into a witchcraft medicine. (169:395)

## Yucca, Agavaceae

**Yucca aloifolia** L., Aloe Yucca

- **Drug**—**Choctaw Dermatological Aid** Boiled mashed root with grease or tallow used as salve for various purposes. (25:24) *Unspecified* Decoction of roots used as a salve for various purposes. (177:9)

**Yucca angustissima** Engelm. ex Trel., Narrowleaf Yucca

- **Drug**—**Apache Snakebite Remedy** Emulsion used in cases of snake or insect bites. (17:51) **Hopi Ceremonial Medicine** Crushed root used in purification ceremony. *Dermatological Aid* Crushed root used as shampoo for baldness. *Disinfectant* Crushed root used in purification ceremony. (200:71) *Laxative* Root used as a strong laxative. (200:34, 71)
- **Food**—**Hopi Fruit** Fruit sometimes used for food. (17:64) Fruits pit baked with lamb's-quarter leaves and eaten with corn dumplings in salted water. (120:18) **Southwest Indians Starvation Food** Used when agricultural reserves dwindled. (17:10)
- **Fiber**—**Apache Cordage** Leaves split and used as string. (17:40) **Hopi Basketry** Leaves used in many types of basketry. (200:71) *Brushes & Brooms* Leaf splints used as brushes to apply color to pottery. (17:50) *Sewing Material* Narrow, split leaf strips used as sewing material for coiled plaques. (17:33) **Southwest Indians Cordage** Leaves used to make strings. (17:37)
- **Other**—**Apache Soap** Roots pounded and placed in water to form suds used in bathing and shampooing. (17:57) **Havasupai Fasteners** Leaves used to tie or repair holes in sacking. *Toys & Games* Leaves used as tally sticks to keep track of scores in the hidden-ball game. (197:213) **Hopi Ceremonial Items** Roots crushed to make soap, used ceremonially as a purification rite, and suds associated with clouds. Used as a whip during ceremonies. (200:71) *Decorations* Shredded leaves used to make the packing for the spirals of a plaque. (17:34) *Paint* Juice used as a varnish on certain kachinas. *Soap* Roots crushed

with stones and used as soap. (200:71) **Southwest Indians** *Ceremonial Items* Roots made into suds and used during marriage ceremonies. As part of the marriage ceremony, the groom's head was washed by his future mother-in-law, while that of the bride was washed by the bridegroom's mother. (17:55)

***Yucca baccata*** Torr., Banana Yucca

• **Drug**—**Keresan** *Dermatological Aid* Used for washing hair. (198:564) **Navajo** *Antiemetic* Infusion of pulverized leaves taken for vomiting. *Gastrointestinal Aid* Plant used for heartburn. (55:32) **Navajo, Ramah** *Ceremonial Medicine* Suds made from root used for ceremonial purification baths. *Gynecological Aid* Juice used to lubricate midwife's hand while removing retained placenta. (191:21) **Pima** *Cathartic* Fruits eaten raw as a cathartic. (146:72) **Tewa** *Ceremonial Medicine* Infusion of root used as a wash in adoption and name-giving ceremonies. *Emetic* Unspecified plant part chewed as ritual emetic. *Gynecological Aid* Fruit eaten to promote easy childbirth. (138:49, 50)

• **Food**—**Acoma** *Beverage* Dried fruits dissolved in water to make a drink. *Bread & Cake* Fruits baked, boiled, dried, rolled into loaves, and stored for winter use. (32:54) *Dried Food* Fruits sun dried and stored for winter use. *Fruit* Fruits eaten raw, boiled, or baked. (32:55) *Preserves* Dried fruits eaten as a paste. *Sauce & Relish* Dried fruits dissolved in water and used as a dip. (32:54) *Starvation Food* Tender crowns roasted and eaten in times of food shortages. (32:55) **Apache** *Beverage* Baked fruit pounded to a pulp, drained, and juice drunk. *Bread & Cake* Fruit roasted, pulp made into cakes, and stored. *Sauce & Relish* Baked fruit pounded to a pulp, drained, and juice poured over cakes. (17:18) *Soup* Young leaves cooked in soups or with meat. *Unspecified* Flowers eaten as food only if obtained at the proper time. (32:56) *Vegetable* Flowers eaten as a vegetable only if obtained before the summer rains. (17:19) **Apache, Chiricahua & Mescalero** *Bread & Cake* Fruit roasted, split, seeds removed, and pulp ground into large cakes. Fruit pulp ground, made into large cakes, and stored indefinitely. *Soup* Leaves cooked in soups. *Unspecified* Leaves boiled with meat. *Vegetable* Flowers eaten if obtained before the summer rain, otherwise they taste bitter. (33:39) **Apache, Mescalero** *Beverage* Fruits used to make a drink. *Dried Food* Ripe fruits cooked, split, cleaned of seeds, dried, and used for food. *Sauce & Relish* Fruits made into a syrup and placed on fruits before drying. (14:33) **Apache, Western** *Dried Food* Fruit roasted, dried, wrapped, and stored indefinitely. (26:181) *Sauce & Relish* Fruit pounded together to make gravy. (26:182) **Apache, White Mountain** *Dried Food* Pods dried for future use. *Unspecified* Pods roasted and used for food. (136:147) **Cochiti** *Unspecified* Used as a source of food. (32:14) **Havasupai** *Beverage* Plant used to make a drink. (197:66) *Dried Food* Sheet of fruit flesh dried and the bits eaten dry when needed. (17:17) Fruits split, sun dried, and prepared for storage in the shape of a mat. (197:212) **Hopi** *Fruit* Baked fruits used for food. (42:371) Fruit used for food. (56:17) Fruits eaten for food. (138:51) Large fruits oven baked. (200:71) *Preserves* Fruits sun dried, boiled into jam, and eaten with corn dumplings or boiled bread. (120:18) **Hualapai** *Beverage* Fruit used to make a fermented beverage. *Dried Food* Fruit baked, prepared, and dried for winter use. *Fruit* Fruit eaten raw. *Staple* Fruit cooked and ground into a meal. (195:39) **Isleta** *Forage* Fruit often eaten by deer which left few for the Isletans. *Fruit* Fruit baked, seasoned, and used for food. (100:

45) *Unspecified* Used as a source of food. (32:14) *Winter Use Food* Sun dried fruit used for winter storage. (100:45) **Jemez** *Unspecified* Used as a source of food. (32:14) **Keres, Western** *Fruit* Fruit eaten when thoroughly ripe. *Sauce & Relish* Soaked, cooked fruit made into a syrup and used as hot chocolate. *Winter Use Food* Cooked, dried fruit stored for winter use. (171:74) **Keresan** *Fruit* Fruit used for food. (198:564) **Laguna** *Beverage* Dried fruits dissolved in water to make a drink. *Bread & Cake* Fruits baked, boiled, dried, rolled into loaves, and stored for winter use. (32:54) *Dried Food* Fruits sun dried and stored for winter use. *Fruit* Fruits eaten raw, boiled, or baked. (32:55) *Preserves* Dried fruits eaten as a paste. *Sauce & Relish* Dried fruits dissolved in water and used as a dip. (32:54) *Starvation Food* Tender crowns roasted and eaten in times of food shortages. (32:55) **Navajo** *Bread & Cake* Pulp made into cakes, dried, and stored for winter use. (17:20) Ripe fruits dried, ground, kneaded into small cakes, and slightly roasted. (32:54) Baked or dried fruits ground, made into small cakes, and roasted again. (55:32) *Dessert* Fruit boiled in water with or without sugar and eaten as a dessert. (165:221) *Dried Food* Fruits dried and stored for winter use. (32:54) Fruit dried and carried, when at war, with grass seeds and jerked venison. (55:32) Fruit dried for winter use. (110:31) Ripe fruit, with seeds removed, boiled down like jam, made into rolls, and dried for winter use. (165:221) *Fruit* Fruits eaten ripe or cooked. (17:20) Fruit eaten raw or cooked. (32:54) Fruit eaten when picked or cooked. (55:32) Fruit eaten raw or baked in hot coals. (110:31) Dried fruit rolls soaked in hot water and eaten with corn mush. (165:221) *Porridge* Ripe fruits dried, ground, kneaded into small cakes, and boiled with cornmeal into a mush. (32:54) Baked or dried fruits ground, made into cakes, roasted again, mixed with cornmeal, and made into gruel. (55:32) Dried fruit cakes boiled with cornmeal into a gruel. (110:31) *Preserves* Fruit used to make jelly. (55:32) *Sauce & Relish* Fruit pulp made into cakes and mixed with water to make a syrup eaten with meat or bread. (17:20) Dried fruit cakes mixed with water to make a syrup and eaten with meat and bread. (110:31) *Special Food* Dried fruit eaten by warriors at war. (17:20) *Winter Use Food* Fruit cut in half, dried, and stored for winter use. Baked or dried fruits ground, made into small cakes, roasted again, and stored for winter use. (55:32) **Navajo, Ramah** *Bread & Cake* Fruit molded into foot-long rolls. *Preserves* Fruit used to make preserves. (191:21) **Papago** *Dried Food* Seeds dried and used for food. *Fruit* Fruits eaten fresh. *Porridge* Fresh fruits made into a gruel and used for food. *Staple* Fruits used as an important staple crop. *Unspecified* Pulp ground, cooked, and used for food. (34:23) Species used for food. (36:61) **Pima** *Beverage* Dried fruit made into cakes, cooked in water, and liquid drunk. *Bread & Cake* Dried fruit made into cakes. (17:16) *Dried Food* Fruits boiled, dried, ground, boiled with flour, and used for food. (146:72) *Porridge* Dried fruit made into cakes, ground, and cooked with cornmeal to make gruel. (17:16) **Pima, Gila River** *Candy* Plant dried and used as sweets. (133:6) *Fruit* Fruits eaten raw and pit roasted. (133:7) **Pueblo** *Dried Food* Fruits sun dried and stored for winter use. *Fruit* Fruits eaten raw, boiled, or baked. (32:55) **San Felipe** *Dried Food* Partly matured fruits cooked to form a semiliquid substance, dried, and stored for winter use. *Fruit* Ripe fruits eaten without preparation. (32:54) *Unspecified* Used as a source of food. (32:14) **Sia** *Fruit* Fruit used for food. (199:107) **Southwest Indians** *Beverage* Dried fruit pulp boiled in water and drunk.

*Bread & Cake* Pulp mixed with chokecherries and made into cake. (17:11) Pulp patted into cakes and dried thoroughly. (17:15) *Dessert* Preserved fruit soaked in water, cooked to a thick syrup, and eaten as a sauce-like dessert. (17:12) *Dried Food* Pulp cooked to a paste, dried, and stored for winter use. (17:10) Rind dried and eaten without cooking. Partially ripened fruits gathered, cooked, the pulp dried and stored for winter use. Pulp cooked to a paste and dried for winter use. (17:11) Fruits dried between beds of grass, split into halves, dried further in the sun, and stored. (17:15) *Fruit* Fruit eaten raw. (17:10) Fruits eaten for food. (17:9) *Preserves* Fruit pared, pulp chewed, cooked, dried, and eaten as a conserve. (17:12) *Staple* Seeds dried, stored in baskets and ground into meal when needed. (17:15) *Sweetener* Fruit pared, pulp chewed, cooked, dried, and conserve dissolved in water to sweeten beverages. (17:12) *Unspecified* Greatly sought after and utilized as food. (17:10) Green pods gathered and allowed to mature in sun or dwellings. (17:9) *Tewa Fruit* Fruits formerly eaten. (138:50) *Walapai Beverage* Fruits mixed with water and liquid drunk. *Dried Food* Fruit dried, folded, and stored for winter use. (17:17) *Yavapai Beverage* Dried fruit soaked in water until pulp dissolved and liquid drunk. (17:16) Sun dried fruit boiled and used as a beverage. *Dried Food* Sun dried fruit boiled and used for food. *Fruit* Fruit cooked in coals and used for food. (65:258) *Unspecified* Flower stalks gathered before blossoming, roasted in fire, and prepared for use. (17:16) *Zuni Fruit* Fruits pared and eaten raw or boiled and skinned. (32:54) Fruit eaten fresh or boiled, cooled, and the skin peeled off with a knife. (166:72) *Preserves* Flesh cooked, made into pats, sun dried, and eaten as a conserve. (32:54) Fruit made into conserves and used for food. (166:72) *Sauce & Relish* Flesh cooked, made into pats, sun dried, and mixed with water to form a syrup. (32:54) *Sweetener* Fruit made into conserves and used as a sweetener before the introduction of coffee and sugar. (166:72)

- **Fiber—Apache Basketry** Leaves used for the main portion of the baskets. (17:35) *Cordage* Leaves split and used as string. (17:40) **Apache, Mescalero Basketry** Small roots used for basket work. *Cordage* Leaves used to make twine or rope. (14:33) **Apache, Western Cordage** Leaves split and sections tied together by square knots to make cordage. (26:182) **Apache, White Mountain Clothing** Leaves reduced to fiber and made into cloth. *Cordage* Leaves used to make string. (136:147) **Havasupai Cordage** Leaf fiber braided into ropes. The leaves contained a good fiber. The terminal spine and a section of the back of the leaf were removed and pounded to free this fiber from the fleshy portion of the leaf. The fiber was often braided into rope, three- to six-ply, from 12 to 30 feet long that was used for many purposes, including handling horses. (197:212) **Hopi Basketry** Leaves used in basketry. (42:371) Used for basketry. (56:17) Leaves occasionally used in basketry. (200:71) **Hualapai Clothing** Stems used to make shoes. *Cordage* Stems used to make rope. (195:39) **Isleta Basketry** Fibers used to make baskets. *Brushes & Brooms* Fibers used to make small brushes for pottery decoration. *Cordage* Fibers used to make cords and ropes. (100:45) **Jemez Basketry** Leaves used to make baskets. (17:34) **Keres, Western Cordage** Leaf fibers used to make ropes. Leaves were pounded between stones to separate the fibers which were used for ropes. (171:74) **Navajo, Ramah Basketry** Leaves used to make ceremonial and utilitarian baskets. *Brushes & Brooms* Leaves made into brushes used for cleaning baskets. Leaf slivers made into

paintbrushes. *Cordage* Leaf fiber made into string or rope and used for temporary or emergency purposes. *Snow Gear* Fiber used to tie snowshoes to the feet. *Sporting Equipment* Leaves made into a ball thrown into the air for archery target practice. Roots made into ball for shinny game, played at night. (191:21) **Papago Basketry** Used as the foundation in coiled basketry. (17:34) Leaves used as foundation in coiled basketry. (34:57) *Building Material* Leaves split and used for the weft of wrapped weaving in house frames. (34:53) *Cordage* Leaves split and used as tying material. (17:40) **Pima Basketry** Used in basketry. (17:34) *Brushes & Brooms* Fiber used to make hairbrushes. (17:50) *Cordage* Leaf fiber used to make cords or ropes. (17:40) *Mats, Rugs & Bedding* Leaves woven into mats. (17:34) Split leaves used in weaving mats. (17:37) **Southwest Indians Cordage** Split leaves or fibers used as tying material. (17:39) **Tewa Cordage** Fleshy leaves boiled, chewed, and the fibers twisted into cord and rope. (138:50) **Yavapai Cordage** Leaf fiber used to tie grass stems of mescal to make a brush. (65:259) **Zuni Basketry** Split leaves used to make winnowing baskets, baskets for serving food and for transporting materials. (166:78) Interlaced leaves used to make baskets. (166:81) *Clothing* Leaves boiled, chewed, and fiber woven into skirts and kilts. (17:45) Leaf fibers used in weaving fabrics. The leaves were folded about 4 inches in length and tied with a fragment of the leaf. These folds were boiled with a small quantity of cedar ashes. When sufficiently cooked, the leaves were placed in a bowl or basket and cooled. When the leaves were cooled, youths and young women peeled off the epidermis and chewed the leaves, starting at one end and progressing to the other. After chewing the leaves, the fibers were separated, straightened out, tied with fiber strings, and hung in an inner room to dry. When required for weaving, the fibers were soaked in water to soften them. (166:78) *Cordage* Leaves boiled, chewed, and made into a double-stranded cord. (17:40) Leaf fibers made into cords used to tie prayer plume offerings together and for other ceremonial uses. Split leaves used in place of cords or rope. (166:78) *Mats, Rugs & Bedding* Leaves split and plaited into mats to cover various vessels. (17:36) Dried leaves split, plaited, and made into water-carrying head pads. (17:47) Split leaves plaited into mats for covering hatchways, grain vases, and other vessels. The leaves are also used for making pads for supporting water vases upon the head. (166:78)

- **Dye—Navajo, Ramah Unspecified** Leaf juice used as a medium for pigments of pottery paints and slips. (191:21)
- **Other—Apache Containers** Thick portion of stalk used as hearth when making fire. (17:51) *Designs* Roots used to produce a red pattern in baskets. (17:35) *Soap* Roots pounded and placed in water to form suds used in bathing and shampooing. (17:57) *Tools* Stalk used to make fire drills. (17:51) **Apache, Mescalero Soap** Large roots used to make soap. (14:33) **Apache, Western Soap** Roots used as soap. (26:182) **Apache, White Mountain Soap** Roots used for soap. (136:148) **Havasupai Soap** Roots used as a soap for washing the hair. *Tools* Terminal spines used as needles. *Toys & Games* Ring of leaves wrapped in buckskin used in the hoop and pole game. *Waterproofing Agent* Dried leaves boiled with gum, hardened, powdered, mixed with water, and used to waterproof baskets. (197:212) **Hopi Soap** Roots used for soap. (42:371) Root used for soap. (56:17) Roots used as soap. (200:71) **Hualapai Soap** Roots used for soap. (195:39) **Isleta Decorations** Fibers used to make plaques. (100:45) **Keres, Western Ceremo-**

*nial Items* Leaves used as whips during the initiations. Switches used as whips by the masked personage. *Soap* Crushed leaves mixed with water for soap. (171:74) **Navajo Ceremonial Items** Roots used ceremonially. (110:31) *Musical Instrument* Stout leaves used as drumsticks. (17:36) *Soap* Roots used to wash hair and garments. (110:31) **Navajo, Ramah Ceremonial Items** Leaves used to make ceremonial drumstick. Leaves stuck into snowballs, mixed with red clay, and used to stop the snow and rain. *Fasteners* Leaf juice mixed with pottery paste. *Soap* Root made into soap used for washing wool or clothing, shampooing the hair, and bathing the body. The root, pounded with rocks to remove the bark and to soften it, was stirred vigorously in warm water to whip up suds. (191:21) **Papago Soap** Plant macerated, placed in water to form suds, and used for washing hair. **Pima Soap** Plant macerated, placed in water to form suds, and used for washing hair. (17:56) Stems reduced to pulp and used as soap. (146:72) **Pima, Desert Cash Crop** Used for trade. (133:6) **Southwest Indians Ceremonial Items** Plant suspended from a ring carried on the back of a god impersonator. (17:53) *Soap* Leaves pounded and used in washing. (17:55) **Tewa Hunting & Fishing Item** Leaves baked in warm pit, chewed, and fiber woven into fishing nets. (17:45) *Soap* Roots bruised, placed in water, and used to wash woolens, cotton fabrics, feathers, and hair. (138:49) **Yavapai Soap** Root, stem, and leaves pounded and worked in water to form lather for washing hair and body. (17:56) **Zuni Ceremonial Items** Plant used ceremonially for a great variety of purposes. Narrow leaf bands worn around the head by personators of anthropic gods. The personators of anthropic gods adorned their wrists and ankles with yucca ribbons, and the novitiate into the medicine order of a secret fraternity had his or her wrists adorned with them also. (166:99) *Soap* Roots pounded, made into suds in cold water, and used for washing. (17:55) *Tools* Leaves used to make cincture pads for supporting water vases upon the head. (166:78)

***Yucca baileyi* var. *navajoa*** (J. M. Webber) J. M. Webber, Navajo Yucca

- **Drug**—Hopi *Laxative* Plant used as a laxative. (as *Y. navaja* 42:370)
- **Fiber**—Hopi *Basketry* Leaves used in basketry. *Brushes & Brooms* Twigs used to make snow brooms. Plant used for paintbrushes. (as *Y. navaja* 42:370)
- **Other**—Hopi *Ceremonial Items* Twigs used to make the masks for the kachinas. Plant used as whips in ceremonies. *Hunting & Fishing Item* Plant used as an anchor for bird traps. *Paint* Juice used as a varnish for sacred kachinas. *Soap* Crushed roots used for soap. (as *Y. navaja* 42:370)

***Yucca brevifolia*** Engelm., Joshua Tree

- **Food**—Cahuilla *Unspecified* Blossoms used for food. (15:150) **Kawaiisu Dried Food** Fruit pit roasted, mashed, dried, and stored for future use.<sup>84</sup> *Fruit* Fruit pit roasted and eaten.<sup>84</sup> (206:69) **Southwest Indians Fruit** Fruits eaten for food. (17:63) **Tubatulabal Unspecified** Immature pods used for food. (193:16)
- **Fiber**—Cahuilla *Clothing* Fibers used to make sandals. *Cordage* Fibers used to make nets. (15:150) **Kawaiisu Basketry** Dark red root-stock core used as pattern material in coiled basketry. The core was split into strands, soaked, and worked in with the coiling so that the color was always on the outside. (206:69) **Shoshoni Basketry** Roots

used to make baskets. (as *Y. arborescens* 117:445) **Southwest Indians Clothing** Made into cords and used as base for fur robe garments. (17:43)

- **Dye**—Shoshoni *Black* Roots used as black dye in basketry. *Red* Roots used as red dye in basketry. (118:8)
- **Other**—Panamint *Designs* Red-brown inner roots used for basket designs. (105:78) **Southwest Indians Designs** Roots used to make brown designs. (17:35)

***Yucca elata*** (Engelm.) Engelm., Soaptree Yucca

- **Drug**—Apache, Western *Ceremonial Medicine* Peeled stalk shaped like a short snake, heated, eaten by a practitioner and spit at the sick. (26:182)
- **Food**—Apache *Unspecified* Species used for food. (17:64) *Vegetable* Flowers boiled and eaten as a vegetable. (17:19) **Apache, Chiricahua & Mescalero Dried Food** Stems baked overnight, dried, broken into pieces, softened, and eaten. (33:38) *Vegetable* Flowers boiled and eaten as a vegetable. (33:39) **Apache, Mescalero Dried Food** Trunks pit cooked, dried, and stored for future food use. Flowers boiled, dried, and stored for future food use. *Soup* Flowers used as fresh vegetables in soups. *Staple* Trunks pit cooked, pounded, and made into flour. *Unspecified* Young stalks cooked, peeled, and eaten hot. (14:40) **Apache, Western Dried Food** Boiled blossoms dried and stored in a dry place. *Unspecified* Blossoms boiled with seeds, fat, or bones. Stalk charred and eaten like sugar cane. (26:182) Blossoms used for food. (26:193) **Papago Unspecified** Species used for food. (17:64) **Southwest Indians Dried Food** Stems baked, dried, softened in water, and eaten. (17:19)
- **Fiber**—Apache, Chiricahua & Mescalero *Basketry* Leaves woven into shallow or tray baskets to carry prepared mescal home. (33:37) **Apache, Western Cordage** Leaves used to make cordage. *Furniture* Leaves used for the head shade of cradleboards. (26:182) **Papago Basketry** Leaf used as the binding element in coarse coiled ware. (17:34) *Building Material* Used for the weft of wrapped weaving in house frames. (34:54) *Sewing Material* Species used to sew coils into tight baskets. (17:62) **Pima Mats, Rugs & Bedding** Leaves twilled into mats. (17:60)
- **Other**—Apache, Western *Decorations* Red roots used in basket decorations. *Soap* Roots used for soap. (26:183) **Navajo Ceremonial Items** Leaves made into scourges and used in the Night Chant. A leaf was taken from the east side of the plant and one from the west. The leaves were then split in two and the interchanged halves bound together to form the scourge. These scourges were carried by the different personators in the Night Chant. *Soap* Roots used for soap. *Toys & Games* Used to make the 102 counting sticks for the moccasin game. (55:33) **Pima Containers** Fibers made into carrying nets. (17:35) Cactus ribs bound together to form the frame for containers used to carry crops. (17:46) *Soap* Used as soap. (146:72) **Southwest Indians Fasteners** Leaves tied to make a fastening loop for sandals. (17:28)

***Yucca filamentosa*** L., Adam's Needle

- **Drug**—Catawba *Dermatological Aid* Root rubbed on the body for skin disease. (157:188) Roots rubbed on body or decoction of roots taken for skin disease. (177:9) **Cherokee Ceremonial Medicine** Used as an ingredient with broom sedge and amaranth in green corn medicine. *Dermatological Aid* Beaten root used as salve for sores.

*Misc. Disease Remedy* Infusion taken for diabetes. (80:25) *Sedative* Used as a soporific. (203:75) **Nanticoke** *Orthopedic Aid* Poultice of roots applied to sprains. (175:56)

- **Other—Cherokee** *Hunting & Fishing Item* Used to intoxicate fish. (80:25) Pounded roots strewed on water to “intoxicate fishes.” (203:75) *Soap* Roots pounded, boiled, and used instead of soap to wash blankets. (80:25)

### ***Yucca glauca*** Nutt., Small Soapweed

- **Drug—Blackfoot** *Antirheumatic (External)* Decoction of grated roots used for sprains. (86:80) *Dermatological Aid* Decoction of root used as a tonic for falling hair. Poultice of roots applied to inflamed and bleeding cuts. (114:274) *Hemostat* Poultice of grated roots applied to bleeding cuts. (97:25) Poultice of roots applied to inflamed and bleeding cuts. *Herbal Steam* Decoction of grated roots used as herbal steam for breaks and sprains. (114:274) *Orthopedic Aid* Decoction of grated roots used for breaks. (86:80) Decoction of grated roots used as herbal steam for breaks and sprains. (114:274) *Veterinary Aid* Decoction of roots applied to saddle sores. (97:25) **Cheyenne** *Dermatological Aid* Decoction of dried root used as hair wash for dandruff and to prevent baldness. Smashed root applied as powder or used as a wash for sores, scabs, and skin outbreaks. (83:12) **Dakota** *Dermatological Aid* Root used to wash the scalp to make the hair grow. (69:358) **Isleta** *Dermatological Aid* Root mixed with ground stolons from vine mesquite grass and used as a hair wash to make the hair grow. (100:45) **Keres, Western** *Herbal Steam* Tender heart shoots used in the sweat bath. *Strengtheners* Infusion of tender heart shoots used for weakness. (171:76) **Kiowa** *Dermatological Aid* Plant used for dandruff, baldness, and skin irritations. (192:18) **Lakota** *Abortifacient* Roots and prickly pear cactus roots used as “medicine for not give birth.” *Dermatological Aid* Infusion of roots used to soak the hair as a vermin killer and to make the hair grow. *Gastrointestinal Aid* Infusion of pulverized roots taken for stomachaches. *Gynecological Aid* Roots and prickly pear cactus roots used by mothers when they cannot give birth. *Veterinary Aid* Burning root fumes used to allow a horse to be caught and haltered easily. (139:28) **Navajo** *Dermatological Aid* Roots used to wash hair. (55:33) *Laxative* Plant used as a laxative. *Stimulant* Plant used as a delirifacient, a drug that causes delirium. (90:164) **Navajo, Ramah** *Contraceptive* Rotten root used to make suds taken to induce menopause. *Gynecological Aid* Cold infusion of root used to expedite delivery of baby or placenta. *Poison* Compound containing leaf juice used to poison arrows. (191:21) **Omaha** *Unspecified* Root used in smoke treatment for unspecified illnesses. **Pawnee** *Herbal Steam* Root used in smoke treatment for unspecified illnesses. (70:71)
- **Food—Acoma** *Dried Food* Fruits sun dried and stored for winter use. *Fruit* Fruits eaten raw, boiled, or baked. (32:55) **Apache** *Unspecified* Stalks roasted, boiled, or eaten raw. (17:19) Flowers eaten as food. (32:56) **Apache, Chiricahua & Mescalero** *Unspecified* Stalks roasted, boiled, or eaten raw. *Vegetable* Stalks boiled, dried, and stored to be used as vegetables. (33:38) **Apache, White Mountain** *Dried Food* Pods dried for future use. *Unspecified* Pods roasted and used for food. (136:147) **Cochiti** *Unspecified* Used as a source of food. (32:14) **Isleta** *Forage* Fruit often eaten by deer, which left few for the Isletans. *Fruit* Fruit baked, seasoned, and used for food. (100:45) *Unspecified* Used as a source of food. (32:14) *Winter Use Food* Sun dried fruit

stored for winter use. (100:45) **Jemez** *Unspecified* Used as a source of food. (32:14) **Keres, Western** *Beverage* Dried, fruit cakes used to make a beverage. *Bread & Cake* Boiled, dried fruit made into cakes. (171:76) *Fruit* Fruit eaten when thoroughly ripe. *Sauce & Relish* Soaked, cooked fruit make into a syrup and used as hot chocolate. (171:74) Dried, fruit cakes made into a syrup. *Starvation Food* Roasted hearts used for food in times of famine. *Unspecified* Tender heart shoots eaten for food. (171:76) *Winter Use Food* Cooked, dried fruit stored for winter use. (171:74) **Laguna** *Dried Food* Fruits sun dried and stored for winter use. *Fruit* Fruits eaten raw, boiled, or baked. (32:55) **Lakota** *Unspecified* Flowers and buds eaten fresh or cooked. (106:51) **Navajo** *Fruit* Fruit eaten raw or baked in ashes. *Winter Use Food* Fruit sliced and dried for winter use. (55:33) **Navajo, Ramah** *Fruit* Fruit roasted in ashes and eaten. *Unspecified* Flower buds roasted in ashes and leaves boiled with salt and used for food. (191:21) **Pueblo** *Dried Food* Fruits sun dried and stored for winter use. *Fruit* Fruits eaten raw, boiled, or baked. (32:55) **San Felipe** *Unspecified* Used as a source of food. (32:14) **Southwest Indians** *Sauce & Relish* Pods boiled in water and made into pickles. *Starvation Food* Crowns roasted and used in times of food shortage. (17:14) Used when agricultural reserves dwindled. (17:9) *Unspecified* Tender stalks boiled or baked. Seeds eaten with the pods. (17:14) **Tewa** *Fruit* Fruits eaten for food. (138:52) **Zuni** *Unspecified* Seedpods boiled and used for food. (166:73)
- **Fiber—Apache, Mescalero** *Basketry* Leaves split and used to make baskets. (14:40) **Apache, White Mountain** *Cordage* Leaves used to make “moccasin strings” and cords. (136:147) **Dakota** *Cordage* Leaves macerated to clear the fibers and with the sharp leaf points attached, twined into thread. *Sewing Material* Sharp points of leaves used as needles. (70:71) **Hopi** *Brushes & Brooms* Leaf splints used as brushes to apply color to pottery. (17:50) **Isleta** *Basketry* Fibers used to make baskets. *Brushes & Brooms* Fibers used to make brushes for pottery decoration. *Cordage* Fibers used to make cords and ropes. (100:45) **Keres, Western** *Basketry* Leaves used to make baskets. *Brushes & Brooms* Chewed leaves used to make brushes for pottery paint. *Cordage* Crushed leaf fibers twisted and used for ropes. (171:76) **Navajo, Ramah** *Cordage* Fiber made into string to tie hoops, prayer sticks, chant arrows, and other ceremonial equipment. (191:21) **Omaha** *Cordage* Leaves macerated to clear the fibers and with the sharp leaf points attached, twined into thread. *Sewing Material* Sharp leaf points used as needles. (70:71) **Papago** *Basketry* Leaves used as foundation in coiled basketry. (34:57) Inner leaves dried, split, and used for sewing nonwatertight trade baskets. (34:58) *Building Material* Leaves split into strands, made into cords, and used for lashing house frames together and thatching. (34:61) Strips of fiber used to tie mesquite pole tips to other poles in forming house skeletons. (34:66) *Cordage* Leaves split into strands, made into cords, and used for tying up bundles of material. (34:61) **Pawnee** *Cordage* Leaves macerated to clear the fibers and with the sharp leaf points attached, twined into thread. *Sewing Material* Sharp leaf points used as needles. **Ponca** *Cordage* Leaves macerated to clear the fibers and with the sharp leaf points attached, twined into thread. *Sewing Material* Sharp leaf points used as needles. (70:71) **Southwest Indians** *Basketry* Leaves used in the manufacture of baskets. (17:34) *Brushes & Brooms* Leaves used as brushes to place designs upon pottery. (17:49) *Cordage* Split leaves or fibers used as tying material. (17:39) **Tewa**

*Basketry* Used to make sifting baskets. *Brushes & Brooms* Narrow slips used as paintbrushes in decorating pottery. *Clothing* Used to make bandoleers and neckties for clowns and dancers. *Cordage* Fibrous leaves split into narrow strips and used for tying material. (138:52) **Zuni** *Brushes & Brooms* Leaves made into brushes and used for decorating pottery, ceremonial masks, alters, and other objects. (166:82) *Cordage* Leaves soaked in water to soften them and made into rope by knotting them together. The fibers of the leaves were separated and lengthened for making a coarse cord. (166:79) *Mats, Rugs & Bedding* Dried leaves split, plaited, and made into water-carrying head pads. (17:47) Leaves used for making mats, cincture pads, and other articles. (166:79)

- **Dye**—**Navajo, Ramah** *Black* Juice mixed with yellow soil for a black dye. *Red* Juice boiled alone for a red dye. (191:21)
- **Other**—**Apache** *Soap* Roots used for soap. (136:148) **Apache, White Mountain** *Toys & Games* Leaves used as counters in various games. (136:147) **Blackfoot** *Soap* Roots used as a soap substitute and hair wash. (97:25) **Dakota** *Containers* Dried stems peeled and used to make a hearth. (69:358) Dried, peeled stems used to make a hearth, to contain the fire. (70:71) *Fuel* Leaves bound in a slender bundle and used as a substitute for wood. The slender bundle of leaves formed the fire drill, which was placed in a hearth and twirled by the hands until it smoldered, upon which time it was blown upon to ignite the flame. *Hide Preparation* Boiled root used in tanning hides. The yucca roots were boiled and then cooled and sprinkled over the hides after they had been treated with the brain-liver-marrow dressing. *Soap* Root used like soap to wash the scalp. (69:358) Root used like soap, especially for washing the hair. *Tools* Hard, sharp-pointed blades bound with sinew and used in place of wood to make the fire drill. (70:71) **Isleta** *Decorations* Fibers used to make plaques. *Soap* Roots pounded until soft, soaked in water, and used as a soap for bathing, washing hair and blankets. (100:45) **Keres, Western** *Fasteners* Leaves used as strings to tie chili peppers. *Soap* Crushed roots rubbed on hair or clothes for soap or crushed, roasted roots soaked in water for soap. This soap caused more itching than that from wild leafed yucca, but was considered better to keep the natural color of the hair. *Tools* Flower stalks used as spindles to start fire by friction. (171:76) **Kiowa** *Soap* Root used to wash clothes and hair. (192:18) **Lakota** *Soap* Roots boiled and used as shampoo or as a substitute for soap. (106:51) Roots used to make soap. (139:28) **Navajo** *Ceremonial Items* Plant used to stir the water for the ceremonial baths. *Soap* Roots used for soap. *Toys & Games* Used to make the 102 counting sticks for the moccasin game. (55:33) **Navajo, Ramah** *Soap* Root used for soap. (191:21) **Omaha** *Soap* Root used like soap, especially for washing the hair. (70:71) **Papago** *Fasteners* Used to bind women's hair over their foreheads while racing. Fiber used to tie saguaro needles together. *Soap* Roots dried, pulverized, mixed with water, and the suds used for washing the hair. (34:51) **Pawnee** *Soap* Root used like soap, especially for washing the hair. **Ponca** *Soap* Root used like soap, especially for washing the hair. (70:71) **Southwest Indians** *Soap* Roots roasted, soaked in water, removed, and soapy liquid used to wash hair and cloth. (17:54) Leaves pounded and used in washing. (17:55) *Tools* Stalk used as a spindle in making fire by friction. (17:52) **Tewa** *Soap* Roots used to make lather. **Tewa of Hano** *Ceremonial Items* Used to make whips to beat novices during some initiation ceremonies.

(138:52) **Zuni** *Soap* Peeled roots pounded, made into suds, and used for washing the head, wool garments, and blankets. (166:83)

### *Yucca glauca* Nutt. var. *glauca*, Soapweed Yucca

- **Drug**—**Montana Indian** *Dermatological Aid* Root used as a substitute for soap and as a wash for the hair. (as *Y. angustifolia* 19:27)
- **Fiber**—**Hopi** *Basketry* Used for basketry. (as *Y. angustifolia* 56:17)
- **Other**—**Hopi** *Soap* Root used for soap. (as *Y. angustifolia* 56:17)

### *Yucca harrimaniae* Trel., Spanish Bayonet

- **Food**—**Southwest Indians** *Starvation Food* Used when agricultural reserves dwindled. (17:9)

### *Yucca louisianensis* Trel., Gulf Coast Yucca

- **Other**—**Comanche** *Soap* Roots used as soap. (29:524)

### *Yucca schidigera* Roez. ex Ortgies, Mojave Yucca

- **Food**—**Cahuilla** *Unspecified* Fruit pods eaten raw or roasted. (15:150) **Hualapai** *Dried Food* Fruits baked, prepared, and dried for winter use. *Fruit* Fruit eaten raw. *Staple* Fruits cooked and ground into a meal. (as *Y. mohavensis* 195:40) **Luiseño** *Unspecified* Blossoms cooked in water and used for food. (as *Y. mohavensis* 155:195) Pods roasted on coals and used for food. (as *Y. mohavensis* 155:196) **Mohave** *Fruit* Fruit peeled and eaten without preparation. (37:204) **Southwest Indians** *Beverage* Fruit cooked and made into a drink. *Dried Food* Dried fruit used for food. (as *Y. mohavensis* 17:18) *Fruit* Fruit used for food. (17:22) Fruits eaten for food. (17:63)
- **Fiber**—**Cahuilla** *Basketry* Fiber used as starting material for baskets. *Brushes & Brooms* Fiber used to make brushes for body painting. *Cordage* Fiber used to make bowstrings, netting, and strings for shell money. (15:150) **Diegueño** *Clothing* Fibers used to make sandals. (84:45) **Hualapai** *Clothing* Strong fibers used to make shoes and sandals. (as *Y. mohavensis* 195:40) **Southwest Indians** *Clothing* Made into cords and used as base for fur robe garments. (17:43)
- **Other**—**Cahuilla** *Soap* Scraped, mashed roots and water used as soap. (15:150) **Luiseño** *Hunting & Fishing Item* Plant fiber used to make fishing lines. (as *Y. mohavensis* 155:200) Leaf fiber formerly used to make fishing lines. (as *Y. mohavensis* 155:203)

### *Yucca schottii* Engelm., Schott's Yucca

- **Food**—**Apache, San Carlos** *Dried Food* Fruits dried and used for food. *Fruit* Fruits cooked, skins peeled off, and pulp used for food. (95:258) **Papago** *Fruit* Fruits cooked and eaten with white flour. Fruits eaten raw. **Pima** *Fruit* Fruits cooked and eaten with white flour. Fruits eaten raw. (95:262)
- **Other**—**Papago** *Cash Crop* Dried fruits sold to the Pimas. (95:262)

### *Yucca* sp., Soap Root

- **Drug**—**Navajo** *Poison* Plant considered poisonous. *Throat Aid* Poul-tice of plants applied to the head for sore throats. (55:34)
- **Food**—**Navajo** *Forage* Buds eaten by sheep. (55:34) **Papago** *Staple* Fruits dried and used as a staple food. (34:45) **Yavapai** *Fruit* Boiled fruit used for food. *Unspecified* Flower stalk picked before blooming, roasted in fire, and used for food. (65:258)
- **Fiber**—**Navajo** *Basketry* Fiber used to secure the butts of the first twigs around a small stick at the bottom of the basket. Leaf pith braid woven into a basket. *Building Material* Pith twisted with mountain grass and used for roofing. *Clothing* Fiber used to make knitted leg-

gings. Yucca fiber and grass fiber used to make the earliest costume. Pith twisted with mountain grass and used to make leggings and shoes. Used to make moccasin uppers and dresses. *Cordage* Strands used to tie rolled skins into a rabbit skin blanket. Fiber used to tie butt and tip of corn husks filled with dough. *Mats, Rugs & Bedding* Pith twisted with mountain grass and used to make mats for bedding and blankets. Fiber and grass used to make sleeping mats. (55:34)

- **Other—Great Basin Indian Soap** Root suds used to wash wool. (121:47) **Jemez Soap** Roots boiled, fibrous part removed, water rubbed into lather, and used to wash hair and woolen blankets. (44:28) **Navajo Ceremonial Items** Leaves used for ceremonial purposes. On the sixth day of the Mountain Chant Ceremony, before the couriers were sent on their way, a basin of water containing soap root was brought in, and after the medicine man had daubed the couriers with a little of the suds, they washed themselves from head to foot and cleaned their hair as well. The Lashing God in the Night Chant carried a ring of yucca leaves on his back and suspended from this by its roots was a complete plant of soapweed. He held in his hand yucca scourges which were made from the leaves taken from the east and west sides of the plant. For the yucca that hangs at his back, a specimen was selected whose roots stuck well out of the ground and was kicked out with the foot. Masks made of the leaves were also used in the Night Chant. In one of the dances of the last night of the Mountain Chant, yucca was made to grow from the root, through buds and flowers to the ripe fruit. (55:32) Roots, pollen, and leaves used during many different ceremonies. Pitch used to cover bull-roarers for some of the ceremonies. Fiber used to string cakes baked for Fire God and attached to his right arm on ninth day of Night Chant. Leaf strips intertwined with sprigs of fir and used to make necklaces and wristbands for ceremonies. *Containers* Wood tied to stalk with shallow holes and used at the hearth to hold a fireset. *Jewelry* Leaves used to make bracelets worn by scouts. *Musical Instrument* Folded leaves used as drumsticks to beat basket drums. *Protection* Leaf juice mixed with powders and applied to shields. Yucca leaves were heated over a fire and the juice wrung out of them into an earthen vessel. The juice was then mixed with powders and applied to the shield with a pointed stick to make it live in the power of the sun, the serpent, the bear, the lightning, and the rainbow. (55:34) **Soap** Used for cleansing purposes. (55:32) Roots used to wash wool and hides. Suds and ashes used to wash newborn babies. *Tools* Used to make a brush to apply colored clays to pottery. *Toys & Games* Leaves made into a ball and used to play "shooting the yucca," a Navajo game played with a ball made of bark and wound with yucca leaves which had been previously placed in hot ashes to make them flexible. A stick of scrub oak was attached to this by a yucca cord, to give momentum to the light ball. The ball was thrown into the air and the archers discharged their arrows at it as soon as it was drawn downward by the weight of the stick. Fiber used to make a ring for a game similar to "ring toss." *Waterproofing Agent* Leaf pitch used for waterproofing baskets. (55:34)

#### **Yucca torreyi** Shafer, Torrey's Yucca

- **Food—Apache Beverage** Baked fruit pounded to a pulp, drained, and juice drunk. *Bread & Cake* Fruit roasted, pulp made into cakes, and stored. *Sauce & Relish* Baked fruit pounded to a pulp, drained and

juice poured over cakes. (17:18) **Apache, Chiricahua & Mescalero Bread & Cake** Fruit roasted, split, seeds removed, and pulp ground into large cakes. Fruit pulp ground, made into large cakes, and stored indefinitely. (as *Y. macrocarpa* 33:39) **Southwest Indians Fruit** Fruits eaten occasionally. (17:63)

- **Fiber—Apache Basketry** Leaves used for the main portion of the baskets. (17:35)
- **Other—Apache Designs** Roots used to produce a red pattern in baskets. (17:35)

#### **Yucca whipplei** Torr., Chaparral Yucca

- **Food—Cahuilla Bread & Cake** Roasted stalks dried, ground, and mixed with water to make cakes. *Dried Food* Flowers and stalks sun dried and preserved. *Unspecified* Less mature flowers parboiled and very mature flowers boiled three times with salt and eaten. *Vegetable* Sliced stalks parboiled and cooked like squash. (15:150) **Luiseño Unspecified** Roasted stalks used for food. Plant head roasted in an earth oven and formerly used for food. Blossoms cooked in water and used for food. (155:195) **Mahuna Sauce & Relish** Stalks pit roasted and used to make a syrup. *Unspecified* Flowers eaten as food. (140:58) **Tubatulabal Unspecified** Stalks used for food in late winter and early spring. (193:11) Stalks used extensively for food. (193:15)
- **Fiber—Mahuna Basketry** Pods used for basketry. (140:58)
- **Dye—Mahuna White** Pods used for bleaching buckskin fiber a pure white. (140:58)

#### **Yucca whipplei var. caespitosa** M. E. Jones, Chaparral Yucca

- **Food—Kawaiisu Dried Food** Apical meristems pit roasted, mashed, dried, and stored for future use.<sup>84</sup> *Unspecified* Apical meristems pit roasted and eaten.<sup>84</sup> Stalks roasted, peeled, and eaten. (206:69)
- **Fiber—Kawaiisu Basketry** Split rootstock cores used as pattern material in coiled basketry. *Building Material* Green leaves made into strong cord used to bind the vertical and horizontal poles of the winter house. (206:69)
- **Other—Kawaiisu Containers** Small stalk section used as a stopper for the basketry water bottle. (206:69)

#### **Yucca whipplei** Torr. **ssp. whipplei**, Chaparral Yucca

- **Food—Diegueño Unspecified** Young stalk peeled, roasted, and eaten in the spring. Blossoms picked before opening in the spring, boiled twice, and eaten. (84:45)
- **Fiber—Diegueño Basketry** Leaf fibers used as the foundation for the beginning of a coiled basket. (84:17) *Furniture* Leaf fibers used to make lattice work cradle on a frame of scrub oak. (84:45)

**Zamiaceae**, see *Zamia*

**Zamia**, Zamiaceae, conifer

**Zamia pumila** L., Coontie

- **Food—Seminole Unspecified** Plant used for food. (as *Z. floridana* 169:489)

#### **Zanthoxylum**, Rutaceae

**Zanthoxylum americanum** P. Mill., Common Prickly Ash

• **Drug—Alabama** *Dermatological Aid* Decoction of bark used as a wash for itching. (172:663) Infusion of inner bark rubbed on itchy area. (as *Xanthoxylum americanum* 177:35) *Toothache Remedy* Pounded inner bark used for toothache. (172:663) Inner bark put into cavity and packed around the tooth for toothaches. (as *Xanthoxylum americanum* 177:35) **Cherokee** *Antirheumatic (External)* Infusion used as a wash for swollen joints. (80:51) **Chippewa** *Cold Remedy* Infusion of bark taken for colds. *Cough Medicine* Infusion of bark taken for coughs. (as *Xanthoxylum americanum* 71:134) *Orthopedic Aid* Decoction of root used as a wash for paralysis and to strengthen child's legs and feet. *Pediatric Aid* Decoction of root used as a wash to strengthen legs and feet of weak children. (53:364) *Pulmonary Aid* Infusion of bark taken for all pulmonary troubles. (as *Xanthoxylum americanum* 71:134) *Throat Aid* Decoction of root gargled or taken for sore throat. (53:342) **Comanche** *Burn Dressing* Roots pulverized and powder used for burns. (99:6) *Febri-fuge* Infusion of bark taken for fever. (29:524) Infusion of pulverized roots used for fever. (99:6) *Throat Aid* Inner bark placed in throat for sore throat. *Toothache Remedy* Root bark held against tooth for toothache. (29:524) Roots pulverized and used for toothache. (99:6) **Creek** *Veterinary Aid* Infusion of bark used to rub on dog's nose to improve his scent. (172:663) **Delaware** *Heart Medicine* Infusion of inner bark used for heart trouble. (as *Xanthoxylum americanum* 176:35) **Delaware, Oklahoma** *Heart Medicine* infusion of inner bark taken sparingly for heart trouble. (as *Xanthoxylum americanum* 175:30, 80) *Tonic* Bark used alone and in compound as a tonic. (as *Xanthoxylum americanum* 175:80) **Iroquois** *Abortifacient* Decoction of bark taken to promote miscarriage. (87:368) *Analgesic* Bark smoked for toothaches or neuralgia. (87:367) Compound infusion taken for back pain. Infusion of bark taken for pain after confinement. *Anthelmintic* Decoction of bark taken for worms. *Antiemetic* Compound infusion taken for vomiting. *Diuretic* Infusion of roots taken when water stops because of gonorrhea. *Emetic* Compound decoction taken to vomit during initial stages of consumption. *Gastrointestinal Aid* Decoction of bark taken for cramps. *Gynecological Aid* Infusion of bark taken for pain after confinement. *Kidney Aid* Compound infusion taken for kidney trouble. *Orthopedic Aid* Compound infusion taken for back pain. *Toothache Remedy* Bark smoked, chewed, or placed into the tooth for toothaches. *Tuberculosis Remedy* Compound decoction taken to vomit during initial stages of consumption. *Venereal Aid* Infusion of roots taken when water stops because of gonorrhea. (87:368) **Menominee** *Adjuvant* Infusion of berries used as a seasoner in medicines. (151:51) *Analgesic* Poultice of pounded inner bark used for rheumatism and sharp pains. *Antirheumatic (External)* Poultice of pounded inner bark applied for rheumatism and sharp pains. (54:133) *Cold Remedy* Decoction of inner bark used for cold settled in the chest. (54:130) *Dermatological Aid* Infusion of berries sprayed from mouth onto sores. Poultice of root bark applied to swellings in special rite. *Other* Infusion of berries taken for minor maladies. *Pulmonary Aid* Infusion of berries sprayed on the chest or throat for bronchial diseases. (151:51, 52) *Sedative* Compound infusion taken and rubbed on body to quiet person near convulsions. (54:128) **Meskwaki** *Cough Medicine* Bark and berries used to make cough syrup. *Expectorant* Bark and berries used as an expectorant. *Hemostat* Bark and berry medicine used for

hemorrhages. *Kidney Aid* Compound infusion of root used for kidney trouble. *Strengtheners* Compound decoction of inner bark given to strengthen convalescent patient. *Toothache Remedy* Powdered inner bark used for toothache. *Tuberculosis Remedy* Bark and berries used for hemorrhages and tuberculosis. (152:244, 245) **Mohegan** *Heart Medicine* Infusion of bark taken for heart, 3 days on, 3 days off, before resuming. (as *Xanthoxylum americanum* 174:269) Infusion of inner bark taken in small doses for heart trouble. (as *Xanthoxylum americanum* 176:77, 132) **Ojibwa** *Respiratory Aid* Infusion of berries sprayed on chest for congestion from bronchitis. *Throat Aid* Bark or berries used for sore throat and tonsillitis. (153:387) **Pawnee** *Veterinary Aid* Fruits used as diuretic for horses. (70:98) **Potawatomi** *Venereal Aid* Root bark used for gonorrhea, an historic reference (1796) (154:80)

• **Other—Omaha** *Incense & Fragrance* Fruits used by young men as perfume. (as *Xanthoxylum americanum* 68:323) Fruits used by young men as perfume. (70:98)

### *Zanthoxylum clava-herculis* L., Hercules's Club

• **Drug—Houma** *Orthopedic Aid* Salve of grated root mixed with whisky rubbed on swollen limbs. *Toothache Remedy* Poultice of grated root and bark applied to aching teeth. (as *Xanthoxylum clava-hercules* 158:61)

### *Zanthoxylum fagara* (L.) Sarg., Lime Pricklyash

• **Other—Seminole** *Hunting & Fishing Item* Plant used to make bows and arrows. (169:475)

## Zea, Poaceae

### *Zea mays* L., Corn

• **Drug—Cherokee** *Dermatological Aid* "Smut" from plant used as salve. *Kidney Aid* Infusion taken for "gravel." *Pulmonary Aid* Parched grains eaten for "long wind." (80:30) **Keres, Western Panacea** Pollen eaten for almost any kind of medicine. (171:77) **Mohegan** *Dermatological Aid* Decoction of dried cobs used as a wash for poison ivy rash. The balls of corn husks covered with woven cotton were used with long fringes of white cotton ceremonial sashes symbolizing corn and a desire for bountiful crops. *Decorations* Ribbioned corn husks used as hair decorations in ceremonies. *Toys & Games* Ribbioned husks made into small, square pads and used by young people in games. Small plumes were attached to the small, square pads upright, in the center, forming the shuttlecocks for use in the game of battledore and shuttlecock. (166:99)

### *Zea mays* L. var. *rugosa* Bonaf., Corn

- **Food**—**Navajo** *Bread & Cake* Sweet cornmeal and herb roots made into cakes and baked in a pit. (55:30)
- **Other**—**Navajo** *Ceremonial Items* Cornmeal mush used to make images for ceremonies. In the Bead Chant, an image of a wildcat was made of sweet corn; in the Mountain Chant, an image of the bear was made of sweet corn; and in the Coyote Chant, effigies of a coyote and a kit fox were made in sweet corn; other images such as the dog, chicken, cat, and pig were also reproduced in sweet corn. To make these animals, a stiff mush was made of corn, which was kneaded to the desired shape, omitting the extremities such as tail, ears, and feet. White shell, turquoise, and cannel coal was used for the eyes. (55:30)

### *Zephyranthes*, Liliaceae

#### *Zephyranthes* sp., Zephyr Lily

- **Drug**—**Seminole** *Toothache Remedy* Infusion of bulbs used for toothaches. (169:304)

### *Zeuxine*, Orchidaceae

#### *Zeuxine strateumatica* (L.) Schlechter, Soldier's Orchid

- **Drug**—**Seminole** *Gynecological Aid* Decoction of whole plant taken and used as a wash for barrenness. *Reproductive Aid* Decoction of whole plant used as a wash for impotency. (169:318)

### *Zigadenus*, Liliaceae

#### *Zigadenus elegans* Pursh, Mountain Deathcamas

- **Drug**—**Alaska Native** *Poison* Plant considered poisonous. (85:163) **Eskimo, Inupiat** *Poison* Whole plant considered poisonous. (98:139) **Keres, Western** *Antirheumatic (External)* Infusion of 11 plants used as an athletic rubdown. *Diaphoretic* Eleven plants used in sweat bath. An infusion of 11 plants was sprinkled on hot rocks to form dense steam. Men stayed in the sweat bath for 3 to 5 minutes for sev-

eral successive evenings before the deer hunt or race. *Poison* Plant considered poisonous. *Strengthened* Root rubbed on muscles as a strengthener. Infusion of 11 plants used as an emetic before breakfast prior to athletic events or deer hunts. Infusion of 11 plants used during athletic training every morning prior to breakfast until the brew had been depleted, to give long endurance, a keen eye, and so that the deer could not smell you. (171:78) **Navajo, Ramah** *Dermatological Aid* Cold infusion of plant used as a lotion for mad coyote bite. (191:21) **Thompson** *Analgesic* Pulverized, baked root used as salve on painful areas, especially back and feet. (164:463) *Poison* Bulb caused "human poisoning" and leaves usually fatal to cattle. *Veterinary Aid* Leaves usually fatal to cattle. (164:512)

- **Other—Thompson** *Ceremonial Items* The father of a girl reaching puberty had to snare a grouse, cut off its head, remove its eyes, and in their places put two small roots of this plant and another in the mouth. Otherwise, the father was not able to snare any more grouse. (164:508)

**Zigadenus nuttallii** (Gray) S. Wats., Nuttall's Deathcamas

- **Drug—Gosiute** *Emetic* Plant used as an emetic. *Veneral Aid* Plant used for venereal affections. (39:384) **Ute** *Poison* Bulbs considered poisonous. (38:37)

**Zigadenus paniculatus** (Nutt.) S. Wats., Foothill Deathcamas

- **Drug—Navajo, Kayenta** *Veterinary Aid* Infusion of plant given to sheep with bloat. (205:17) **Paiute** *Analgesic* Poultrice of bulb used for neuralgia. *Antirheumatic (External)* Poultrice of root, sometimes mixed with tobacco, applied for rheumatism. *Dermatological Aid* Poultrice of bulb used for swellings. *Emetic* Decoction of root taken as an emetic, in spite of poisonous nature of plant. *Orthopedic Aid* Poultrice of bulb used for sprains and lameness. *Toothache Remedy* Poultrice of bulb used for toothache. (180:149) **Paiute, Northern** *Antirheumatic (External)* Poultrice of roasted, mashed bulbs applied to swollen parts or used for rheumatism. (59:128) **Shoshoni** *Analgesic* Poultrice of bulb used for neuralgia. *Antirheumatic (External)* Poultrice of crushed raw or roasted root applied for rheumatism. *Dermatological Aid* Poultrice of bulb used for swellings. *Emetic* Decoction of root taken as an emetic, in spite of poisonous nature of plant. *Orthopedic Aid* Poultrice of bulb used for sprains and lameness. *Toothache Remedy* Poultrice of bulb used for toothache. **Washo** *Analgesic* Poultrice of bulb used for neuralgia. *Antirheumatic (External)* Poultrice of crushed, raw root applied for rheumatism. *Dermatological Aid* Poultrice of bulb used for swellings. *Orthopedic Aid* Poultrice of bulb used for sprains and lameness. *Toothache Remedy* Poultrice of bulb used for toothache. (180:149)
- **Food—Navajo, Kayenta** *Unspecified* Bulbs cooked with meat and corn and used for food. *Vegetable* Plants used as greens. (205:17)

**Zigadenus venenosus** S. Wats., Meadow Deathcamas

- **Drug—Chehalis** *Emetic* Plant sometimes used as a violent emetic. (79:23) **Haisla & Hanaksiala** *Poison* Roots considered highly toxic. (43:203) **Klamath** *Emetic* Roots mixed with rootstocks of blue flag and used for vomiting. (45:93) **Lakota** *Poison* Plant poisonous to humans. (139:28) **Mendocino Indian** *Analgesic* Poultrice of mashed bulbs applied to painful bruises and sprains. *Antirheumatic (External)* Poultrice of mashed bulbs applied to rheumatism. *Dermatologi-*
